er saw such wistfulness in a girl's didn't know a girl could look like lump rose in my throat; she was , so much in earnest. I didn't Clement had come here. It didn't me like him; and yet his daughter o know. Whether her reasoning t or not, I could follow it. I looked her gravely.

it doesn't seem silly," I said.

miled. "I know it as well as if he d me when he left home that night so tired. There isn't any reason in as grown persons speak of reason, e is plenty for me. When I knew ght that daddy had gone—it came suddenly that he had disappeared, verything had been too much for st as mother had always feared it —I sat down in a chair, numbed. I 't think of anything except that he ne, gone now that mother was not o take care of him. I went through rrible fears—fears ——" She caught oat at the memory of them, even. a bit I grew quieter, and then I I don't think I said much except d! O God!' just like that, but after he answer came. It wasn't in the of words; just that I began to think America—and I remembered you. ed to know quite clearly that I must here and search, that you would help That is why I came before they have finished searching all the places they ing to in London. They pretend to that he has just wandered off, that y be in any of a hundred places. They e had a nervous breakdown, and per- he lost his memory; that's what one e doctors suggested; amnesia, he it. They dragged the Green Pond, have inspected everybody brought up the river; but I haven't worried that much, because I know that is here."

e shining eyes, the voice gathering ness and vibrancy as she continued, utter trust in her own absurd little m somehow touched me as nothing had. Let her believe it if she wished. ably while she was here they would Clement's body back in London some- e, and the dismal details would be while she was out of the way. Let relations—the whole caboodle of 'em— nd the funeral and say "I told you so" ne another. I at least had the flower he family here, and she should try her d at America before she went back to n all.

You're just like your mother, my ," I said.

Which after all isn't a bit what I wanted say—for Marie had been a good soul, always a little dull, while this girl was linet with grace and life and pep. But 'd have thought I'd paid her the finest mpliment in the world. She flushed, and seized my hand suddenly with a con- sive clasp.

"I'm not half so good!"

"Probably not," I said dryly—I like with a bit of fire in their make-up, my- f—"but you suit me."

And then to my surprise she burst out ing and hung around my neck, and I und myself wiping her eyes with a hand- rchief that was hopelessly inadequate, ce I had taken it out of her own hand, and tting her back just as if she had been baby.

She was tired out; I saw that.

And just as I was about to suggest that go to her room and take a nap Briggs ppeared in that suave way of his and id that Miss Valentine's room was ready, nd since the boat had docked so early ould she care to take a sleep, and in the eantime we could find out all the in- rmation from the steamship companies bout passengers who might have a re- emblance to the doctor.

I hadn't thought of that, but I had to ad- it that it was a good notion. I nodded my head wisely and assured her that I would have everything shipshape for the search by the time she was awake, and as she disappeared with Briggs—I hovered in the background, for when it comes to making arrangements I have to admit that the rascal is much better than I—I heard a female voice upraised in respectful welcome. Briggs had imported an elderly maid for my niece, a creature as perfect as himself. I heaved a sigh of relief as I saw Valentine consigned to her hands behind closed doors.

But that should not prevent me having it out with Briggs!

He did not even reply to my tirade, merely suggesting by his attitude that I spoke with the wisdom of Solomon—that he was humbled in the dust. When I began to repent my severity he made the suggestion he had been waiting to make:

"Shall I take in hand the gathering of information about the doctor, sir? I know you won't want to be bothered with that; too much detail. And Miss Valentine, sir, she'll enjoy society and the theater, but Jane says she only brought two suitcases and she has nothing fit to wear. Shall I order from Tendrin's, or will you go yourself, sir ——"

He didn't finish his sentence, just stood waiting respectfully, and I felt my heart give a great leap of pleasure. I wonder if there is an old bachelor in the world who hasn't longed at some time or other to dress a pretty woman—not as she wants to dress herself, but as he would dress her? For a long time I'd owned a half share in an island where they breed birds of paradise—the big plumes that had come to me were packed away in a storehouse. I'd been paying storage on them for years and years. Now I had a woman to dress, even if she were a very little woman. But oh, she was sweet and charming and almost my own flesh and blood! I sprang up with haste and told Briggs I'd go myself.

"And I'll telephone Mrs. James, sir?" said he.

"Eh, what?" said I, staring. For a moment I didn't follow him. Then I knew that as usual he had been perfection. Mrs. James is a stately old dowager with a heart of gold, who has been my good friend ever since I was a clerk in her husband's bank. Then when I got on and they gave me a position of trust she gave herself the joy of running me socially, as she called it. I didn't appreciate what it meant then, but later I'd known that anyone Mrs. James sponsored was bound to be in the proper running; she's a social arbiter, even in these hurrying days. Briggs of course knew this, too, and he intended Valentine to have the best start possible. As I was getting into the taxi he came running down the steps.

"Mrs. James will be pleased, Mr. Magnus, if Miss Forster and you will have tea with her this afternoon."

"Telephone Mrs. James we'll be delighted," I said, and slammed the door. Briggs is an excellent servant, but hang it all, a man does occasionally like to do a little thinking for himself.

Val, I could see, would need the most careful turning out. She might be a beauty or she might be almost plain. She was going to be a success, I declared, and I did not hesitate to get Tendrin himself out of bed to talk the matter over. He keeps late hours and usually sleeps until noon. The little man became quite excited after a bit, and sketched two or three of his pet ideas for me. In the meantime he had a velvet suit and some smoky fox furs and three or four befurred and befeathered little hats packed into big boxes for me and sent on to the apartment. He understood that the young mees had distinction, he declared—so much better than beauty alone.

I chuckled to myself, because I believed that she might be beautiful as well.

But even so I wasn't prepared for the Val who appeared in the study. The elderly maid stood right behind her, her grim face relaxed in a smile as she watched me to see the result of her handiwork. I think she knew in that minute something of how an artist feels as he watches the public admire his latest picture. For I stared at Valentine with my eyes popping out of my head. Talk of your beauties! She was exquisite. I stared, and I chuckled, and she laughed softly. No girl could have helped liking the clothes and the sight her mirror had shown her. Val had cheeks the color of wild roses now, and her eyes were as blue as gentians.

"Uncle Magnus," she said, "you wizard!"

I squeezed her hand; a lump came into my throat. The pretty little thing—the pretty little thing! I felt as if my daughter had come to life before me, though I'd never had a daughter; but I imagined I felt as a father would feel.

Mrs. James was sitting very stiffly in her chair, but she stood up and peered at Val in amazement when I presented her. She became quite excited and whispered and pinched my hand behind Val's back. She scolded me for not having told her of Valentine's expected arrival.

"If you had," she said, "I'd have denied myself to everyone, and we'd have planned a sensation to introduce the child. Why, Magnus, she's a fairy, a fairy! Why didn't you tell me you had this in hiding? Man, she'll be the rage in half an hour, once she's seen. Oh, if I'd only known!" She rang the bell vigorously.

She was just a fraction of a second too late. The butler answered her ring and announced Young Jim at one and the same time, and the moment he did so Mrs. James looked at me with an expression that said "There, I told you so!" and waved the butler away. She couldn't very well let her other guest know that she had been going to deny herself to him, when he had caught her entertaining us. But after she had presented Young Jim she kept on muttering to me in an undertone that it was a pity—might as well not show the girl now. And her faded, shrewd old eyes would fasten first on me and then on the young people sitting side by side on the sofa—Young Jim, as we all called him, with his dark head and dark eyes and all his vigorous slim youth; and little Val, her head shining with its nimbus of red gold, her blue eyes dancing, her cheeks pink as a sea shell.

Old though we felt, we couldn't watch them without our hearts softening and our eyes shining a little too. It was so plainly a case of love at first sight for Jim—and Val was supremely unconscious of what was happening to him, it seemed. She laughed and shone and twinkled and talked of London and her wounded brother, and Young Jim listened as if he were entranced; and when we stood up to go he quite simply said good-by to Mrs. James and went with us as if it was the most natural thing in the world.

The last sight I had of the old lady she was sitting up, grimmer than ever, in her straight-backed chair, and she called after me as I followed Val from the room, "Telephone me, Magnus, later in the evening. You'll probably be bored."

She has the knack of being as right as Briggs, although not so frequently. But this was one of the times when she hit it, for I had been yawning for half an hour when I remembered what she had said. For Young Jim had insisted on coming back with us and staying for dinner—and he and Valentine sat and talked and talked and laughed—everything they touched on glittered.

Not that I minded! I loved Young Jim; everybody did! He was simple and manly and unspoiled, and he was Mrs. James' nephew and the heir to an enormous fortune, part of which I managed for him—or, rather, helped him to manage—and I could not suppress a really worldly satisfaction that he had fallen so desperately in love. As for Valentine, the child was made for love, and showed it! It was like Galatea coming to life out of the cold marble.

It did not take a minute to get Mrs. James on the phone, although she has usually quite a dignified ceremonial before she will take a call, but she must have been waiting close at hand.

"You tell Young Jim to come here. I want to see him!" she snapped.

In a few minutes she had the whole story out of me about Val's father, and her voice softened as she heard it. "A good girl," she said; "good and beautiful. Lord, Magnus, you're in luck—as usual."

"It's not my luck," I told her; "it's Young Jim's! After all, he's the right age."

I laughed to stifle a sigh, but all I heard in answer was a snort of wrath. There are times when you'd declare that Mrs. James has no manners—she expresses herself so oddly.

"Magnus," she said, "you make me tired; James used to say you were a financial genius. It's a good thing finance has nothing to do with women—you'd have been a failure all right. You talk as if you were eighty. Don't you know that at thirty-six —— Oh, pshaw!"

She hung up in disgust, jamming the receiver down on the hook in vicious disregard for my ears.

"Mum" is the word!

says *The Dainty Woman*

When after active exercise on a warm day—tennis, golf, or even walking—you would like to feel entirely free from the odor of perspiration—

"Mum" is the word.

Or when, at the dance or other crowded social gathering, you want to enjoy the comfortable assurance that you are entirely free from body odors—

"Mum" is the word.

Think what it means to be always free from this embarrassment—to know that the delightful sense of personal cleanliness the bath imparts will be yours throughout the day and evening—no matter how warm the weather, how crowded the gathering, or how active you are. This assurance is yours by remembering that—

"Mum" is the word.

"Mum" is a dainty snow-white cream, which prevents all body odors without checking perspiration or interfering with any function of the body. "Mum" will not irritate the skin nor injure the finest waist or gown.

Get "Mum" today. 25c at stores, or from us postpaid.

Also try Amoray, the talc with a delightful, clinging fragrance that lasts all day—really a Powder Perfume. 35c at stores, or from us postpaid.

SPECIAL OFFER

In order to introduce "Amoray" (Powder Perfume), the distinctive feminine talc, we are making this special offer. Send 50c and your dealer's name and we'll send you both "Mum" and "Amoray" postpaid. Use the coupon.

Mum Mfg. Co.
1106 Chestnut St., Philadelphia

The metal you never see on your table —but which is there

THE friendly gleam of polished silver greets your dinner guests. Perhaps in the linings of spoons or cups there is the dull glow of gold. Your percolator is polished nickel. For tea you may use a samovar of copper.

Another metal is always on your table—invisible, but ever present, in the delicate finish on your plates, cups, and saucers. This metal is lead, used by makers of fine china in producing the smooth, hard glaze on the surface. In your cut glass salad bowl or fruit dish, lead is again invisibly present, for lead is used to give cut glass its brilliance. The hard rubber insulation on your percolator and toaster contains lead.

Here, perhaps, are uses of lead that are new to you. There are many others; lead enters your daily life in more ways than you might think possible. The electric wires that supply the light above your dining-table are fastened together with lead solder, protected by lead fuses, covered with a rubber insulation which has lead as one of its ingredients. The electric-light bulbs contain lead, which gives to glass greater heat resistance.

Good paint contains white-lead as its most important ingredient. Tons of metallic lead are corroded every day, to provide the white-lead used by paint manufacturers and painters.

Paint protects buildings from deterioration and decay—hence the maxim, heeded everywhere today, "Save the surface and you save all." The more white-lead any paint contains, the greater its protecting power and its durability. The lead-and-oil paint which painters prefer for outdoor use is simply pure white-lead, thinned with pure linseed oil.

National Lead Company makes white-lead of the highest quality, and sells it, mixed with pure linseed oil, under the name and trade-mark of

Dutch Boy White-Lead

Write our nearest branch office, Department A, for a free copy of our "Wonder Book of Lead," which interestingly describes the hundred-and-one ways in which lead enters into the daily life of everyone.

There never has been any reasoning with Mrs. James. Five years ago she asked me brusquely if I was cherishing a broken heart. When my laughter had reassured her she attacked the subject from another angle. Thirty-one, she said, was a sensible age for a man to marry; she knew two charming girls ——

Assuring her gravely that I had no desire to follow in the footsteps of Brigham Young she swept my levity aside by handing me pictures—the débutantes of the year.

"Isn't there one that appeals to you?" she said.

But I couldn't tell her how I felt. Sometimes, wistfully, I'd thought I caught sight of a face in a crowd—the face of the sort of girl I might marry; but it had never turned out that way, and now I was afraid of women. What had an old bachelor to do with pretty, audacious girls? I was annoyed at Mrs. James—matchmaking, meddling old woman. Why couldn't she be content to watch the pretty idyl going on before our eyes, as I was?

As the days went by the thing became a byword. All the men were crazy about Valentine, but she seemed to me to have eyes only for Young Jim. They rode together every morning in the park, and often Young Jim came for breakfast. When we walked abroad he appeared as if by magic on the sidewalk, and when we went to dances or to the theater he was always there too. I used to tease Valentine about it, but she only glowed and laughed, though sometimes her beautiful eyes had a haunted expression. Each night that she had not found Clement she sighed, and each morning was exciting, because it held the possibility of finding him. Briggs reported no results from his many inquiries, even. Val had told Young Jim all about it, and he was as anxious as she. They neither of them doubted that they would find him either. Sometimes it seemed to me that youth is faith—because it has not suffered disappointment. And to what fragile threads it fastens its hopes.

Summer flew in that year. It was June before we knew it, and one evening in the first week Valentine came into the library before dinner and perched on the arm of my chair.

"Uncle Magnus ——" she said, and waited.

I felt a pang go through me. You know what it is to fear something—and suddenly know that you are face to face with it.

"Uncle Magnus," said Val again, burying her bright head on my shoulder for a minute, "I—I can't stay here unless I find daddy, you know. I have to go back to Clem."

I wanted to tell her that it was folly but I couldn't. I could see into her heart too well, and then somehow all the old tentacles of family life that I had thrown off came and gathered about me. I knew that Valentine, being herself, could not abandon her crippled brother Clement or the care of the household, and probably in their quixotic youth the two of them would decide that the old home must be kept open for their father. Unless they had proof of his death they'd plan for his return. And Young Jim would have nothing to say to which she would listen. I believed she loved him—but love, in her strange category, did not come before duty. It had been this idea of duty as an archenemy to all joy and freedom from which I had torn away, and here I was, up against it again.

It was hard—hard on me! At last I'd found something—something that made everything else seem small by comparison. Val was sweet and lovely and dear, and—she wasn't English, not at heart! She'd felt as if she came home, that morning she came to me. And with all her gentle sweetness she had a gayety and a happy charm that made her seem a part already of the country I loved.

How I'd dwelt on having her near me—an American! One of my own people—someone who really belonged to me—but free, free, no longer tied down by all their inhibitions and worn-out ideas.

Not that I don't admire the British—they're true blue all through; I'd fight another man who spoke disparagingly of them—but I didn't need to explain to Val what I meant. She knew.

Her little sigh told me as she looked out of the window to the fresh summer green of Central Park.

Nothing more was said just then, but I carried a heavy heart about with me all evening.

"Briggs," I said that night, st
him as he came to lock the windo
the night, "Miss Valentine thinks sh
leave us unless she can find her fath
give a thousand dollars to find son
to stop her."

"It's a lot of money, sir," said
respectfully.

"Yes," I said, lapsing into gloom

Briggs went on with his work; he
better than to interrupt me when
thinking. Presently I found him st
waiting by the door.

"Well?" I said impatiently.

"Nothing, sir," said my servant q
"except about Miss Valentine. Is she
she really wish to find her father, si
thought him a bad egg, sir, if you
cuse the expression."

"You saved me the trouble of ask
said I. "All the same, she wants t
him, naturally. But of course he
here; he probably jumped into the Tha

"I wouldn't be so hopeful, Mr.
nus," said Briggs gravely. "Men hav
known to turn up when they're leas
pected. Good night, sir."

He left the room with the air of p
solicitude that he adopts as a good
and good morning demeanor.

The next morning Young Jim ca
and asked if I thought that Val
would like to dine at the Adamantine

"It's different from anything she'
anywhere else, isn't it?" he said. "I
suggested it in the most deferential
as he took my hat. If you say the
Uncle Magnus"—he'd adopted Val's
for me; it made me wriggle irritably.
certainly not his uncle—"I'll invite
James, as company for you." He grin

I wonder it had not occurred to me
the Adamantine Club. I'd been a me
for years. Old James put me up befo
died, and Young Jim often lived in
place for weeks at a time. It isn't the
distinguished, but it is certainly the
fashionable club in New York, and i
cludes so many persons that it is al
distinguished for that fact alone.

But what I wanted Val to see, more
anything, was the clubhouse and the wa
did everything. Style—they couldn't
it in London. I had an idea that if Valen
had to go home she might as well see ev
thing possible beforehand. I fell in
Young Jim's idea with enthusiasm.

In days of loveliness I had never
Val so beautiful as she was that night
we waited for Young Jim to bring
James to the club. She had on a p
dress. I always love a young woman
pink. Tendrin and I had evolved it
tween us. It had been my idea to h
bird-of-paradise plumes form the soft dé
letage and the curve of the scalloped sk
and so, although the dress appeared
simple, it really was rather a gorgeous
fair. It looked as if a rainbow had be
caught and twined around a pink clou
There was a fan that went with it t
Val waved it to and fro as she watched t
crowd, always with that half-smiling glan
hiding the hint of wistfulness. Once s
sighed. I may have been wrong—but
think it was because she hated to thi
of leaving America. I'd determined
prevent her, but how—how? I gave
thinking and sat and gloated over the chil
When Young Jim arrived I saw him ha
stop as he followed Mrs. James across th
room. Valentine was enough that night
give any man pause.

We went into the dining room, found ou
table by the window. Valentine was talk
ing to Mrs. James—they were laughing an
looking about the room. It is a beautiful
lofty place, a trifle dark for my taste o
any but a summer day, but the oak panel
ing serves only to emphasize the uniform
of the waiters, which are gorgeous enough
for a stage setting. The Adamantine Club
wanted something different for its attend
ants, and it certainly got it. All tha
crimson and silver and brilliant blue—with
the powdered wigs and silken calves—
quite out of place, but gorgeous, all the
same.

I don't think anyone else noticed at first,
even Young Jim. But I saw Val glance
across the room to a particularly splendid
specimen wearing the waiter's uniform, and
her eyes widened peculiarly. She looked
again, and then bent across the table to me.
She spoke very quietly, but with a supreme
effort at self-control:

"Uncle Magnus, I have seen father.
Can you go and take Mrs. James, please!
Jim, I am dreadfully sorry to spoil the

The Aristocrat of Automobile Bumpers

Biflex

BIFLEX Bumpers grace the most distinguished motor cars in America. Notice the better cars as they glide up and down the boulevard; observe the cars parked at exclusive hotels and clubs—you will find most of them are equipped with Biflex Bumpers.

Thus owners of fine cars not only pay an impressive tribute to the charm and distinction Biflex Bumpers impart to cars, but also indicate their confidence in Biflex to protect passengers against injury and cars against damage in traffic collisions. Yet, Biflex Bumpers are within the means of all motorists, and they afford equal distinction and protection to all cars.

Biflex, the original broad-faced bumpers, are built to block bumpers of all heights; to absorb severe shocks. They are made of selected, spring steel, oil-tempered. Their strength is proportioned to the weight of your car. The fastenings are solid and rattleproof.

When your automobile dealer recommends Biflex Bumpers, it is evidence of his confidence and pride in the cars he sells. It also indicates his sincere interest in your welfare and safety.

Look for the Biflex trade-mark. See your dealer. If he can't supply you, write us. Priced from $21 to $28.

(Continued from Page 62)

party, but you see, if father did not find me alone—it is the only chance ——"

Her voice had a note of terror in it; not for herself; for this poor father. Before I could reply she went on with her speech:

"He's—it's absurd, but he's a waiter! He won't mind me, but if he sees you all ——"

Her eyes besought; she almost pushed me from my seat. Young Jim grasped the situation with his usual flashing insight.

"Yes, yes, we understand. Of course we'll go. If you want us, telephone! We'll be at the apartment, dear." She did not notice the "dear." It was like a knife in my heart to believe he must have used the word often. The pain persisted as I guided Mrs. James from the room.

"Extraordinary!" she muttered.

I excused it, for I knew that she was hungry and wanted her dinner. Mrs. James has lost, in her sense of appetite, the delicate flavor of romance that is the birthright of every lady.

As we reached the entrance I looked back. Val sat alone at the table set for four, and a sudden mist came before my eyes. She looked so little. I seemed to see two pictures of her—as she had come to me that first day in her battered velvet hat and ugly tweed suit, and as she was to-night in her foamy pink cloud and birds of paradise.

Mrs. James coughed, attracting my attention.

"A good girl," she said in a hungry voice. "A good girl. And Lord, how beautiful!"

Val sat on at the table until the waiter she had recognized came near. Then she signaled him quietly. He came towards her, stooping a little in his gorgeous uniform, a napkin under his arm, the interrogatory expression of the waiter born in his eyes. But there was something else there, too, a remorse that was sadder than grief, a dry-eyed endurance of inexplicable suffering. Val said that the tears rushed to her eyes as she looked at him.

How came so much wisdom to be locked up in her heart? That was the marvel as she told me about it. She knew as she met his gaze that he had lost all memory—of her, at least. The words that had been on her lips died away; she clutched the table with her small hands, forcing herself to speak in a gentle, aloof tone.

"Waiter, my party have not arrived. I feel a little conspicuous sitting here alone. Won't you take me to some quiet place where I can telephone—and wait?"

"Certainly, madam!"

He drew back her chair deftly and escorted her from the room. The big lobby was almost empty, but she shook her head at his suggestion that she wait there, and he led the way to a small writing room off the main one. She sat down and looked up at him.

"I wonder, would you telephone to my uncle, Mr. Magnus." She paused. "Does that name remind you of anyone?"

"No," he told her; and he drew his hand across his eyes as if to brush away a film.

"I think it does," she said quietly, "only you don't quite remember, do you? What is your name?"

"Clement," he said, and stared at her.

Once again he made that gesture, infinitely weary, infinitely pathetic, of brushing away something that had tantalized him. A sob caught in her throat, but she forced it back.

"You've been ill, haven't you?" she asked, seeing how thin he had become. "Have you any family, any friends here?"

He hesitated uneasily, moving from one foot to the other. His eyes were on her face now, and she kept hers on him, watching for a faint spark of recognition. He still stood, but she pointed to the chair facing her, and he dropped into it after an instant of hesitation, leaning back as if he were ineffably weary.

And then, as the silence persisted, she had the big idea, the thing that dazzled her as she thought about it. She would tell him the story, the story of himself as she saw it. Perhaps her voice, and the names she would use ——

"I used to know someone so like you," she said. "His name was Clement, too—Clement Forster. He was a surgeon, and people came to him from all over the world to have him cure them. He was a very clever man indeed, but so often he was tired. He had a brother called Dick, and a son named Toddy, and a daughter ——"

She didn't get any further. He stood up, pushing back the chair and peering at her with eyes grown suddenly keen. The shadow had dropped away as if the sun shone on it; he touched the little hand she held out to him, and suddenly his head dropped down on it and he began to cry. Val fell on her knees beside him, the pink dress billowing all about her, her little face a blur of yearning tenderness.

"Daddy," she said, "I've been searching for you everywhere, darling."

"You are like your mother," he said, and looked at her gently, a look that turned almost to criticism. "But your mother was never such a little queen of Sheba!"

And so by degrees the real Clement Forster, the father she had known, came back. But he seemed to her stronger, less dependent than she had ever known him. As she talked to him understandingly he picked up the threads with ease. His trained mind could trace readily just what had happened to him, and he told Val that he had gone out that night when he had disappeared to get a breath of air, to forget a phrase that rang in his memory like a tolling bell.

"Joseph's coat," it went over and over, "Joseph's coat, Joseph's coat."

Haunted thus mentally, and yet physically so tired that he found moving agony, he had run through the streets of the West End. A taxicab had appeared suddenly, and he'd hailed it, sinking down on the cushioned seat and saying only "Anywhere!" The man had driven him to the station, and he'd boarded the train for Liverpool in subconscious effort to escape the sounds within his troubled mind.

Of all that happened when he had finally reached New York he did not know, nor how he got there. He'd come to the end of the money he carried, and then, passing the Adamantine Club one night, had seen the gorgeous uniforms of the waiters, and to stifle that old refrain had gone in and asked for a job. He said it had rested him at first to do that work, but lately he had begun to be troubled because he could not remember who he was nor why he was there; and he hadn't dared to tell his fellow workers that. He shrank from their laughter.

"At first," he said quite simply, "I used to see two faces—Dick's and Toddy's—then gradually they faded. I did not know why I saw them, but I knew they hurt. Val—my little girl!"

"Oh, daddy!" she cried yearningly. Yet as they clung together she knew that he had come back from the shores of forgetfulness with no longer any real need of her.

I don't know, but I think that Clement Forster was glad to drop his enforced rôle and emerge once more as the distinguished surgeon. He never knew that I had heard the whole story. When he came into the apartment with Val later that evening, wearing ordinary evening clothes, it was in his old easy, rather self-assertive manner. I saw then how wise she had been; he would never have brooked the knowledge that anyone of his own, save Val, had seen him. He had accepted her explanation as quite an ordinary thing. Realizing that he had suffered from an attack of amnesia brought on by strain and repressed remorse, he never spoke of it afterwards, even to Valentine; he knew enough to be sure of his cure.

Inwardly she clung to that idea of hers—that he'd worn that gorgeous clothing, done this extraordinary thing—as a penance, even though he hadn't known it. How right she was I do not know. I'm not a psychologist. The only thing that mattered was that she'd found him. That she should have sensed his feeling did not seem remarkable at all to Clement himself. I suppose it came from having lived for many years with poor Marie, whom we always looked upon as stupid.

"Of course, Uncle Magnus," Val said to me late that night, when she had seen her father safely to his room and crept out to me in the library, "he was very upset at first. For such a long time he'd suffered because he'd been harsh with poor Dick and—and perhaps hadn't always understood Toddy. It is very pathetic, really, when you think of it; not even mother suspected how he felt."

"Pathetic?" I growled. "Leaving you to suffer and drag the Green Pond—never a line, just walking off like that! Oh, I know he couldn't help it, but—but he ought to have helped it; and now—to look at him—you'd think he owned the earth."

Around the Clock with 3-in-One

Go around the clock with this wise young housewife and see the many, many uses she has for 3-in-One in a single day.

See how she uses 3-in-One for lubricating all "household machinery"—sewing machine, talking machine, vacuum cleaner, even the baby carriage.

She cleans and polishes her best furniture with 3-in-One and makes mirrors and cut glass shine beautifully by adding a few drops to the wash water.

With 3-in-One she keeps her gas range always spick and span, nickeled parts shining, enamel lustrous, unpolished iron "velvety black." By oiling the handles with 3-in-One she knows they'll work easy.

And, wonder of wonders! She has learned that excellent, economical Dustless Dust Cloths and Polish Mops can be made by permeating ordinary cloths and common mops with 3-in-One.

This great little helper for busy housewives is a pure oil compound, gritless, greaseless. You can't over-oil with 3-in-One—and it never dries out or becomes rancid.

All the many household uses are described in detail in the Dictionary of Uses, packed with each bottle and mailed free with every sample. A post card or the coupon at right will bring both sample and Dictionary. Write for them today.

3-in-One is sold at all stores, in 1-oz., 3-oz. and 8-oz. bottles; also in 3-oz. Handy Oil Cans.

THREE-IN-ONE OIL CO., 165 O. Broadway, New York City

smiled at me forgivingly. Did she faint sigh? "Of course you don't tand daddy. No one really did, ever, darling mother. I—I don't, quite. can't help thinking of how awfully e was I found him, Uncle Magnus. s frightfully tired of wearing Joseph's

lare say!" I said grimly.
rouldn't even flash back the tiny le of humor that showed as she fin-

I didn't approve of Clement Forsd I never shall. I could hardly make f sorry for him, and yet without Val-'s faith what a fate might have been Perhaps he'd never have remem-: perhaps he'd have lived and died ter. Oh! I was sorry for him when ught of that; but something troubled I couldn't sleep until I had ques-d her further.

'our father ——" said I.

were interrupted by a knock. Briggs ed; his manner was so perfect as al- to be unctuous. He carried a salver s hand, and before us deposited some gram forms.

Mr. Jim suggested before he left, Miss ntine, that you might want to send a age to your brother. Something after manner, miss?"

e indicated a message written in a clear, le hand.

mething dawned on me, something had not previously been clear. I hed for my check book.

Something of this kind, Miss Valentine, ing from the hospital in London, would r Doctor Forster greatly. Also, there boat on Saturday; we might secure sportation."

le waited gravely. The message was g, but it was very clear. Clem would erstand exactly what to do. He could ch from his couch, call the hospital, e them send an urgent cable to the er surgeon asking him to make all haste returning. Val read it through twice. aw her lips twitch. Then she bent and ed her name.

"That is an excellent idea, Briggs. I—I nk it had better be sent at once, don't u?"

"Yes, miss; very good, miss."

I could have sworn that he strutted, ough he hurried from the room.

"Uncle," said Val, "has it occurred to u—wasn't it strange that Briggs had nner all ready for you here when you and m and Mrs. James got back? Jim told e he laughed. I—uncle do you think im thought of that cable?"

I shook my head, sighing. "No, honey, don't; the message was in Briggs' own riting."

"And Jim said that he suggested our oing to the Adamantine Club. Of course t doesn't seem possible, uncle, but it almost—doesn't it look to you as if he must ave known—about daddy?"

"He probably did," said I bitterly. "He as undoubtedly already engaged staterooms on the boat sailing on Saturday, and—and passage for two."

My voice grew a trifle husky. I swear I couldn't help it; when a man is older he wants a pretty young thing of his own close to him. It seemed too bad that Clement Forster should have everything. I worked myself up into quite a state about it.

"If he has," I said, "he loses that thousand dollars, and I swear I'll dismiss him. I want a servant, not a secretary. Briggs is altogether too perfect."

"Oh, he hasn't taken passage for me, has he?" said Val in alarm. "It—it is all right about daddy, of course. I really think he had better go. He fits best in London, I think, don't you? But I couldn't go, Uncle Magnus, could I?"

She seemed to be waiting for something.

"You are going to marry Jim?" I asked. How heavy my heart felt! I could hardly bear the light in her face.

"Marry Jim?" Her voice was strange as she repeated my words. She began to laugh. "Oh, no," she said, shaking her head in the adorable way she had brought over from babyhood; "I couldn't marry Jim. He wouldn't want me, really; he just thinks he does. Why, Jim isn't old enough; he's just a boy."

"He's three years older than you."

A shadow flitted across her face. "It seems as if you wanted me to marry him," she remarked resentfully.

"No, no!" My words were vehement. She turned from me, but I could see her eyes as she faced me in the mirror. I don't know just what exclamation fell from my lips. "Mrs. James said I knew nothing about women!" I added, almost as if the words were forced from me.

"Mrs. James? Mrs. James? What has she to do with us?" Val shot at me; there was something like a flash of fire in the quicksilver voice.

At that minute Briggs tapped and entered again.

"The cable has gone, Miss Valentine," he announced in his best manner.

She thanked him, floating from the room silently like a gay butterfly. Something went with her, the doors of paradise shut. What a gray old world!

"Damn you!" I roared at Briggs. "Don't you know when you aren't wanted? No, don't go; now you are here we'll have a little explanation. When did you learn of Doctor Forster's position in the Adamantine Club?"

Briggs did not falter. He appeared to meditate. "I think it was three days after Miss Valentine arrived, sir."

"And you kept this knowledge to yourself? You allowed my niece to live in anxiety about her father? You ——"

"Well, Mr. Magnus, I kep' my eye on him, sir; he wouldn't have escaped me, I assure you. And it isn't as if Miss Valentine were really your niece; that's all a pretense, of course. Why, she never even speaks of you as uncle to Jane or me, no more. It didn't seem to be giving the thing time, sir, to find the doctor in three days."

His eyes had grown almost wistful; he looked at me respectfully.

Then he drew himself up and resumed his normal manner, standing back for Val to enter.

"If you please, miss," he said quietly, "I've taken passage for the doctor, Stateroom B—17, on the upper deck."

He seemed to melt from the room.

Valentine came towards me quietly, her blue eyes shining through tears.

"You see he didn't take passage for me," she said. "Will you fix it with him? I—I don't want to ask him myself."

But even then I didn't understand. I had to turn away from her, I felt so strange. Life had grown so gray. Now at last I knew that I was really old; I'd been playing with the idea before.

"Yes, I'll ask him," I said tonelessly, and picked up my pen. That silver voice was murmuring in my ears.

"Three days until Saturday—three days more."

As if she had taken a sudden resolution she stood up, her eyes brighter than I had ever seen them, the flush in her cheeks a brilliant rose.

Over and over in my mind went that phrase of Briggs: "It didn't seem to be giving the thing time, sir, to find the doctor in three days."

What thing?

I lifted my eyes to Val, and heard her catch her breath. She came closer, leaning over my shoulder, watching me write.

"A thousand dollars," she said curiously, "for Briggs?" She flashed a glance at me.

"Payment, little Val, for something he did for me; even perfect servants have their price."

A smile twinkled deep down in the blue eyes, came gasping to the surface in a half incredulous laugh. She looked at me, puzzled, radiant, the sudden clear joy of love shining through. The lovely, lovely thing!

The world rocked about us. I caught her to my breast. Not even to her father did she use the exquisite tone that now carried her thoughts to me. The spring wind floats the breath of violets to the stars in some such melody.

"It only took three minutes to make you love me, Magnus, and I had three days!"

"I've loved you from the first moment—only I didn't understand. Briggs did, the old rascal!"

I told her what he said.

She smiled up at me, her small face transfigured.

"We'll always keep him, won't we, Magnus dear? He's almost perfect, I think."

"If I hadn't asked you to marry me he'd have given me the idea—before Saturday."

She laughed in gentlest mockery—but I believe it. Then as I looked at my little love I forgot all about Briggs. I kissed her dazzled eyes softly. The frail feathers of the birds of paradise framed the lovely face—the face I had first seen beneath an old and battered hat. How thankful I am that she ever had that odd idea about Joseph's coat!

Drink it Through a Straw

They all taste better through a straw

What's *Your* Drink?

Chocolate Soda
Orangeade
Lemonade
Iced Tea
Iced Coffee
Milk
Ginger Ale
Sarsaparilla

Always use straws at the soda fountain

They Safeguard your Health

3 Phases of L.B. Service to 125,000 firms

TODAY, business is taking a self-inventory of methods. Slipshod practices get roughshod treatment. Profit-making executives scrutinize profit-draining departments.

And they find Library Bureau the one ally able to help them turn wasteful files and records into profitable business producers, through these special services:—

L. B. Analysis Service

L. B. Analysts sift out filing conditions in any business and lay full recommendations before executives. Hundreds of organizations have profited by this service.

L. B. Indexing Service

Trained L. B. operators shoulder the clerical burden of initiating or reorganizing file and record systems, irrespective of the size or nature of the business. Library Bureau has thus served banks, insurance companies, railroads and thousands of other businesses, large and small.

L. B. Schools of Filing

Untrained personnel can ruin the most efficient system. Library Bureau has enabled many firms to enjoy competent help through the graduates of its several filing schools. Every phase of the science of filing and record-keeping is taught. A recently instituted correspondence course has placed this training within the reach of young women everywhere.

These and other phases of L. B. Service have caused progressive firms in every industry to turn to Library Bureau. For whenever any problem in connection with filing and record-keeping arises, Library Bureau's leadership is unquestioned.

The Six Big Divisions of Library Bureau Service

1. Special Service

Analysis Service: Trained experts analyze your file and record needs and furnish full recommendations. Send for folder No. 612.

Indexing Service: Prepares and writes card records. Transfers accounts from books to card ledgers. Relieves you of the clerical burden of installing new card and filing systems. Send for booklet No. 822.

Statistical Service: A unique service to business executives. Prepares confidential statistics from figures supplied by any business. Send for folder No. 919.

2. Specialized Departments

Bank Department
Send for booklet No. 805.

Government Department
Send for booklet No. 818.

Insurance Department
Send for booklet No. 704.

Library Department
Send for catalog No. 812.

Schools of Filing
Send for booklet No. 503.

L. B. Service includes the planning of new systems, special and stock equipment, laying out filing and record departments, the preparation of confidential information.

3. Filing Systems

Alphabetic
Geographic
Numeric
Subject
L. B. Automatic Index
The Russell Index

Library Bureau installs the filing system that best suits the needs of any business. Send for book No. 709 or Russell folder.

4. Card Record Systems

L. B. Sales record—sales information at the sales manager's finger-tips. Send for folder No. 615.

L. B. Stock record—eliminates over-stocking or under-stocking. Send for folder No. 605.

L. B. Card ledger—saves space, time and money, over bound or loose-leaf ledgers. Send for booklet No. 711.

L. B. Visible record file—combines unit feature of cards with visible feature of the book index. Send for folder No. 713.

5. Cabinets—*Wood and Steel*

They are used by 125,000 businesses. L. B. quality is standard.

L. B. has originated many labor-saving devices:

Vertical units.
Card record desks.
Counter-hight units.
Card ledger trays.

Send for catalogs Nos. 707 and 708.

L. B. Record Safe. Send for folder No. 712.

6. Supplies

L. B. Cards—Over 2,500,000 a day. More than 1,000 stock forms. Known for their uniform quality, accurate size and smooth edges.

L. B. Folders include every kind; notably the famous L. B. Reinforced folder which saves valuable space in file drawers.

L. B. Guides include plain, printed, celluloided, removable label and metal tip.

RITA COVENTRY

(Continued from Page 19)

s, she became enthusiastic as a child, allenged Parrish to a match.
e loser to give the winner a prize," ified.
right. What shall it be?"
at's for the loser to decide."
as his purpose to allow himself to be d and to make his vanquishment an for giving her a present. He had ishing to give her a present. What ld be he had not determined beyond ct that it should be something ex- and precious; something worthy of d of his feeling for her; a piece of y, doubtless; perhaps a linked brace- platinum and diamonds such as he ought of giving Alice for her birth- except that for Rita the diamonds be larger to bear comparison with her jewels. Not that he had the least ht of overlooking Alice's birthday. urse he would get her something: hing nice, though less expensive than nond bracelet. He simply could not two.

a having emptied the magazine of her and made a not discreditable score, sh began to shoot.

must miss about every other shot," id to himself, and he commenced by so. Then it struck him that Rita t notice the even balance between the nd misses; wherefore he began to vary rogram, with the result that he lost t of his score. He found it, moreover, usly difficult deliberately to take false Two or three times he said to him- "I must miss this one," yet when he he would not miss. The targets drew rifle barrel as the magnetic pole a le. It was easy enough to miss if you t want to, but difficult to do it by nt. Trying to miss was like trying to at cards. To bring oneself to do it— competition and against a woman who never held a gun before—was absurdly cult. Yet Parrish, as he fired his last , believed that he had thrown the ch to Rita.

'Well, you win," he said, laying down little rifle.

'Why, no!"

'Certainly you do!"

The attendant set him right.

"You trimmed the lady by three hits," d he.

Parrish was surprised. However, it n't matter. Really he needed no excuse giving her the bracelet.

"You shot well for a beginner," he said they proceeded up the Boardwalk.

"I'm glad you think so. It's lots of fun. w you shall have your prize."

Like a child at a party he was wondering hat the prize would be.

"Now?"

"Yes. We'll go in here." She was head- him up a short connecting walk leading the door of a hotel grillroom.

"For the prize?"

"Yes. The prize is an ice."

He was a little disappointed. Not that e desired a handsome gift from her—had he proposed such a thing he would have rotested, and sincerely—but he wished hat she had thought of something more ersonal and less trivial; something he ould keep.

This grillroom was one of the gayest lancing places on the Boardwalk. The alf dozen negroes who supplied the music were not playing when they entered and the vacant central space with its surround- ing banks of tables made Parrish think of the sandy bed of some drought-stricken stream. Then the drum rolled and there came a burst of jazz music, whereupon the empty space was inundated, becoming a whirlpool on whose surface dancing figures drifted round and round, bobbing, swaying, spinning this way and that, like flotsam at the mercy of capricious currents.

"Aren't you going to ask me to dance?" demanded Rita presently.

The proposal came as a mild shock to Parrish. In his twenties he had enjoyed dancing, and though his interest in it had diminished with his advance into the thir- ties, he had remained a dancing man until, more than a year ago, at the time of Clara Proctor's protracted visit to Alice, in New York, he had found it expedient to renounce the pastime.

In this renunciation Clara had been the determining factor, for there had come to the apartment in her train a following of sleek-haired, facile-footed youths whose entire thought and talk was of dancing places, orchestras, tunes and steps; and though Parrish had tried at first to make himself agreeable to Clara and these friends of hers, on Alice's account, taking the two girls and the young men on several nocturnal jaunts to realms of jazz, he had soon perceived that Clara and the youths—her troupe of trained seals, she called them—regarded him as nothing more than a convenience: someone to provide liquor and a limousine and settle restaurant checks. Neither for Alice nor for him did they show the least consideration; once they became ensconced in some noisy half-disreputable dancing place, they were never ready to go home. He did not care for Broadway night life and knew that Alice liked it not at all; each time he took them out he saw her growing fatigued with the din as the night wore on, and, himself tired and bored, would finally suggest that it was time to go, but only to be overruled by Clara and the youths, who under the combined spell of jazz and high- balls seemed to contract a mild hysteria, a dancing frenzy which possessed them like some demon that only the light of dawn could exorcise.

After several of these unsatisfactory experiments Parrish ceased to invite them out. But they continued to go, and Clara, who did not wish to be the only woman in the party, was constantly tugging at Alice, endeavoring to persuade her to accompany them on their jaunts about town. This put Alice between two fires. She did not wish to go, and knew that he did not wish her to, yet she sometimes felt obliged to ac- company her visitor.

It was when he perceived Clara's per- sistent selfishness that Parrish put his foot down. Partly to protect Alice from further imposition, partly to protect himself from the continual intrusions of Clara and the youths when he and Alice wished to be alone, he declared his purpose of giving up dancing altogether and asked Alice to join him in so doing. Of course she agreed; she always did as he asked her to. From that day to this he had not danced; that fact— of course without the details—was his ex- cuse to Rita now.

"I haven't danced for a long time," he told her.

"Oh, never mind. Come on."

She had already risen. There was noth- ing else for it. Reluctantly he accompa- nied her to the floor. Then all at once reluctance turned into delight; the flow of music caught and wafted them away as easily as if they were adrift on a swift stream in a canoe; he might have known that it would be like this!

"And you didn't want to," said she in light reproach.

She was all music. Her speaking voice, rich and mellifluous, was like her tread in walking, while her dancing—ah, it was like a song expressed in motion.

"I want to close my eyes," he said.

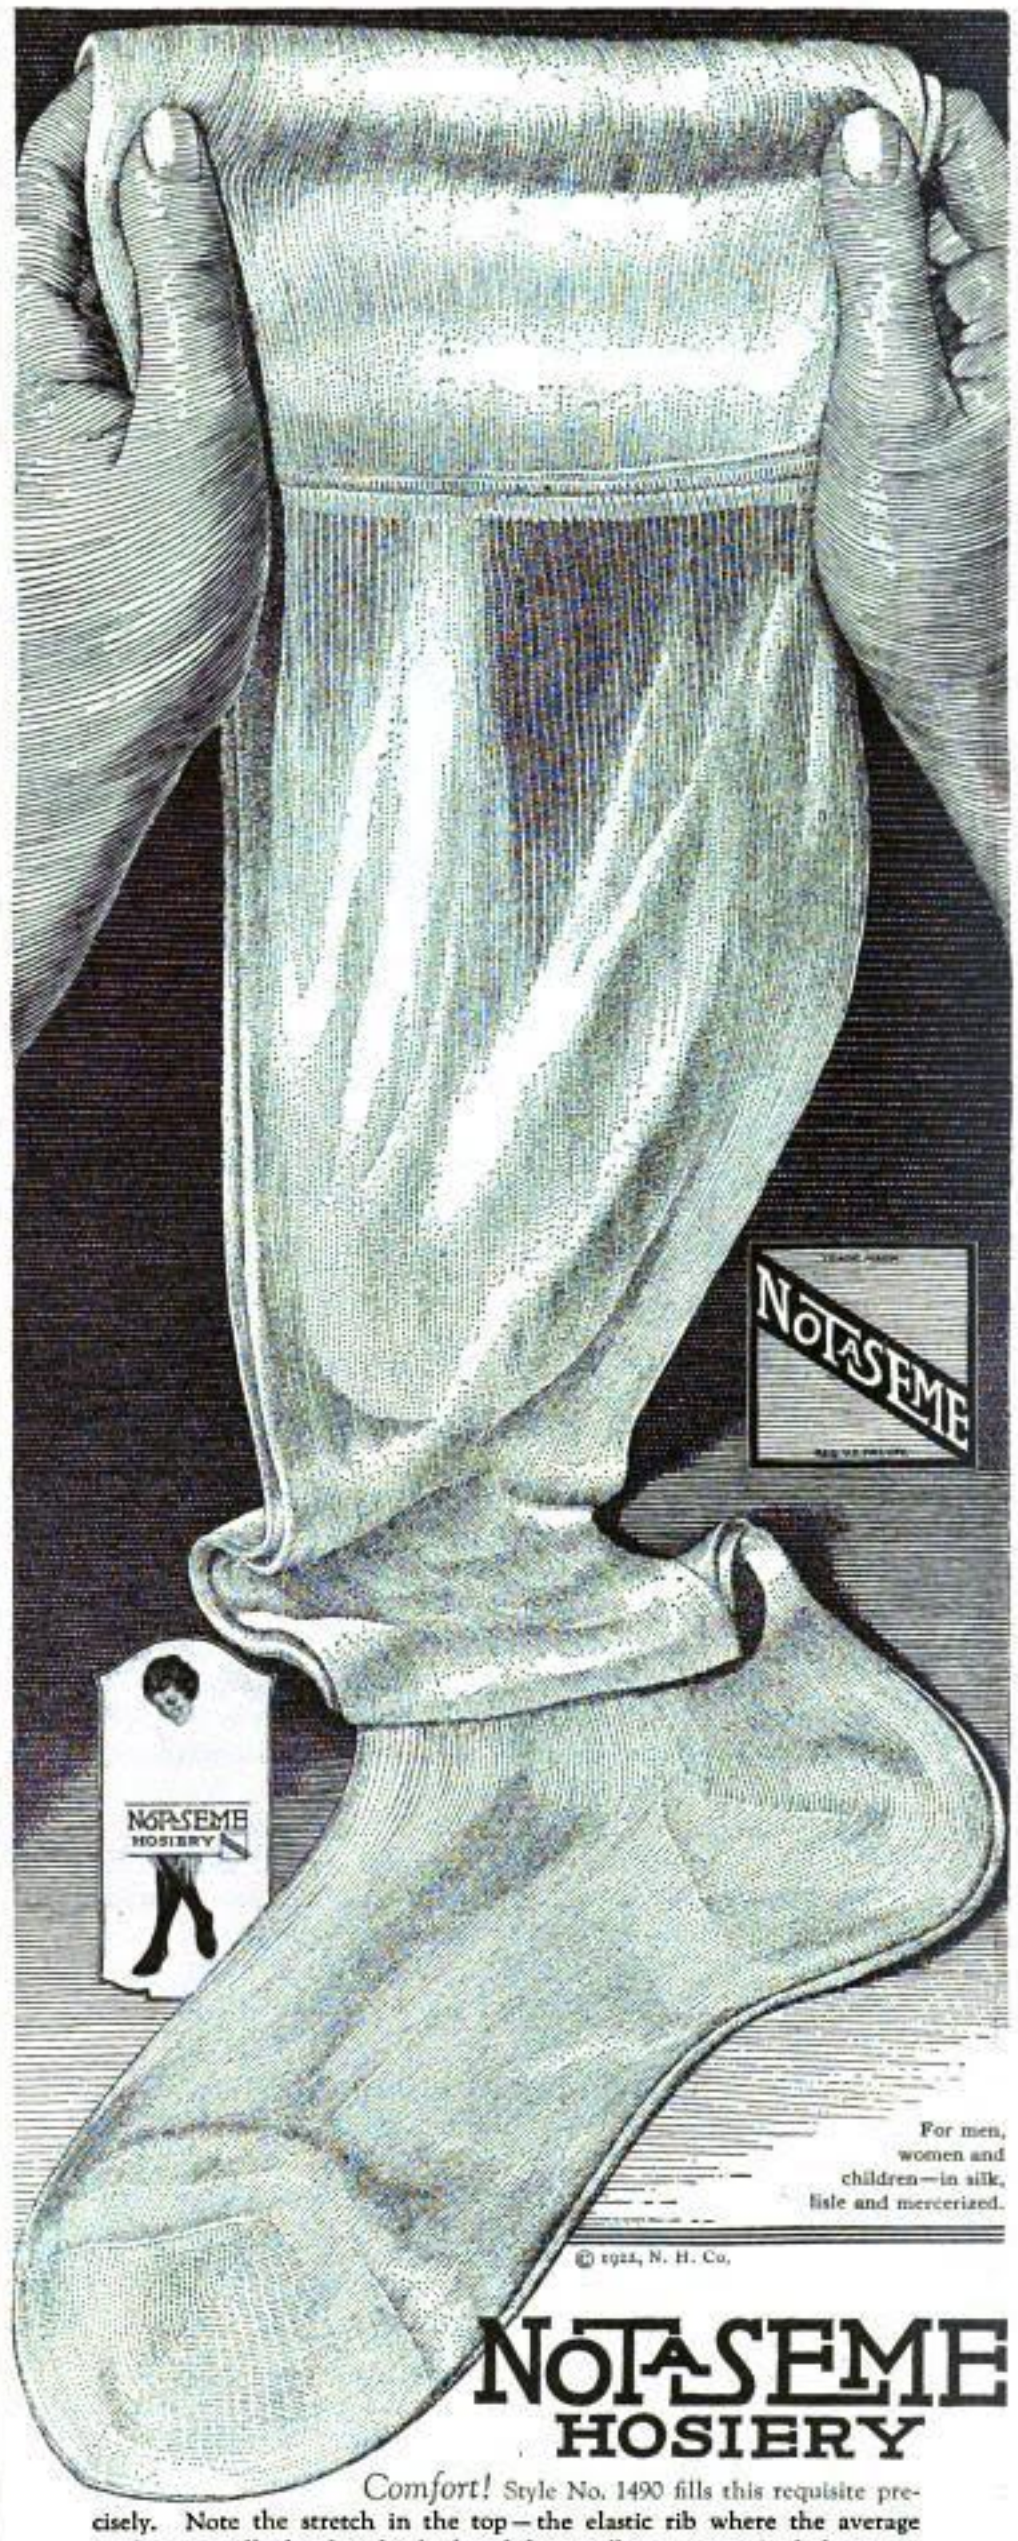
"Do, then. I'll guide."

He let his lids fall, and in that artificial darkness, surcharged with melody and movement, experienced an exquisite sensa- tion as of soaring with her in a perfect oneness through a vast sweet night.

"Now," he murmured, "we are far up among the stars. How huge the heavens are! We must hold to each other, Rita, or we may get lost."

His eyes, opening, encountered hers. Not since the night of their first meeting had he looked into them at this close range; now, as then, he gazed like one who seeks to penetrate the depths of some unfathom- able sea.

"Are you sorry we danced?" she asked with the shadow of a smile as the music died away.



She knew he was not sorry, and he told her so as they moved toward their table.

"And yet," he added, "I don't want to dance again—not now; perhaps never again. I want to keep this memory."

She nodded, then suggested "Shall we go?"

"Yes, if you'd just as soon. Let's go out and look up at those stars we were among a little while ago."

But when they first emerged from that brightly lighted place they could not see the stars. Above the glitter of the Board- walk lamps the sky looked black. Not until they had walked halfway to their hotel, accustoming their eyes to this lesser

Pattern No. 8040. This shows the possibilities of an old-fashioned stained wooden floor when covered with a Blabon Rug of genuine linoleum.

A Blabon Rug of genuine linoleum — not a costly woven rug!

For beauty of pattern, richness of coloring and length of wear, a Blabon Rug vies with even the fine grades of fabric rugs. Yet a Blabon Rug costs so much less!

And little care is required—only a light regular going over with a damp cloth keeps a sanitary Blabon Rug clean and bright. It is mothproof and lies flat without fastening. No vacuum cleaning, no hard sweeping, no beating is necessary. Blabon Rugs make housework easier.

Visit your dealer and see the Blabon Rugs of genuine linoleum in an assortment of sizes in beautiful designs and color combinations.

For genuine linoleum look for the name Blabon. If your dealer hasn't Blabon Rugs write us.

To make sure that the dealer offers you genuine Blabon Linoleum insist upon seeing this label which appears on the face of all Blabon Art Linoleums.

BLABON Inlaid Art Linoleums

Important Notice: Floor coverings (including rugs) made upon a felt paper base are not linoleum, and to describe, advertise, or sell them as linoleum is a violation of the law. Felt paper floor coverings have a black interior which is easily detected upon examining the edge.

BLABON RUGS of genuine Linoleum

brilliance, could they discern dim pinpoints of light overhead.

"Let's go out on the balcony," he suggested when they reached Rita's sitting room.

How different now the aspect of the heavens! Half the universe seemed to be spread out before them, the great dome, star-dusted, overhead; and below, stretching away to a mysterious horizon, a sea of blackness on which white lines of surf continually formed and faded.

"It's our world," he said when they had stood for a time by the railing looking out at the stupendous spectacle. "It's all ours. No one else can look at it without permission from us. We'll issue a few tickets; but only to a select group, and they mustn't stand where we can see them; and of course they must be lovers."

"Yes."

His arm stole around her. He leaned and let his cheek touch hers. How cool and sweet it was; how soft her hair against his brow! His arm about her trembled. He turned her toward him, closed his eyes, and with that power of divination that comes in the dark to lovers found her lips.

One of her hands was resting on the sleeve of his overcoat, and now he could feel it creeping upward slowly along the collar of his coat and so around his neck.

"Tell me you love me, Rita!"

She moved her head as though in acquiescence.

"But tell me! Say it!"

She drew away a little.

"I love you," she said. "That is ——" And there she stopped.

"A lot?"

She did not answer instantly; she seemed to be questioning herself; then, "Yes," she replied, "I think a lot."

"But if you love me a lot," he asked her, "why did you want to qualify at all?"

"Only because these things—if I shouldn't love you always so much as you wish me to—if it should end—why, then I ——"

He did not hear her out.

"But it's not going to end!" he cried, drawing her close to him again. "It's going to grow! It's going to be the big consuming thing in both our lives! You'll see! You'll see!"

XX

HE WAS already thinking of Rita when early next morning he awoke. Sunlight was streaming into his open windows with the fresh salt air. His sleep had miraculously refreshed him. He leaped out of bed like a happy boy, and sang to the accompaniment of his running bath water and the metrical click of his razor on the strop.

Few people were in the dining room at that early hour, and when, having breakfasted, he passed out to the Boardwalk he was astonished at its emptiness. It was like Wall Street on a Sunday, he reflected; and it occurred to him that there was something as startling in the spectacle of emptiness where usually there is a crowd as in the spectacle of crowds in unaccustomed places.

For a moment he leaned upon the iron railing, watching the surf break on the golden sand and drawing deep breaths of mild, invigorating air. It seemed to him that he had never smelled a breeze so sweet or seen a sun so brilliant. What a pity, he thought, as he walked briskly off, that everyone was not out to enjoy the morning. What a pity that Rita was not up to walk with him.

She had told him that eleven was her hour for rising.

By half past ten he was back at the hotel, waiting in his room, and promptly at eleven he telephoned to her. His good morning had the sound of a caress.

"How did you sleep?" he asked.

"Splendidly. And you?"

He told of his early start, his walk, the glory of the day.

"You never saw such a morning. You must hurry and get out."

"But you won't want to walk any more, will you?"

"Just try me! When will you be ready?"

"I'll hurry all I can."

"Let me come and sit while you have breakfast."

"I've had my breakfast."

"Then let me wait in your parlor while you're getting ready."

"The piano tuner's there."

"Oh!" He wanted so much to see her. It was hard to wait.

"I'll meet you downstairs in the lobby in an hour."

This morning, however, she was punctual. Five minutes—ten minutes—fifteen minutes past the appointed time sat watching the elevators. There began to return to him dimly, like memories of a nightmare, recollections of other times when he had waited for her thus—in vain. Matters were, however, on a different footing now; there would be no more of this miserable uncertainty; this was the morning of little tardiness.

Still—what was keeping her? She should surely to be down by now. He would go to his room and ring her up again. He ascended, and alighting from the elevator moved down the corridor; but instead of stopping at his own door as he had intended to he continued until he came to hers. As he drew near he heard the muffled sound of a piano, and he was raising his hand to knock at her door when he realized that the music was coming from within.

Ah, that then was the cause of the delay. Naturally. The piano tuner having completed his work, Rita was trying out the instrument and, artistlike, had lost all track of time.

Without knocking he paused. Sawyer, the night of her dinner party in New York, when she had accompanied herself in Drink to Me Only With Thine Eyes, he had never heard her play, and he was astounded now by the brilliance of her virtuosity.

The composition she was playing was not familiar to him. It was a strange thing, full of curious melancholy cadences. He stood motionless, listening, until the last notes had been struck. Then he knocked.

"Why didn't you let me know that you were playing?" he said to Rita when she opened the door. "I should have loved to sit and listen."

As he took a step toward her she stepped back, raising her hand in warning.

A young man was seated upon the piano bench. His back was turned and he did not look around, but it was unmistakably a young back, and there was something youthful, too, in the look of the head—curly hair, thick and short cropped, which stood up upon the head like sculptured hair upon a Greek statue.

"Oh!" said Parrish vaguely, looking at the back.

"It was Mr.—ah ——" Rita paused, giving the stranger time to announce his name; then, as he neither spoke nor turned his head, but did a light swift run with his left hand, she raised her voice slightly to indicate to him that he was being spoken to, saying, "I don't think you told me your name?"

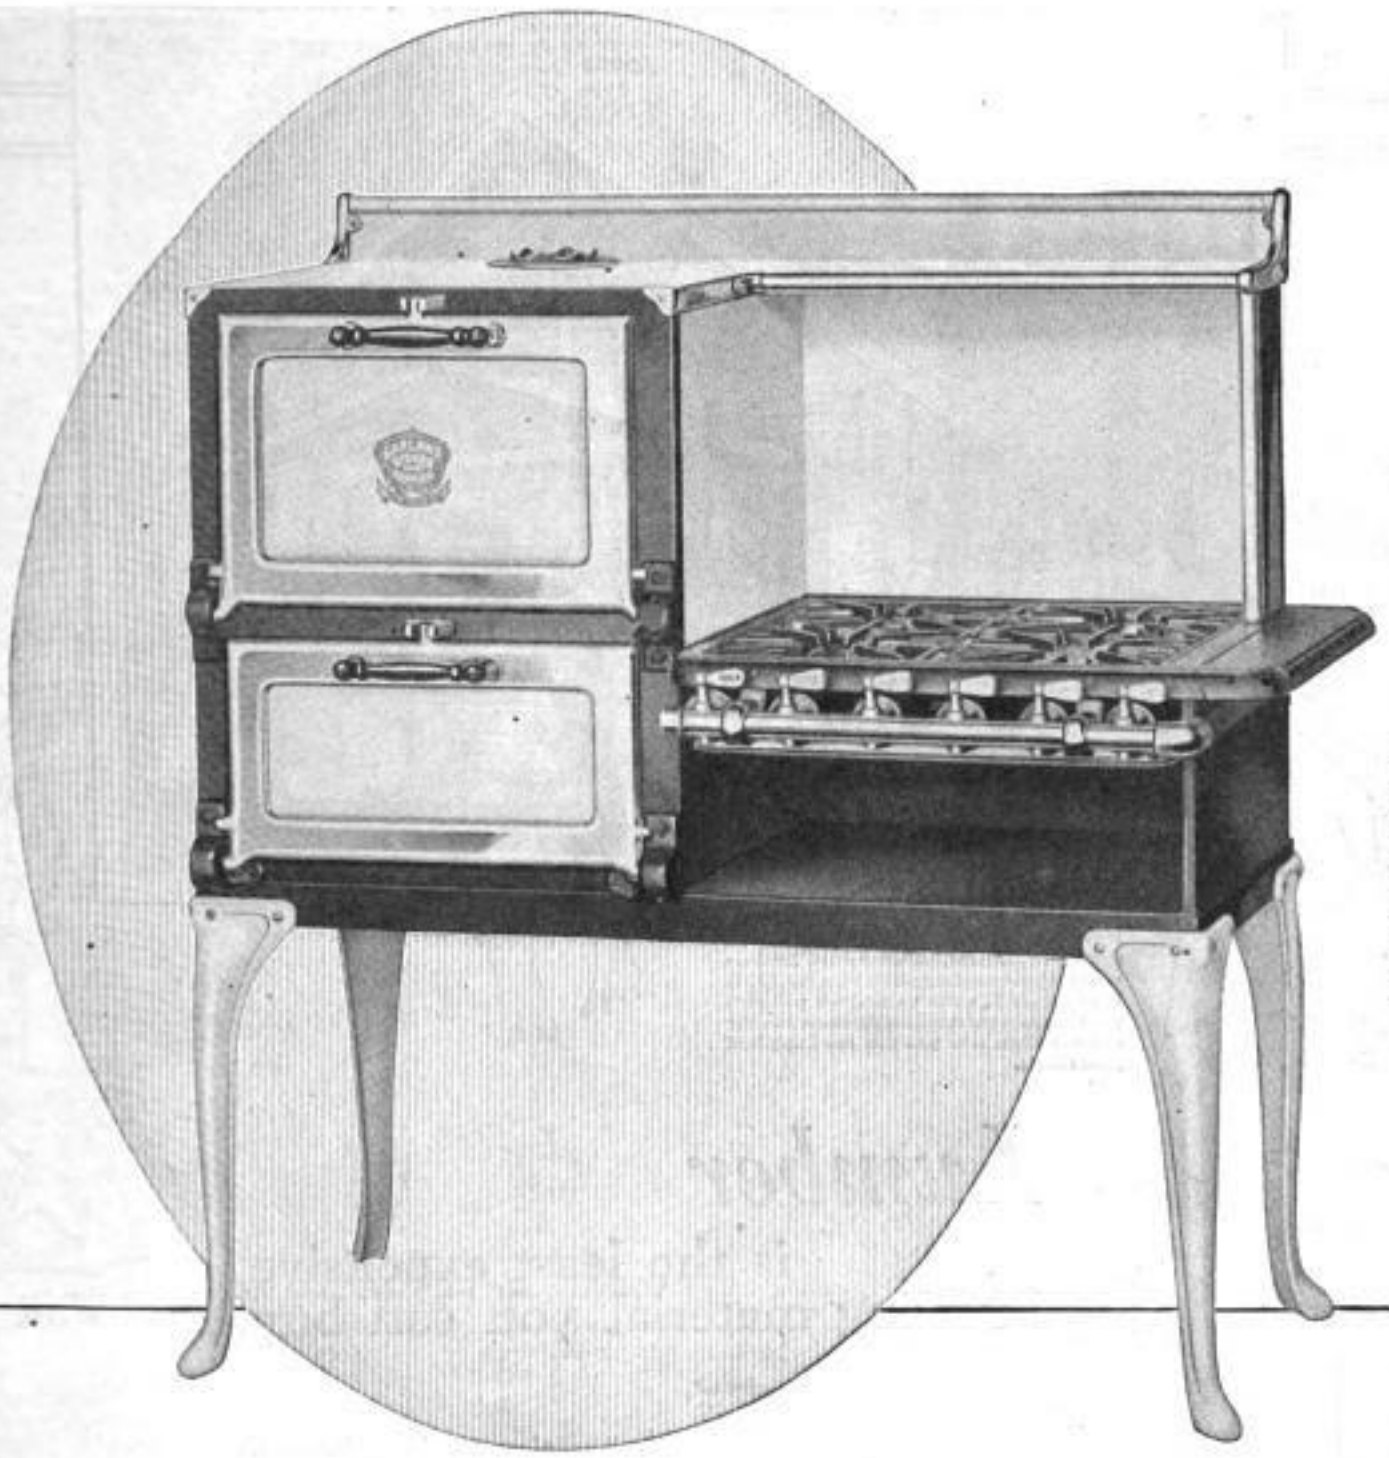
At that the other pivoted slowly.

"Delaney," he said, looking up at her.

"This is Mr. Parrish, Mr. Delaney."

The young man seemed to see Parrish now for the first time. He gave him a nod, making simultaneously a slight throaty sound which the older man interpreted as meaning "How are you?"

"How do you do?" said Parrish, advancing and holding out his hand. Meanwhile he was thinking, "He doesn't mean to be rude; he's shy and awkward."



Thus cornered, Mr. Delaney got up from the piano bench and shook hands hastily, as one who would fain get something over with. Though his hand was not large it was square and strong, but there was a nervous quality in the grip it gave, and in its quick escape. Parrish felt as if his hand had been dropped.

The young man's glance was like his handshake. The light-blue eyes, large, intelligent and slightly prominent, held a vague expression as they encountered Parrish's, and they dropped quickly, seeming first to study his scarf and then his watch chain.

If Mr. Delaney's manner was unusual, so was his physiognomy. His was not one of those faces that fall conveniently under some everyday classification; Parrish had never known anyone who looked in the least like him, yet he was perplexed by a paradoxical feeling that the face was familiar. It was a Celtic face, although the strongly modeled features had the kind of regularity we associate with the art of classic Greece—a fact rendered the more striking by the sculptured hair, growing well down upon the forehead. Suddenly Parrish knew why the face had seemed familiar. Mr. Delaney was a prototype of the Hermes of Praxiteles—a slenderer Hermes in a shoddy suit of twentieth-century clothing. Of course! Why, he even had the soft cheek of Hermes and the

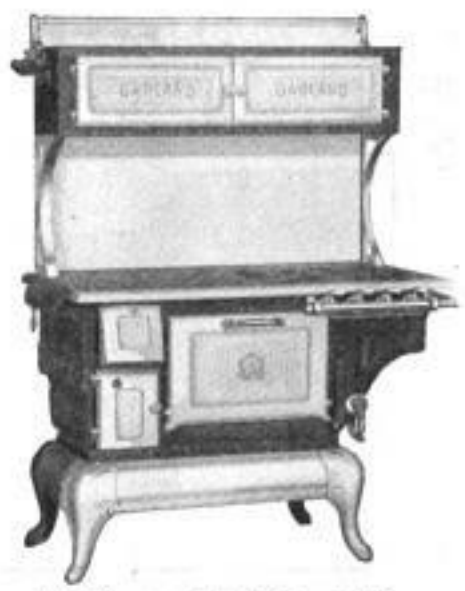
This Garland Gas Range is finished in full white glistening porcelain enamel as well as semi-enamel. It is wiped clean like a china dish. Both the large baking and the broiling ovens are ventilated to give that uniform heat for which the Garland is famous. The large cooking top is equipped with the patented Garland heat spreading burner, which saves you 10% in gas consumption. Garland Gas Ranges are made in every size and finish to fit every kitchen requirement.

GARLAND STOVES AND FURNACES
The World's Best
TRADE MARK REGISTERED



Chosen by More Than 4,000,000 American Homes

It is both impressive and significant, that more than 4,000,000 American homes will have no other cooking or heating equipment than Garland.

It is reasonable to believe, also, that this overwhelming preference is an acknowledgment that Garland products are better and that they cook and heat better.

The fact is that not only in these 4,000,000 American homes, but in 80 per cent of the modern kitchens of all our hotels, restaurants, and institutions as well, Garland ranges are preferred and used.

Unquestionably, Garland products are thus preferred because they cook and heat better, and because the features which produce these desirable results are found nowhere else—whether the fuel be gas, coal or wood.

This illustration is the beautiful Garland Simple Action, three-fuel Combination range, which cooks and bakes perfectly with either gas, coal or wood. By simply pulling the lever you change from one fuel to the other. Both fuels can be used at the same time when needed. Made in various sizes and finishes, it is one of our most popular Garland models because it assures a warm kitchen in winter and a cool one in summer.

If you do not know the name of the nearest Garland dealer, or if you have any heating or cooking problems, write direct to us because there is a Garland heating and cooking device for every purpose.

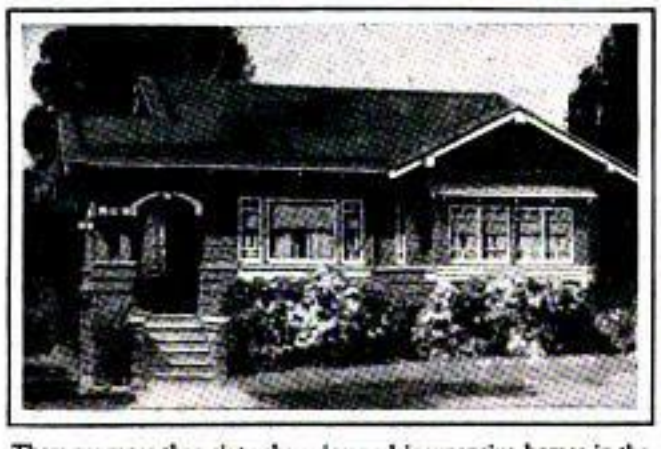
If you admire this cozy little home here at the top of the page, ask your retail lumberman to show you Long-Bell Plan No. 1277. If he hasn't it, write us and we will give you the names of retail lumbermen in your community where you can see Long-Bell plan sheets.

Lumber



is the least expensive building material you can buy

There was a time when it was commonly believed that homes, to be beautiful and modern, must be big and expensive, and that only the well-to-do could afford them.

TODAY, throughout the land, there are being built small, inexpensive homes of wood that bear every mark of charm, distinction and convenience. For, it has been found that *design* and *arrangement*, and not costly materials or huge size, are the real essentials of beauty in home building.

NINE OUT OF TEN of these small homes are built of wood, because beauty, coziness and homeyness are best obtainable by building with lumber.

AND LUMBER *is the least expensive building material you can buy today.*

There are more than sixty charming and inexpensive homes in the Long-Bell plan service. This one at the bottom of the page is Long-Bell Plan No. 254. Ask your lumberman. If he hasn't it write us and we will give you the names of retail lumbermen in your community where you can see Long-Bell plan sheets.

Keep in mind the importance of good lumber. The permanence of your home depends upon it. To obtain dependable lumber of uniform high quality in all grades ask your lumberman for—

immortal youth, albeit Parrish his age to be twenty-six or twenty-

wishing to put the other at his e older man spoke cordially. t was a lovely thing you were play- said. "I waited outside the door. as it?"

ey thrust his hands deep into his pockets, bent his head forward as studying his feet, and took a few own the room.

wouldn't know it," he declared. art of a concerto."

own," Rita put in quickly.

don't say!"

youth had turned and was now by no again.

y it over, won't you?" said she.

lanced at her quickly, shaking his hen looked down at his shoes again. I told you I hadn't worked it

y, yes, you have. Certainly that ino movement is ——"

t andantino—adagietto," he cor-

smiled.

ere's very little difference," she re-

beg your pardon," returned Mr. ey, showing the faintest shadow of a and raising his voice to a slightly tenor note, "but there is every nce. There is exactly the same dif- as between andante and adagio."

rish looked expectantly at Rita, but ly answered, "Perhaps you're right."

ertainly I am right. Otherwise, why m?" Then, as she failed to reply, but gazing curiously at him, he said, me show you—in this song," and ng down to the piano bench again, to play.

a followed him to the piano, and behind him, watching his hands ly.

ere," he said. "When I play it this it's andantino; but if I do it like this, it's adagietto." He looked around at "You see?"

dismissed the elucidation with a little asking:

Is that yours too?"

Yes."

Unpublished?"

Yes. I've had nothing published."

It's a folk song, isn't it?"

An arrangement of Bonnie Doon," said "The familiar arrangement always ir- ted me. It's such a silly jig tune."

o Parrish, Bonnie Doon was one of eral folk songs that were sacred. He embered his mother's singing it long at the old square piano. He did not to hear it spoken of with disrespect. reover he was revising his first impres- of Mr. Delaney.

"Silly jig tune?" he repeated in a tone htly hostile.

"Exactly," replied the other. "It's all pped up." Then, lifting his light voice song he cruelly burlesqued the ancient angement:

banks and braes o' boh-honn-nie
Doo-hoon,
How can-hann ye bloo-hoom sae fre-hesh
and fair ——

"You see?" he said over his shoulder. The music doesn't fit the words at all."

"For a good many years," Parrish re- arked dryly, "people have been under an pression that they fitted."

"Well, they don't," said the other. That's only one of many queer impres- ions people have. They're full of 'em. ost people think that air was written for Bonnie Doon, but it wasn't. Not any more than my suit was made for you. It as written for an entirely different song."

"Nevertheless," pursued Parrish, "I ontend that there is a delightful quaint- ess about it."

"Oh," said the other, "if you're talking f quaintness ——" He gave a shrug. "I'm talking about the fitting of music to words."

"Play your arrangement again," Rita put in quickly.

Delaney did so.

"Really," she exclaimed when he had finished, "it's lovely." She looked at Parrish, asking, "Isn't it?"

"Why, yes," he said; "but ——"

"And you mean to say," she went on, "that you haven't published any of these charming things of yours?"

"I've sent them around," said he.

"And nobody would take them?"

"Nobody except one fly-by-night firm that wanted me to pay to have them published." He smiled up at her.

"They will take them!" Rita cried.

"Maybe—some day," he returned coolly, still smiling up at her, while his hands fluttered over the keyboard in a light improvisation. "Some day after I'm dead, I guess."

The idea seemed genuinely to amuse him, as if it were a jest not at his own expense, but at the expense of music publishers. His smile was infectious; his face lighted with it, his eyes looked roguish, dimples appeared in his cheeks, and his lips, drawn back, revealed two rows of hard white teeth. Though the young man had incensed him, and though the smile was not for him, Parrish found himself almost betrayed into an answering smile. He checked the impulse. Rita, however, burst into a laugh.

"If you're planning to die before they publish your arrangement of Bonnie Doon," said she, "you'll have to hurry up."

"What makes you think so?"

"Because it's going to be published at once!"

Unmoved, he demanded again, "What makes you think so?"

"I'm going to tell them to. That's why!"

"And you think that when you tell them to ——"

"Right off!" she answered, amused. Plainly she was delighted with the situation.

"You just give me the manuscript of that song," she went on, "and two or three other things. I'll take them with me. I'll have contracts drawn. My lawyer will ——"

"There isn't any manuscript. I've never written it."

"Heavens! Make one then."

"All right. I suppose I could do it to-night."

"Not to-night—now."

"I haven't any ruled paper."

Again she laughed.

"Oh," she said, "I'll rule the paper for you."

"But my job—I've got two more pianos to tune to-day."

"Your job!" she repeated scornfully. "Why, it's ridiculous, with your gift, tuning pianos! It's a crime!" In her excitement she took him by the shoulder and shook him gently for emphasis. "Don't you ever tune another! Do you hear?"

"That's all very well," he answered, "but I have a family to look after. I have to get a certain amount of money every week."

"Oh," she said, showing mild surprise, "you're married? Children?"

"No! Married? I should say not! It's my mother and sister."

"You don't look married," she said. Then dismissing the subject, "Well, anyway, you're coming to New York right off, and I'm going to ——"

"I can't afford to go to New York."

"You can't afford not to! Don't you understand there's going to be business with music publishers for you to attend to?" As if at the vision of his attending to business she laughed again.

"You don't seem to get it through your head," he declared doggedly, "that I have my living to make. It's a matter of dollars and cents."

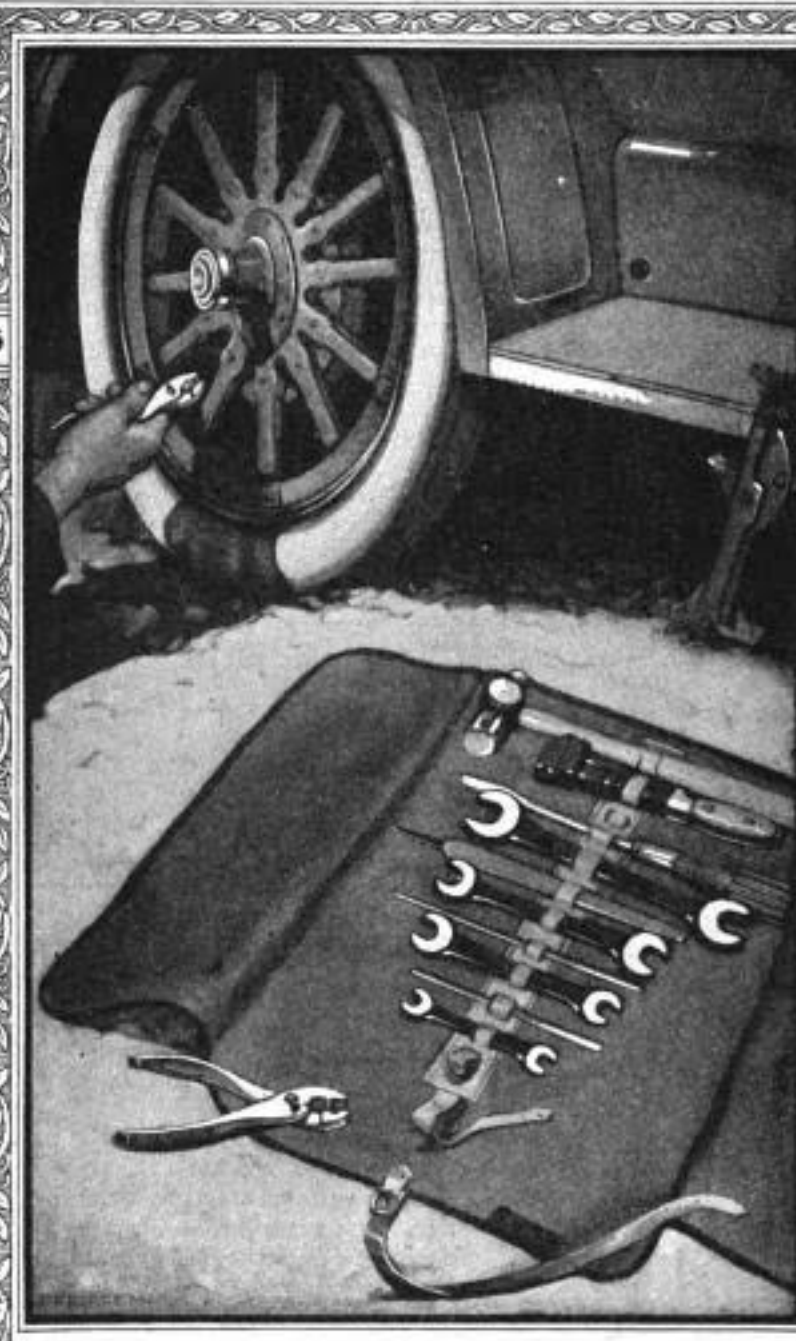
He was playing his arrangement of Bonnie Doon again, pianissimo.

"Oh," she cried impatiently, "forget those dollars and cents for a minute, won't you?"

"I can't."

"But that part is easy!" There was a note of triumph in her voice. "The point is that I'm going to sing your songs in concert. Do you see? I'll sing your Bonnie Doon at a benefit next week. You'll accompany me, and when ——"

"Not in E major," he interrupted. Hastily he transposed the song a half tone lower. "E flat is better for you."



"No, it isn't! Why is it?"

There was a sudden crispness in her voice, which Parrish thought boded ill for the young man. But Mr. Delaney was apparently unconscious of the menace.

"Oh, yes," he insisted in a matter-of-fact tone, "that song in E major would bring out all the worst notes in your upper register." As he spoke he thumped heavily upon three successive keys.

Parrish saw Rita clench her fist. There was a moment during which she stared speechless at the youthful back in its wretched belted coat. But though the lightning played for an instant in her eyes

it did not strike. When she spoke her tone was calm.

"Oh, you've heard me then?"

"A dozen times. I worked in New York all last winter. You're wonderful in Louise."

The little laugh she gave seemed to originate in the region of her solar plexus.

"Meaning, I suppose, that I'm not much good in my other rôles?"

At that he turned around and looked at her earnestly.

"Oh, I don't mean that at all! I meant musically. Histrionically, of course, nobody can touch you. Except perhaps in Butterfly."

Rita grinned.

"Thank you," she said, "for these very few kind words."

The other stared at her, puzzled. A flush like that of a rosy baby spread over his face. He rose, protesting.

"Oh," he blurted, "I didn't mean to—I—I didn't mean ——"

"Never mind what you meant," said Rita, shaking her head hopelessly. Then moving toward the desk, she ordered, "Come over here and write that music."

Parrish, who had been standing by the French windows leading to the now sunlit balcony, turned quickly.

"Look here," he said to her, "I—if we're not going to get that walk—if you're going to write this music—there's no use in my hanging around any longer. I'll just—ah ——" Without finishing, he moved definitely toward the door.

Leaving Delaney at the desk Rita crossed and laid a detaining hand upon his arm.

"I'm sorry," she said in a low tone, "but—you see?" With an expressive jerk of the head she indicated the musician, who was already writing busily. "He won't be long. Let's lunch at half past one—up here. We'll have our walk afterwards."

"All right," he said. But even before she pressed his arm and showed him the smile he was feeling that "all right" was not enough.

"That will be fine," he added.

XXI

WHEN, after a second walk, Parrish ascended again to Rita's sitting room he found Mr. Delaney all but ready to depart. The young man glanced at him quickly as Rita let him in, then took up his overcoat and made haste to put it on.

"Let me help you," said Parrish with politeness. Stepping behind the young man he lifted at the collar of the overcoat. But the garment did not slip on easily.

"Wait a minute," said the other after a moment's struggle. "This sleeve lining is torn."

He withdrew his arm from one sleeve, then carefully reinserted it and maneuvered it through. Having donned the coat he turned up the collar as if that were the natural way to wear it; then drawing a checked cloth cap from a pocket with one hand he reached down with the other and took from the floor a small tan satchel, which, though stamped in imitation of alligator skin, was plainly made of cardboard. A muffled clink of tools came from within the bag as he lifted it.

"Then it's all settled," said Rita, giving him her hand.

"Yes."

He snatched her hand, shook it quickly, dropped it and made for the open door, putting on his cap as he went.

"Don't lose the address," Rita called after him.

With one hand upon the outer door knob Delaney paused and turned in the aperture.

"I've got it safe," he assured her.

Finding himself thus arrested he seemed to have some difficulty in going on again.

"Well, then"—he said in the tentative tone of one about to depart; but he still stood there.

"Au revoir," called Rita, with a characteristically gay wave of the hand.

That seemed to supply the impetus the young man sought. With a quick smile and a jerky little nod he drew the door shut after him. No sooner had it closed than there came from the hall without a dull crash as of falling dishes. Then voices. The two looked at each other.

"I'm afraid," said Rita slowly—"I'm afraid he must have run into the waiter—with our luncheon."

"Of course," said Parrish with cynical indifference, "that's precisely what he *would* do."

He took a few steps away from the door as if to indicate his disassociation from any disaster in which Mr. Delaney might become involved.

"I'll go and see," said Rita, and rapidly toward the door.

"Hold on!" he cried, turning "Don't!"

She stopped.

"Why not?"

"He'll come back again!"

"No, he won't; and, anyway, if fault he can't afford to pay for it."

Parrish gave in.

"All right," he said, moving tow door. "You stay here. I'll go see to it."

Two or three minutes later he ca

"Yes, it was our lunch," he sa fatigued tone. "I fixed the waiter, gone down to duplicate the order, that Delaney's gone we may get it."

Rita laughed.

"Don't you like him?" she aske chievously.

"The young whelp!" he burst "Why, the way he talked to you— *down* to you! A piano tuner! It w worst piece of impudence I ever ha my life!" He paced the floor. "I ca believe my ears. I wanted to kick One thing after another! I kept say myself, 'This is a little *too* much! N going to nail him!' But you didn' just took it. Offering to help him, t what he'd said!" He stopped staring at her. "Think of it!" he "You tell him you'll sing some rot song of his; some song he had to— cause Bonnie Doon isn't good e him—the same as telling him yo him—and what does he say? Does thank you? No! He tells you yo sing!"

"Oh, hardly that," she said.

"Practically that. Telling you keys you can't sing in! Telling you got a lot of bad notes in your upper ter! Yes, and thumping them! T them! Rita, I can't see why you sta it. I can't get it through my head."

She smiled.

"He was a dog to do it," she tol "but it's true."

"No, it isn't! And if it were, that only make it worse. Tell me—f satisfy my curiosity—how did you come to let him get away with it?"

She looked thoughtful.

"Well," she said, "in the first place h gifted; he really knows. And being gift he's queer. One makes allowances. A there's something horribly pathetic abo him, so poor and so talented and ——"

"So rude," he put in.

"Yes, but he's young. He must be ve young. How old do you suppose he is?"

"Old enough to know better," he a swered dourly. And he added, "The pretty men always look younger than th really are."

"Yes," she agreed reflectively, "he good-looking."

"Too good-looking," Parrish mumble as the waiter knocked at the door. "I ought to have been a girl."

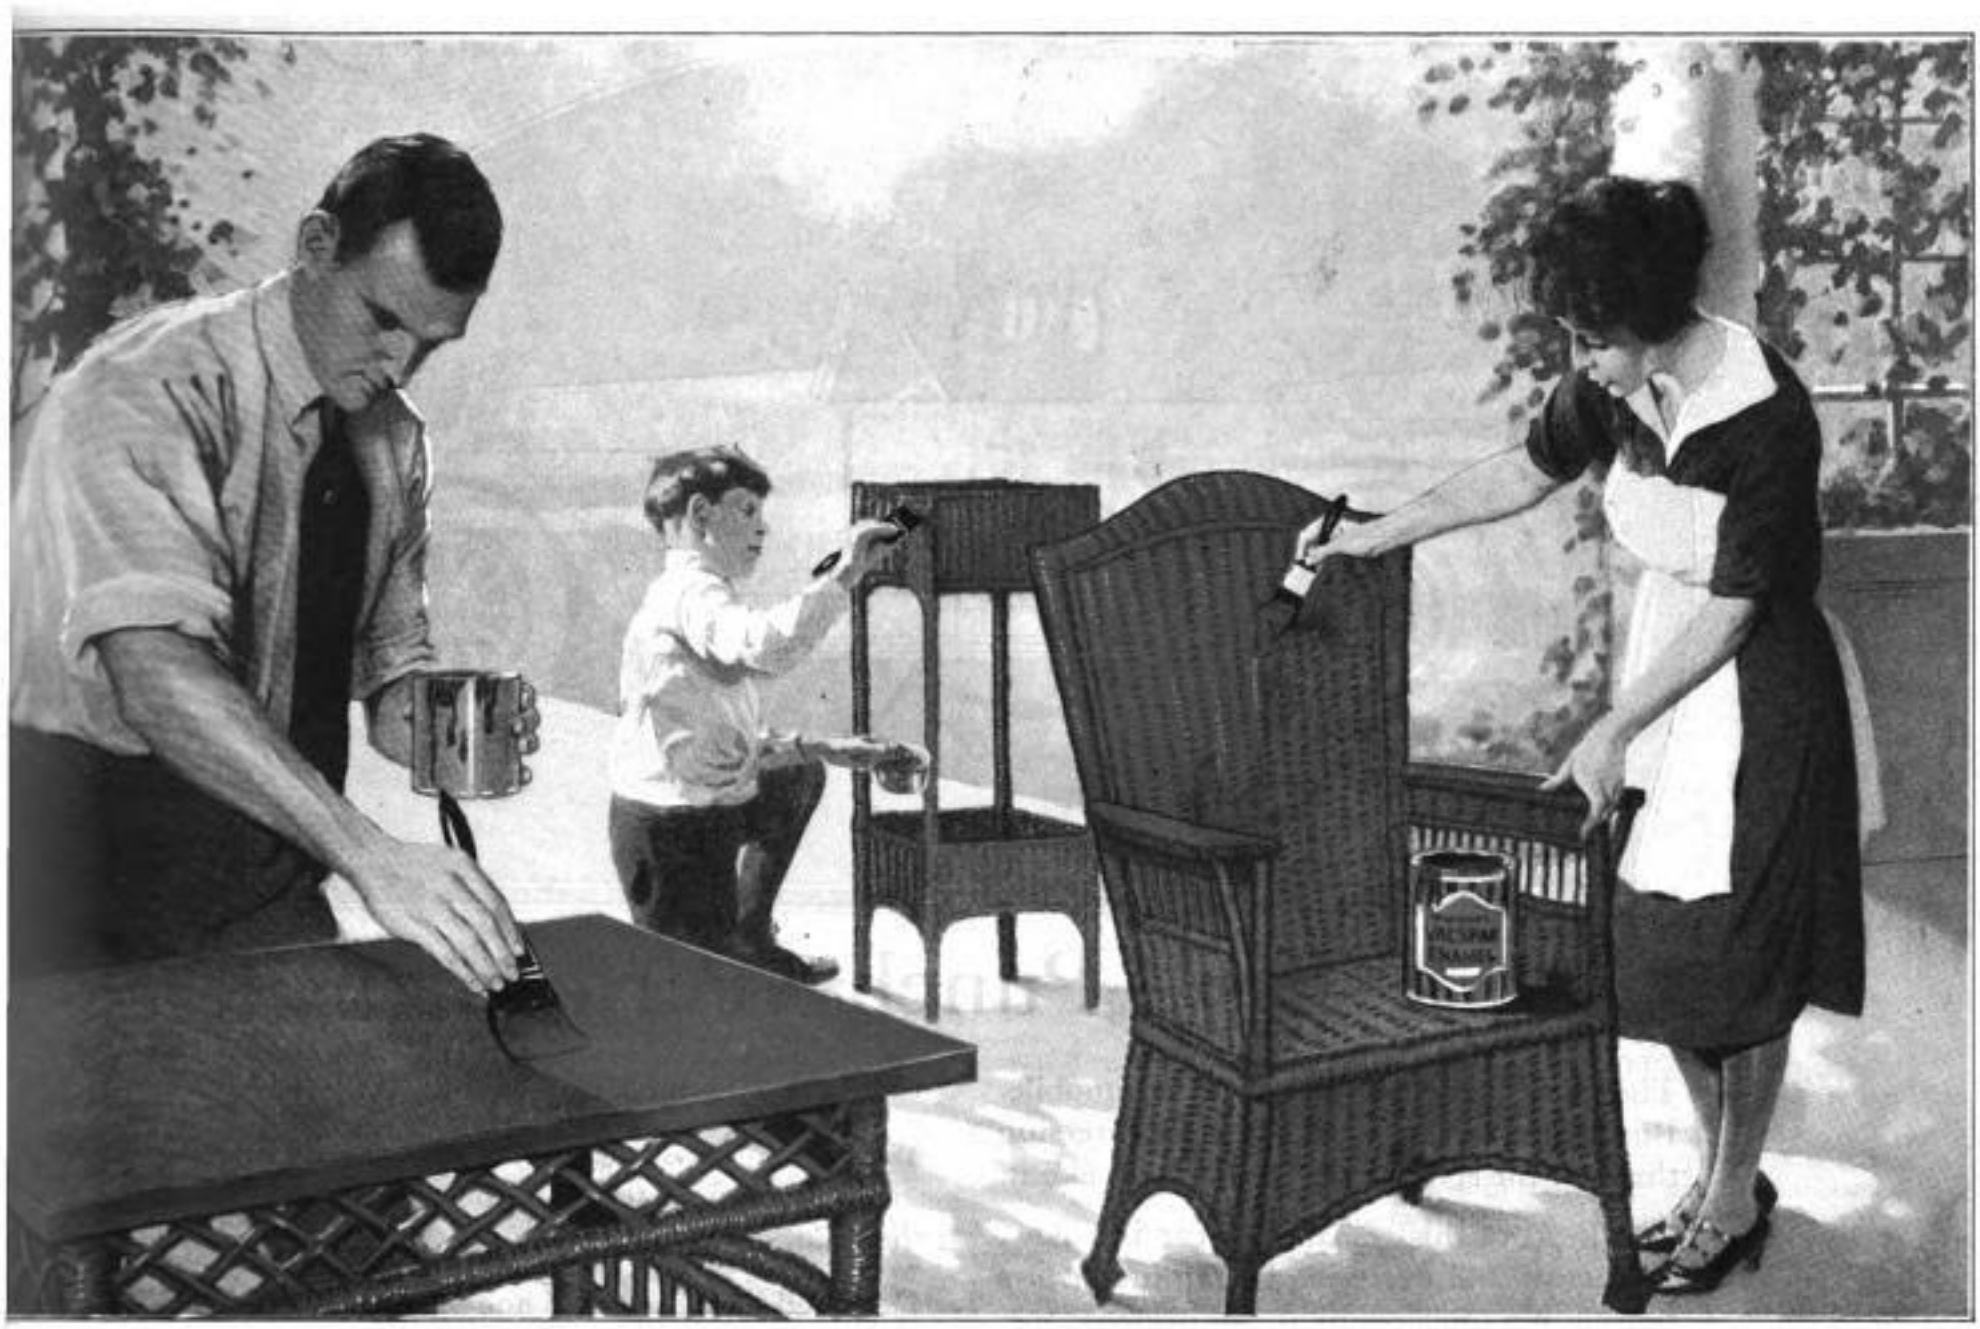
But he quickly forgot about Delaney Never, it seemed to him, had Rita be quite so fascinating as during that lunch eon. She seasoned the repast with amusin gossip—the story of a dog fight at a re hearsal, a little fight between two litt dogs which rapidly became a big fight be tween two big prima donnas; stories o intrigue in the struggle for fame; dri tales of temperament, love and jealousy of pranks played upon one another by th singers, and of misadventures during per formances, making for Parrish successiv pictures of a world new and strange.

"I've never been behind the scenes a the opera," he said.

"You'd like to? Come any time I'm singing."

"What do you sing Wednesday night?" he asked.

"Butterfly, but—you'd have to come during the first part of the evening. I have a business engagement later. Wouldn't you rather come Monday—it's Manon—and stay all evening?"



He put his hand over hers upon the table.

"What a question, when Monday is five days further off than Wednesday! Besides, I love you in Butterfly. You look just like a Toyokuni. I've always wished I could some day see you in those costumes, close to."

"All right," she said. "Come a little before eight. I'll leave word with the door man."

Call It Pep—Punch—Performance

The motor is the heart of a good automobile. But the soul of a car finds expression through the spirit of the men who make it.

The heart of this remarkable car is a new, distinctive and exclusive Jordan motor of a thoroughly modern, light, high-speed type.

Engineers have long been baffled in the effort to build a motor that combines silence with what we love to call a "punch". When they built for silence the power was not there.

This Jordan motor has what the small boy would call a "wallop"—a silent, thrilling something that makes the old driver turn and grin.

Call it pep—punch—performance.

You will enjoy its snap and go—the solid, sturdy feeling of the car—no wabbling on the road.

Designed in every detail and built from the owner's point of view, this new Jordan is produced for those who want a motor car of lasting value that will run 200,000 miles and, with friendly care, last ten years.

Light as the needs of the hour demand, it gives that dependable, day-after-day performance which reveals true value.

Drive this new Jordan yourself and know the thrill of true motoring joy.

Sunday morning in a quaint Virginia town. Mellowed by time and fragrant with great deeds. Spring coming up the world—church bells recalling romances of three hundred years ago. Then at the lilac close of a soft, spring day the wondrous round of the moon on the hill. That's Williamsburg in May.

rose, passed behind him and laid her upon his shoulders.

[y dear," she said, "I'm awfully dis-nted about something. Like a cow-'ve been putting off telling you. I go back this afternoon."

turned quickly in his chair and looked her, echoing stupidly:

his afternoon?"

es. They got me on the long-distance you were out. Isn't it disgusting? hat idiot Bonata. You remember, I you about her? She's such a slow '. It's outrageous that they keep her."

ut why do *you* have to go back?" he nded, rising.

t's the new opera—goes on a week from day. I have several scenes with her. 've called a rehearsal for ten o'clock orrow morning."

"Oh, Rita!"

"I tried to get them to postpone it," she went on, "but they couldn't. I saw that myself when they explained." She looked disconsolate. "But there's no need for you to come if ——"

"Don't be ridiculous!" he cried. "You know perfectly well I couldn't stand it here!"

"Then," she answered, sighing, "there's nothing to do but pack and order the car."

Turning away from her he walked with a slow step to the French windows and looked out upon the balcony and the wide sea beyond as if to bid them farewell. Then he faced her.

"Well," he said, "they can't take *that* away from us, anyhow!"

(TO BE CONTINUED)

TROPICAL GROWTH

(Continued from Page 9)

their auctions were bona fide, that they legitimate and sound, that they were out reserve, that they were absolute. solute auctions" was the watchword of hour.

his was what had been happening: l-estate firms had advertised auctions, up lots for sale, and, when those in ndance languidly refused to bid more a six or seven dollars for a lot, used pro-ional buyers to make phony bids in r either to run up the price or get the off the market. It is possible that such ing will never happen again, now that l-estate firms have the habit of adver-ng absolute auctions—possible, but rely probable. With five or six auctions ng held each day, and with large num-s of lots being offered to stolid Middle sterners who have come more for the free ch and the automobile ride than for the l estate, it is inevitable that some lots will for about $1.75 if everything is left in the nds of the legitimate prospects. Common se tells us that no real-estate dealer could d such a blow without emitting poignant icks of pain, no matter how persuasively d convincingly he may chatter about solute auctions.

Some of the real-estate dealers allow cus-ners to buy land on terms that would at-ct even Trotzky, who doesn't believe in at sort of thing. Four-hundred-dollar s in one subdivision can be had for enty dollars cash and ten dollars a nth, with no interest or taxes for a year. another subdivision $1250 lots sell for 00 cash and twenty-five dollars a month til 20 per cent of the principal has been id, after which the buyer can sink back d refrain from paying any more on his incipal for seven and a half years. A m advertises island water-front lots at 750 a lot, the terms being "$750 cash; alance $500 every six months; no interest st year; no taxes till spring 1925."

Blots on the Landscape

Subdivisions extend out of Miami in all directions—up the coast and down the coast and inland and out into the bay in the shape of islands. Palm Beach is seventy-five miles north of Miami; and there are almost enough subdivisions along that seventy-five-mile stretch to provide homes for a million people.

Some of the subdivisions are beautiful. Some have been thoroughly cleared of the tangled jungle of palmettos and other scrub that make a total mess of so much undeveloped Florida land; and flawless roads and pavements have been constructed, water mains put in, and gas, water and electricity provided. Restrictions are imposed in some of the good ones; homes costing less than $4000 cannot be built on certain lots, while on other lots they must cost at least $15,000.

In other subdivisions the streets are half laid, the location is vile, and the shacks that are run up on the crowded lots are little better than the marsh huts of Revere Beach and Coney Island, to which poverty-stricken city dwellers of Boston and New York frequently repaired during the heated terms of the early '80's.

On top of these depressing spectacles, many of which may some day be partially obscured in tropical verdure, certain enterprising citizens of Miami have added to Florida's scenic beauties by lining the roadsides with blatant signboards setting forth the delights of garages, restaurants, clothing emporia and similar enterprises. Not content with building self-sustaining signboards which protrude gauntly and repulsively from the flat landscape and convince the newcomer that he is approaching a slum city, they have nailed countless numbers of huge yellow monstrosities to the palms and pine trees along the highways—signs which have no influence on anyone except the lover of beauty, and which serve only to fill him with contempt for people who can permit the natural beauties of their surroundings to be so befouled. In the North one expects to find—as he does find—a plague of signboards and hideous summer resorts whose predominant features are those of the awful and tasteless '80's. In the new South, however, which lures tourists with honeyed words and promises of every sort of beauty, the erecting of roadside signboards should be viewed with as much disgust and loathing as grapefruit stealing or murder—both of which crimes fall under somewhat the same head in Miami.

Sensitive Tomato Plants

Spreading through and beyond the subdivisions are the orange and grapefruit groves and the truck gardens and vegetable farms. Oranges and grapefruit are so common in Southern Florida that grapefruit are served free in many of the hotels, while many other hotels keep large bowls of free oranges alongside the ice-water tank. So far as is known, these are the only things that one has a chance of getting for nothing in Florida hotels.

There are hundreds of three-acre and five-acre farms owned by Northerners who didn't like winter and ran away from it with one or two thousand dollars in their pockets. Many of these little farmers not only manage to make both ends meet but even salt away comfortable bank rolls. One little town near Miami shipped 61,000 quarts of strawberries to Northern cities during the first six weeks of the 1922 season, and the growers' share of the spoils was fifty cents a quart. The wise strawberry farmers, who plant their land to velvet beans during the summer and plow them under in September, and otherwise indulge in the clever tricks of the trade, get some very snappy results. One of the best strawberry farmers near Miami had 4.1 acres of land planted to strawberries in 1921. His first berries came in on December twentieth, and he picked twice a week until July fifteenth. The total yield of his 4.1 acres was 41,059 quarts, his average price for each quart was forty-five cents, and his gross sales amounted to slightly under $18,500. His total expenses were a little over $6000.

More than 14,000 acres are planted to tomatoes in the vicinity of Miami, and nearly 500,000 crates were shipped North during the 1921 season. These tomatoes bring the growers about three dollars a crate, of which about $1.75 must be charged off to fertilizer, labor, hauling and crating. The life of a tomato farmer is not a happy one, for the crop is very sensitive to wet weather. It is also very sensitive to dry weather. The slightest nip of frost also puts a severe crimp in it. Some of the tomato farmers say that the plant is so sensitive that if a man cusses or chews tobacco in its vicinity it will refuse to bear. In spite of all this, there are plenty of tomato

No Air Lost!

2000 more miles can be added to each tire, if kept properly inflated

THE old fashioned tire valve, which is in such common use, is one of the things motorists have become used to, simply because they have never had anything better.

Do you realize how much time you waste going through the routine of pumping your tires once a week—not to mention the dirt and grease—waiting your turn—washing up—and all the rest?

This remarkable new invention, the Trex Air Valve Lock, now *positively* locks the air in your tire, stops all leakage and maintains perfect inflation. It eliminates all the troubles of repumping.

For years under-inflation has caused untold damage to tires, bringing them to an untimely end, in spite of the intention of the motorist to keep his tires at normal pressure. The Trex Air Valve Lock means *full mileage* from every tire, and with no cares or burdens whatever on the car owner. It pays for itself many times over.

Road tests as well as laboratory tests have proved that the Trex Air Valve Lock positively locks the air in the tire. Fits any tire, and is interchangeable. Screws onto top of present valve stem. Outlasts several sets of tires. All metal; no rubber parts to rot or deteriorate.

Carried by the leading established jobbers and dealers in all parts of the country. You can readily recognize our attractive orange and black display boxes, each holding five Locks, suitable for the four tires and spare tire on one motor car. Sold singly, if you desire. Get a set for your car today.

Ask your own garage man, or write to us. Absolutely guaranteed against defective workmanship or materials, as are all Trex Products.

THE TREXLER COMPANY, Philadelphia, Pa.

Manufacturers of the famous Trex Tire Tool and other high-grade automotive products

Factories: WILMINGTON, DELAWARE

Actual Size

$1 for each tire. In many experiments this Lock has added over 2000 miles to the life of the tire. You'll never buy 2000 miles cheaper in any tire.

TREX

TRADE MARK REG. U.S. PAT. OFF.

AIR VALVE LOCK

1. Positively locks the air in your tires; adds more mileage through perfect inflation.
2. Eliminates trouble of repumping, and premature blow outs due to rim cuts.
3. Fits any tire; any motorist can attach in three minutes.

The selection and cutting of the sole leather for Beacon Shoes is performed with consummate care; which is characteristic of every step in the production of this nationally known footwear.

Your Ideal of Footwear

Just before you go to purchase new footwear you quite likely form a well-defined idea of style, of quality and of *price*.

More properly your idea should be termed an *ideal*. For you do want good style, and accurate fit, and faithful service. And you do not want your shoes to cost too much to buy, nor to wear.

In Beacon Shoes you will find that ideal. For example: At $6 your Beacon dealer will show you admirable footwear, smartly fashioned and substantially built; footwear that you will take pride in wearing.

We are as Proud of the Prices as we are of the Shoes!

We are proud of our ability to build for you intelligently designed, sturdy, comfortable shoes that you may purchase without a feeling that you have been extravagant. We are equally proud that we can stamp the Beacon trademark on shoes of that character.

lovers to plant tomatoes every winter, and some of them have made fortunes out of this popular fruit—or vegetable.

The cupidity of farmers who are sick of Northern winters is easily aroused by prices obtained for the best varieties of mangoes. "Their rich, spicy flavor, tempting fragrance and beautiful coloring," say the Miami prospectuses, "make them one of the most tempting table desserts that can be imagined." Miami, it appears, has a monopoly on this fruit, and the catalogues rub in the bad news by adding that "this monopoly is not only confined to the cultivation but also to the exquisite joy of eating it, as very few find their way to the Northern markets, the local demand far exceeding the supply." One reads that the choicest varieties "readily sell in the Northern markets for from $1.00 to $1.50 each," thus confirming the belief of the late P. T. Barnum that there was one born every minute. The weak spot in this argument is not visible at the moment; but there is some good reason why the Florida people prefer the exquisite joy of eating the mango to the even more exquisite joy of shaking down their Northern brothers for $1.50 per mango. Maybe it's because there aren't enough raised in Florida to make it worth while to ship; maybe it's because the mango ripens from June through August and the weather is too warm to ship. At any rate, there is an Ethiopian concealed somewhere in the woodpile. And one who aspires to become a mango grower will no doubt have his first fine enthusiasm dashed by the fact that trees begin bearing in from five to seven years after being set out. Seven years is a long time to wait. And Northerners may acquire a little sense in seven years and refuse to pay $1.50 for the exquisite joy of eating one mango about the size and general texture of a peach.

Reclaiming the Everglades

Off to the west of Miami lie the Everglades, first made famous by the Seminole War, when the United States Army spent upwards of fifteen years trying to chase the Seminoles out of the Everglades, but seldom saw more than three Seminoles at one time. The Everglades, not so long ago, was an enormous shallow lake 8000 square miles in area, dotted with half submerged islands out of which grew giant whiskered live oaks and countless varieties of tropical plants. The alligator basked in its shadowed streams and the graceful panther lurked among the undergrowth, constantly ready to emit a blood-curdling scream calculated to make the hardiest intruder think longingly of home and mother. Exploration was made almost impossible by a saw-toothed grass which grew throughout the Everglades and extended several feet above the water, so that the person who tried to force his way through it would cut everything to shreds up to and including his eyebrows. People talked for years of draining the Everglades; but such talk was usually received with screams of laughter that rivaled the yells of the Everglades panthers.

Several years ago the state of Florida settled down in earnest to the systematic draining of the Everglades. Canals were cut, giant locks were installed to control the water level, and the land was cleared. Thousands of acres are being reclaimed each year, settlers are moving in constantly and the reclaimed land is yielding vegetables and fruits of a size and quality to make a Maine farmer shake his head dubiously and wonder whether that last batch of licker that the sheriff sent him had affected his eyes. The soil is a rich black muck which has resulted from centuries of decaying vegetation; and anything that will grow will grow about twice as large and twice as rapidly in the Everglades as it will anywhere else. There used to be only two seasons in the Everglades—wet and wetter; but now there is a dry season; and in the course of a few years, when the fruit trees begin to bear, the Everglades alone will be in a position to supply every city in the North throughout the winter with all the newfangled and oldfangled fruits and vegetables that can be desired.

The thousands of farmers who have retired from active farming and are occupying their winters by absorbing the sun in Miami and pitching horseshoes in Royal Palm Park become fearfully excited over the various varieties of grass that are raised in the Everglade lands. Grass is not a thing that one would expect to mention at any length in an article on a winter resort; but the excessive wonderment over it on the part of the horseshoe pitchers requires so mention of grass. It appears that some the grasses that have come in thick enou to get themselves talked about are Pa Bermuda, Rhodes, Natal, Sudan, St. Luc St. Augustine, Napier, broom-sedge, Gu emala, panicum, crab grass, maiden ca billion dollar grass and several othe There seems to be everything but just pla grass. The chief idea in the minds of t farmers seems to be that with all this gr the Florida stock raisers can have ev green pasturage, and cattle can be fed about a third of the space that they ne in the North.

This of course is important if true; b the average person who comes to Miami not interested in grass except as somethi on which to play golf or sit. What wants is usually holiday relaxation a plenty of it; and if that's what he wan he can get so much of it in and near Mia that one week of complete relaxation ma usually be followed by two weeks of s cuperation.

The Rise of Miami

The people who knew Miami prior 1918 have an entirely different place their minds from the Miami of to-day. T old Miami was a city first and a winter r sort afterward. This statement will course offend the touchy Miami folk; b it is true none the less. It was—and is— hustling, bustling, booming, noisy ci with about one automobile for each seve eighths of an inhabitant, and with pe petual warmth and sunshine. In the lon run, however, the big-money tourists—th people who roll down each winter wit their money done up in bales and be plaintively to be shown where and how t spend it—don't want to go to a hustlin bustling, rapidly growing city for the winter holidays, even though the city ma boast perpetual warmth and sunshine What they want is plenty of sun and sky and a complete change from the scener to which they are accustomed in the Northern cities, and a surcease from al noises except the noises they make them selves—which are frequently much louder than the ordinary noises of a city. Fo that reason Palm Beach was in a class by itself. The big-money tourists went to Palm Beach. Miami got a smattering of them, but a very small smattering. Palm Beach sneered at Miami Beach and called it the Coney Island of Florida. That, however, was prior to 1918. To-day Miami has been augmented by Miami Beach.

The story of Miami Beach is a remarkable one, and it should be told here, since without it Miami would scarcely be able to get out gaudy prospectuses with pictures of beautifully shaped ladies in red one-piece bathing suits on the covers. This is the way of it:

Miami's palm-shaded streets run down to the shores of Biscayne Bay, which is a strip of water some seven miles long and between two and three miles wide. Between the bay and the ocean is a long, narrow tongue of land, not much over a mile in width at its widest point. Prior to 1913 this narrow tongue of land was a worthless jungle. The man who owned practically all the land on it is said to have bought it for $12,000. The only way of reaching it was by ferryboat, and there was nothing on it except a bathing shack on the beach at the extreme tip, to which a few tourists occasionally repaired when the urge for sea bathing became almost too intense to be endured.

In 1913, however, when the population of Miami was only about 7500, a wealthy Indianapolis business man, Carl Fisher, came to Miami for his health. Fisher was able to see the possibilities in things which everyone else regarded as impossibilities. He had always plunged heavily on his beliefs while his friends and acquaintances stood on the sidelines and told one another what a shame it was that Carl had gone bugs. One of his plunges had been the big Indianapolis Speedway—a gigantic structure which does all its business, pays its expenses and makes its profits on one day out of the year.

In Miami he became interested in the long, narrow, jungle-grown sand spit that shut Miami off from the sea. In his feverish mind's eye he saw it covered with the greatest winter resort of modern times—with acres of beautiful homes, and hotels bowered in towering palms and scarlet-flowered hibiscus; with polo fields and golf

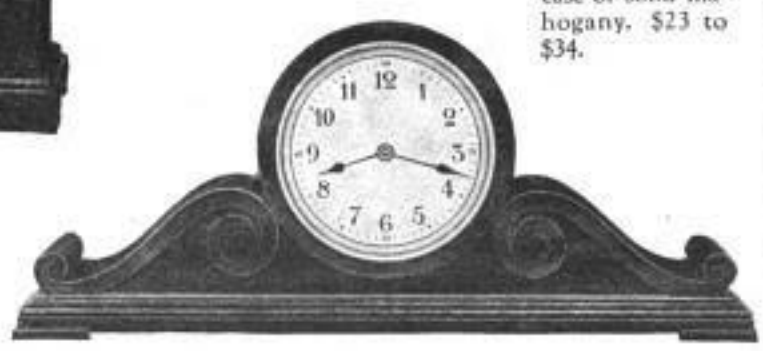
SETH THOMAS

She ran all the way to the station
and got there ten minutes too soon

ALL the needless rush to get ready—the panting race down the street—a trip to the city started wrong because the clock was ten minutes fast!



Surely modern life is tiring enough without the needless strain of faulty clocks. And it is *so* needless. A hundred and nine years ago Seth Thomas began making accurate clocks and putting his name on the dials.

It will add immensely to your peace of mind to have a Seth Thomas Clock in your home; and the cost, as the Jeweler will tell you, is very much less than you may have supposed. He *likes* to show Seth Thomas Clocks and tell about their service. Why not drop into his store this morning and afford him that pleasure?

At the left is one of a group of eight remarkably serviceable upright models—8-day, striking clocks in mahogany cases. Prices from $15 to $22.

There are eight small clocks, suited to desk or boudoir, in the group represented by the model illustrated below. Jeweled 8-day movement with watch escapement—a splendid timekeeper—in a hand-rubbed case of solid mahogany. $23 to $34.

A Seth Thomas gift is assured a place of honor in any home.

SETH THOMAS

(Continued from Page 78)

links and tennis courts and ice rinks; with lagoons and canals and artificial islands and Venetian gondolas; with casinos and bathhouses and outdoor swimming pools that would outdo anything in America or Europe.

He let himself go with the utmost enthusiasm, and kept his imagination working on a twenty-two-hour day. His friends gave up all hope for him. "Poor Fisher!" they murmured privately behind his back. "Poor Fisher has gone completely loco. We must make arrangements to put him away quietly."

He got control of the bulk of the unnamed worthless tongue of land and went out to look it over carefully. Around its shores he found a solid wall of mangroves, whose interlaced roots rose several feet out of the water in such a confused and slimy jumble that any appreciable progress through them was a matter of hours. So he got a gang of twelve negroes and set them to work hacking a hole all the way through this jungle. Beyond the mangrove swamp was a solidly interlaced growth of cabbage palms and palmettos through which no human being could force a passage without tearing his clothes and his skin to shreds. The palm and palmetto growth filled every part of the tongue except the shores—and the shores were overgrown with mangroves.

Greatly cheered and stimulated by these obstacles, he promptly set to work on his scheme to build, almost overnight, a great American winter resort. Starting at the extreme tip of the tongue his gangs of laborers cleared off the mangroves, cabbage palms, palmettos and other scrub. They found bears in it, and panthers and countless numbers of smaller animals, and quail by the thousands. Then along the edges of the tongue they built high cement bulkheads. As the bulkheads were finished dredgers pumped sand and water out of Biscayne Bay and inside the bulkheads. The water ran off, but the sand remained and turned the swamps and marshes into solid land. This work required dredging crews of 150 men, three pumping boats, two digging boats, from ten to fifteen barges, five supply boats, two oil tugs, two anchor boats and an eighteen-inch pipe line over a mile in length. For eight months the pay roll was $4000 a day, and Fisher's friends daily became more insistent that he be put away where he could no longer throw his money into the Atlantic Ocean.

An Extraordinary Development

Canals and inland waterways were dug so that future residents might have easy access to all portions of the resort by yacht, house boat and motor boat. Palms, hibiscus and tropical plants and vines slowly crept along in the rear of the dredging operations. Fifty acres were turned into polo fields. Three hundred and twenty-five acres were set aside for golf courses. Three excellent golf courses were made, two at a cost of $200,000 apiece, and one at a cost of a quarter million.

To-day the tongue of land that was an impenetrable jungle in 1913 and a waste of sand in 1917 has become the city of Miami Beach. Its value has grown from $12,000 to $20,000,000. There may be some to question the latter figure; but the assessed value of Miami Beach property in 1921 was $5,540,112; and unimproved property was being assessed at one-quarter its valuation, while improved property was being assessed at one-tenth its valuation. It has a frontage of six miles on the ocean, seven miles on Biscayne Bay, and sixteen miles on inland waterways and canals—though a Miami Beach enthusiast would no more think of listing Miami Beach property in miles than a jeweler would think of listing diamonds in quarts. It's too precious. He lists it in feet, and tells you that the frontage on inland waterways is 85,000 feet. In a few years, if he progresses in the future as he has in the past, he'll probably be listing it in inches.

Many a water-front lot has been sold for double the price that was paid for the original jungle not so many years ago.

There are over forty miles of streets and roads, lined with palms and shrubs. Several hotels have been built. The largest is no more expensive than the big Palm Beach hotels—although that is sufficiently expensive to send the cold shivers up and down the spine of the person who hasn't become thoroughly hardened to money spending.

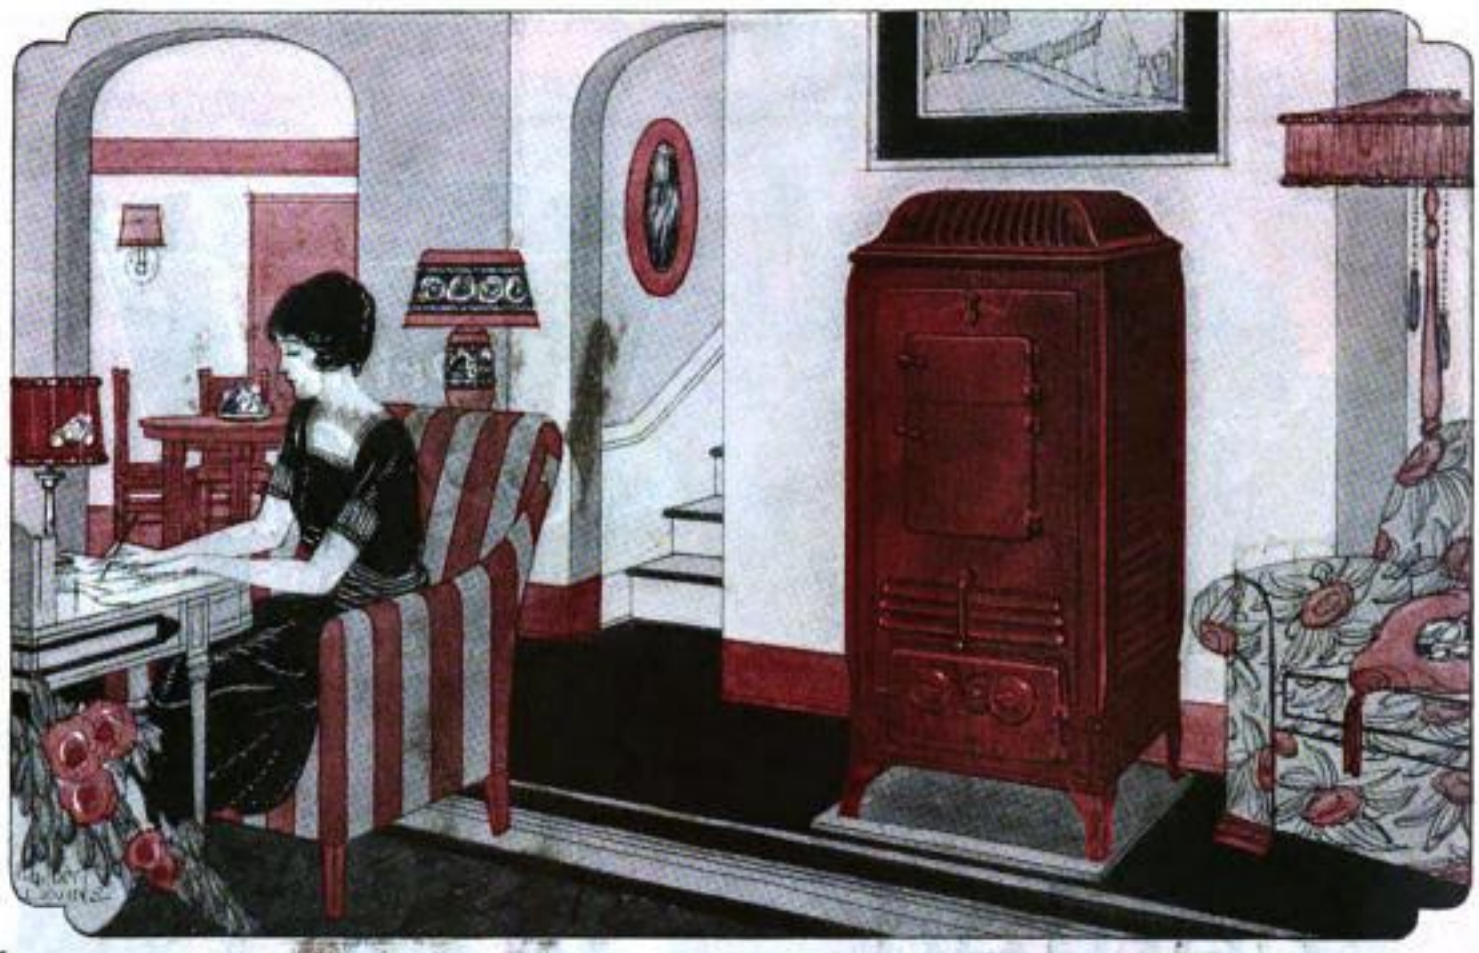
There are a score and more of apa houses, and 350 private residences from unconsciously simple little bungalows up to artfully simple $200,000 huts.

Within another six years, accord the more sane and conservative Beach predicters, there will be six o more hotels at Miami Beach, all than the present ones. Fisher has a modest caravansary planned, which have an ice rink, covered tennis cou a tanbark horse-show inclosure on th Unless his friends lock him up he is carry out his plans—which will pr be as highly successful as his past ve

A few of his friends no longer fear sanity. His former business part Indianapolis, James A. Allison, has helped the good work along by buildi stocking at Miami Beach an aquariu rivals the greatest aquariums of M Naples, Honolulu and Manila. A many of his friends, however, still their heads pityingly when they hear tion of hotels with ice rinks on the

The dredging operations which transferred sand from the bottom o cayne Bay to the top of Miami Beac left several unsightly mud banks pr ing a few inches from the surface o bay. Fisher surrounded these mud b with bulkheads and pumped more into them. The result was seven bea islands, most of which are already sh by palm groves and dotted with simpl beautiful homes costing about thirty lars a square inch. They are easy of a since they are connected with the mai or the causeway.

Bathing-Suit Notes



Some Miami people have likened t islands to lilies which o'erlace the sea, the fashion of Senator Lodge quoting Browning in an attempt to explain islands of the Pacific to a concourse of h boiled hearers; but Palm Beach folk, that peculiar jealousy evinced by the dents of one Florida resort toward ev thing in a rival Florida resort, say they look more like floating flapjacks. truth, of course, lies between; and in other two years, when all of them covered with masses of tropical foli there will be nothing flapjackish ab them at all. One of the islands, toge with an obelisk rising from its center, constructed solely as a memorial to He M. Flagler, without whose vision and fo sight Florida would probably be kno only as the place that Florida Water named after. One of the largest isla has an area of sixty acres. A mile of bu head, with bulkheading at twelve dolla foot, was necessary in its construction, a its total cost was half a million dollars.

The inability of 90 per cent of the hum race to see how a thing is going to lo when finished has cost the human race large amount of money at Miami Bea Not long ago, for example, an effort w made to sell a new house for $16,000. stood on new flat land, however, and the were no trees or shrubs around it. Ever body who saw it refused to buy it; $3500 was spent in planting grass, palm and flowers and adding walks and a boa house. When this had been done the hou sold instantly for $30,000 to one of the me who had refused to pay $16,000 for it th preceding year.

Miami and Miami Beach are now con nected by a curving concrete causeway three and a half miles long. New an spacious as it is, it is often too small t accommodate the thousands of automobile that hasten out to Miami Beach on bo Sunday afternoons in midwinter in orde that their occupants may obtain an eyeful as the saying goes, of the bathing crowds The prudish element hasn't yet been able to make its influence felt at Miami Beach to any noticeable extent. The one-piece bathing suit is heavily displayed by en gaging young women, and there are also large numbers of bathing suits which ap pear to be one-half-piece or even two-fifths-piece. The latter variety of bathing suit is never worn with stockings; for no stockings—so far as is known—have yet been made long enough to reach to the hips. A striking effect is frequently ob tained by the wearers of these two-fifths-piece bathing suits when they stroll out on the beach in short, hip-length capes which hang open negligently at the throat. One sees nothing below the cape but several

d specifications for
l hearth and brick
ng for the Heatrola.

Gentlemen:—

You were too modest!

—in your claims for this new heater, which looks like a phonograph and works like a furnace"

—so say letters from hundreds of men and women

HIS is to place important new heating information in the hands wners of small homes and bunga—with or WITHOUT BASENTS. Also stores, offices, halls, etc.

ply mail the coupon below. Book all information will be sent free postpaid.

e this opportunity to inform your- on this new-day way of heating, ou have had unsatisfactory heating ults this past winter, or if you are ding or remodelling this spring.

w principles are embodied in the ate Heatrola—a practical warm- furnace, finished in grained ma- pany enamel and designed like a dsome cabinet phonograph.

ousands are in use. Back of it is r 77 years' experience in building ating devices for the home. Results e amazing. The owner or renter of small home is now offered all the vantages of warm air heating at w cost.

What Users Write Us

Recently we wrote to hundreds of users of Heatrolas. We wanted to learn first-hand what their experience had been with the Heatrolas in their homes.

Their replies are amazing.

They tell us we are too modest in our claims.

We say the Heatrola will heat 3 to 6 connecting rooms. Many users tell us it has been doing even more than that. We have published a number of these letters in a booklet, which we shall be glad to send on request.

What we said about fuel economy, too, is multiplied. Five and 6 rooms are being heated at no more expense than heating one room the old way.

Thus it is in thousands of homes, from Maine to California. Everywhere the Heatrola arouses the greatest enthusiasm.

Supplants Stoves and Fireplaces

Installed in one of the living rooms, the Heatrola keeps the whole house warm. It heats 3 to 6 connecting rooms better than the ordinary stove heats one.

Note, particularly, that the Heatrola is not a stove. It is a furnace, which circulates great volumes of warm, moist air throughout the house.

Hence the Heatrola offers the most healthful, the most economical way of heating. And the cleanest, for it is finished in a vitreous enamel, hard and smooth as glass, that you can rub and dust with a cloth, just as you do your furniture. This finish is practically everlasting.

No black iron to polish, no nickel to shine. No going into the cellar to tend the furnace, this new way.

Where To See The Heatrola

Leading hardware stores, furniture stores and heating contractors everywhere are now featuring the Heatrola. Ask your local dealer to show it to you. Or, if you don't know him, MAIL THE COUPON for free book and local dealer's name.

m.

Tourists who plan to bring back a wee
of Scotch with them from Florida
uld be very careful to carry the bottles
their hand luggage. All trunks are
ed on the way up, and all alcoholic
mulants carefully abstracted. Nothing
s is touched. A friend of mine took three
tal hot-water bottles to Florida with
n so that he could bring Scotch back
them. These bottles were incased in
tty pink flannel wrappers. He filled
em with Scotch as planned; but when he
ached Washington again he found that
a trunk had been opened and the bottles
moved. The pink flannel wrappers were
t behind, and nothing else had been
uched.

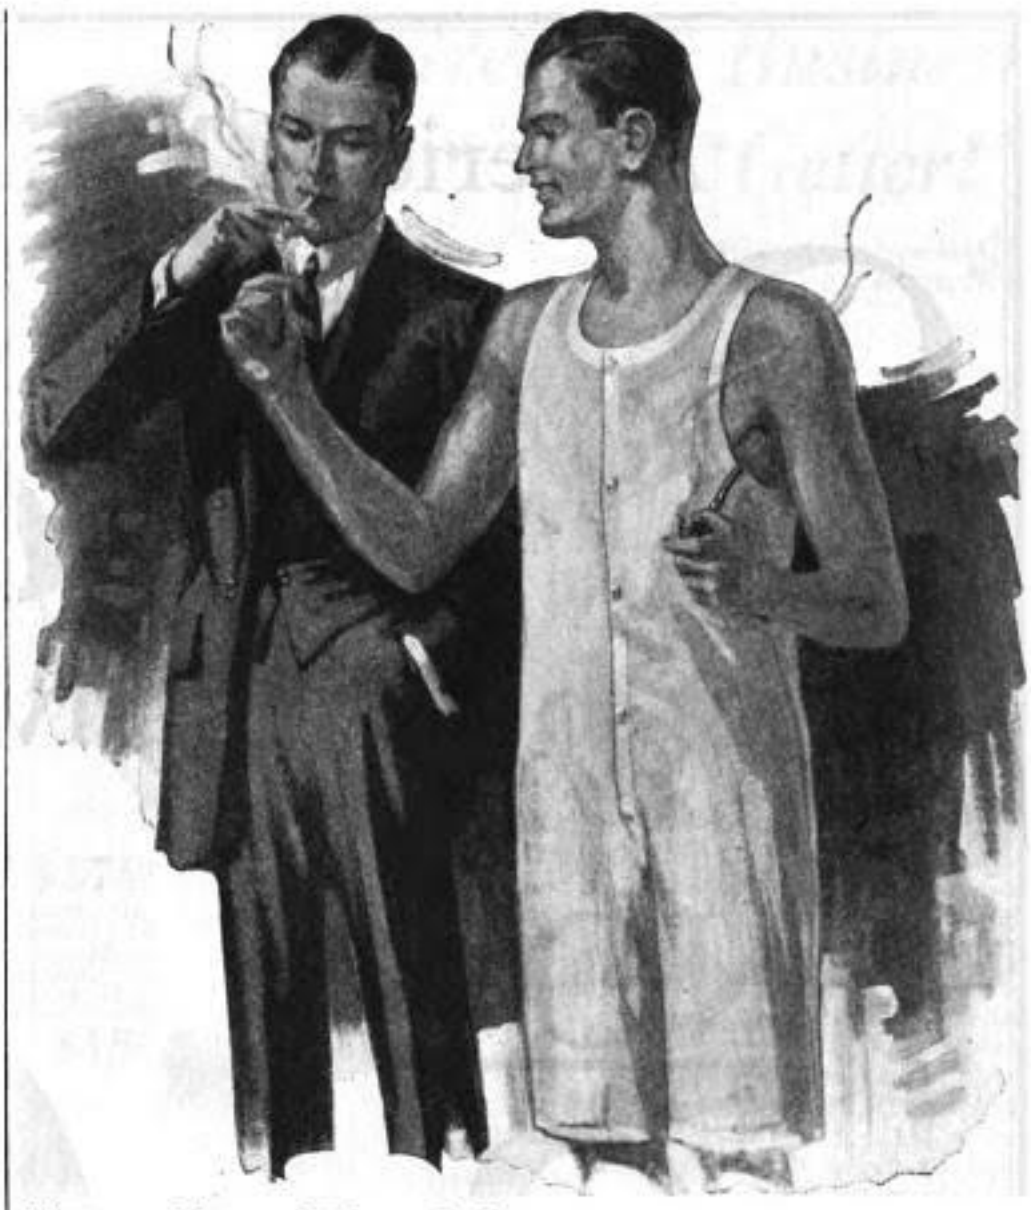
There seems to be an idea in the North
hat rum running from Bimini and Cuba
o the Florida coast can be easily stopped
y prohibition agents. This is a mistaken
dea; for the rum runner has several hun-
red miles of uninhabited coast line and
eys on which to land his cargo. It was
among these keys that the most notorious
irates of the early days concealed their
essels and their treasure, and eluded pur-
uit for years. It would be as easy to catch
a rum runner among the Florida keys as to
ocate a red ant in the Hippodrome.

The Florida keys drip down from the end
of the peninsula on which Miami Beach is built, and would doubtless be compared by Senator Lodge or the late Robert Browning to a necklace of jade and gold, or to mango on mango that o'erlace the sea, or something similarly poetic. Among, between and around these keys is found the greatest fishing in the world. Florida fishing is about as much like the ordinary conception of fishing as prize fighting is like fox-trotting. Instead of sitting contemplatively over a rod and reel with a pipe in his mouth and a dreamy look in his eyes, and occasionally snaking a small fish out of the water in a leisurely manner, the Florida fisherman crouches over his rod with taut muscles and enters knock-down and drag-out fights with bundles of concentrated energy that leave him as sore and limp and blistered as though he had been wrestling with the Twentieth Century Limited.

Speedy motor boats slip away from Miami landing stages and reach the fishing grounds in an hour. Over the reefs, on whose rocky peaks lie the skeletons of many an ancient wreck, wait the barracuda, sometimes known as the tigers of the sea.

Catching Big Ones

They are long, slim, silvery fish, rather like enormous pickerel, and their jaws are set with heavy dog teeth. They average between four and five feet in length; and as the fisherman sits in the stern of a motor boat with his bait spinning along thirty yards astern he can see the barracuda following, following, following along behind the bait like a thin gray shadow. The barracuda is always there and always hungry; so when all other game fish fail the fishermen turn to him. When he finally decides to take the bait he takes it with such vigor that the fisherman feels that a steamer trunk has fallen on the tip of his rod. The rods are stiff as iron and the big reels have drags on them that would stop a race horse in a hundred yards; so the average barracuda seldom fights more than ten minutes. All game fish, of course, are caught by trolling from the back of a motor boat traveling from six to ten miles an hour.



Out a little farther toward the Gulf Stream are the golden dolphins, thin and surprised-looking fish, much smaller than the barracuda, but better fighters. There, too, is the husky amber jack, that fights for twenty minutes and more in spite of the heavy drag on the reel. The prettiest welterweight fighter of the Florida waters is the sailfish, a blue-and-silver torpedo, five and six and seven feet in length, with a spear for a nose and a lateen sail for a dorsal fin. He is a finicky striker, and when he is at the bait one feels only a slight jar. The lightness of the touch usually means sailfish; and when it comes, the fisherman releases his drag and lets his line run out fifteen or twenty or even thirty feet. Then he snaps the drag back into place and hoists his rod with a mighty heave without further inquiry. Frequently the sailfish is at the end of the line, in which case the fun begins—the sensation being about the same as holding a bucking broncho at the end of a fifty-yard rope. If an amateur is holding the rod the end of the thirty or forty-five minute fight finds him calling in a weak and trembling voice for a large drink of varnish or some similar restorative, and he spends the remainder of the trip pricking and caressing the blisters on his hands.

Farther out in the Gulf Stream are the kings of the heavyweight scrappers—tuna; while between the keys and the mainland are the giant tarpon. These fish will fight for two, three and even four hours; and if, in their leapings to shake the hook from their mouths, they chance to fall into the boat, there is never any room for anyone else.

The spectacles that one sees in these Florida waters are enough to make Izaak Walton take the pledge.

During one day's fishing which I had off the keys with President James Allison, of the Miami Aquarium, and Cap'n Charley Thompson, champion tarpon tracker of Biscayne Bay, a whip ray twenty feet from wing to wing shot thirty feet into the air just ahead of our boat, falling back into the water with a crash that must have been heard a mile in every direction. Cap'n Thompson declared that this violent leaping was due to the fact that the whip ray frequently feeds on clams. When he has gathered a bushel of clams into his stomach he leaps high in the air and descends on his

(Continued on Page 85)

"Dollar Topkis gave me new ideas about value"

"I'D like to have the money I've wasted because I was afraid to buy an athletic union suit priced as low as a dollar. I was so sure I couldn't get anything worth while, that I cheerfully gave up double, year after year.

"I didn't know Topkis then.

"Finally, a persistent salesman in Johnson's shop argued me into trying Topkis. I thought he was foolish to urge me to spend less than I wanted to. He was—like a fox; he knew he was landing me as a life-time customer.

"My dollar never before bought me as much quality and value as I get in Topkis. Loose, airy fit that keeps me comfortable all over and lets my skin breathe. No skimpiness; no bagginess; no pinch, no pull.

"Wear? That's where Topkis shines. Keeps its size, too, no matter how often it's washed. But I could talk for a year without getting the Topkis idea across to you. Hop into a suit yourself and find out the same way I did."

Topkis Athletic Union Suits are made of best nainsook and other highgrade fabrics. Preshrunk—full size guaranteed. Be sure you get your correct size—38 if you wear a 38 coat, and so on.

No good dealer will ask more than a dollar for the Topkis Men's Union Suit—although many will tell you it's worth more.

Men's Union Suits, $1.00.

Men's Shirts and Drawers, 75c per garment. 75c for Boys' Union Suits, Girls' Bloomer Union Suits, and Children's Waist Union Suits.

Ask for TOPKIS Underwear. Look for the Topkis label.

can never tell what is going to turn
Florida waters. The prospectuses of
winter and summer resorts usually lay
it on a little too thick. The Miami prospectuses always sound very much too much. Starting with the bathing girls on the front cover and ending with the proud fisherman on the back cover, they always look a little too perfect. The phrasing, too, seems a trifle sappy and fat-headed. "It's June in Miami," these prospectuses declare, "where winter is turned to summer." They seem to rave overwildly. "Miami welcomes you with the smile of the tropics," rave these bits of passionate literature, "and the warmth of the unclouded sun is instilled in the hospitality of the greeting that awaits you here. Leave winter behind, fling care to the icy winds, come to Miami and play at being eternally young again. Here in Nature's most alluring out-of-doors playground, under azure skies, amid fronded palms and riotous flowers, with song of bird, the balmy air, and the benedictions of glorious sunshine, find health, happiness and contentment."

It seems like raving before you've been there. But after you've once been there you recognize that the bathing girls and the fish are as advertised. As for the prospectuses, they don't seem so violent after all. In fact, they seem pretty conservative.

Sense and Nonsense

Coming Across

RING the early Kansas days, when he Dalton Gang was terrorizing the trainmen on railroads were always ied when any of the Dalton boys ded their train, for fear they conlated a holdup.

e of the Dalton boys, the recognized r of the gang, had a habit, when trav- from one point to another, of bluffing onductors into carrying him free.

e day the Dalton Gang leader boarded ain, and when the conductor came nd and demanded his fare Dalton ped out his gun and snarled "There's fare" as he shoved his gun into the uctor's ribs.

All right, you ride, Dalton," coolly an- ed the conductor, walking on through car.

he conductor proceeded into the bag- car and procured a sawed-off shotgun. en he returned Dalton was leaning out he car window, so, taking him unaware, conductor calmly walked up to him, ed the gun into his ribs and gruffly . "Say, Dalton, I'm ready to punch your t now." And Dalton came across.

Distance No Object

AUNTING the farmer in the western section of Kansas about the absence of ter on his land has been commonly prac- d for years.

Last summer a party of Eastern autoists passing through this section of the ntry, bound for the Pacific Coast. One the drivers of the party, in need of water, pped a farmer along the road, who was ling several barrels of water on his wagon. After negotiating with the farmer for much-needed water the auto driver iously inquired, "Well, my friend, tell how far do you have to haul this ter?"

"Oh, only 'bout ten miles," the farmer yly answered.

"Land sake!" exclaimed the stranger. Why don't you dig a well?"

"What's the use?" drawled the farmer. It's 'bout as far one way as 'tis the other."

Took the Words Out of His Mouth

AT had got hurt—not much more than a scratch, it is true—but his employer d visions of being compelled to keep him r life, and had adopted the wise course of nding him to the hospital.

After the house surgeon had examined im carefully he said to the nurse: "As ubcutaneous abrasion is not observable I do not think there is any reason to apprehend tegumental cicatrization."

Then turning to the patient, he asked quizzically, "What do you think, Pat?"

"Sure," said Pat, "ye took the very words out of my mouth. That's just what I was going to say."

The Life of the Party

THE general manager of a large Pacific Coast concern overheard some of his employes discussing the Jap question.

Stepping up among them he jocularly interrupted, "Well, Tommy, I suppose you'll be the first to enlist if we should have war with Japan!"

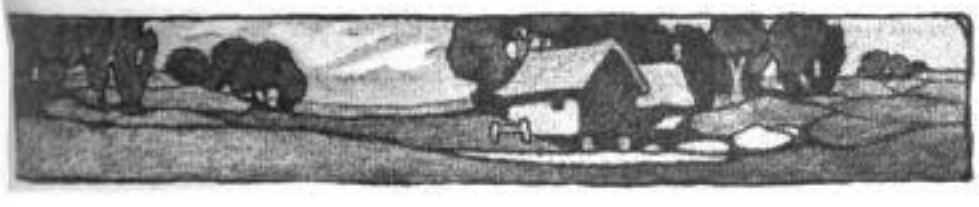
"Oh, yes," Tommy nodded. "I'll go—but there'll be two other guys going too."

"Well, who are they?" inquired the boss.

"Why, the two fellows that will drag me there!" Tommy replied.

His Parting Words

A LARGE Western railroad, when its employes are injured or accidentally killed, requires the foreman to render a full detailed report of the accident. A printed form is used, which has many complexities before all detailed questions are satisfactorily answered. The company employs a large number of Mexican track laborers, and one day a push car loaded with rails got away from a Mexican, taking him on a wild ride down grade until the car hit a derail at a switch. The laborer was killed instantly.



Mike Casey, an old-time foreman, took matters in hand and immediately undertook to render his accident report. In his rough scrawl he answered all the questions to the best of his knowledge, but hesitated when he encountered the last question on the printed form, namely: REMARKS.

Scratching his head for several minutes while he pondered, he finally inserted, "He never made any. He was dead."

His Method

"THERE hain't nuth'n special in the paper to-day," replied an acquaintance who had been interrogated by Tobe Wolford, of the Owl Gulch, Arkansas, neighborhood, "except that it says four million folks will starve to death in Rooshy this winter if they don't get help."

"Well, they ort to starve if they hain't got no better sense than to stick right there in Rooshy when times is thataway," was the disgusted answer. "When things get to such a pass with me that it looks like something has got to be did I hook up the hosses, pour a gourdful of water on the fire, call the dogs, and take the family over to Oklahomy to visit my wife's kin."

Cheaper to take ICE *than spoil food*

A FEW cents a day will buy enough ice for average family use. Food costs you many times as much. You cannot *afford* to waste it. At this season you *need* ice, not only to keep food from spoiling, but also to retain its fresh, appetizing flavor and the nourishing qualities so necessary to health. Keeping food down cellar or in a back entry is *not safe;* at any temperature above 50° it spoils.

The Comfort of Having Ice

cannot be measured in money. It makes a big difference in the family health, especially the health of young children. They must have fresh milk and you cannot keep it fresh without ice. Disease germs multiply rapidly in milk which is not kept COLD. Take ice regularly—the year 'round; it will save you money.

This Emblem Your Protection

On any ice wagon it means that its owner is a responsible business man and a member of the National Association of Ice Industries, pledged by it to give you PURE ICE, CAREFUL WEIGHT and GOOD SERVICE. He would not be awarded this emblem if he did not live up to the high standards set by the Association for serving the public. You can depend upon him and his drivers—KNOW in advance that his ice is pure and his weight is right.

NATIONAL ASSOCIATION OF ICE INDUSTRIES

DEPEND ON ICE IN ALL WEATHER

THE COVERED WAGON

(Continued from Page 21)

Wingate and his wife were talking heatedly, she in her nervousness not knowing that she fumbled over and over in her fingers the heavy bit of rock which Molly had picked up and which was in her handkerchief when it was requisitioned by her mother to bathe her face just now.

After a time she tossed the nugget aside into the grass. It was trodden by a hundred feet ere long.

But gold will not die. In three weeks a prowling Gros Ventre squaw found it and carried it to the trader, Bordeaux, asking "Shoog?"

"Non, non!" replied the Laramie trader. "Pas de shoog!" But he looked curiously at the thing, so heavy.

"How, cola!" wheedled the squaw. "Shoog!" She made the sign for sugar, her finger from her palm to her lips. Bordeaux tossed the thing into the tin can on the shelf and gave her what sugar would cover a spoon.

"Where?" he asked her, his fingers loosely shaken, meaning "Where did you get it?"

The Gros Ventre lied to him like a lady, and told him, on the South Fork, on the Creek of Bitter Cherries—near where Denver now is; and where placers once were. That was hundreds of miles away. The Gros Ventre woman had been there once in her wanderings and had seen some heavy metal.

Years later, after Fort Laramie was taken over by the Government, Bordeaux as sutler sold much flour and bacon to men hurrying down the South Fork to the early Colorado diggings. Meantime in his cups he often had told the mythical tale of the Gros Ventre woman—long after California, Idaho, Nevada, Montana were all afire. But one of his halfbreed children very presently had commandeered the tin cup and its contents, so that to this day no man knows whether the child swallowed the nugget or threw it into the Laramie River or the Platte River or the sagebrush. Some depose that an emigrant bought it of the baby; but no one knows.

What all men do know is that gold does not die; nay, nor the news of it. And this news now, like a multiplying germ, was in the wagon train that had started out for Oregon.

As for Molly, she asked no questions at all about the lost nugget, but hurried to her own bed, supperless, pale and weeping. She told her father nothing of the nature of her meeting with Will Banion, then or at any time for many weeks.

"Molly, come here, I want to talk to you."

Wingate beckoned to his daughter the second morning after Banion's visit.

The order for the advance was given. The men had brought in the cattle and the yoking up was well forward. The rattle of pots and pans was dying down. Dogs had taken their places on flank or at the wagon rear, women were climbing up to the seats, children clinging to pieces of dried meat. The train was waiting for the word.

The girl followed him calmly, high-headed.

"Molly, see here," he began. "We're all ready to move on. I don't know where Will Banion went, but I want you to know, as I told him, that he can't travel in our train."

"He'll not ask to, father. He's promised to stick to his own men."

"He's left you at last! That's good. Now I want you to drop him from your thoughts. Hear that, and heed it. I tell you once more, you're not treating Sam Woodhull right."

She made him no answer.

"You're still young, Molly," he went on. "Once you're settled you'll find Oregon all right. Time you were marrying. You'll be twenty and an old maid first thing you know. Sam will make you a good husband. Heed what I say."

But she did not heed, though she made no reply to him. Her eye, "scornful, threatening and young," looked yonder where she knew her lover was; nor was it in her soul ever to return from following after him. The name of her intended husband left her cold as ice.

"Roll out! Roll out! Ro-o-o-ll ou-t!"

The call went down the line once more. The pistolry of the wagon whips made answer, the drone of the drivers rose as the sore-necked oxen bowed their heads again, with less strength even for the lighter loads.

The old man who sat by the gate at Fort Laramie, twisting a curl around his finger, saw the plain clearing now, as the great train swung out and up the trail. He perhaps knew that Jim Bridger with his own freight wagons, going light and fast with mules, was on west, ahead of the main caravan. But he did not know the news Jim Bridger carried, the startling news that Carson was carrying east. Here three old mountain men, for a few hours meeting after years, now were passing on apart, never to meet again. Their chance encountering meant much to hundreds of men and women then on the road to Oregon; to untold thousands yet to come.

As for one Samuel Woodhull, late colonel captain, it was to be admitted that for a time he had been conscious of certain misgivings of fate. But as all thoroughbred animals are thin-skinned, so are all short-bred pachydermatous, whereby they endure and mayhap arrive at the mark as well as the next. True, even Woodhull's vanity and self-content had everything asked of them in view of his late series of mishaps; but by now he had somewhat chirked up under rest and good food, and was once more the dandy and hail fellow. He felt assured that very presently the bygones would be bygones. Moreover—so he reasoned—if he, Sam Woodhull, won the spoils, what matter who had won any share of victory? He knew, as all these others knew and as all the world knows, that a beautiful woman is above all things *spolia opima* of war. Well, in ten days he was to marry Molly Wingate, the most beautiful woman of the train and the belle of more than one community. Could he not afford to laugh best, in spite of all events, even if some of them had not been to his own liking?

But the girl's open indifference was less of all to his liking. It enraged his vain choleric nature to its inner core. Already he planned dominance, but willing to wait and to endure for ten days, meantime he employed innocence, reticence, dignity, attentiveness, so that he seemed a suitor misunderstood, misrepresented, unjustly used; to whose patient soul none the less presently must arrive justice and exoneration, after which all would be happier even than a marriage bell. After the wedding bells he, Samuel Woodhull, would show who was master.

Possessed once more of horse, arms and personal equipment, and having told his own story of persecution to good effect throughout the train, Woodhull had been allowed to resume a nominal command over a part of the Wingate wagons. The real control lay in the triumvirate who once had usurped power, and who might do so again.

Wingate himself really had not much more than nominal control of the general company, although he continued to give what Caleb Price called the easy orders. His wagons, now largely changed to ox transport, still traveled at the head of the train, Molly continuing to drive her own light wagon and Jed remaining on the cow column.

The advance hardly had left Fort Laramie hidden by the rolling ridges before Woodhull rode up to Molly's wagon and made excuse to pass his horse to a boy while he himself climbed up on the seat with his fiancée.

She made room for him in silence, her eyes straight ahead. The wagon cover made good screen behind, the herdsmen were far in the rear, and from the wagons ahead none could see them. Yet when, after a moment, her affianced husband dropped an arm about her waist the girl flung it off impatiently.

"Don't!" she exclaimed. "I detest love-making in public. We see enough of it that can't be hid. It's getting worse, more open, the farther we get out."

"The train knows we are to be married at the halfway stop, Molly. Then you'll change wagons and will not need to drive."

"Wait till then."

"I count the hours. Don't you, dearest?"

She turned a pallid face to him at last, resentful of his endearments.

"Yes, I do," she said. But he did not know what she meant or why she was so pale.

What could you borrow on *your* home?

HOW DOES its present value compare with its cost? Your bank will tell you and it's well to know.

The only known way to keep the original value in a building is to keep it painted. That's the first thing to know and the second is this:

Every building has many surfaces, each requiring a different finish according to the nature of the surface and the wear it gets. You can buy under the Sherwin-Williams label just the right finish for each surface you wish to protect or beautify—a finish that will faithfully serve its purpose and keep the value in your home. There is a Sherwin-Williams dealer near you.

Send 50 cents (65 cents in Canada) for *The Home Painting Manual*, the most complete work on painting ever compiled. 170 pages of text; 27 color plate pages. Address 601 Canal Rd., Cleveland, O., Dept. B435.

Sent Free.—Set of 8 color plates, showing modern effects in interior decoration and attractive combinations for exterior painting. The Sherwin-Williams Co., 601 Canal Road, N. W., Cleveland, Ohio.

$82 spent for paint brought a $1,500 loa on this house

FINDING it necessary to place a mortgage on a small dwelling which I owned, I had the property inspected by an appraiser and was surprised to learn that the appraiser advised his company to reduce the amount of insurance on the house by one-third.

The best offer of a loan I could get was $800 which I did not accept, and in talking with a real estate friend the condition of the paint came up. When I told him that the house was about four years old and had never been painted, he said without hesitation, "That is the cause of your trouble." I immediately got in touch with a reliable paint dealer, invested $42 in a standard brand of ready-mixed paint and employed an old negro "Jack of all Trades" who put two coats of paint on the house for $40.

This $82 investment made my house look so much better that I had no difficulty in securing a loan of $1,500 and my insurance policy, instead of being reduced, was increased one-third.

beauty of the maid beside him. He
illing to pay any price.
hen it all seems settled."
ll but one part. You've never really
ctually told me you loved me."
wry smile.
'm planning to do that after I marry
I suppose that's the tendency of a
an. Of course, it can't be true that
one man will do for a woman to marry,
e woman for a man. If anything went
g on that basis—why, marrying would
! That would be foolish, wouldn't it?
ppose women do adjust. Don't you
k so?"
is face grew hard under this cool rea-
ng.
Am I to understand that you are
ying me as a second choice, and so
t you can forget some other man?"
Couldn't you leave a girl a secret if she
one? Couldn't you be happier if you
? Couldn't you take your chance and
if there's anything under the notion
ut more than one man and more than
woman in the world? Love? Why,
at is love? Something to marry on?
ey say it passes. They tell me that
rriage is more adjustable, means more
erests than love; that the woman who
rries with her eyes open is apt to be the
ppiest in the long run. Well, then, you
d you wanted me on any terms. Does
t that include open eyes?"
"You're making a hard bargain—the
rdest a man can be obliged to take."
"It was not of my seeking."
"You said you loved me—at first."
"No. Only a girl's in love with love—
first. I've not really lied to you. I'm
ying to be honest before marriage. Don't
ar I'll not be afterward. There's much
that, don't you think? Maybe there's
mething, too, in a woman's ability to
djust and compromise. I don't know.
'e ought to be as happy as the average
arried couple, don't you think? None of
hem are happy for so very long, they say.
hey say love doesn't last long. I hope
ot. One thing, I believe marriage is easier
o beat than love is."
"How old are you, really, Molly?"
"I am just over nineteen, sir."
"You are wise for that; you are old."
"Yes—since we started for Oregon."
He sat in sullen silence for a long time,
ll the venom of his nature gathering, all
is savage jealousy.
"You mean since you met that renegade,
traitor and thief, Will Banion! Tell me,
isn't that it!"
"Yes, that's true. I'm older now. I
know more."

"And you'll marry me without love? You love him without marriage? Is that it?"

"I'll never marry a thief."

"But you love one?"

"I thought I loved you."

"But you do love him, that man!"

Now at last she turned to him, gazing straight through the mist of her tears.

"Sam, if you really loved me, would you ask that? Wouldn't you just try to be so gentle and good that there'd no longer be any place in my heart for any other sort of love, so I'd learn to think that our love was the only sort in the world? Wouldn't you take your chance and make good on it, believing that it must be in nature that a woman can love more than one man or love men in more than one way? Isn't marriage broader and with more chance for both? If you love me and not just yourself alone, can't you take your chance as I am taking mine? And after all, doesn't a woman give the odds? If you do love me ——"

"If I do, then my business is to try to make you forget Will Banion."

"There is no other way you could. He may die. I promise you I'll never see him after I'm married.

"And I'll promise you another thing"—her strained nerves now were speaking truth for her—"if by any means I ever learn—if I ever believe—that Major Banion is not what I now think him I'll go on my knees to him. I'll know marriage was wrong and love was right all the time."

"Fine, my dear! Much happiness! But unfortunately for Major Banion's passing romance, the official records of a military court-martial and a dishonorable discharge from the Army are facts which none of us can doubt or deny."

"Yes, that's how it is. So that's why."

"What do you really mean then, Molly—you say 'That's why'?"

"That's why I'm going to marry you, Sam. Nine days from to-day, at the Independence Rock, if we are alive. And from now till then, and always, I'm going to be honest, and I'm going to pray God to give you power to make me forget every other man in all the world except my—my ——" But she could not say the word "husband."

"Your husband!"

He said it for her, and perhaps then reached his zenith in approximately unselfish devotion, and in good resolves at least.

The sun shone blinding hot. The white dust rose in clouds. The plague of flies increased. The rattle and creak of wheel, the monotone of the drivers, the cough of dust-afflicted kine made the only sounds for a long time.

"You can't kiss me, Molly?"

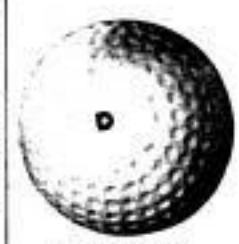
He spoke not in dominance but in diffidence. The girl awed him.

"No, not till after, Sam; and I think I'd rather be left alone from now till then. After —— Oh, be good to me, Sam! I'm trying to be honest as a woman can. If I were not that I'd not be worth marrying at all."

Without suggestion or agreement on his part she drew tighter the reins on her mules. He sprang down over the wheel. The sun and the dust had their way again; the monotony of life, its drab discontent, its yearnings and its sense of failure once more resumed sway in part or all of the morose caravan. They all sought new fortunes, each of these. One day each must learn that, travel far as he likes, a man takes himself with him for better or for worse.

XXIX

BANION allowed the main caravan two days' start before he moved beyond Fort Laramie. Every reason bade him to cut entirely apart from that portion of the company. He talked with every man he knew who had any knowledge of the country on ahead, read all he could find, studied such maps as then existed, and kept an open ear for advice of old-time men who in hard experience had learned how to get across a country.



Two things troubled him: The possibility of grass exhaustion near the trail, and the menace of the Indians. Squaw men in from the north and west said that the Arapahoes were hunting on the Sweetwater, and sure to make trouble; that the Blackfeet were planning war; that the Bannacks were east of the Pass; that even the Crows were far down below their normal range and certain to harass the trains. These stories, not counting the hostility of the Sioux and Cheyennes of the Platte country,

with us again

Dunlop *162*
The *best* ball to play with. Smaller size. 85c each.

Dunlop "*D*"
The *most durable* ball to play with. Medium size. 85c each.

Dunlop *Magnum*
The *easiest* ball to play with. Large size. 85c each.

Dunlop *Warwick*
The *cheapest* of good balls to play with. Medium size. 70c each.

The Choice of Particular Players

Here's the golf ball that has established itself as the choice of particular golfers. Amateurs and Professionals, the world over, have depended upon the *sure* playing qualities of Dunlops for more than fifteen years.

Today, as a perfected product of skilled workmanship, the Dunlop ranks as the leading imported golf ball, both in volume of sales and the general spread of its popularity.

This Year's Price 85 Cents Each

During the last two years the regular price of *standard* Dunlop balls has been $1.10 each. This season we are pleased to announce a price recession, which makes the Dunlop *162*, the Dunlop "*D*" and the Dunlop *Magnum* obtainable at 85c each. The *Warwick* will retail at 70c. Everything considered—including the playing qualities, durability and dependability—we believe that the buyer of golf balls will find the Dunlop range provides for the truest economy.

You Can Get Dunlops If You Ask For Them

Many players accustomed to the use of Dunlop golf balls have sometimes found it difficult to obtain their favorite brand. No need for being without Dunlops this season. A liberal supply is available, and there is no reason for taking a substitute article. Sometimes, though, you may have to insist on Dunlops to get them. If you don't find Dunlop balls in stock, please write us, giving the name of your club.

This is the number of the plated, ball-tip, loose-pin McKinney Butt.

If you are thinking of building, this book will be mighty helpful

ITS aim is to suggest to you a number of little things which should be carefully considered in building a home—little things which sometimes are overlooked—but little things which go a long way toward making your home an easy-running, pleasurable place in which to live.

It is a book which will prevent a lot of regrets after your home has been lived in a while. It will eliminate such expressions as "Well, if we had to do it over again we would do thus and so!"

Ask us to send you this book. A postcard will bring it by return mail.

The book will also give you considerable valuable information about proper hardware for your home—particularly information about hinges.

It will explain to you the importance of hinges. Why they should be selected carefully; why a few moments' thought about hinges before your home is built will enable you to forget all about hinges during all the years you occupy the house.

And it will tell you why McKinney Hinges and Butts for over half a century have answered the exacting requirements of architects, builders and home owners, why they have always given such long years of service, why they have always served easily, smoothly and noiselessly.

Garage Door Hardware Sets. We will also send you our book describing one of the latest McKinney developments for the convenience of those who are thinking of building a private garage. The book shows pictures and working plans for the designing and erection of all kinds of garage doors. For each type of door there is a complete set of McKinney Hardware, packed complete in a box. Everything needed for the hanging and operation of the doors is included. Write for these books today.

McKINNEY MANUFACTURING COMPANY, Pittsburgh

McKINNEY
Hinges and Butts and Hardware

Garage hardware, door hangers and track, door bolts and latches, shelf brackets, window and screen hardware, cabinet hardware, steel door-mats and wrought specialties.

made it appear that there was a tacit suspense of intertribal hostility, and a general and joint uprising against the migrating whites.

These facts Banion did not hesitate to make plain to all his men; but, descendants of pioneers, with blood of the wilderness in their veins, and each tempted by adventure as much as by gain, they laughed long and loud at the thought of danger from all the Indians of the Rockies. Had they not beaten the Sioux? Could they not in turn humble the pride of any other tribe? Had not their fathers worked with rifle lashed to the plow beam? Indians? Let them come!

Founding his own future on this resolute spirit of his men, Banion next looked to the order of his own personal affairs. He found prices so high at Fort Laramie, and the stock of all manner of goods so low, that he felt it needless to carry his own trading wagons all the way to Oregon, when a profit of 400 per cent lay ready not a third of the way across and less the further risk and cost. He accordingly cut down his own stocks to one wagon, and sold off wagons and oxen as well, until he found himself possessed of considerably more funds than when he had started out.

He really cared little for these matters. What need had he for a fortune or a future now? He was poorer than any jeans-clad ox driver with a sunbonnet on the seat beside him and tow-headed children on the flour and bacon sacks, with small belongings beyond the plow lashed at the tail gate, the ax leaning in the front corner of the box and the rifle swinging in its loops at the wagon bows. They were all beginning life again. He was done with it.

The entire caravan now had passed in turn the Prairies and the Plains. In the vestibule of the mountains they had arrived in the most splendid out-of-doors country the world has ever offered. The climate was superb, the scenery was a constant succession of changing beauties new to the eyes of all. Game was at hand in such lavish abundance as none of them had dreamed possible. The buffalo ranged always within touch, great bands of elk now appeared, antelope always were in sight. The streams abounded in noble game fish, and the lesser life of the open was threaded across continually by the presence of the great predatory animals—the grizzly, the gray wolf, even an occasional mountain lion. The guarding of the cattle herds now required continual exertion, and if any weak or crippled draft animal fell out its bones were clean within the hour. The feeling of the wilderness now was distinct enough for the most adventurous. They fed fat, and daily grew more like savages in look and practice.

Wingate's wagons kept well apace with the average schedule of a dozen miles a day, at times spurting to fifteen or twenty miles, and made the leap over the heights of land between the North Platte and the Sweetwater, which latter stream, often winding among defiles as well as pleasant meadows, was to lead them to the summit of the Rockies at the South Pass, beyond which they set foot on the soil of Oregon, reaching thence to the Pacific. Before them now lay the entry mark of the Sweetwater Valley, that strange oblong upthrust of rock, rising high above the surrounding plain, known for two thousand miles as Independence Rock.

At this point, more than eight hundred miles out from the Missouri, a custom of unknown age seemed to have decreed a pause. The great rock was an unmistakable landmark, and time out of mind had been a register of the wilderness. It carried hundreds of names, including every prominent one ever known in the days of fur trade or the new day of the wagon trains. It became known as a resting place; indeed, many rested there forever, and never saw the soil of Oregon. Many an emigrant woman, sick well-nigh to death, held out so that she might be buried among the many other graves that clustered there. So, she felt, she had the final company of her kind. And those weak or faint of heart the news that this was not halfway across often smote with despair and death, and they, too, laid themselves down here by the road to Oregon.

But here also were many scenes of cheer. By this time the new life of the trail had been taken on, rude and simple. Frolics were promised when the wagons should reach the Rock. Neighbors made reunions there. Weddings, as well as burials, were postponed till the train got to Independence Rock.

Here then, a sad-faced girl, true promise and true to some strange phil of her own devising, was to becom wife of a suitor whose persistenc brought him little comfort beyon wedding date. All the train kne Molly Wingate was to be married t Sam Woodhull, now restored to tru authority. Some said it was a good others shook their heads, liking well a maid either blush or smile in such Molly's, whereas she did neither.

At all events, Mrs. Wingate w days baking cakes at the train Friends got together little presents bride. Jed, Molly's brother, himself dler of parts, organized an orchest dozen pieces. The Rev. Henry D Baptist divine of much nuptial di en route, made ready his best coat. came into camp. In the open spaces valley hundreds of wagons were sca each to send representatives to Moll gate's wedding. Some insisted th ceremony should be performed on t of the Rock itself, so that no touch mance should lack.

Then approached the very hour— the night, after duties of the day done. A canopy was spread for the mony. A central camp fire set the for the wedding feast. Within a hal the bride would emerge from the s of her wagon to meet at the canopy the Rock the impatient groom, alread in his best, already giving largess t riotous musicians, who now attune struments, now broke out into rude or pertinent song.

But Molly Wingate did not appea her father or mother. A hush fell o rude assemblage. The minister of th pel departed to the Wingate encamp to learn the cause of the delay. He f Jesse Wingate irate to open wrath girl's mother stony calm, the girl h white but resolute.

"She insists on seeing the marria cense, Mr. Doak," began Jesse Win "As though we could have one! As th she should care more for that than parents!"

"Quite so," rejoined the reverend "That is something I have taken up the happy groom. I have with all couples I have joined in wedlock on trail. Of course, being a lawyer, Mr. Wi hull knows that even if they stood be the meeting and acknowledged themse man and wife it would be a lawful marr before God and man. Of course, also w know that since we left the Missouri R we have been in unorganized territory, no courts and no form of government, society as we understand it at home. well. Shall loving hearts be kept asun for those reasons? Shall the natural co of life be thwarted until we get to Oreg Why, sir, that is absurd! We do not e know much of the government of Ore itself, except that it is provisional."

The face of Molly Wingate appeared the drawn curtains of her transient ho She stepped from her wagon and ca forward. Beautiful, but not radiant, was; cold and calm, but not blushing uncertain. Her wedding gown was all white, true enough to tradition, thou but of delaine, pressed new from its pa ing trunk by her mother's hands. Fi bodice, long and deep in front and at ba was plain entirely, save for a treasure lace from her mother's trunk and f mother's wedding long ago. Her hands h no gloves, but white short-fingered mit also cherished remnants of days of scho girl belledom, did service. Over whi stockings, below the long and full-bodi skirt, showed the crossed bands of lo elastic tapes tied in an ankle bow to ho in place her little slippers of black hig finished leather. Had they seen her, all ha said that Molly Wingate was the sweete and the most richly clad bride of any on the long, long trail across the land that ha no law. And all she lacked for her weddin costume was the bride's bouquet, whic her mother now held out to her, gathere with care that day of the mountain flow ers—blue harebells, forget-me-nots of varie blues, and the blossom of the gentian, bol and blue in the sunlight, though at nigh infolded and abashed, its petals turning i and waiting for the sun again to warm them.

Molly Wingate, stout and stern, ful bosomed, wet eyed, held out her one little present to her girl, her ewe lamb, whom she was now surrendering. But no hand of the

he Open Door to Better Health-
It's in Your Home

scientist from another world ld come to our earth and a book on our habits and s, we might have a queer of ourselves. Among other he might say:

se humans live in artificial rns of wood, stone or c, divided into rooms with s between. The outer walls e doors and windows to it light and air.

ummer, windows and doors open and their houses are t and airy, but in winter close the outside openings even the doors between the ns, living in a stuffy, dry, ted atmosphere that is ally very uneven in temper- re.

is queer custom, that is quite erally followed even in the t of their homes, is un- ubtedly the cause of much ess, for these humans are ject to many diseases of se, throat and lungs in the nter, when they really should more healthy than in the mmertime."

t must admit that this is true. ors know it is true and insist on windows and doors in the sick- . Architects know it is true, they design homes with wide ings between the living rooms.

t do what they will, the doctor the architect cannot give you a pletely open house with proper ilation in winter; **only a good ting system can do this.**

The Convector Opens Your Doors to Health

The Mueller Convector heats ry room in a house through one ister on the first floor. It auto- tically circulates all the air in r home over its large heating sur- e and back again to your rooms.

Fresh air is warmed and mingled h all the air in the house and sent roughout every room. This health- ventilation is going on all the ne; the air is never still. There n be no stagnant air pockets, no otty hot or cold places.

This complete air circulation, used by the Convector, really ens doors to better health. Hav- g a well designed open house is of tle use unless your heating system ves you correct ventilation. You ight keep every inner door open d still have poor ventilation with a eating system that does not circu- te air.

There is no more practical and conomical way of heating any home han with the clean, warm air that omes from the Convector's single egister. Living rooms are entirely free of heating apparatus—no pipes, no radiators, no valves or registers scattered over the house—nothing but a constant circulation of health- fully moistened air. The Convector never makes a noise, it cannot freeze, it cannot leak.

How Nature Automatically Keeps the Temperature Even

Sometimes people ask how an even temperature may be maintained with Convector heat and ventilation—why the upstairs rooms are not cooler than the downstairs rooms—why the room or hallway in which the register is located is not warmer than other parts of the house.

They might as well ask how an even temperature is maintained with the large warm air heating and ventilating systems installed in our best schools and hospitals. They operate on exactly the same principle as the Convector, except that they must have expensive systems of fans and piping because of the large size of the buildings. With the Convector the warmed air circulates quite naturally and evenly, without these aids.

This system of circulation is so efficient that if one room becomes cooler than the others for any reason, the Convector automatically begins to send more heat to that room. Gravity causes this action, and there is nothing more positive than the law of gravitation.

There is rarely a difference of more than a few degrees in temperature in the rooms of a Convector heated home.

Interesting Facts About the Convector

It is positively guaranteed to heat all your home to your entire satisfaction.

Thousands of practical tests prove that it saves one-third to one-half in fuel.

It can be installed in any home, new or old, usually in less than one day's time.

Warmed air from the Convector is healthfully moistened. It does not harm furniture, interior woodwork and fine finishes, fabrics or musical instruments, as dry heated air often does.

The Convector is more quickly and easily regulated to temperature change than any other type of system, and it is regulated directly by the **amount of fuel you burn.** You can take the chill off the whole house in a few minutes by burning a few pounds of fuel—the Convector is noted for this economy.

It is very easily operated—two firings a day will keep all your home cozily warm. Nothing to get out of order. No expensive repairs.

Heats ample supply of water for kitchen and bath.

Sizes for homes of four to eighteen rooms. Will heat store buildings, theaters and churches. Takes small space in basement. Never heats basement. Not necessary to have full size basement for installation.

Burns any fuel—hard coal, soft coal, coke, wood, gas, oils, lignite, screenings.

You can buy the Convector on easy terms, if desired, from a dealer near you. Send coupon now, for complete information on installation for your home.

Keep a supply of Pet Milk always on the pantry shelf

and you will never be without milk. You will appreciate the convenience and economy of using Pet Milk. For coffee, it is fine. For all cooking, it is excellent. Pet is pure, rich, full-cream cow's milk, with part of the natural water removed, then sterilized—that's all. *Milk at its Best!* Try it and you will never be without it. Your grocer can supply you. Two sizes —tall and small. For *Free* book of Pet recipes, write to The Helvetia Company (Originators of the Evaporated Milk Industry) General Offices—St. Louis.

Try this recipe

COCOA. 2½ tablespoons cocoa, 4 tablespoons sugar, 1 cup Pet Milk, 3 cups water, few grains salt. Scald milk diluted with two cups of the boiling water. Mix cocoa, sugar and salt; add a half-cup boiling water and stir to make a smooth paste; then add remaining half-cup of water and boil one minute. Pour into scalded milk and beat thoroughly with Dover egg beater just before serving.

"Yes, of course," her father chimed in.
It's the consent in the contract when you
and before them all."
"I'll not stand before them. I don't
ment! There is no agreement!"
Suddenly the girl caught from her mother
e pitiful little bride's bouquet.
"Look!" she laughed. "Look at these!"
One by one, rapidly, she tore out and
ng down the folded gentian flowers.
"Closed, closed! When the night came,
hey closed! They couldn't! They couldn't!
't not—I can't!"

She had the hand's clasp of mountain blossoms stripped down to a few small flowers of varied blooms. They heard the coming of the groom, half running. A silence fell over all the great encampment. The girl's father made a half step forward, even as her mother sank down, cowering, her hands at her face.

Then, without a word, with no plan or purpose, Molly Wingate turned, sprang away from them and fled out into a night that was black indeed.

Truly she had but one thought, and that in negation only. Yonder came to claim her a man suddenly odious to her senses. It could not be. His kiss, his arms—if these were of this present time and place, then no place in all the world, even the world of savage blackness that lay about, could be so bad as this. At the test her philosophy had forsaken her, reason now almost as well, and sheer terrified flight remained her one reaction.

She was gone, a white ghost in her wedding gown, her little slippers stumbling

Unmindful of the Sullen Apathy of Men and Women, Jed Sang With His Cracked Lips as He Swung From One Jig to the Next

over the stones, her breath coming sobbingly as she ran.

They followed her. Back of them, at the great fire whose illumination deepened the shadows here, rose a murmur, a rising of curious people, a pressing forward to the Wingate station. But of these none knew the truth, and it was curiosity that now sought answer for the delay in the anticipated divertisement.

Molly Wingate ran for some moments, to some distance—she knew of neither. Then suddenly all her ghastly nightmare of terror found climax in a world of demons. Voices of the damned rose around her. There came a sudden shock, a blow. Before she could understand, before she could determine the shadowy form that rose before her in the dark, she fell forward like the stricken creature.

XXX

THERE was no wedding that night at the Independence Rock. The Arapahoes saw to that. But there were burials the day following, six of them—two women, a child, three men. The night attack had caught the company wholly off guard, and the bright fire gave good illumination for shaft and ball.

"Put out the fires! Corral! Corral!"

Voices of command arose. The wedding guests rushed for the shelter of their own wagons. Men caught up their weapons and a steady fire at the unseen foe held the latter at bay after the first attack.

Indeed, a sort of panic seized the savages. A warrior ran back exclaiming that he had seen a spirit, all in white, not running away from the attack, but toward them as they lay in cover. He had shot an arrow at the spirit, which then had vanished. It would be better to fall back and take no more like chances.

For this reason the family of Molly Wingate, pursuing her closely as they could, found her at last, lying face down in the grass, her arms outspread, her white wedding gown red with blood. An arrow, its shaft cracked by her fall, was embedded in her shoulder, driven deep by the savage bowman who had fired in fear at an object he did not recognize. So they found her, still alive, still unmutilated, still no prisoner. They carried the girl back to her mother, who reached out her arms and laid her down behind the barricaded wagon wheels.

"Bring me a candle, you!" she called to the nearest man. It chanced to be Sam Woodhull.

Soon a woman came with a light.

"Go away now!" the mother commanded the disappointed man.

He passed into the dark. The old woman opened the bodice over the girl's heart, stripped away the stained lace that had served in three weddings on two sides of the Appalachians, and so got to the wound.

"It's in to the bone," she said. "It won't come out. Get me my scissors out of my bag. It's hanging right 'side the seat, our wagon.

"Ain't there no doctor?" she demanded, her own heart weakening now. But none could tell. A few women grouped around her.

"It won't come out of that little hole it went in," said stout Molly Wingate, not quite sobbing. "I got to cut it wider."

Silence held them as she finished the shreds of the ashen shaft and pressed to one side the stub of it. So with what tools she knew best she cut into the fabric of her own weaving, out of her own blood and bone; cut mayhap in steady snippings at her own heart, pulling and wrenching until the flesh, now growing purple, was raised above the girl's white breast. Both arms, in their white sleeves, lay on the trodden grass motionless, and had not shock and strain left the victim unconscious the pain must now have done so.

The sinew wrappings held the strap-iron head, wetted as they now were with blood. The sighing surgeon caught the base of the arrowhead in thumb and finger. There was no stanching of the blood. She wrenched it free at last, and the blood gushed from a jagged hole which would have meant death in any other air or in any patient but the vital young.

Now they disrobed the bride that was no bride, even as the rifle fire died away in the darkness. Women brought frontier drafts of herbs held sovereign, and laid her upon the couch that was not to have been hers alone. She opened her eyes, moaning, held out her arms to her mother, not to any husband; and her mother, bloody, unnerved, weeping, caught her to her bosom.

STUDY THIS PICTURE A MOMENT

HAVE you ever seen a union suit without a single button front or back? Here it is.

THE HATCHWAY
NO-BUTTON UNION SUIT *for Men and Boys*

Step into the legs, slip your arms through the armholes, and you're in. You never imagined such simplicity. You have a new experience in store for you in comfort as well: comfort that conforms to the body lines and comfort of mind through the complete elimination of button bother morning and night, and no more sewing on of buttons or repairing of button holes.

And material comfort too. The Hatchway, like its famous predecessor, the Hatch One Button Union Suit, comes in a rich range of summer weather-defying fabrics. Cool knitted fabrics that are so light you only think of them because of their comfort. Woven fabrics that include nainsook, crêpe, soiesette and even pure silk.

See these garments at your favorite dealer's today. He can get them for you, if we have as yet been unable to supply him, or if he is temporarily sold out. It has been a big job to keep dealers stocked up this Spring, but if you have any difficulty in getting just what you want, we shall be glad to see that you are supplied, delivery free anywhere in the United States. In ordering, please state sizes and numbers of garments required, enclosing remittance to our mill at Albany. Send for free catalog illustrating complete line of Hatchway No-Button Union Suits and Hatch One Button Union Suits photographed on live models.

Men's Nainsook Suits, $1, $1.50, $2, $3, $5 (The $5 garment is all silk).
Boys' Nainsook Suits, $1, $1.25.
Men's Knitted Suits, $1.50, $2, $3, $3.50.
Boys' Knitted Suits, $1, $1.25.

THE RICE PROCESS WHITE

Smooth—white—washable as tile

A paint for walls and woodwork that resists dirt

WHY do most white paints collect dirt so quickly?

The surface of ordinary flat or egg-shell finish white paint is not actually smooth but full of countless pores—microscopic holes in which dust and dirt cling.

Barreled Sunlight produces a lustrous finish that is smooth and unbroken. This even surface resists the tiny dirt and dust particles. Marks or smudges cannot sink in. Walls and woodwork coated with Barreled Sunlight can be washed clean like tile—even after years of service.

That is why this paint is being used today in buildings of every description—office buildings, stores, hotels, apartment houses, schools and industrial plants. Ideal also for woodwork throughout the home and for the walls of kitchen, bathroom, laundry, etc.

Made by the exclusive Rice Process, Barreled Sunlight is guaranteed to remain white longer than any gloss paint or enamel applied under the same conditions. Easy to apply. Flows freely and leaves no brush marks. Comes ready mixed in cans from half-pint to five-gallon size—barrels and half-barrels.

If your dealer does not carry Barreled Sunlight communicate with our nearest distributor. (See list below.)

Save the surface and you save all

"My lamb! My little lamb! Oh, dear me! Oh, dear me!"

The wailing of others for their dead arose. The camp dogs kept up a continual barking, but there was no other sound. The guards now lay out in the dark. A figure came creeping toward the bridal tent.

"Is she alive? May I come in? Speak to me, Molly!"

"Go on away, Sam," answered the voice of the older woman. "You can't come in."

"But is she alive? Tell me!" His voice was at the door which he could not pass.

"Yes, more's the pity!" he heard the same voice say.

But from the girl who should then have been his, to have and to hold, he heard no sound at all, nor could he know her frightened gaze into her mother's face, her tight clutch on her mother's hand.

This was no place for delay. They made graves for the dead, pallets for the wounded. At sunrise the train moved on, grim, grave, dignified and silent in its very suffering. There was no time for reprisal or revenge. The one idea as to safety was to move forward in hope of shaking off pursuit.

But all that morning and all that day the mounted Arapahoes harassed them. At many bends of the Sweetwater they paused and made sorties; but the savages fell back, later to close in, sometimes under cover so near that their tauntings could be heard.

Wingate, Woodhull, Price, Hall, Kelsey stationed themselves along the line of flankers, and as the country became flatter and more open they had better control of the pursuers, so that by nightfall the latter began to fall back.

The end of the second day of forced marching found them at the Three Crossings of the Sweetwater, deep in a cheerless alkaline desert, and on one of the most depressing reaches of the entire journey. That night such gloom fell on their council as had not yet been known.

"The Watkins boy died to-day," said Hall, joining his colleagues at the guarded fire. "His leg was black where it was broke. They're going to bury him just ahead, in the trail. It's not best to leave headboards here."

Wingate had fallen into a sort of apathy. For a time Woodhull did not speak to him after he also came in.

"How is she, Mr. Wingate?" he asked at last. "She'll live?"

"I don't know," replied the other. "Fever. No one can tell. We found a doctor in one of the Iowa wagons. He don't know."

Woodhull sat silent for a time, exclaimed at last, "But she will—she must! This shames me! We'll be married yet."

"Better wait to see if she lives or dies," said Jesse Wingate succinctly.

"I know what I wish," said Caleb Price at last as he stared moodily at the coals, "and I know it mighty well—I wish the other wagons were up. Yes, and ——"

He did not finish. A nod or so was all the answer he got. A general apprehension held them all.

"If Bridger hadn't gone on ahead, damn him!" exclaimed Kelsey at last.

"Or if Carson hadn't refused to come along instead of going on east," assented Hall. "What made him so keen?"

Kelsey spoke morosely.

"Said he had papers to get through. Maybe Kit Carson'll sometime carry news of our being wiped out somewhere."

"Or if we had Bill Jackson to trail for us," ventured the first speaker again. "If we could send back word ——"

"We can't, so what's the use?" interrupted Price. "We were all together, and had our chance—once."

But buried as they were in their gloomy doubts, regrets, fears, they got through that night and the next in safety. They dared not hunt, though the buffalo and antelope were in swarms, and though they knew they now were near the western limit of the buffalo range. They urged on, mile after mile. The sick and the wounded must endure as they might.

Finally they topped the gentle incline which marked the heights of land between the Sweetwater and the tributaries of the Green, and knew they had reached the South Pass, called halfway to Oregon. There was no timber here. The Pass itself was no winding cañon, but only a flat, broad valley. Bolder views they had seen, but none of greater interest.

Now they would set foot on Oregon, passing from one great series of waterways to another and even vaster, leading to the western sea—the unknown Sea marked as the limits of their possions by the gallants of King C when, generations earlier, and care all these intervening generations of to danger, they had paused at the sumr Rockfish Gap in the Appalachians waved a gay hand each toward th known continent that lay they knew how far to the westward.

But these, now arrived halfway o that continent, made no merriment in turn. Their wounded and their sick with them. The blazing sun tried sore. Before them also lay they knew what.

And now, coming in from the nort in a vast braided tracing of travois and trampling hoofs, lay a trail which told them was that of yet another war waiting for the white-topped wagons led on across the Pass. It could n more than two days old.

"It's the Crows!" exclaimed Sam W hull, studying the broad trail. "Th got their women and children with th

"We have ours with us," said Price simply.

Every man who heard him looked at the lines of gaunt cattle, at the stained canvas coverings that housed families. They were far afield from or safety.

"Call Wingate. Let's decide wha do," exclaimed Price again. "We'll to vote."

They voted to go on, fault of any b plan. Some said Bridger's post was far ahead. A general impatience, *fre* querulous, manifested itself. Ignor many of these wanted to hurry on to gon, which for most meant the Willam Valley, in touch with the sea, marke the usual end of the great trek. Few k that they now stood on the soil of Oregon country. The maps and jour of Molly Wingate were no more fa coming, for Molly Wingate no more tau the evening school, but lay delirious un the hothouse canvas cover that intensi the rays of the blazing sun. It was life death, but by now life-and-death is had become no unusual experience.

It was August, midsummer, and o half the journey done. The heat was bli ing, blistering. For days now, in the sage country, from the ford of the No Fork of the Platte, along the Sweetwa and down the Sandy, the white alkali d had sifted in and over everything. L cracked open, hands and arms either w raw or black with tan. The wagons w ready to drop apart. A dull silence h fallen on the people, but fatuously follo ing the great Indian trail they made ca at last at the ford of the Green River, t third day's march down the Pacific Slo No three days of all the slow trail had be harder to endure than these.

"Play for them, Jed," counseled Cal Price when that hardy youth, leaving h shrunken herd, came in for his lunch th day at the ford.

"Yes, but keep that fiddle in the shad Jed, or the sun certainly will pop it open

Jed's mother, her apron full of broke bits of sagebrush, turned to see that h admonishment was heeded before she begt her midday coffee fire. As for Jed himsel with a wide grin he crouched down at th side of the wagon and leaned against wheel as he struck up a lively air, roarin joyously to his accompaniment:

"Git out o' the way, old Dan Tucker,
You're too late to git yore supper!"

Unmindful of the sullen apathy of me and women, the wailing of children stiflin under the wagon tops, the moans of th sick and wounded in their ghastly dis comfort, Jed sang with his cracked lips a he swung from one jig to the next, th voice of the violin reaching all the wagon of the shortened train.

"Choose yore pardners!" rang his voic in the joyous jesting of youth. And— marvel and miracle—then and there thos lean brown folk did take up the jest, an laughingly gathered on the sun-seared sands. They formed sets and danced—danced a dance of the indomitable, at high noon, the heat blinding, the sand hot under feet not all of which were shod. Molly Wingate, herself fifty and full-bodied, cast down her firewood, caught up her skirt with either hand and made good an old-time jig to the tune of the violin and the roaring accompaniment of many voices and of patted hands.

Announcing
Standardized Service
bringing reduced prices for maintenance, new economies in labor and parts, and an end to guess-work

NOW comes the long-expected introduction of Standardized Service. And Marmon is first to attain the mechanical perfections which make it possible. It is the climax of years of effort—the Marmon is a nine year development!

Since the inception of the "34" series of Marmon cars, Nordyke & Marmon Company has had but one object in view: to design and produce the most efficient and comfortable means of transportation at the lowest cost per mile.

This goal has finally been reached. Nation-wide records of upkeep costs of thousands of 1920, 1921 and 1922 Marmons, enable us to offer Standardized Service, the new-day way of reducing operating costs to a minimum.

Our plan is this:

The national organization of Marmon distributors have joined in a co-operative movement to adopt a known price for service. We are establishing uniform published prices.

We aim to prove beyond question that the Marmon, by virtue of its inherent simplicity and ruggedness of design, costs less to own and operate than comparable cars. We prove that a Marmon ranks first in economical operation, of all high-grade cars.

We have based our Standardized Service upon time studies of thousands of Marmons. The new minimums in hours of labor and material costs are entirely practical, not philanthropic. A fair profit is made on each job, but lower than ever.

For the first time in motor history, an owner knows *beforehand* just what service costs.

Higher mileage—Lowered cost

Records show that there are 16 service operations covering the average requirements and constituting 85% of all maintenance. Now these are reduced to a simple cost system: hours of labor plus price of materials.

Take the most important item, for example. We know that with reasonable care Marmons do not require rebuilding until after 35,000 to 50,000 miles of service. **This enables the Marmon distributor to give you a contract with each Marmon of the later series, agreeing to completely rebuild the motor at any time necessary, in 55 hours' actual labor. The total cost for labor and materials does not exceed $265.*** This includes complete replacement of all parts liable to wear except crankshaft bearings, as records show that they do not wear within this mileage. Read about this remarkable contract in "Modern Transportation Costs," a booklet sent to all who mail us the coupon on this page.

For the other 15 average service operations, we likewise establish actual standardized prices, based on new efficiencies. Thus we insure every owner the lowest operating costs in the history of The Foremost Fine Car.

Learn the details

Marmon is able to make this revolutionary announcement, the details of which will amaze you, because it has established positive, undisputable records for long-life, dependability and economy—due to inherent simplicity of design of its wonderful, vibrationless six-cylinder motor, due to its sturdy chassis, due to superfine materials and higher standards of manufacture.

Every car owner will be intensely interested in this startling, but inevitable, development of Standardized Service.

So we have prepared a complete booklet entitled "Modern Transportation Costs." It describes Standardized Service. We send it free to all who ask. Merely mail the coupon. The facts will give you a new basis of computing operating costs. You will learn a way of owning a finer car at a lower cost. Send for this book—it does not put you under the slightest obligation—it is our contribution to a better day in motoring.

used at length, dropping her calico etween her fingers, and hastened to a wagon side as she wiped her face er apron.

dn't you hear it, Molly?" she de- d, parting the curtain and looking in. s, I did. I wanted—I almost wanted . Mother, I almost wanted to hope Am I to live? Where are we now?"

a right pretty river, child, and ost to Oregon. Come kiss your r, Molly. Let's try."

reupon, having issued her orders t everyone to work at something er practical fashion, the first lady train went frizzling her shaved buf- eat with milk in the frying pan; ling that milk now was almost at the ing point, and that now they wouldn't nother buffalo; but always getting rd with her meal. This she at last ly announced:

ell, come an' git it, people, or I'll it to the dogs."

t on the sand, on blankets or odds nds of hide, the emigrants sat and rith the thermometer—had they had perhaps a hundred and ten in the The men were silent for the most with now and then a word about the which they thought it would be wise ake at once, before the river per- e might rise, and while it still would wim the cattle.

We can't wait for anyone, not even Crows," said Wingate, rising and end- he mealtime talk. "Let's get across." ethodically they began the blocking the wagon bodies to the measurement olished by a wet pole.

Thank the Lord," said Wingate, "they'll clear now if the bottom is hard all the ."

ne by one the teams were urged into ticklish crossing. The line of wagons almost all at the farther side when all nce the rear guard came back, spurring.

"Corral! Corral!" he called.

He plunged into the stream as the last driver urged his wagon up the bank. A rapid dust cloud was approaching down the valley.

"Indians!" called out a dozen voices. "Corral, men! For God's sake, quick—corral!"

They had not much time or means to make defense, but with training now become second nature they circled and threw the dusty caravan into the wonted barricade, tongue to tail gate. The oxen could not all be driven within, the loose stock was scattered, the horses were not on picket lines at that time of day; but driving what stock they could, the boy herders came in at a run when they saw the wagons parking.

There was no time to spare. The dust cloud swept on rapidly. It could not spell peace, for no men would urge their horses at such pace under such a sun save for one purpose—to overtake this party at the ford.

"It's Bill Jackson!" exclaimed Caleb Price, rifle in hand, at the river's edge. "Look out, men! Don't shoot! Wait! There's fifty Indians back of him, but that's Jackson ahead. Now what's wrong?"

The riddle was not solved even when the scout of the Missouri train, crowded ahead by the steady rush of the shouting and laughing savages, raised his voice as though in warning and shouted some word, unintelligible, which made them hold their fire.

The wild cavalcade dashed into the stream, crowding their prisoner—he was no less—before them, bent bows back of him, guns ready.

They were stalwart, naked men, wide of jaw, great of chest, not a woman or child among them, all painted and full armed.

"My God, men!" called Wingate, hastening under cover. "Don't let them in! Don't let them in! It's the Crows!"

(TO BE CONTINUED)

ONCE A SLOGANEER—

(Continued from Page 13)

Mr. Bowser frankly groaned.

Primrose Farm! I see where I'm going have one merry time."

'It's that or the scrap heap," the doctor ured him.

'Ned, you've got me scared," said Mr. wser. "I'm afraid your diagnosis is ht; I have advanced sloganitis. But I n't think lying around a farm or anyere else will cure it."

Doctor Harter made as if to leave in gust.

"Wait, Ned!" cried Mr. Bowser. "You n. It's true. I don't own this business. owns me. But Nothing Can Break A wser. I'm Going To Be My Own Boss reafter, Not The Servant of Phrases. ad on to Primrose Farm!"

"That's the spirit," said the doctor, rning back from the door.

"I promise," said Mr. Bowser solemnly, not to think of slogans for a month. My ind will lie fallow. I want to come back re Charged With The Electricity Of ife."

Automatically he reached for the thick otebook to jot down the happy phrase. With a smile Doctor Harter snatched it rom him, threw it into a desk drawer, and lammed the drawer shut.

"No, you don't!" said the doctor. "From his second I hold you to your promise. Conquer this thing. Don't let sloganitis out you down and out."

"You Can't Put A Bowser Out," said the owner of that name, taking his hat—a handsome example of Handhewn Hedgear—Class Yet Dignity. "You Might As Well Try To Put Out The Sun."

"Cut that," warned the doctor.

"Sorry," apologized Mr. Bowser. "Rome Wasn't Built In A Day, Nor New York Razed In A Night."

"Cut that out," growled Doctor Harter as he hurried Mr. Bowser into the elevator.

II

JANSFORD BOWSER was in the sixth day of his rustication at Primrose Farm, Clinton Valley, in Dutchess, fairest of counties.

In a tweed suit, shaggy as a collie, he sat at breakfast in the pleasant old-fashioned dining room with Miss Evelina Venable, who was sixty, and Miss Cornelia Venable, who was sixty-one. The air of repose was well-nigh perfect. Mr. Bowser had napped, dozed and slept liberally since his arrival, and he was calmer than when we undressed him in his office, but hardly more contented. Only that morning as he tied his tie he had to check himself in the midst of announcing to a redwinged blackbird outside his window, "Bowser Totters On The Brink Of Boredom."

The two sisters wore that look of serenity seen only on the faces of the simple-hearted. And yet on this morning, sunlit though it was, that serenity seemed to be struggling with worry. Mr. Bowser might have noticed this had he not just then been very busy with the strawberries and cream. He was flooding his second helping of berries with thick yellow cream from the blue willow-pattern pitcher. Miss Evelina looked at Miss Cornelia and sighed. Miss Cornelia looked at Miss Evelina and sighed. Mr. Bowser looked up at both of them interrogatively.

"I beg pardon?" he said.

"Oh, nothing," said Miss Evelina.

"Oh, nothing," said Miss Cornelia.

"Man Does Not Sigh For Nothing," he declared, choosing a berry as big as an egg. "What's wrong?"

The sisters looked embarrassed.

"Cornelia is worried about the berries," said Miss Evelina.

"Evelina is worried about the berries," said Miss Cornelia.

"Worried about these berries?" said Mr. Bowser. "Why, Each Is A Garden's Masterpiece."

"It's not the berries themselves," said Miss Evelina shyly. "It's the market."

"O-ho," said Mr. Bowser. It was all he could say from a berry-crowded mouth.

"You see," explained Miss Evelina timidly, "Cornelia and I—we depend on our berries."

"O-ho," said Mr. Bowser again.

"You see," explained Miss Cornelia, "if the berry market fails us again we'll have to give up Primrose Farm."

"We shouldn't like to do that," added Miss Evelina.

"What's wrong with the berry market?" asked Mr. Bowser.

"The man in New York we usually sell them to," said Miss Evelina, "won't take them this year. He says he can get them cheaper in New Jersey."

ARNOLD
GLOVE-GRIP SHOES

Put your feet at ease!

WEARING Glove Grip Shoes is like giving your feet a holiday. The Glove Grip feature *lifts up* the arches of your feet instead of pushing them down. Fatigue disappears. The *cause* of most foot aches is removed.

And the old idea—that comfortable shoes must be unconventional in shape—is knocked sky-high! Glove Grips are as good to look at as they are to wear. They combine style with comfort in a manner that cannot be duplicated in any other shoe made. The Glove Grip idea is *patented*.

Note the men's oxford shown above. Conservative in its general atmosphere but with a touch of distinction that marks its wearer as being fashionably shod.

Below is a spring model for women—the Vassar. Its graceful lines have aroused enthusiasm wherever it has been shown.

First-class dealers everywhere are now displaying these and other Glove Grip models for men and women. If your dealer does not carry them, we will gladly send you the name of one who does, together with an attractive miniature catalog.

"The Most Interesting Development in Golf —since the rubber core ball"

The Bristol Steel Golf Shaft is the successful result of years of experiment in the effort to produce a golf shaft that would be equal to the finest hickory.

Lighter than hickory, the Bristol Steel Golf Shaft makes a better balanced club—it puts the weight where it ought to be. When you take hold of it, it feels right—it possesses the same "whip" in all weather, will not corrode and is unaffected by climatic conditions. It is a handsomely finished shaft.

Patented Nov. 22, 1910 Oct. 3, 1911

"Bristol"

TRADE MARK REG. U.S. PAT. OFF.

Steel Golf Shaft

Patented May 12, 1914 May 2, 1916

NOTICE: Basic and Supplementary Patents covering Steel Golf Shafts are controlled exclusively by us.

Good hickory is growing scarcer, as everybody knows. The Bristol Steel Golf Shaft is the equal of the finest hickory in every particular. Give it a trial and convince yourself. Ask your "Pro." about it. Have him fit the Bristol Steel Golf Shaft to one of your old clubs or buy a new club equipped with it.

Golf Shops and Sporting Goods Dealers: A great deal of interest is being shown by golfers everywhere in the new Bristol Steel Golf Shaft. It will pay you to investigate this new source of revenue.

Golf Clubs fitted with Bristol Steel Golf Shafts can now be supplied by The Crawford, McGregor and Canby Co., Dayton, Ohio, and The Hillerich & Bradsby Co., Louisville, Ky.

Write for our descriptive circular giving us the name of your golf club and professional.

The Horton Mfg. Co.
441 Horton St., Bristol, Conn.

If You Fish

then you know Bristol Steel Fishing Rods—you know them as the standard; the rods demanded and used by real fishermen; the rods which give maximum satisfaction in all kinds of game fishing. Every Bristol Steel Fishing Rod is guaranteed in workmanship and material.

No. 16, Cork Handle "Bristol" Trout Rod, 9 feet long, can be purchased from your dealer for $5.50, or it will be sent to you direct by us for the same price, postpaid.

Write for Bristol, Meek and Kingfisher Fishing Catalogue—mailed free on request.

"But not better," said Miss Cornelia proudly.

"I should say not!" agreed Mr. Bowser. "Best I ever put a tongue to."

He balanced a truly remarkable berry on his spoon and asked, "How much did he pay?"

"Six cents."

"A berry?"

"No; a quart."

Mr. Bowser looked horrified.

"Six cents a quart for berries like this? Why, I've paid sixty for worse."

"I'm afraid sister and I are not very good business people," said Miss Evelina, blushing.

"But they are fine berries, we think," said Miss Cornelia, also blushing.

"Why, it ought to be worth six cents just to see a quart of berries like these," declared Mr. Bowser.

"The man in New York said," remarked Miss Evelina, "that berries are berries, and that they all look alike to him."

"He did, did he?" said Mr. Bowser, and a sudden gleam, which might have been the sometimes mentioned gleam of battle, came to his blue eyes. "He did, did he?"

He ceased eating berries and leaned his brow on his hand a full minute. Then he raised his head and cried "I have it."

"You have what, Mr. Bowser?"

"The punch idea!"

He checked himself. He was thinking of his promise to Doctor Harter. He gazed wistfully at the berries. He ate one. He thought how bored he had been just doing nothing. He ate another berry. He gazed at the faces of the Misses Venable and read in them a growing concern. He ate another berry. He slapped his hand down on the table; the plates and the two sisters jumped.

"Sorry," apologized Mr. Bowser. "But really this idea is too good to lose."

"What idea?"

"About your berries."

"Our berries?"

"Yes. I know what they need."

"What? More cream? More sugar?"

"No," cried Mr. Bowser in the voice of a trumpet. "Individuality."

The sisters exchanged uncomprehending glances.

"Why, ladies," exclaimed Mr. Bowser, his nostrils distending like those of a veteran fire horse scenting smoke, "look here! These Berries Are Gems. They Belong In A Queen's Necklace. Why, New York is full of connoisseurs who'd gladly pay a dime apiece for such berries. Wait! I have it! I have it! 'The Connoisseur's Berry. A Dime Each—And Worth It. Each In Its Own Individual Container.' Look, ladies, look!"

Excitedly he rummaged through his pockets and fished out an old envelope. With fingers that trembled he tore it and folded it into a small cornucopia. Into this he popped a berry and, with a twist, sealed it in.

"There!" he cried, waving it before their astonished noses. "Behold! 'The Connoisseur's Berry. So Rare We Won't Sell More Than Twenty Berries To One Family.' Not bad, eh? We'll print that on each wrapper. Look here, Miss Evelina, Miss Cornelia, how long does the berry season last?"

"Only a few more weeks," they told him.

"We must work fast." The words were popping from Mr. Bowser so fast that they tripped on one another's heels. "Is there a printer in this town?"

"I believe Mr. Wibber, of the Clinton Valley Clarion, does printing for folks," said Miss Evelina.

"A job press. Might be worse," said Mr. Bowser, speaking crisply, incisively. All trace of ennui was gone now. "Here, you, Miss Evelina, get Wibber on the phone at once and tell him to come right up here with samples of colored paper——"

He caught himself, for he saw that the sisters were looking at him curiously.

"Oh, I beg your pardon, really," he said. "I'm very sorry. Forgot myself. Habit of mine to be bossy when I'm in a hurry. Will you please, Miss Evelina, ask Mr. Wibber to come up here as rapidly as the good Lord will let him. Ask him, please, to bring colored paper. Bright yellow preferably."

"What for?" asked Miss Cornelia.

"You'll see," said Mr. Bowser mysteriously. "Now let me have a pencil and a wad of copy paper. Please." He added this word as an afterthought.

"Doctor Harter said you weren't to have them," protested Miss Cornelia.

"Hang Doctor Harter! I beg your don. I mean I'm sure he won't mind, that I'm rested up a bit."

His tone was so exigent that Miss nelia produced paper and pencil. He most snatched them from her hands, the gleam noted before grew even brig in his blue eyes as he poised the pencil the paper.

"The man said berries are berries, he said aloud to himself. "Berries berries, eh? All alike, eh? We'll 'Most Berries Are Just Berries. Ver Berries Are Precious Jewels—Each B Gets A Mother's Tender Care.' Not that. Not bad."

He was still writing industriously w Mr. Wibber, the printer, arrived with yellow paper.

Five days after Mr. Wibber arrive Primrose Farm with his yellow paper, had a long, head-to-head talk with Bowser, the roadster of Dr. Ned Ha snorted angrily up to the door of Prim Farm, and Doctor Harter stamped ang up the porch steps, rang angrily at the and demanded angrily to see Mr. Bow

He found Mr. Bowser at the telepho and at Mr. Bowser's elbow was a pile what anyone could tell were proofs fr from the printer and exhaling the pung perfume of printer's ink.

As Doctor Harter burst into the room heard Mr. Bowser saying, "Is this Par & Rexford, Fifth Avenue's Famous Fr erers? This is Mr. Bowser, sales mana for Venable's Connoisseur's Berries. . Sorry, Mr. Parker, but we can't let y have more than ten thousand. Quali product, you know. . . . No, I did say ten thousand quarts. You buy ord nary berries by the quart. I said t thousand berries. . . . Yes, a nic each, wholesale. Fixed retail price, a di each. . . . You can use ten thousand week till the season closes? . . . Goo First shipment will reach you to-morro See our ad in the morning papers? . . Glad you liked it. . . . Thanks. G'-by

He hung up the receiver just befo Doctor Harter bounded across the room tear it from his hand.

"What the devil is the meaning of this roared Doctor Harter.

"What?" asked Mr. Bowser, trying t look innocent.

For reply Doctor Harter slammed dow on the table a New York morning news paper.

"Do you think I can't read?" demande the doctor heatedly. "Do you think don't know the fine hand of Bowser whe I see it?"

Mr. Bowser wriggled a bit sheepishly i his chair.

"Couldn't resist temptation," he mur mured.

"Listen to this," bellowed Doctor Harter in a fine passion. He read from the paper:

"BERRIES ARE BERRIES," said the old-fashioned fruit man.

But he was wrong. Dead wrong!

Most Berries are Just Berries.

But VENABLE BERRIES are the Precious Jewels of Berrydom. Each berry gets a mother's tender care. That's why the new sensation is called

Venable's CONNOISSEUR BERRY

The biggest, most luscious, most delicious mouthful that ever delighted the palate of mortal man!

Each in a sanitary, dust-proof yellow wrapper, with the Venable Seal of Superiority stamped on it. None genuine without the signature,

E. & C. VENABLE,
PRIMROSE FARM.

On sale at a few of the most select of the fine fruit stores. *Look for the Berry in the Yellow Kimono.*

A DIME EACH—AND WORTH IT.

Doctor Harter slapped the paper down hard and glared at Mr. Bowser.

"Again I ask," he said, "what the devil do you mean?"

"That ad sold ninety thousand berries," said Mr. Bowser meekly.

"And gave you a relapse of sloganitis!" roared the doctor.

"It put the Venable Berry On The Map," said Mr. Bowser.

"It may put you off the map," said the doctor hotly. "Now, see here, Bowser, I'm going to cure you in spite of yourself. Primrose Farm is a failure."

NEW YORK'S

COPPER

SKY-LINE

CONTRIBUTING a touch of subdued color that has a most striking effect, Copper is the predominating roofing material in New York's new sky-line. On every side is visible the old-green tone that gives the Copper roof its quiet and lasting beauty.

Of course, the element of color is only incidental. For Copper is used because it is the best roofing material.

In these prominent structures, representing the best architectural experience and the greatest thrift, Copper is the favored metal in the interior as well.

In the plumbing pipes, Brass, Copper's principal alloy, is used. In the hardware, doors, grilles, railings, Copper's greater durability and beauty are utilized in Brass or Bronze.

Copper, Brass and Bronze resist rust as no other metals do. Copper products are not expensive, for they are everlasting; they save you costly repairing and replacing of short-lived substitutes; they extend the useful life of the building, and thus earn much more than their cost.

In skyscraper or cottage—Copper, Brass and Bronze are cheaper because you pay for them only ONCE

"Save your feet"

Is Foot Comfort Worth a Dollar?

When you come home feeling miserable and all tired out, with aching, swollen feet, you probably feel as though you'd pay anything to have well feet again. Anything rather than that pain in the ankle and instep, the burning in the soles, all the troubles that come from fallen arches and weakened conditions of the feet.

You can get foot comfort easily and quickly—for only a dollar. Jung's "Wonder" Arch Braces have aided thousands of such cases as yours. They help the feet by holding in place the small muscles between the bones of the feet. They correct fallen arches. Relieve foot strain. Overcome pain in knees, legs and heels.

No matter what appliances or supports you have used, you should try a pair of Jung's "Wonder" Arch Braces. Made of special "Superlastik," light and porous, but firm and durable. Enable you to stand or walk for hours without tired and aching feet. Money back if they don't make your feet feel better. Price $1 per pair (Canada $1.50).

If your shoe dealer, druggist, surgical dealer or chiropodist can't supply you, order direct.

Write Today for Our Free Book

Contains valuable information about the feet. Illustrated with X-Ray views. Tells how to relieve and prevent foot ills and get genuine foot comfort. New edition just off the press. Send for your copy today—no obligation involved.

ARCH BRACES

(Continued from Page 98)

"It is not," denied Mr. Bowser. "It's on the map now. Miss Evelina and Miss Cornelia are fixed for life."

"I mean as a rest place for you," returned Doctor Harter. "It's too civilized. Too near New York. Too many temptations for a weak-willed sloganeer. Pack up your things."

"Why?"

"You sail to-night for Opipee."

"What's that? Trade name?"

"No. It's an island."

"Where?"

"Never mind. It's wild and primitive. No white men there."

"No white men? Oh, doctor ——"

"Not one. The natives are bay. They don't know a word of English. But they're peaceable. You're to live there like a primitive man."

"I'm no Robinson Crusoe."

"Neither was he, till he was cast away," said the doctor grimly.

"But, Ned ——"

"What?"

"I don't believe it's rest I need, after all."

"I'm the doctor, not you. Do as I say. You promised you'd try to beat sloganitis."

"A Bowser Promise Is Like Forged Steel," said Mr. Bowser.

"Cut out that stuff."

"Sorry. I slipped."

"Come. Pack up."

"Oh, all right," said Mr. Bowser wearily. "Weeping Judas, doc, but you're masterful."

"Then you'll keep up your fight?"

"Until The Moon Falls Into Hoboken," promised Mr. Bowser.

They spun away in the doctor's car, while the Misses Venable, simultaneously tearful and radiant, waved their best cambric handkerchiefs after the departing Mr. Bowser.

III

A SERIES of successively smaller steamships landed J. Sanford Bowser on the palm-fringed coral strands of the remote and all but unknown isle of Opipee, with a vast quantity of impedimenta and a grouch.

He pitched his tent—it was a Beazleigh Tent—"Canvas of Unbelievable Durability"—and arranged his array of glittering camp utensils, took out his pipe, lit it, sat down on the sand.

"Now," he said, "for a real rest."

For a long, long time he sat there gazing out toward the horizon where his ship had disappeared.

"Now," he said again, "for a real rest."

And yet, somehow, the words did not ring right. The suspicion forced its way into his brain that for him resting was the hardest kind of work.

He got rid of this thought only by going to bed and to sleep.

Next day the mood of the night before was still with him, and despite his resolution to take things easy at any cost it was with a blue mien that he set forth for a stroll of inspection of the island, where for a month he was to be a voluntary Robinson Crusoe.

The island, clearly, was all that Doctor Harter had represented it to be in regard to primitiveness. As Mr. Bowser remarked to himself as he made his leisurely way along, "It Is As Devoid Of Traces Of Civilization As A Fish Is Of Pajamas." Nothing met his roving blue eyes but sky, sea, beach and trees. Finally he located the natives, the remnant of some tribe, very dark-brown, very aloof, and apparently of a philosophic temperament. They lived in a tiny settlement of thatched huts deep in the island jungle. They pursued, if one may use a word denoting motion, the simple life.

As a matter of fact they lay about and let the simple life come to them. Reclining on contented backs in the shade, they let Nature take its course and grow things for them to eat. Now and then with an abnormal burst of energy they overtook an earthworm in its flight, put it on a hook and let it dangle in the water, the line tied to one big brown toe. Then they slept the sleep of the virtuous until some wayward fish consumed the bait and twitched them into consciousness, whereupon they yawned, reeled in the line, yawned, and devoured the fish on the spot, spurning the formality of cooking it as an effete affectation. Mostly they slept. Their spoken tongue, indeed, resembled a series of snores. When Mr. Bowser greeted them with a loudly genial "Hello" they responded with an affable snore, and edged off deeper i the bush.

"Chummy little place," observed Bowser to a scarlet cockatoo on a bre fruit tree. It was the end of his tenth on Opipee. Truth to tell, Mr. Bowser finding rest and solitude not at all to liking.

"Chummy," he said ironically, but ad "Restful. You must admit that. Re restful, for those who like to rest. Place Where Sleep Was Discovered.' bad, that."

He continued to pace along the be

"A lot of men—tired business fellow would like to know about so restful a as this," he observed a little later to a l crab that was scuttling along the sh "Where Mother Nature Takes Man, Son, To Her Bosom. Wish I'd brou my notebook."

For the first time since his arrival a sm decorated his face.

"Nothing Here But Atmosphere," remarked; and then, brightening marke "By Judas, it rimes! You could set it two lines:

Nothing Here
But Atmosphere."

On he paced.

"No," he said a minute later. "I m cut that stuff out. I must not Fall A V tim To Verbiage."

As the words bounced against the pa trees and echoed in his ears he shrugged shoulders with a hopeless shrug.

"Did it again," he muttered.

He marched onward along the beach.

"I'll think of the trees," he said. I eyed them defiantly, as if he dared the to inspire him. "Musical-comedy trees he mused. Then from his mouth cam the words, "The Only Sound Is Th Whispering Of These Cool Green Sentine to Nature's Paradise. Not bad, tha Could have it set in 18-point Caslon und a good half-tone of that clump of cocon palms. Jove! I've done it again."

He clenched his fists resolutely.

"I'll watch the sunset," he said betwee tight teeth. He sat on a rock and concen trated his gaze on the semitropical sun very much as a cat watches a mouse hol The sun slipped down, mingling its molte gold with the glowing pink of the cloud

"Like Celestial Strawberry Ice Cream," said Mr. Bowser, and clapped his hand t his lips.

The sun seemed to leer at him seduc tively. Temptation beset him sore. A sig shook his whole body. He was acutely miserable. Then rebellion broke loose. His mind and body seemed simultaneously t stiffen. He stood up on the rock and faced the setting sun.

"I like to make slogans," he shouted. "I like to, do you hear? And I'm going to make 'em! I'm going to make 'em!"

The cloud lifted from his brow as he pronounced the words. He looked the sinking sun squarely in the eye, and in that bell-toned voice his clients and associates knew so well he declaimed:

"Here In This Zephyr Fanned Isle Of Repose, Diamond-Studded Night Succeeds Soft, Glorious Day. When New York Streets Are Deep In Snow Slip Away To Opipee, The Magic Isle Where The Sun Is Ever Kind. It Turns That Oh-What's-The-Use Feeling Into An I'm-Glad-I'm-Alive Feeling. Write For Free Literature."

He sprang to his feet and ran down the beach as fast as he could run. He dashed up all but breathless to the native settlement. The astonished blacks, languidly munching an evening meal of breadfruit from a common pot, saw his face red from running and alive with excitement. Had they understood English they'd have heard J. Sanford Bowser shouting with all his lungs:

"Wake Up, You Black Dumb-Bellies! Wake Up! I'm going to Put Opipee On The Map!"

IV

ONE month to a day after J. Sanford Bowser had for the first time swept a glum eye over the charms of Opipee, Dr. Ned Harter came to get his patient. Doctor Harter's launch lurched through the surf to the strand of Opipee, and the doctor was so violently in a hurry to catch Mr. Bowser in the act of resting that he leaped into the thigh-deep water and waded lustily to land.

"Bowser!" he boomed. "Bowser! Where are you?"

No voice replied; nowhere was there a trace of Mr. Bowser.

Digitized by Google

h anxious eye he surveyed the spot he had left Mr. Bowser pitching it. Something had happened there, ding sudden and violent. Where the had been were evidences that it had prooted, wiped out. There were the d embers of the last Bowserian camp here were the tent pegs still in the l; but the tent had been ripped from Doctor Harter's alarmed lips framed rd "Typhoon." Then he shook his he knew that that tranquil isle knew t of typhoons. An even more alarmpicion shot across his brain. Canni- Had the natives by some strange us been pricked from their torpor anged, overnight, into man-eaters? possible.

avism," groaned Doctor Harter aloud. Bowser! And I'm to blame. I'm me." He stood there on the beach, ided. He lifted his eyes to the rows onut palms that marked the jungle's ing. Then his eyes protruded a good nch from his head as if his grand- 's ghost had darted into his ken. In elief against the dark green of the tropees was something that leaped out to his astonished eyes. It was a sign. peared to be made of what was once a brown canvas tent. It bore, in inexut unmistakable letters of white, this d:

THIS IS OPIPEE
"NATURE'S PLAYGROUND"
REST IN ITS NOURISHING AIR
RECTED BY THE OPIPEE CHAMBER OF COMMERCE
J. SANFORD BOWSER
PUBLICITY DIRECTOR

octor Harter stood on the beach, inble of motion or articulation. At one the same second he experienced the tions of relief, amusement and anger. was reading the sign for a third time, was so absorbed in it that he did not a number of dark figures moving toward down the beach in single file until they ed within a dozen feet of him. They e natives, brown and glistening as re- ly shined tan shoes, and they walked heads high and with the step of men mportance. They were naked save for ething which was not exactly a garment which covered them from neck to es, before and behind. To the confused in of Doctor Harter the significance of odd garments did not, for some sec- s, become apparent. But as the natives ed quite near in dignified procession, it struck him.

They were sandwich men. Their garnts were signboards!

The signs they bore were made from ls and ends of packing cases and flat ces of driftwood, and in the same bold tering of the canvas sign they bore rious legends:

FREE
EVERY EVENING
GORGEOUS SUNSET
FREE

DRINK DEEP OF THE
STIMULATING ATMOSPHERE
NO EXTRA CHARGE

TELL YOUR FRIENDS
OPIPEE
MADE A NEW MAN OF YOU

BOOST OPIPEE—
OUTPUT
A MILLION COCONUTS
BY 1925

And there were a dozen more in similar ven, each carried by a proudly solemn native.

Doctor Harter said something between his teeth, and then strode down the beach toward the gap in the forest line from which issued the procession. Down a trail beaten through the jungle by countless bare feet, and quite recently trimmed and widened by hatchets, he could see the little clump of native huts. A sign on a tree at the trail's start caught his eye. It read:

STRAIGHT AHEAD
TO
BOWSER CITY
"WATCH US GROW"

With swift steps the doctor made his irate way toward the group of rude thatched huts. Just outside the hamlet, at the beginning of the crooked path that was the settlement's only street, was a sign on a stake:

FIFTH AVENUE
SPEED LAWS ENFORCED
AUTOMOBILE CLUB OF OPIPEE

Doctor Harter approached the first house, a tumble-down one-room hovel of straw and mud. Its door was all but obscured by a gay sign made, an acute observer might surmise, with pot black on a man's white linen shirt. This sign read:

THE MARLBOROUGH-BOWSER ARMS
"A HOSTELRY OF MARKED SUPERIORITY"
AMERICAN & EUROPEAN PLAN
J. S. BOWSER, PROP.

The next hut, more dilapidated, if possible, than the first one, bore a sign made obviously from a linen trouser leg, and lettered in clarion letters:

FIRST NATIONAL BANK OF BOWSER CITY
"RELIABLE AS THE OCEAN'S TIDES—
SOLID AS THE ROCKY MOUNTAINS"
PLANT YOUR MONEY HERE; WE'LL MAKE IT GROW

Doctor Harter shook his head partly in awe, partly in anger, and compressed his lips. The next hut bore another sign, obviously the other trouser leg. This hut was the largest in the village, and from its size presumably the residence of the chief. The sign read:

OPIPEE CHAMBER OF COMMERCE
"PROGRESS IS OUR MIDDLE NAME
PROSPERITY OUR LAST NAME"
GET ON THE BAND WAGON

A smaller sign, perhaps the sleeve of something, bore in firm letters the words:

WELCOME TO BOWSER CITY
OFFICE OF J. SANFORD BOWSER, PUBLICITY DIRECTOR
GET IN TOUCH WITH BOWSER FOR FACTORY SITES
WALK IN

Into this edifice pushed Dr. Ned Harter. In the single dim room he saw a figure so absorbed in the task of lettering another sign that the entrance of the doctor was not noticed. The figure was J. Sanford Bowser. He was clad sketchily but efficiently in a Swansofto unionsuit, having sacrificed the rest of his wardrobe in the cause of publicity, and the look on his face was utterly beatific as with a bit of burnt cork he put the finishing touches on a sign reading:

GET BEHIND BOWSER CITY
PATRONIZE THE LOCAL STORES

He looked up, saw Doctor Harter and the cork dropped from his hand. J. Sanford Bowser looked as guilty as a schoolboy caught with a Dead-Eye Dick novel in his geography. But the look changed swiftly to one of pride, of defiance.

As for the doctor, his aspect was sardonic, but his manner controlled, as he said, "Well, Bowse, at it again?"

"Yes," said Mr. Bowser. "I'm going to put Opipee on the map. Just wait till I get back to New York and spread the Message of its Health-Building Sunshine over a few hundred pages of newsprint. See. I've got a complete campaign all written."

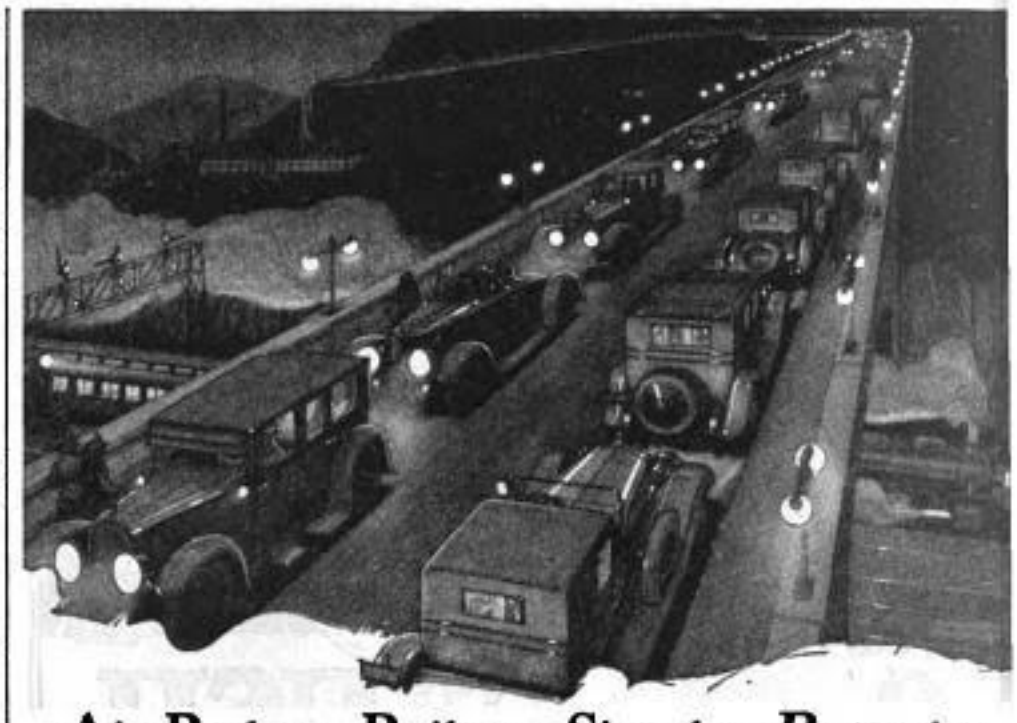
He indicated a pile of palm leaves covered with writing made with a pin.

"Bowse," said Doctor Harter sternly, "I said I'd see you through this and I'm going to. My sporting blood is up. I demand one more chance to cure you of sloganitis. If I fail this time I'll admit my cure is all wrong."

"Guess I'm incurable, Ned," said Mr. Bowser.

"You're incorrigible," said the doctor. "Do I get the chance?"

"Yes. I gave my word."



"Good! The launch is waiting."

"Wait a second, Ned," said Mr. Bowser, "till I find a good clarion site for this poster. Then I'll be with you."

▼

WHEN the boat docked in New York, Doctor Harter bundled J. Sanford Bowser into a waiting motor car, silenced his protests, whisked him straight past the Bowser Building, and onward, ever onward, deep into Connecticut.

As the car hummed through the beginnings of the Berkshires, Doctor Harter

New and delicious

Orange-CRUSH

Reg. U.S. Pat. Off.

ice cream, ices and sherbets

101,000 gallons of ice cream and ices flavored with Ward's Orange-Crush, Lemon-Crush or Lime-Crush were sold in 1921 by one firm in one city—Rieck-McJunkin Co., of Pittsburgh. *That is over three million dishes!*

These new flavors are the same used in the well-known "Crush" drinks, only specially prepared for ice cream purposes.

Utmost care is used in selecting and compounding the pure, delicious ingredients—fruit oils and juices from oranges, lemons or limes, U. S. certified food color and cane sugar.

One ice cream firm in principal cities and towns is exclusively licensed to use the "Crush" flavors in frozen products.

Ask any retail ice cream dealer. Send for free booklet, "How Orange-Crush Is Made."

relaxed from his grim silence long enough to remark, "Charming bit of scenery we just passed."

"Wonderful site for a billboard," said J. Sanford Bowser wistfully.

Silence for a mile or two, then, from Mr. Bowser, "Would it be too much to ask, Ned, whither are we drifting?"

"Sanitarium," said Doctor Harter.

"What one?"

"Restwold," said Doctor Harter.

Mr. Bowser groaned.

"More rest?" he said plaintively.

"If this fails," the doctor returned, "I'll admit rest is not the cure for sloganitis."

A few more miles of scenery elapsed before Mr. Bowser ventured to speak again: "What sort of place is Restwold?"

"They make you rest," said the doctor briefly.

Mr. Bowser's shrug had an aroma of utter skepticism.

Presently, after following twisting back roads, barren of human habitations, the car reached Restwold, a low, white, much-porched building in a grove of pines, having about it such an air of somnolence that Mr. Bowser yawned at the very sight of it.

"Here we are!' said Doctor Harter cheerfully. "Restful, isn't it?"

"As a Tomb," said Mr. Bowser dejectedly. Then, brightening, "How's this? Restwold—The Temporary Tomb. All The Peace Of Death With None Of Its Inconvenience."

"Bowse!"

"Sorry."

Doctor Harter turned his reluctant patient over to Doctor Downey, who conducted Restwold, and departed.

"Am I the only inmate?" asked Mr. Bowser.

"One other," said Doctor Downey. He had a deliberately restful voice.

"Business bad?"

"I never take more than two resters at a time," said Doctor Downey with sweet severity. "And I never discuss business."

Mr. Bowser sighed. There being nothing else to do he went silently to bed.

In the morning after a quiet breakfast in his gray-walled room Mr. Bowser took a seat—a yielding, cushioned seat—on the porch, and sat staring at the Berkshires. His stare was sad. He had resolved on the night before to make one more try to throw off sloganitis, and to rest, really rest. He tried to occupy his mind by counting the trees on the mountain side. He got as high as 7853 and then lost count. A frown began to form on his face. He fidgeted. He started to count the trees again. He could not help trying to figure out how much paper they would make if reduced to wood pulp, and how he would fill that paper, when converted into magazine pages, with gripping, compelling, clarion words. He lit a Marlborough-Somerset. He fidgeted again. He closed his eyes and tried desperately to rest. It tired him to do so. He stood up and went to the edge of the porch and drew deep into his chest the fresh air, so fresh indeed that it forced its attentions on him.

"The freshest air I ever filled a lung with," he said aloud, "M'm. Let's see." He fumbled for a phrase. "Air So Fresh," he began, "Air So Fresh ——"

"—— That It is An Inspiriting Blend Of Wine And Electricity!" cried an excited voice at his elbow.

J. Sanford Bowser wheeled about sharply.

"Oh, I hope I didn't startle you," said the same voice. "But I just couldn't resist the temptation to finish your phrase."

J. Sanford Bowser saw that the owner of the voice was a girl, a rather pretty girl too; not a flapper, for she had too much character in her face; thirty, thought Mr. Bowser, or maybe thirty-one, and most pleasing to the eye in her sport suit of the newest shade of lavender.

"I promised I wouldn't, you know," said the girl gravely.

"Wouldn't what?"

"Make phrases," said the girl, flushing.

J. Sanford Bowser started.

"Are you a patient here?" he asked.

"Do I look like a milkmaid?" laughed the girl.

"Oh, no. Oh, no, no, no," he repli hastily. "This fresh air confuses me. I I understand you are being treated phrase making?"

The girl nodded.

"So nice to discover someone who derstands," she said. "Yes. I've got vanced phrase fever. Doctor Harter so."

J. Sanford Bowser gave her a look char with interest and curiosity.

"Will you sit down?" he said with bow.

They took adjacent seats.

"Let me introduce myself," said girl. "My name is Kunkle."

"Kunkle," mused Mr. Bowser. "Nam familiar. By any chance are you rela to P. I. Kunkle, of Dingman, Tinney Kunkle, "Prosperity Engineers—The of Advertising Wedded to ——"

"—— The Science of Selling," finish the girl triumphantly.

"You are related, then?"

"I am that Kunkle," said the girl, stud ing her brogue toe. "I wrote that phras

"You?" Mr. Bowser was incredulo "You, P. I. Kunkle?"

"Yes, I'm P. I. Kunkle—Pandora In Kunkle."

"But I always thought P. I. Kunkle a man."

"She never was," she replied.

"Do you mean to say," said Mr. Bow with widening eyes, "that you are P. I. Kunkle who did the Komfy-Kle Bath Tub campaign—'Makes Every Ba A Holiday'?"

She nodded.

"And you're the P. I. Kunkle that the Pan-American Pie campaign?"

"'Heaven In Hunks,'" she murmu with downcast eyes.

"And the P. I. Kunkle who did s wonders with the sales of Doctor Peetli Toni-Tonick?"

"'But, Mamma, you pwomised me Kwismus a case of Doctor Peetlie's To Tonick. It stimulates my pancreatic zymes and settles my tummy,'" she quote

"Great work!" cried J. Sanford Bows "I've always wanted to meet P. I. Kunk My name is Bowser—J. Sanford Bo ser ——"

"'Let Bowser Put You On The Map,' she said, delight and awe in her soft voi

"Shake!" he said.

They shook.

Then they talked. He was full bottled-up talk, and now the stopper was ou He told her of his loneliness, his smashe to-smithereens feeling, which Doctor Ha ter had labeled sloganitis, and of how had tried to rest and couldn't. The talked all day. Toward dusk they h jointly worked out an elaborate plan to p Restwold on the map.

"Restwold—With Emphasis on t REST," was his contribution.

"At The Second Joyous Lungful Of Vimful Air You Own The World," w hers.

After dinner, beneath a gentle moo they talked some more. Their chairs we close together. They talked about them selves; about their souls.

"To-night," he confided to her, "I tel graphed Doctor Harter that he was wron about my case. Rest will never cure m sloganitis. And, thinking out loud, I don believe I want to cure it—now."

There was something tender, full meaning, in the way he said the wor "now."

"Phrase fever is not so bad," she sai softly, "when someone else really unde stands."

"After all, Pandora," said J. Sanfor Bowser as he took her unresisting hand "Love Is Understanding."

There was an interval. What happene only the moon saw.

"Shall we call the firm Bowser & Kun kle?" he asked, his arm about her.

"No, dear," she answered. "Just Th Bowsers."

"The Bowsers," he repeated in ecstasy "The Bowsers!"

"The Bowsers," she said, more softly still. "Let These Twin Go-Getters Put You on the Map."

SHALL WE FINANCE EUROPE OR AMERICA?

(Continued from Page 23)

at fancy prices finds no confirmation in the views of experts who have studied conditions, or in foreign-trade statistics.

"The prospect for the revival of American business lies in the increase of business in the domestic markets and in a foreign trade maintained along more normal lines and developed in a more normal way than is sometimes urged by the proponents of plans for artificial stimulation of foreign trade."

After picturing this background of normal trade Mr. Reynolds strikes the keynote of his theme by discussing the ill-balanced financial position of the world. "The United States," he declared, "and in much less degree Great Britain, are the only countries with an appreciable amount of capital for export. For the purpose of maintaining their own financial solidity these two countries can ill afford to supply Continental Europe with funds secured through bank expansion.

"Reports indicate that the nations of Continental Europe have made small progress in balancing their budgets. Deficits have accumulated. These nations must make serious efforts to improve public finances. This course involves stringent measures in the way of deflating inflated paper currencies. It also involves taxation of the most rigorous character. There must be retrenchment in public expenditures. . . . It is imperative that European countries work, tax, save, restrict imports to necessities, and above all reverse the mad policy of printing bank notes.

"One of the conditions necessary for normal trading between the United States and Europe is, therefore, that European countries shall themselves take clearly defined steps to strengthen their exchange position. Moreover, Europe should first help herself before seeking large amounts of new capital in the American market."

How often we have heard this same statement; so often that we, as Americans, are "full up and fed up" with the idea; but what is being done in foreign countries to-day, or, for that matter, in the United States?

Some Striking Figures

Do the American people to-day realize the extent to which European countries have been securing capital in our markets?

During the period 1915–20, according to this Mississippi Valley banker, "foreign loans floated through American bankers aggregated some $5,000,000,000. Direct loans by the Federal Government to European nations amounted to some $10,000,000,000. At the present time the unfunded debt of Europe probably amounts to somewhere between $3,500,000,000 and $4,000,000,000. In all, these figures represent an export of something like $19,000,000,000 of capital."

If capital is a form of prosperity, then we have been exporting prosperity at a get-rich-quick spendthrift rate which may be difficult to continue if we expect to enjoy and profit by some of our prosperity at home.

To illustrate the significance of his figures Mr. Reynolds makes some terrifying comparisons. "During the period 1915–20 the total reported issues of securities—railroad and traction, industrial, municipal and state, and those put out by the Federal Government, amounted to $43,500,000,000. Of that total $15,000,000,000 went to Europe. Europeans received $3,000,000,000 more than was given to all American railroads, traction companies and industries combined. They received as much as these with state and municipal issues added.

"In many statements regarding the subject of exporting capital the idea seems to be prevalent that money is the only form of capital." But this is not true, Mr. Reynolds maintains. "If the United States makes loans to France and the proceeds of the loans are expended in the United States, it is felt that Americans will be safe because the money is still here. But in such case they have parted with capital goods that have been paid for with their own funds. They will receive for these capital goods the customary evidences of debt—bonds or notes which draw interest. This is as truly an export of capital a gold had been sent abroad. . . . Am ican capital resources have been depl to the same extent in either case. I immaterial whether the recent $100,000, French loan was made in goods or in so far as this country's capital accoun concerned. Thinking about the expor capital should not be confused by cente attention on money and forgetting the that capital goods are exported even tho the money can be spent in this country

"Much of the same situation under the plan for the proposed $100,000, foreign-trade financing corporation. I a plan to export a large part, or all, $1,000,000,000 of capital to Europe. I a plan to stimulate exports, but it invol the export of capital goods in return which Americans will receive inter bearing promises to pay."

What is the effect of this policy?

"In considering foreign trade and export of American capital"—to qu further from Mr. Reynolds' statement "not only the needs or demands of Eur must be taken into account but also t capacity of Americans to export capi without seriously affecting domestic ind try. Europe would not gain in the lo run from the impairment of Americ resources and capital.

Exporting Prosperity

"No recourse to statistics is really nec sary to confirm the truth of the stateme so often made that American railroa have not received, for several years, ad quate additions to their capital, additio that were necessary to efficient transporta tion service. Some idea of the situation ca be gained from the fact that reported issu of railroad and traction securities fro 1909 to 1914 averaged almost $1,000,000 000 each year, while from 1917 to 192 inclusive, the average was less than $450 000,000 a year. It seems a reasonable in ference that the export of American capit to Europe must have helped to stay rai road progress and development. Similarly the export of American capital must hav had an adverse effect on building opera tions and must have been a contributin cause to the present housing shortag Capital needs for building are problemati Estimates range from $1,000,000,000 t $5,000,000,000. Even the most conserva tive figures, however, show the need fo capital in the United States if building to play its full part in the restoration o domestic prosperity.

"Indeed, in every field of domestic en deavor the shortage of capital has be more or less seriously felt, and althoug the United States is now a creditor nati it must be recalled that at no time in it history, prior to the war, have the peop of the United States accumulated enoug capital for American needs."

In 138 years of our national independ ence we produced our own prosperity by a process of work and thrift. During th past eight years we have been expecting our prosperity in the form of capital sav ings and capital goods, but now that we are at the turn of the road financially industrially, economically and nationally what is to be our future policy? To what use shall capital accumulations be put? Shall they be turned in large measure to Europe or put to work in the United States?

Mr. Reynolds raises the issue. "Since savings are not indefinitely expansible, a decision is necessary as to whether they shall be spent here to furnish Europeans with capital goods, or spent here to furnish American industries with such capital goods. To what extent shall American savings be used to furnish Europe with capital goods and to what extent used to furnish capital goods for the rehabilitation of American industries?

"One thing at least seems clear: The United States cannot export its capital and have it too.

"The scheme of financing sales to Europe would be more alluring if a revival of business on the high-price level of the first part of 1920 could be foreseen." Mr. Reynolds added, "but the maintenance of such a price level is neither possible nor

should be exported."
problem of transportation and the
ed of capital to enable our railroads
in much needed new construction
one Mr. Hoover was discussing in
gton when he made the statements
at the beginning of this article.
we look at the national economic
on as a whole," Secretary Hoover
, "the greatest impulse that can be
to recovery from any source what-
a reduction of rates on primary
dities, combined with the immedi-
mption of railway construction and
ent. The first depends upon reduc-
operating costs, the second upon
tion of credit.
e thing is absolute: Our transporta-
cilities are below the needs of our
y, and unless we have a quick
ption of construction the whole
nity—agricultural, commercial and
rial—will be gasping from a strangu-
caused by insufficient transportation
oment that our business activities
e.
ew people seem to realize the amount
ansion in our transportation machine
sary to keep pace with the growth of
ountry, and an equally few seem to
any notion of the price we pay for
aving it. . . . There would be no
alty whatever, by basing such losses
e experiences we have already had, to
late a loss to the American people of
0,000,000 for each one of these peri-
transportation shortages.
here is nothing that is so irrecover-
a loss to the nation as idle shops and
men. To-day we have both," the
tary of Commerce told the Interstate
merce Commission. "There is nothing
will so quickly start the springs of
ness and employment as an immediate
mption of construction and equip-
t of the railways. When business does
me we shall need all of our capacity for
production of consumable goods. We
not only find it strangled for lack of
sportation but we shall find ourselves
ging into the manufacture of this very
way equipment and construction in
petition with consumable goods for
erials and labor. Herein lies the basic
e of destructive price inflation and
ns, with all their waste and over-
ansion."

Railroads in Need of Capital

f this is the condition of our transporta-
n system, if a real program of construc-
would aid the nation as a whole, then
y is not the capital forthcoming to
nce the work? Let Mr. Hoover an-
r: "Surplus capital is pouring by hun-
ds of millions monthly into tax-free
urities and foreign loans, and yet our
lways are unable to finance the most
derate of construction programs."
To show how the railways are not the
y businesses in the United States that
e being strangled by a lack of capital,
mit me to quote the latest reports of R.
Dun & Co. on the commercial failures
this country during February. Dun's
tistics state there were 2331 commercial
lures with liabilities of $72,608,393 in
at month of this year. In both number
d amount this exceeded any other Feb-
ary in thirty years, and included 481
anufacturers, 1714 general stores, grocers,
y-goods merchants and traders, and 136
nts and brokers. During January of
s year there were 2723 failures, with
ses amounting to $73,795,780. How-
er, during this same month of business
alties in the United States, foreign
vernments and municipalities obtained
4,236,000 of new capital from the Amer-
n people and American banks.

In January and February there were 5054 failures, with liabilities of $146,404,173. During these same two months European and other foreign countries obtained $158,886,000 in the American market. Our failures amounted to $146,404,173, and at the same time we exported $158,886,000.

During January of this year there was an increase over last year of $42,514,000 in the amount of our capital exportations to foreign governments and municipalities alone.

"If American railways cannot earn interest on their borrowings let us throw up our hands and prepare for a second Russia," Mr. Hoover declared.

"Justification for proposals to furnish Europe with even more capital," Mr. Reynolds said, "is sought in the plea that the fortunes of the people of the United States are tied up with those of Europe. Failure, distress and disaster there will mean failure, distress and disaster here."

Furthermore, the Chicago banker continued, the "view is urged that American goods, particularly raw materials, must be sold to Europeans, not only in order to relieve the American market but also to furnish Europe the materials on which to work in the process of economic rehabilitation.

"Any proposal to furnish Europe with more capital should receive the closest scrutiny.

"If certain of the European nations are impoverished their position will not be greatly improved by America's financing sales of goods without adequate consideration of the risk involved or thought of the extent to which capital should be exported. If Europe is impoverished improvement of the condition of her peoples will not be brought about by forcing America to the same condition."

Backing Foreign Horses

"Foreign trade has been emphasized to such a degree of late that thought of business revival is largely in terms of exports and foreign financing. If it were necessary for the people of the United States to await the rehabilitation of Europe before they could enjoy a fuller measure of prosperity, they might have to wait a very long time. Just how long, no one knows! Such a prospect is far from comforting at a time when gloom enough engulfs American business. There need be no paralysis of action with the world's greatest domestic market at hand and controllable. To emphasize this point, an exaggerated statement might almost be risked, that if we take care of our 92 per cent or 93 per cent of domestic business, the 7 per cent of foreign business will take care of itself."

"A prosperous America can help the world," Charles M. Schwab, chairman of the board of the Bethlehem Steel Corporation, wrote not long ago, "but a prostrate America cannot."

The serious condition caused in the United States to-day by such large exportations of capital is what prompted the State Department, on March 3, 1922, to issue a warning to American bankers expressing the desire of the Government to be more fully informed of prospective foreign loans.

Prosperity comes in two varieties, the imported brand and the domestic product. There is a group of men who are tireless advocates of imported prosperity, the kind that is supposed to come from limitless investments in foreign countries. They say we can live and prosper on foreign profits. But can we?

Do we not as a matter of fact have to choose between imported prosperity and prosperity which is "made in the U. S. A."?

We are engaged to-day in national as well as international competition for trade. Our business depression, transportation deadlock, commercial failures cannot be exported and exchanged for the uncertain prosperity of Europe. By financing Europe's comeback and neglecting our own we are hamstringing prosperity and a sound economic revival in this country.

In the race for normalcy we have been putting our money on foreign horses because we have been told that Europe must come first and America last.

Can we afford, as a people and a nation, to wreck this country financially and industrially in order to rebuild the rest of the world?

The logical, safe and sound policy would be for the United States to put its own house in order first and then, when prosperity returns, share that prosperity with our less fortunate neighbors.

"What an Old Sea Captain says about Liquid Granite

"There she is, mate—clean, tight, and tidy as the decks must be. You can rattle your tackle on that. And if a bit of sea slaps over the rail, mop it up, and no harm done."

Liquid Granite brings out the natural grain of the wood and preserves its beauty under the hardest wear. It makes a floor clean, waterproof, durable, resisting the buffetings of use, standing up under occasional hard knocks and persistent daily wear.

An Architect, A Painter and A Sculptress Joined in Designing This Exquisite Lamp

The lines, proportions and coloring of most of the lamps you see in these days of commercialism are the work of designing departments of large factories. They are the fruits of a deep knowledge of what makes a "popular seller." But some people, the **Decorative Arts League** committee felt sure, would like a lamp designed purely with an eye to good taste, a lamp of artistic proportions and harmonious tones, a lamp embodying grace, symmetry and beauty rather than the long experience of the "salesman-designer" of what seems most in demand in retail stores.

Hence this exquisite little lamp you see pictured, "Aurora," as it has been named by an artist because of the purity of its Greek lines and tones.

A Labor of Love

For the delicate work of designing a lamp that should be a real work of art instead of a mere unit in a factory's production, and yet should be a practical and useful article of home-furnishing, the League enlisted the enthusiastic coöperation of a group of talented artists—one a famous architect skilled in the practical requirements of interior decorating, one a painter and genius in color-effects, and one a brilliant sculptress, a student of the great Rodin in Paris.

They caught the spirit of the League's idea, and the designing of a lamp that would raise the artistic standards of home-lighting became to them a true labor of love. Model after model was made, studied and abandoned, until at last a design emerged with which not one of the three could find a fault.

Every Detail Perfect

One style of ornamentation after another was tried out, only to yield in the end to the perfect simplicity of the classic Greek lines. Even such a small detail as the exact contour of the base was worked over and over again until it should blend in one continuous "stream" with the lines of the slender shaft. The graceful curves of the shaft itself, simple as they seem in the finished model, were the results of dozens of trials.

The result is a masterpiece of Greek simplicity and balance. Not a thing could be added or taken away without marring the general effect—not the sixty-fourth of an inch difference in any moulding or curve but would be harmful. "Aurora" blends with any style of furnishing; it adapts itself to boudoir or foyer-hall, to library or living room.

"AURORA"
$3.50

In the exclusive Fifth Avenue type of shops, where lamps that are also works of art are shown, the equal of this fascinating little "Aurora," if found, would cost you from $15 to $25—perhaps more. Yet the price of this lamp is but

$3.50—Think of it!

Only the Decorative Arts League could bring out such a lamp at such a price. And only as a means of widening its circle of usefulness could even the League make such an offer. No matter how many other lamps you have in your house, you will always find a place just suited for this dainty, charming little "Aurora," 16 inches high, shade 10¼ inches in diameter; base and cap cast in solid Medallium, shaft of seamless brass, all finished in rich statuary bronze; brass-bound parchment shade of a neutral brown tone outside and an old-rose colored reflecting surface; shade holder permitting adjustment to any angle; push-button socket; six feet of insulated lamp cord; 2-piece attachment plug. You will rarely, if ever, get such a value again.

Direct from Producer to Consumer by Mail Only

Send no money—simply sign and mail the coupon, then pay the postman **$3.50** plus the amount of parcel-post stamps on the package. Weight of lamp shipped is only five pounds, so postage even to furthest points is insignificant. If you should not find the lamp all we say of it, or all you expected of it, send it back in five days and your money will be refunded in full. Clip the coupon now, and mail to **Decorative Arts League, 175 Fifth Avenue, New York, N. Y.**

Decorative Arts League (175 Fifth Avenue, New York, N. Y.)

You may send me, at the members' special price, an "Aurora" Lamp, and I will pay the postman $3.50 plus the postage, when delivered. If not satisfactory I can return the lamp within five days of receipt and you are to refund my money in full. You may enter my name as a "Corresponding Member" of the Decorative Arts League, it being distinctly understood that such membership is to cost me nothing, either now or later, and is to entail no obligation of any kind. It simply registers me as one interested in hearing of really artistic new things for home decorations. (SP-1)

1400 Fourth St., Waupun, Wis., U. S. A.

REGGIE

(Continued from Page 7)

At the end of a week Bertha, the paid cook, departed. Reggie had found her a new position. "Get another place for you, Bertha," he had said, and had started out in his casual, thoroughgoing way to make good his promise.

He had gone directly to the Kelseys'. Mrs. Kelsey, a widow, whose husband had made several millions, and then, in the good American way, had died and left them to her, was by far the wealthiest woman in town. Her daughter, Trenna, was a friend of Reggie's. He had known her for years. He called and presented his case.

"Business, Trenna," said Reggie, leaning against the wall of the Kelsey living room. "Find a position for Bertha, our cook. Letting her go. Can't your mother take her?"

Trenna, perched lightly on the arm of a purple velvet sofa—a slender, charming blond creature—swung her silk-clad legs and smiled at him.

"Of course. Mother's always looking for a cook. Send her over."

"Thanks."

The girl's wide-open blue eyes studied him keenly.

"Are you tired of her, Reg? Or ——"

"No. Fine cook. My idea, letting her go. Family thinks I ought to earn my board. Going to do the cooking from now on."

"Reggie! Are you really?"

"M'm."

She came toward him, put her hand on his arm.

"Reg! You funny old boob—can you cook?"

"M'm."

She glanced up at him appraisingly, then laughed.

"You're the darnedest man, Reg. Honestly ——"

"Don't see anything funny about it," said Reggie in his deep, drawling voice.

"You do see something funny about it. But not the way I mean. Sometimes I think you're laughing at—at all of us."

"Not at you, Trenna. Sure your mother will want Bertha?"

"Absolutely. Send her over. I'll be responsible."

So Bertha was transferred to the Kelseys', and Reggie—it was rather a mystery how he managed it—ruled serene in the Mendenhall kitchen.

III

THE extraordinary fact was that Reggie turned out to be an excellent cook. Before long the family began to admit privately that he was the best they'd ever had. Still later they took to praising him outright. "You really are a wonder, Reggie. How ever did you make that timbale?"

"Cookbook," said Reggie imperturbably.

He went to all the dances as before. If Foxboro, in the persons of its more fashionable set, looked at him curiously he did not particularly notice it. Foxboro always had looked at him curiously. Once Bert King, now a member of a famous brokerage firm in town, and still the hero of Foxboro, saw fit to poke fun at Reggie. It was at one of the Country Club dances, and a group of young people were gathered about the fireplace.

"Hear you're some chef, Reggie. Why don't you open a tearoom? Make scads of money!"

Everyone laughed and looked at Reggie, leaning against the stone mantel. He was as serious as ever—so serious, so thoughtful that it produced a little hush.

"'Fraid it wouldn't be a success, Bert. Tell me you're on a diet."

It was a subtle and telling stroke. Mr. King was known to be sensitive about his figure. They all laughed again, and rose as the music started. Bert, a trifle red about the cheek bones, gathered up Trenna Kelsey and danced off with her. He was paying open court to Trenna these days. So was Charley Bingham, for that matter; but Bert was the general favorite. They made an appropriate couple—the local hero and the local heroine. Foxboro approved the romance, sentimentally beamed upon it.

But now Mr. King, looking down into his partner's face, found it overcast with a peculiar sternness.

"You deserved that, Bert. You had no business to pick on Reggie."

"I was only joking, Trenna."

"I like Reggie. He's a peach."

Mr. King was moved to retaliate, was rather a short-tempered young and Reggie's reply had smarted.

"Peach blossom!" said Bert.

Trenna did not answer. But whe dance was over she withdrew abr from the hero's arms.

"Headache. Going home," she nounced over her shoulder, and lef King standing stiffly in the center room. She walked over to the fire where Reggie still made a graceful pi

"I'm going, Reg. Come with me?"

"Home? Right, Trenna."

"I'll get my things. Won't be a mi The car's parked out in front."

It was a February night, mild, w touch of spring in the air. Trenna She drove beautifully, negligently, gloved hand resting on the wheel, the holding together the flaps of her fu ning cloak.

"Reg?"

"M'm?"

"Aren't you painting at all now?"

"No time. Done a few etchings."

"Well, I think it's a shame. Jus cause you happen to be different —

"Got to make some money some Trenna. That idea of Bert's. Tear Not so bad. Believe I could make it

"Do you mean it?"

"M'm. Buy an old farmhouse o state road, just outside town. Decor myself. Do my own cooking. Get a C man. Only run it through the sum Make enough to paint all winter. Thi

"I'm sure you could! Listen, Re You know that old house with the elms in front of it, about a mile from t The one that's been empty so long?"

"M'm. Sketched it once. All q angles. Interesting."

"Why wouldn't that do? Let's d out and look at it."

"Now?"

"Yes. I've got a flashlight."

"Game," said Reggie.

She glanced at him, sitting slum down beside her, his long legs in t black trousers twisted about each o in a manner that was characteristic Reggie's. She laughed.

"Reg! You funny old nut!"

"Why?"

"Just because you are," said the and put her foot on the accelerator.

They reached the deserted farmh about a quarter of an hour later. It dark and, in its dilapidated state, bidding. Trenna shivered as Reggie p up a window.

"Kind of spooky, Reg, isn't it?"

"M'm."

He climbed through the window, lea out, picked her up casually and lifted over the sill. She stood close to h clutching his arm.

"See any mice, Reggie?"

"No." He was already calculating possibilities of the place. "Put a do tables here. Think? Cut a door thro to the porch. Maybe take down that p tition."

They prowled about for half an ho Reggie profoundly interested, thoughtf Trenna shuddering and clinging to flashlight.

Once a rat scuttled across the floor. S shrieked and jumped up on a broken ch her skirts to her knees.

Reggie regarded her contemplativel his head on one side.

"French poster," he said in a judi tone.

Trenna laughed hysterically. It stru her as irresistibly funny that Reggie shou compare her with a French poster eleven o'clock at night, in a spooky house that was falling visibly to pie about them.

She was still laughing when they g back to the car.

"Honestly, Reg, you don't know ho scared I was."

"Do," said Reggie. "Saw your le quivering."

She giggled as she swung the car o into the road.

"You forget my legs, young man."

They rolled quietly along toward th lights of Foxboro.

"Fun, wasn't it?" said Trenna.

"M'm," murmured Reggie. "Believ I could do it, Trenna. Make some money

hat Good Old Clothcraft Serge—

ke an Old Friend, it Wears Well

OW to get the very most for your clothing dollar—that is your problem ay.

Doesn't it interest you vitally to know t thousands and thousands of critical ers have found the answer in *that good Clothcraft Serge?*

They have found that, like a good old nd, serge wears well; it holds its shape, eeps that sturdy, sensible appearance over ng period of time. There's no "ginger-ad" about a Clothcraft suit—just common se and good taste in style.

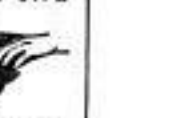
You take no chances—every Clothcraft suit carries a tten guarantee that it will give satisfactory wear and vice—there are no restrictions—you're the sole judge. And Clothcraft has effected great savings by perfect- new manufacturing processes or combining old ones that there are actual savings in dollars and cents. These savings are not held to give Clothcraft or its ailers a greater margin of profit, but are actually ved on all the way to you. Thus it happens that u can get genuine Clothcraft Serge Specials today at se prices:

Clothcraft Serge Specials

No. 5130 (Blue) $30 — No. 4130 (Blue) $35
No. 3130 (Gray) $35 — No. 7130 (Gray) $29
No. 7132 (Brown) $29

The Savings that Come to You

THROUGH lowered manufacturing costs, YOUR clothing costs are lowered, too.



To begin with, Clothcraft has one of the largest clothing plants in the world and uses an enormous amount of raw materials. The quantity purchases make tremendous savings, right at the start.

Then, over 75 years of manufacturing experience have taught numerous little money-saving "short-cuts"—bettering the product and lowering the cost.

For instance, this "felling" machine reduces *costly* hand labor to a minimum—and sews a smoother seam. It "fells" the sleeve linings in your Clothcraft suit—and you pay less for it.

One little "Merrow" machine does the work of two expensive men well—and speedily. It sews crotch pieces and overcasts the edge of the trouser at the same time.

And another almost human machine is the "jumper," which bastes the stiffening in the coat-front—formerly a slow hand-operation.

So, here and there are many out-of-the-ordinary machines, all doing their bit to save *you* money. Clothcraft Clothes bring you better values at a moderate price.

CLOTHCRAFT CLOTHES

Something New for Campers and Tourists

How often, after a hard day's trailing, you've sat before the camp fire cooking a well earned meal when, slide! went the skillet into the fire, or else the coffee pot took a header off a slippery stone right into the middle of a bed of coals! But, you need not put up with these annoyances any longer—you can cook your camp meals in comfort if you use a

Campfire Grub Stake

The neatest, handiest article of its kind ever produced. Something needed by every hunter, trapper, fisherman, camper, and even the occasional picnicker. Can be set up in one minute. Adjustable racks for meats, skillets, pots and pans—can be instantaneously raised, lowered or turned in accordance with the height of flame and direction of wind. Racks stay in position automatically without set screws or lugs.

Portable and Compact—Weighs Only 7 Pounds

The Campfire Grub Stake is light, portable and compact. Complete outfit as pictured weighs but 7 pounds. Can be carried in a hiker's pack or knapsack or under an automobile seat. Securely packed in a strong fiber container 20" long, 9" wide and 1¼" thick. All parts carefully cast of the best grade of metal and guaranteed against breakage and mechanical defects.

Buy From Your Dealer

Most good Sporting Goods, Auto Accessory and Hardware Dealers and Department Stores can supply you with a Campfire Grub Stake. If your dealer has not yet stocked it, order direct from The Campfire Mfg. Co., 1037 Boatmen's Bank Bldg., St. Louis, Mo., giving dealer's name and enclosing money order or check for

(Continued from Page 106)

Go to Paris. Paint. Come home. Make some more money. Paint."

"Yes," said Trenna, and for some reason she sighed.

IV

IT WAS Aunt Victorine who advanced Reggie the money to finance his tea house. The family were solidly against it. Their arguments, in substance, amounted to this: It wasn't respectable.

"Respectable!" said Aunt Victorine from her place at one end of the council—dinner—table. "Maybe you don't know it, but one of your ancestors, old Jacob Mendenhall, once kept a tavern on the Boston Post Road; and it didn't prevent him from being a good citizen, either. You come up to my room, Reggie, and we'll talk it over."

"Aunt Victorine," said Mr. Mendenhall sternly, "I insist that you ——"

"You can insist all you like, Peter Mendenhall. It's my money and I'll do what I like with it. If Reggie wants funds for a tea house I'll lend them to him. What's more, I'll pay a cook to take his place here. You come along, Reggie."

Foxboro as a whole, it must be confessed, agreed with the family. It did not approve of Reggie's tea house. "Reggie's career," said Bert King, "is cut out for him. He'll invent a new salad dressing, and die famous."

If Reggie heard this *bon mot* he, as usual, paid no attention to it. He was busy fixing up the old house on the state road. He had decorated the front of it with a novel and humorous design of colored patterns, which gave the place a rakish, mischievous look. The various angles of its decrepitude had been held and firmly fixed by the local contractor—who had thought Reggie quite mad. Inside, the plaster walls of the main tearoom were covered with humorous figures—a fat man balancing a teacup on his knee, a willowy lady with green hair elegantly fishing for sugar lumps with a pair of fire tongs; a juggler in a brilliant coat balancing a pile of plates on one finger. Reggie, at least, thought his decorations amusing, and Sue's two children, when they saw them, shrieked with delight. Older persons, on the contrary, stared at Reggie's handiwork and were inclined to take it seriously. They had an uncomfortable suspicion that it was intended as Art.

No, Foxboro did not approve of Reggie's venture. That fact, however, did not prevent it from turning out, practically en masse, on the Saturday afternoon of Reggie's opening, which occurred about the first of June. Of his family, all were present except his father, who had not been able to get out from town.

"We'll have to go," Mrs. Mendenhall had said. "We can't desert Reggie."

"Go?" piped up Aunt Victorine. "Humph! Of course I'm going. Wouldn't miss it for a thousand dollars."

To say that the afternoon was a success is to put it mildly. It was a polite stampede. An hour after the first guest had arrived Reggie and his lone Chinaman were hopelessly involved. The latter came panting into the kitchen, his round face glistening like the Moon of Despair.

"Allee time glest come. No good. Me squalsh."

Reggie, flushed and disheveled but still calm, thrust his head out of the kitchen door and signaled to Trenna Kelsey. She came.

"Riot," said Reggie. "What'll I do?"

Trenna cast her eye over the crowded room, nodded, and gave his arm an encouraging pat.

"Leave it to me, Reg."

In ten minutes she had organized a relief committee of volunteer waitresses. She herself returned to the kitchen, rolled up her chiffon sleeves—it was a warm afternoon—and went to work making sandwiches and cinnamon toast. The day not only was saved but glorified as well. The daughters of the first families of Foxboro were toiling for Reggie. Even his own sisters ——

"Honestly!" whispered Jane to her mother as she passed with a tray of tea and cakes, "Reggie has every débutante in town working for him. Wouldn't you know it?"

"Genius!" said Aunt Victorine, highly delighted.

When it was over, and the crowd had gone, Reggie, a cigarette between his lips, leaned against the kitchen wall and looked at Trenna washing her hands in the sink.

"Thanks," murmured Reggie expansively.

"Oh, I thought it was fun."

"Bore," said Reggie.

She turned to him a face pink with bending over the stove.

"You'll make a great success of it. I know you will. Your decorations are a marvelous ad. If you could have heard what people said!"

The ghost of a smile passed over Reggie's lips. His mouth drooped a little more noticeably.

"M'm," said Reggie.

"You'll be a plutocrat in no time, young man."

"Hope so. Going away this summer, Trenna?"

"I'm going to Narragansett in August," said the girl.

From the road in front of the house came the loud honking of an automobile horn.

"That's Bert," observed Trenna. "He said he'd drive out for me. My car's on the blink. 'By, Reggie."

"Thanks, Trenna. Saved my bacon."

"I saved your cinnamon toast, anyway. I suppose you'll be busy from now on. Going to live here, aren't you?"

"M'm. Like it better."

"Well, come see me, Reggie, or I'll be out here after you." She added lightly, putting on her hat, "Can't give you up, young man. Too much of a habit."

Again the automobile horn. She touched his hand, turned and ran out of the kitchen. He heard her call to Bert King, "Coming! Sorry to keep ——"

For the next two months Reggie saw little of Trenna. He was busy—busier than anyone, including Reggie, ever had thought he could be. The tea house proved popular, became a fad. He hired a second Chinaman, then a third. By the middle of July he had made almost as much money as Belle made in a year. But he was so easy-going, so casual about it that his family refused to be impressed. They no longer looked upon Reggie's tea house as unrespectable. Somehow Reggie had a way of making things respectable simply by doing them. They looked upon it as an idiosyncrasy, as a toy with which he amused himself. They understood that Reggie was, at bottom, thoroughly impractical.

As for Trenna, she came frequently to the tea house—she was Reggie's best customer—but always there were others with her. Bert King or Charley Bingham, or both. A number of young men were more or less in love with Trenna, crazy about her, in the Foxboro idiom; but Bert and Charley were the chief rivals. Bert and Charley had been rivals since their high-school days, when both had tried for the Graduating Essay Medal—which Reggie had won. But in the present case Reggie could be safely disregarded. He was out in the kitchen, making sandwiches.

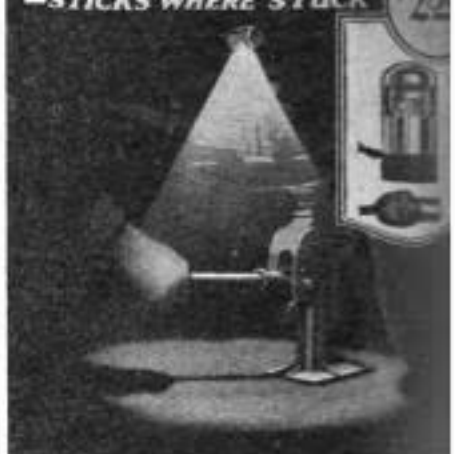
Foxboro had decided that it would be either Bert or Charley, and probably Bert. In fact some persons went so far as to say that Charley was not really in love with Trenna, but that he meant to marry her if he could, simply for the sake of defeating his rival.

Other persons had it on excellent authority that both young men were desperately in love with Trenna.

Altogether it was a fascinating drama. Foxboro talked about little else that summer. It was understood that Trenna would announce her engagement to one or the other of the two young men when she returned from her month at Narragansett. She was leaving Foxboro August first.

A few nights previous to that date Reggie locked up the tea house and set out to walk the mile into town. He was going to call on Trenna, to say good-by to her. He met her halfway to the village, driving her car. She saw his tall figure swinging along the road in the twilight and stopped.

"Hi, Reg!"



He crossed over to her, stood leaning against the side of the car.

"'Lo. Just coming in to see you."

"Were you? Funny. I was coming out to see you. Tired of waiting for you, Reggie. Honestly, we haven't had a talk for ages. Hop in."

He climbed into the seat beside her without bothering to open the door. She laughed and let in the clutch. They drifted along, the warm night air in their faces, the road a languid black river flowing under their lights. At the first hill, however, she stopped again; they sat looking at the lights of Foxboro, twinkling at a distance.

WEBSTER MAGNET LIGHT
—STICKS WHERE STUCK

"Sticks Where Stuck"
Leaves Both Hands Free

When making tire changes along dark muddy road—or when tinkering in a poorly-lighted garage you need Webster Magnet Light. It "sticks where stuck" affording ample light and the freedom of both hands. It is indispensable in emergencies.

It is attractive—and sturdily built. Its dull black, rust-proof electric magnet base clings tight to any iron surface. Its nickel-plated reflector shades the eyes and protects the bulb. Its twelve feet of cord is ample for the largest car and the plug fits any socket about the car.

If your dealer cannot supply, send check or money order direct, specifying make and model of your car.

"I feel I'm going to unburden myself, Reg."

Reggie did not answer. He was busy lighting a cigarette.

She said, murmurously: "So many lovers, I don't know what to do. Not so many really, but enough so that I feel—surrounded."

"What lovers are for," said Reggie.

"Reg! Don't be a lemon. What I mean is ——" She threw out her young arms in a gesture unpremeditated, beautiful. "I always thought it would be fun to have a lot of men—well—interested in me. I've only got two, as a matter of fact—that's a very modest number these days, I'll have you know—but they plague me, Reggie."

"M'm."

"I like them both, and I've a dreadful feeling that I'm going to marry one of them before long. You know, when a woman gets to be my age, twenty-two next September—and that's older than you'll ever be—she begins to have intuitions. She knows whether she's going to marry or not. I feel it coming on, Reg."

"Which one?" he asked.

"That I don't know."

Reggie mused, studying the hot coal of his cigarette.

"Why?" he said finally. "Mean—why ——"

"Why marry at all? That's just what I've been wondering. But—I don't know—people expect it of you, for one thing. And it is natural, isn't it? I mean—instinct, and all that. Ask Freud! He knows." Her laugh had in it a troubled note. "One day it doesn't seem to matter which man I choose, so long as he's young and sound. My mind runs to a modest mansion on Elm Avenue, full of my own things—silver and linen and furniture. Children, too. I get kind of hungry for ——" She shrugged her shoulders. "I don't know. But the next day, or more likely the same night, I want—other things. Things not so easy to name, but more—more perfect. Then I feel like jumping into the car and beating it away from Foxboro at sixty miles an hour."

"Feel that way to-night, don't you, Trenna?" he asked, looking around at her.

"Yes!"

"Let's go," said Reggie.

"Where?"

"Anywhere. Difference does it make?"

She put her foot on the starting pedal. The motor caught with a thrilling, muffled roar.

A moment later they were flying down the hill, if not at sixty miles an hour, at least at fifty. And they were headed away from Foxboro.

They got home from that drive at an indefinitely early hour. In fact, by the time Reggie had walked the mile back to the tea house the first gray feelers of daylight were beginning to creep over the sky. Even then he did not go to bed, but sat by the window in his room, smoking a cigarette and watching, with a deep contentment, the shifting colored patterns of the dawn.

▼

TRENNA came back to Foxboro in September. Reggie had closed his tea house directly after Labor Day, and was once more a man of leisure. He dropped in to see Trenna the first night of her arrival home. It was about 7:30 in the evening when he rang the Kelseys' doorbell. Trenna herself let him in.

"Reg!"

"Came early," said Reggie. "Avoid the rush."

She laughed, and putting her arm about his neck drew down his head and kissed him.

"You funny old nut. Let's sit out here on the porch. Mother's in the living room. Simply got to talk to you, Reggie."

They sat on the porch, in the warm September evening, talking. About 8:30 Bert King drove up in his car, and a little later Charley Bingham arrived.

The greetings were hearty, but somewhat forced. Charley Bingham produced a box of chocolates, which he opened with appropriate facetiousness. Still the atmosphere of the front porch continued to be charged with a slight constraint, a slight embarrassment.

Finally Reggie got up, in his languid, graceful manner.

"Go see the family," he murmured. "Night, Trenna."

"Good night, Reggie."

He nodded to the two rivals, descended the porch steps and sauntered off down the sidewalk, munching one of Charley Bingham's chocolates. In front of the Mendenhall house he stopped a moment, looking up at its discreetly veiled windows, his head on one side, his mouth drooping. Then he sighed and went in.

He found his family gathered in the upstairs living room—his mother, his father, Belle, Jane and Aunt Victorine.

"Well, Reggie!"

"'Lo. Thought I'd drop in, see how you were getting along."

His mother sketched the family state of health.

"Belle has a cold. Jane's coming down with one. My neuritis is better. Your father's been working nights at the office."

"Inventory," said Mr. Mendenhall wearily. "How are you, my boy?"

"Right," said Reggie.

"Have you seen Trenna?" asked Belle, looking at him with a peculiar animation. The light in her eyes was one almost of eagerness. Reggie wondered.

"M'm," he said.

"Tell us, Reggie," demanded Jane. "You know her best. Which one is she engaged to, Bert or Charley?"

Belle interrupted before Reggie had a chance to reply.

"It isn't Charley. At least ——" She stopped, confused, and looked appealingly at her father.

Mr. Mendenhall spoke.

"Charley's been confiding in Belle. They go in on the same train, you know—the 8:15. Eh, Belle?"

"He told me," said Belle more calmly, "that he hadn't proposed to her. He isn't sure whether he's in love with her or not. If you ask me, I think it's just because he and Bert have always been—rivals, and—everybody expects ——"

"Well, I think it's Bert!" said Jane. "Don't you, Reggie?"

"Never can tell, Jane."

Aunt Victorine spoke up.

"Humph! Reggie could have her himself if he wanted her. She doesn't look at anybody else when he's around. I watched her that day of the opening."

"But—Aunt Victorine!" protested his mother. "Reggie isn't—Reggie couldn't get married if he wanted to. He has no money."

"Have," said Reggie. "Made two thousand dollars on the tea house."

A chorus of exclamations.

"No!"

"Did you really, Reggie? I think that's wonderful."

"Very good, my boy. Very good indeed."

His mother's voice dominated the outburst. "But it isn't enough to get married on!"

"Trenna Kelsey's got plenty, and to spare!" retorted Aunt Victorine, tenaciously clinging to her argument.

"Reggie would never marry for money," said his mother with dignity.

Reggie had been leaning against the mantel, smoking. Now he straightened up, looking from one to the other with a mild and tranquil eye.

"Already have," said Reggie.

"Have!" exclaimed Mrs. Mendenhall. "Have what?"

His voice was as serene, as drawling as ever.

"Trenna," he said. "Married her. Month ago. Before she went away."

The family sat staring at him, their mouths open—a circle of round open mouths in astounded faces. Reggie felt it incumbent upon him to explain, to go into detail, to be, for once in his life, loquacious. He made an effort.

"One night out driving. Talked it over. Decided. Drove to Greenwich. Borrowed money from Trenna. Bought a ring. Minister married us. Came home." He stopped and glanced about at them; they still seemed stupefied. "Thought we'd get it over with," he said garrulously. "Announce it later."

His mother's voice was tremulous, almost plaintive.

"But—Reggie! You couldn't—without telling us!"

"Telling you now."

"But—you—where are you going to live?"

"Beauty of it," said Reggie. "Going to live in Paris. Paint there."

Aunt Victorine's triumphant pipe rose clear above the ensuing babel:

"Told you so!"

He escaped from them as soon as he could, slipping out of the room in the midst of a hot discussion as to whether a secret

YOUR
Most Valuable
ASSETS!

HEALTH—Efficiency—Happiness.—What a pity so many business men and women try to gain and retain them *in spite of their FEET!* You, for example, probably imagine that your *head* or your *hands* alone can guide you to fullest enjoyment of these precious assets. wedding ought not to be followed by a public repetition.

Belle was the only one who observed his silent exit. She followed him and overtook him on the stairs.

"Reggie!"

He turned, aware of a strange agitation in that trim, businesslike body. Belle's hand was on his arm; it was trembling.

"Reggie, tell me. How do you do it? How do you do it?"

"Do what?"

"Get what you want?"

He looked into his sister's face. Her upturned nose, red now with the affliction of a cold, gave her an interrogative—a pathetically interrogative and beseeching air.

"Something you want, Belle?"

"Charley," she whispered; and then with a fierce choking sob: "Charley!"

He put his hand over hers and squeezed it.

"Ask him," said Reggie. "Be a damn fool. Ask him."

Belle's breath of a reply followed him down the stairs.

"I will, Reggie."

VI

IT WAS afternoon of a day later. Reggie was alone in the tea house, packing and putting things to rights. He was glad to be done with the tea house; it had bored him excessively. Possibly Jane would run it another season. Silly of Jane to stick around home, running errands for their mother, when she might be out on her own. He would speak to Jane about it before he left for Paris. Paris!

He heard an automobile stop before the house, looked out of the window and saw Bert King coming up the walk. The latter's face had a set look; his air was one of grim determination. Discomforting.

"Trenna's told him," thought Reggie. "Wonder what he wants?"

The matter was not long in doubt. Bert King opened the door of the tearoom, walked in and planted himself squarely in front of its proprietor.

"I've come, Reggie," said Mr. King, "to punch you in the nose."

"Why?" asked Reggie.

Mr. King's jaw—it was a fighting jaw—thrust forward slightly.

"Just—for—my—own personal satisfaction."

"Oh."

"Been wanting to do it all my life," continued Mr. King, drawing a deep breath. "All my life—and now ——"

"Minute," interrupted Reggie. "Come outside. Ground's softer than the floor."

The other opened his mouth to protest, but Reggie already was strolling across the room. Bert King, flushed with the rage of years, followed him out of the house and into the back yard, where a straggling apple orchard made sweet the autumn air.

But Mr. King was not to be moved by any sweetness, of apples or of human persuasion. He caught Reggie by the shoulder and spun him around. They stood eye to eye.

"All my life!" said Bert; and added, "You never would fight. Don't suppose you'll fight now?"

"Can't," said Reggie. "Not your way."

"Won't, you mean! Well, I'm not going to be done out of it," shouted Bert. "I've always wanted to, and I'm going to—just for my own personal satisfaction!"

He drew back his arm and shot it toward Reggie's inoffensive and rather delicate nose.

Something happened. It happened suddenly and miraculously. It happened to Bert King.

The ground dropped out from under him; an apple tree danced crazily before his eyes, and then—he was lying on his back on the thick grass, staring at the sky.

He sat up. There was nothing before him but the mild September landscape.

"Behind you, Bert," came in Regg deep, unhurried tone.

He spun about, sprang to his feet made a rush toward the despised advers

It happened again. The treache falling earth, the dancing apple tree, sense of being suspended in mid-air. T a crash, like something being broken distance.

When he came to, Reggie's arm around him and his head was resting Reggie's knee.

"What the hell?" said Bert King thi

"Jiujitsu;" explained Reggie. "Lea in France. Fellow in my company. right now, Bert?"

"Uh-huh."

Mr. King stood up.

"Reggie," he began—"Reggie, I—

But at that moment Trenna Kelsey, was Trenna Mendenhall now, came ing about the corner of the house, her h her hand, a luminous edge to her blond

"Bert!" she said when she saw him, stopped a short distance away. "W are you doing here?"

Reggie spoke up, gravely, imperturba

"Came out to congratulate me, Tre Right, Bert?"

"Right," said Mr. King. "I sur sure do. Both of you!"

And he went away.

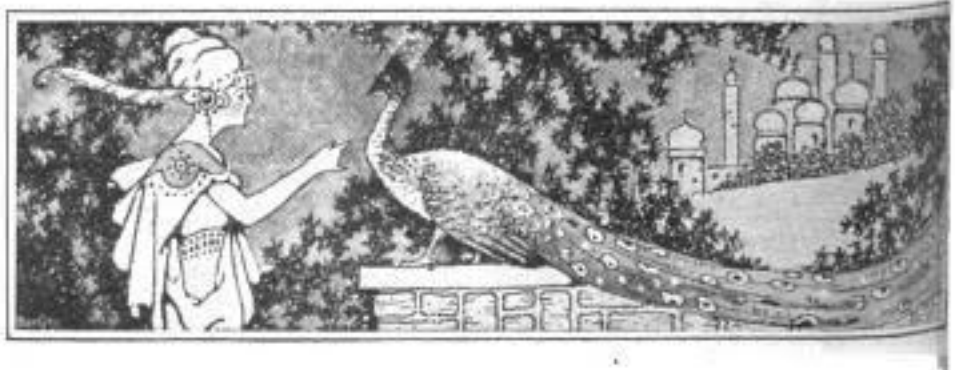
He strode off, his shoulders squa walking rapidly in the direction of highroad. They heard the sound of motor, diminishing, growing fainter.

The girl sighed. She was standing c to Reggie now, looking up at him, hands on his shoulders.

"I feel awfully guilty, somehow. awfully happy. Kiss me, Reggie."

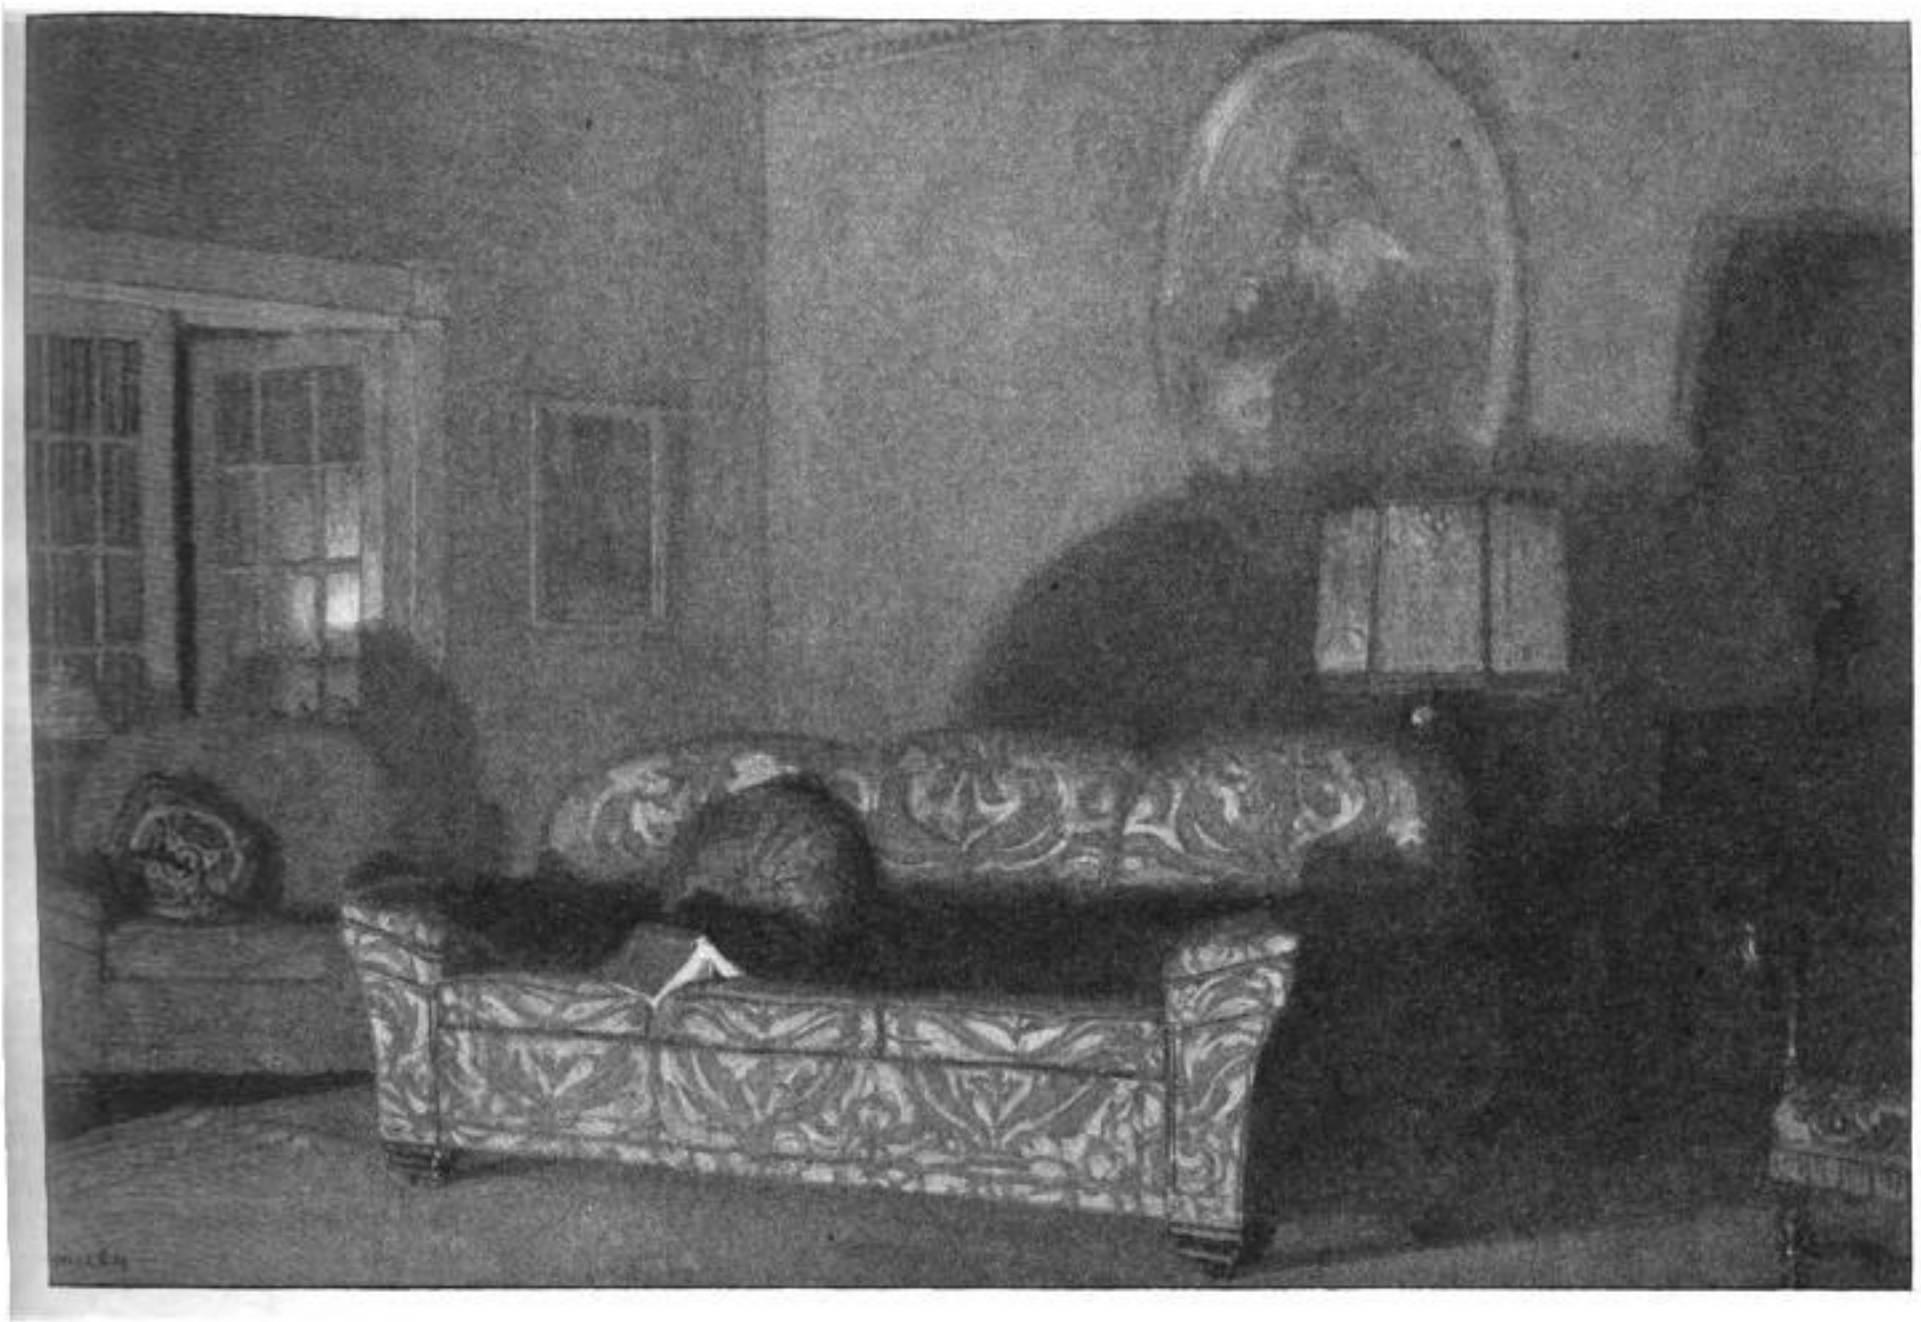
Reggie kissed her.

VII



THE Mendenhalls are still a busti family, though their situations h changed somewhat. Belle is married Charley Bingham and has a baby, a g to which she devotes herself in a capa and businesslike manner. Sue is expecti her third, which doubtless will be as s cessful as the two others. Mrs. Mende hall divides her time between her clubs a the housekeeping, for Jane at last h shaken off the maternal apron strings. S has taken over the tea house, and runs the year around. She is doing very w All the Mendenhalls are doing well. T furniture business has returned to n malcy, and is beginning to prosper agai Mr. Mendenhall catches the 7:45 with his former gusto.

Aunt Victorine is planning to go abroa to visit Reggie and Trenna in Paris. T family consider it most impractical of h but she is going, nevertheless. Trenn baby, a boy, is named Victor, after Au Victorine.



The Mendenhalls often speak of Regg and always with affection. When the ne came that one of his paintings had be purchased by the French Government f the Luxembourg they made no attempt conceal the fact, though when the paintin in question was reproduced in the Sunda Times it turned out to be a most unmi gated nude.

"I see," said one of the members of t Wednesday Evening Literary Society, Mrs. Mendenhall—"I see that Regg had one of his pictures accepted by t French Government."

"Yes," answered Mrs. Mendenha "We're all very happy about it. . . . What say, Mrs. Carpenter? . . . Trenn Oh, no, I don't think so. They ha models for—for everything. It's not re sidered at all im—— What say, Mr Fletcher? Lucky he married Trenna! Ye I admit that Reggie never would have be able to earn his own living. An artist, yo know. So impractical. But then"—glan ing about the circle with a maternal smile "Reggie always was a delicate boy."

A Remarkable Piece of Furniture

A Beautiful Davenport, of Authentic Design, that Conceals a Comfortable Bed of Regulation Size

Serves By Day and By Night

THE Davenport Bed pictured above gives some idea of the important advance accomplished during recent years in furniture of this type. Its low cost, good appearance, great comfort and pronounced utility are qualities shared by the products of eighty-three manufacturers who have successfully endeavored to build better and more useful furniture.

Only in purpose does the modern Davenport bed resemble the earlier pieces that lacked the smartness of line, the harmony of design and of color and the luxurious softness now combined with mechanical simplicity. Today, the Davenport Bed is a remarkably fine piece of furniture, available in any design you might wish in an ordinary davenport, and of equal beauty and comfort. Yet it serves by day and by night.

Small wonder that the perfected Davenport bed is being so widely accepted, even in homes where there is no nightly want for extra sleeping accommodation.

To the eye, there is no suggestion of the Davenport Bed's dual purpose; it is simply a low, comfortable, roomy and attractive davenport.

The Davenport Bed shown above, arranged for night. There are other types—long and short models—of equally good appearance and utility

But at bedtime this piece, by one easy motion, can be transformed into a real bed with springs and mattress of regulation size and type. In the morning it is as easily returned to its daytime appearance and use. Mattress and bedding are completely concealed from sight.

In house, apartment or summer home, in living room, library, sun room or where you wish, the Davenport Bed serves every purpose of the regular davenport by day and offers restful comfort for one or two persons by night.

Everywhere, there are dealers who can provide you with the Davenport Beds to match your requirements, your other furnishings and your price. Davenport Beds may be had *en suite* or separately. Their distinctive appearance and practical utility are sure to win your favor.

Send for our handsome brochure. It shows a broad variety of modern Davenport Beds in a wide choice of sizes, woods and covering materials.

Shake It Into Your Shoes

Sprinkle It Into Your Foot-Bath

ALLEN'S FOOT-EASE

The Antiseptic, Healing Powder for the Feet

Takes the friction from the shoe, relieves the pain of corns, bunions, callouses and sore spots, freshens the feet and gives new vigor.

Makes Tight or New Shoes Feel Easy

At night, when your feet are tired, sore and swollen from walking or dancing, sprinkle Allen's Foot-Ease in the foot-bath **and enjoy the bliss of feet without an ache.**

Over One Million five hundred thousand pounds of Powder for the Feet were used by our Army and Navy during the war.

In a Pinch, use ALLEN'S FOOT-EASE

THE GALLOPING TIGER

(Continued from Page 28)

any higher position than any other. Are we not all artists, and therefore equals?"

"Right!" cried Shamus. "Especially as there are no two of us in exactly the same line!"

"It fits in with my adaptive theory perfectly," drawled Edouard. "We are not sailors, but we are men with the desire to sail in our hearts; therefore we will take the material at hand and make a sailing democracy of ourselves!"

I listened to this breathlessly. Wasn't it a beautiful idea? But Ted didn't appreciate it a bit! He just busied himself with his horrid old pipe until his face got absolutely crimson over it.

"Well, come on, you folks," he said, "if you want to see the ship. This isn't an experience meeting!" And with that he led the way down the long wharf to where at the very end a big sailing boat lay snug against the piles.

The Sadie Brown of Boston was a vessel you could not help noticing, because as you approached her a distinct odor of fish—not very new fish—began to sort of emanate from her. In fact she radiated an aroma of generations of fish, as it were, and if you had once been aboard her I am sure you would always have been able to find your way back, even in the dark.

"You see she was a fishing schooner," Ted explained rather unnecessarily. "But she can quite easily be cleaned up. She's in swell shape except olfactorily."

"She's a beauty!" exclaimed Shack as we boarded her. "A ship o' dreams! What do you say she is called?"

"The Sadie Brown."

At that a howl of protest went up from the entire crowd.

"That will never do!" said Shackelton, who in spite of his declaration about having no captain in our crowd could not help rather taking the lead. This was natural enough, too; a sort of instinct after all his voyages before the mast and his volumes of sea poems. "That will never do!" said he. "We must have an inspirational name—a name which means something!"

"Let's call her the Sinn Fein," suggested Shamus.

"Not on your life!" Ted howled at once. "This is a strictly peaceful boat, even if it is a she!"

"How about The Toddle?" I suggested. "She's apt to, when we get out on the deep water, you know."

"Dear Pet!" said Shack tenderly. "Your humor is so quaint! But I think that name hardly expresses us all, if you see my point?"

"How about The Gauguin?" put in Malvina.

"Nearer, much nearer!" exclaimed Shack. "But I think some native word would be even better!"

"Native of what?" muttered Ted, but nobody paid any attention to him.

Then Zelda, who had so far contributed nothing but cigarette smoke, took one of the books she inevitably carries about, from under her arm.

"I brought it along—my copy of Murphy's book," she said, "in case it would be useful. We may find a name in that!"

"Good!" exclaimed Shack. "Let us see!" and he began turning the pages over rapidly, with familiar fingers. Ted came and looked over his shoulder.

"Shadowy South Seas!" he exclaimed. "Some book! Shadowy is right; they sure are shadowy, not to say shady!"

"Do you know anything about the South Seas, Mr. Stonewall," Shack asked coolly, "that you call them shady?"

"Sure!" said Ted. "I know the natives' favorite food is tenderfeet, but I'll be game if the rest are!"

"Nothing of the kind!" reprimanded Shack. "Their native dish is called poi!"

"Short for hoi polloi," Ted insisted. "However, why not call the boat Tahoa? I see it means a headache from thinking."

"I favor calling it the Moon and Sixpence!" said Shack.

But nobody would agree to that, and finally we compromised upon The Galloping Tiger because that expressed the entire Village, if you know what I mean, and all of us had a feeling of relief when so much was settled.

"Well, come on, now," said Ted a trifle impatiently. "Don't you want to look over the boat itself?"

"Wait!" exclaimed the pale Edouard dramatically. "Before I go one step further on this voyage another point of extreme importance must be definitely arranged. This ship has no figurehead!"

It was too true. We all went and looked over the end where the figurehead ought to be, and there was none. Ted tore his hair—rather exaggeratedly, I thought.

"What shall we do?" he exclaimed.

"Calm yourself, old chap!" said Ed. "I'll tell you what I'll do—I'll make one."

"Something appropriate and in character," I suggested timidly, for I remembered Smoke, and Shack echoed my sentiment.

"Of course!" said he. "A symbol of our errand!"

And so that was that!

"Now that we have settled the two most important psychic points," said Shack briskly, "let's have a look at the practical side—eh?"

"If you really think it necessary," said Ted, leading the way. "Well, here is the hold—we men will have to sleep down there—it's a little fishy now, but we can fumigate it."

"Sulphur candles," said Shamus.

"Oh, sulphur smells so horrid!" protested Zelda. "Why not use incense? When I took my studio over the old stable I used incense, it's so much pleasanter!"

Shack ignored her.

"I say, this will be really amusing!" he exclaimed. "Once we get it clean we will give it a coat of paint—lavender walls with a cerise trim on the bunks! Ripping—eh?"

"Just as you please," said Ted, leading us on. "Now here is the galley; the oil stove is perfectly good if it's cleaned up a bit—messy cook, I'll say they had—and then come on aft ——"

"What's down there?" inquired Shackelton, peering over the edge of a sort of skylight—hatch, I mean. He drew back hastily at the first whiff.

"Oh, it's only the tank," replied Ted. "You ought to remember that, Salts. Didn't you say you once sailed on a fishing boat?"

"Er—well, only for a short time," said Shack.

"Well then, that's the tank, where they used to put the catch," Ted went on smoothly. "You'd better start your fumigating down there. Just give a look here at the cabin—two nice little staterooms off it—see? For the girls, of course."

"Light oak!" screamed Malvina as she entered first. "Oh! Impossible! We will have to paint it all! But give me time and I will make this ship a thing of beauty! I was an interior decorator for one winter, you know!"

"That's all down below," said Ted, turning to Shack and Shamus. "Don't you fellows want to look at the rigging now? She's got almost new canvas."

"Sails!" exclaimed Malvina, her face lighting with an idea. "Sails! Oh, children, wouldn't it be wonderful if I were to batik the sails? Glorious orange and purple, say?"

"Now that you mention it," said Ted, "it would. But I think you will find plenty to do below—and on deck. And after all, white or even gray sails are pretty good, don't you think?"

"Ted Stonewall, that's the first sympathetic remark you've made to-day!" I cried.

"I'll make another now," he retorted cheerfully. "It's nearly one o'clock—why not all come over to White's and have a bite of lunch on me?"

Well, everybody thought that would be splendid, only Shack could hardly bear to leave the ship.

"There is such a lot to be done!" he said with a groan. "Just one more thing before we go. Of course I think we ought to do the whole work ourselves, but as the boat is so large, and as perhaps one of us might fall ill, or overboard, don't you know, how would it be to have one—just one hired sailor to lend a hand if—if necessary?"

"I think," said Ted seriously, "it might perhaps be well. In fact I was going to suggest it. Not that we would let him really do anything—but just, as you say, to lend a hand."

If the party had been enthusiastic before, they were now wild with delight. This idea of Shack's was such a good one. That man certainly had a genius for thinking of the right thing.

"Well," said he, "will you engage one for us, Ted?"

Stampin Steel to Bea Death

DURING the war the government required bullet-proof steel body armor for experimental purposes in France. "Six weeks' delivery," said other concerns, but government officials were advised by those who were familiar with our methods of quick production to go to Mullins, with the result that the finished and assembled armor was delivered aboard ship in New York ***just 11 days after we received the order.***

Many unusual achievements mark our 43 years' experience in all kinds of sheet metal stamping. We are the world's largest manufacturers of many metal products. We are equipped—as no other company is—with machinery, men and experience to do your metal stamping better and at a lower cost than it has been done before.

Send blueprints—let our engineers co-operate with you in solving your problems—and write for the Mullins story.

"I certainly will, Shack," said Ted, delighted to be admitted to first-name terms. "And I guess I'll keep him away from The Galloping Tiger until about an hour before we sail. You know how sailors are—the crude things! He might not understand our preparations!"

Everything being so beautifully settled, we went off to lunch. On the way over Ted as usual got me alone for a moment, and I felt moved to tell him a terrible secret which was weighing heavily upon my mind.

"Ted," said I, "you are not the only one who will have to bring someone on board at the last moment. Don't breathe it to a soul, but mother is coming with us. She wouldn't let me go, otherwise. Isn't it awful?"

"Huh!" said Ted. "There are going to be several shocks on the big day!"

"What?" I said. "Oh, Ted, what?" But he wouldn't tell.

"Wait and see!" he said darkly. "By gollies, I never thought this bunch would go as far as actually starting, but I now believe they will. And when we sail, believe me, kid, we're going to sail right!"

"You don't know these people!" I said indignantly. "They are real; and you are only just beginning to learn it!"

I will never forget the ten days that followed. They were one continuous party, during which the boat was gradually transformed, while Shackelton Salts presided over the work like a great poetic viking. He was simply the most wonderful of men, and I began to realize more and more strongly that a rich girl like myself ought really to marry a poet and make him free to develop his genius unhampered by any financial worries. Shack seemed to think so, too, although I would not permit him to come right out and say it. I wanted to prolong the sweetness of our indefinite relationship until the end of the voyage, sailing free with him—and the rest, of course—under the swelling white wings of the ship, and then seal our betrothal with a kiss beneath the tropic moon, bathed in the scent of palely flaming hibiscus blossoms. That last sentence is Shack's. I rushed off and wrote it right down immediately after he had said it, speaking on the deck of The Galloping Tiger, as she was now called, and waving a paintbrush dripping vermilion paint as he spoke, for this tender sentiment passed between us while he was working on the modernization of the cabin hatch.

"But you will give me your answer at the end of the voyage, won't you, Leopardess?" he ended, slapping a vermilion panel into a robin's-egg-blue door. And so of course I had to promise—and I had pretty nearly decided that I meant to say yes.

When that boat was finished it really was worth seeing. You would not have known it for the same old Sadie Brown of Boston, and although I had helped a lot in fixing her up, except when I was uptown buying a few yachting clothes, I could not but wonder if it really was the same vessel, and what on earth the New England lady for whom she had originally been named would think if she could see it now!

The hull was black and the deck a soft bright yellow—a queer shade which Edouard had put on because he wanted gold, and gold leaf was dreadfully expensive, so he had to use yellow paint because it was the nearest thing at hand. The hold was lavender and vermilion, as per first thoughts, and the cabin had been redecorated in black woodwork and tangerine upholstery, while on every available wall space and door hung synthetic Gauguins of South Sea subjects, painted by Malvina; and honestly, if you hadn't been told you would not have known that they were not by the great French-Tahitian master himself, particularly one called Papeete Madonna which represented a homely colored woman with twins looking through a sliced banana. At least that's what I think it was.

Well, at any rate the cabin was lovely, and the galley simply jammed full of wonderful eats. I had a big order of cooked things sent down from the Ritz as a starter, and I had also got Tams, our butler at home, to send down a lot of tinned things in glass—every possible edible that comes put up that way. Because when we had drawn lots about the work I had been elected to cook for the first day. And as I simply could not cook anything but fudge I was afraid they might get tired of it as a steady diet.

But while the boat was a great success I think that perhaps the most interesting thing about it was Edouard Roulande's figurehead. Never will I forget the day he brought it aboard, wrapped carefully in soft sheetings, and borrowed a couple of dollars from Ted to pay the men who lifted it from the taxi to the deck. Everybody dropped their work as soon as Ed announced what it was he had, and stood eagerly waiting for him to unveil it.

"Comrades," said Edouard solemnly, "I have devoted weeks of work to developing this figurehead, and I feel that its unveiling among our intimate little group is worthy of a real ceremony. I have put my whole soul into getting just the right figure—something which would be utterly symbolic of the spirit of pure beauty and adventure which is leading us seaward. It ought to be christened properly. Has anybody got any liquor?"

Well, we couldn't dig up any wine because Tams had not brought it down yet, but Shamus after a little hesitation produced a flask off his hip, and this Ed handed solemnly to me.

"Will you be sponsor, Constance?" he asked me, using my given name, which showed how seriously he was taking this affair.

"I will, indeed!" I replied, accepting the flask and starting, of course, to throw its contents upon the shrouded figure, when a unanimous cry halted me.

"Wouldn't it be more sensible to drink it?" suggested Shack.

He is always so practical. So they drank it—a little nip apiece—to the voyage, and then Edouard allowed me to pull the string, and the figurehead stood revealed.

At first I was afraid that my eyes had something wrong with them. Yet I felt all right, so I merely rubbed them and looked again. But the figure looked just the same, only more so. It was a wooden Indian—a regular Sixth Avenue cigar-store Indian holding a bunch of cigars. True, it had been jazzed up a good deal with gold paint and bright colors. The cigars had been painted white with green tips and around the figure's middle was a hula-hula skirt made of heavy copper wire; also it wore a garland of tin flowers gracefully but firmly flung about its neck.

"Suffering cats!" cried Ted. "What in the name of ham ——"

"It is a Tahitian maiden holding a bunch of asparagus," replied Edouard with great dignity. "The asparagus is the Marquesan symbol of swift growth."

There was a little silence then, of appreciation. I felt so stupid not to have immediately seen what Edouard had intended; it was all so plain once he explained it, and as we afterward agreed—all but that tiresome Ted—it was such a splendid example of the Adaptive School of Sculpture; so much result from so little work, if you know what I mean. But Ted simply could not get the right angle on it.

"All right, all right!" he said to me privately. "If they can pull that sort of stuff, so can other people. If you like it, Pet, why, I will strive to please!"

At the time I had not the remotest idea of what he meant, but on the day we sailed I got a glimmer.

The morning of that eventful day came at last, although at the beginning of our plans it had seemed as if we would never really get away. I awoke at dawn, my heart beating with excitement and anticipation. At least I thought it was dawn, but it was only overcast, and nearly ten o'clock. I jumped out of bed in a hurry, you can believe, for we were supposed to sail at one, and I wanted to be aboard before mother got there. Mother is apt to be on time for things, and her coming along was bound to be an awful shock to our little group, who had not as yet been told about her.

Well, I reached the Sadie—I mean The Galloping Tiger—ahead of the entire crowd, although I thought Ted, who lately had seemed to grow more and more pessimistic about the other man's seamanship, would surely be down, fussing and worrying over silly things like gasoline and ropes and that sort of stuff. But he wasn't, and the watchman let me aboard and then, at about 11:30, Malvina showed up carrying Poe her black cat, her dyeing outfit, and our electric curling iron. She was also accompanied by Shamus in a yachting cap, tennis shoes and a new straw suitcase.

"I thought we'd better have the electric curler, Pet," Malvina explained. "The salt air takes the curl out of one's hair so quickly. And I brought Poe along for a mascot."

"And where will ye get the electricity for that curler?" demanded Shamus. "Unless it's from sparks off the black cat itself?"

The Bedouin's Home on the Sahara

Shade in the Garden of Allah

THE BEDOUINS—that picturesque people of the hot, sand blanketed desert—long ago devised a "front porch" for their tents with a covering to shield them from the sun.

Because the covering was made of cloth, it absorbed heat rather than threw it off. Moreover, it collapsed when the wind blew too strong. But—it provided shade.

How different from the most modern of sun protectors that you see on so many American porches—

COOLMOR
Trade Mark

Self-Hanging, Wind-Safe Porch Shade

Coolmor shades are as cool as the name implies. Made of beautiful basswood in varied colorings, they lend attractiveness to any porch. The exclusive wide and narrow slat is a patented feature. Coolmor rolls easily and is wind-safe and self-hanging. Write for information and name of nearest dealer.

A COOLMOR Shade 6 ft. wide with a drop of 7 ft. 6 inches costs only $6.40
north of Alabama and east of Colorado.

For All Men *for* All Purposes!

To some men "travelo" is the greatest jacket ever devised for sports wear; others insist it must have been invented for the special benefit of salesmen and others who travel; still others look upon it as a jim-dandy work jacket for store, office or factory. You know best why you want a "travelo," but no matter what you want it for most, you also have this all-purpose, all-year jacket for all other wear. And remember, only in the genuine "travelo" do you get the particular fit, shape and wear which the original and exclusive "travelo" elastic-knit process insures.

Over 5,000 Dealers sell "travelo" knit jackets, in a variety of models and colors, including many beautiful heathers. Should you have any difficulty buying a "travelo," write us direct, mentioning style, size and color preference.

"Oh!" said Malvina, chagrined. "That's so! I forgot we had no wiring on a sailing boat! What an annoyance! But Poe will bring us good luck, anyhow. Not that I am superstitious!"

"Sure a black cat is an evil thing!" exclaimed Shamus indignantly. "And Shack has a terrible fear of cats of any kind. Don't you know it's bad luck they bring, and no good at all?"

"It is not!" said Malvina furiously. "It's good luck, and we need something to counteract this Pier No. 13!"

Well, I did not enter into their squabbles then, for Zelda and Edouard and Shack were arriving simultaneously, with lots of luggage and in a high state of excitement. The instant Shack saw me he rushed right over and grabbed me by the arm.

"Pet, we are lost!" he whispered. "I must hide you at once until we sail. Do you know who is on the end of the dock in a motor? Your mother!"

"Well," said I, outwardly calm but inwardly trembling, "go help her with her bags. She's coming with us!"

"Pet Torrington, I thought you were a real radical!" he said solemnly. "And now you bring along your mother—your mother! I am inexpressibly shocked!"

But he fetched her, none the less, and the news was broken to the rest, and mother was really a dear to them, looking awfully smart and pretty, though large, in a blue serge coat and striped skirt, and examining the boat through her lorgnette, very amiably, making them all like her tremendously, the way she can when she wants something. There was no sign of Ted.

"Confound him!" said Shackelton, after we had finished a picnic lunch and waited around and gone ashore to telephone innumerable times, but to no avail. "Confound the man, I've a good mind to sail without him!"

"But there isn't any wind!" objected Shamus. "And besides, he was to bring a sailor. Sure and I think we should wait for the poor kid—I mean lad!"

"I should say so!" I cried indignantly. "Sail without Ted Stonewall on his own ship? Over my dead body!"

"Don't get excited, dear," said mother in that soothing way of hers which irritates me so. "There is no need to worry; Ted will turn up, I'm sure!"

And mother was right, as she sometimes is, for about mid-afternoon Ted did turn up in a state of breathless excitement. With him were two strangers, who hovered in his rear while he gave us his news; and a queerer pair I never saw.

One was palpably the hired, professional sailor: a stalwart man with stubby brown sideburns, wide-bottomed blue trousers, a short sailor jacket and a round cap with ribbons on it. He stood there, spitting behind his hand and occasionally giving a hitch to his trousers, and he was, I suppose, a typical sailing-boat sailor—a very extreme case, I judged, but competent. There was nothing queer about him except the perfection of his British-tar type, if you know what I mean. But his companion was certainly a most remarkable figure.

This other was an unusually tall, bony man with a hawklike nose and eyes and a terribly weather-beaten face. He stood with a peculiar slouch, and his glance fairly burned me up when I met it. But striking as his face was, his clothes were even more peculiar, for he wore a Russian-peasant smock belted with a bright sash, high boots, into which his trousers were tucked, and a round astrakhan cap. His long white whiskers swept across his chest. It was to this person that Ted pointed as he spoke to the assembled crew of The Galloping Tiger in a hoarse whisper.

"Friends," he said anxiously, "a most unexpected and amazing thing has happened. That's what delayed me so! An old friend of mine from Russia—a man who befriended me when I was there, in Siberia, and to whom I owe my life, in fact—has just arrived in this country, only to find that he is wanted by the police. I have brought him to you, to beg that we take him with us on our voyage!".

"From Russia?" exclaimed Shackelton. "Your friend? Bring him, of course. Who is he?"

"He is a great poet," explained Ted. "That's why I thought you would not mind, although he doesn't speak any English. His name is Andrey Kropushkin!"

"Oy! The great man!" cried Zelda. "What an honor!"

"Do you speak Russian?" asked Ted in a choking voice, whirling on her.

"Alas, no!" she mourned. "I'm afraid none of us do! But he maybe speaks a little Yiddish?"

"Well, never mind that," said Ted. "I talk Russian enough to make him understand me. I'll go fetch him and Harry Binz aboard, and then let's be off before the cops locate us!"

Look About You

IN St. Paul's Cathedral, which he designed, Sir Christopher Wren lies buried. A simple slab bears this inscription in Latin:

"IF YOU WOULD SEE HIS MONUMENT,
LOOK ABOUT YOU"

Of your Prudential savings such a sentence might be written. Farms and homes financed by mortgages; railroads and the telephone financed by bonds; city schools and parks and roads financed by state and county bonds—all these are, in part, a monument to the investments which Prudential has made for you.

Wherever you live a part of your savings is close at hand and at work. If you would see them working, look about you.

To compliment your guests—Premium Ham

No matter how simple your dinner, if you serve Premium Ham it will be a subtle compliment to the good taste of those who share it with you. For while Premium Ham—a boiled shank-half especially—is easy to prepare, not extravagant, and will serve the family for meals to come, it is indeed an aristocrat among meats.

It has taken years of constant care—in the selecting of meat, in the perfecting of the special sweet mild cure, in the skillful smoking over hardwood fires—to get that unvarying tenderness and delightfully piquant flavor which distinguish Premium Ham.

Place a Premium Ham shank-half in cold water, heat slowly and let it simmer gently, allowing 30 minutes to the pound. Remove the skin while the ham is hot. Serve with buttered carrots and peas.

BEAUTY · STRENGTH · POWER · COMFORT

THE NEW IMPROVED SEVEN PASSENGER

HAYNES 75

TOURING CAR

The exactness with which Haynes engineers and designers create the specific car for its purpose is shown in the new, improved Haynes 75 Touring Car. It is a true touring automobile — equipped for travel. On the rear a handsome moleskin-covered trunk is placed on the special rack, with the car body protected by heavily nickeled rods which add to its appearance; five separate package receptacles are cleverly arranged in the car; two spare tires may be carried flanking the hood — in every way thoughtfulness has been exercised to provide the conveniences the tourist demands.

The car itself, with its three-quarter running board, its searchlight head lamps, its graceful lines, its splendid finish, is the picture of power and dependability. This impression is more than borne out by the mechanical excellence achieved by Haynes engineers. The new, already famous, quiet-running Haynes-built 75 engine is a revelation to even the most experienced driver. With the Haynes volatilizer to give it increased and immediate power, the pick-up and get-away of the car are admirable. It is one of the outstanding achievements of the organization which has had the longest automobile experience in America.

See this exceptional seven-passenger car at your Haynes dealer's showroom.

We recommend that you place your order with him now for early delivery, for the demand is naturally growing rapidly.

There is something about a good cake all wrapped up in a coat of creamy chocolate frosting that makes people feel that your dinner has been a success. To be sure of that "something" you must use the right flour.

Just try our GOLD MEDAL cake recipe and you will feel certain that the world's leading flour was specially prepared for you to make that one particular cake. It takes less flour to make better cake, pastry and bread when you use GOLD MEDAL.

The Gold Medal Cake

GOLD MEDAL FLOUR—2¼ cups
1¾ cups sugar
½ cup shortening
1 cup milk
Whites of five eggs
2 teaspoons baking powder
1 teaspoon vanilla flavoring

Cream sugar and shortening together. Add milk alternately with the flour, which has been sifted with the baking powder. Add flavoring and mix well. Fold in the well beaten whites of eggs. Put in well greased cake tins and bake from thirty to forty minutes in a slow oven. This recipe may be baked in two large layer tins or three small tins.

The Chocolate Icing

2 cups sugar
¾ cup milk
1 tablespoon butter
4 ounces bitter chocolate (2 squares)

Place all ingredients in a sauce pan and boil, stirring constantly until a small amount dropped in cold water forms a very soft ball. Allow to cool and then beat until thick enough to spread on cake.

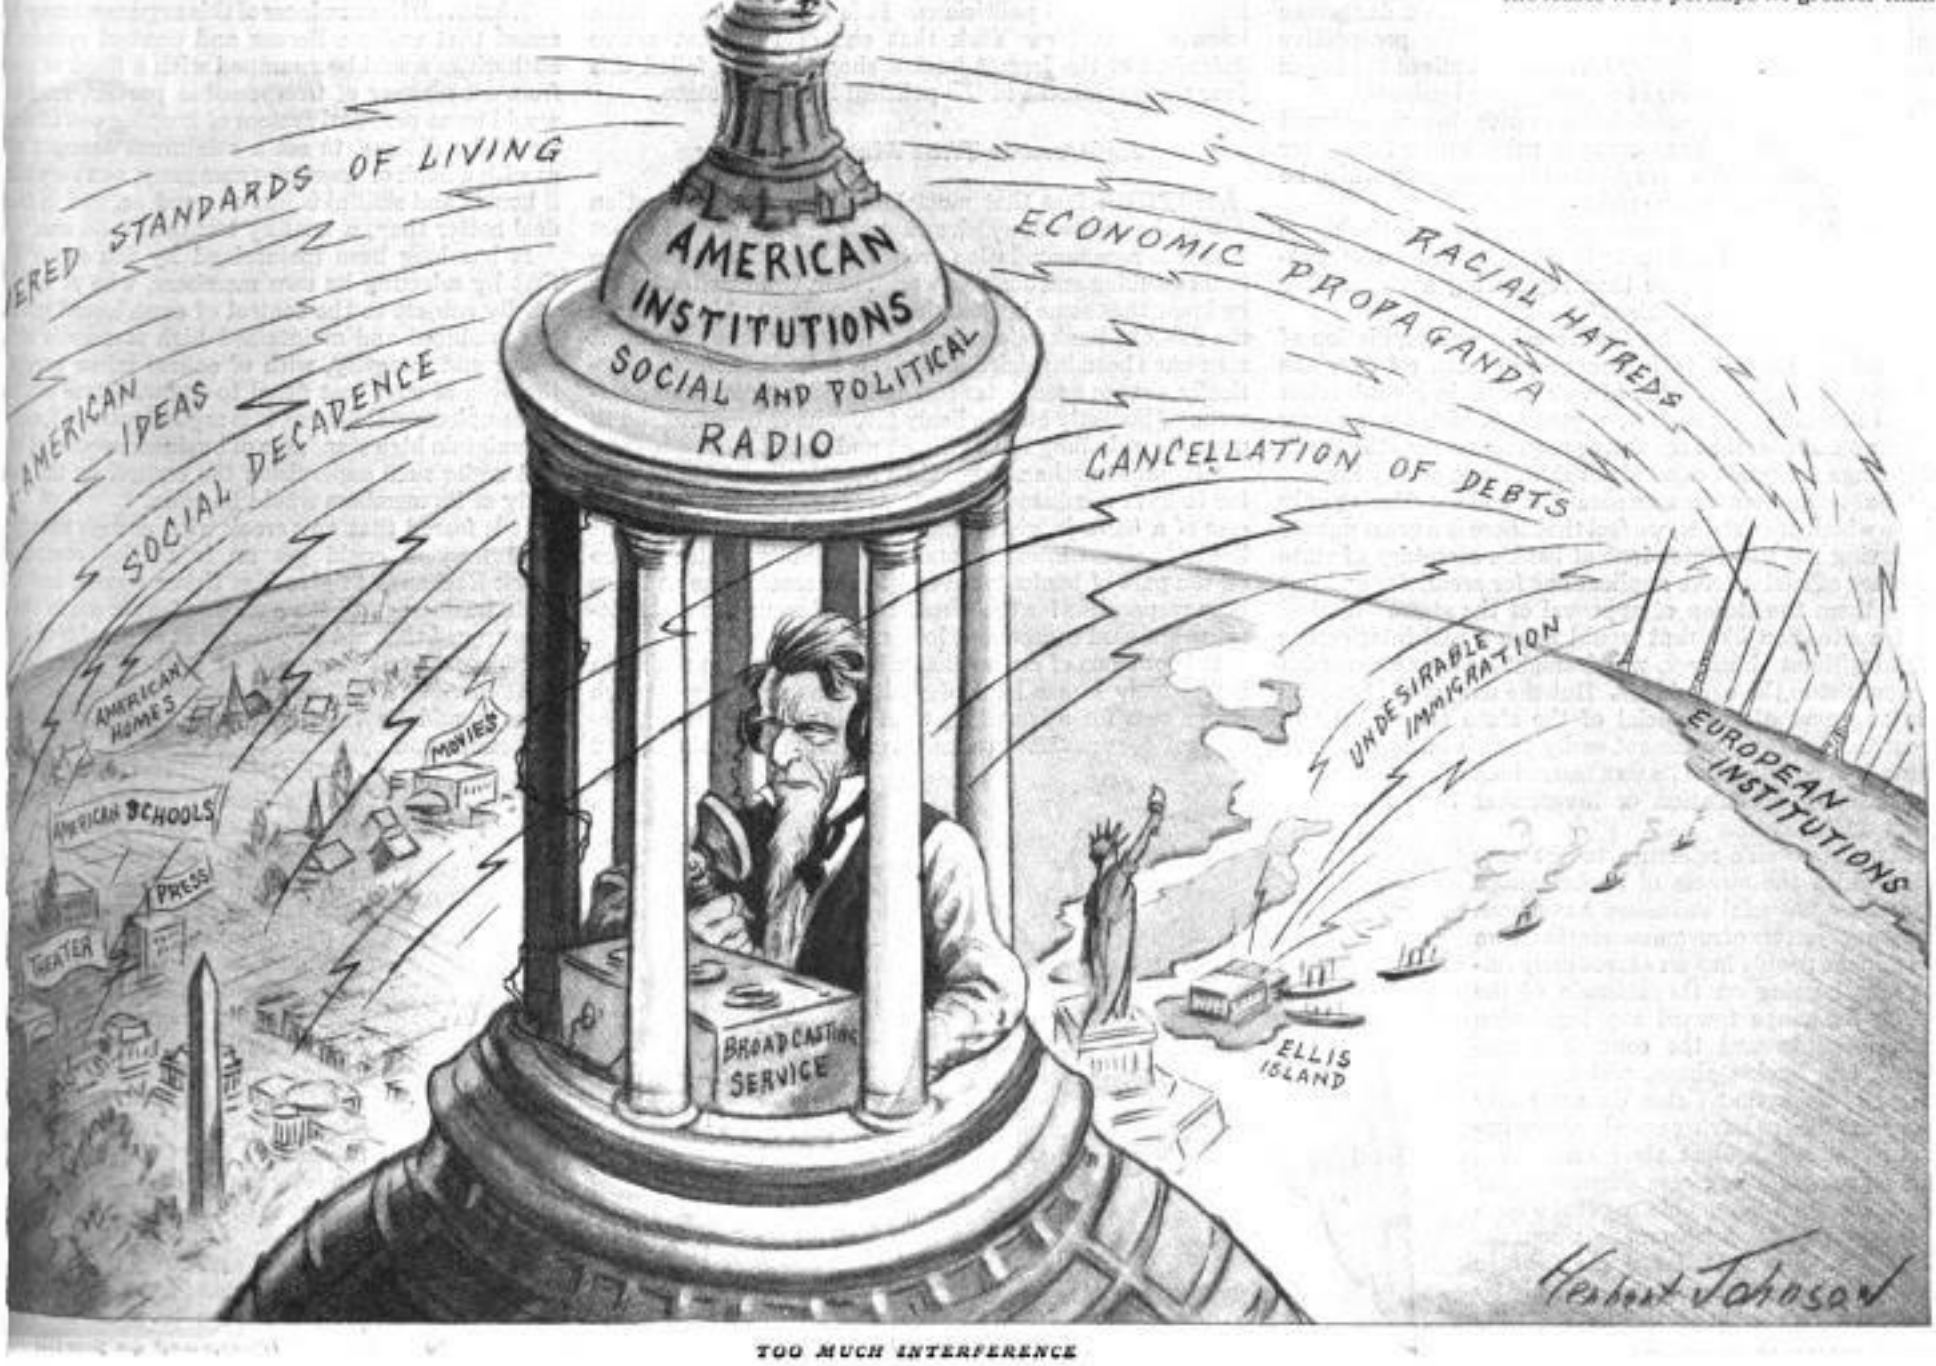
rotecting the Small Investor

WHERE THE NEW YORK STOCK EXCHANGE STANDS



By Albert W. Atwood

question of protecting the small inves- is not only one of permanent economic ortance but has a continued personal rest for millions of individuals. The s been discussed many times from many viewpoints. High wages during the e Liberty Loans created new armies of stock and bond holders. The great boom of 1919 carried with it the flotation of thousands of new stocks. Now subject is up again in most insistent form because of the failure in the early year of between fifty and a hundred stock-brokerage lew York City alone. Though many of these were ers carried on the most extensive operations and several cases, with liabilities amounting to millions. are so many ways in which money may be lost and the purchase of stocks, and so many plans and protecting the small buyer, that one hardly knows egin. But an essential fact is that the largest single r securities, and especially for this country is the New York Stock . The 1100 members of that body rized to deal in bonds with a par value of more than $37,000,000,000 and stocks of a par value of nearly $18,500,000,000, in addition to nearly 32,000,000 shares of stock without par value.

The brokers who belong to the Stock Exchange are members of 437 different firms, ranging from comparatively small and unimportant partnerships up to J. P. Morgan & Co. itself. In the public mind the Stock Exchange is almost synonymous with the words "Wall Street." To a large extent the public looks upon the Stock Exchange and all manner of promoters, stock salesmen and brokers as part of the same piece of financial machinery of which the Stock Exchange is the essential cog. The Stock Exchange is blamed no doubt for many evils for which it is not responsible, but on the other hand it is by far and away the chief link in the chain by which securities reach the hands of the public.

Thus the first and most natural approach to the subject of protecting the small investor is to discover the attitude of the Stock Exchange. It is true that among the stock brokers who failed in recent months only a very small fraction were members of the Stock Exchange. It is true also that though severe losses have been sustained in the purchase of Stock Exchange securities in the last few years the losses were perhaps no greater than

TOO MUCH INTERFERENCE

Digitized by Google

among business operations in general, and certainly the vast flood of get-rich-quick shares which were sold so freely in recent years were only in the rarest instances listed on the Stock Exchange.

But the Stock Exchange is so large and powerful that its responsibilities are correspondingly great. If the small investor is to be safeguarded and the standard of protection raised the Stock Exchange must obviously take the lead. For that reason these questions were put to Seymour L. Cromwell, president of the Stock Exchange:

What specific objection has the Stock Exchange to the regulation of its members by the state banking department or other state authority? Why should brokers, who handle large sums of money, object to being licensed and controlled like banks and other similar institutions?

If the Stock Exchange objects to this sort of treatment, what constructive proposal has it to make regarding the whole question of bucket shops, get-rich-quick stock selling and financial swindling?

Many customers have urged that all brokers be placed under state control, on the ground that the average customer is no more competent to pick out a good sound broker than he is able to choose a strong bank or insurance company. These latter institutions have long been regulated by the state.

Mr. Cromwell replied: "The Stock Exchange is not against legislation which will accomplish good, and there is nobody so thoroughly in favor of such legislation. But the danger of licensing, above all, to me is the lowering of the standard instead of the raising of it."

Objections to Licensing Systems

"WE CONSIDER that it would be a very easy thing for a man to get a license. We have seen an extraordinary amount of that in the personal letters that a lot of these bucket-shop men have received from really prominent persons.

"Now if a man came with letters of that character he could probably get a license, and it would not make much difference who he was. After a man once has a license he can go on doing business until he has been proved guilty. A very complete case would have to be made out against him before the license could be taken away.

"We feel that a man going into the rural districts with a license, with a badge, would carry with him practically the stamp of approval of the state, almost a guaranty from the state, and that a great many very bad brokers and promoters would slip in. We regard that as a dangerous thing. This licensing will not only lull the prospective investor into a false security but it would afford the bogus broker a valuable means of securing new business.

"Moreover, the honest broker with his well-earned reputation dislikes the attempt to substitute a license for reputation and credit. He dislikes the company which he believes such a system would necessitate."

In a recent speech to members of the Stock Exchange President Cromwell said that "licensing doesn't stop fraudulent practices any more than registering a vicious dog will prevent him from biting."

Nearly all proposals for the licensing and regulation of brokers are coupled with a measure of control over the issuance of securities. But Mr. Cromwell in his interview called attention to the fact, regarding which there seems to be no dispute, that the listing requirements of the Stock Exchange are much more strict than those of any law.

"But aside from our own securities and considering only those which are outside, we feel that there is a great danger in having the superintendent of banks, secretary of state or other official receive applications for securities and put upon them the stamp of approval of the state. We feel that a situation like that would mean a real interference with legitimate business, which might be countenanced if it would stop the bad things. But the danger of stamping the approval of the official of the state on an issue of securities is that you cannot easily take it off again. The thing does not stand on its own feet, which an ordinary speculation or investment must do."

Mr. Cromwell's reference to the ease with which the owners of bucket shops and other financial swindlers have been able to get letters of recommendation from prominent people has an exceedingly important bearing on the attitude of the Stock Exchange toward any legislation that looks toward the control of brokers. The bucket shops, which are so-called brokers that either do not really buy securities or having bought them immediately sell against their customers, are in almost every case dependent for existence upon being able to get the quotations of stock prices made upon the floor of the Stock Exchange and nowhere else. Unless these can be had quickly by telegraph or telephone the bucket shop soon goes out of business.

But the Stock Exchange, owing to its autocratic power and perhaps monopolistic character, as well as its freedom from state regulation, is able to deny and does deny its ticker service or quotations to many of those who ask for them. It also frequently rips out the telegraph wires from brokers who are not members of the exchange but who have been granted the ticker service. This is done upon evidence that these brokers are bucketing their orders. Whatever the defects or faults of the Stock Exchange may be, there is not the slightest doubt that it has broken up numerous great and powerful rings of bucket-shop gamblers by the simple and expeditious device of tearing out their wires, as well as those of many individual bucket shops. Indeed, the many brokerage failures in recent months were precipitated by action on the part of the Stock Exchange in depriving what it suspected to be bucket shops of their tickers.

Now it is asserted by the Stock Exchange that many of these bucket shops, and rings or groups of them, have had the most powerful of political backing. Nor is there the slightest doubt that bucket shops, like race tracks, gambling houses, liquor interests and other easy-money forms of business, have had in many instances the support of politicians. Mr. Cromwell says: "We believe that it is greatly to the public benefit for us to have this, you can call it 'autocratic' power, if you want to. We believe we are the last ditch, in the way of defense, against these swindlers. We believe that we are the one agency that the public authorities can use to accomplish what they want, if they want to. When the wires were taken out of one of these houses last year, the pressure that was exercised was such that we are convinced that the cure cannot come from that source"—political control.

"In some of the recent flagrant failures of bucket-shop houses men who had held public office were partners or directors. Any man in the public service who may have even a remote interest financially or otherwise in—let me say—bucket shops or stock-swindling concerns might be able to block the active efforts of honest officials in the enforcement of the law. It has another significant feature in that, if reputable stock exchanges were to be placed under the control of the states through incorporation, not only would their powers of discipline be menaced but they might be subject to demands under threats of interference which would be extremely serious and detrimental to the maintenance of free financial markets."

One does not have to take the word of the Stock Exchange for the existence of strong connecting links between bucket shops and politicians. It is a matter of common knowledge in New York that one of the most active defenders of the largest bucket shop that has failed this year was prominent in the political life of the state.

References That Mean Nothing

ANOTHER fact that must be taken into consideration is the ease with which swindling brokers appear to get letters of recommendation even from men of high standing in the banking and business world. Mr. Cromwell said that he knew that some bucket shops have been able to obtain the finest of bank references. "We know that prominent men have been inveigled into giving introductions to practically chance acquaintances, and in many cases these references, honestly but foolishly given, have been utilized to promote swindling in the Street and out of it.

"It has sometimes seemed to be sufficient for a depositor to have a substantial bank account to justify the officers of a bank in giving him letters of introduction that imply business integrity and responsibility. This failure on the part of banks to investigate character has at times been responsible for the distribution of securities of doubtful value, and consequent losses to the public."

It is obvious of course that a bucket shop can maintain a relatively larger bank deposit or appropriate a much larger sum for advertising than a legitimate broker, because it does not have to use its capital in its business, and therefore can pile it up in a bank to make an showing, or spend it for advertising purposes.

In view of these facts there is a very obvious presented. Many people feel that the Stock is not strict enough in keeping its quotations service out of the hands of irresponsible swindl has been urged to far greater severity in this re other people say that it is an arbitrary and institution when it rips out wires from bucket sho due process of law. The question is whether u control it would be easier or more difficult for t shops to get the stock quotations and ticker ser

In discussing the position of the stockbroker l well laid stress on the fact that the broker is a c and personal agent of his client. Brokers look u position as only slightly removed from the pr relationship of the lawyer or physician, where the of personal character is more important even tha finances. The relation is looked upon as one personal confidence, and there is no profession th posed to guard information regarding the affa clients more jealously than that of the stockbrok

Confidential Relationships

THE position taken by most brokers is that the handle money and securities for their princi handle them not as a bank does, but as a person Very few customers have personal checking acc brokerage firms, and a broker is not supposed t everyone who chooses to come into his office. He for the principals with whom he is willing to ass confidential relationship involved in the employm customers are expected to select as their brokers me they personally know, in whom they have perso fidence and whom they can trust.

In other words, brokers take the position that t less public business than banks or insurance co and for the state to come in and assume supervisio be to substitute forms and red tape for the perso tact that is the whole spirit of the business. The that their position is like that of an executor o personal agent holding property of another, and t a question of personal honesty and character rath of concrete facts in the form of financial statemen balance sheets, that quickly show to the examin insurance company or bank whether such institut insolvent or not.

Whatever the soundness of this argument may be, assert that under a license and control system th authorities would be swamped with a flood of appli from all manner of irresponsible parties, and that would be no practical system of keeping out the cro would be difficult to set a minimum amount of c as with a bank or insurance company, as a very poor if honest and skillful is just as good as, and in fact deal better than, a wealthy but dishonest one.

It has long been maintained by the Stock Ex that by selecting its own members, who at all tim wholly subject to the control of experienced govern has produced and maintained high standards of bu honor and integrity, with of course minor exceptio the eyes of men best fitted to know. State control its complemental license, it is argued, cannot itself pr or maintain high standards of business honor and int and under such supervision the control by the gov body of its members would be gone.

It is feared that any crook with enough money t good lawyers could get an injunction compelling Stock Exchange to give him ticker service, and con to do business until the case was fought out in the c It is argued that not only the swift removal of tickers outside concerns suspected of bucketing but the ex swift discipline of its own members upon frequent sions would be interfered with by all manner of objections and obstacles.

Mr. Cromwell stated that in one o Middle Western States which has a b sky law that has been advertised working well, the exchange has had n trouble with bucket shops using its tic than almost anywhere else, and has to pull out many of them.

It may be argued that the Stock change should take the leadership in ting statutes upon the books that restrict bucket shops, get-rich-quick erations and bogus investments generally and that its failure to do so has been important reason for the growth of su parasites. Mr. Cromwell spoke of t blue-sky laws as cumbersome and as bei obstacles to the distribution of honest securities.

He also expressed the view that m of these laws have not yet accom plished enough to make them a mat

NE CROWDED HOUR

"Sending You Down to the Cabin at a Moment When I Knew He Would be There. So That You Might Catch Him"

By Ben Ames Williams

ILLUSTRATED BY C. D. WILLIAMS

RANNEY lived on the road from Harbor to Fraternity, some eight from the bay. He was, at the which I write, a man fifty-seven , and his life had been as completely ul as life can be. He had never adventure, had never suffered a ohe, had never achieved any great d never even been called upon to particularly poignant grief. He was born in the here he still lived and save for one trip to Portland er crossed the county line. He married the daughman whose farm lay on the other side of Fraterhe was not particularly pretty at any time; and never any passion for her, though he had always r well enough, and had always been kind. His nd mother lived till he was in his forties, then ceably in their beds. He had been a child of their rs, and before they died they had become almost tely helpless, so that he felt it was time for them He and his wife had three children, all of whom maturity. The oldest, a girl, married an East boy who later moved to Augusta; the other two, ent to Augusta to work in a factory there, pre- the ordered hours of confined toil to the long and r tasks upon the farm.

and then Jeff's wife departed to visit her daughter, him to keep bachelor hall alone. He managed tably enough; his life, then as always, followed a dered and familiar routine. He rose at daylight, for his stock, made his own breakfast, did whatever ay before him for the day, finished his chores before supper at night, washed the dishes, read the evepaper till he fell asleep in his chair, and then went to Now and then in the spring and summer months he time to catch a mess of trout; now and then in the winter he shot a partridge or a rabbit. When there circus in East Harbor, or a fair, he went to town for ay. When there was a dance in the Grange Hall he is wife had used to go; but they had long since ceased frivolities.

ff's farm was well kept; he had a profitable orchard, ows were of good stock. When the price of feed made nterprise worth while he raised a few pigs. There was ortgage on the farm, his taxes were paid, he owed no , his buildings were in good condition, he owned a ndhand automobile and a piano, and he had some few dred dollars in the bank. It is fair to say that by the dards of the community in which he lived he was a sperous man. He was also a just man, and he had a ire sense and wit which his neighbors respected.

the November day, some years before this time of which pose to write, he woke early and looked from his hen window and saw a deer feeding on the windfalls in rchard. He shot the animal through the open win- ; and the spike horns, still attached to a fragment of skull, were kept on the marble-topped table in the er of the farmhouse. The shooting of this deer was most exciting, the most interesting thing that had ever happened to Jeff until that series of incidents in which romance and drama were so absorbingly mingled, and which is to be here set down.

It was a day in October. He had planned to go down into his woodlot and manufacture stove wood, to be stored for use during the winter that was still twelve months away. But when he awoke in the morning a cold rain was lashing his window, and a glance at the sky assured him the rain would continue all that day. He decided to postpone the outdoor task. A few errands in town wanted doing, so he put before his animals sufficient water for their needs till night, threw a thing or two into the tonneau of his car, secured the curtains, cranked the engine and started for East Harbor. Since the road was muddy and somewhat rutted, and he had no chains, it was necessary for him to drive slowly; and his late start made it almost noon when he slid down the steep and muddy hill into the town. He parked his car at an angle in the middle of the street and went to the restaurant presided over by Bob Bumpass for his midday meal. Eating at a restaurant on his trips to town was one of the things Jeff accounted luxuries.

Bob, fat and amiable as a Mine Host out of Dickens, asked Jeff what he wanted; and Jeff ordered Regular Dinner Number Three: Vegetable soup, fried haddock, pie and coffee; thirty-five cents. Not till he had given his order did Jeff perceive that a certain excitement was in the air.

There were two other customers having lunch near where he sat. One was Dolph Bullen, whose haberdashery was among the most prosperous of East Harbor mercantile establishments; the other was the chief of police, Sam Gallop, a wordy man. Bob Bumpass, having taken Jeff's order and served his soup, leaned against the counter to talk with these two men. Jeff perceived that Sam was telling over again a story that had evidently been told before.

"Yes, sir," said Sam, "he came right along when I took a hold of him. And he had the necklace in a kind of a leather case in his pocket the whole time."

"You took him right off the Boston boat, didn't you?" Dolph asked.

"Yep," said Sam. "Right out of his stateroom. He had his suitcase open on the bunk when I knocked on the door. I didn't wait for him to let me in. Just opened her right up and went in; and he looked at me kind of impudent; and he says, 'Hullo,' he says. 'What's the matter?' Cool as you want."

"He come in here one day this summer, when the yacht was in here," Bob commented. "I kind of liked his looks."

Sam shook his head ponderously. "Them's the worst kind. But he didn't fool me."

"Name's Gardner, isn't it?" Dolph asked.

Bob nodded. "Frank Gardner. He's worked for old Viles for six-seven years, he said."

The chief of police was not willing that his part in the affair should be forgotten. He was a round-faced, bald, easy-going man; but he knew his rights, knew that in this drama which had been played he had a leading rôle.

"I says to him, 'Matter enough,'" he continued importantly. "'I got a warrant for you,' I says. And he asked me what for; and I told him for stealing Mrs. Viles' jewels. He got red enough at that, and mad looking, I'll tell you. And he started to say something. But I shut him up. 'You can tell that to someone else,' I says. 'My job's to take you up to jail.' Then he asked who swore out the warrant; and I told him old Viles did; and at that he shut up like a clam, and snapped his suitcase shut, and came along. I found the things when I went through his clothes, up't the jail."

He had more to tell, and when Bob Bumpass had brought Jeff his fried haddock and resumed his place as auditor Sam took up the telling. How Leander Viles had come to him, demanding the arrest of his secretary; how he had insisted that the millionaire swear out a warrant; how incensed Viles had become at this insistence.

"I'll tell you," said Sam emphatically, "he got right purple, till I thought the man'd burst; and he sort of fell down in a chair, grabbing at his chest; and then he got white as can be."

Dolph nodded. "Men like him, big and fat, and full of whisky all the time—they go that way. He's got a temper too. Some day when he's good and mad that heart of his will crack on him."

Their talk continued, and Jeff continued to listen. In any issue it is instinctive for mankind to take sides. Dolph and Bob Bumpass were inclined to think a mistake had been made. "I don't believe he aimed to steal that necklace at all," said Bob; and Jeff found himself agreeing with the restaurant man. The three were still discussing the matter when Jeff finished his pie, paid his score and went his way.

His errands kept him busy all that afternoon. An ax handle, two or three pounds of nails, four feet of strap iron and a box of shells from the hardware store; a pair of overalls from Dolph Bullen; oatmeal, coffee, sugar and salt from the grocer; a bag of feed from the hay and grain market at the foot of the street. These errands were attended with much casual conversation, chiefly concerned with the arrest of the jewel thief. Late in the afternoon Jeff sought out Ed Whalen, who dealt in coal and wood, and made a deal by which Ed would buy from him a dozen cords of stove wood, to be delivered while snow was on the

Digitized by Google

ground. Ed's office was near the water front; and when Jeff came out he perceived the Viles yacht at her anchorage a little above the steamboat wharf. Jeff studied the craft for a while admiringly, and he wondered how much she had cost. "As much as my whole farm," he guessed. "Or mebbe more."

Night was coming swiftly; the lights aboard the yacht were turned on while he stood there, and her portholes appeared like round and luminous eyes. He could dimly see a sailor or two, in oilskins, under the deck lamps. Rain was still falling, cold and implacable. "Guess the folks that live on her are keeping dry, inside," he hazarded. He tried to picture to himself their manner of life, so different from his own, as he went back up the hill toward where he had left his car.

A farmer from Winterport, whom he had not seen for years, halted him on the corner above Dolph's store, and they talked together for a space in the shelter of the entrance to the bank. A whistle down the harbor announced the coming of the Boston boat; and before they separated another whistle told of her departure. Then Jeff had trouble cranking his car. He had forgotten to cover the hood, and the ignition wires and plugs were wet. One cylinder caught at last; and then another; and finally all four. He had already loaded in his purchases on the floor and seat of the tonneau. The bag of feed lay along the seat.

The Winterport man had reported that the steamship line would make a new rate for apples by the barrel to Boston that fall; and Jeff decided to go down to the wharf and make inquiries. He parked his car on the edge of the wharf, in the lee of the freight sheds, and this time threw an old rubber blanket over the hood to keep the plugs dry, before turning toward the office. With the departure of the boat, business hereabouts was done for the day; and save for a light in the office, and another on the pier toward shore, the wharf was dark. Jeff's errand occupied some ten minutes' time; and while he was inside a fiercer squall of rain burst over the harbor. He could hear the water drumming on the roof.

When the squall had passed he returned to his car and took the blanket off the hood and threw it into the dark cavern of the tonneau, then cranked the engine and turned around and started home. His lights, run from the magneto, were dim and uncertain; his attention was all upon the road. The car skidded and slid and slued and bumped; but it came to no disaster. He drove into his own barn toward seven o'clock in the evening, and left his purchases untouched while he went into the house to change into overalls, so that he might do his chores.

When he came back into the barn he saw someone standing motionless beside the machine. He lifted the lantern which he carried, so that its light flooded the still figure, and perceived that the person who stood there, facing him, was a woman.

This woman, in these surroundings, was an amazing apparition. Against the background of his old hayrick, still half full of hay, Jeff saw her outlined. She wore a sailor's oilskin coat, buttoned about her throat; and beneath the skirts of the draggled coat he glimpsed slim silk-clad ankles and badly soiled white satin pumps. She wore no hat; her hair was wet and all awry; and there was a thin streak of blood from a scratch upon her temple that had trickled down across the bridge of her nose in a slanting direction. Yet in spite of these difficulties he perceived that she was very beautiful.

At sight of her Jeff had stopped in his tracks and still stood motionless with surprise, the lantern in his lifted hand. The woman's white fingers fumbled nervously at the fastenings of the oilskin coat she wore; she waited for a moment in silence; but when he did not speak she nodded in an uneasy little way and stammeringly said to him, "Good evening!" Her voice was full and throaty and pleasantly modulated.

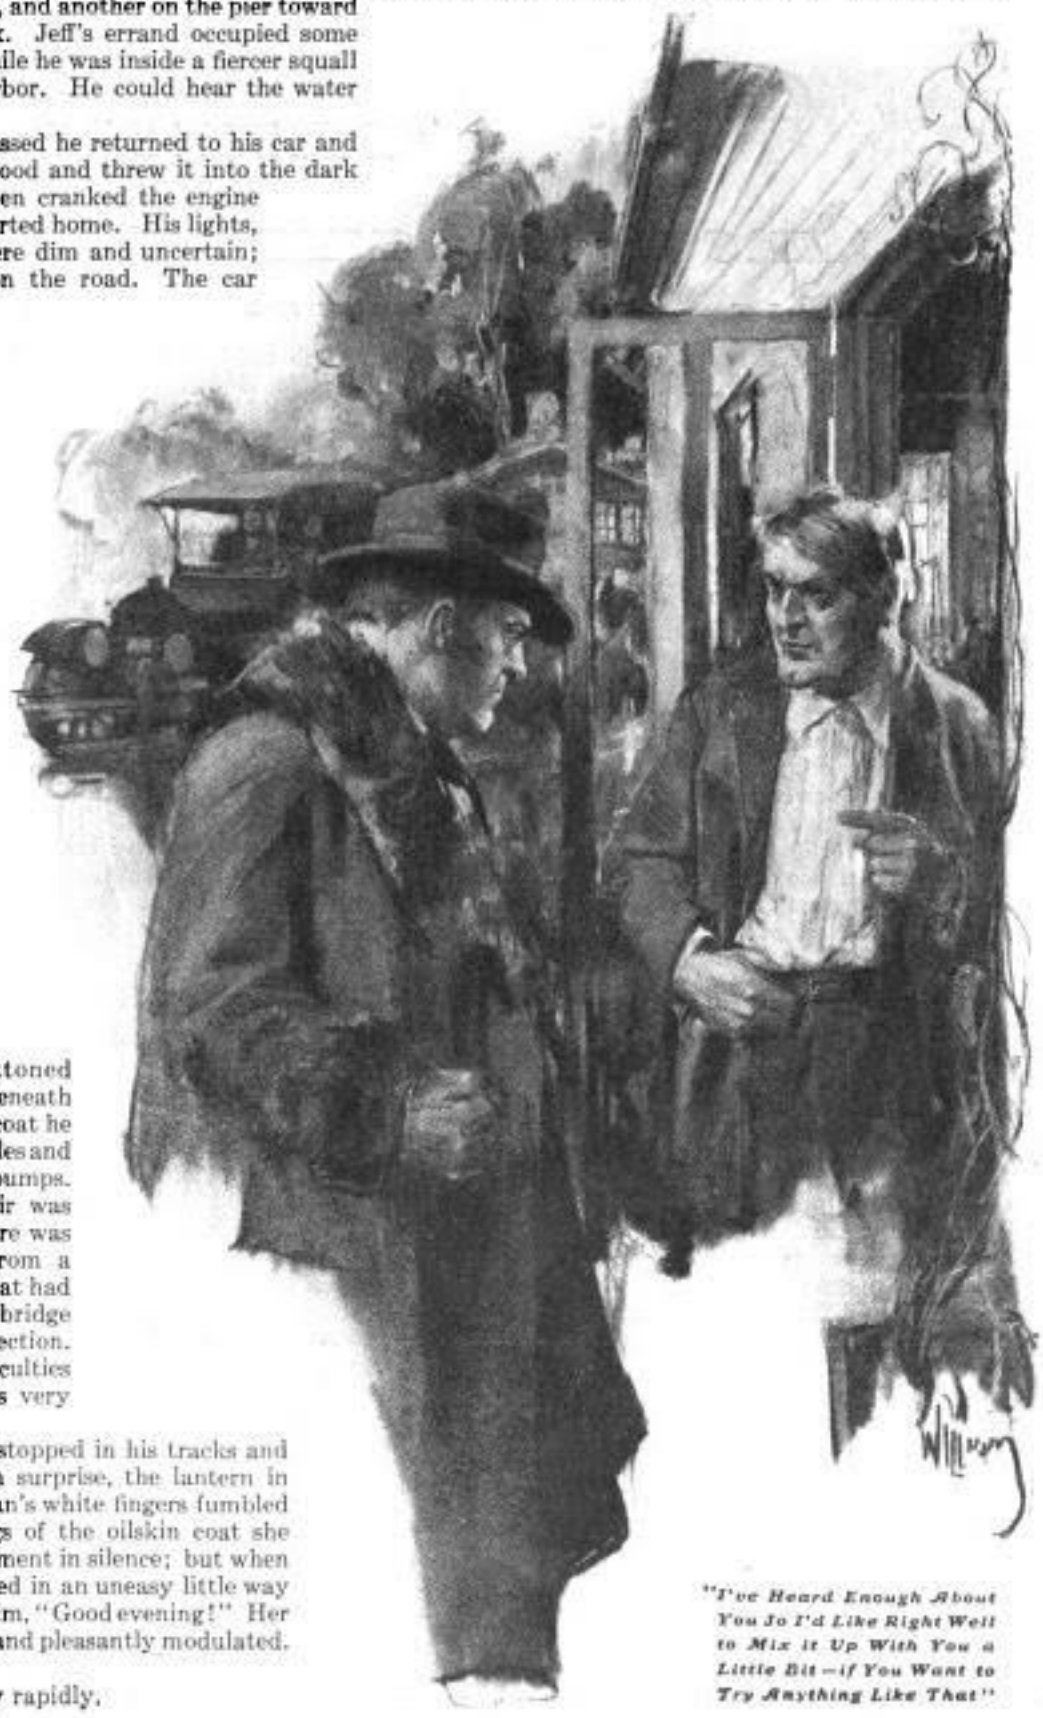
Jeff replied, "Howdo!"

She began to speak very rapidly.

"You're probably wondering how I came here. I was in your car. On the floor of the back seat. Almost crushed. That big bag fell off the seat on top of me when you hit that terrible bump. It banged my head down on a piece of iron. I'm afraid it has bled a little. I was almost smothered. The road was so rough."

She was panting as though she had run a race; and Jeff watched her steadfastly for a moment, and then, for sheer relief from his astonishment, gripped the commonplace with both hands.

"You better come in the house and wash up," he told her slowly, "and get warm. I guess you're kind of wet."



She nodded. "Yes. I'd like that. I'd like to do that."

He perceived that she was fighting for self-control, putting down the revolt of jangling nerves.

"Come through here, ma'am," he bade her, and led the way through the woodshed and into the kitchen. There he set his lantern on the table and brought fresh water from the pump. "I've been away since morning," he explained. "The water in the tank is cold. You want to wait till I heat some up?"

She shook her head. "This will do finely."

He went through into the bedroom and returned with a heavy porcelain bowl, which he set in the sink, removing the granite-ware washbasin. The woman had sunk down limply in a chair beside the table. Jeff, careful not to distress her by his scrutiny, unwrapped a fresh bar of soap, brought out a clean towel. Then with half a dozen motions he threw shavings and bits of kindling into the stove, touched a match to them, laid a stick or two of hardwood atop. "That'll warm the kitchen up pretty quick," he told her. He understood that she wished to be alone, yet was not sure what he should do. At last he said awkwardly, "I'll be doing the chores," and lighted a lamp for her, then took the lantern and departed through the shed again.

"I've Heard Enough About You So I'd Like Right Well to Mix it Up With You a Little Bit—if You Want to Try Anything Like That"

When he had gone only a few steps he stoppe ered, then returned and knocked upon the doo which he had come out. She bade him enter; he did so he found her on her feet, unfastening black coat.

"You could go into the bedroom," he said te

She shook her head, smiling gratefully. "I'm is fine. But I would like a comb."

"I'll get my wife's for you," he replied; and to her. Mrs. Ranney was a good housekeeper; was as clean as new. "Would there be anything asked when she had thanked him for it.

"No. But you're very kind to me."

"I'll get the chores done," he replied uncomfort this time departed in good earnest to the barn.

When he had fed and watered the stock, findi in the familiar routine, he removed his purchases car. Saw where the woman had crouched on The rubber blanket which he had thrown in at must have fallen across her back; the heavy sac might well have crushed her. "Lucky she wa hurt," he told himself. He was full of speculatio questions, half dazed with wonder. Women of su as this were as though they lived in another world, was in his kitchen now.

It was necessary for him to go back to the hou the milking pails. Again he knocked upon the d the woman bade him come in. She had laid aside skins; he was not able at once to understand just was she wore. A dress, but of a sort unfamiliar to He had seen magazine pictures of such things. An gown, décolletté. Her hair was loose in a wav about her smooth shoulders, and she was leanin the stove.

"I'm sorry," she apologized, flushing with so fusion. "I'm trying to get it dry."

He would have backed out of the kitchen. "I'm hurry, ma'am."

But she cried warmly, "No, no, it's all right. Co

"I come to get the milk pails," he explained. "I them out this morning." He took them from the d board at one end of the sink. "I'll go milk now."

She asked diffidently, "Can't I be starting supp you're doing that?"

Jeff smiled faintly. "I'm used to cooking. *I* know the things are."

"I can cook," she assured him. "What are we g have for supper?" She was beginning to see some in the situation.

"Why I just figured to scramble some eggs, and coffee," Jeff confessed. "The things are in the pan through the dining room," he added.

"I'll have supper all ready when you come back promised.

He said reluctantly, "Well, all right," and left her

When he returned, half an hour later, he found h hair in a loose braid, wearing one of his wife's aprons about the kitchen table. "I've everything ready, told him, "but I waited, so that things would be sli hot."

"I got to separate the milk first," he explained.

She nodded and, while he performed that oper busied herself with egg beater and mixing bowl. He the cream down cellar, set the skim milk in the shed fo hogs. When he had washed his hands and face she moned him to supper in the dining room. She had ma omelet and toast, and her coffee was better than his. ate with the silent intentness of a hungry man. After she insisted on washing the dishes, while he read, fit enough, yet with an appearance of absorption, the p that had been left that afternoon in the mail box b the door. There was something grotesquely domest the situation, and Jeff's pulses were pounding with wo at it all.

He had asked the woman no single question. Th were a thousand questions he desired to ask, but an in delicacy restrained him. The glamour of the hour dazed this man; his senses were confused. There wa unreality about the whole experience. The dishes, rat in the sink, sounded no differently than when his m washed them. The illusion that it was his wife who l come home in this guise had for a moment dominion o him. The lines of newsprint staggered and swam bef his inattentive eyes. He wondered, wondered, wonder But he asked no question of his guest.

When she had finished her self-appointed task and en into the dining room where he was sitting she seemed expect a catechism; but Jeff kept his eyes upon his pap as a man clings to a safe anchorage, till at last she w forced to speak.

"I've been expecting you to question me," she sa uncertainly.

Jeff looked up at her then and found some reassuran in the fact that the silence was thus broken. "I've bee expecting you'd tell me without asking," he said, smilin faintly at her.

"I ought to," she nodded. "But there's so much to tel and it must sound so incredible to you. I hid in your ca

RANNEY was a man habituated to routine; he naturally into a regular way of doing even irregular The next morning his life was on the surface as it ways been. He rose to his chores, returned to his ast, went into the woodlot and set about the task postponed the day before. The woman cooked ast and did the work about the kitchen that his wife have done. It would have been easy for any out- o accept as fact her pretended status as Jeff's niece California.

Jeff was not deceived by the apparent normality s new existence. The man was immensely curious her, absorbed in the mystery which she personified. oughts all that day were full of conjectures, full of heses, formed and as quickly thrown away. One he clung to as probable fact. It seemed to him cer- he had come ashore from that yacht which he had lying in East Harbor the night before; had come e as one who flees. But to the questions who she be and why she had fled, he found a thousand an- and accepted none of them.

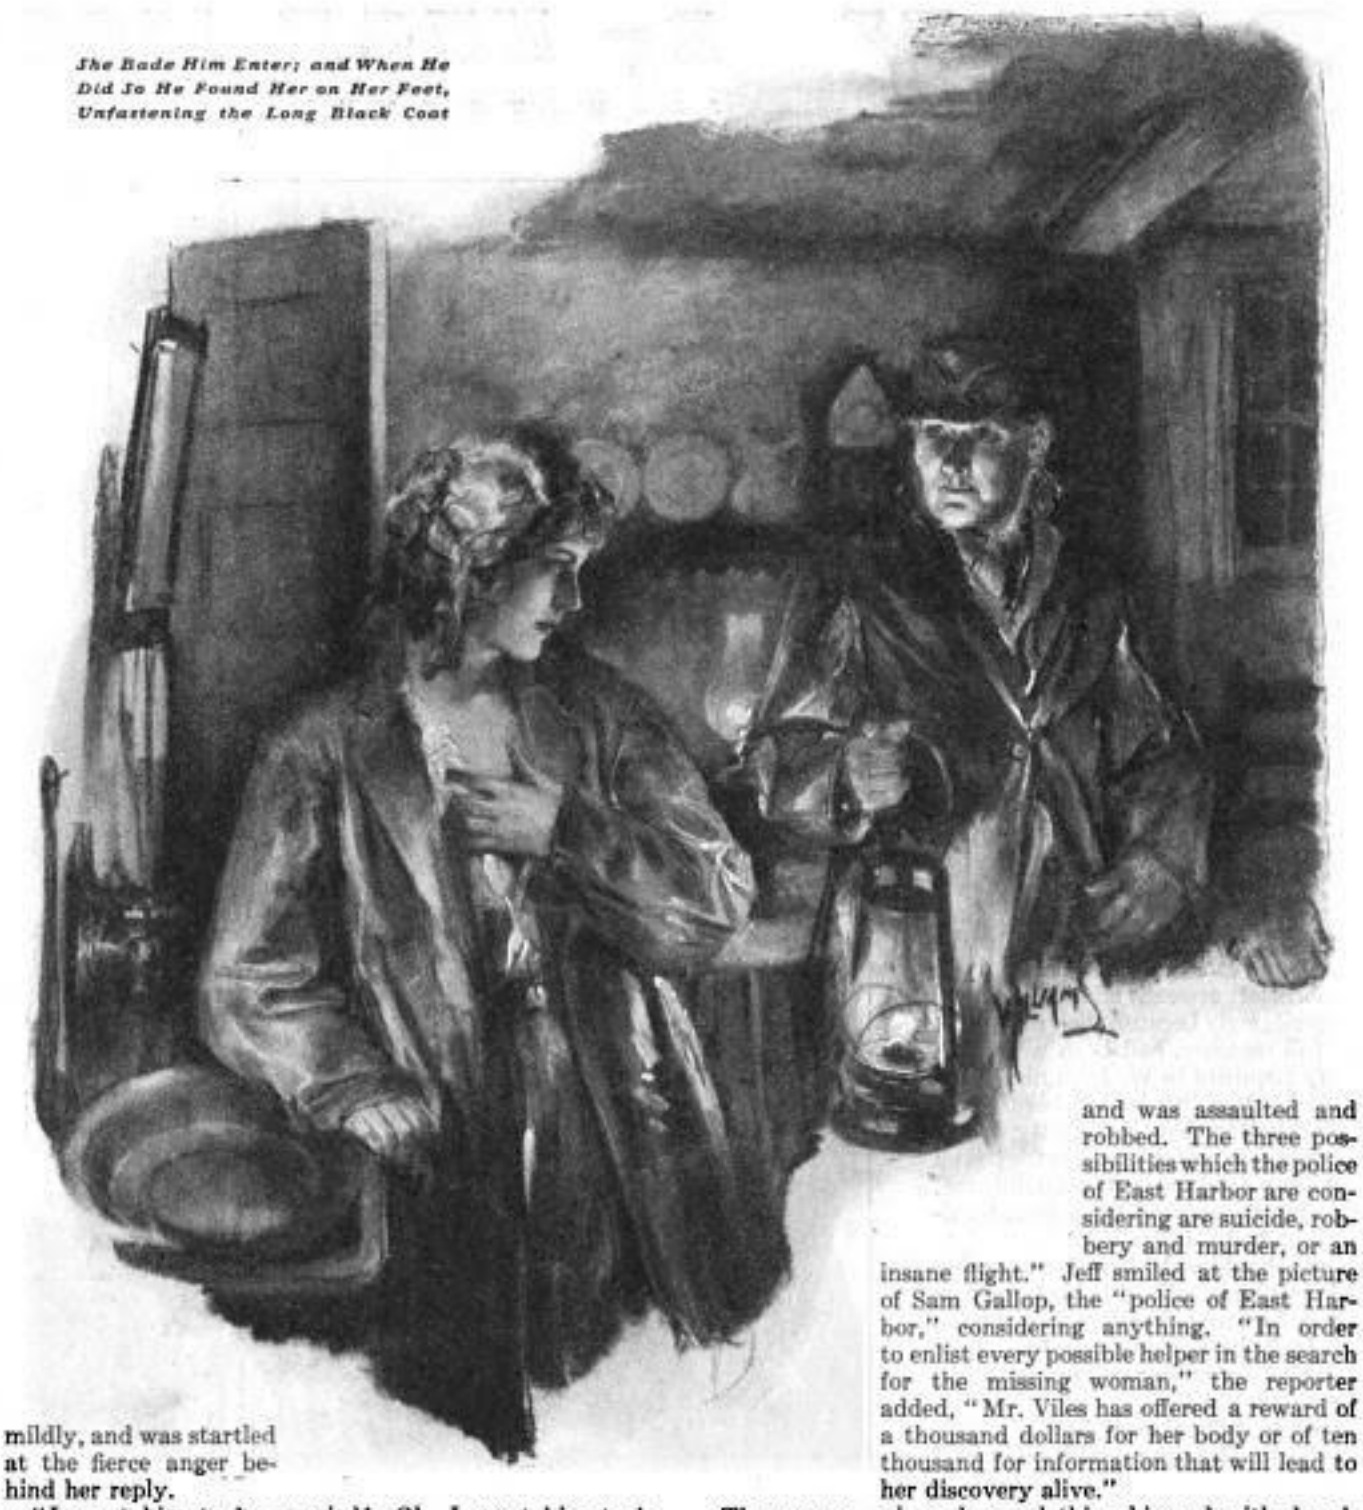
e question of her identity was solved that night, for e first page of his Boston paper a headline caught his It read thus:

MILLIONAIRE VILES'
WIFE IS A SUICIDE

s eyes moved down the closely printed column, intent ach word. Save for journalistic padding the first graph told the story:

ST HARBOR, ME., Oct. 18—Lucia Viles, wife of Leander , the millionaire banker, committed suicide here last night owning. She left the Viles yacht, which is anchored in the or, in a small rowboat, at a moment when a heavy squall of had driven the crew to shelter; and it is presumed that she w herself into the water as soon as she had reached a suffi- distance so that she would not be seen. The tide was ing out; and the rowboat was picked up by an incoming rman early this morning, down below the bell buoy, three s from the yacht's anchorage. The body has not been re- ed. Mr. Viles, millionaire husband of the dead woman, to-day that she had been subject to fits of melancholy for e time.

eff read this while his guest was washing the dishes r supper. She had thrown herself zealously into these usehold tasks, as though her overstrained nerves found ef in them. When she came into the dining room after- rd he laid the paper down in such a manner that she ot see the headline which had caught his eye.



She did see it, caught up the paper, read hurriedly, ded up when she was done, to find him watching her.

"You've read it?" she asked. He nodded. "I didn't ink they'd have it in the papers," she cried, as though alled at what she had done.

"Guess you didn't make your boat fast when you ded," Jeff suggested.

She shook her head. "No. I pushed it off. I hoped ey would think this."

He studied her, surprised and thoughtful. "Won't your sband be kind of worried about you?" he suggested

She Bade Him Enter; and When He Did So He Found Her on Her Feet, Unfastening the Long Black Coat

mildly, and was startled at the fierce anger behind her reply.

"I want him to be worried! Oh, I want him to be tortured!" she cried, and became absorbed once more in that which was printed on the page before her. "'The body has not been recovered,'" she read aloud after a moment; and with a quick change of mood laughed at him, shuddering faintly. "It does give me a creepy feeling," she said.

"I should think it might," Jeff assented mildly. "Yes, I should think it would."

She was wearing a gingham dress belonging to his wife, which he had found at her request. Now, sitting across the table from him, she began to tremble and to laugh in nervous bursts of sound.

Jeff asked, "What's the matter? What you laughing at?"

"I can't stop," she told him helplessly. "It just strikes me as funny. I can't help laughing. If I didn't laugh I should cry. They think I'm dead. Dead!" The word was high pitched, almost like a scream.

Jeff had seen feminine hysteria before; he said sternly, "You got to stop. Now you be still."

The woman controlled herself at once, nodding reassuringly. "Yes, I'll be still. I will be still," she promised. "You won't let them find me here, will you? You won't let them know I'm here?"

"Andy Wattles stopped here this morning, in the truck," Jeff answered. "I told him you'd come. He'd heard me say you was thinking of coming. It was safest to tell him."

"But I wasn't thinking of coming!" she cried, appalled.

"My brother's girl from California was," he reminded her; and she nodded over and over, as a child nods, to show her understanding and her acquiescence. Her trembling had ceased; her fright was passing. She went to bed at last, somewhat reassured.

But the paper next day, in even larger headlines, announced that doubt was cast upon the theory that she was a suicide.

"Mr. Viles," the reporter wrote, "said to-day he thought it possible his wife might have become temporarily insane; that she was subject to hours of extreme nervous depression. It is known that she took a considerable sum of money from a safe in her cabin before she left the yacht. It is possible that she went ashore upon some errand and was assaulted and robbed. The three possibilities which the police of East Harbor are considering are suicide, robbery and murder, or an insane flight." Jeff smiled at the picture of Sam Gallop, the "police of East Harbor," considering anything. "In order to enlist every possible helper in the search for the missing woman," the reporter added, "Mr. Viles has offered a reward of a thousand dollars for her body or of ten thousand for information that will lead to her discovery alive."

The woman, when she read this, shivered with dread. "They will find me," she told Jeff wearily. "Oh, I hoped they would believe me dead."

"I dunno as they'll find you," Jeff argued. "They're not apt to look out this way. They're more likely to think you headed for Boston or somewheres."

"It's hopeless," she insisted. "I think you'd better go tell them where I am, and get the money. The ten thousand dollars. Some good will come out of it, that way. I'd like you to have the money. You've been kind to me."

The man laughed reassuringly. "Shucks, ma'am," he said. "What would I do with a lot of money like that? It's no good except to buy things with, and I've got more things than I can take care of now. Don't you fret yourself. They ain't going to find you, ma'am."

"Everyone knows I'm here. Those women who came to-day ——" She moved her hands drearily. "Someone will tell."

Jeff shook his head. "No, they won't. That was Will Bissell's wife and Mrs. McAusland. They heard from the store that you was here; and they'd heard my wife say you was coming."

"Oh, they must have seen that I was ——" She paused, unwilling to hurt him.

"Different from us folks?" he asked, smiling at her understandingly. "Well, California folks are different from people around here. They'd have thought it was funny if you was like us."

"And my wearing your wife's dress."

"I told 'em your trunk was lost. You had to have something to work around the house in."

She was, in the end, unwillingly persuaded to a more hopeful point of view. But when she had gone up the stairs to her room Jeff sat for a long time, turning the newspaper in his hands, reading over and over that which was written there. She was so beautiful, so much more beautiful than anyone he had ever seen; and the gown she wore when she came to the farm had stamped itself upon his visual memory as a part of her beauty. That a reward of ten thousand dollars should have been offered for her discovery did not surprise Jeff; though it added to the glamour which cloaked her in his eyes.

By HUGH MACNAIR KAHLE

ILLUSTRATED BY HUBERT MATHI

AS USUAL, W. John Simpson met disillusion halfway. He confronted his tardy enlightenment with a correctly cynical amusement, his chagrin almost exactly counterbalanced by the satisfaction of a triumphant inner "I told you so" addressed to that other Mr. Simpson who had once written it William J.

Edith had not justified the expectations of this artless fellow; the shrewd and sardonic W. John had never expected that she would.

He surveyed her now, impersonally, aloof, observing that his prolonged silence did not disturb her, that she was content to hear the nervous clock, the whit-whit-whit of the gas grate, her attention engaged with her seam, her lips puckered, her brows drawn faintly together. She no longer required conversation, his conversation. His smile became perceptibly acid. They were all alike.

In a way, he had known from the very beginning, had been accessory before and during the fact to his own deception. It was a pity too. Outwardly Edith left so little to be desired. He catalogued the items of this superficial appeal, admitting them ungrudgingly because their existence, in full measure, had been a preliminary requisite to W. John Simpson's notice. If Edith hadn't been something better than just pretty, if she hadn't been amiable and, in the trivial exchanges of nascent acquaintance, clever, there would have been no illusions to be destroyed.

He shouldered his just proportion of the blame. He'd helped her persuade him that she was different; she couldn't have convinced him if he hadn't been willing—eager, even—to be convinced.

She met his glance above the needlework. Her lips relaxed and curved slowly. He admitted that she had a jolly smile. "Tired, John?"

He nodded. He realized suddenly that he was very tired, tired of the whole silly quest. That very speech, for instance—he classified it savagely. Maternal, proprietary, without excuse. Just because he had fancied that a fellow could play about with her a bit she assumed a vested interest in him. Her property.

"You shouldn't do it! You're just slaving for that Mr. McIntyre. He doesn't appreciate you either. You ought to take care of yourself."

He held a bitter smile in decent leash. There it was, naked and shameless, if a fellow needed any better proof. She might just as well have added "because you belong to me now." They all got that way. Sooner or later, no matter how frivolously they began, they got that look in their eyes, that possessive quality in their voices, that tenderly superior attitude. And if you hadn't been on your guard, hadn't been wary and watched your step, they could make it stick too.

They couldn't remember that it was just play. That was the whole trouble. No matter how it started they always ended by taking it in dull, deadly earnest. And even when your conscience was absolutely clear they could make you feel like a desperate cad for not taking it in earnest too. A fellow was a fool to jolly himself with that old dream of finding a girl who could keep on playing, who didn't want young slender romance to grow old and fat and stupid. There wasn't any such girl. They were all alike.

"Of course I believe in working with all your might." Edith rethreaded her needle. "But you oughtn't to overdo it. Night work's bad for you—and you've stayed at that old office five evenings in two weeks!"

"Got some new accounts—keep us all hustling at first."

He achieved a passable counterfeit of a smile. She'd counted! She thought she had a right to keep tabs on his evenings! It was about time he got his eyes open.

"It's not as if they paid you extra either."

A finger on the purse strings too! He realized suddenly that she'd been vetoing nearly all expensive fun lately. They'd been going to movies instead of plays, eating afterwards at some soda fountain, dining at dinky Italian joints; she chose the Subway instead of taxicabs. Oh, she'd given him warning, sure enough. Her signals had flown in plain sight. And if she hadn't practically told him to-night he might have let it go on for weeks—might have got himself jammed in a corner.

She Thought She Had a Right to Keep Tabs on His Evenings! It Was About Time He Got His Eyes Open

He came to his feet, moved by an instinct of escape.

"I do feel all in. Guess I didn't realize it. Been holding my nose against the old grindstone pretty steadily, for a fact. Bad company. Better go home and catch up on sleep."

She let him go too willingly. He almost stumbled on the stairs. His feet wanted to run. That was a near thing—nearer than usual. If he'd happened to ask her what she was making! He shivered at the recollection of that impulse, arrested just in time.

It was always like this. You'd think you'd found one at last—found a girl who could play the game and stop at that—be a good comrade, dabble delightfully in sentimental shallows—and the first thing you knew she had you sitting by a fire and watching her hem dish towels.

It was lucky that he'd been working late. He could stay at the office every evening for a couple of weeks, and then taper down gently on any surviving intimacy, avoiding anything like a fuss.

Of course she'd be sore. Probably in private she'd cry about it, and see that he guessed as much when they met—try to make him feel guilty. They all did that. He scrutinized his word and deed in accurate retrospect, confirming his stainless innocence of anything, overt or implied, which could justify dish towels. And yet he couldn't help feeling rather mean about it. That was the worst of these disappointments: you couldn't even count on your own moral support.

Well, it was over anyway. That was settled. And he ought to be convinced, now, that there wasn't any pot of gold at the end of that rainbow. You could dream about a girl who took romance temperately, but there weren't any real ones who did, except those who only pretended to like it. To the rest it was just a habit-forming drug. They wanted it in ever-increasing doses, until even in sickening quantities it failed to stimulate, and merely narcotized.

Edith, for instance. At first made her gleam and sparkle; there was just a steady unea glow. And, at the last of it, t fire and dish towels!

No, when it came to re women were either total abstai hopeless topers. They couldn' it or leave it, couldn't learn to the taste instead of craving the e

He sighed deeply as he turn his collar against a nipping win the river. It was a frightful Taken sparingly sentiment glorious intoxicant, but you co drink alone, and for compan must choose between girls wh feigned a taste for it and girls it inevitably stupefied. There any sense in hoping that you'd day find the ideal playmate. only let yourself in for—for dish-towel look if you tried to for her.

The dream brightened as it its reluctant flight. Only su that such a girl existed—a girl took it truly and yet lightly, could enjoy the shallows with sire for the depths; a girl, fo stance, who could regard a kiss detached and pleasurable ineid with none of the train of implica which silly custom had append it. Only suppose—but it was b to stop supposing, once for all. you gave such dreams a lodgi your fancy they'd surely lead t tempts at their translation to re Still, suppose ——

He shook his head impatie Better get all that nonsense ou his head for keeps. Plenty of o things to think about. Miller, fo stance, of the Miller Electric. I could just get under Miller's s ever so little. He could be sold, anybody else, if you could find what went on behind that fr face. And a new contract like t would settle things at the office, too, put a fellow on a d nite footing as an out-and-out salesman, with a draw account against commissions instead of a static salary.

That was the idea. If you must dream, dream ab something attainable instead of wasting your imagina on impossibilities. One reason he hadn't got ahead fa at this advertising job was probably right there. If h cut out this wild notion of finding the ideal girl he mi have had an interest in the McIntyre agency by now.

In this light he regarded the closed episode of Ed with a new malevolence. She'd distracted his attenti from his work, just when he had his first crack at selling t Served him right though. Maybe he'd believe now th they were all alike.

It was a pity though. You were only young a little wh and if there were a girl who —— He set his foot brutal on the persistent vision. Of course there wasn't any su girl.

II

SUPERFICIALLY—he compelled himself to insert th adverb against an incautious impulse—superficial this girl undoubtedly measured up. Not just looks either there were thousands of them who struck agreeably on th optic nerve; this was deeper than that, though still a affair of the surface, to be sure. Class. You could alway tell that when you saw it if you'd trained your eye t recognize the counterfeits. A blend of health and wit an charm with something that was neither hereditary no yet acquired—a clear and confident eye, neither bold, inquisitive nor coldly disinterested; a direct, unstudie speech, with the effect of words used like arrows, instantly chosen, accurately aimed; that cunning harmony of dress too, presenting itself as a unit instead of an assembly—al these things had a share in it, and were yet merely symp toms of it, external indicia, not the thing itself.

There was fun behind that mouth, too, or W. John Simpson was no judge at all. That was the most important single factor, when you came right down to it, that gift of humor which could grin back at life's flat old jokes. Perhaps, after all, this girl ——

e campaign? I'd put a reasonable price on them, and
e really good—just about what he ought to have."

listen to reason. And we'd about decided, anyway, to illustrate with photographs if we ever managed to line him up. Can I see what you've got?"

He went over the prints rapidly. They were extraordinarily good, not merely in execution but in conception too. They told a story in its simplest form, realized the full value of the pictorial appeal.

"We could use most of these, I think. They're good—very good."

She shrugged. "I know that. There's a condition. If you ever come to use them my name doesn't appear. They're your work—as far as Mr. Miller is concerned."

"All right—that's all the better for us of course."

Again his mind wavered from the essential point. They must have quarreled in earnest if she felt like this.

"Now about selling him. I wonder if you've noticed anything queer about him."

"He's the coldest proposition I ever tackled. Sits perfectly still, never talks, himself, except to say when your time's up. Won't even ask a question."

"Yes. Does that suggest anything to you?"

He shrugged. "Plenty. But nothing very useful, so far."

"I'll give you a lead, then. You'll have to sell him through his eyes. There, now. Does that help?"

He laughed. "It would help—you, sure enough. But it doesn't do me much good. He won't even look me in the eye—sits there staring at the end of my nose till he gets me wondering if there's a smudge on it."

"You've even noticed that! And still you don't see!" She spread her hands. "Who ever started the fiction that business was a man's job, I wonder? I guessed it the first time I saw him."

"I'm still in the dark."

She was splendid when she glowed like this. Really handsome—not just another good-looking girl. Perhaps —— He gritted his teeth. Again? Wouldn't he ever learn?

"He's watching your lips, that's all. He's not very deaf, but he's sensitive about it. Men of his sort often are—they pride themselves on youth, and hate to admit anything that doesn't bear them out. He misses about half what you say, and has to strain for the rest. Stay away from his office and write him. When you do see him always send him a letter repeating what you've said. He does nearly all his buying that way."

His mouth opened. As simple as that! And as visible to his eye as to hers! That was the kind of observation and inference that counted! He'd been right about her—she had a mind with a tempered edge.

"I'll try it, anyway. I'm better at letters too. Six years' work in the copy department, you see. Just beginning to try the selling end of it. I'll land Miller if a typewriter can do it. And if I do I'll—well, I suppose thanks won't do you much good, but you'll get all I've got."

"I'll sell a lot of photographs that cost me real money," she said. "Take them with you if you like. Let your art manager see them before you go ahead. I'll talk prices with him direct if he's interested."

He lingered, in spite of dismissal in her voice and look. Carey would be dealing with her after this—fat, falsetto Carey, with his pink, puffy fingers and his bulging eyes. He groped for a pretext that would bring him back. A girl like that—and it was suddenly significant that a tenuous chain of improbable coincidences had led him to her—a girl who might, after all ——

"Good-by, Mr.—er—Mr. Simpson."

She'd even had to glance at his card. He resolved that she'd know his name before she finished with him.

"Good afternoon, and a first installment on the thanks account."

He went out, pleased that he'd varied the commonplace even a little. Really a remarkable girl, however you considered her. He discovered that he was contrasting her with Edith. A girl who wouldn't be very likely to degenerate to dish towels.

He was bitter about Edith now. He'd missed her—not the real woman of course, but the imaginary Edith who had almost convinced him that he'd found the ideal playmate at last. They had separated into quite distinct personalities in his thought; Edith as she was had destroyed Edith as he had fancied her. He couldn't quite forgive her for that, even though he was broad-minded enough to admit that she couldn't help being what she was.

Looking back he found the lost romance touched with a soft melancholy glamour. It had been perfect while it lasted; Edith had played the game so beautifully at first. He remembered an evening by that little lake in the Jersey hills, with a moonway on the water and a mandolin tinkling like thin silver on the farther shore. And he had kissed Edith, quite casually, and she hadn't minded, hadn't even seemed to give it significance. It had all been delightfully pianissimo till she spoiled it—as sweet and light and meaningless as the thin, distant mandolin. And it was gone. He couldn't help missing it, displeased as he was with Edith herself.

As he reached the office he was already considering Dora Willet as a possible candidate for the vacant idealship. Of course it wasn't likely that she was different, but you couldn't tell. Plenty of people believed in fate, and they might be right, at that. When you figured the odds against his ever meeting Dora Willet it certainly looked as though somebody had taken a lot of trouble to bring them together.

He scowled at Carey as he passed his desk; Carey, vulgarly cheerful under his layers, absorbing a cigarette in a long, feminine holder. Carey couldn't possibly appreciate a girl like that. He called them skirts, as if they weren't anything but clothes with clockwork inside. The fat mutt! He exhibited the prints defiantly, his hostility appeased only at Carey's ready approval.

"Who's this D. Willet? Never saw her work."

"Guess she's just beginning. Got a sort of shop over in the Sidney Building."

Carey cocked his head. "What's she like? Any good?"

The hostility revived. "Clever photographer, I guess."

"Meaning you saw her first, eh? Well, son, the race doesn't always favor the front runner."

"Quoting the war cry of the well-known turtle family," said W. John tartly.

He avoided a counter by shutting the door of the cell in which he still wrote his copy and dictated his letters, his good humor restored by the lingering savor of the retort. He'd tell Edith that. The impulse startled him. Habit took hold of a fellow in funny ways. He hadn't even realized this one. He saw

American Troops, at the End of a Day's Training, Returning to Camp in Back of the Lines. Above—The First American Troops to Arrive in France. They are Wearing the French Helmet

JUST as it is impossible for an individual to view his family's relations with outsiders impartially, so is it beyond the capacity of nationals of one country to see anything except their own side in dealings with other nations. The tendency to attribute base motives and double dealing to a rival is universal; on the other hand, everything that one's own country does is great and noble and of pure purpose. And of course an enemy is always a scoundrel.

The extremes to which this sort of thinking will drive people are often laughable. I remember two nice old ladies from New England stopping a returned war correspondent on Fifth Avenue to question him about certain stories they had heard of war prisoners in German hands.

Was it true that the Germans prodded prisoners with bayonets, and kicked them, too, to make them walk faster?

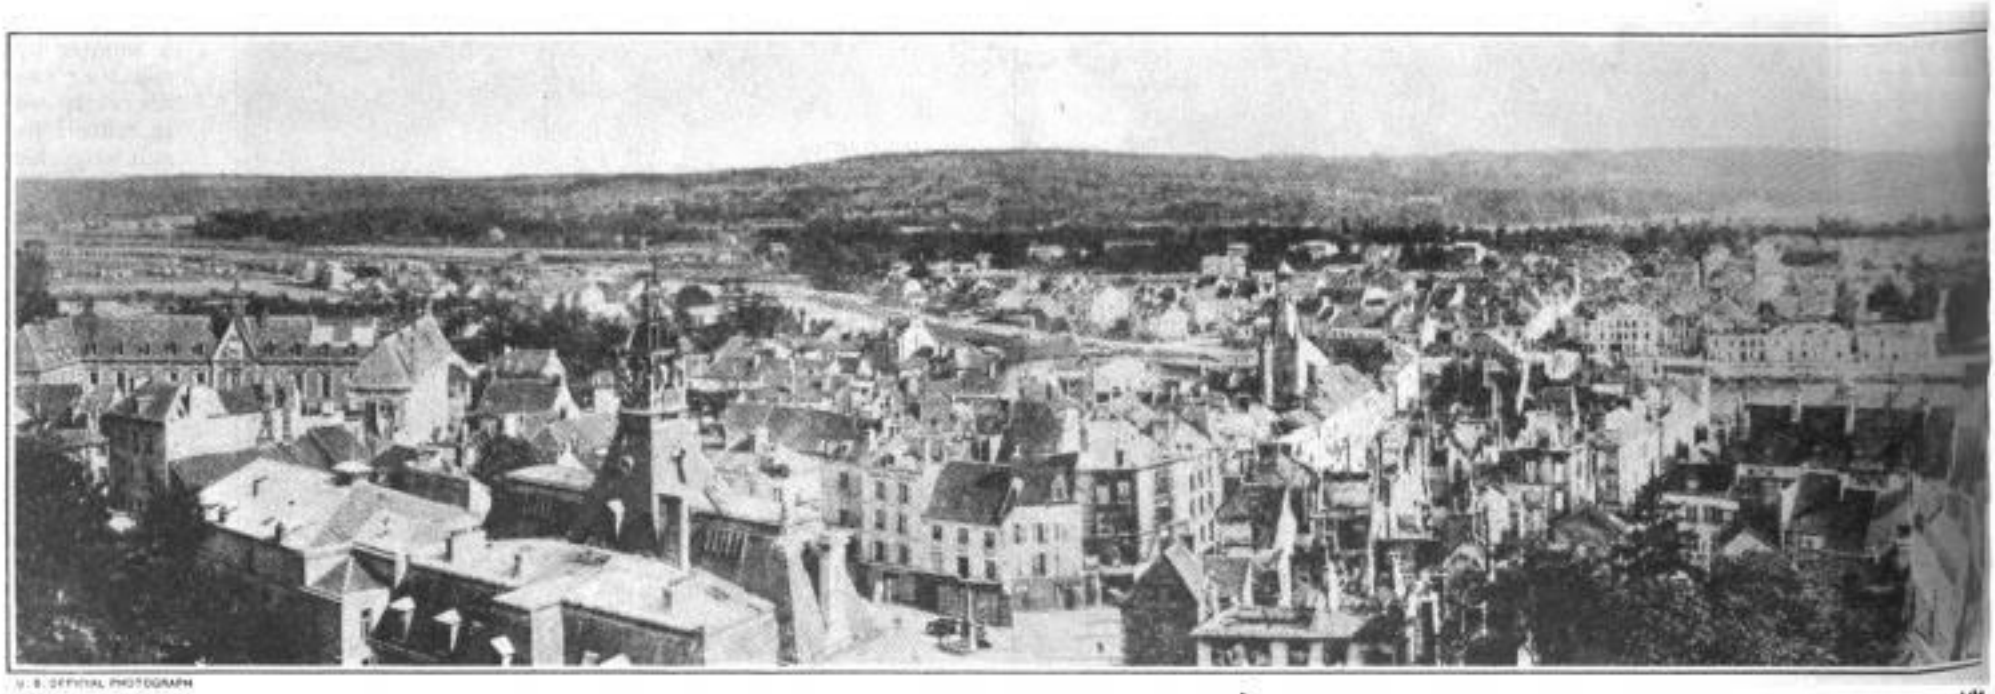
"Well, war's a tough game," answered the correspondent, who was a bit fed up with the whole business.

"It's dog eat dog, and every army has men in it who go in for rough stuff. You have to, in a fight."

"Oh!" gasped the ladies, all aflutter. "But not our boys! They're too noble."

Conditions Early in 1918

WITH this very human tendency in mind I have tried in this narrative—and will continue to do so—to stick as exclusively as possible to official reports and memoranda which are in the secret files of the French, British and American authorities. Now and then short explanations are necessary to a clear understanding of what the official report really means, for it seems generally to be the object of officialdom to make communications conceal happenings and disguise intent to all except the inner circle, and even in that direction to word agreements so as to leave loopholes for further decisions.



And I plan to tell all sides of the story. Therefore it may as well be admitted right now that the American effort in the war up to the early months of 1918 was very dismal. We had made the welkin ring with shouts of what we would do, and our Allies had evidently taken us at our word. By this I mean the civilian populations, and the rank and their ar their h command governm must hav ized the in bility of p such huge in France newspape orators described, those forc then none and we h means of porting had they ready.

That w saddest of the war erywhere enemy wa umphant. sia had lapsed; Italy lay bruised from one of the erushing defeats in military annals; an spite a 20 per cent numerical superiori the Western Front the Allies had been u to score anything but local successes ag the German defense. Their efforts to g decision had failed signally, with terrifi of man power and a sickening slump in mo If the Germans could hold and beat bac Allies with considerably fewer forces might they not do in the approaching when they would have numerical superi on account of the arrival of their freed sions from the Eastern fronts?

Dismal Months

"THE German general staff could now f see . . . ," writes General Pershin his published report, "the campaign of 1 against the French and British on the west front which might terminate the war. It not be said that German hopes of final vict were extravagant. . . . Discouragem existed not only among the [Allied] c population but throughout the armies well. . . . Allied resources in man po at home were low, and there was little prosp of materially increasing their armed strengt

The events of the last half of 1917 called new decisions. On July twenty-sixth a co ference of the French and Italian command in chief and the British and French chiefs staff had agreed: "General conclusio reached were necessity for adoption of purely defensi attitude on all secondary fronts and withdrawing surpl troops for duty on western front. By thus strengtheni western front, believed Allies could hold until Americ

one of the sweetest sights
ever gladdened the eye.

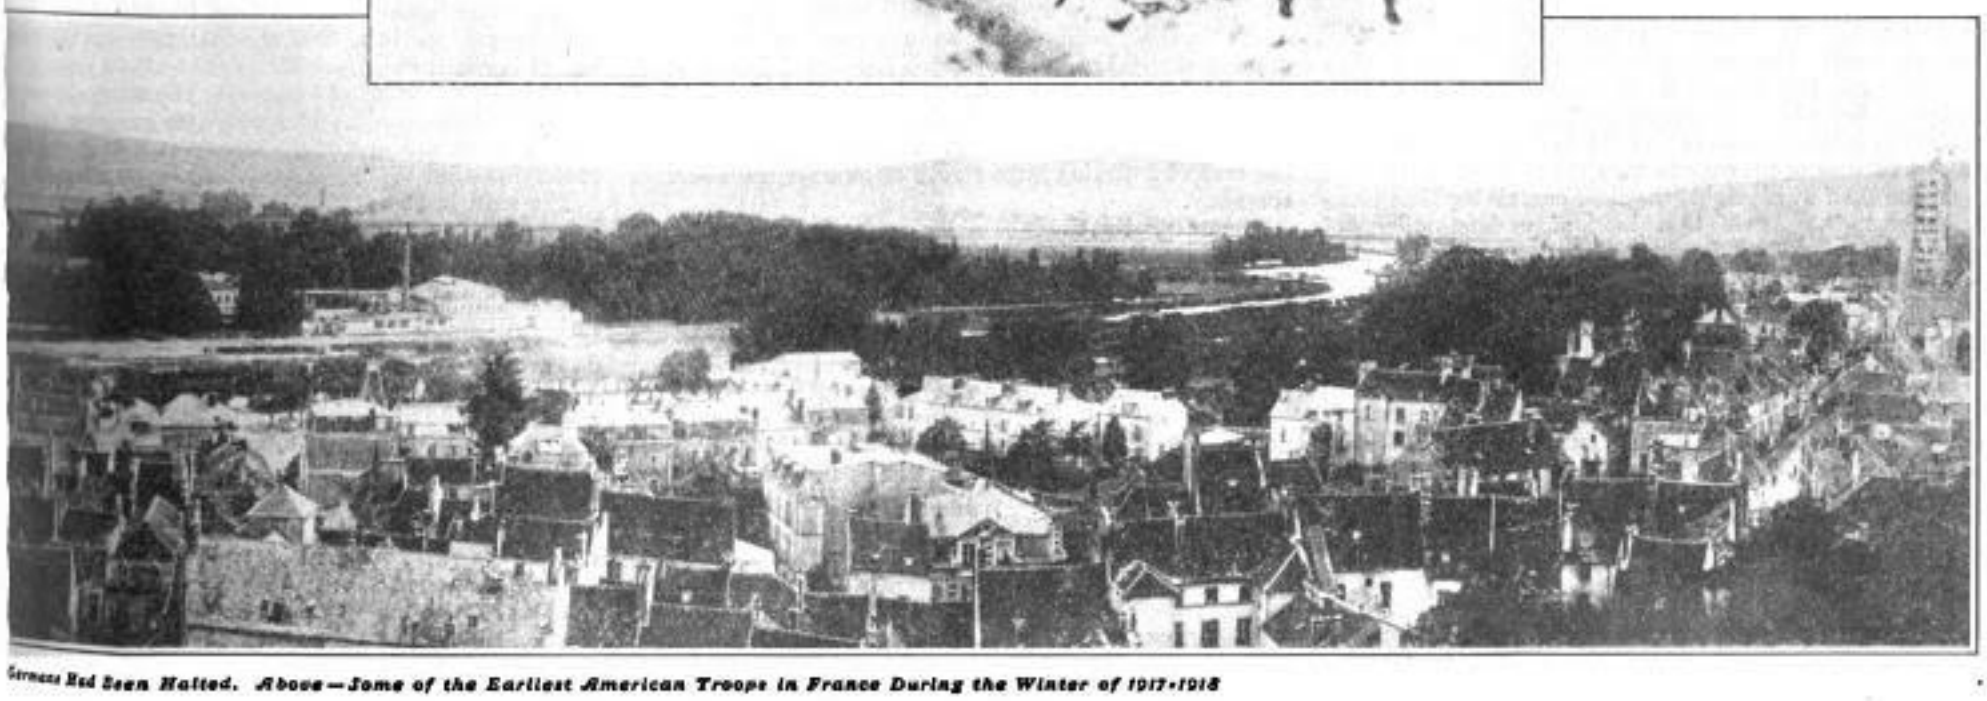
The winter wore along under most depressing conditions. On every hand we heard discouragement talked among the civilian population. Had our troops felt that adequate progress was being made, the rain and snow and mud and the lack of proper clothing and shoes and equipment would not have mattered; but it was so pitifully evident that American effort was falling below expectations. And our supplies! I remember at one time we had no blankets, no shoes, no socks, no caps, except what we could buy from the British surplus and the French.

Our lack of supplies at this time was a scandal. And instead of receiving the quantities needed, instead of getting the heavy shipments of hard-boiled fighting men the 1918 prospect demanded, the A. E. F. grew by comparative driblets while witnessing a continuous procession of junketing parties of politicians and their friends, and helplessly watching much needed shipping diverted to business uses and to humanitarian efforts. For we had in the United States an unduly large element of ballyhoo enthusiasts who seemed to think that the war could be won with chocolate and hostess houses, and whose excessive zeal for humanitarian work in preference to fighting slowed the wheels of the military machine appreciably. It was a bitter pill for the American soldiers to see these joy-riders whirling through the training areas when they needed clothes to their backs and reënforcements by division units.

The American commander in chief kept moving heaven and earth to hurry shipments of men and material, but the results were woefully disappointing. The United States had not yet got into its stride, and naturally the difficulties in the way of operating so far from its base proved enormous.

"For all practical purpose," reported Pershing, "the American Expeditionary Forces were based on the American Continent. Three thousand miles of ocean to cross with the growing submarine menace confronting us, the quantity of ship tonnage then unknown, and a line of communications by land 400 miles long from French ports to our probable front, presented difficulties that seemed insurmountable as compared with those of our Allies."

Great Handicaps Overcome



YET despite these handicaps—despite red tape and French efforts to direct American construction more in the direction of permanent improvements than temporary works to meet the need of haste—when the armistice was signed a year later, "all projects for construction had been completed and supplies were on hand to meet the needs of 2,000,000 men, while further plans for necessary construction and for the supply of an additional 2,000,000 were well under way." It is worth mentioning, also, that we had more than 2,000,000 men in France before the armistice was signed.

The A. E. F. had taken over certain southern ports in France and the use of some lines not already devoted exclusively to the French and British military machines. As for the American front of the future, "to the east the great fortified district east of Verdun and around Metz menaced central France, protected the most exposed portion of the German line of communications—that between Metz and Sedan—and covered the Briey iron region, from which the enemy obtained the greater part of the iron required for munitions and material. The coal fields east of Metz were also covered by these same defenses. A deep advance east of Metz, or the capture of the Briey region, by threatening the invasion of rich German territory in the Moselle Valley and the Saar Basin, thus curtailing her supply of coal or iron, would have a

FISH EYES

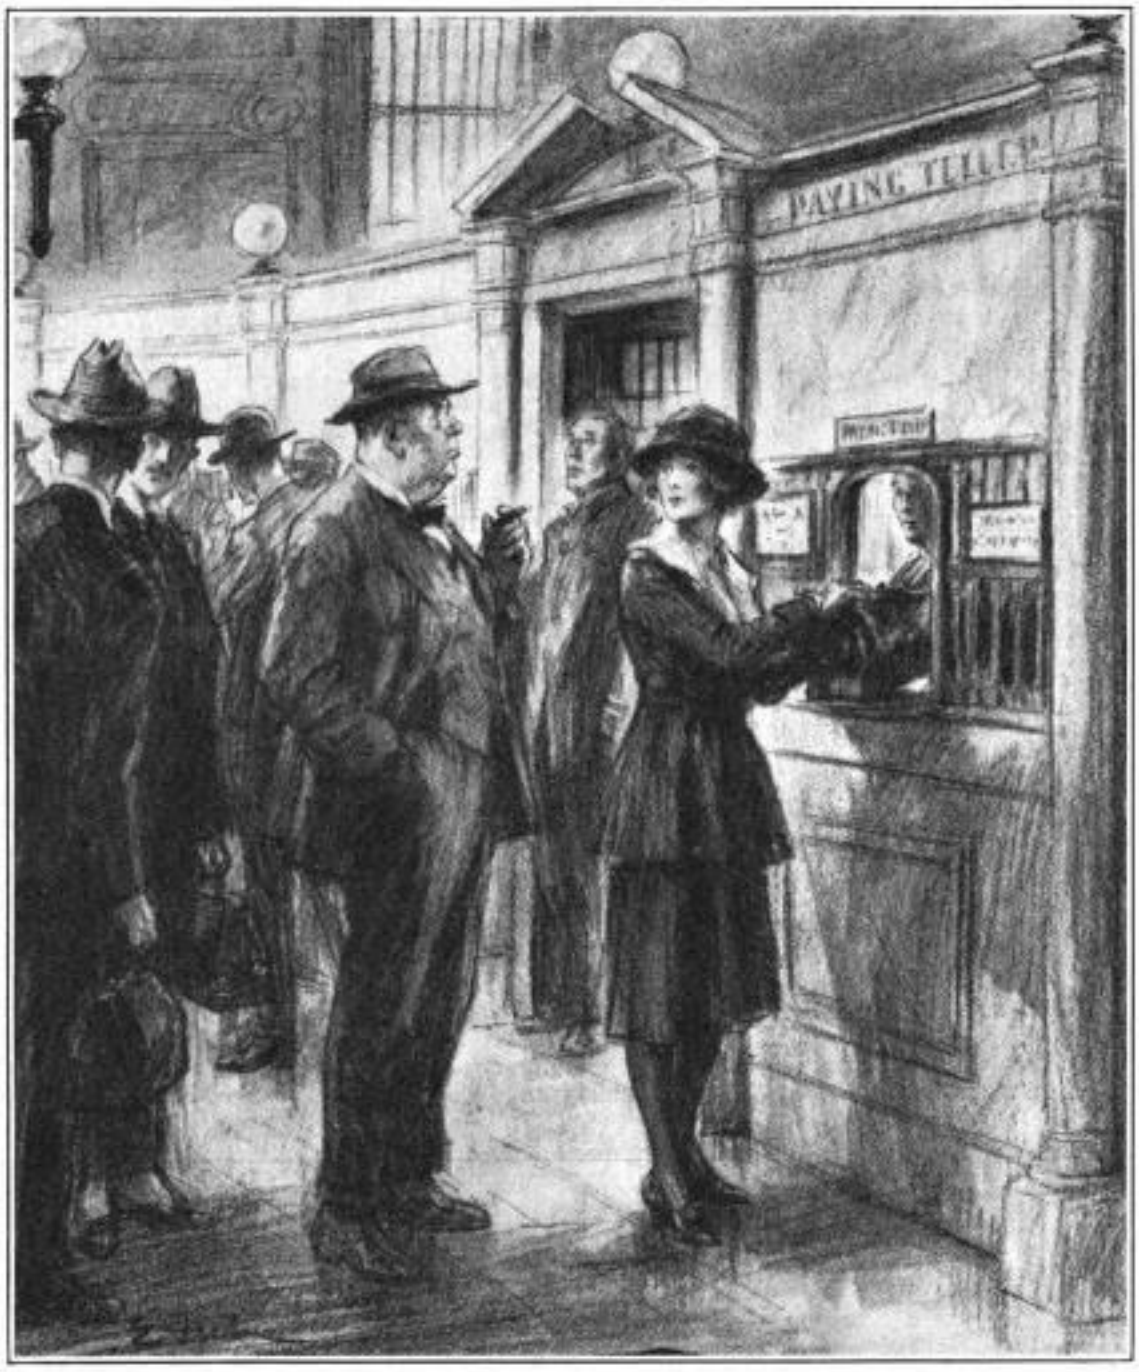
By OCTAVUS ROY COHE

ILLUSTRATED BY ERNEST FU

CLIFFORD WALLACE was noticeably ill at ease. He worked intensively yet mechanically at his post in the Third National Bank, within the narrow confines of a cage bearing the inscription Paying Teller No. 1. Horizontal lines of worry creased his forehead and a single lock of white stood out with startling clarity against the deep brown of his hair.

Beside him were piled great stacks of money divided into neat packages. Behind his back the huge doors of the cash vault gaped, disclosing more money. At the right of his cage were the inclosures of the three other—the junior—paying tellers. The marbled lobby of the big bank was a welter of discordant activity, of impatience—the clink of silver, the soft shuffling of new bank notes, the slamming of ledgers, the hum of banking during the rush hours.

To-day was the busiest of the month for Paying Teller Number One. To-day came due the pay rolls of the three largest corporations in the industrial district of which this city was the metropolis. More than a million and a quarter dollars in cash occupied the cage with Cliff Wallace; a million and a quarter dollars in silver and bills, only a few of the latter in denominations of more than one hundred dollars. It was Wallace's task to make up these pay rolls and deliver them to the armed men who came with the checks. He was sorting the money now, indifferent to the exasperated stare of the little man outside the window who impatiently rattled his own modest pay-roll check for $208.



Behind the irate little man a line formed slowly—two or three other representatives of small businesses, then a strikingly pretty young woman in a blue coat suit, and behind her, two stalwarts from the Garrison Coal, Iron and Steel Company. Cliff knew the proportions of the check they carried—$278,000. Real work there, work requiring intense concentration. It was so easy to make an error of a few hundred dollars when one dealt casually in single amounts greater than a quarter million. Cliff received the little man's check and counted the money deftly, cramming it into a canvas sack. He was visibly annoyed when the man insisted on opening the sack and counting the money for himself. Cliff's eyes sought those of the pretty girl and a brief glance of understanding passed between them. Both were taut of muscle and tense of nerves; upon the face of each was an unnatural pallor.

The little man completed his count, closed his canvas sack and moved off pompously. The next man in line presented his check and received his money. So, too, did the next. The girl pushed her check through the window—the pay-roll check of the wholesale hardware company for which she worked; $728.56. With it she presented a leather satchel. Cliff Wallace unlocked the barred window of his cage to take the satchel. He placed it on the shelf at his right, the shelf containing the mountains of bills. Again that look of understanding—of apprehension—passed between them. They spoke with simulated casualness.

"Good morning, Phyllis."

"Good morning, Cliff."

That was all. Yet, save for those first glances, they avoided each other's eyes. The oldish-young paying teller sorted out the amount of her pay roll. And then, working discreetly, swiftly and dexterously, he piled beside it a small stack of new bills. In that stack of bills was a hundred thousand dollars; one thousand one-hundred-dollar bank notes. Once he permitted his eyes to rove restlessly about the lobby. They paused briefly on the gray-coated figure of the bank's special officer, who lounged indifferently near the Notes and Discounts Window. Apparently the bank detective had neither thought nor care in the world. Reassured, yet with no diminution of his nervousness, Cliff Wallace returned to the task in hand.

The Color Receded From Her Cheeks, and Her Hand Trembled Visibly as She Shoved Her Satchel Through the Little Window

Into the girl's brown leather satchel he put the amount of her pay-roll check, and then he crammed into it also the one hundred thousand dollars.

His face was ghastly pale as he faced her once more. The hand that held the satchel trembled violently. He conscripted a smile which he intended to be reassuring, and the smile with which she answered him was so obviously an effort that it seemed to shriek her guilt. For a second they remained rigid, staring into each other's eyes, then the envoys of the Garrison Coal, Iron and Steel Company coughed impatiently and the girl moved away. The paying teller fingered the $278,000 check nervously, his eyes remaining focused on the blue coat suit which was moving with horrid slowness toward the whirling doors that opened onto the street. And finally she disappeared and Cliff Wallace breathed a sigh of infinite relief. Thus far nothing had been noticed. He gave his attention to the task of assorting huge stacks of bills for the Garrison company.

Meanwhile the girl in the blue coat suit turned into the swirl of traffic on the city's main thoroughfare. She threaded her way through the crowd, walking with unnecessary swiftness, with the single thought in her mind of putting as much space as possible between herself and the Third National Bank. Her fingers were wrapped tightly about the handle of the brown leather satchel, her face bore a fixed rigidity of expression, her heart was pounding beneath the plain tailored waist she wore. It seemed incomprehensible that the transaction in Cliff Wallace's cage had gone unnoticed. It had been so simple—so absurdly simple.

And now she was making all haste toward the office where she worked. Cliff had warned her that she must return promptly from the bank in order that the inevitable investigation should disclose no suspicious lapse of time.

She turned up a side street and thence into a gaunt, red-brick building labeled Sanford Jones & Co. Biting her lips with a fierce effort at control, she entered the bu and turned immediately int women's washroom. Trem fingers found the door ke turned it. Then making c that she was alone in the roo took from the shelf a large pi brown wrapping paper whic had placed there earlier i morning—that and a bit of t

She dropped to her knees, o the satchel and took from it th hundred thousand dollars. Sl a vague amazement that so money should be of such small She arranged the bills neat three stacks of equal height wrapped them carefully in brown paper. Then with the age securely tied with twin closed the satchel, unlocked washroom door and swung the office. No one had notice brief excursion into the washr that much was evident.

Straight toward the cash desk she went, and in his h placed the satchel. His eyes sa briefly into hers.

"Got back pretty quick morning, Miss Robinson."

She forced a smile. "Yes. much crowd at the bank. I did back in a hurry."

The bit of dialogue pleased The cashier had noticed specific that her absence from the store been of briefer duration than us He would remember that when detectives made inquiry.

She seated herself at her ty writer. Beside her, on the batte oak desk, she placed the innocuo appearing brown paper packa the package containing one hu dred thousand dollars. She horribly nervous, but apparen no one noticed anything unusual her manner. The wall clock in cated the hour of 10:30. Fr then until noon she must work.

It was difficult. Her thoughts were focused upon t money before her. Once a clerk stopped by her desk chat and his hand rested idly upon the package of mone She felt as though she must scream. But he moved aw eventually. She breathed more easily.

At five minutes after noon she left the office for her lunc With her went the package of money. She made her wa to the City Trust and Savings Company, an imposi edifice of white marble nearly opposite the Third Nationa She entered the building and descended the broad stai way to the safety-deposit vaults, noticing with relief tha there was an unusually large crowd there. She extende her key to the ancient man in charge.

"Two-thirty-five, please. Mrs. Harriet Dare."

Mrs. Dare, now dead, had been Phyllis' sister. Phyll had access to the box. Too, she maintained in this bank box in her own name, so that should official investigatio progress to the point of examining the safety-deposit bo of Phyllis Robinson, nothing to excite suspicion would b found. That was one of the strongest links in the safet chain that Cliff Wallace had welded.

The man in charge ran through his index and handed her a card to sign. Her hand trembled as she wrote he name: Phyllis Robinson. The old man took her key and his, unlocked the box and left her. There were a number of persons in the vault: One pompous gentleman ostentatiously clipping coupons from Liberty Bonds of fifty-dollar denomination; an old lady who had already locked her box and was struggling vainly to assure herself that it was thoroughly locked; a fair-haired clerk from a broker's office assuming the businesslike airs of his employer; a half dozen others, each reassuringly absorbed in his own busi-ness. Phyllis took her box—it was a large one—and carried it into one of the private booths which stood just outside the vault door.

She placed the tin box and her package side by side on the mahogany shelf. A quick survey of the place assured her that she was not observed. She wondered vaguely why she was not. It seemed as though someone must know. But apparently no one did. Swiftly she transferred the

He led up a chair d seated him- lf, after having rst closed the r of the presi- nt's office.

"Mr. Warren"—his voice was steady and incisive, giving no hint of the emotional strain under which he labored—"I have just checked over the cash. I am precisely one hundred thousand dollars short."

The president's swivel chair creaked. The gentleman strangled on a puff of cigar smoke. His big, spatulate hands came down on the polished mahogany desk surface with a thump. His eyes widened.

"You—you are what?"

"My cash is one hundred thousand dollars short."

The statement appeared to have difficulty in penetrating.

"My dear Mr. Wallace—that is impossible! An exact amount?"

Cliff was more at ease. It was a scene he had rehearsed a hundred times, and it was developing just as anticipated.

"I realize the impossibility, sir. But it is nevertheless a fact."

Robert Warren's face hardened slightly. He regarded his chief paying teller with a critical, speculative glance. Wallace returned look for look. The president spoke:

"Please explain yourself, Mr. Wallace. Am I listening to a statement or a confession?"

"A statement, sir."

"H'm!" Warren was himself again. Only superficially was the man genial. He had cultivated geniality as a business asset. Basically he was utterly emotionless. He realized that the thing to which he gave ear was of vital import, and as that realization hammered home, his demeanor became intransigently frigid. "H'm! A statement?"

"Yes, sir."

"Your cash is—er—an even one hundred thousand dollars short?"

"Yes, sir."

"How does that happen?"

"I'm trying to find out myself."

"You are quite sure?"

"Certainly, sir. I would not have come to you had I not been sure."

Silence. Again that clash of eyes. "This puts you in an exceedingly awkward position, Mr. Wallace. Personally."

"I understand that, sir."

"One hundred thousand dollars is a great deal of money."

"Yes, sir."

"The responsibility is absolutely and exclusively yours."

"I realize that."

"Its loss cannot but be due to carelessness on your part."

"That is probably true."

"Probably?"

"Yes, sir. I am not certain about any phase of this—this—unfortunate situation."

Warren lighted another cigar. "Of course the bank will not lose. You are bonded. I must notify the bonding company immediately."

"Of course."

The younger man's poise seemed to get on the nerves of the bank president. For once in his life he had come into contact with a man more unemotional than himself. His fist pounded the desk suddenly.

"Damn it! Wallace, what does it all mean?"

"That that amount of money has disappeared, sir."

"One hundred thousand even?"

"To the dollar."

"When did you notice the loss?"

"Just a few minutes ago, sir—when I checked over the cash."

"You rechecked?"

"Twice."

"Have you been alone in your cage all day?"

"I believe so, sir."

"You only believe?"

"I can't make a too positive statement. The cages of the other paying tellers open into mine. Almost every day the door between my cage and theirs is open for a little while. It is possible that that was the case at certain times to-day."

"You are not positive?"

"No, sir."

"But you believe that the door was open—in the regular course of the day's work?"

"Yes, sir."

"And you believe that one of your assistants took that money?"

Wallace's face twitched, ever so slightly. "No, sir."

"No?"

"Even if my door had been open, Mr. Warren, I don't believe they would have had a chance to take that much money."

"But—but, Wallace—there are only four men in this bank who could have taken it—provided it was taken; yourself and your three assistant paying tellers."

"I realize that."

"And you say that you don't believe they could?"

"Yes, sir."

"H'm! Do you realize the inevitable conclusion?"

"That if they didn't, I did?"

"Exactly."

"Yes, sir, I realize that."

"Yet you say that you did not."

"Of course."

Robert Warren showed a flash of irritation. "You seem damned unexcited."

"I don't believe this is any time for me to become excited, sir."

Robert Warren rose. "Come with me, young man. We'll lock the doors of the bank and check every cent of cash we have. There must be some mistake."

"I sincerely hope so, sir."

A careful check-up showed plainly that there was no mistake. One hundred thousand dollars had disappeared from the bank during the course of the day's business. It was gone. The three assistant paying tellers were nervous and excited. The cashier, a nervous, wiry little man, rushed around the bank like a chicken suddenly bereft of its head. The bank's private detective, a portly, unimaginative individual, strutted around the empty lobby trying to look

BOOTLEGERDEMAIN

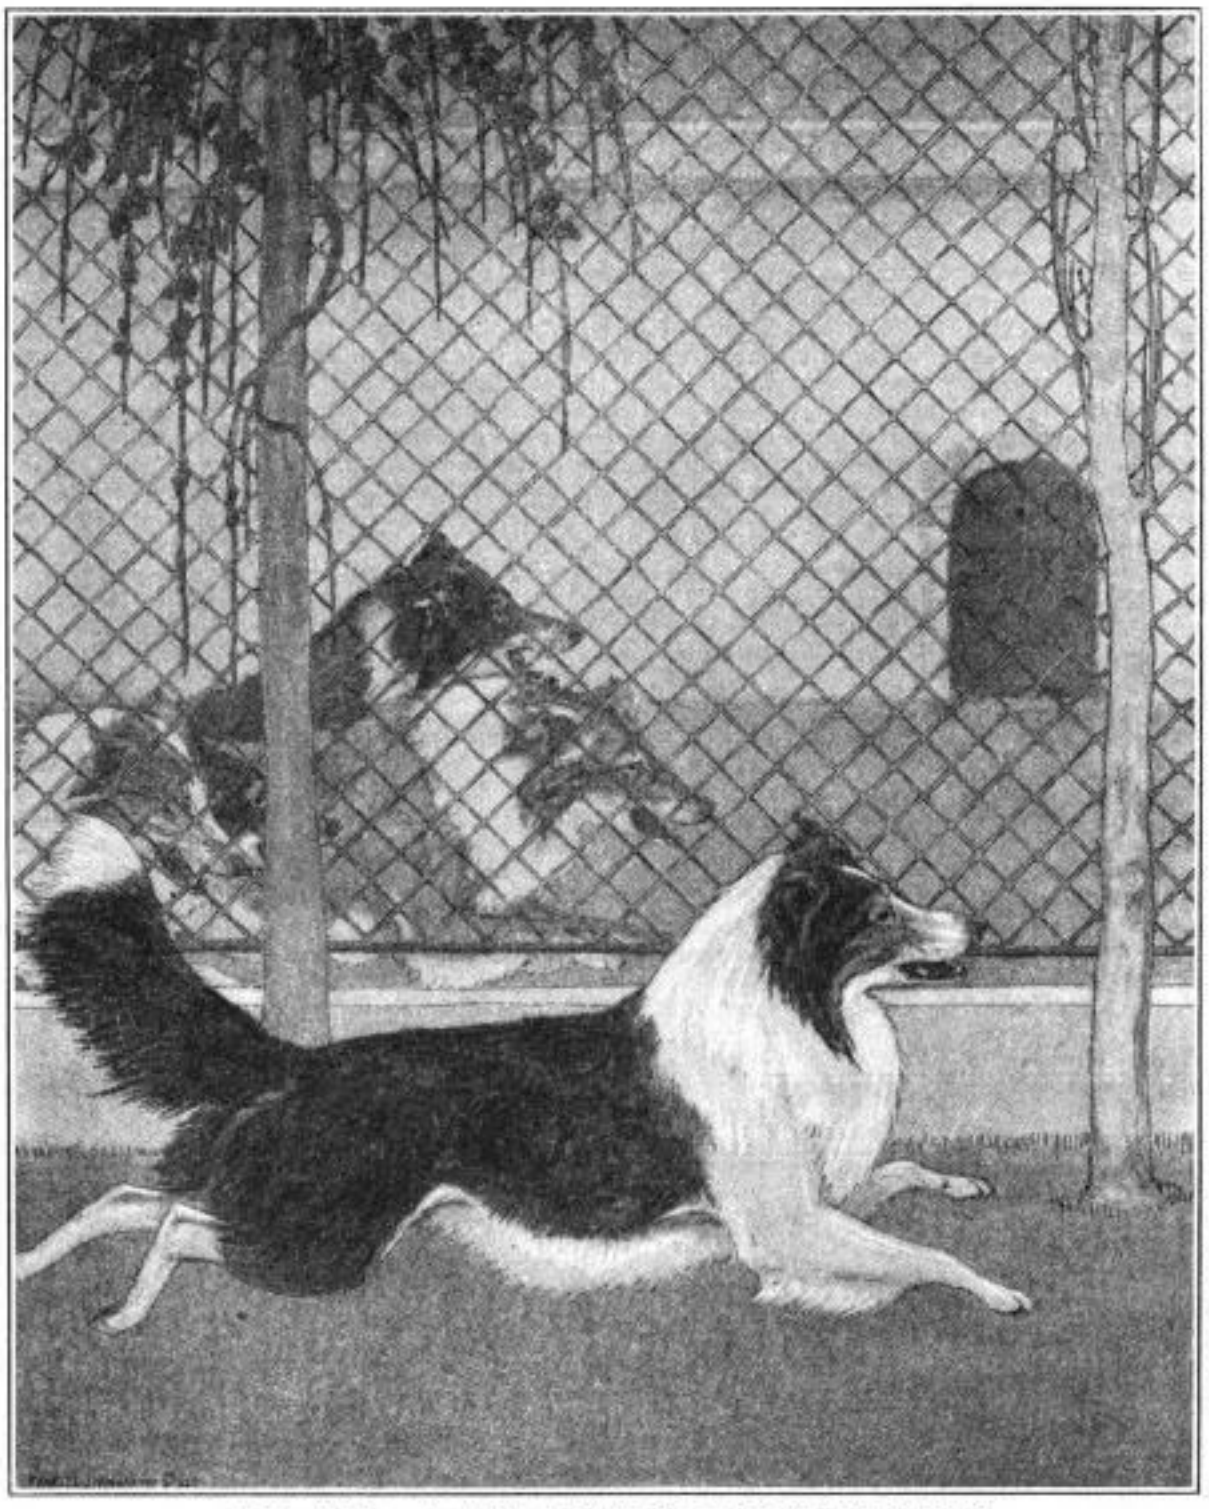
By Albert Payson Terhune

ILLUSTRATED BY CHARLES LIVINGSTON BULL

THEY called it the Greased Road. Before July, 1919, it had been known as the Hamburg Turnpike. It ran southwest from the Canadian border for several hundred miles. Here and there, on its smoothly twisting length, settlements were clumped or straggled. Incidentally it wound along Crescent Hill, skirting the noisily black metropolis of Midwestburg. It had once been a highway of much minor convenience but of no special significance. Now it had taken on a new and rather sinister importance. The countryside at large and the motor-club signs still spoke of it as the Hamburg Turnpike. But an ever-increasing element from Canada to Missouri knew it as the Greased Road.

There was no more visible or tangible grease on its well-kept surface than automobiles spill on any other thoroughfare. But certain chauffeurs received one dollar and seventy-five cents a mile for making long runs on it. Certain garages along its course received from twenty to thirty-five dollars a night—or a day—for harboring and tending these chauffeurs' cars. More than one village constable and crossroads justice of the peace was refurnishing his home and buying a mechanical piano and a new set of dining-room furniture by reason of a mysteriously doubled income.

The long highway was greased with money, particularly in spots where untoward creaking would have interfered with a flourishing industry. Along its undulating miles, sometimes by day but oftener by night, chugged heavily laden trucks, driven by stone-faced men and laden with boxes and bales.



These bales and boxes were most distinctly labeled for all to see. There was no mystery about them. The legends, Dominion Apple Corporation and Saskatchewan Canning Concern, Ltd., and the like, were stenciled on their exposed sides with vivid clearness; and the vehicles themselves bore still more plainly the names and stolid business addresses of their owners. Sometimes through the darkness such heavy-laden trucks or a line of from three to seven high-powered motor cars would go roaring along the Greased Road at hideous speed and showing illegally few lights. From the north they came, and the night swallowed up their southward dash.

A like traffic prevailed on a score of other greased roads leading from Canada, from Mexico, from Florida. The greasing of these thousands of miles was a costly item. But the consumer paid it all, the price of the commodity rising in direct ratio to every greased mile.

At the point where the Greased Road topped the summit of Crescent Hill—the most exclusive residence suburb of Midwestburg—stood the gorgeous estate of Rufus G. Belden, the region's chief politician-financier. Well back from the curiously wrought iron fence and its elaborate gates, across a swell of stage lawn, the house of Rufus G. upreared its six-hundred-thousand-dollar bulk. It was not a home; it was a residence. Anyone with half an eye could see that.

The architect seemingly had sought to graft the dream glories of the Taj Mahal on the more practical groundwork of Buckingham Palace. If the resultant edifice had been built by a less inexhaustibly rich man it must have won the nickname of Belden's Folly. It was that sort of house.

At a respectful distance behind it was a garage-stable which had the aspect of a dissolute Russian cathedral. To the left of this was the most ornate and up-to-date group of kennel buildings in America. Here were housed the famed Beldencroft collies, the pride of Rufus G. Belden's heart. Here they were cared for by a staff of highly efficient and more highly paid collie experts, under command of a soft-spoken little Scot named Jamie Mackellar.

To Gambol Around and Around Their Prison Was the Ultimate Insult

Back of the kennels was the most unpretentious and only homelike structure on the estate—Jamie Mackellar's cottage. Here, with his big Yorkshire wife and his two stocky children, dwelt the little Scotchman. Here, too, an honored member of the Mackellar family, dwelt Champion Lochinvar Bobby, the great collie who shared Jamie's hearth and board and who gave to his diminutive master a blindly obedient adoration. Bobby was not one of the bragged-of treasures of the magnificent Rufus G. He was Jamie's own dog, not only because Jamie had bought him as a gangling pup and had humanized him and taught him he had a soul, but because Bobby had chosen Jamie as his god. When the best type of collie thus selects a man or woman to worship it matters nothing who else may buy or sell him. Till death he is the dog of that one chosen deity.

People had a way of liking Mackellar. Even the awesome Rufus G. held him in queerly high esteem, and after one or two useless attempts had ceased to try bullying him. He valued Jamie's services unspeakably, and trusted him alone of all his employes.

On a morning in very early spring Mackellar finished his round of the kennels. Bobby paced along beside him on the tour of inspection, every line of his classic head and shaggily tawny body vibrant with lofty contempt for these lesser dogs of his breed who must wire runs and concrete huts instead chumming with their master. For have reduced snobbishness to an

As Jamie paused to g rections to one of the men Bobby unbent so f sniff patronizingly at a merle collie—one of seven dogs that had been turn together for the day in wire inclosure. The mer been thrusting his pointe through the wire loop Bobby touched the sniffi trils inquiringly with hi The temperamental snarled at the unasked att from a dog that was fre he himself was not. No did he snarl, but he snap futility at the receding m

Moreover, early s had got into the great blood and had wakened the imp of mischief that lies very deep below the su in a collie's make-up.

Thus, even as Bobby t away, he changed his s walk for a wild gallop. A and around the big wire r frisked at top speed, his plu tail flying. Now, as any student knows, this was the blackest affront he could sibly heap upon the merle the rest of the run's occup It was bad enough to walk their prison. But to gam around and around it in freedom while they were cap was the ultimate insult. A fraction of a second the ma of Bobby's prank was prov

Every one of the seven dogs proceeded to go ma Barking, screaming, howling, they flung themselves at wire barrier, following in a plangent rush the course Bobby's playful gallop, splitting the morning air with horrible cacophony of din.

"Quiet!" shrilled Jamie Mackellar, coming up at a t followed by two kennel men. "Quiet, there!"

The seven clangorous dogs ceased their wild din a came to a shambling halt, still whimpering and star resentfully out at Bobby.

At his master's shouted command Bobby had also doned the provoking gallop. His deep-set dark ey atwinkle, his head a little on one side, he stood gaz interestedly at Jamie, who bore down upon him.

"It's all your fault, you old ruffian!" accused Jamie "Don't go flattering yourself I don't know it! I saw th whole thing! Are you a harum-scarum, kittle-kattle, six month pup, or have you gone fey, Bobby lad?"

For answer Bobby wrinkled his nose backward in a gri that showed teeth and gums alike, and he came wriggling in conciliation up to Mackellar, gesticulating feverishly with one stiffly outthrust white foreleg. There was no fear in his placating manner. He knew perfectly well that Jamie was not displeased with him. But he also knew that he had been in mischief and that it behooved him to make his peace. Mackellar rumpled the classic head in feigned severity, grumbling:

"That's the collie of it! You never know when the oldest of 'em will turn puppy. Take shame to yourself for

ose poor tikes, Bobby boy. Next time you do it you in there with 'em for a while, just to show you els to be in the hoosgow. I'm off to the station ve those bales of cedar shavings come and to pay ew crates. Want to come along? Not that you o."

e Bobby's mock contrition fell away from him as . Though he read the tone rather than the words 's question, long experience told him it forecast a l on the instant he was dancing feverishly around man, careless now whether or not his antics use the kenneled dogs to frenzy.

the drive to the highroad they started, Jamie sturdily along and Bobby dashing ahead and k to his master's side a dozen times in as many feet. Once out on the turnpike, he steadied down havior of the occasion. True, he trotted ahead or to investigate interesting scents and sounds along But at the most distant approach of any motor ways dropped back to Jamie and walked soberly, the man's side, until the car had gone by. This earned to do long ago, even as he had learned to the forward or sideways excursions and to stay is master as soon as the city streets were reached. t a half mile beyond the Beldencroft gates a turn llside road brought him in sight of a motor vehicle h he did not drop back to Jamie's side. For this was standing still. It was a huge truck, empty or a heap of tarpaulin on its tonneau floor. It was orth and had evidently come from Midwestburg some point to southward.

e puncture had brought its driver down from his he man was replacing the deflated tire with one of res strapped under the tailboard. He was on his side the car, hard at work. Bobby trotted past th no great interest, but stopped presently and back. This because Jamie Mackellar had paused the busy mechanic.

l Rufus G. had hired him as kennel manager Jamie ade his living, first by driving another man's truck r a truck of his own. Several odd features of this n the road to-day had caught his notice.

sweating driver glanced up from his tire-changing to see a small man and a large dog intently watching The driver had not the look of a bashful or self- us person. Yet noting this interested inspection he l. Indeed, he seemed thoroughly uncomfortable. ed any help?" Jamie opened the conversation in his way.

"No," grunted the driver. "And I don't need any gallery, either. Move on, can't you?"

Jamie looked grieved at the rebuff, but his interest was greater than his shyness.

"I never saw such a heavy truck before with pneumatic tires," he said, "except for carting explosives. It must be a big expense item when you're deep-loaded. Of course you can make lots better time, and you don't jounce so much. But the cost of all those spares ——"

"Say!" exhorted the driver, getting truculently to his feet and revealing himself as something like a head taller and forty pounds heavier than the little Scot. "Say, you mangy shrimp, I told you once to beat it! I'm telling you again! Next time I'll start you on your way. Take the air!"

Jamie flushed. He was a peaceable and friendly chap. He did not like to be spoken to in this fashion. Far down under his friendliness something hot began to stir.

"The road is public, neighbor," he said gently. "If it riles you to be talked to while you're working I'll keep my mouth shut. But I'm an old-time truckman, and this machine of yours has got some things about it that are new to me. By your leave I'll just walk around it and take a look or two. I won't meddle with anything."

The driver, after delivering his warning, had bent down over the almost adjusted tire. To the first part of Jamie's reply he had paid no heed at all. But now as Mackellar took an inquisitive step nearer the truck he got to his feet again and lurched threateningly forward.

Deftly, with his hamlike right hand, he grasped Jamie by the collar-back and spun him around, facing the city below.

"Walk!" he commanded, giving the amazed little man a forward shove.

Then two things happened at the same time and with bewildering quickness. Bobby, head turned, ears cocked, had been listening to the colloquy. Skilled at reading the human voice, he disliked the tone of this sweating and malodorous stranger toward his little god. Yet, as Mackellar did not seem ruffled by it, Bobby saw no cause to interfere.

Now, however, something occurred that did not need any explanation or second thought. The driver had laid violent hands on Jamie.

As the man gripped the Scot's coat collar Bobby sprang for him. Jamie, too, at the brutish contact, was galvanized into fury. Wriggling eel-like out of his coat, he spun about and smote upward with all his wiry strength at the driver's unprotected jaw.

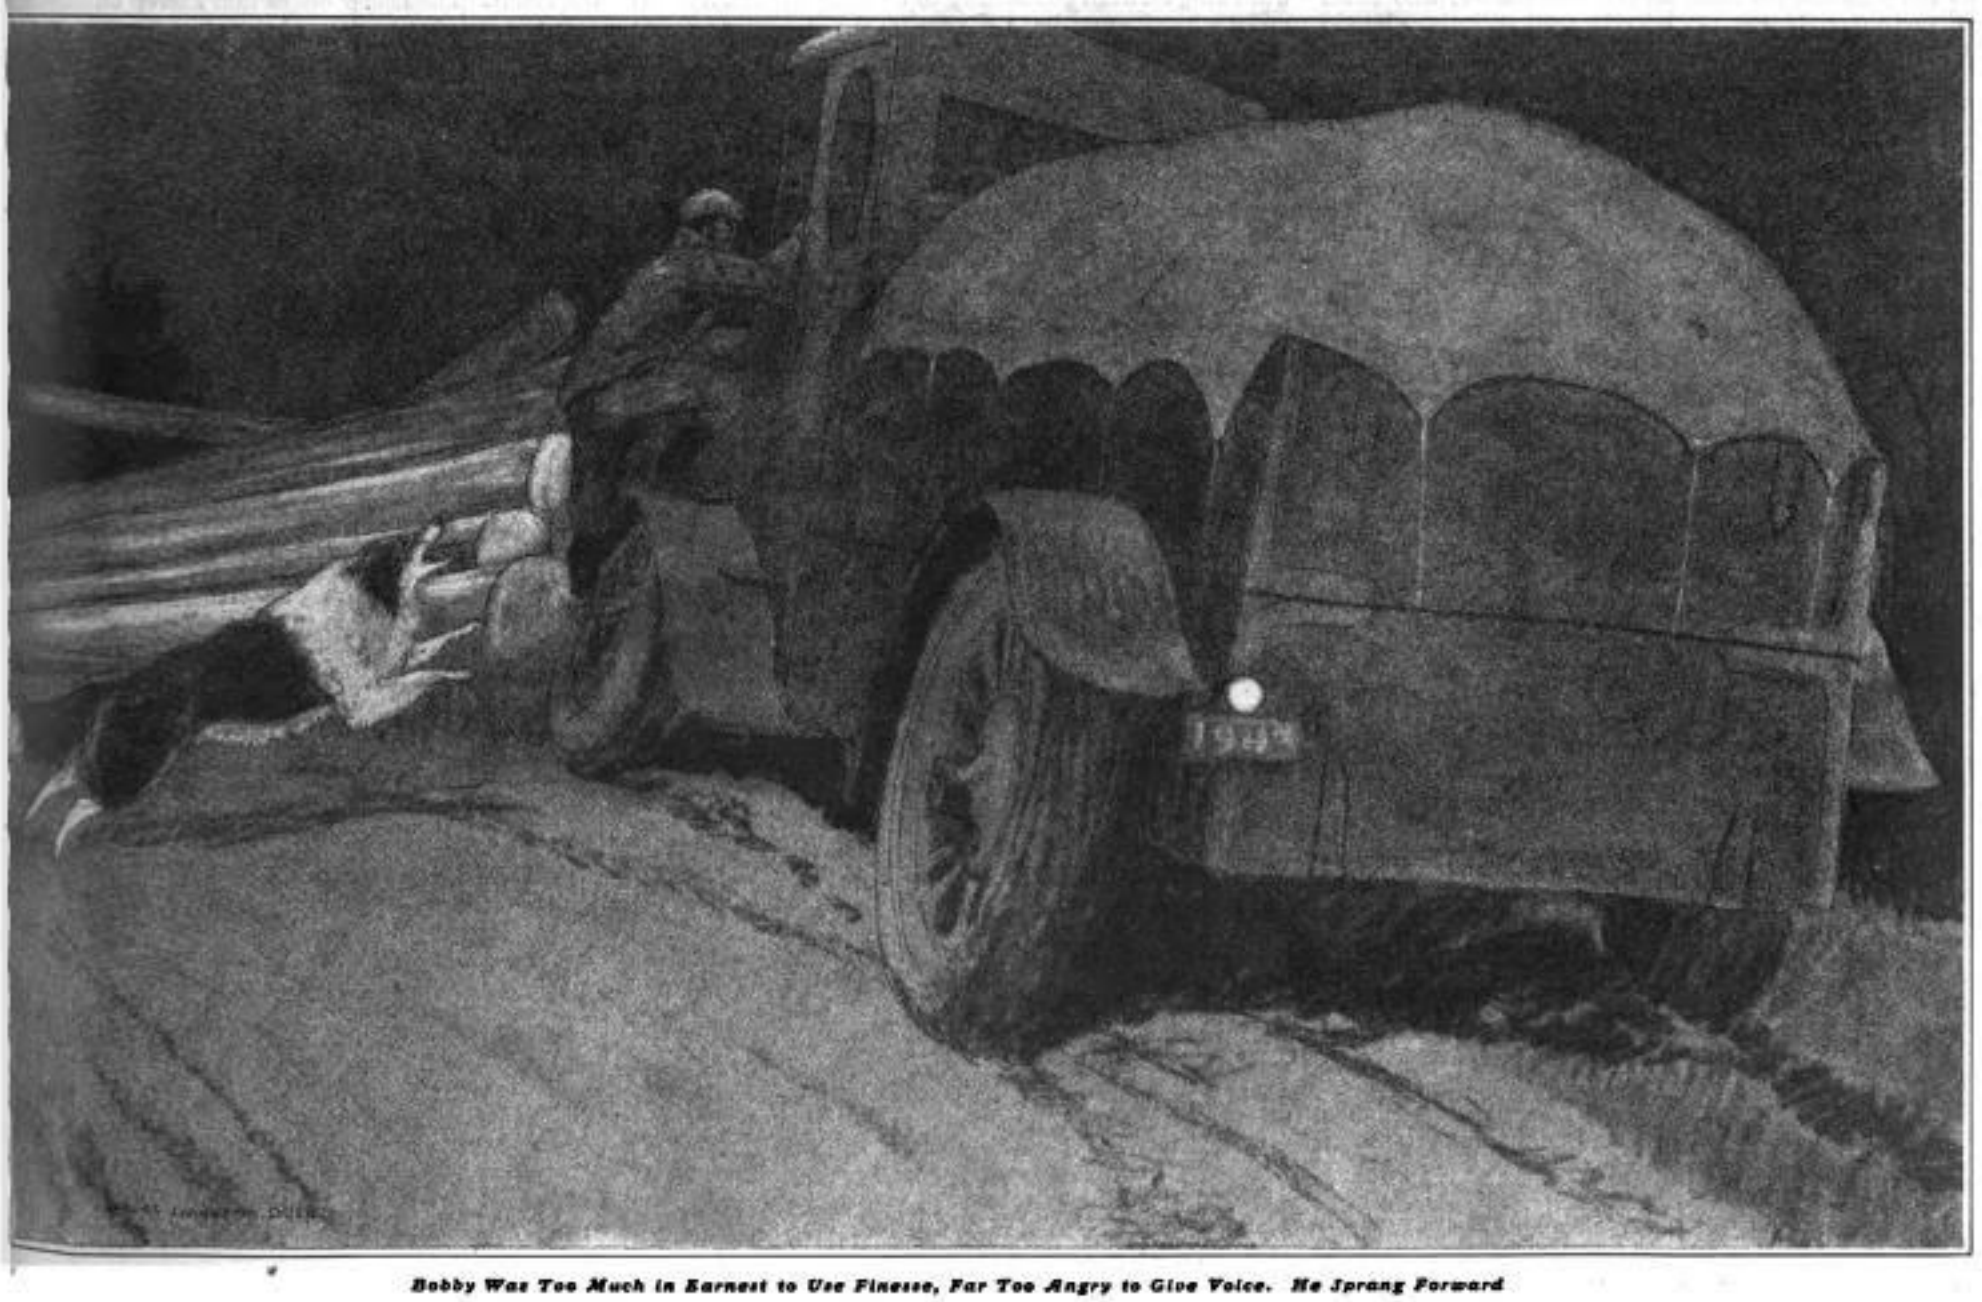
Now Malachi Dorner was uncommonly handy with his fists. Also, as became a man of his trade, he was resourceful and plucky and of powerful physique. But just now his right hand was impeded by a suddenly vacated coat and his left was far extended in a grab for that coat's elusive shedder. Moreover, attack was the last thing to have been expected from the meekly talkative and nosey little intruder whom he had sought to chastise.

Wherefore Malachi Dorner was off guard. Wherefore, too, Malachi Dorner received on the jaw point a scientific and fairly effective blow that set him rocking back on his heels. At the same moment seventy pounds of furry avalanche smote him on the upper chest. A double set of white fangs raked his red throat dangerously deep, in a praiseworthy effort to reach the jugular.

Backward reeled Malachi Dorner, scrambling for his balance and flailing the empty air with his outflung arms.

Bobby, missing his mark, sprang again. The arm gripping Jamie's coat sought mechanically to fend him off. The coat was slashed from neck to waist by the snapping jaws; then was shaken aside as Bobby made a fresh dive for his master's assailant.

Jamie Mackellar, blind with rage, smote again for the heavy jaw of the giant who had so grossly assailed him, and again the blow landed. It landed at the same instant Bobby's flying bulk smote Dorner amidships, and this time the dual impact sent him asprawl on his back.



The driver, bleeding from the flesh wounds in throat and arm, and jarred by the two jaw smashes, prepared nevertheless to spring up and return to the fray. But Bobby whirled again at his throat and the man shrank back. With one hand Dorner sought to thrust away the dog; with the other he reached for his hip pocket.

It was then Jamie noted for the first time that his chum was taking part in the battle. He seized the collie by the ruff as Bobby flashed past him in the throat dive.

"Steady, Bobby boy!" he quavered, tugging at the anger-scourged collie. "Steady, there! No one asked you to horn in! I'm none so old I can't fight my own fights. Keep back, you murderous idiot! Now then," he shrilled defiantly at the prostrate Dorner, "are you man enough to get up and finish it? Or have you maybe had all you can hold? Which'll it be?"

For answer the driver tucked his ample feet under him for the dual purpose of getting up and of launching himself at the belligerently dancing little Mackellar. But his warlike eye rested on Lochinvar Bobby, tense, bulky, terrible, straining forward in his master's grasp; and half

THE KEEPER OF THE BULL

By Courtney Ryley Cooper

An Elephant in the Act of a Breakaway

THERE are certain well-founded American traditions regarding the equally American circus which it seems almost sacrilege to disturb. For instance, it has been handed from generation to generation that when a big show goes into territory comprised of many small towns the circus splits into several parts like the fabled joint snake, and exhibits in three or four places at once. Again, it's a certainty that the fiercest beasts in captivity are the lions and the tigers and that if ever one of them should escape it at once would vent the pent-up rage of years of imprisonment by killing everyone in sight. By the same line of reasoning the bravest man on the whole blatant organization must be the lion trainer, who twice daily—rain or shine—goes into the dens with these beasts and by a narrow margin comes forth with skin and body still hanging together. A different existence indeed from that of the bull man—all elephants are "bulls" on a circus—who has nothing to do save to keep his placid, gigantic, ever-begging charges from eating too many peanuts, to bring them forth now and then that they may push a few wagons complacently around the lot, or trot them into the ring during the crowded hours of the performance to do the hootchy-kootchy in their lumbering, comical fashion, to play a big mouth harp with their trunks until that laughing, easy-going trainer takes it away from them, to cavort at a pachydermic game of baseball or bear the million-dollar beauty around the arena at the head of the grand entrée. All in all, comparatively speaking, it would seem much easier than shooting a blank-cartridged revolver into the bellowing jaws of a roaring lion. Of course he must be handy always to warn the uneducated that his big, clumsy charges hate tobacco, and that they never forget an injury, but those are only little idiosyncrasies which bob up even with some human beings. No matter how placid a person or beast may be ——

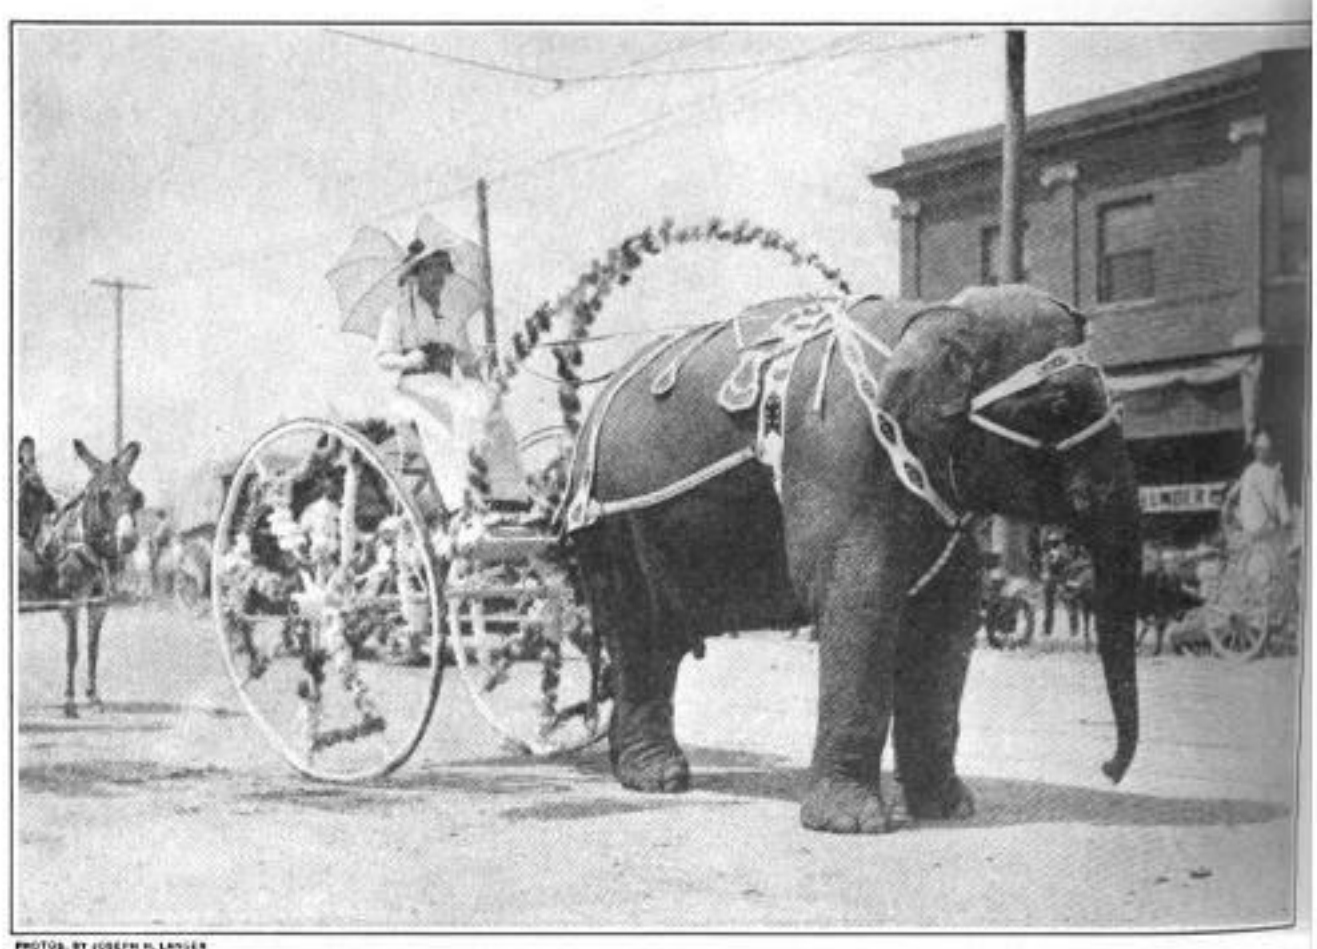
Shattering Old Traditions

BUT to get back to the traditions. Just to take them in their numerical order, a show never splits and never exhibits in several places at once. The lions and tigers aren't nearly so fierce, perhaps, as one of the tumbling bears, which stays in its cage for the simple reason that no one ever has been able to train it. Still more, when the doors of a lion or tiger den are left open by a careless attendant—as often happens—the escaped feline is usually so frightened at being exiled from its natural, steel-barred home that it does nothing but run in circles and yowl like some overgrown house cat until its rescuers surround it with a bit of side walling and restore it to its own habitat again; and the lion trainer, he who fights the ferocious beasts in the steel arena, often yawns after his work is over and calls for nothing stronger than a bottle of near-beer. Unless there is illness or fear or an animal feud of some sort among his charges, he has little to worry about. But the placid life of the placid keeper of the placid bulls is something entirely different.

For, as it often happens with traditions, the usual reasoning is wrong. In the first place, the bulls are not placid, just as they are not clumsy, just as they do not remember an injury for years and just as they do not promptly set upon the man who insults their taste with a juicy plug of tobacco. Perhaps, long, long ago there may have been a solitary elephant that disliked nicotine—but times evidently have changed. To-day a plug of tobacco is a titbit for any elephant, and more than once is a visitor's pocket ransacked by an inquiring trunk searching for a chew. Elephants eat tobacco just as they eat sugar cane or pop corn or peanuts or candy. To them it is a delicacy. Nor is the taste confined only to chewing tobacco; if you'll keep your eyes open the next time you go to a circus you may even see elephants shooting snipes, where visitors have dropped their cigar butts along the picket line. Which ends that.

Their memories are no longer than those of any other intelligent animal, and their clumsiness and slowness are things that exist only in appearance. As for the relationship of ease between the lot of the keeper of the lions and the keeper of the bulls, the lion trainer leads a bored existence. All that is necessary for him to do is to keep a whip rein on a group of well-trained beasts, and by a reasonable amount of care guard his own skin. The keeper of the bulls must strive to protect his own life, the lives of the thousands who crowd into the circus, the lives of the animals of the menagerie, the horses of the great show, the tents, the wagons, the heavy, costly properties—and even the houses and lives of the people in the town where the circus is showing, as well as that of the countryside surrounding it! Once the placid, amiable, stodgy elephant starts forth upon a tour of wreckage his only competitor is a tornado, and his only possible master that envied person of a life of ease—the keeper of the bulls!

Inconsistency is a thing which surrounds an elephant on every side in his life in the circus. Just as he is the best-liked beast of the menagerie, so is he the most feared. Just as he is the thing that must be counted upon literally to drag the show out of the mud when the mire of a wet circus lot has sunk every wagon to the wheel hubs and so entangled the heavy conveyances that horseflesh, even tractors, lose their efficiency, so on the very next day he may wreck everything he has worked so hard to save. He will swing forward confidently to the attack, should a lion make a breakaway, but the proximity of a mouse or even a small, harmless snake on a country wayside is the signal for a panic. He will carry a cannon on his back into a performance and stand immobile while the booming charge breaks in deafening fashion above him—and then, on the next Fourth of July, start a stampede at the popping of a penny firecracker. He will remain at a picket line through confusion and turmoil while thousands of persons crowd about him, then pull up stakes and chase the daylights out of a candy butcher who consistently offends him by selling dainties among the show goers instead of distributing them free along the elephant line. He is the sagacious animal in captivity—yet, when he be frightened he doesn't know enough to turn out of the of a brick building. His daily food consists of fully hundred pounds of roughage, a few pounds of coal wh munches greedily if he can but get it, a bushel or grain, ten or twenty pounds of pure dirt—chocolate or swamp muck preferred—and a tub or two of wate he will quit it all gladly for one lonely peanut or a pi candy. In the circus world they've changed an old expression to fit their own needs:



"Inconsistency—thy name is elephant!"

The Four-Legged Paradox

FOR, it seems, the paradox is a continual thing wit great pachyderms which form the backbone of pr cally every circus. There is never a time in which the not depended upon to save the show in times of arrivals, muddy or sandy lots or on long hauls from unloading runs to the exhibition grounds, when the tw three tons of flesh and bone and muscle which every phant possesses are thrown into play to augment efforts of the straining draft stock and chugging trac Yet, by the same token, there is never a moment w the circus is free from the danger of being torn to pi by that same bone and muscle and sinew! Upon one and one alone does the task depend, one man who leader above a leader, who can succeed often where others may fail, and upon whom rests the responsibi for salvation or wreckage—the keeper of the bulls.

In explanation, a herd of elephants—and in some of big circuses a herd will number as high as twenty members—is built upon the monarchial system, wit princess or two, a queen and a king in control. princesses and queen are elephants; the only male n allowed is the superintendent of the herd, the man whom the queen, or leader, vows allegiance. No mat what other men may do, what other men may command the keeper of the herd decides otherwise—then otherwi the result. The leader obeys him above all others, if obeys at all; the princesses obey her, and the male me bers tag along in a group of bulky camp followers, cithe agitators and revolutionists. The males make the trou in an elephant monarchy, the females make the laws a enforce them. It is seldom that other than a male cau a stampede; and almost inevitably it is a female—obeyi in her turn the man who commands her—that halts it.

As an example: The Sells-Floto Circus, one of t group of larger shows, was in Canada several years ag and one of its stands was Winnipeg. The performanc

into the sheetlike rain he went, to leap to the run-
board of the first passing automobile and literally
commandeer it for a trip to the circus grounds several miles away. His experience with elephants and the instinctive knowledge of what the beasts might do under circumstances such as this demanded swift action, and plenty of it. More, intuition proved correct!

The storm had struck as suddenly at the circus grounds as in the city. With the first flash of lightning the wind had swept through the menagerie tent with galelike force, lifting the side walling and causing it to slap and bellow and snap in

Snyder After He Had Been Executed

queer ghostly fashion. The elephant herd, peaceful and drowsing at its double row of stakes only a moment before, had heard and seen!

There was no keeper to reassure them; only assistants. To an elephant an assistant counts for little if the supreme voice is absent, and right at that moment Alispaw was miles away. In vain the menagerie men sank their bull hooks into the ears of the plunging charges, then bobbing about like so many plummets strove in vain to hold the beasts in line. Even Old Mom, the head of the herd, had become panicky with the rest, not from fear of the storm but from the fright caused by the si
of that twisting, writhing side wall a
had shown for an instant in the glar
the lightning. To the elephants it r
resented s[illegible] unknown bellowing m
ster about to attack; the unexplai
thing always means trouble in an
phant herd. So the stampede had beg

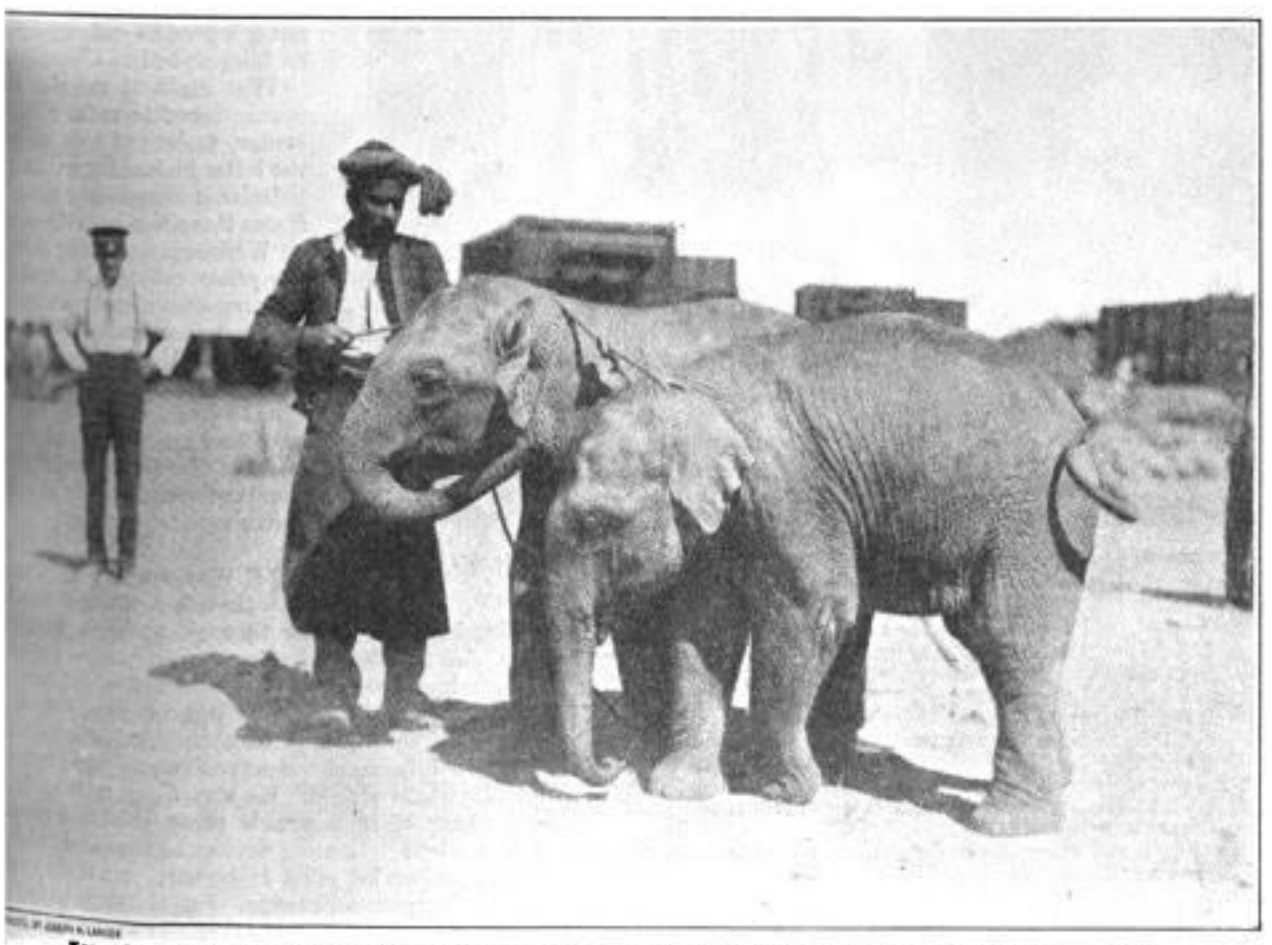
still another thunder—that of ton-he
bodies plunging across the menag
tent, the crashing of timbers as they knocked poles and ca
from their path, and the stampede of the nine-eleph
herd was on! A moment later the stages, the poles,
seats and grand stand of the main tent were splintering
snapping as some sixty thousand pounds of fear-madde
elephant flesh tore madly here and there in the big in
sure, rushing wildly, then wheeling as frantically in
other direction as a lightning flash showed that writhi
flapping thing of wind-blown canvas surrounding them
every side. Greater and greater the frenzy became; in
milling two of the males collided and began to fight w
swift smashing rushes and lashing trunks. Louder
louder became the squealing and trumpeting—sudde
to lull. A voice had come faintly from the darkness
the menagerie tent—every torch long had been ext
guished—a voice which caused Old Mom to turn and
trumpet with a new note:



"Mom—Mom! Here I am!"

The Bull Keeper Restores Confidence

AGAIN the call sounded and Old Mom answered,
queen obeying the command of her overlord.
fighting ceased. A new signal sounded from the thr
of Old Mom. The elephants steadied. A moment la
Alispaw, standing in the connection between the men
erie and the main tent, saw revealed in a flash of lig
ning a great hulking shadow coming slowly but stead
toward him, while in the rear there followed eight oth
practically abreast! Old Mom had heard the voice
sought. That was enough!

But the fight had only begun. The storm now
taking on a new intensity, a new fury, and the trai
knew that he had but two allies, Mom and Alice, a s
of elephantine lady in waiting to the real queen of
herd. As soon as possible he caught the two elepha

RITA COVENTRY

By Julian Street

ILLUSTRATED BY HENRY RALEIGH

XXII

THE Jersey pines were looming black in the February twilight as the limousine slipped swiftly into Lakewood, and it was dark when, after a light repast, Parrish and Rita resumed their way toward New York. Reaching the city before ten, they drove to her house, where, because of her early rehearsal next morning, they parted on the doorstep.

"Wednesday night, then, at the opera house," she said in farewell as Pierre opened the outer door.

Wednesday night—and this only Monday!

At Parrish's own door Ito greeted him with his polite Japanese smile.

"Teregram for you, sir," he said as he carried in the baggage; for Ito had the usual Oriental difficulty with "l" and "r."

Parrish knew what the telegram would be. Going to the library he took the yellow envelope from the desk, opened it and read. Yes, it was from Alice—a tautological announcement that she had arrived safely in Cleveland. Also there lay upon the desk a special-delivery letter addressed in her familiar handwriting—legible, slightly unformed, above all, honest.

As the telegram closed with the words "Much love," so the letter opened with the salutation "Dearest," followed by a dash; for dashes served Alice in place of periods, colons, semicolons and sometimes commas.

Hurriedly he read the letter:

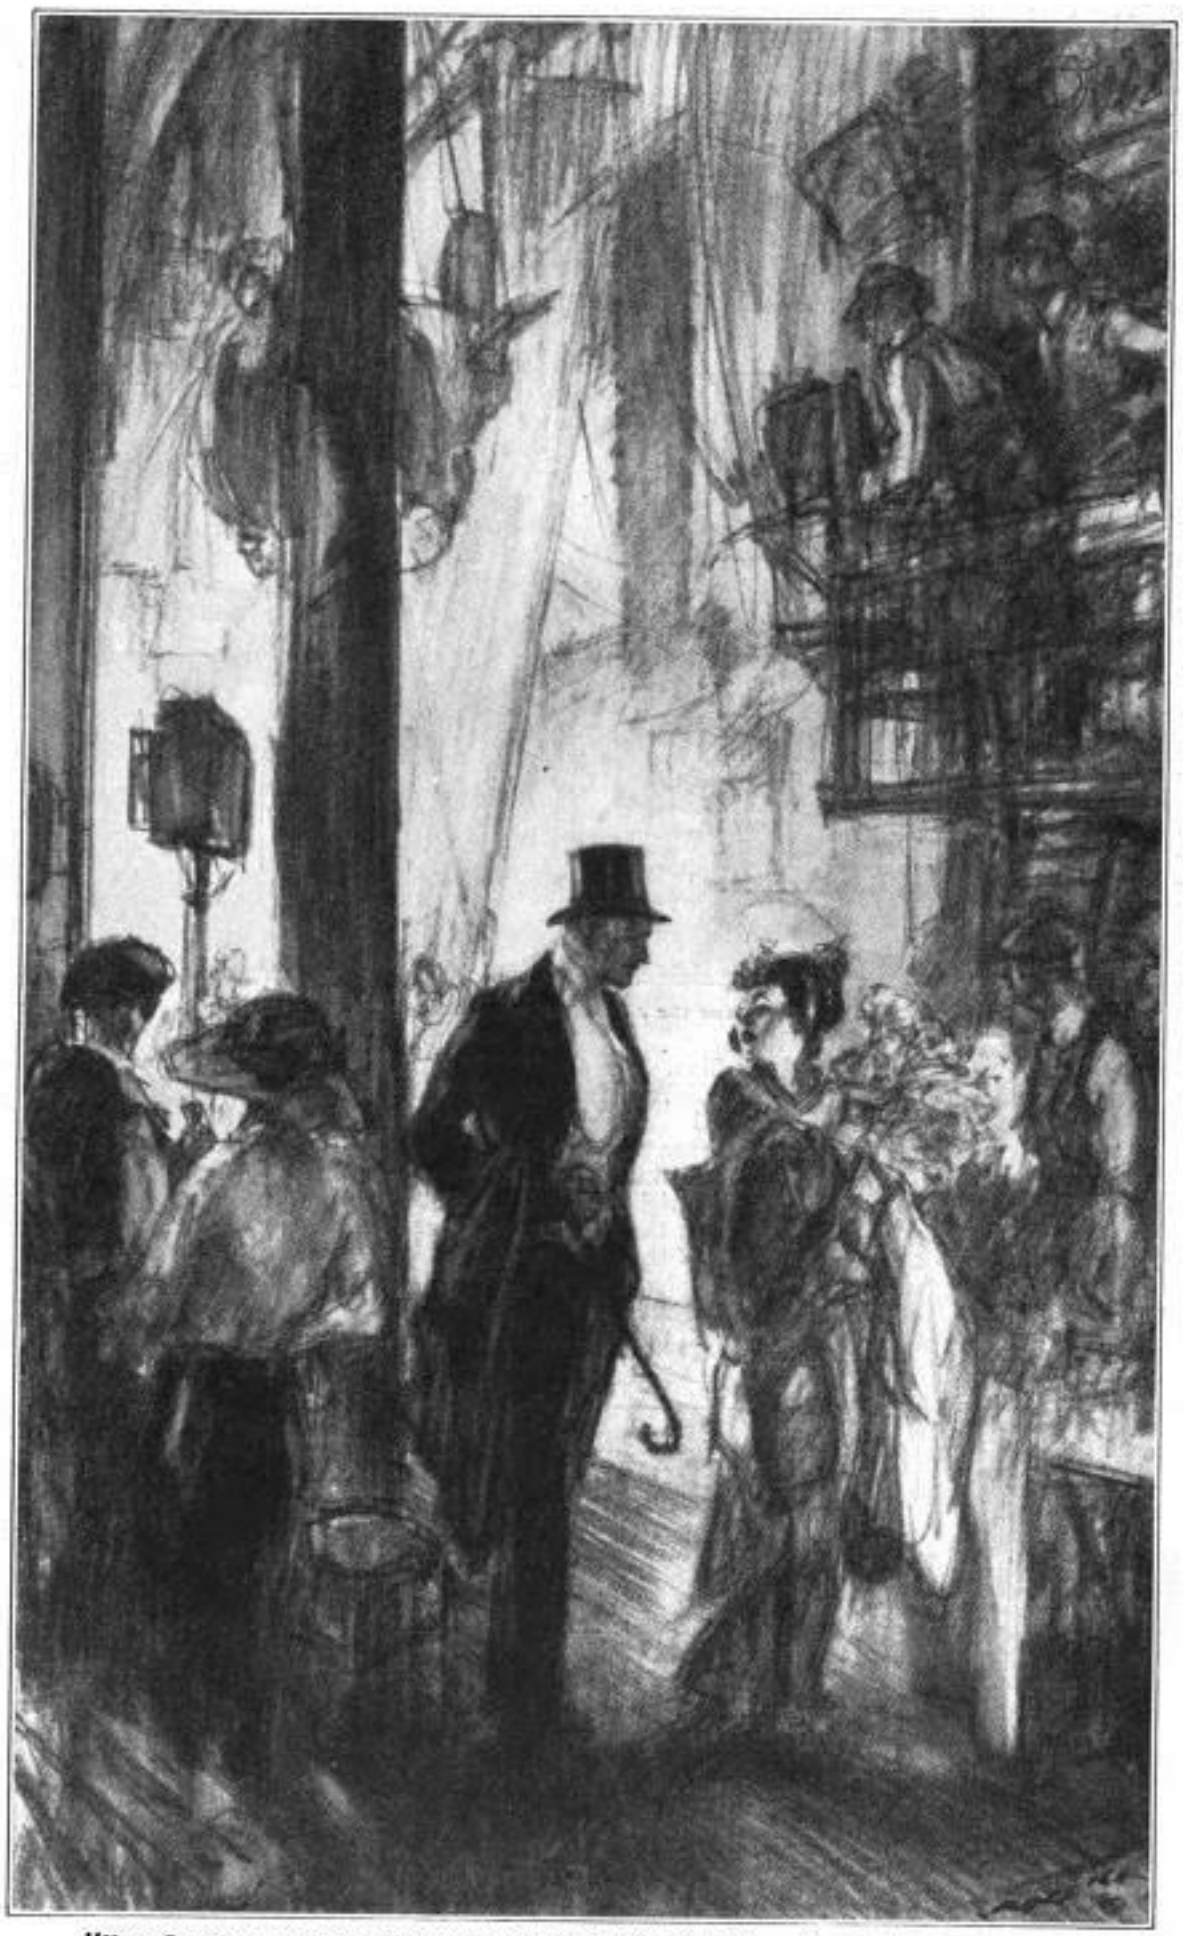
George met me at the station with his car and drove me out to the house—It was certainly fine to see them all again—though of course I miss you terribly dear—When I was here before the grading wasn't all finished but now everything looks nice and settled inside and out—although it is certainly what you would call "suburban" looking—It's a California bungalow type house—stucco and brown wood—with a second story that you'd hardly notice from outside—and the furniture is mostly "mission"—I can see you turn up your nose at that! I don't think Margaret really likes mission furniture—but George the old dear likes it because it's "solid looking"—and all those two ever think of is having everything the way the other wants it—You would think them very unsophisticated and they are—the way I used to be!—but I know you'd like them because they are so good and devoted—and you'd be crazy about the children—They have grown so much since I last saw them that I could hardly believe my eyes—and they made such a fuss over "Auntie Alice" that it made her cry—It certainly is wonderful to have children love you like that and I don't say it because they are Margaret's but they really are *remarkable*—I think I cried partly because they are such little darlings and partly because their little arms around my neck somehow made my loneliness for you horribly acute—Does that sound crazy dear? Maybe it is but that's how I felt—Oh Dick how I do love you! (How Clara would scold me for writing you that and telling it to you all the time!) She thinks men are so conceited and selfish because she has never known the right *kind* of man and that has made her cynical—She says a woman is a fool to let a man know she cares because a man tires of a woman when he is so sure of her—I don't believe you can lay down any such rule to cover all cases do you? Anyway, I *want* you to be sure of me! And it's lucky for me I do!—because if I *didn't* want you to be you would be just the same—I couldn't help letting you see—

Oh dearest I'm so worried over Margaret! She's so miserable—worse than I thought—The doctor says she ought to have gone to the Adirondacks two or three weeks ago because though it's just pleurisy she won't get over it in this lake climate at this time of year and it might get worse—She has been fighting going because she can't bear to leave George and the children but she is getting frightened about herself now and since I am here she certainly has no excuse—But Dick it means a month or six weeks out here for me and I only reproach myself for not having realized and come sooner—So I can't go back with you when you come through—but I would give anything on earth to see you—Couldn't you stop over a train and come up? But if not I could come down and see you for a minute at the train—That would *help* wouldn't it dear? So if you go west be sure to telegraph me in plenty of time—

Well dear I'm afraid this epistle isn't any too cheerful sounding—but I do miss you so and this is the nearest I can get to talking to you—

Take care of yourself for my sake dear and don't get too tired—You work so hard you know—and there are so many germs around one can't be too careful—

I will write you every day and you must write me as often as you can even if it is only a line just to let me know you are well.



Perhaps if we get so lonesome for each other we can't stand it any longer we can talk on the long distance the way we did when I was here before—

Oh Dick you know how I adore you don't you?

Your loving Ali

P S—

You haven't forgotten what the farmer wrote you the fences at Blenkinswood have you?

"Your Engagement," He Began Interrogatively, "That Business You Spoke of—It Hasn't by Any Chance Been ——"

Parrish sighed heavily, to letter into small pieces and dr them into the wastebasket. of his welter of conflicting tions and impulses emerg thought of telephoning to be quickly he let it slip back int welter. He would write.

He took a sheet of paper the rack, dipped his pen paused. Then he wrote "D and after pausing again, a "est." But when he blotte word the final syllable, not h dried so long, was percep lighter than the first.

"Oh, hang it!" he said.

He tore up the sheet and le fragments fall to the basket, w Alice's letter already lay; the ing he went to his room, wa and put on his bathrobe and pers, whereafter he returned t desk and sat for a moment, only to get up again. This he proceeded to the butler's try, where, after picking sava at the ice, he secured a suit piece, which he washed and posited in a tall thin glass. Th he went to the sideboard and, unlocking it, withdrew a bo containing an amber fluid. Ha he poured a generous portion his glass, and adding water, dra

Putting down the empty g he returned to the desk, sea himself, took up the telephone asked for the telegraph office.

His night letter to Alice w long, sympathetic and uninfor ing. "Am writing," he ended.

But he did not write that nig and next morning he was pres for time; he had been absent fr the office for a day; much busin would be awaiting him. Moreov there were errands to be done the way down. He stopped at jeweler's, on Fifth Avenue, a was there for the better part of hour, closeted with the head of firm. Thence he went to his fl rist's, where he ordered flowers be telegraphed to Cleveland.

That night at the club he w requisitioned to make a fourth bridge, so he put into his pock the letter he had begun, intendin to finish it when he got home. B it was late when he got home; an on Wednesday morning there w the office calling him again. meeting kept him downtown late than usual, and when, after takin his walk up the Avenue, he reache the apartment, it was practically time to dress. Ordinarily he woul have had more time, but to-night he must dine early in order to be at the stage door promptly at quarter before eight.

XXIII

HE WAS even a little ahead of time, but the door man was expecting him and let him through, sending a young man to pilot him to Rita's dressing room.

Parrish had been behind scenes before, but never in such a place as this. Here, as in an ordinary theater, he was aware of worn gray boards underfoot, of brick walls crude and solid, and of the pervasive musty smell common to all playhouse stages. He was dimly conscious as he moved along of innumerable ropes and cables running aloft, of cyclopean lighting devices to be avoided, of furniture and properties piled in corners, and of the brutal bareness of unpainted canvas. Yet this stage, because of its vast size, was unlike any other. It was cosmic. In its dim vistas workmen were but gnomes; beyond the towering

as her face that held him.
e stared at it, discon-
erted. For though there
as a trace of Rita in the
es, disguised with heavy
ake-up—the lashes
eaked with oily black, the
inner corners dotted with red, the outer corners lined obliquely to give an Oriental tilt—and though it was her voice that spoke to him from behind that mask of grease paint and powder, he could not feel that this was she. Like the lad in the fairy tale whose loved one is transformed by witchcraft into another shape, he shared memories with the extraordinary being before him, yet felt that she was a stranger to him.

With an instinctive desire to overcome this sense of unreality he went back to the subject of which they had last spoken, asking, "How did the rehearsal go yesterday?"

She was leaning toward the mirror, giving a final touch of color to her lower lip.

"Lasted all day," she said, as if speaking to her own reflection.

Turning her head from side to side she inspected critically the fit of her wig; then with both hands she pressed it down more firmly.

Meanwhile Parrish, anxious to break through this sense of remoteness, sought her eyes, moving behind her and looking at her in the glass.

"Did you get very tired?"

She turned quickly.

"Oh, don't do that!" she cried. "Don't look at me in the glass when you're talking to me. It's unlucky!"

He smiled.

"I didn't know that you were superstitious."

"I suppose we all are. Things here depend so much on luck. Don't you remember—we were speaking of that the other day? For instance"—her laugh was a little bit apologetic—"we are superstitious about whistling in the dressing room. It brings bad luck to whoever is nearest the door. And I wouldn't dare have any shoes on a shelf higher than my head. That's awful—poverty, disaster, death! And yesterday we didn't sing the last few measures of the opera. We never do until the first night. And there's an old superstition about ——"

"I hope," he put in, "that there is none about receiving a gift in the dressing room. Because," he went on without waiting for her answer, "I've brought you this."

From an inside pocket he drew a flat leather-covered box, and placed it before her upon the dressing table.

She seized his hand.

"Oh, you dear! How dear of you!" Then pressing the button which released the lid of the box, and discovering in its black velvet nest a flexible linked bracelet of platinum, set with square diamonds, chic and costly, she cried out again, "Oh, it's lovely! You extravagant boy!"

Pulling back one kimono sleeve she slipped the bracelet on her arm and, holding it away from her, gazed at it admiringly. Then rising and taking both his hands she exclaimed, "I'd like to hug you! But I mustn't. This liquid powder rubs off."

"I'll take a chance," he said, looking down at her benignantly.

"I won't," she returned, laughing. "I have to go on too soon."

As if in confirmation of her words the maid knocked at the door, announcing:

"*Le prélude va commencer, mademoiselle.*"

"*Bien, Sophie.*" She summoned her, and taking off the bracelet placed it in her hand, saying, "Look at the beautiful thing monsieur has given me!" Then, as the maid admired, she added, "Now you take good care of it, Sophie!" And to Parrish, "I hate to take it off, but it might be noticed from the front—and of course it is out of character."

"Yes, of course."

He was disappointed. He wanted her to wear it. With it on she belonged to him.

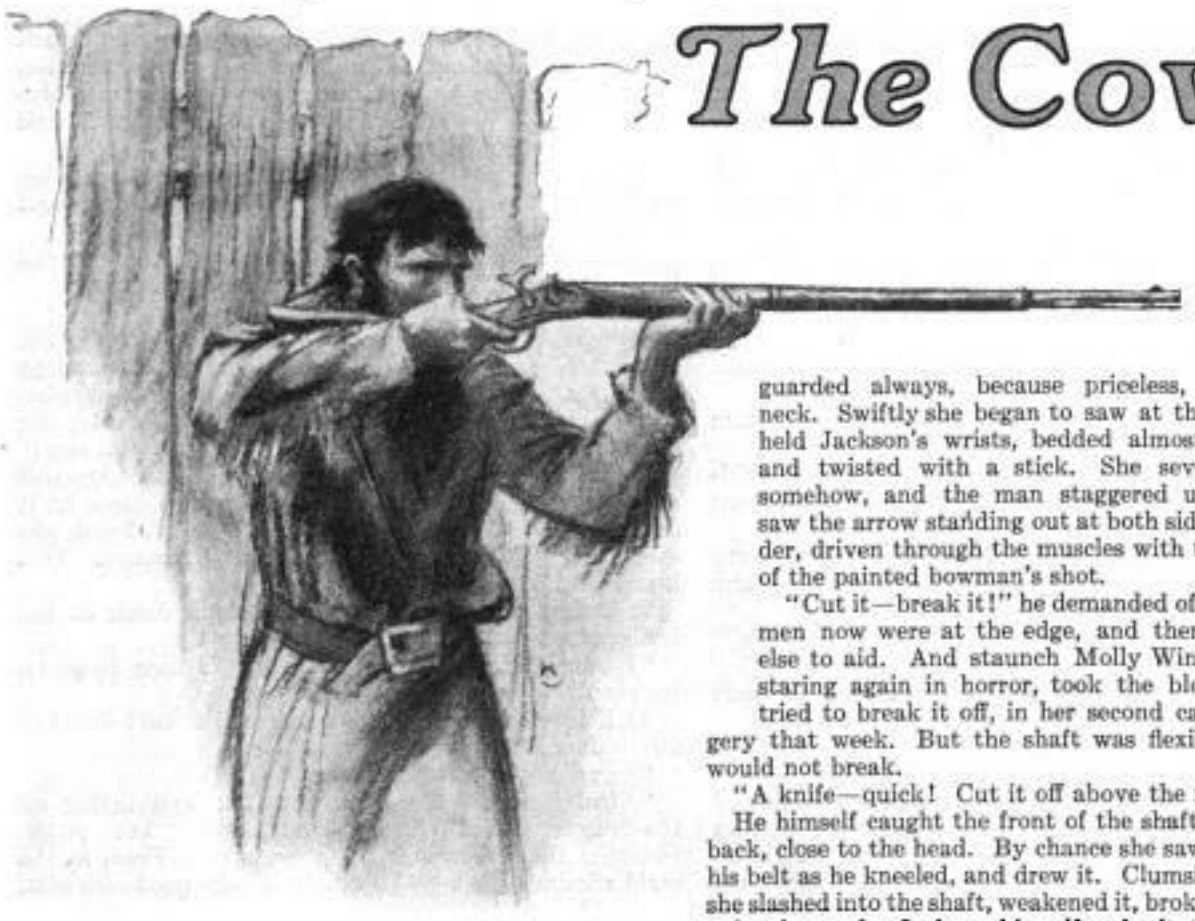
"Now come," said she, "and I'll show you where to stay and watch the act."

She led the way out through the anteroom, down the steps and to the stage.

The scene, showing the Japanese house with its terrace and garden on a hilltop overlooking the town and bay of Nagasaki, was fully set, and the footlights and borders were aglare. Two singers, costumed for the parts of Pinkerton and Goro, were standing at one side, well back, prepared to be discovered when the curtain should rise.

This obvious readiness made Parrish nervous as he walked across the stage at Rita's side. "What if the curtain should suddenly ascend!" he was thinking to himself. And when, just as he was thinking that, the first violins vigorously attacked the beginning of the overture he was startled to the point of panic. To be caught out there in the middle of the stage—a nightmare! He looked anxiously at Rita, but she reassured him with a smile.

When the curtain did rise they were safely off the scene, seated in two gilt chairs behind the concealing proscenium arch and its appendant draperies. Hitherto the music had been muffled by the curtain, but now there came a burst of sound from the entire choir of strings, and simultaneously a sense of air in circulation between stage and auditorium, and of a great dark something out there beyond the footlights, very quiet but very much alive.



From their vantage point they watched the bustling

"All Right! Now Hold Stiddy a Minute"

The Covered Wago

By Emerson Hough

ILLUSTRATED BY W. H. D. KOERNER

XXXI

HOW, cola!" exclaimed the leader of the band of Indians, crowding up to the gap in the corral where a part of the stock had just been driven in. He grinned maliciously and made the sign for "Sioux"—the edge of the hand across the throat.

But men, rifles crosswise, barred him back, while others were hurrying, strengthening the barricade. A half dozen rifles, thrust out through wheels or leveled across the wagon tongues, now covered the front rank of the Crows; but the savages—some forty or fifty in number—only sat their horses, laughing. This was sport to them. They had no doubt at all that they would have their will of this party of the whites as soon as they got ready, and they planned further strategy. To drive a prisoner into camp before killing him was humorous from their point of view, and practical withal, like driving a buffalo close to the village before shooting it.

But the white men were not deceived by the trading-post salutation.

"He's a liar!" called out the voice of Jackson. "They're not Sioux—they're Crows, and out for war! Don't let 'em in, boys! For God's sake, keep 'em out!"

It was a brave man's deed. The wonder was his words were not his last, for though the Crows did not understand all his speech, they knew well enough what he meant. One brave near him struck him across the mouth with the heavy wooden stock of his Indian whip, so that his lips gushed blood. A half dozen arrows turned toward him, trembling on the strings. But the voice of their partisan rose in command. He preferred a parley, hoping a chance might offer to get inside the wagon ring. The loose stock he counted safe booty any time they liked. He did not relish the look of the rifle muzzles at this close range. The riders were now piled in almost against the wheels.

"Swap!" exclaimed the Crow leader ingratiatingly, and held out his hand. "How, cola!"

"Don't believe him! Don't trust him, men!"

Again Jackson's voice rose. As the savages drew apart from him, to hold him in even better bow range, one young brave, hideously barred in vermilion and yellow, all the time with an arrow at the prisoner's back, the men in the wagon corral now saw that Jackson's hands were tied behind his back, so that he was helpless. But still he sat his own horse, and still he had a chance left to take.

"Look out!" he called high and clear. "Get away from the hole! I'm coming in!"

Before anyone fully caught his meaning he swung his horse with his legs, lifted him with his heels and made one straight, desperate plunge for the gap, jostling aside the nearest two or three of his oppressors.

It was a desperate man's one hope—no hope at all, indeed, for the odds were fifty to one against him. Swift as was his movement, and unprepared as his tormentors were for it, just as the horse rose to his leap over the wagon tongue, and as the rider flung himself low on his neck to escape what he knew would come, a bow twanged back of him. They all heard the zhut! of the arrow as it struck. Then, in a stumbling heap, horse and rider fell, rolled over, as a sleet of arrows followed through.

Jackson rolled to one side, rose to his knees. Molly Wingate chanced to be near. Her scissors, carefully guarded always, because priceless, hung at her neck. Swiftly she began to saw at the thong which held Jackson's wrists, bedded almost to the bone and twisted with a stick. She severed the cord somehow, and the man staggered up. Then they saw the arrow standing out at both sides of his shoulder, driven through the muscles with the hasty snap of the painted bowman's shot.

"Cut it—break it!" he demanded of her, for all the men now were at the edge, and there was no one else to aid. And staunch Molly Wingate, her eyes staring again in horror, took the bloody stem and tried to break it off, in her second case of like surgery that week. But the shaft was flexible, tough and would not break.

"A knife—quick! Cut it off above the feather!"

He himself caught the front of the shaft and pushed it back, close to the head. By chance she saw Jed's knife at his belt as he kneeled, and drew it. Clumsily but steadily she slashed into the shaft, weakened it, broke it, pushed the point forward. Jackson himself unhesitatingly pulled it through, a gush of blood following on either side the shoulder. There was no time to notice that. Crippled as he was, the man only looked for weapons. A pistol lay on the ground and he caught it up.

But for the packs and bales that had been thrown against the wheels, the inmates of the corral would all have fallen under the rain of arrows that now slatted and thudded in. But they kept low, and the Indians were so close against the wagons that they could not see under the bodies or through the wheels. The chocks had not yet been taken out from under the boxes, so that they stood high. Against such a barricade cavalry was helpless. There was no warrior who wanted to follow Jackson's example of getting inside.

For an instant there came no order to fire. The men were reaching into the wagons to unsling their rifles from the riding loops fastened to the bows. It all was a trample and a tumult and a whirl of dust under thudding hoofs outside and in, a phase which could last no more than an instant. Came the thin crack of a squirrel rifle from the far corner of the wagon park. The Crow partisan sat his horse just a moment, the expression on his face frozen there, his mouth slowly closing. Then he slid off his horse close to the gap, now piled high with goods and gear.

A boy's high quaver rose.

"You can't say nothing this time! You didn't shoot at all now!"

An emigrant boy was jeering at his father.

But by that time no one knew or cared who shot. The fight was on. Every rifle was emptied in the next instant, and at that range almost every shot was fatal or disabling. In sudden panic at the powder flare in their faces, the Crows broke and scattered, with no time to drag away their wounded.

The fight, or this phase of it, was over almost before it was begun. It all was one more repetition of border history. Almost never did the Indians make a successful attack on a trading post, rarely on an emigrant train in full corral. The cunning of the Crow partisan in driving in a prisoner as a fence had brought him close, yes—too close. But the line was not yet broken.

Firing with a steady aim, the emigrants added to the toll they took. The Crows bent low and flogged their horses. Only in the distant willow thickets did they pause. They even left their dead.

There were no wounded, or not for long. Jackson, the pistol in his hand, his face gray with rage and pain, stepped outside the corral. The Crow chief, shot through the chest, turned over, looked up dully.

"How, cola!" said his late prisoner, baring his teeth.

And what he did with this brave he did with all the others of the wounded able to move a hand. The debt to savage treachery was paid, savagely enough, when he turned back to the wagons, and such was the rage of all at this last assault that no voice was raised to stay his hand.

"There's nothing like tobacker," asserted Jackson coolly when he had reëntered the corral and it came to the question of caring for his arrow wound. "Jest tie on a good chaw o' tobacker on each side o' that hole an' 'twe long afore she's all right. I'm glad it went plumb th I've knowed a arrerhead to pull off an' stay in wh sinew wroppin's got loose from soakin'.

"Look at them wrists," he added, holding up his "They twisted that rawhide clean to the bone, dam skins! Pertendin' to be friends! They put me in fro you'd let 'em ride up close—that's the Crow way, t right into camp if they can, git in close and play f But, believe me, this ain't but the beginnin'. The back, an' plenty with 'em. Them Crows ain't west Pass fer only one thing, an' that's this wagon train.'

They gathered around him now, plying him with tions. Sam Woodhull was among those who came, a Jackson watched narrowly every moment, his own w handy, as he now described the events that had b him hither.

"Our train come into the Sweetwater two days b you-all," he said. "We seen you'd had a fight but ha on. We knowed some was hurt, fer we picked up woman fixin's—tatting, hit were—with blood on hit, we found buryin's, the dirt different color."

They told him now of the first fight, of their losses, wounded; told him of the near escape of Molly Wi though out of courtesy to Woodhull, who stood near, said nothing of the interrupted wedding. The old m tain man's face grew yet more stern.

"That gal!" he said. "Her shot by a sneakin' I hoe? Ain't that a shame! But she's not bad— comin' through?"

Molly Wingate, who stood ready now with band told him how like the two arrow wounds had been.

"Take an' chaw tobacker, ma'am," said he. "P hunk on each side, do-ee mind, an' she'll be well."

"Go on and tell us the rest," someone demanded.

"Not much to tell that ye couldn't of knew, gentlem resumed the scout. "Ef ye'd sont back fer us we jined ye, shore, but ye didn't send."

"How could we send, man?" demanded Woodhull agely. "How could we know where you were, or wh you'd come—or whether you'd have been of any use if had?"

"Well, we knew whar you-all was, 't any rate," rejo Jackson. "We was two days back o' ye, then one Our captain wouldn't let us crowd in he said he wasn't welcome an' we w needed.

"That was ontel we struck the big C trail, with you all a follerin' of hit bl a-chasin' trouble as hard as ye c chase.

"Then he sont me on ahead to war an' to ask ef we should jine on. We kno the Crows was down atter the train.

"I laid down to sleep, I did, und sagebrush, in the sun, like a fool. I beat out and needed sleep, and I thou I was safe fer a leetle while. Whe woke up it was a whoop that done They was around me, laughin', twe arrers p'inted, an' some shot inter ground by my face. I taken my chan and shook hands. They grabbed me a tied me. Then they made me guide th in, like ye seen. They maybe didn't kn I come from the east and not from t west.

Jim Bridger

"Their village is on some creek above here. I thi they're on a visit to the Shoshones. Eight hundred m they are, or more. Hit's more'n what it was with t Sioux on the Platte, fer ye're not so many now. An' a time now the main band may come. Git ready, men. F me, I must git back to my own train. They may be bac twenty mile, or thirty. Would ary man want to ride wi me? Would ye, Sam Woodhull?"

The eyes of his associates rested on Woodhull.

"I think one man would be safer than two," said h "My own place is here if there's sure to be a fight."

"Mebbe so," assented Jackson. "In fack I don't kno as more'n one'd git through if you an' me both started His cold gray eye was fixed on Woodhull carelessly. "An ef hit was the wrong man got through he'd never lead the Missouri men for'rerd to where this fight'll be.

"An' hit'll be right here. Look yan!" he added.

He nodded to the west, where a great dust cloud rose

re is comin'," said he. "Yan's Bannocks, like as even the Shoshones, all I know, though they're uiet. The runners is out atween all the tribes. I e on my way."

urried to find his own horse, looked to its welfare, too, had an arrow wound. As he passed a certain he heard a voice call to him, saw a hand at the ed front.

s Molly! Hit's you! Ye're not dead no ways,

me," said the girl.

trew near, fell back at sight of her thin face, her but again she commanded him.

now," said she. "He's—he's safe?"

s, Miss Molly, a lot safer'n any of us here."

u're going back to him?"

s. When he knows ye're hurt he'll come. Nothin'll im, oncet I tell him."

ait!" she whispered. "I heard you talk. Take him She pushed into his hand a folded paper, unsealed, it address. "To him!" she said, and fell back on the ds of her rude pallet.

hat moment her mother was approaching, and at her alked Woodhull, actuated by his own suspicions Jackson. He saw the transaction of the passed note essed what he could not know. He tapped Jackson shoulder, drew him aside, his own face pale with

n one of the officers of this train," said he. "I want ow what's in that note. We have no truck with n, and you know that. Give it to me."

kson calmly tucked the paper into the fire bag that at his belt.

ome an' take hit, Sam, damn ye!" said he. "I don't what's in hit, an' won't know. Who it's to ain't o' yore business!"

ou're a cursed meddler!" broke out Woodhull. 're a spy in our camp, that's all you are!"

o? Well, cussed meddler er not, I'm a cussed shore An' I advise ye to give over on all this an' mind yore ess. Ye'll have plenty to do by midnight, an' by that all yore women an' children, all yore old men an' all cowards'll be prayin' fer Banion an' his men to come. includes you somewheres, Sam. Don't temp' me too ner too long. I'll kill ye yit ef ye do! Git on away!"

They parted, each with eye over shoulder. Their talk had been aside and none had heard it in full. But when Woodhull again joined Mrs. Wingate that lady conveyed to him Molly's refusal to see him or to set a time for seeing him. Bitterly angered, humiliated to the core, he turned back to the men completing the defenses of the wagon park.

"I kain't start now afore dark," said Jackson to the train command. "They are goin' to jump the train. When they do come they'll surround ye an' try to keep ye back from the water till the stock goes crazy. Lay low an' don't let a Injun inside. Hit may be a hull day, er more, but when Banion's men come they'll come a-runnin'—allowin' I git through to tell 'em.

"Dig in a trench all the way aroun'," he added finally. "Put the women an' childern in hit an' pile up all yer flour on top. Don't waste no powder—let 'em come up close as they will. Hold on ontel we come."

At dusk he slipped away, the splash of his horse's feet in the ford coming fainter and fainter, even as the hearts of some felt fainter as his wise counsel left them.

They waited—the women and children, the old, the ill and the wounded huddled shivering and crying in the scooped-out sand, hardest and coldest of beds; the men in line against the barricade, a circle of guards outside the wagon park. But midnight passed, and the cold hours of dawn, and still no sign came of an attack. Men began to believe the dust cloud of yesterday no more than a false alarm, and the leaders were of two minds, whether to take Jackson's counsel and wait for the Missourians, or to hook up and push on as fast as possible to Bridger's Fort, scarce more than two hard days' journey on ahead. But before this discussion had gone far events took the decision out of their hands.

"Look!" cried a voice. "Open the gate!"

The cattle guards and outposts who had just driven the herd to water were now spurring for shelter and hurrying on the loose stock ahead of them. And now, from the willow growth above them, from the trail that led to the ford and from the more open country to the westward there came, in three great detachments, not a band or a body but an army of the savage tribesmen, converging steadily upon the wagon train.

They came slowly, not in a wild charge, not yelling, but chanting. The upper and right-hand bodies were Crows. Their faces were painted black, for war and for revenge. The band on the left were wild men, on active half-broke horses, their weapons for the most part bows and arrows. They later found these to be Bannocks, belonging anywhere but here, and in any alliance rather than with the Crows from east of the Pass.

Nor did the latter belong here to the south and west, far off their own great hunting range. Obviously what Carson, Bridger, Jackson had said was true. All the tribes were in league to stop the great invasion of the white nation, who now were bringing their women and children and this thing with which they buried the buffalo. They meant extermination now. They were taking their time and would take their revenge for the dead who lay piled before the white man's barricade.

The emigrants rolled back a pair of wagons, and the cattle were crowded through, almost over the human occupants of the oblong. The gap was closed. All the remaining cargo packages were piled against the wheels, and the non-combatants sheltered in that way. Shovels deepened the trench here or there as men sought better to protect their families.

And now in a sudden mêlée of shouts and yells, of trampling hoofs and whirling colors, the first bands of the Crows came charging up in the attempt to carry away their dead of yesterday. Men stooped to grasp a stiffened wrist, a leg, a belt; the ponies squatted under ghastly dragging burdens. *(Continued on Page 86)*

OUR OFFICIAL FAMILY

Recollections of a Cabinet Minister's Wife

By Mrs. Josephus Daniels

COPYRIGHT BY G. V. BUCK, WASHINGTON, D. C.

Mrs. Daniels Going Aboard the U. S. S. Dolphin, the Former Secretary of the Navy Following

THERE are men who bitterly assail one another on the floor of the United States Senate, but whose wives are the best of friends. This situation has come about largely through the organization known as The Ladies of the Senate, which was formed by Mrs. Thomas R. Marshall, wife of Vice President Marshall.

During the days of the war Mrs. Marshall brought the group together to sew for the Red Cross. A room in the Senate Office Building was set aside for their use one morning of each week, and over their needles and their box luncheons the women began to establish friendships.

Some of the bonds which grew between Democratic and Republican women remind me of a friendship one of my boys formed soon after we went to Washington. The boy had never known much about Republicans, and one day he came to me with popping eyes. "Mother," he said, "my friend is a Republican. Will it do for me to go with him?" Democratic and Republican women have found that it would do for them to go together, and politics has been relegated to the background with such pleasant results that the organization is to be continued.

A remark which Mrs. Marshall made shortly after coming to Washington is indicative of her strength of character. "I have no respect for a woman who changes her habits here," she said. "If she has been brought up to believe that a thing is permissible under her code of manners I have no criticism of her when she does that thing here. But when she changes her standards because she has a different position in Washington, then I do condemn her."

Too Small for the Chair

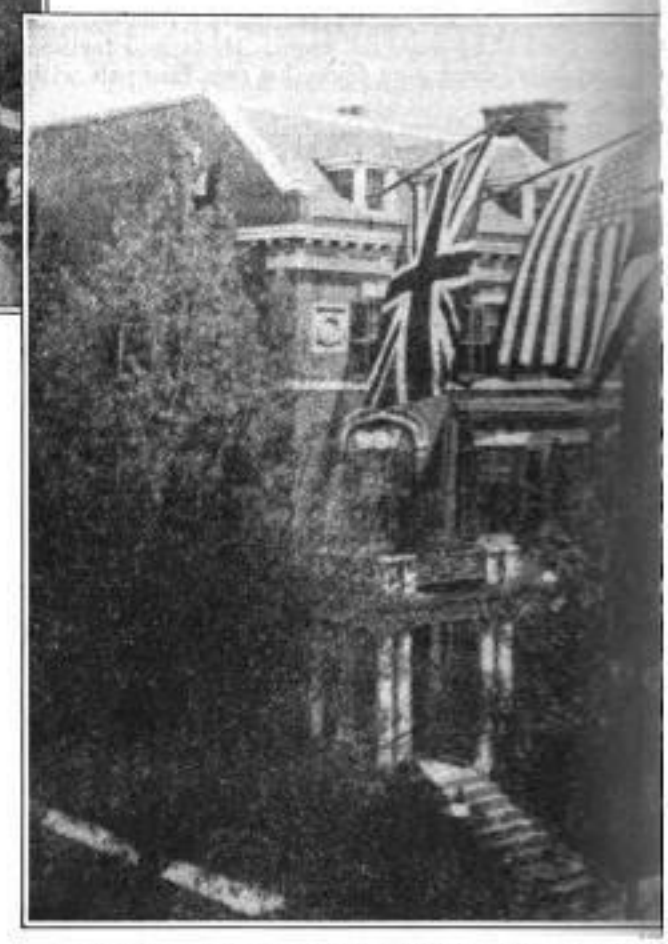
UPON Mr. and Mrs. Marshall fell a considerable burden of social responsibility in Washington. Their own great popularity brought them many invitations. Added to this was the fact that while President Wilson was ill upon the Vice President devolved the official entertaining for foreigners.

It was during this time that Mr. Marshall said one night at dinner that he believed he should carry a screen around with him, retiring behind it at intervals to declaim, "The representative of the President will now come forth," or "The Vice President will now come forth," or "A Hoosier politician will now come forth."

Mr. Marshall never spared himself in the quips and jokes for which he was famous, and his frequent remarks at the expense of the senators over whom he presided have been enjoyed by many persons in the galleries.

Mrs. Daniels in Y. W. C. A. Uniform

A story is told of him when he first came to Washington. Former Senator Bacon, of Georgia, a great stickler for tradition, entered the chamber one morning to find that the great throne-like chair provided for the Vice Presidents for years had been replaced by a simple swivel chair such as is used by many an American business man at his desk.



Senator Bacon interviewed the sergeant-at-arms and was told that the secretary of the Senate had ordered the change. His indignation mounted as he went to the secretary and was told that the Vice President was responsible for the order. Thereupon Senator Bacon approached the Vice President. Mr. Marshall heard him through, as he expatiated on the glories of vice presidents of the past who had occupied the chair, and then he asked: "Senator Bacon, the people elected me Vice President without having seen me or that chair. All I can say is I am a misfit and I do not intend to continue shaking around in it like one pea in a pod."

One can imagine the Vice President mentally remarking that it was hard enough to preside over that particular Senate without sitting in an uncomfortable chair.

It is a great tribute to the spirit with which the Vice President performed his duties during those trying days when the Administration was the object of such bitter attack by the senators, that upon his retirement he received a gift from the senators, accompanied by speeches bearing testimony to the high regard with which he is held. Similarly The Ladies of the Senate made a gift to Mrs. Marshall in token of their affection and esteem for her.

Mr. and Mrs Marshall brought home to me a fact which I had never appreciated so keenly before I went to Washington. I had enjoyed my own children so much and had lived so greatly with my four boys that I had not realized the void in the lives of those who have no children, nor the keenness of envy with which they regard those who have them. I can recall several men in Washington who happened to be thrown with my boys and who revealed plainly their yearning for sons to carry on the name they had striven and sacrificed to establish. One very wealthy and powerful man several times rode in the same elevator with one of my boys and one day laid his hand on the lad's shoulder and said, "I would give a million dollars if you belonged to me."

From the beginning of their stay in Washington Mr. and Mrs. Marshall participated in the local civic and patriotic activities, and at a day nursery where

Residence of Secretary Daniels in Washington, Where an Amusing War Scare Occurred While President Wilson Was Dining There

Mrs. Marshall helped to weigh and measure babies she became greatly interested in a little boy who was suffering from malnutrition. The boy often came under her attention. She learned that the father and mother were honorable, hard-working people with a large family to support. Finally Mrs. Marshall, with the approval of the Vice President, asked to take the boy home for six weeks. Permission was given by the parents. Mr. and Mrs. Marshall were then making their home at one of the hotels. They took a house in order to make the boy comfortable, and engaged a trained nurse for him. As they struggled to bring the child back to health they experienced the sacrifice which greatly endears, and at the end of the six weeks they found that they could not bear to give him up.

The Kindly Marshall Spirit

IT WAS a rare spirit which Mr. and Mrs. Marshall displayed in planning for the little boy. There was no adoption, for they did not want him to be bound to them by law nor the mother to be prevented from having him back whenever she might want him. There was no pretense that the child was their own, and the little fellow was taken regularly to visit his old home, for they wanted him to love and be loved by his own family. Whenever the child was ill his own mother was the first to be notified.

Morrison Marshall lived with the Vice President and Mrs. Marshall for several years, until the spring of 1920. One day Mrs. Marshall came to a Congressional Club luncheon, at which she was guest of honor, saying that the child was not well. During the luncheon she repeatedly sent to ask after him over the telephone, and immediately after the luncheon had been served she excused herself and rose from the table. From that day the child grew worse, and a few weeks later passed away. He was buried in Washington until one day, early last year,

arshall announced that she was with- for a time from all social activities, took the little body to the Marshall plot in Indiana.

ip's transom is not a ventilator, a ne contains powder which is to be instead of stories that should be a conning tower and a fighting top eculiar purposes of their own—these were learned for the first time by women, and some men, when they e guests of Mr. Daniels on board the n, the ship assigned to the Secretary Navy for his particular use.

Dolphin was completed during the istration of President Arthur and ssioned in 1884. There was a terrible l over her cost, a sum considerable se days, but an amount which to-day scarcely buy a good launch. That rk was well done is proved by the long which the ship has given and the at her engines, in use now for more thirty-five years, have never needed replaced. But the criticism broke the of the owner of the shipyard in which olphin was built, and in his will he d his family never again to take a nment contract.

Trips Aboard the Dolphin

E Dolphin is the oldest steel ship now in e Navy and has the record for traveling reatest number of miles of any of the . Indeed, during one year of the war olphin traveled a greater distance than ther ship in our Navy. That was after les to the south of us created a great for small-draft ships, and Mr. Daniels d over the Dolphin for fighting service. the time the Dolphin had just been over. There were new hangings, and which I especially liked had been put into the com- tion dining and sitting salon. The Japanese steward, had been on board during most of the time that Mr. els had been Secretary of the Navy, carefully rolled up new rug and put back the old one. As the ship was oaching Haiti the admiral in command summoned the ard and remarked that he didn't think much of that and would like the new one laid before port was hed. The steward, with an intrepidity that was mar- s under any conditions and especially so in view of the utation of the admiral for sternness, replied, "Sir, you 't have that. That is Mrs. Daniels' rug."

ut the admiral got the rug.

While she was in southern waters the Dolphin was taken o Tampico Harbor, and there the memorable incident urred of the imprisonment of her paymaster, when miral Mayo noti- the authorities at the prisoner st be released and United States saluted or he uld fire on the y.

The first official p which we made the Dolphin was April 1, 1913, after ee weeks crowded ith entertainments the incoming embers of the Ad- inistration, house nting and all the tails of getting set- d in a new city. was the first time hat most of the embers of the cab- et and their wives ad been able to stop ng enough to real- e their new status s members of the fficial family.

We had on board, among others, the Secretary of War, Mr. Garrison; Mrs. Garrison; Miss Nona McAdoo, who was then hostess in the house of her father, the Secretary of the Treasury; and Miss Agnes Hart Wilson, who because of her mother's illness acted as hostess all during the two Administrations for her father, the Secretary of Labor. Then there was Miss Eleanor Wilson, the youngest daughter of the President, and her cousin, Miss Bones.

Mr. and Mrs. Thomas R. Marshall and Their Foster Son, Morrison Marshall

The sound of the steering engine of the boat was noticeable as we proceeded toward the capes for the target practice, which was the object of our trip, and there was recalled a former Secretary of the Navy, whose sleep was disturbed one night by the engine and who called the captain and asked what was causing the noise.

"The steering engine, Mister Secretary," replied the captain.

"Have it stopped," said the secretary, rolling over and composing himself again for slumber, and leaving the captain to solve the impossibility of stopping the steering engine and yet docking the next morning at Annapolis.

That was the first of many trips on board the Dolphin, all of them delightful, although wind and wave often worked havoc with our plans. On one occasion we were taking a party up to the Massachusetts coast for the launching of the Nevada, our guests including Mrs. Newlands, wife of the senior senator, and Senator and Mrs. Pittman, of Nevada. A very rough sea was running, which rolled Mrs. Pittman's chair completely over and sent her sliding across the deck in a heap with some young guests and their chairs. We were obliged finally to put in to Newport and continue our journey to Quincy by rail.

The Rivers and Harbors Convention was meeting in Albany one year and Mr. Daniels, who was to speak at the convention, could not spare the time to make the trip by water, but it was necessary that the Dolphin should go. It accordingly became my duty to make the trip and act as hostess. The Berkshire was taking up other delegates, and the two boats exchanged hospitalities on the ride up the Hudson. We stopped one evening at a small town and on our trip around the city a resident who apparently had not understood who I was, asked me, in the presence of the party from the Berkshire, "What kind of a fellow is this man Daniels, anyway?"

Consternation was visible on the faces of those around me, and I can still remember the relieved laugh at my reply, "That question was put up to me twenty-six years ago, and I decided that he would do."

The Dolphin was stationed in the Hudson River for the Army and Navy game one year, when a most amusing incident happened. The motor boat to go between shore and the ship was beautiful in appearance but unreliable in use. On this day the young officer in charge of the motor boat had had the bos'n and the crew taking her round and round the Dolphin so that he would be sure that she was in perfect trim when the Secretary of the Navy came on board. When they left the ship for the trip shoreward to meet Mr. Daniels a sailor standing at the stern, who was too confident of his sea legs, was swept off the boat by a hawser. As the launch circled round and round in the effort to pick him up out of the water a sudden jerk stopped the engine, the motor refused to mote—and there on the dock stood the Secretary and his party.

Entertaining in New York Harbor

THE young officer told me afterward, with tears of consternation in his eyes: "Oh, Mrs. Daniels, you don't know how I felt. You haven't been taught to believe for years that the Secretary of the Navy is a little shining light in heaven — not quite God, but the next thing to God."

A dinner on board the Dolphin which stands out most clearly in my recollection was given in New York Harbor, when the Mayflower, the President's yacht, and the Dolphin had taken up a large party for a review of the fleet.

Rear Admiral Fletcher, commander in chief of the fleet, invited the men of the party to dine with him on board the flagship, the Wyoming, and the ladies were asked to dine with me on the Dolphin.

When I returned to the ship that morning after the review I had a gift not ordinarily accorded to an individual, a box of flowers at

A Woman Named Kat

By Mary Brecht Pulver

ILLUSTRATED BY CHARLES D. MITCHELL

She Stared Now at Her Hostess, Unaware of the Mistiness That Came Before Kate's Eyes

AFTER the door closed on the lady agitator Kate Alverdy sat down again on the little sofa facing the picture of Napoleon and Josephine and looked at it steadily. Not that its details composed themselves to her eye any more clearly than during the interview just closed, nor indeed that Kate needed any clarity of composition. Actually she was not seeing the picture at all. It was there—a small patch of color arrangement on her wall—just as it had hung unobtrusively this many a year—since her marriage, eighteen years ago, in fact—like a familiar mole on a friendly face. She recalled now that she had never liked the picture. It was really a wretched choice for a wedding gift. She stared at it steadily, still without looking at it, remembering how she had unpacked it out of its tissue paper all those years ago and hung it up here in the little reception room, an unconsidered bit of detail, because Cousin Julius Page had so kindly sent it, and because its frame was really good, powdered Florentine gold leaf over bronze, and because in her great encompassing happiness this scrap of historic emotion seemed to play the part of foil. She had traded, self-congratulatory, a little smug, on the note of tragic suggestion it offered.

It was not really a picture of Napoleon and Josephine at all. It was really Napoleon Breaking the News to Josephine. At least this was the caption on the back, and you could gather from the posture of the parties concerned that the news was vital and most unpleasant. It was written all over the person of the doughty little emperor, in the puffed-out stock, on his pouter-pigeon chest, in the forensic position of his hands, one buried in the bosom of his coat, the other beneath its tail. His face was grim, his shoulder averted; but you gathered that the very grimness and angle of aversion bespoke his imperial discomfort and uncertainty of himself.

The effect of his news was even worse on the poor little beautiful, miserable lady on the sofa back of him. Her dark, curly head was buried in a morsel of handkerchief; her whole willowy figure had sunk back into the affectionate embrace of a maid of honor. All because of the news the disagreeable little person in the frog-bellied costume, with his square jaw and wispy forelock and tasseled boots, had broken to her—Kate had called him names a dozen times in looking at the picture—to wit and namely, as could be ascertained in any French history book, the news that he was going to put her away.

Kate suddenly pressed her hands tightly together and, leaning over, picked up from the corner of the rug, with delicate care, an almost invisible curlicue of white thread. As she did so she could see again the half-concealed legs of Petunia Rosyblow thrusting out from under the sofa—the legs which had precipitated the lady agitator's remarks.

Kate called them all lady agitators—these women who were affiliated with public movements, with those boards and bureaus and committees in which the name of Richard Alverdy figured, and with whom, in the capacity of Richard Alverdy's wife, she had so often been compelled to commune.

"Compelled" is the word deliberately chosen, for Kate was reactionary and insubordinate in her compliance with modern demands. She cared no whit to be a lady board or to sit on committees, though she must figure in their presence as the wife of the owner of the big Alverdy Mills and the social hub of their little mill community. She must lend an ear to community benefits, to soup kitchens and ailing orphans, to home relief and housing problems, to all necessary beneficences connected with her husband's work.

In her heart of hearts she cared for no active part here. For her a book by the fire or a tramp with her dog over russet autumn hills, or—driving her maids out of the kitchen—the mixing of a special cake or salad for Rick, as in the old days. She was insular and narrow in her interests—Rick had often told her so. It was because of this insularity that she had fought herself so often and so gallantly; had let her name become a synonym for generosity of time with those who fostered the growth of new movements in their town. It was because of this that she so often received them here—eager, earnest persons afire with zeal to better the world, to rebuild and construct. In the prefranchise days it was here the suffragist had burned her ear with scorching proof of her oppressions; it was here ladies with a string of federated clubs or societies under their wing pressed her for contributions; or patronesses of benefits for rest homes for pets or old women or outworn veterans; or godmothers for municipal schemes and leagues and drives. Kate always permitted herself to be driven. Rick had given her a wonderful bank account. Only at times her mind would grow a little vague before her besieging host. She would sometimes formulate a faint protest about people doing their day's work and saving a little and taking plenty of baths and reading books, but this was met with sweeping protest. They must have playgrounds and theaters, movies and talking machines, swimming pools ——

"Rick's given them all those things. This is Fairvale, you know—everybody gets fair play and fair pay."

There were other things, she was told. Her duty was clearly defined. There was always plenty to do.

This morning she had almost refused to come down when Miss Camilla Conway's card was brought up to her; had yawned boredly and was on the verge of flat denial.

"Field Secretary for the County and State Bureau of Eugenics and Health Extension," she had read.

"Great heavens," said Kate savagely, "what have I to do with health or eugenics, standing here tottering on the brink of the grave? What has old Mrs. Alverdy to do with this?"

You see, it was the morning of her fortieth birthday, and Kate was a bit savage about it. She didn't care particularly to be forty—never had really intended to be forty—yet here was the fact thrust violently upon her, full-grown, like Pallas Athene sprung from Z brow. Why, yesterday she had only thirty-nine—a mere chit—now, to-day, definitely categoried!

"I'm old, Father William—ol the dickens—and yet I don't feel bit."

It was just here that Miss Conw card had been thrust upon her.

"Eugenics!" said Kate ag "She'll be sixty, and have a lean hungry look, and yellow eyes that will blaze bore into you, and a bit of green parrot feathe a magenta velvet tomato on her bonnet. Perh just to look at her will cheer me up."

That was how it came about that a minute l Kate faced the visitor in her reception room, realized her great error.

Miss Camilla Conway was in complete rapport as exponent of her subject. She sat, a healthy-looking yo woman of twenty-eight or so, in a low mahogany ch wearing a modest suit of heather cloth with squirrel fu yet such was the quality of the atmosphere she creat the aura she exhaled, that Kate felt almost apologetic the closed windows of her room. She felt that only drivi currents of pure icy air should envelop any creature vivid and rose red and cream white and bursting w palpable vital energy. Not that Miss Conway was beau ful; quite the reverse; and this was curious, too, as Ka realized in coming forward. There was no feature of M Conway's face, no individual turn or curve of her stro hale figure, that was not in itself charmingly created. Fr the intense blue of her clear eyes like Norwegian i from her smoothly banded Titian hair and full-to-bursti ruddy apple cheeks; from her double row of unsull teeth like kernels of new corn—to the strong column of h throat and the rather fully exposed lines of her capabl strong legs in the thick wool stockings and stout brogu she was the epitome of human female vigor.

Yet the hand that had assembled her seemed to ha slipped. Despite numberless delightful features, there w no effect of beauty. She was the type of whom one woul say, "She just misses being pretty." To tell the truth Miss Conway's miss was well wide of the bull's-eye, a Kate, coming forward, noted.

Plain and wholesome; a suitable mother for warriors-the viking's bride. She does setting-up exercises, countin one—two—three. She looks best in a sweater and gym knickers. She can play basket ball like a fiend and do th Dutch roll backward. She washes with antiseptic soap an wears masculine lingerie.

"How d'you do, Miss Conway?" she said aloud.

"Mrs. Alverdy! How fortunate I am to find you a home! I've been wanting to see you for so long! But I've been so crazy busy ——"

"Exuberant!" thought Kate. "She gushes—she's so healthy she can't help it. Oh, well, I'm forty!"

She had drifted away from Miss Conway's thread, but caught up.

"—— for three weeks. Of course we've seen Mr. Alverdy a lot—ever since we opened up our committee rooms—and he's heart and soul with us. Mr. Alverdy is wonderful!"

"Yes," said Kate—she smiled, a little languid, though no one on earth could have told so well as herself, she thought, how wonderful Richard Alverdy really was. It was this feeling that threw up a barrier between her and others when they began to speak of him—a sort of fierce possessiveness that turned her cool and unreceptive.

"Women usually find him so," she added.

"I can quite believe it. I was never so surprised. I thought when he came into the office, 'Is it possible that so young a man, so—er—well, so attractive, so magnetic a man can carry Fairvale on his shoulders, and have made so great a name for himself throughout the state?' Wonderful, Mrs. Alverdy, really!"

"Yes," said Kate not ungraciously, "and what is it you wish of me, Miss Conway?"

Miss Conway sat very erect, her fine, strong young spine straight as a dart, but Kate rather lounged on her little sofa. Her lavender morning gown, with the pleated Val lace collar and cuffs, set off her long, slim, straight lines to advantage. Kate looked rather well when she lounged—and knew it.

"Oh, Mrs. Alverdy, I shall come to that in a minute—I was leading up to it, in fact—just telling you how wonderfully interested and kind Mr. Alverdy has been.

Digitized by Google

—how different he appeared from my expecta-
nd you, too, Mrs. Alverdy. I hope you don't mind
ıg you you're different too. I had fancied some-
ll, how shall I put it?—someone quite matronly
All the mill owners' wives I've worked with
ere so—comfortable."
hrew back her head and laughed. Her teeth were
t as good as Miss Conway's, and her laugh was
dden chiming of full-toned, sweet bells.
now, Mrs. Alverdy, I'll come right to the point.
rdy has an autumn field day here in Fairvale, and
ised the eugenics and health committee a booth
n, with a lot of appropriate stunts. We'll have a
itronesses, and we'll want you to head it; and, oh,
ts are lovely, Mrs. Alverdy! We'll have a better-
ontest, of course, and a beauty contest for girls
enty—with a committee of returned soldiers from
. F. for judges—and running races for matrons of
e or over—the loveliest prizes, Mrs. Alverdy!
Brothers are giving the girls an order for a
ollar hat, and Barrett & Reeves are offering the
the loveliest set of sprigged china—one hundred
pieces—and we have a beautiful set of Famous
of the Past, in three-quarters Levant, for our prize
. The last contest will be for hale old men above
ears, Mrs. Alverdy. We will give the books to the
est preserved specimen, making the tests according
astic standards. It will be so interesting. We have
derful entries already, one of eighty-seven, the
e ninety—an old Mr. Knorr, a beautiful old man
ks like a prophet out of the Bible. And of course
ner will have to tell us exactly how he has lived
to preserve his splendid powers."
d Jake Knorr is the winner he will tell you he was
coffee and fried pork and pie and has chewed and
since he was a baby. Our old men around here
ke that."
I'm sure you are wrong, Mrs. Alverdy! Good
like everything valuable, requires thoughtful care
bandry. It is only to be had by living according
mple, hygienic routine. It is humanity's most
s possession and, like everything else, is had at a

apple bloom on Miss Conway's cheeks deepened,
blue eyes turned accusingly on Kate.
m sure our committee can convince you of many
ental truths regarding health, Mrs. Alverdy, if you
ow us. All too few mothers of families have as
te a comprehension as they should of the simple
ments of normal living. For your own sake, Mrs.
y. I hope you will forgive me if I am too
al, but you suggest a certain lack of physi-
e yourself, of—er—being under form, and
r own sake, and the sake of your children,
ould seriously interest yourself in our great
-extension work."
r the sake of my children!"
e repeated the phrase rather idiotically.
rely, as the mother of the children of a

thought one of your
ren ——"
Ah, Petunia! That's an
doll out of my child-
. My little nieces come in and play with her
etimes."
e knew perfectly the correct ritual to follow—
canonical thing to say.
It has always been the greatest disappoint-
t to Mr. Alverdy and me that we have no
dren—the source of a very deep sorrow."
he had heard women talk like that—a few women in
case. It would be the truest, the sincerest thing she
self had ever uttered, yet its very truth, its sincerity
vented utterance. To interpret the hidden wistfulness
her life into the cool ears of this positive, scrubbed and
wing exponent of the hygienic was unthinkable. The
verse in Kate that reared that peculiar barrier behind
ich she so often hid moved her now. She swung her
t and let her head tip at a casual, careless angle, her glance meeting Miss Conway's rapt blue stare nonchalantly. But Miss Conway was still involved.

"Oh, but that is too unfortunate—is it not, Mrs. Alverdy? I had no idea of such a thing! No child—no son to whom Mr. Alverdy can pass on his great interests! What a disappointment it must be to him!"

"In just a minute I shall put her out of my house—with my two bare hands. She's strong as a bull, but God will give me the strength," thought Kate.

Miss Conway appeared to be chanting. She was naming, one by one, Richard Alverdy's industrial achievements—the bone and sinew of the Fairvale prospect that stretched over two hills visible through the long windows. She was summing them up now, reiterating the pity of their deprivation.

"I've always been sorry for childless people. One can imagine the disappointment. After all, a home is not a home without a child, you know. Indeed, marriage"—she fixed Kate with a brisk, bright eye—"marriage without a child can hardly be called marriage."

"My dear young woman, what can you possibly know of marriage, who have never tried it?"

The words formed on Kate's lips, but died there. She was thinking what devastation a callous foot can offer to one's hidden inner garden.

"What should you call it, Miss Conway?" she asked.

Miss Conway lifted her head as at a challenge.

"It is not for me to say, Mrs. Alverdy; but I believe—I am sure that it might be made the basis of a supreme, a supernal sacrifice in the interest of life, of humanity. I have often wondered why in certain instances a childless woman does not abdicate."

"Abdicate!" Kate repeated.

Miss Conway snapped her glove with vigor.

"Just that, Mrs. Alverdy. How beautiful it would be—er—eugenically speaking, if women of that type stepped aside! Everything we do must be for the race, for the common human betterment. A woman not contributing is, of course, a parasite. You'll pardon my frankness, Mrs. Alverdy, but I am genuinely and unselfishly interested. What a pity that the triumph of Fairvale must die with Mr. Alverdy; that its association with his name will span but one generation!"

"With my two bare hands!" Kate's mind registered.

But she was no longer thinking connectedly. She saw the capable youth and strength of Miss Conway—and this was her fortieth birthday. Outside the wide reach of Rick's factories stretched, climbing brown-gold hills that melted into purple distance, and she saw Rick as he had walked out of the hall at breakfast—tall, lean, supple, active—young still, as men were counted.

And Kate almost sneered aloud. Almost she said aloud: "Why, I've thought of all these things before, my poor girl, a million times! Who are you to refresh my mind in this way? Do you suppose you have to go about putting the world to rights? Do you suppose your thought is original?"

Miss Conway was putting on a second glove. Rosy and strong and determined, ignorant as a child who has unwittingly set off a mine, she stared now at her hostess, unaware of the mistiness that came before Kate's eyes and lay like a film across the room. She only put out a square, forthright hand.

"Oh, Mrs. Alverdy, I hope I haven't been too personal—that you'll not construe my remarks in that way! I only spoke from a general angle. My work keeps me in touch so closely with people I can't help wanting to work out problems for them. It seems to me such a waste to do anything but put out a helping hand—don't you think?"

And Kate could think of no particular irony or convention with which to evade. Miss Conway wrung her hand literally, and her assent verbally to her project, and was gone all at once—calm, ruthless, conquering, "like a proud, trumpeting elephant," Kate thought, hearing her descend from the porch.

Then she had gone back to sit on the little sofa and had looked at the Napoleon and Josephine, which had bobbed suddenly into her consciousness during Miss Conway's talk, and at the limp form of Petunia Rosyblow.

After all, Miss Conway had offered her nothing new. She had been the spark, the catalytic that set off certain processes in Kate's soul. For better than two years now the tiny hidden seed of Miss Conway's idea had been germinating in Kate's mind. It had remained for a Miss Conway suddenly, crudely, to put into the symbols of accepted speech—the coarse phrases of an intrusive stranger—the hidden, evaded, half-guessed concept that Kate had allowed to play on the edge of her consciousness. Marriage, Kate had been reared to believe, was for better, for worse. Still, it was true that Rick had made a little kingdom for himself—was a little industrial Napoleon really.

There was, of course, something in Nap's idea. She admitted that. A woman must mean something—must be contributing. What exactly did she herself contribute? Well, if she contributed nothing, was not this horrible lady agitator right? Was she not a parasite—purely that? And didn't Rick himself think so? They were certainly no closer together. Something, some wall, lay between. For years Rick seemed to evade any—any searching analysis, any attempt to discuss their deprivation in life. He was satisfied, he declared, but was it not a satisfaction of resignation. And didn't hot rebellion stir in his heart at times? Did he not feel these things Miss Conway had so crudely uttered, or hadn't they been put into words, actually, for him?

Kate remembered suddenly a dozen instances where innuendo or condolence had been uttered. She had passed them over, but the scars remained. She was suddenly aware of these now. Now also she remembered afresh certain scraps of conversation overheard when Rick was making his Christmas presentation at the local newsboys' dinner, the little fellows clustering around him:

"Doesn't Mr. Alverdy love children? What a father he would have made!"

Rick was fond of children—healthily, normally so. Yet it hadn't occurred to Kate in their earlier years that they mattered more to him—if as much—than they did to her. It was apparently only that their lack mattered so much to other people.

PHILADELPHIA, MAY 6, 1922

Getting What We Ask For

PENNSYLVANIA has a chance to leaven the public life of the country by nominating for the governorship at her approaching primaries a citizen who has behind him a long and unspotted record of unselfish public service, a record that is noteworthy not for mere passive honesty but for a thousand proofs of the old Roosevelt fighting strain that puts the fear of God into the hearts of political tricksters and predatory private interests.

Pennsylvania politics is a mass of contradictions. Governor Sproul gave the seat in the United States Senate left vacant by the death of Senator Knox to Mr. W. E. Crow, a purely political appointment that was not hailed with approbation except in organization circles. A little later, the passing of Senator Penrose, the sole survivor of the old race of great bosses, left the state organization leaderless, and the immediate political outlook was hazy until the governor surprised friends and foes alike by the appointment of Mr. George Wharton Pepper to the Penrose seat.

Apparently this was recognition of the principle that big offices should go to big men, regardless of the bleatings and yammerings of petty politics.

Shrill factional fights for the Republican gubernatorial nomination were suddenly stilled by the announcement of Mr. Gifford Pinchot that he was out for the governorship on a platform prepared by himself and scattered broadcast. To Mr. Pinchot's enemies the distressing feature of this sudden eruption was not that it was backed by a sensible and alluring platform but that they well knew he meant every word of said platform, and if elected would carry it out in letter and in spirit. Moreover, they were beset by the well-grounded fear that the voters at large are so familiar with Mr. Pinchot's reputation based upon past performances that they, too, would take his declaration of principles at its face value instead of regarding it as the conventional effervescence of political hokum.

The enthusiasm with which adherents flocked to the Pinchot banner threw the organization leaders into a panic, and after several withdrawals a new candidate was put forward at the last minute. The tactics pursued afforded a striking instance of the extent to which a few men can nullify the spirit and purpose of the direct primary system.

In recent years Mr. Pinchot's name has not often figured in national news, but everyone with a memory a yard long recalls that it is, in effect, a short way of referring to or connoting the Conservation of National Resources. The long and bitter fight that Mr. Pinchot made is now ancient history; but it is no less valid training for the sound exercise of executive functions as the chief magistrate of a vast and prosperous commonwealth.

One of the greatest living authorities on American history was recently asked what was his opinion of the House of Representatives, taking it by and large, from the days of the Continental Congress down to the present time. He was quick to reply, "Pretty poor stuff! But," he added, "the Senate, until recently, has been rather better." It ought to be a great deal better; and so ought the general standards governing the election of men to all high public offices.

The willingness of men like Mr. Pepper and Mr. Pinchot to make the very real personal and financial sacrifices involved in the acceptance of public office is a hopeful sign and a good omen.

Unceasingly we complain of the burden of taxes and extravagant public expenditure under which we labor; and at the same time, as a rule, we keep on putting into office men who, we know in our hearts, will continue to operate along the same old wasteful lines.

With our voices we moan for relief, but with our votes we echo the cry of the mad orator in Lewis Carroll's book: "Less Bread! More Taxes!" And we get what our votes ask for.

Bonds for African Land

ACCORDING to traditional economics the payment of the debts of Europe to the United States can be accomplished only in terms of goods and gold. We could draw the new gold of the world as fast as it is mined, and some governmental gold in addition. We could invite and receive a flood of goods. Mr. Vanderlip has proposed a scheme of liquidation whereby the payments would remain in Europe for upbuilding, constituting American investments there.

Many economists who rebel at the thought of a flood of gold and goods, declare outright for cancellation. New proposals are always welcome in a dilemma. A new proposal comes from Senator France, and is stated in the Congressional Record.

The proposition of the senator from Maryland—whose position on the recognition of the Soviet Government of Russia is well known—runs to the simple effect that the ex-Allies should turn over to us the former German colonies and cables as liquidation of their debts to us. President Wilson stated in Paris that this country would accept no part of former German possessions. That is not in contradiction to the present proposal, because we would now be accepting present Allies' possessions! Let a line be drawn from about Ashland, Wisconsin, to El Paso, Texas. The country to the east of this line corresponds in area to the combined areas of the former German colonies, as illustrated in a map printed in the Record. The speech of the senator bristles with pertinent homilies. "Civilization is goods." "It is ethically right for us to extend the boundaries of civilization to Africa, and it is commercially wise to do so." The bonus question is several times referred to in the address, and the reader makes the inference that homesteads might be carved out of these African lands. Finally, appeal is made to the missionary spirit of the country.

The link between evangelization and trade has seldom been more sympathetically described. "Christianity is service, and service must be expressed in goods; so that it is particularly sound ethically and it is very wise commercially to do what I have suggested."

What Germany might think of the matter is not stated. Nor is any intimation of the attitude of the ex-Allies adduced.

We did not ratify the Treaty of Versailles, so that we have never confirmed the legality of the transfer of these former German possessions.

Insular Americans who have only a hazy idea of the size and location of the former German possessions in Africa will proceed to study Africa when they take in Senator France's appraisal of the trade of these And the attention of the Shipping Board and of t partment of Commerce is respectfully drawn matter.

According to the figures printed in the Congre Record, in 1913 the imports into Togoland were at £531,000,000, the exports at £456,000,000. verted into dollars, that would make a nifty addi our declining foreign commerce. Surely, there reason to search for bagatelles in Europe when package in trade awaits us in Togoland.

What the group of irreconcilables who protest getting entangled in foreign affairs must have t when they read this proposal in the Record! F Senator Johnson was silent.

Four Thorny Problems

THE four thorniest problems of international and the four weightiest are:

How to reduce German reparations equitably to that Germany can pay without a ruinous collapse;

How to stabilize the depreciating currencies of E and to restore a régime of honest money;

How to adjust equitably interallied debts and restore a normal balance of trade between the Co and Great Britain on the one hand, and between E and the United States on the other;

How to bring about a drastic and proportionate tion of the armies and military budgets of Europe— that involves also a removal of the jealousies, fea territorial ambitions of many old and new states.

The particular point to which we wish to call att is that these four problems and their solutions are dependent and almost inextricably interwoven wit another. Thus, the reason why the French Gover has been struggling so desperately against any red of Germany's treaty debt to France is that the p public expenditure of France is nearly double the revenue from taxes; but a large part of this deficit to the cost of an enormous standing army, which ar required to overawe Germany and compel her, by ho by crook, to pay the installments as they become Again, the reason why all the ingenious plans for sta ing the depreciating currencies and fluctuating exch of Europe have come to nothing is that practically a old and the new states in the war area—and not a f their neighbors who were neutral—are suffering deficits, financial chasms that cannot be bridged ov taxes or loans.

Many of the taxes—and this applies especiall customs duties—are so high that their revenue yield w increase if they were lowered; and the liquid capital o world available for investment in such markets as Lon Amsterdam, Paris and New York is so small in compar with what it was before the war that embarrassed st with disordered finances, which have already ado measures of open or concealed repudiation, have no ch of obtaining loans, even on the most usurious terms why should any sensible American, Englishman, Du man or Scandinavian who has saved a little money it to Latvia, Esthonia, Czecho-Slovakia, Jugo-Slavia Greece when he knows that it will be used to pay the posterously inflated armies and bureaucracies of th countries, and that in a year or so after the money been spent there will very likely be no alternative betw another loan and default?

Thus, the solution of the first and second proble depends upon the solution of the fourth.

At first sight, the connection of the third is less imm diate and less obvious; and certainly it does involve oth considerations; but it is pretty clear from the terms of t United States Government's refusal to participate in t Genoa conference, as well as from the tone of debates Congress and of responsible organs of the American pre that neither the American Government nor the Americ people is at all inclined to be indulgent towards its ex barrassed European debtors, or even to discuss the co mercial difficulties that such huge repayments will involv until Europe is ready to set its house in order.

Their memories are so good that they forget, even when harassed by the hide-piercing tos of the opposition.

these nonforgetters there is one that stands out—one mberer who can remember more in five minutes than verage absent-minded person can forget in a month.

e reference is to George Wharton Pepper, who, among tless other things, is senator from Pennsylvania, or of several hundred pounds of law books, athlete, ntaineer, college professor, baseball expert, Fellow of American Academy of Arts and Sciences, color sergeant e First Provisional Plattsburg Regiment, and cham- heavyweight rememberer of North America.

COPYRIGHT BY HARRIS & EWING, WASHINGTON, D. C.

Governor Sproul (Left) and Senator George Wharton Pepper on Their Way to the Capitol, Where the New Senator From Pennsylvania Took His Oath of Office

A Memory Like Macaulay's

HE reason for the peculiar Pepper memory is not due to the fact that his family was training him for the Senate to the fact that he was expected to be blind. His eye- ht was so bad when he was a child that he was never t to school, but was tutored at home by his mother— learned Greek in order that she might teach it to her . A year before he entered college a tutor was secured r him—a blind tutor, so that he might be instructed in e ways of blindness in addition to his studies. The tutor ught him tricks of memory that made it possible for him read a thing once and remember it or to have it read to him once and remember it. Such an accomplishment is a very handy asset for a blind man.

The tutor was eminently successful. It was no more difficult for young Pepper to remember offhand such difficult and annoying matters as the date of the Battle of Salamis and the names of the kings of Egypt than it was for him to remember how to tie his necktie. After he had read over two or three times a piece of prose or poetry sufficiently abstruse to make the average person clutch wildly at his brow and wonder what it all meant, he had it by heart. One of the most difficult pieces of poetry to memorize is Francis Thompson's The Hound of Heaven. Pepper learned it in an hour. Boyd-Carpenter, Bishop of Ripon, was remarkable for his skill at developing a complicated argument. Pepper once heard him deliver a lecture on a deep, mystifying, brain-twisting philosophical subject; and after the lecture was over Pepper, who had taken no notes, went away and dictated the entire lecture to a stenographer from memory. He can say the Book of Psalms from memory—if he has time. When he was an undergraduate at the University of Pennsylvania he took the leading part in The Acharnians of Aristophanes, the first occasion that a Greek comedy had ever been given in America. The play has a large cast, and the dialogue is composed of single lines and half lines, so that there are a great many speeches in it. Pepper learned not only his own part but all the other parts as well. When the rehearsals came to an end Pepper could recite the entire play, which took over two hours and a half to present. This would have been somewhat of a stunt if the play had been in English. Instead of that it was in Greek; and each vowel sound in each word had to receive the personal attention of the deliverer. When President Wilson declared before Congress that American participation in the war was essential Pepper and a party of friends were eagerly waiting in Philadelphia to hear what the President would say. When the speech was released it was read over the telephone to Pepper, who digested it carefully and then hung up the receiver and redelivered the speech to his friends.

Pepper's eyes grew stronger after he entered college, and he at once embarked with the deepest enthusiasm on his life program of taking a violent interest in everything in sight. If there weren't enough things in sight to keep him busy for sixteen or eighteen hours a day he invented a few things and took an interest in them with equal enthusiasm.

Keeping Busy

THUS it appears on the records of the University of Pennsylvania that George Wharton Pepper, of the class of 1887—he took his degree, by the way, when he was twenty years old—ran the half mile and threw the hammer for the varsity track team, played fullback and guard on the varsity football team, rowed on his class crew, played on the varsity cricket team and caught on his class baseball team. Nor will it do for the technicians who read this article to write letters to the editor pointing out amid hoarse and jeering guffaws that since track meets, crew races, cricket and baseball are spring pastimes, it would be impossible for any one man to participate in all of them outside of the pages of a piece of rah-rah fiction. Pepper participated in them, and anyone who doesn't like it should lodge his protests with the University of Pennsylvania.

In addition to occupying himself with every athletic diversion in sight Pepper toyed with his studies so effectively that he was elected to Phi Beta Kappa—an honor accorded only to students who maintain a dizzy standard of excellence in their studies for a matter of three years. And then, instead of being universally hated by all his classmates for his general superiority, he was made Spoonman of his class—the position of Spoonman being a peculiar University of Pennsylvania institution accorded by vote to the most popular man in the class, and carrying with it, as a badge of office, a large wooden spoon.

When he got out of college his memory easily retained the idea that the little busy bee, or the busy little bee, was worth emulating because it attains its enviable position at the pinnacle of the insect world by improving each shining hour. So he kept on exercising both his brain and his body and otherwise arranging matters so that he had no idle hours whatever; and for that reason he is still what might be termed a bruiser. He has the strength and endurance of one of those large, puffy horses with whiskers on its feet, but none of a horse's clumsiness. He is tall and brown-faced and soft-spoken, with a tremendous chest that frequently splits the cloth just to the rear of his upper vest

THE GALLOPING TIGE

II

By Nina Wilcox Putnam

ILLUSTRATED BY CHARLES D. MITCHELL

"There Ain't No Justice!" He Shouted

THERE wasn't any wind as yet, but Ted didn't mind that, and curiously enough Shack did not seem to mind it, either, although he had talked so much of starting out under full sail, and had poetized about it constantly. He and Shamus turned over the flywheel of the kicker without comment, while Harry Binz, the professional sailor, took the wheel and Ted flew about attending to last details.

It gave me a mighty queer feeling, that start did, a very deep, profound emotional upset, I admit. To think that soon Manhattan's tall towers would be seen no more, and that we had simply weeks and weeks ahead of us of nothing but ocean—an ocean which would gradually grow warmer and more beautiful the while I came to know my poet better, and then—and then Tahiti! Nothing but sunshine and flowers and dancing. And, as I am ashamed to confess, I recalled with a little sigh of relief a couple of good moving-picture houses. There might even be a native yacht club. I rather hoped so, because after all there was a certain danger in a lot of New Yorkers remaining absolutely idle for too long, and nothing ruins friendship as quickly as boredom does.

But in the meanwhile the deck was a scene of gorgeous activity. I felt wonderfully safe and happy with our splendid crew. The only person who caused me the slightest feeling of uneasiness was the stranger, Andrey Kropushkin, Ted's Russian friend, who stood about morose and idle in a curious posture—his smock tucked up in the rear and his hands thrust deeply into his back trousers pockets, his jaws working constantly, although he did not speak a word. His silence was eloquent, however, for he eyed Shamus and Shack in a way which made me rather nervous when they performed any of their duties about the boat, and when Edouard spread a Spanish shawl upon the deck, and sitting down upon it began to play his ukulele, Mr. Kropushkin let out a peculiar sound that was half a roar and half a groan; a sort of native cry, I suppose. At any rate it brought mother to my side, from which vantage point she looked the unexpected guest over carefully through her lorgnette.

"Pet!" said she. "Do you know that man looks very familiar to me? I am positive I have seen him somewhere!"

"But where, mother?" I demanded. "You certainly haven't been to Russia."

"No, of course not!" replied mother in the tone with which she is accustomed to dismiss any suggestion she considers improper. "But wait a moment, dear! He reminds me of someone—that curious drop of his shoulders! Now I remember! He suggests old Captain Billy Hicks, who used to be around Rosemere Bay. He is dead now, I think, poor fellow. But he had that same morose look!"

"Mother!" I exclaimed, inexpressibly horrified. "The very idea of comparing a distinguished foreign poet to some old water-front character! I, for one, am glad to know that Ted would make friends with a Russian poet of his own free will, and I think it's simply too exciting for words to have him along!"

"Well, I expect I ought to see that the man is put at his ease!" mother replied, the hostess instinct in her coming to the fore, as usual.

And with that she sailed over to him, intent on a little formal conversation. But Zelda had beaten her to it and was already firing Yiddish at him when we drew up chairs and motioned him to sit down—which he did, somewhat reluctantly.

"Oh, Comrade Kropushkin!" Zelda exclaimed. *"Es git uns gros ehre eicle zu haben mit unz heite abend!"*

But Mr. Kropushkin only shook his head and stirred about uneasily, uttering a single Russian word which sounded sort of like "Goshallfishooks!" Having been obliged to take his hands out of his rear pockets in order to sit down, he did not seem to know quite what to do with them until he found his knees, when he at once started rubbing them rhythmically.

"I am afraid the great one speaks no Yiddish," said Zelda with a sigh. "Oy, what a pity! When there is so much I want to ask! The truth about Russia, you know, and everything!"

"Are you a good sailor, Mr. Kropushkin?" asked my mother in her best manner. "This may be quite a rough trip, you know. I hope you won't be seasick!"

Mr. Kropushkin only groaned at this, and I signaled shyly and appealingly to Ted, who promptly hurried over and joined the group.

"I think maybe Andrey would like to go below and lie down a while," said Ted nervously, "until we are clear of the port, you know! Ishov no iski sov!" he added to the Russian.

Kropushkin got to his feet with eagerness. Edouard had joined the group by now, and we all stood around watching interestedly.

"I really think he had better go below!" Ted insisted. "He probably is not used to small boats like this, anyway."

"Oh, I am so disappointed!" cried holding out a volume which she had carrying clasped to her breast. "I volume of his poems. They are in R and I can't read a word of them, but hope he would read them to us!"

"What the devil!" exclaimed Ted volume of his poems! Why, I—well, jiggered! Why, I—I didn't suppose was a volume of his poems anywhe this country, that is, I should say, of Ahem! Some other time, Zelda. The boat might come along any moment. him to read some other day! Slov nov he added to Mr. Kropushkin, who most unexpected thing. Thrusting b bony red hands toward the heav a despairing gesture he threw ba head, and strange words broke his lips.

"There ain't no justice!" he sh

In an instant Ted's hand desc upon the man's shoulder, and he q and went below, Ted closing the door behind him, and wiping th spiration from his brow as he back. He was evidently very d moved. So were we.

"You heard?" said Ted sh "That's his socialism—it's the only lish sentence he knows, and he do so worked up over it, the poor chap! He has these spells, but just leave him alone a while h recover."

"Do try to get him to read to night," Zelda begged.

And of course we all echoed her d Ted promised. He had to befor would let him go, and then we tered to take up our various appoi tasks.

These did not fall very heavil any of us as yet, however, althoug had drawn lots under our plan of fect equality and no command. Ed Shamus had the mainsail, Shack Ted the foresail, and as these wer tied up because there was no wind were not very busy and had nothin do except sit around and talk. We still going out with the kicker, w more or less ran itself, with only a l attention from Ted. Harry Binz steering, and while I was cook for day the things I'd ordered from the had been sent down in vacuum beat which left me perfectly free for afternoon.

Well, everything went beautifully. No formali delayed us, and no hateful police came looking for Kropushkin, and really, first thing we knew, we were of the narrows and in deep water, headed for the Azo The adventure had really and truly begun. And oh, h I loved it! My heart fairly sang with excitement pleasure, for I am a fine sailor and so, of course, was Sha who for the first hour or two paced the deck alone i stately manner, leaning over every once in a while commune with the waves, I guess, and to think profou thoughts about the deep.

Ted, on the other hand, was as busy as a beetle, fina taking a trick at the wheel, and while he was th Shamus joined us, for mother was doing her check bo and didn't want to be talked to, so I had stationed mys by Ted.

"Say, Stonewall," Shamus began. "That man Binz."

"What about him?" said Ted. "Isn't he a first-cla standard-size sailorman?"

"Well, he seems a fine sprig of a boy," said Shamu "and a good, competent fellow. But why doesn't h sing?"

"Why should he?" demanded Ted. "Grand opera isn written into his contract."

"Sure, man alive, I wasn't thinking anything of th kind!" Shamus declared. "Chanteys is what I mean! Wh don't he sing some chanteys?"

"Maybe he doesn't know any," Ted suggested.

"Well then, faith, and he's a funny kind of a sailor!" Shamus declared. "Why man, all common sailors sin chanteys. Anyone knows that! Maybe he's a bit shy You tell him we'd like him to go roaring about the deck

for that is the true nature of his kind, and very likely a habit with him. Maybe we'd pick up a little copy from what he sings—eh?"

A curious sort of spasm convulsed Ted's face for a moment, but when it passed he replied seriously enough.

"I'll speak to him about it, Shamus," he said. "I think your point is well taken. Any regular sailor in real sailor clothes ought certainly to sing deep-sea chanteys whether he has specifically contracted to do so or not. It's only right. Of course if he was one of the ordinary commercialized sailors in suspenders and an old derby hat, such as we all too often see on sailing vessels to-day, we could hardly expect chanteys from him. But he is so unspoiled—a good old-fashioned type—that it's more than likely he knows some."

"Call him and suggest it!" said Shamus. "Don't let him think we are making fun of him; just be natural about it!"

"All right!" assented Ted. Then he raised his voice. "You, Binz!" he shouted roughly. "Shiver your timbers and come along aft or I'll belay your bones!"

Harry Binz, who had been doing some mysterious thing with the ropes, gave a hitch to his trousers, called out, "Aye, aye, sir!" and came aft, which was where we were.

"Binz, my lad," said Ted in a kindly tone, "the ladies and gentlemen have requested me to state that if you feel moved to sing they will be glad to have you do so. If during your hours of toil, or in your idle moments, a deep-sea chantey or so leaps spontaneously to your throat, go to it and let her rip! We won't mind. In fact, we sort of expect it of you!"

Harry Binz blushed a deep crimson. I suppose it was a blush, or maybe he just got red in the face.

"What the dev—that is to say, aye, aye, sir!" he gasped. "Just as you like, of course."

Then he gave another little hitch to his trousers and went back to the rope.

"I hope we didn't embarrass the poor chap too much," said Shackelton Salts, who had quietly joined our little group, "so that he'll keep quiet for fear we're making game of him."

"Oh, no," said Ted easily. "I don't think so. He was probably just surprised, that's all."

And Ted was right, for a little while later, just before sunset, when I was in the galley hard at work putting parsley around a pair of cold roast ducks, I heard him singing, and peeking out I saw Shack with a notebook, crouched in hiding and putting the words down, I suspect, although I for one didn't think the chantey very beautiful and certainly not nearly as salty as many of Shackelton's own composing. Still, ringing out in the free ocean air, it did sort of add to the romance of things and lent a good deal of atmosphere to the ship. The chantey was something about:

The captain was a saphead,
And the stew was made of horse;
The mate was full of licker
And couldn't steer the course;
The crew was in the cabin
Eating bread and honey;
Oh, I don't love the sea, boys,
I just do this for money!

But Shack kept nodding his head as he wrote and seemed intensely interested. He had on his psychoanalytic expression and appeared to be finding some deep meaning in the chantey which was entirely hidden from ignorant little me. I gave up listening pretty soon and had just turned my attention to frosted charlotte — also from the Ritz—when Edouard stuck his head into the cookhouse and sniffed at the beautiful supper I was preparing.

"Huh!" said he scornfully. "You don't suppose Prince Kropushkin will eat that stuff, do you?"

"Why not?" I demanded. "And why prince?"

"Well, see here, Pet," he said seriously. "Zelda says he's a prince. She says all Russian refugees are princes or grand dukes. At any rate, she's got him out on deck, trying to teach him English, and she calls him prince. He hasn't denied it yet, anyhow. Look here—he's a really great man in Russia. Zelda says she knows all about him. And if we don't look out she's going to cop all his interest—she's bringing him cushions and what not, and I think it's up to some of the rest of us to show him a little distinguished attention and make him feel at home."

"That's a good idea, Ed," I replied. "What do you suggest?"

"I tell you what!" he said eagerly. "Of course I know this is your day to cook, and all that, and that you've a splendid supper for the rest of us—but I know how to cook the Russian national dish; I read about it in a novel by Gogoyl. And I think it would make a tremendous hit with the old boy if I fixed it for him."

"Go to it!" I said. "But where will you get the ingredients?"

Edouard gave me a look of scorn.

"My dear girl," he said a trifle impatiently, "how many times must I tell you that the actual materials are unessential in making anything? I will simply use as a foundation the ingredients we have, which most closely symbolize the real ingredients, and compose a mess of pottage!"

"Mess will probably be right!" I retorted, flouncing out with the ducks, and leaving Edouard already feverishly sorting cans of spaghetti and sardines. For the first time I doubted the soundness of his theory of adaptivity. He could talk all night about its all-embracingness, but I, for one, would not eat a mouthful of adaptive goulash! Furthermore, I doubted if Edouard would eat it himself, and I began to wonder whether he was perfectly sincere.

I had scarcely put the ducks on the center table of the main cabin, which was deserted, when a strange sound arrested my attention. It was a deep sobbing moan, and came from one of the tiny staterooms. Of course I went over and knocked, and when a faint voice said "Come in" I entered to find Malvina spread all over the lower berth, her face as green as her crinkled smock, her feet dangling limply over the edge.

"Oh, Pet, make them stop the boat!" she moaned when she recognized me. "This is awful—awful! Oh! I never felt anything like this in Kansas!"

"I dare say!" I snapped. "But this is a calm night! What on earth will you do when it blows? I thought you said you had done lots of boating?"

"On Duck Lake," Malvina replied faintly. "Oh, I wish I was home! Do you think I am going to die, Pet? I would hate to die without ever having truly lived!"

"But you have lived," I said cheerfully, "and you'll feel better if you'll only come up on deck!"

"I couldn't—I couldn't," she protested, resisting all my efforts to make her get up. "Oh, Pet, I know I'm going to die, and I've made such a failure of life! I wouldn't mind dying so much if only I had been married and h home and children and—and some decent tail and a French ball dress, first. And, oh, Pet, a house in the suburbs and a permanent wave; an you are my best friend, when I am dead just rem horrible mistakes and go back home to your o before it is too late!"

"There, there!" I said soothingly. "I'll get y of something that will fix you up. Things are n as you think!"

"Well, Poe is lost anyway!" Malvina retorte fully. "He escaped when Zelda took her thing doesn't come when I call!"

"Never mind that old black cat!" said I. " Zelda take her things away, and where did them to?"

"She's moved to that little cubby-hole up—u that she can study Russian in quiet," groaned "Oh, Pet, why did I waste my life?"

Well, I am not the sort who will do anything f some other time, so I did it then, and waited on Jones as well as I could. But I must confess dreadful shock to have her talk in that amazi ventional way, reneging on everything she had before the world merely because she thought dying; especially as she was doing nothing of the only needed a little fresh air and courage. It wa disillusionment to me to discover her true natur got her up finally, and half an hour later, the wa very calm by then, she even managed to come to which was a step in the right direction, because had been appointed waitress. However, the best do for the table was sit at it.

My own appetite was excellent, and my fait manity sort of returned as I looked at the bunch w gathered about the, by this time, fairly festiv Prince Kropushkin had the seat of honor, of cou mother on one side of him and Ted next on the interpret, although as yet the Russian had said a nothing at all. Then beside Ted came dark litt and next to her, actually, Malvina, very limp in pretending she was merely too thoughtful to eat, i chin resting in her thin hand. Edouard was at t and Shack, with, I was delighted to see, a coupl poems which he had dashed off on his little typewr very afternoon and which I had a feeling he would us if we urged him a little. Harry Binz was at th and Shamus, with the leg of a duck and two j cake, was on watch above. It was a beautiful evening and just that soft sunset hour that I love the roseate glow filling the little cabin and lendi of extra enchantment to everything.

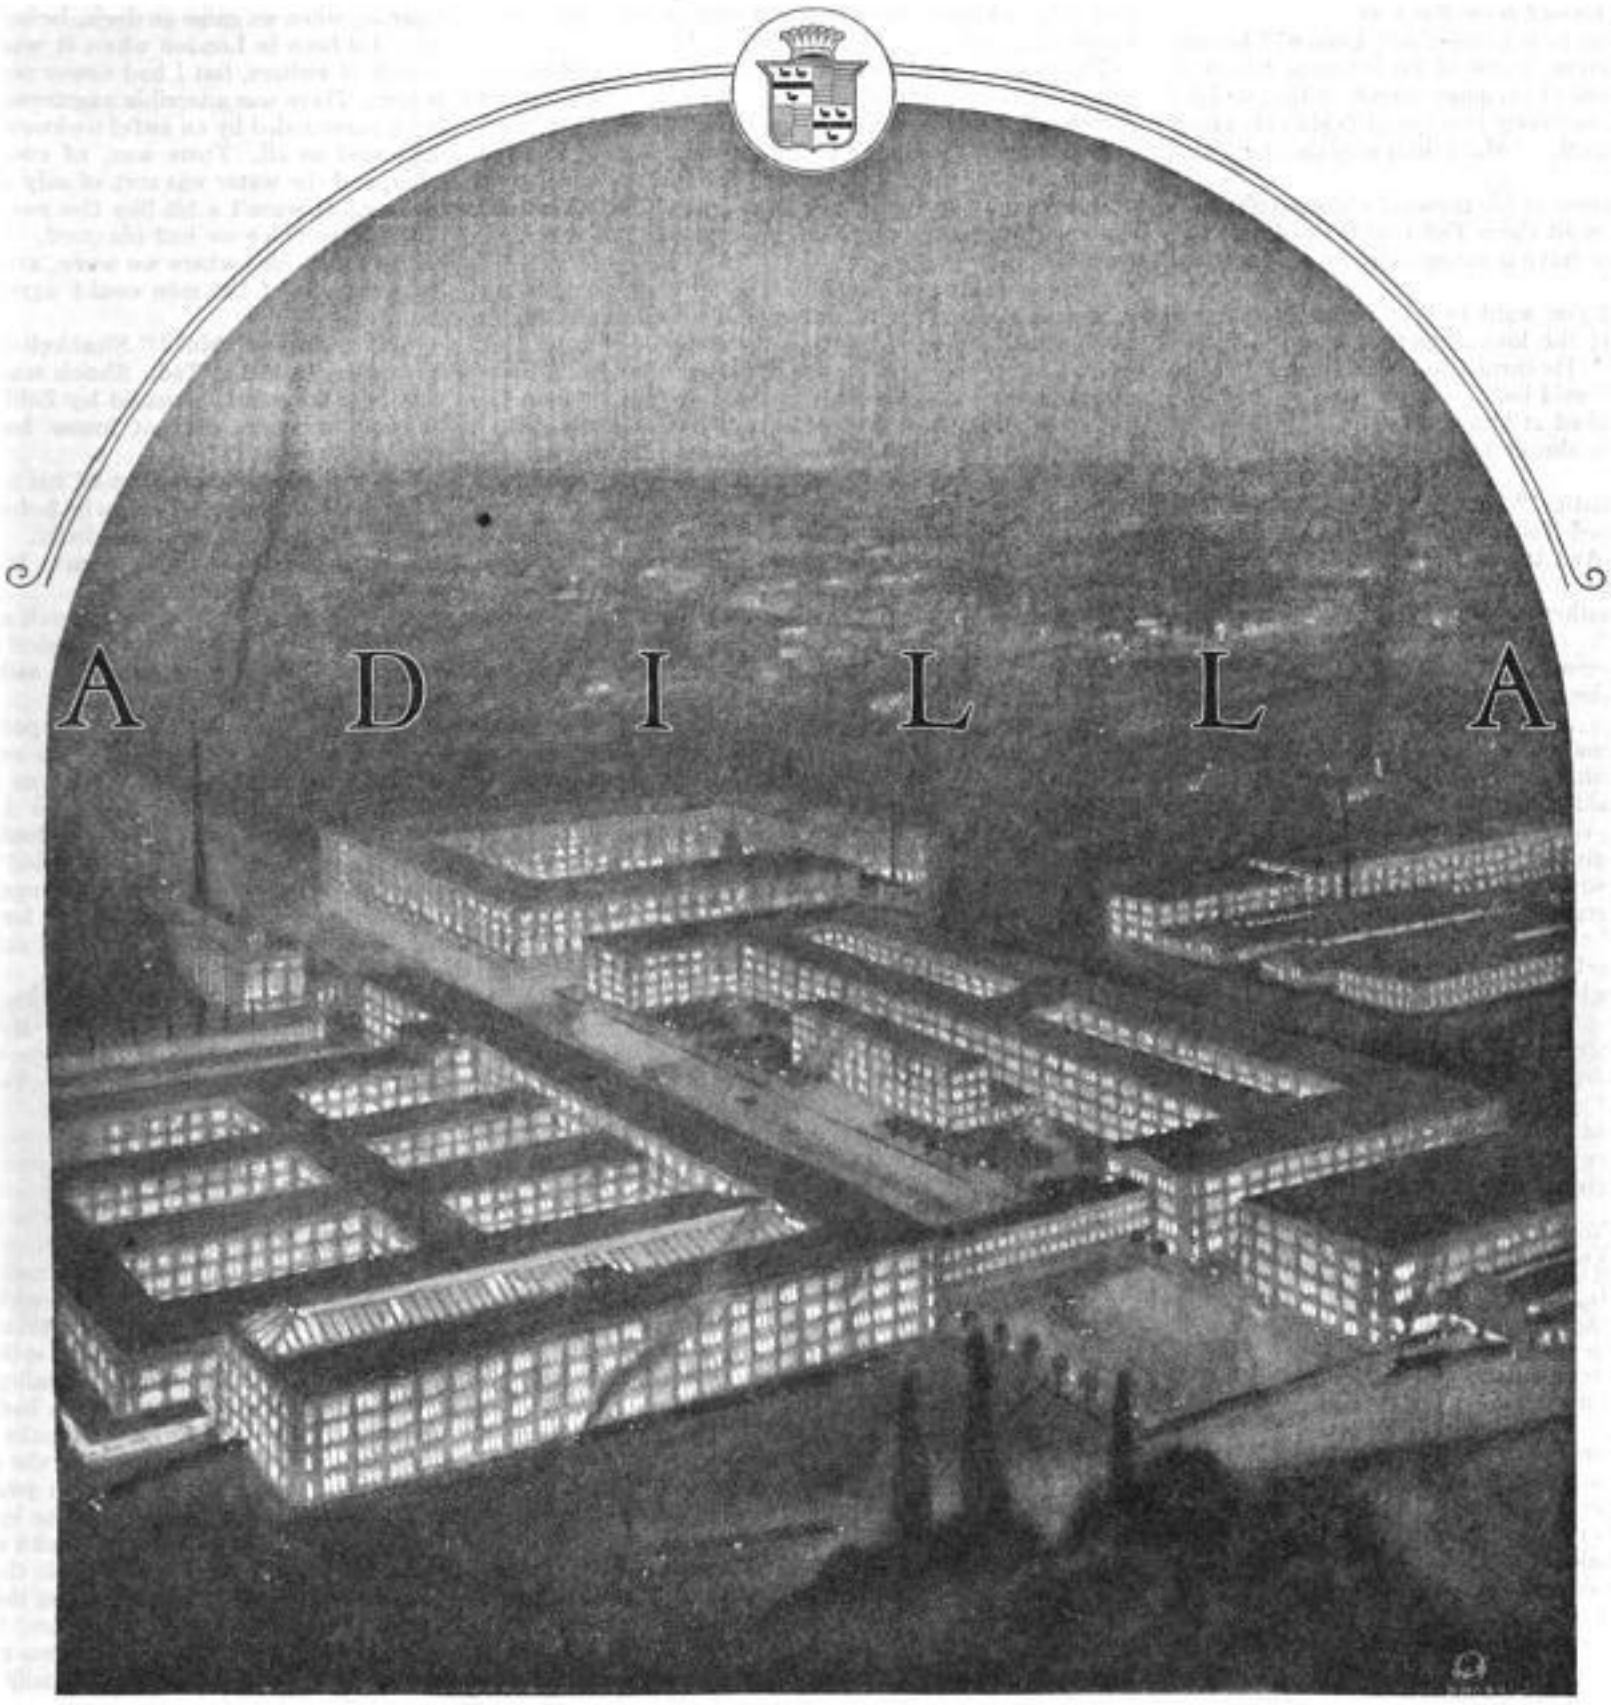
My first supper was a great success and everyt joyed it except Malvina and Prince Kropushkin, obliged to eat som ouard's special di politeness, but wh seem to care for much, even after translated Edoua ory of adaptivity The Russian sat thought, and conv rather languished.

"See how he has ical romantic mel of the true Rus Zelda exclaimed. he would talk. I'd know what the gre is thinking. About olution, I suppose!

"He looks to me didn't have much replied Edouard, w sulky because his had not been prope preciated. "Mayb getting senile!"

"Well, for my think he has an infe complex," said S "He is certainly ver est, at any rate."

"He's got an inh allright!" Edouard



The sound of Edo voice must have att the prince's attentio he turned toward sculptor as if he were to speak—but he d he merely looked, got a distinct impr that Edouard was rep to him. Ted saw th and interfered tactfu

"Oh, Pet, Make Them Stop the Boat!" She Moaned. "This is Awful! I Never Felt Anything Like This in Kansas!"

CRAFTSMANSHIP IS A CREED HERE, AND ACCURACY A LAW

Even to observers of the finest automotive plants in Europe and America, the new Cadillac manufactories are a source of wonder and of admiration.

The fact that the site embraces more than 49 acres, and that the buildings provide a floor area of more than 2,500,000 square feet, is in itself sufficiently impressive.

But even the great structural magnitude of the Cadillac plant is surpassed by the orderly production and the exquisitely precise machine-equipment within. Craftsmanship is a creed here, and accuracy a law.

Thousands of the instruments of manufacture, expertly contrived and almost unbelievably exact, were designed especially to meet the requirements of Cadillac.

Every process of construction is pursued with microscopic carefulness. More close, fine measurements are observed on the Cadillac, it is believed, than on any other car.

In appearance, the motif of the vast new Cadillac works is immensity; but its spirit and its greater source of wonderment are minute precision in every smallest dimension and operation on the Cadillac car.

"I'll try to get him to tell you about Lenine!" he suggested hastily. "Lenine is one of his intimate friends!"

The prince made one of his queer sounds at this, which I couldn't quite catch correctly because of Zelda's shouting.

"Oh, do!" she cried. "Make him explain the Third Internationale!"

"I'd rather hear some of his poems," objected Shackelton. "If he would read them Ted could translate. I'm sure his poetry must have a savage virility and unusual lyricism combined."

"I'll tell him that you want to hear his poetry, then," said Ted. "Some of the love sonnets are very delicate. You'd be surprised." He turned to his neighbor. "Solier ad nauseum solgob," said he.

The older man looked at him with a sort of piteous expression; there were almost tears in his eyes and in his voice as well.

"There ain't no justice!" he muttered helplessly.

"There!" exclaimed Ted brightly. "Always thinking of the revolution! And trying to talk to us in our own language!"

At that instant mother gave a violent start and a little scream.

"Someone kicked me!" she said indignantly. "I wish you'd tell your Russian friend to keep his feet where they belong."

The prince muttered something unintelligible at that, and Ted reproved him severely.

"Rashpitkin!" said he. Then he turned to Zelda. "Here—give us that volume of his poems and I will translate them!" he commanded. "The prince is very shy about reading his own stuff. You know how it is yourselves! Feels embarrassed at putting his own work forward, and all that!"

Zelda produced the book from her lap, and we sat about in expectant silence while Ted turned the pages, hesitating where to begin.

"Lovely stuff, lovely stuff!" he muttered, half to himself. "So different from his political works. You know his military book, of course—How I Took Russia Steppe by Steppe? Very cold piece of work, that! Ah! Here is a beauty!" And as we settled into silence he read aloud with, I must say, a great deal of expression:

"Rashir nor solsk:
Yah nar rasanah,
O posh, O, trolticar!
Hav no per permik!
Holnor! Lush lunisky,
Or droshky
Or droskivar,
Vodka, vodka!"

There was a tense moment when he finished. Kropushkin himself seemed uneasy and began rubbing his knees in that characteristic nervous way of his. The stillness was broken at length by Shackelton Salts.

"Beautiful!" he said in a low voice. "Very beautiful indeed—but what does it mean?"

"I'll have to make a very rough translation," said Ted apologetically. "I'm no poet myself, you know. But it's something like this:

"The little sister moon is in the sky:
Oh, come, my tender love, my father's little cabbage flower,
Let us catch a droshky, a low, swift-moving droshky,
And drive into the face of the mad moon,
Drinking vodka!"

"How striking! How strong!" cried Shack. "See—it even moves the poet himself!"

And indeed it seemed to. For a moment I thought the Russian was going to grasp Ted's throat in his extreme excitement. But before anything actually happened between them a terrible cry rang out from up on deck and sent us all simply flying above. It was Harry Binz who called, and the words sent a chill to my heart.

"Man overboard!" he shouted. "Man overboard!" And in a panic we all rushed up to see. Binz had the deck to himself.

"That fool of an Irishman walked out on the bowsprit!" he howled at Ted. "I guess he's hanging on by the stays, but we'd better get him quick!"

It was Ted who did the job, however. I never saw such snappy action in my life. It seemed only an instant before Shamus' dripping figure was on deck again, and Shackelton was giving him a bawling-out.

"You're a fine lookout!" said Shack scornfully. "What the devil did you think you could see out there from the bowsprit anyway? You can't see any distance from down here!"

"Look out your own self then!" retorted the shivering Shamus. "For by your leave I'll do no more to-night! Since you're so smart, why don't you do better?"

"I will!" replied Shackelton. "I will climb into the topmast and from there cry out what I see!"

And this he proceeded to do with great enthusiasm, although not much agility, while Shamus went shivering and cursing below, and the prince, becoming suddenly and violently agitated, drew Ted away for an emphatic whispered argument.

The rest of us watched Shackelton as he climbed up and up to perfectly dreadful heights. My heart was fairly in my mouth while I kept my eyes glued to his figure as it moved against the sunset, and I was most awfully relieved when he stopped at a sort of crosspiece, threw one leg over it, and clung there, one arm about the mast, the other hand shading his eyes in the most appropriate and charming gesture.

Meanwhile the prince had broken away from Ted, tucked up the back of his smock, and with his hands in his rear pockets again, paced violently up and down the deck several times before whatever was overcoming him overcame him completely and he made a dash for the forecastle and disappeared into it. After which Ted, with an exhausted air, joined us in watching Shack, and a mighty good thing he did, too, for just then we found Malvina's black cat, Poe.

You see, Shackelton had climbed into the foremast and Poe, who had been missing for several hours, had, it seems, climbed up into the hindmast and was afraid to come down. He—I mean Poe—had been up there mewing faintly, but nobody had heard him and come out to give him that moral encouragement about descending which all cats seem to need when they have gone up higher than they had originally intended. And now he caught sight of Shackelton up in the other crosstrees and gave every evidence of being about to try to jump across to him. Shack saw this and he didn't care for the idea at all. Not that he was afraid the cat wouldn't be able to make the wide leap, but that it would succeed in doing it, for Shack had the cat fear, and he simply could not endure one to come anywhere near him. So pretty soon he was mewing even louder than Poe.

"Hey! Call that creature off!" he shouted in a regular panic, holding to the mast first with one arm and then with the other. "Call that beast off, I say!"

"Here, kitty, kitty!" cried Malvina, suddenly galvanized into life. "Oh, Poe, come here! Oh, my lovely cat! Oh, do rescue him, Shack!"

"Rescue my eye!" shouted Shackelton. "Call him off before he jumps on me or I won't answer for the consequences!"

"Kitty, kitty!" shouted Malvina, now almost as frantic as Shack. "Oh! He won't come down! He's going to leap!"

"Don't let him!" yelled Shack, clinging hysterically to the mast with both arms now. "Don't let him or I shall fall!"

"Good heavens, man! Why don't you come down?" Ted called.

"I can't!" shrieked Shackelton. "I'm dizzy. I daren't move!"

"Oh, rescue him!" Malvina screamed.

But whether she meant Shackelton or her pet I am uncertain. Although the words left her lips and not mine, it was most certainly Shack for whom I was concerned. Of course I knew the cat could not possibly make the jump from mast to mast, and I expect the cat knew it, too, although he kept on going through preliminary crouches, the way cats do. But I certainly was afraid that if Shackelton got any more scared than he already was he'd fall to the deck before our very eyes. It was truly dreadful to see him, the far-famed sailor poet, crouched up there like a frightened monkey or something, on a mast which ought to have been perfectly familiar to him! The sight made me fairly ill.

"Grab hold of the halyards," Ted called up at Shack, "and swing yourself down!"

"How can I grab the halyards when the sail isn't up?" howled Shack.

"The halyards, you poor nut—not the hoops! The ropes—right at your hand!" Ted replied, convulsed with laughter. "Say, you are some sailor boy! Hey, wait, I'll come up and show you!"

With which he made a dash for the mast, shinnying up much better than Shackelton had done, and pretty soon he had the author of Sea Songs of a Sailorman safe on deck; safe but hardly sound, for Shackelton was a nervous wreck and had to be helped below. At this sight I turned away, overwhelmed with shame for him, something inside me simply crawling with disgust. If there is one thing I despise it is a fake of any kind. And Shackelton Salts had claimed to have been around the Horn goodness knows how many times! Well, perhaps he had—as a passenger on a steamer! Ugh! Tears of sheer bitterness and disillusionment welled up into my eyes, so that I could hardly see, and I stumbled over something in the growing darkness on my way aft to a secluded corner where I might weep in peace. The object over which I had tripped was Poe, the black cat, who had magically descended from the mast unaided and unobserved, and was now purring around my feet as unconcernedly as though nothing at all had happened, and the world was the same good old world of romance which it had been half an hour earlier.

The even tenor of our ways now suddenly turned to a deep barytone—and a little off key, at that. For next morning when we came on deck, behold we were in a fog. I'd been in London when it was showing of benefit of visitors, but I had never seen a fog like before. There was a terrible vagueness about it, a being surrounded by an awful unknown nothingne depressed us all. There was, of course, not a b wind, and the water was sort of oily and most un looking. It wasn't a bit like the sunny trip to t South Seas which we had planned. Moreover, w the remotest idea where we were, and just drifte because none of the men could agree on what to do.

"What do you think?" Shackelton, who was for the day, asked of Ted. Shack was rather cros very poor breakfast, prepared by Zelda, whose tu to cook, and who did not know how. "What suggest, Stonewall?"

Ted took his little pipe out of his mouth and e large cloud of smoke very slowly before he replie

"Why ask me?" he said calmly. "I thought agreed to run this ship in turn. It's your tur wouldn't dream of interfering."

Well, Shack walked off, very much annoyed at t he couldn't seem to make up his mind about what even after Harry Binz, the handy sailor, volunte suggestion that we anchor.

"No, no!" exclaimed Shack impatiently. "W keep moving! The Azores can't be very far awa and I'd like to touch them as soon as possible!"

No sooner had he said this than Andrey Krop who was standing near, suddenly doubled up in t alarming manner, and had to be led away by T course we all crowded around to inquire for the p man when Ted reappeared alone, for it was app quite a dreadful attack. But Ted said the Russ all right and resting quietly.

"I'm keeping him safe below for a while," he sai there is nothing to worry about. He has these occasionally. It comes from the bread he ate in as a rule, but it sometimes occurs when a poem is oping!"

And so began the most completely nightmari I have ever spent. The fog stayed down tight, and t we were scarcely speaking to one another. The o citement was furnished by Zelda, who discovered the galley and absolutely refused to go back in an cooking lunch. Zelda, the fearless radical! And w pointed out that it was her day to cook she simply re that nothing had been agreed about rats, and that s out on strike. And as we couldn't split her union mother took Poe with her into the galley and they s on the rats and on Zelda, and we had a delicious anyhow; but preparing it didn't make mother ver company, as you can imagine, and she said several sharp things about nasty common young females made Zelda sore, so she punished us by refusing to to the table, and went off sulkily with a volume of in one hand and a can of sardines in the other.

And still the fog kept up. During the afternoon Kropushkin reappeared on deck and began his r pacing up and down, turning nervous glances at th peering into the fog and occasionally bursting in exclamation. Sometimes it was "Yah!" and then something like "Godfreylishia!" And when pr Captain Shackelton Salts asked him to stop and te how to say "boat" and "sail" in Russian the old looked as if he would like to bite the poet's head o was so rude that Ted had to interfere.

"He's composing. Let him alone!" he advised t And believe me, we took the hint!

Shamus, Shack and myself were seated on the fo hatch and as I was between them I got the brunt of first fight.

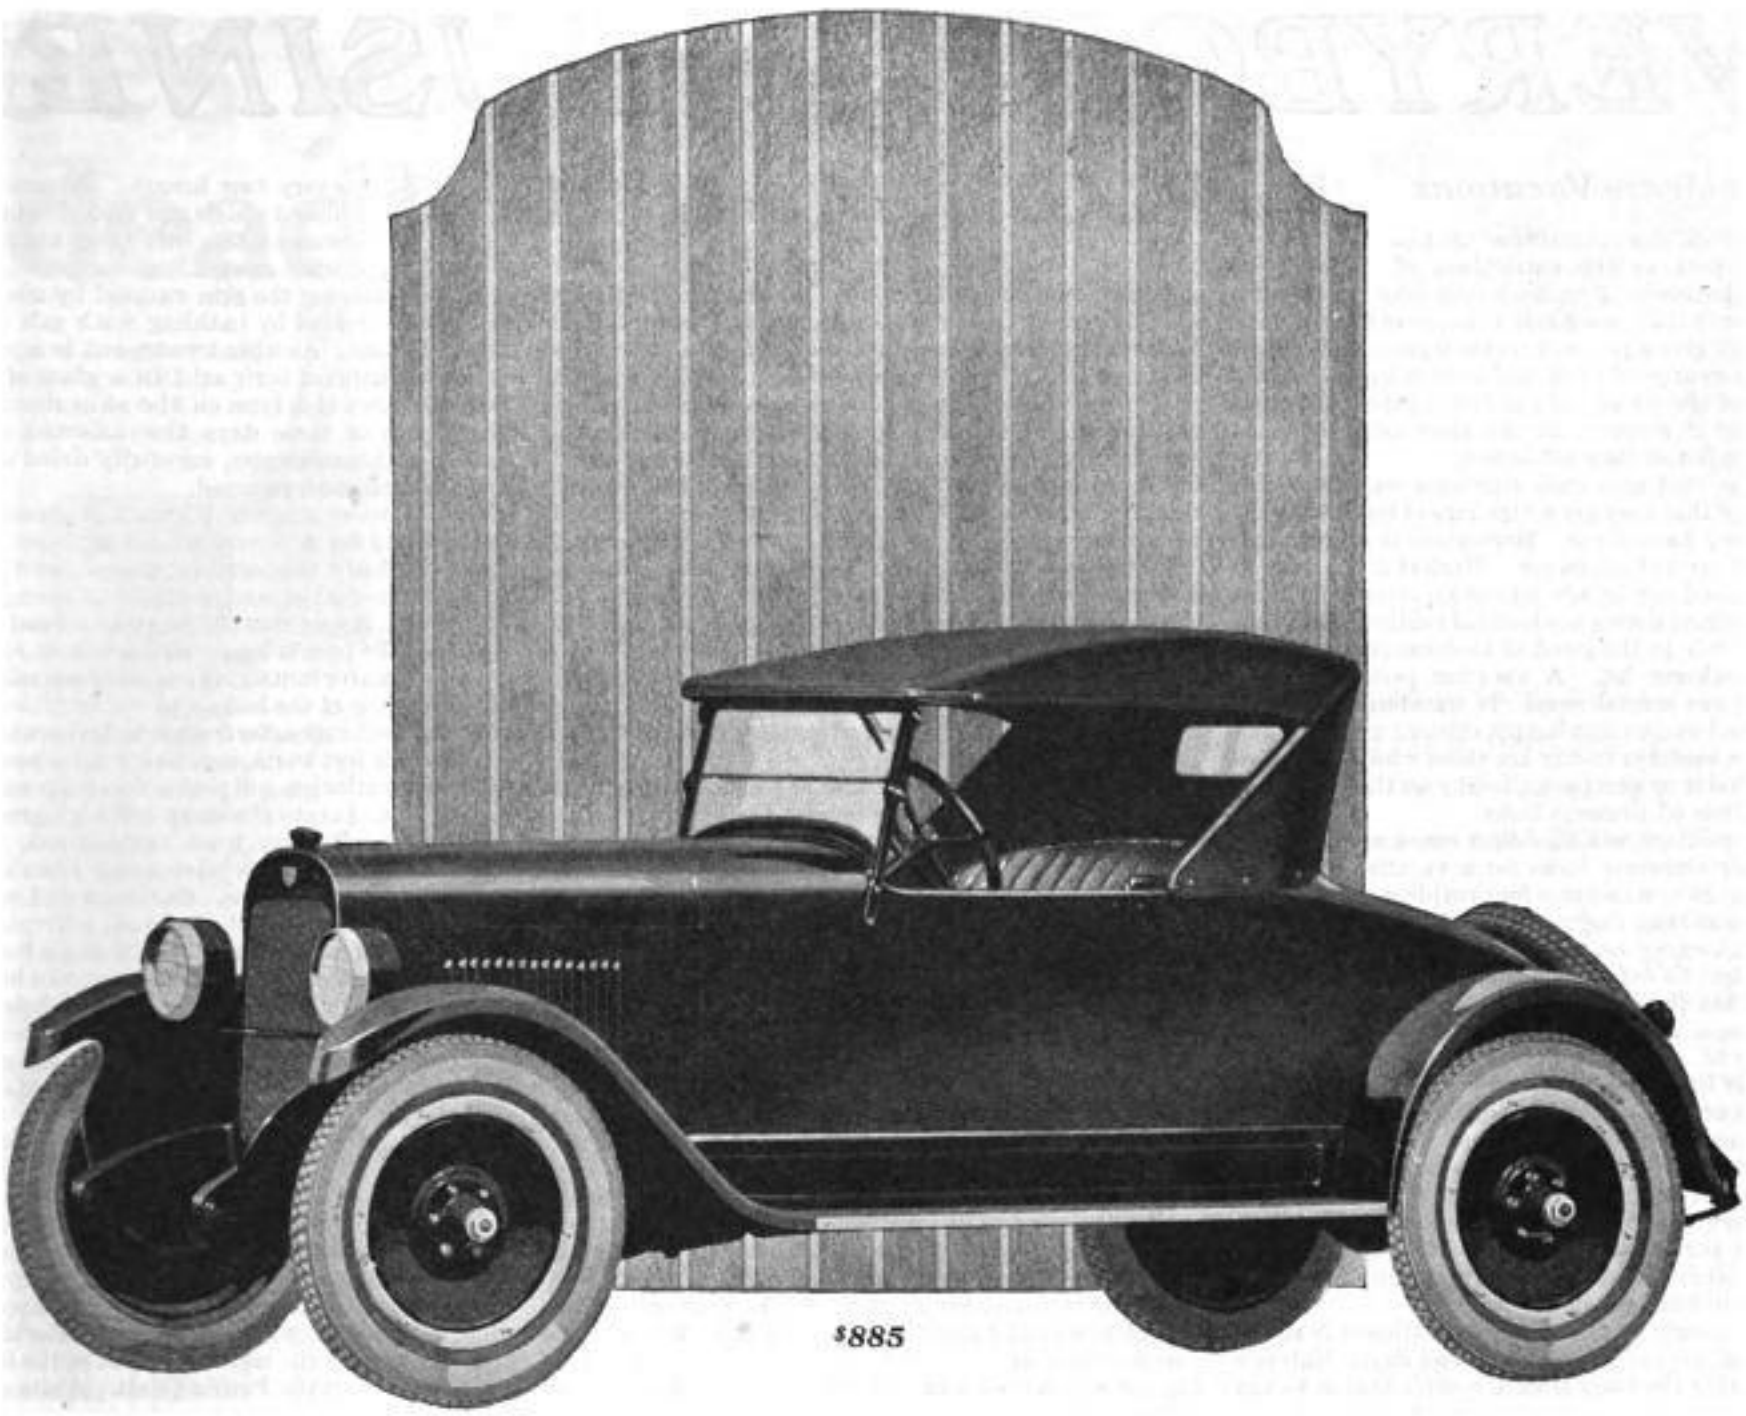
"These poems I'm going to read you," Shack b "are all descriptive of the Marquesan Islands."

"I'm going to write a book about them islands my Shamus broke in. "I'm going to take an entirely diff angle from Murphy, at that. The men that's been there haven't properly understood ——"

"As I was saying," Shack insisted, "these poems going to read ——"

"How can you describe Tahiti when you haven't there yet?" demanded Shamus.

"Well, you've never been in Ireland, but you wr book about it!" Shackelton snapped back.



"Faith, I don't want to listen to any nonsense st out of The Shadowy South Seas!" exclaimed Sha jumping to his feet. "I suppose ye have poi rimed joy and pareu with happy crew! Bah! I know tricks! I'm off to write some titles for the chapters of own book!"

"Saphead!" muttered Shack, looking after Sha retreating figure. "He writes like an after-dinner spea and speaks like an after-dinner writer!"

From which you can see that things were really go very badly. And when Edouard, who was set to swab decks that evening, used all the fresh water out of

EVERYBODY'S BUSINES

Common-Sense Vacations

By FLOYD W. PARSONS

VACATIONS now constitute an important part in the curriculum of modern business. People who are wise know that a respite from one's daily work and a change of environment are necessary to give a person a renewed grip on life. Civilization often wearies of itself, and at such times ordinary individuals feel the backward tug toward the freedom of savagery. Just as serpents discard their skins, so must humans shuffle out of their old selves.

Corporations that give their employes vacations with pay have found that they get a high rate of interest on the investment they have made. Recreation is a great balancer as well as a harmonizer. Healthful exercise in pleasant surroundings brings into play certain faculties that are not utilized during the hours of routine work. Employes grown stale in the grind of business nearly always prove a quarrelsome lot. A vacation period properly employed restores mental snap. It transforms irritable, peevish men and women into happy, efficient workers. The biggest men in business to-day are those who either have the vacation habit or who have a hobby on the side which takes their minds off tiresome tasks.

Business conditions will doubtless cause many people to modify their elaborate ideas for a vacation this year and carry through some scheme for providing recreation at a much lower cost than they would contemplate in flusher times. Though expensive hotels and fashionable resorts may suffer from this enforced economy, it does not necessarily follow that the pleasures of the individual must be curtailed. People who are forced to follow the campers' trails this year because of their attenuated purses may find new joys never before experienced.

The success of a vacation depends largely on one's observance of simple common-sense rules. First is the necessity of a safe water supply. In order to have this, preference should be given to modern plumbing rather than mountain scenery. Tennis courts and golf links are less important than a sufficiency of pasteurized milk. If there is the least doubt as to the purity of drinking water it is advisable to boil it.

A common mistake of the average vacationist is to try to take on a full coat of tan in one or two days. Nature's way of protecting the body from the sun's heat is to tan the skin, but this process must take its course slowly. Otherwise the individual will acquire a painful if not serious case of sunburn. It is not the light rays but the invisible chemical rays from the sun that burn and blister the skin, sometimes setting up abscesses deep in the tissues. Sunburn may be treated satisfactorily by heating one-half pint of water and then stirring into it a level teaspoonful of boric-acid powder; then add twenty drops of carbolic acid and shake well. Use a small piece of cotton or a spray to apply the solution to the skin. If cotton is used dab it on—don't rub it in. Wet the skin twice each hour. If blisters form, do not open them. Less pain is experienced if one permits the blisters to break of themselves. When a person is burned and no medicine is available cold compresses will afford relief.

Vacations usually take people into new environments, where the body is subjected to changed conditions which should be beneficial. However, because of carelessness and lack of preparation many vacations bring disaster rather than build health. Everyone going to the mountains or seashore should be prepared to deal intelligently with accidents or cases of sudden illness. In many places doctors are not at hand, so a simple first-aid kit may prove to be a life-saver. One authority suggests the following contents for a simple, inexpensive kit: Two gauze bandages, two or three inches wide; two cotton bandages, three inches wide; one roll of adhesive plaster, one inch wide; two dozen safety pins, two ounces of absorbent cotton, one yard of plain sterile gauze, one or two ounces of tincture of iodine, two dozen compound cathartic pills, four ounces of castor oil, two ounces bicarbonate of soda, one dram permanganate of potash, one hot-water bag and one clinical thermometer.

Headaches and fevers may be relieved by ice-cold applications. Most other pains respond to hot applications. A pain in the abdomen is often the result of constipation and will be relieved by a laxative. Colicky pains, however, frequently accompany diarrhea, and in such a case all food should be stopped at once and the patient should be given plenty of water to drink. A twenty-four-hour fast will usually cure diarrhea. Isolate a feverish patient and feed him nothing except a little milk, and that only in case he is very hungry. Hundreds of cases of typhoid fever are contracted during summer vacations. Many people are guarding against infection with this disease by subjecting themselves to antityphoid vaccination. This vaccination affords protection for from one to four years. For those who lean to the use of vaccines it is worth looking into.

In the case of small cuts bleeding is beneficial, as it serves to wash out bacteria. Later paint the wound and the surrounding skin with a light coat of iodine. Then apply a dressing of sterile gauze and hold in place with a bandage. Even a large cut will stop bleeding of itself unless a large artery or vein has been opened, in which case send for a doctor. If the blood comes in spurts apply a tourniquet.

Fishhooks are a common cause of wounds among vacationists. Do not attempt to remove the hook by pulling it directly out. This lacerates and tears the tissues. The proper procedure is to push the point of the hook forward and onward in an upward direction, bringing it out on the surface at another point. The barbed end is then cut off with a wire cutter or file, after which it is an easy matter to extract the remaining part of the hook without damaging the tissues.

Even splinters which get under the skin are painful and require proper attention. Before using a needle or the blade of a knife to remove a splinter be sure to pass the needle or knife blade through a flame several times, each time cooling the metal before holding it in the flame again.

Insect bites and stings are a common source of annoyance to vacationists. Probably nothing is superior to the application of a few drops of household ammonia water or some bicarbonate of soda for treating the bites and stings of mosquitoes and other insects. The sting of the insect should be removed before applying the ammonia. Pain may be relieved by applying a solution of boric acid. The insects known as jiggers bore under the skin and must be dug out with a needle which has been sterilized in a flame.

Snake bites usually consist of two punctures, and these should be freely incised with a knife and then sucked. There is no danger in sucking the wound caused by a snake if there are no cracks or sores in the mouth or on the tongue. Later such wounds should be cauterized by applying carbolic acid or nitric acid on a toothpick or bare end of a match. If no acid is available cauterize the wound by touching it with a knife blade, nail or other piece of metal which has been heated in a fire. Permanganate of potash, a level teaspoonful to a pint of boiled water, is also useful. Giving the victim whisky is usually harmful, for in such treatment another depressant is added to the snake poison which is already in the system. Instead of whisky, give aromatic spirits of ammonia, one-half teaspoonful in water every hour, and half a cupful of strong coffee every two hours. Serums have been produced which are effective in certain k snake bites, but they are rarely obta when needed.

Inflammation of the skin caused by contact with ivy is best treated by bathing with salt water, sea being the best. Another treatment is made by dis one teaspoonful of boric acid in a glass of hot wate large blisters which form on the skin should be pun Every two or three days the affected parts sho bathed with warm water, carefully dried without ru and the treatment resumed.

One common summer ailment is sunstroke. Th thing to do for a person who has been sunstruck lower the body temperature and raise the heart Remove the clothing and sprinkle or sponge the bod cold water. Apply cold cloths to the head and heat feet. Let the person inhale ammonia or camphor or low a little water containing one of these stimulants. orous rubbing of the body and extremities is also h No person will ever suffer from sunstroke who keeps hi cool and his feet warm, especially if he perspires fre

More vacationists will probably camp out this yea ever before. Locate the camp on high ground, if po near trees, but away from underbrush. A grav provides good drainage. Get away from standing which breeds mosquitoes. Garbage and waste sho placed in covered receptacles and promptly dispos One way to treat such waste is to dig a hole, partly with field stones, and on top of the stones build a fire garbage should not be dumped into the hole until aft fire has made considerable headway. If the waste is b it should be placed in trenches that are at least t inches deep. Fresh earth should be placed in the tre each day.

Even the simple precaution of digging a drainage all the way around a tent is often overlooked. W flooring adds to comfort.

Many people do not know that there are more tha thousand summer camping sites to let in the one hun and fifty-three national forests in this country. These fo are located in the White Mountains, the Appalachians other Eastern ranges as far south as Florida. Sites also be rented in the lake states, out in the Rockies a the Cascades on the Pacific Coast. A site covering one to five acres may be rented for from ten to twenty dollars a year. Many sites are close to fishing, hunting wonderful scenery. The scheme is so arranged that a lease expires the original renter has the first chan renew it again as often as he likes. The United St Forest Service will sell timber at cost price on the st to the lessee, who can cut the timber himself or hire s one to do it for him. The only proviso is that a dec looking cabin must be built. Application for such a must be sent to the nearest forest-service official, wh authorized to issue a permit to any responsible applic Hundreds of people who are familiar with this plan h taken advantage of the Government's generosity and vided themselves with summer homes that are cheap practically permanent.

The majority of people prefer to sp their vacations near some body of wa and as a result boating and swimm are popular national pastimes. Th sands of smart-Alecks still rock bo and insist on changing seats at most opportune times. The only remedy this brand of folly that has so far b found effective is the liberal use of chlo form. But in swimming, even peo who are cautious often get into trou or must help others; so it is well to ke in mind some of the facts and rules must observe in helping those who ca to grief in the water. An experienc swimmer should always make a care survey of unknown waters before oth go in. Submerged roots, rocks and oth obstructions cause many accidents. Re cue a drowning person by throwing som thing to him rather than by going to hi if possible. Even a small floating obje is quite sufficient to sustain a person weight in the water. If the person trouble is struggling try to keep awa from him for a few seconds until he get quiet. In effecting a rescue take fir hold of the hair of the drowning perso and turn him as quickly as possible on hi back. Throw yourself on your back, an with his back to your stomach swim for shore.

Does your oil *resist* deadly heat?

Every piston head in your automobile engine is exposed hundreds of times a minute to a heat as deadly as that of a blow torch.

YOU have seen a blow torch in action. That shooting, roaring, gasoline driven flame heats whatever can withstand it to a temperature of about 1000 degrees.

You have not been able to look inside the cylinders and watch your automobile engine in action. But the shooting flame of each explosion in the combustion chambers sends deadly heat coursing through your engine—heat that reaches 1000 degrees on the piston heads, and 300–400 degrees on the cylinder and piston walls.

It is under such deadly heat as this that your oil must maintain its body—form a perfect piston seal to give your engine full power and prevent unburned fuel from seeping into the crank case. It must hold apart the flying bearing surfaces, some of them under the sudden impact of a two-ton pressure. The oil in your engine, therefore, has a two-fisted job every instant your car is on the road.

Veedol resists deadly heat because Veedol is manufactured to do just that. Veedol is a Pennsylvania base oil, and goes through the *extra* refining of the exclusive Faulkner process which gives it the *extra* heat resisting quality so necessary to the perfect lubrication of your car.

When you buy Veedol you buy less oil; you help to keep your car on the road and out of the repair shop; and you get a maximum of smooth, efficient power.

There are five Veedol Oils, each different in body, but all of one quality. Go to your dealer. Consult the Veedol Chart on his wall. Select the Veedol Oil designated for your car. Use this oil and no other.

There are Veedol Greases and Trans-Gear Oil for your differential, transmission, cups and springs.

Send for this Veedol Book!

HERE is a new kind of book for the motorist. The "One Hundred One" facts featured are the answers to the hundred-and-one bothersome troubles that pop up periodically in every man's car.

How often have you spent two and three hours locating and remedying some minor fault in your car? How often has some new knock or squeak spoiled an entire day's motoring?

"101 Economies for the Motorist"

The new Veedol Book shows how to get at trouble quickly—but, more important, how to steer clear of trouble. It will especially appeal to the new car owner. Compiled in its 64 pages is the practical knowledge that generally comes only after years of expensive experience.

Write today for your copy of "One Hundred One Economies for the Motorist." Address the Tide Water Oil Sales Corporation, 11 Broadway, New York.

Look for this Gold Seal

You will find it pasted on the face of every genuine *Gold-Seal* Art-Rug and on all *Gold-Seal* Congoleum By-the-Yard. Note the liberal money-back guarantee. Refuse imitations.

Dealers who sell genuine *Gold-Seal* Congoleum usually have a big brother of this Gold Seal on display in their window.

CONGOLEUM COMPANY
INCORPORATED
Philadelphia New York Chicago San Francisco
Boston Minneapolis Kansas City Dallas
Pittsburgh Atlanta Montreal

Think of getting a 9x12 foot rug like that shown above for only $16.20. The rug is *Gold-Seal* Pattern No. 323.

"Sorry I called you extravagant, Sally. This new rug is a beauty for $16.20."

When anyone sees *Gold-Seal* Congoleum Art-Rugs for the first time, he always wonders how such beautiful rugs can be so inexpensive. For though they closely resemble woven rugs in beauty of design and coloring, they cost only a fraction as much.

Gold-Seal Congoleum Art-Rugs come in a wide choice of attractive patterns appropriate for kitchens, bedrooms, dining-rooms and living-rooms. All sizes too—from very little to very big ones.

And the ease-of-cleaning means so much to housewives! Just a light mopping leaves the smooth, sanitary surface spotlessly clean—the bright colors gleaming like new. How much quicker and easier than the tiresome beating and sweeping that woven rugs require.

And—*Gold-Seal* Art-Rugs never curl or "kick up" at the edges. They lie flat without any kind of fastening.

Note the Low Prices

6	x 9	ft.	$ 8.10	1½	x 3	ft.	$ .50
7½	x 9	ft.	10.10	3	x 3	ft.	1.00
9	x 10½	ft.	14.15	3	x 4½	ft.	1.50
9	x 12	ft.	16.20	3	x 6	ft.	2.00

The rug illustrated is made only in the four large sizes. The small rugs are made in patterns to harmonize with it.

Owing to freight rates, prices west of the Mississippi and in Canada are higher.

OUT-OF-DOORS

The Rawhide Railroad

KING of forgotten trails, did you haps ever hear of the Rawhide Rail- at in Oregon? Dates appear in- , yet it seems quite certain that this first railroad ever known in Oregon. not lack a competent historian, for orge Estes, an attorney of Portland, has written a whole book about ook which I am willing to say holds as much of the Homeric humor of erican West as anything I have seen n covers since the days of Mark 's Roughing It.

pears that in the days of old there e Doc Baker, who moved and had ng at Walla Walla, and who, being sort to which coin naturally clings, possessed of all sorts, kinds and tions of money. He made money s, made it in cows, made it in wheat— every way he looked and in every- he did. Old Doc Baker, believe us, have made a splendid hero for some Fork story about Wall Street. In- I shudder to think what old Doc would have done to Wall Street had long enough.

Doc Baker was just naturally a cap- industry, and of the sort who some- live years before their time. It is ated where he got his vision, for so told he never lived outside of Oregon; mehow or other he had heard of rail- even in those early days, and he and pined for a railroad all of his The Columbia River was all right, t was thirty miles away from the which he made his seat of operations. anted to ride from Walla Walla to la on the steam cars, and nothing would do him—and there were no cars.

that time Portland, Oregon, was quite age. A great many of the stumps had pulled out of the main street and there a bank owned by one Mr. Ladd, to bank aforesaid old Doc Baker would once in a while and deposit a wheat full of gold. He brought this down by via the Columbia River and the rest e water route to the present emporium e Oregon country. One day he came ith an especially large sack of specie, dust and other proofs of his industry economy, and casually informed his ers that he wished them to send East order two modern and up-to-date motives for him. His bankers mildly d him what he wanted with locomo- , and in effect he profanely informed that if they would furnish the locomo- s he would do the rest.

cidentally, old Doc Baker told his kers that he wanted them to purchase him and have shipped out with the two motives a little order of one thousand hats. Of course they thought he ded to show his opulence by wearing a silk hat every day, but as to that also Baker remained entirely noncommittal. had a single-track mind. He suggested is bankers that so long as he had plenty money in their bank and they had im- diate access to it, all they had to do was get locomotives and silk hats when he ered them. Whereupon Mr. Ladd agreed do as bid.

t was explained to Old Doc Baker that bring the locomotives around by ship m New York to Portland would take out two years, not to mention the time might take to get together a thousand k hats. The new railroad king of Oregon sually remarked that he would have erything ready by the time the shipment owed up. He then departed for his own spire farther east.

Doc Baker knew that in order to con- ruct a railroad you must have an engineer lay it out. Mr. Ladd thought it would quire about six months to make the pre- minary survey for this railroad, but that emed a long time to a real hustler. Where- on Doc Baker bethought him of a friend y the name of Bill Green, an old-time tagecoach and ox-team driver. True, Bill reen had never seen a railroad any more han Doc Baker, but he was the sort of an that gets things done one way or an- ther; so he was hired for chief engineer n the new railroad.

Mr. Green was slightly handicapped by the fact that he did not know exactly what a railroad looked like, but he had heard of one Pat Prunty, a placer miner who was reputed once to have worked on a railroad far back in the East. He found Pat, and Pat agreed to go in as assistant engineer and chief of construction. The two of them started in to lay out the railroad.

They had no surveying instruments, and would not have known how to use them if they had owned them. Their methods were very simple. Bill Green took a whisky bottle half full of water and found that he could attain perfectly good levels by squinting along the top of the water in the half-filled bottle. This seems a little crude, but as a matter of fact it worked. More than that, it worked on horseback. In that country at that time no one ever walked. The engineers rode while laying out their levels, and so saved themselves much fatigue. So successful were their new railroad methods that instead of requiring six months to lay out the line they did the whole thing in just six days.

You might think that they did this work in a crude and incompetent fashion. Such is far from the case. When the advancing tide of civilization had brought real railroads out into that country the new engineers did not need to lay out a new line from Walla Walla to Wallula. The Bill Green survey and the Pat Prunty grading were found entirely satisfactory, and all that remained necessary was to put down new rails. Our historian informs us that in grading the new lines the engineers used twenty yoke of oxen hitched to a grader made on the spot according to specifications never used elsewhere. They kept this grader in line by hitching teams of mules to it on each side. With this equipment, original and empirical as it was, the grading on the new railroad from Walla Walla to Wallula went on a great deal more rapidly than Mr. Ladd had predicted. They put in culverts to let the water through, built bridges where absolutely necessary, and laid down ties just as is done on a regular railroad.

Of course they had no railroad iron, but that was a mere detail. The rails were made of heavy wooden stringers. Witness the level-headed quality of these masters of transportation. They spiked down the rail on only one side of the track. Why? Because they had no idea how far apart the wheels of a locomotive were, and there was no way of finding out inside of two years. So they nailed down one rail, and let the other lie loose until they could fit the road to the new engines when they came. There was almost no lost motion in any of the operations of building the first railroad Oregon ever had.

The reader will now suppose two years to have elapsed. At the end of that time Banker Ladd sent word by canoe express to Doc Baker that his cargo from the East had arrived. He also sent by personal messenger a straight stick of a certain length. Doc Baker understood. That measured the gauge of the locomotives. Bill Green at once started his men at spiking down the loose rail of the railroad. Doc Baker himself started down the Columbia River to bring up his freight.

It came by barge—two locomotives, one hundred pairs of car wheels and one thousand plug hats. That is to say, it came simply and steadily as far upstream as certain bold rapids, known as Wish-ram, whereabouts dwelt a certain tribe whose hearts were known to be bad in regard to the white man, and who were accustomed to exact toll of travelers much in ancient bandit fashion. At this point the real genius of the reticent Doc Baker shone forth.

He not only needed a passport but he needed a transport as well. How to get the heavily loaded barges over or around the Wish-ram Rapids was a question. Of course, since he had paid spot cash for everything, it was his privilege to do what he liked with the locomotives, the car wheels and the plug hats.

He never had told anyone why he had ordered one thousand plug hats. Everyone supposed that he intended to wear them all on the first train from Walla Walla to Wallula; but such was not the case. He now opened his boxes, crates and packages of silk hats and, taking one of the aforesaid hats in hand, entered the tribal council which had been called for this occasion. He placed the hat upon the head of the chief and, standing back in admiration, declared himself of the personal belief that Solomon had nothing on the chief of the Wish-ram, and that any Wish-ram warrior, thus attired, even if he could claim but little else by way of raiment, would put all personal competition out of the question as against any other tribal member whatsoever. Doc Baker explained that the Wish-ram thus arrayed would be irresistible with the fair sex.

Not to be partial, he explained that he had one thousand of these hats, one for each able-bodied member of the tribe. He indicated also, delicately, that he needed about a thousand able-bodied men to pull his locomotives around the rapids. He wondered if a thousand silk hats would not furnish him a Wish-ram passport in every sense of the word.

It would; it did. As one man, one thousand seminaked Wish-rams, each with a silk hat on his head, laid hold of the lines and walked the locomotives upstream around the rapids.

Bill Green and Pat Prunty had done their work well. It was found that the locomotives fitted the rails absolutely. The engineer and fireman imported from Portland got up steam and found that the new railroad worked. Mayhap certain things occurred by way of celebration—history saith not. But history saith that after a while, under the many cargoes of wheat, Indians and leading citizens who began to use the railroad from Walla Walla to Wallula, the flanges of the wheels began to cut into the edges of the timber stringers. It was apparent that before long the new railroad would disintegrate.

This would never do. But how could the catastrophe be averted? Why, plenty easy! Doc Baker knew that rawhide was the most durable substance in the world for one who rightly understood its uses. He ordered his new railroad to be faced with rawhide all the way from Walla Walla to Wallula! It was done. It was found that over the rails thus reënforced the traffic could be handled with perfect safety. Of course the railroad was a good deal longer when it rained, but in the hot weather she shrunk up hard as iron and worked perfectly.

According to historian Estes, Doc Baker and his engineers did not understand about the cowcatcher on the engine. There were a great many cows in that country, but they did not want to catch them—rather to the contrary. Hence they rigged a little platform at the front of each engine and on each mounted a competent dog. When any animal obstructed the track the dog warned it off, or chased it off when harsher measures were required. All in all, it is a grave question whether the engineers of any age or locality have shown themselves more practical than those who built and operated the first railroad in Oregon. It was only thirty miles long, to be sure, but it was some railroad in its day.

What became of it? Mr. Estes in his history makes that quite plain. There came a very hard winter in that part of Oregon, with deep snows. Maddened by hunger, the wolves came down out of the mountains and infested all the settlements. The hardy men of Oregon prepared to sell their lives as dearly as possible, for each habitation was surrounded by a circle of these beasts, with red, slavering jaws.

How often does some little event turn the whole course of history! The Rawhide Railroad might be operating yet between Walla Walla and Wallula had it not been for the fact that some hungry wolf, while digging in the snow for food, chanced to strike, in a shallow place of the snow, a portion of the roadbed and rails. At that time, owing to the moisture of the snow, the rails were in what might be called a relatively succulent and comparatively edible condition. Word was passed among the wolves. With red, slavering jaws they fell upon the Rawhide Railroad, and soon the Rawhide Railroad had passed through the red and slavering jaws aforesaid.

Naturally that ended it. You can't run a railroad after the wolves have eaten up the rails, can you?

You'll be glad—

to know that U. S. N. Deck Paint has a worthy running mate—U. S. N. Deck Varnish. And it's just as fine a varnish as U. S. N. Deck Paint is a paint.

Guess that's about all I need to say to old friends. But to those who don't know U. S. N. Deck Paint so well, I'll say briefly: If you measure the value of paint in price per gallon instead of in years of service you won't be interested. U. S. N. Deck Paint costs a little more a gallon than most paints; costs more and is worth more. It outwears ordinary paint; it withstands rubbing, scrubbing, and washing. It dries hard overnight. It comes in unequalled colors.

If you're interested, suppose you try U. S. N. Deck Paint on the nursery walls or that breakfast-room set. Or try U. S. N. Deck Varnish on that floor. Then write me and tell me what you think of it—care of Billings-Chapin Co., Cleveland, Ohio.

HATS FOR YOUNG MEN

RITA COVENTRY

(Continued from Page 19)

Goro exhibiting the little house to the American naval officer, the scene with Suzuki, the servant, the arrival of the American consul, Sharpless. Then came Pinkerton's aria, whimsically introducing a snatch of The Star-Spangled Banner, and the amusing passage with its convivial invitation—the English words "milk punch or whisky?" leaping out so startlingly from the mellifluous Italian text.

Presently, motioning to him to remain seated, Rita rose.

"My cue soon," she whispered, and left him.

Soon after, he heard the little hubbub of women's voices that precedes the entrance of Butterfly; then softly, in Rita's thrilling soprano, the recitative, *Ancora un passo or sia*, with music mounting like the hillside steps she was supposed to have climbed; and following immediately on this—still from a little distance—her happy song of love.

The wistful story of this opera and the passionate yearning of its melodies had always moved Parrish, but now he felt a new emotion. This was not Coventry in Madame Butterfly; it was the woman he loved. Breathlessly he awaited the first vision of her on the brow of the hill, his heart thumping thickly; but when, after repeating the plaintive "I have come at the call of love," she appeared he could see her but dimly through tears standing in his eyes. Startled and chagrined at his emotion he hastily brushed them away with the back of his hand.

Thenceforward he sat spellbound, listening for Rita's voice, watching her every gesture. How perfectly she simulated the mannerisms of a gentle little Japanese! How expressive her hands! And how small she looked—or was it only that the tenor was so big and fat? "Young lieutenant"—with those dimensions! There was something unmanly about tenors. Come to think of it, he had never known any man with a high voice to make good in business.

The wedding guests arrived upon the scene, the ceremony was performed and the company departed, leaving Butterfly and Pinkerton alone. Their wedding night. The footlights had been growing dimmer. Stars began to show through the back drop. The music! Nobody could equal Puccini as a composer of these throbbing, passionate love songs.

"*Ti serro palpitante*," sang the tenor and, suiting the action to the word, seized her in his arms.

That was the beastly thing about a woman's being on the stage; she must submit to being handled by such louts.

But in spite of his aversion for the tenor he was again deeply moved by the fiery surge of the big duet with which the act ended, as Pinkerton led Butterfly to the nuptial chamber.

Slowly, like a great cloud drifting across a mountain top, the curtain floated down, while from the space beyond swept applause which made Parrish think of the roar of rain on a tin roof.

As the magnificent footman drew back a corner of the heavy tableau curtain to pass the singers out for the first encore, Parrish stood up and peered through the aperture. In the dim auditorium he could see the people in the boxes nearest the proscenium arch—the men a background for the women—proud-looking women with white shoulders and vivid plumed fans. Because of the blinding glare of the footlights in his eyes they looked unreal to him, like paper figures cut from fashion magazines.

As the singers moved out before the curtain the applause rolled louder. He watched them taking hands, smiling, bowing to each other and to the audience, their faces sharply lighted from beneath, like ballet girls in Degas' paintings.

Finally, after many encores, Rita alone, with the brilliance beating on the youthful contour of her chin and throat; then suddenly through the air, flowers falling, seeming to come from nowhere, and men's voices in the distance calling "*Brava!*"

Her arms were full of flowers when she came to him.

"I must hurry!" she said. "I have to be on at the beginning of the next act, you know. I don't believe it's worth your staying while I change."

"Your engagement," he began interrogatively, as they moved toward her dressing room—"that business you spoke of—it hasn't by any chance been ——"

"No, I'm sorry," she broke in.

"I'll run along then," he said.

"I'm afraid you'll have to," she agreed as they reached the anteroom. She was speaking rapidly, like a busy executive to whom time is everything. "Why don't you go out front and hear the rest from there? Here." She snatched an envelope from the desk, scribbled a few words on it in pencil, and thrust it into his hand. "Take that to the box office. Ask for Mr. Spiegel. He'll give you a seat if there's one to be had. Now I really must ——" She turned toward the door of the inner room.

"Thanks," he said. "Shall I come back for you afterwards?"

"Oh, no. I'll be very late." The words came over her shoulder. But from the doorway she looked back, exclaiming, "Oh—I almost forgot! Come to dinner Sunday."

With that she disappeared.

"Thanks, I will," he said to the chintz curtain and, taking up hat, coat and stick, left the room.

He Was Walking Rapidly; the Collar of His Overcoat Was Turned Up, and He Wore a Checked Cloth Cap

Of course she was in an awful h no doubt about that. She just didn' time to think. And she was pleas the bracelet—he could see that wh thanked him. No particular reas she should speak of it again.

He passed through the stage do walked up the side street toward th of the building.

She couldn't mean that he wasn' her until Sunday. Impossible! S wanted to be sure he wouldn't ma other engagement for Sunday night. that was it.

The lobby was full of men in dress, smoking.

Parrish pushed the envelope throu box-office window.

"There's not a single orchestra left," said Mr. Spiegel. "Will you ta management's box?"

Parrish thanked him and too coupons.

The box, which an usher unlock him, was near the center of the hou A brass plate on the door bore the n the impresario, and a like place on th door informed Parrish that t joining box was that of H Krauss. If he were to go i and sit down at the front Krauss should be in his ow he would have to talk with and he was not in humor to He took a chair at the rear, the high partition sheltered from view.

Just what was her bu about, he wondered—not th was any particular affair o but what sort of business arr ments did opera singers mak course they had contracts. doubt Rita's lawyer looked over for her. He hoped he a good lawyer. But did they contracts at night—in dre rooms? That didn't seem businesslike. You'd think th go to the manager's office—t the lawyer's office—or that lawyer would come to the sin house. Artistic people were toriously careless about busi And she made so much mon probably with her it was come, easy go. What she ne was the advice of a good s business man. She might do worse than to consult him a some of these things.

The house was darkened, curtain rose. The sad story, th fecting melodies and his own e tions as he saw Rita—a tiny fig now in that great gold-fra picture—and heard her voice rying through those vast spa combined to produce in hi state of mournful intoxication which he remained until, as opera was about to end, pe in the parterre boxes began to s away to get to their limousi before the rush of the general odus should begin. He decided go too. If he waited to the v end and went out with the cro he was almost certain to m people he knew.

Having told his chauffeur to keep out the jam by parking in a side street o toward Sixth Avenue, he went out throu the main entrance, and headed up Broa way, intending to cross at the next corn but the street was crowded and he had wait on the curb.

He glanced back several times in the d rection of the stage entrance. He suppos she would take off her make-up before se ing to that business.

A street car stopped; a man jumped o came dodging through the traffic, an brushed by him as he hurried down th street.

Struck by something familiar in the man' appearance, Parrish turned and looked aft him. He was walking rapidly; the colla of his overcoat was turned up, and he wor a checked cloth cap. Something familiar Suddenly he got it. If it wasn't that piano tuner from Atlantic City it was someon mighty like him.

He stood looking after him, but as he looked the young man was lost to view in

The more closely the new management comes into personal contact with owners of the Peerless motor car, the more deeply impressed they are with its past and present performance.

Owners seem unanimous in their eager willingness to submit the Peerless to the most exacting comparison, in point of performance, with the very finest motor cars extant.

Peerless motor cars are now being manufactured by R. H. Collins and his associates, and each day's developments reveal more clearly the splendid foundation laid in advance of their coming.

Among Peerless owners they have found a depth of satisfaction so pronounced that it is difficult to express or explain.

The car upon which they are bringing to bear all their skill and experience was already so good that the very earliest of the eight-cylinder models are still rendering superb service in all parts of the country.

From what they have found of the past, and what they have been able to accomplish, they are convinced that the Peerless has everything to gain by comparative tests which determine real and substantial value in a motor car.

There are going into the Peerless today a fineness and accuracy of manufacturing measurement, a scrupulous care in the choice of materials, and a beauty and durability of finish, which stamp it as one of the world's really great motor cars.

We believe it is the universal conviction among Peerless owners that, under existing market conditions, it would be impossible for those seeking a really fine, serviceable, long-lived motor car to make a sounder, safer investment than the Peerless.

the crowd that was beginning to emerge from the carriage entrance near the stage door.

XXIV

EVIDENTLY Rita had not meant to put him off until Sunday, for next morning she called him up at his office. She wanted to thank him again for the bracelet, she said. She hadn't had a chance to thank him properly last night, she was so rushed. She had the bracelet on now. She loved it. She was going to wear it this evening to dinner. It would be perfect with a black velvet evening gown she had.

So she was going out to dinner!

"What are you going to do to-morrow night?" he asked.

"Some people are coming up to talk about a tour to the Pacific Coast. But I tell you—I'm going to the dressmaker's in the afternoon. Wouldn't it amuse you to come around there? And we could go out to tea after."

That day at lunch Parrish told his partner, Stuart Bement, that the period of depression which had so long been afflicting the country was, in his opinion, about over. This was a good market to buy in. By June conditions would be normal.

Yes, he was feeling optimistic. He carried his optimism up town with him that evening, down in the morning, and up again when in the late afternoon he went to meet Rita.

The name of her dressmaker had long been familiar to him; it was mentioned with respect by the best-dressed women he knew, and he himself had often found his eyes drawn to the double tier of windows, wide and sumptuous, in which its latest costumes were exhibited to the passing Avenue; but he had never entered it before, and now, as he did so, he found himself a little ill at ease. Vaguely he was aware of counters, showcases and wardrobes of polished wood and shining plate glass, holding all manner of feminine equipment; and although it was so obviously put there to be looked at, he had an instinct not to look; to have looked would have made him feel rather like a peeping Tom. Yet why? These things, which suggested to the corner of his eyes that they were dainty, sheer and ribbony, belonged to an incorporated company. Why did woman's dress seem so much more personal than man's—not only her under dress, not only a dress belonging to some specific woman, but even a frock in a shop window?

A being with honey-colored hair approached him, shapely in a tight black dress, very plain but somehow expensive looking. She had the air of mounting toward him like a sunlit breaker gracefully rising to a crest. With her head a little to one side she raised her lined eyebrows in polite interrogation.

He answered with "I'm looking for Miss Coventry."

"Oh, yes." Immediately she was smiling and gracious. She undulated to the elevators, pressed the button for him and, when the boy opened the door, enunciated with careful elegance, "Let this gentleman off at the fourth floor, please."

The fourth floor differed from the first in that the latter was a place of finished things, the former a place of things not quite finished. Except for chairs the room was unfurnished; there were long threads on the gray-green carpet, and opposite the elevators a battery of fitting rooms, gray paneled, with lights shining from within through ground glass.

As he emerged from the elevator two black-clad women stepped toward him.

"Miss Coventry?" he asked.

Ah, yes! Like destroyers picking up a merchantman they swerved and convoyed him.

"The gentleman's here, Miss Coventry," called one, rapping at a fitting-room door.

"Just a minute," came Rita's voice; whereat the convoy, having brought him to his anchorage, sailed away.

Presently the door was opened by a middle-aged woman wearing steel-rimmed spectacles.

Rita was facing him, posed like a manikin, with arms slightly extended. From her shoulders hung a trailing scarf of silvery fabric, very thin, which, attached to bracelets on either wrist, made a background resembling a pair of soft, half-folded wings. The gown itself was of brocade, sapphire blue and silver, cut to a deep V in front and held in place by the slightest of straps.

"Beautiful!" he exclaimed, looking at her white arms.

The fitter, moving behind her, ga touch to the scarf. Simultaneousl woman entered.

"Here's that little frock, dear said, exhibiting a handful of sl chiffon over lace. "It's just You're the very first to see it. I you're here! Mr. S. says right aw there's a creation for Miss Covent it aside for her.' Aren't those lit buds sweet though? I've never a frock like this, dearie, and I cert want you to have it. It's so sympa

"This is Miss McCaffery," said

"Pleased to meet you, I'm su the young woman.

"She's a burglar," Rita went she does know how to dress me."

Miss McCaffery rolled her br Irish eyes in humorous protest.

"Why, *dearie!* How can you a thing? Now, just to show you, I to let you have this little dress a sacrifice."

"It's too young for me," said Ri looking at it appraisingly.

Miss McCaffery turned to Parri mock hopelessness.

"C'n you beat it?" she demanded *her* looks!" And to Rita, "Dea know perfickly well you can we *thing!*"

"I haven't time to try it on t said Rita.

But Miss McCaffery was prep work fast.

"I'll have a model slip it on for said she. Thrusting her head out door she shrilled "Claire!" and pas gown out to unseen hands. Then was about to change, Parrish follow fitter from the room and waited the door.

He had waited but a moment whe appeared a youthful model, lookin a baby cloud at sunset, in the she gown. She entered the fitting r where from over the partition he hear their voices—and did not emerg Rita came out dressed for the street.

"You make no mistake in takin little frock," assured Miss McCaff they stood by the elevator. "It'll you look like an anngenoo. It's so s thetic! Well, good-by, dearie. C soon again." And with a little bow t rish: "Glad to of met you, I'm sure."

For tea they went to a neighboring where there was a dark wainscoted room with tables not too close to each with a softly glowing lamp, red s suggestive of confidences. Most of t bles were occupied by couples intent their own low-voiced conversation.

"This place always amuses me," Rita as they sat. "It's known far an as a place where people go when they want to be seen. So they all come he see each other, and pretend they don

Over the tea he found an opport to speak of something that was o mind.

"By the way, I thought I caught of that young piano tuner the other n The statement was a question.

"Yes; he came around to see me."

"At the opera, the night I was th

"For a minute, yes."

"Are you going to sing his song?"

She nodded. "I told him I would know."

"Well," he declared emphatically, I've got to say is—that young man s to be mighty grateful to you."

"He ought to be," she agreed, "b doesn't show any signs of it yet. I've wondering about it. Anyway, we are ing out some plans to push his songs."

"In spite of his ingratitude, eh?"

"But he's a genius."

"Huh!" said Parrish. "Genius overworked word. Nowadays anyone manufactures a dinky little automob paints a picture that looks as if a defe child had done it or raises the biggest sq in the county gets himself called a ge

Since seeing Delaney so near the o house he had given the case of that y man some thought, and he was prep now to state his conclusions; but Rita missed the topic, saying lightly, "Per you're right; he may not be a genius. I assure you he is a new type to me. odd types have always interested me."

"Certainly you've seen enough of the he said, diverted. "Lord, what a l people you know! And they seem to k you so well, too—or think they do. think *I* do. When I'm with you I think

Start Your Aladdin Set Now

A Kitchen that Smiles

YOU'VE seen pictures of kitchens in Holland by those sturdy Dutch painters who knew that the kitchen is the heart of the home. How happiness radiated from those glowing pots and pans sitting along the wall, like rosy children in a row. Like results are produced in modern kitchens by Aladdin Utensils with their graceful shapes in silvery aluminum and china-like enameled steel.

The strainer cover on the Aluminum Straight Kettle has a perforated slide which closes tightly, and when open pours without spilling. This white enameled steel Sink Strainer is another useful, durable kitchen convenience.

The Double-lipped Aluminum Sauce Pan pours from either side. Has the comfortable rounded handle and nicely rounded easy-cleaning body.

The most progressive hardware, housefurnishing or department store in your town is prepared to help you start your Aladdin set.

but away from you I sometimes get the feeling that I don't know you so very well after all—that I've lost you to whatever people you happen to be with at the time. And who are they all? I try to imagine where you are, but most of the time I don't know where you are. I don't know enough of your life to make a mental picture of it. Why don't I? That's what I want to know. You don't seem to me to be secretive."

"No," she answered. "I'm naturally frank, I think." Then, smiling faintly: "But supposing I were secretive—would you expect me to tell you so, or be secretive about it?"

He laughed, but this time was not to be diverted.

"I've never felt this way before," he ran on. "I can't figure it out. It makes me restless. I want you to know all about me, and I should think you'd want me to know all about you. Haven't you felt that way about people you've cared for? There was a girl I cared for a great deal and I could come pretty near reading every thought in her head."

"And are you still interested in her?" Rita asked.

"She was awfully sweet," said he. "I shall always have a mighty tender feeling for her."

Rita looked at her jeweled wrist watch.

"It's getting late," she said. "I must be going."

As they were waiting for the check he pursued his earlier thought.

"I want you to see my apartment," he told her. "I have some old things that will interest you. Will you come down and dine with me some night soon?"

"I'd love to, sometime when I'm not so rushed."

"Well, anyway," he said, knowing better than to press the point, "I'll see you Sunday night."

XXV

HOWEVER, he was not to see her on Sunday night.

Next morning he had a protracted talk over the telephone with the manager of Parrish & Bement's Chicago office.

"All right," he said rather irritably at the close of the conversation; "either Mr. Bement or I will be out there on Monday. Probably Mr. Bement this time."

But when he went into his partner's room and suggested to him that it was his turn to make the Chicago journey he found him obdurate. The idea of opening a Chicago office had originated with Parrish, and that office had always been regarded in the firm as Parrish's particular concern. But that was not all. The journey that Bement was momentarily expecting to embark upon was not to Chicago, but to his home on Long Island, Mrs. Bement's doctor having informed him that morning that it was probably only a matter of hours before his presence should be urgently required.

Parrish endeavored to express a proper sympathetic interest in the approaching ordeal of parenthood. Well, there was nothing else for it—he would have to go to Chicago himself. It was unavoidable. He must call up Rita and let her know he couldn't come. What vile luck! Who would be there Sunday night? He supposed she'd get some man to take his place. Who would it be? Who would be in his place, at her right?

He always felt uneasy about ringing Rita up. Telephoning to her was somehow connected in his mind with disappointments. But this morning, rather to his surprise, Pierre admitted that she was at home, and a moment later he heard her voice.

"Oh, that's too bad," she said when he had broken the news to her.

"Yes, and I may have to be out there a week," he answered gloomily.

"Well—be sure to let me hear from you when you get back."

"When I get back?" he repeated. "Isn't there some way of my seeing you before I go?"

"When do you leave?"

"To-morrow afternoon—2:45."

"Wait till I look up my engagement list." She began to ruminate aloud: "Um—let's see—Sunday. No, I don't think—unless you —— I tell you: I have to be downtown at three to-morrow afternoon. How would you like me to drive you to the station?"

"That will be great!" he cried. Then his voice became tender. "And there's something else I want, Rita: your photograph. I want to have it with me."

"I'll bring you one."

"Thanks, dear—and write on it, will you?"

"Yes. About quarter after two, then?"

He was waiting, with his baggage, in the lower hall next afternoon when her trim little French landaulet stopped at the door. He was becoming nervous; but she wasn't so very late; and Fifth Avenue wasn't crowded on Sunday—they could drive down quickly.

"You brought the photograph?" he demanded eagerly as they drove off.

She handed it to him. He slipped it out of the glazed-paper envelope.

"Oh," he exclaimed, "as the Festival Queen in Louise! Lovely!"

But secretly he was a little disappointed—not with the photograph but with the inscription: "Faithfully yours, Rita Coventry." He often signed his letters to men friends "Faithfully yours." He couldn't help wishing she had at least written "To Dick"—or better than that, since the picture showed her as Louise, she might have written those lines from the opera which would always have for him a significance so tender:

Pourquoi serais-je belle
Si ce n'est pour être aimée?

Still, when you really thought about it, that word "faithfully" could mean a great deal. He opened the suitcase on the floor in front of him and gently placed the photograph within.

"Do you know I've never had a letter from you?" he said. "Not even a little note." He slipped off his glove and took her white-gloved hand, which was lying in her lap. "Send me a line out to Chicago, will you, Rita?"

"I'll try," she answered; but the little chuckle that followed the remark disconcerted him. "I got a letter from a cowboy yesterday," she explained. "He said he saw my picture in a magazine, and *he* wants me to write to him."

He smiled dimly.

Ah, what a short glimpse of her this little ride gave him. Already they were halfway to the station.

"To-night, when you are going in to dinner," he said, "you can think of me sitting alone in the dining car."

"It's a shame you have to go," she answered, pressing his hand.

"I made a desperate effort to get out of it," he told her; and with feeling added: "I simply loathe to leave you. I hope you're going to miss me?"

"It's this getting away that's the hard part," she sympathized. "The break of leaving. But it won't be so bad when you get there. You'll be busy. You'll be back before you know it."

"But your dinner ——" he began.

"Oh, I'll be giving other dinners."

"And don't forget that you're coming to dine with me. I tell you: I'll wire you from Chicago as soon as I know when I'll be home again. Then you can save the first free evening."

She nodded.

"You won't mind coming alone? I thought I wouldn't ask anybody else—unless you think appearances might ——"

"Appearances?" she broke in with a little laugh. "You're right—you *don't* know me. I can't be bothered with such things. I go where I please." She laughed again. "I'm not quite so emancipated, though, as some people in the opera. Apparently some of them regard gossip as an asset—good advertising."

"As soon as I get back then!" he said almost gayly as the car passed under the overhanging cliffs of Grand Central Station.

He let go her hand.

"I love you, dear!" he said in a low voice as a porter advanced to open the door.

The man took his bags and he alighted.

"Where shall I tell him to go?" he asked, pausing, hat in hand, and thinking how luxurious she looked against the soft upholstery.

"The Discaphone studios; he knows."

"Making records—on Sunday?"

"Yes; they do it for me because I'm so busy through the week."

"What are you singing?"

"Bonnie Doon," she replied.

Some taxicabs had driven up behind them, and now, unable to proceed, set up a hooting of horns which reverberated raucously in that cavernous space.

Quickly he closed the door. The car flashed away. He turned and followed the porter into the busy concourse of the station.

Sometime during the night he wa ened by a silence. The train was cr a standstill. Wondering where he w he raised the curtain, looked out, a ognized the Cleveland station. T stopped; the airbrakes sighed wi

Alice! Alice very near! The trai scheduled to stop at Cleveland, a if it had been she could not ha down at such an hour. It was really then, not to have let her know tha passing through. He should have to her, though. He ought to have d He really should have finished th to her when he came across it in hi a day or two ago. But he would w from Chicago.

Come to think of it, he hadn't he her in some time. Almost a week. had said that she was going to wri day. What did her silence mean? H her sister wasn't worse.

Vaguely, as a background to his th he was aware of the metallic rapp wheel tester's hammer as he wo way along beside the train; first then nearer, then on the front wh the car he was in. Now he could faint flicker of the man's torch.

Poor Alice! Not in the whole wo there a sweeter, gentler spirit!

The wheel tester passed bene window, his torch making a revealin around him. The light penetrat dusty double panes, and there was ment when, for Parrish, the inner da was dispelled.

He had treated Alice badly. He ha selfish, cruel. Now for the first ti acknowledged the truth. And the stabbed him.

The sound of the hammer on the w grew faint in the distance. The train to move; it slipped out into the But Parrish felt it now an unrelenting like Fate, which had him in its clutche was drawing him away. For a long ti lay there in the darkness thinking of his heart filled with loneliness.

His first day in Chicago was cro with business; in the evening there a dinner to attend and it was late wh got back to his hotel. Instead of wr to Alice he sent a long explanatory gram, carefully phrased, pleading bus pressure and promising if possible to her at Cleveland on the return journe

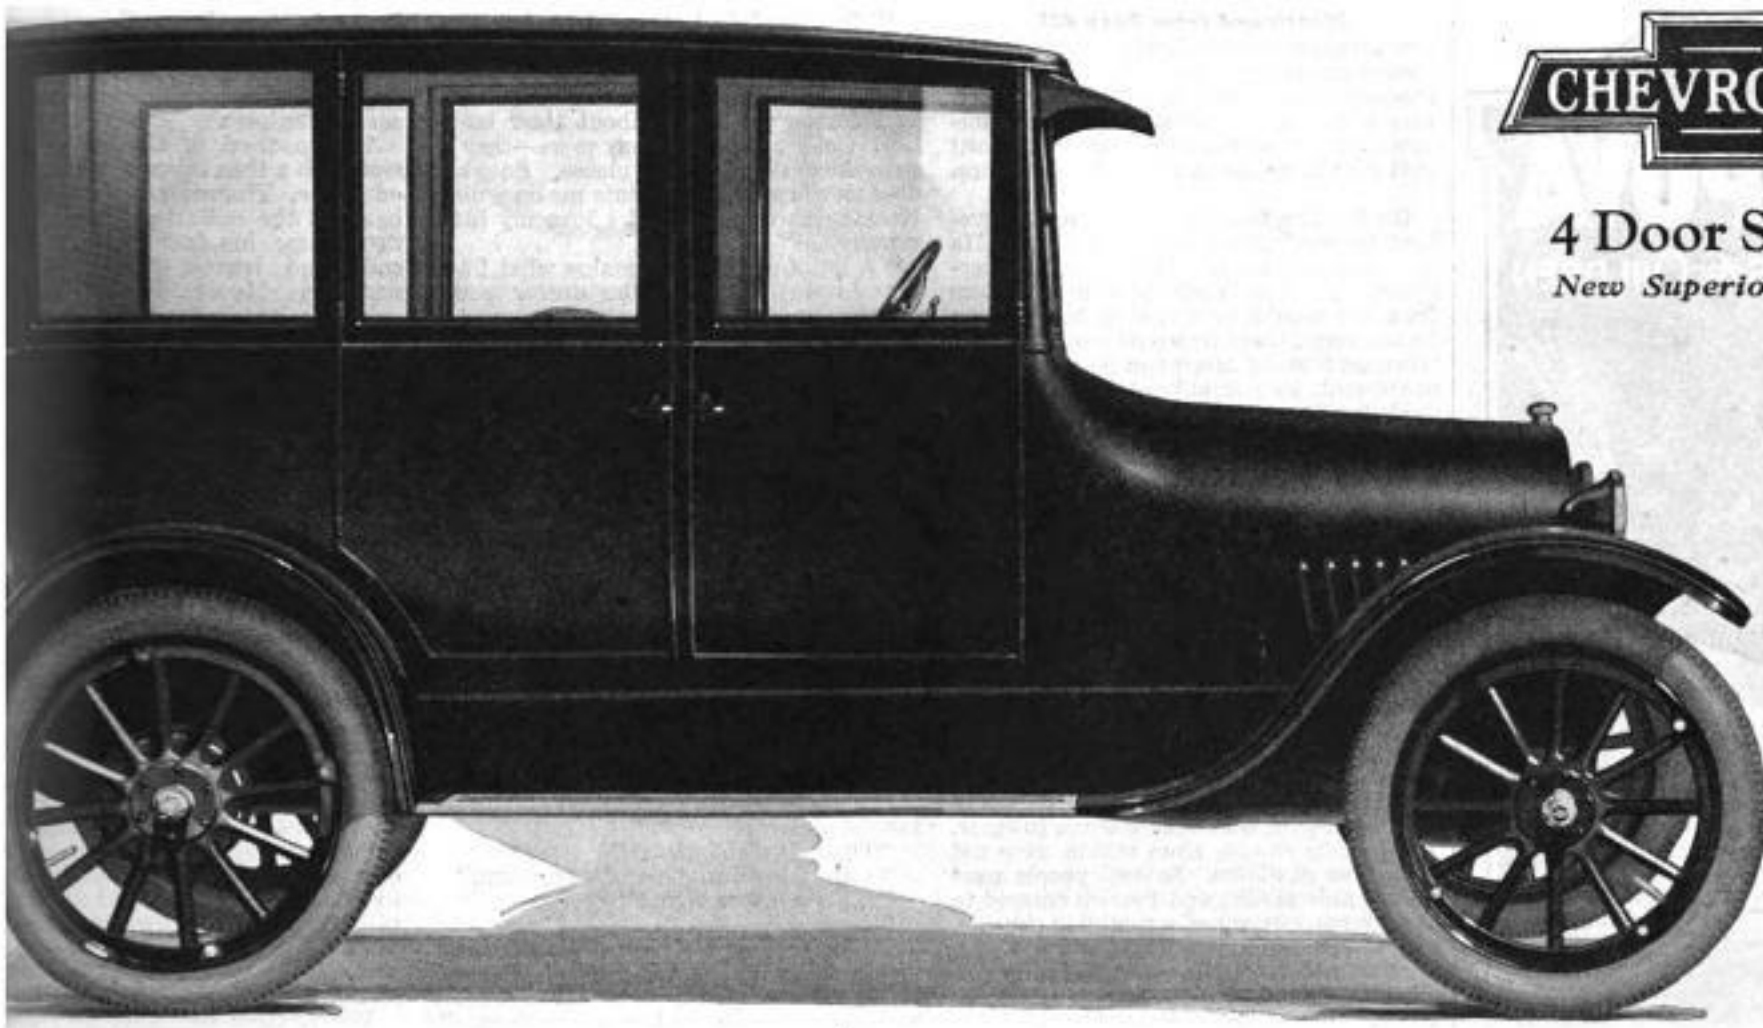
"Am worried at not hearing from y his message to her ended. "How is sister and how are you? Please answer."

It was a little awkward to let her k he was in Chicago; in one sense he w have much preferred not to communi with her until he got back; but he better for having sent the telegram.

Her reply, which arrived early the afternoon, surprised him somewhat. sidering the length of his dispatch to she might, he thought, have been a more communicative. Her message ra

Margaret doing nicely. Am well. D trouble to stop here.

Ten words exactly. How like a wom A woman thought nothing of spend forty dollars on a hat, but to save a cents would boil a telegram to its bones. Though it contained the informat he desired he found the message unsatis tory. Her telegrams usually ended the word "love." That, though, w have made eleven words. But how like that last self-sacrificing phrase, telling not to trouble to stop at Cleveland on way back, although he well knew her e ness to see him.



The effect upon Parrish of his wire Alice was so agreeable that, two days la he telegraphed again. This time there no answer. Two days more passed, ho ever, before he noticed that; and by th the foreground of his mind was occupi by something else: Why didn't that le come from Rita?

Toward the middle of the week he begun to look for it, having his mail s to his room with the papers early in morning, and making excuses to get ba to the hotel during the day. But here it Saturday; he was going home this afte noon, having heard nothing of Rita beyo what he had gleaned from New York new papers, stale with the peculiar staleness newspapers twenty-four hours old.

The concert had occurred on Wednes day. She had sung not only a charmi

The World's Lowest Priced High-Grade All-Year Sedan

The Ideal Family Car

The Comfort and Weather Protection of a Limousine For Less Than the Cost of Most Open Cars

$875

F. O. B. FLINT, MICH.

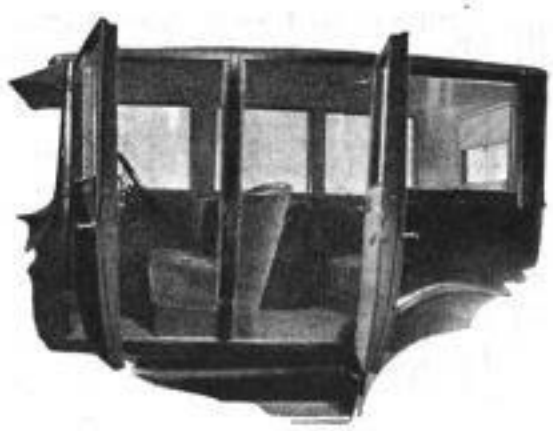
Prices Subject to Change Without Notice

Never before has a Fisher Body Sedan of this quality been offered at a price so low. The beautiful lines, superb finish, luxurious upholstery and refined appointments that have made Fisher Body the standard of excellence in closed cars, are all here in full measure. Its four doors fit perfectly and cannot rattle.

The heavy plate glass windows can be instantly lowered to any desired point, or as quickly raised, and the plate glass windshields are both movable, permitting instant conversion of Sedan into either a closed or open car.

Mounted on the famous New Superior Model Chassis, this car is fully equipped mechanically, and combines ample power and speed with steadiness and ease of handling.

No matter what car you now use, or think of buying, investigate this Sedan. Its power, speed, appearance and appointments please discriminating motorists accustomed to paying higher prices for closed cars.



Its low price and low maintenance appeal to all who find it desirable to economize.

In no other car on the market can you find this unusual combination of Style, Quality, Economy, and Year-Round Service.

SLIPOVA
CLOTHES for CHILDREN

So pretty
—yet low-priced

When Mothers buy "SLIPOVA Clothes for Children" for the first time they can hardly believe that most of them sell for less than a dollar.

Particularly is this so when it is known that "SLIPOVA Clothes for Children" are perfectly made of the best materials, double-seams where strength is needed; cut in the right proportions without skimping, and of fine quality and finish throughout.

"SLIPOVA Rompers" like all "SLIPOVA Clothes for Children" wear well and wash perfectly—without fading because the dyes are fast.

Rompers and all "SLIPOVA Clothes for Children" are sold under a money-back guarantee. The "SLIPOVA" Label is a mark of good quality and lower price.

If your dealer doesn't carry them, write to Dept. D.

new arrangement of Bonnie Doon, but as encores two other songs by Patrick Delaney, the promising young American composer, who provided a sympathetic accompaniment. Both the papers he saw mentioned that Rita had been in unusually fine voice.

On the line that passed through Cleveland he was offered an upper berth. He took another road. Alice would understand. In New York, of course, letters from her would be awaiting him. When he answered them he would explain. But when on Sunday afternoon he reached his apartment, he had only one thought: To see Rita. The early twilight was shadowing the city as he arrived at her house.

"Mademoiselle is not well," said Pierre. "I will see."

"Nothing serious, I hope?" Parrish asked, alarmed.

"Only a little cold, monsieur, but she did not get up to-day. Mademoiselle has to be so very careful. She sings to-morrow night."

Pierre was not such a bad sort after all!

While he was gone Parrish traced patterns on the rug with his cane.

"This way, monsieur," invited the butler as he returned.

Up those two well-remembered flights he led the way, and at Rita's bedroom door stood aside and motioned Parrish to enter. The sounds coming from within were not indicative of illness. Several people were talking animatedly, and Parrish entered to the accompaniment of a rumbling chuckle, uttered by a bearded gentleman reclining upon the foot of Rita's bed, whom he at once recognized as the big basso, Frémecourt.

"And what do you think she do then?" he thundered. "You think she thank me? Hah! No!" He roared derisively. "No! She call me names. 'You grea-at, beeg, clumsy bool!' she say. And all for what? Because I try to do her leetle service! I say to her: 'Madame, your skirt is beautiful, but it leetle beet open in the back.'" He threw up his hands in comic resignation.

Rita, while joining in the laughter, waved to Parrish. He crossed the room, took her outstretched hand, and somewhat to his surprise found himself being drawn down by it.

"On the cheek," she said. "I have a cold. You know Mrs. Fernis, I think, and Mr. and Mrs. Schoen? And this beeg bool, sitting where I should like to put my feet, is Monsieur Frémecourt—Mr. Parrish."

Laughing again they greeted him. Frémecourt rose, made Parrish a brief little bow, and cried out to Rita in booming protest:

"Hah! So you, too, call me bool? It is too much! I go!" He took her hand, bent over, and for a moment extinguished her in his astrakhan beard. Then standing erect he smacked his lips and with a grand gesture proclaimed, "You see, my darling, I do not fear to kees your sweet lips. Your leetle germs have for me no terrors. On the contrary, they shall have a nice nesting place in my beard."

With a flourish of farewells he departed, and had hardly gone when Mrs. Fernis rose.

"Remember, dear," she warned, "the doctor said you were not to talk. You've been talking altogether too much. I blame myself for having stayed so long."

The Schoens made this their cue for departing also.

"I suppose I ought to go too," said Parrish, left alone with her. As he spoke he drew his chair close to the bed.

"Oh, not right away," she said. "Tell me about your trip."

"There's nothing to tell," said he, "except that I accomplished what I went for. I thought you said you'd write to me?"

"I did start a letter, but some people came in and interrupted me and I didn't have time to finish it."

"Let me have it anyway. I've never had a letter from you, you know."

"Oh," she answered, "I found it kicking around my desk yesterday and tore it up. I had your telegram by then, you see."

There was a knock at the door.

"The doctor, mademoiselle," announced Pierre.

Parrish rose as the middle-aged physician entered, carrying his bag.

"What would you do with a girl like this?" he began as soon as she had introduced them. "I can't do anything with her. I tell her not to use her voice, and I come and find a mob of people leaving the house."

"Mr. Parrish just came," defended Rita.

"And I'm just going," he supplemented.

"Anyway," Rita went on, "all you doctors are bullies." She turned to Parrish: "Of course you know about their latest fad? Colds aren't colds any more—they're autointoxication, if you please. So what does this brute do? He puts me on a diet: Nothing fit to eat. And I love my little tummy so!"

"A lot of difference it makes what I tell you to do!" retorted the doctor good-humoredly. "I can't see why you have me at all. Yes, I can, too—to patch you up in time to sing. You're too strong for your own good, young lady; that's what's the matter with you!"

He laid his case on a table near the bed and opened it. As he did so Pierre entered, carrying a tray. The doctor looked at it.

"Here!" he exclaimed. "What's that bacon doing on top of that milk toast?"

"I can't eat that soggy stuff without something to flavor it," protested Rita.

"But I told you," the doctor insisted, "nothing smoked and nothing fried."

"Pierre," said Rita, "you must learn to time your entrances. Take the tray back and bring it after the doctor has gone."

"Without that bacon!" added the latter severely as he screwed the top on an atomizer.

Parrish took Rita's hand. What a lovely invalid she was!

"Tuesday night, then?"

"Yes, unless I'm dead of starvation."

"A little before eight?"

She nodded.

The rosy glow of lamps fell caressingly upon her face and throat. He held her hand for an instant, gazing at her. Frémecourt had kissed her on the lips before them all. Why couldn't he before the doctor? But he knew why. It was because he wanted to so much.

XXVI

ON MONDAY he had men up to tune and polish his miniature grand piano, and he left word with Ito to be sure to have the polisher remove that mark on the music rack where a cigarette had burned it, long ago. On his way downtown he bought a piano lamp with a carved Florentine base and a shade of Burgundy-color silk, and that evening he and Ito did some rearranging in the living room, turning the piano so that a person seated at the instrument would face the room, with the lamplight falling from behind. When the room was settled to his liking Parrish tried Rita's photograph, in its new silver frame, in various places. It looked best, he thought, upon the mantelpiece, where Alice's picture, also silver framed, had so long stood alone.

But where to put Alice? He carried the portrait to his room and tried it on his dresser and his chiffonier; then, dissatisfied, he went into the library and stood it on his desk, where for some curious reason it again seemed out of place. Strange how hard it was to find a corner for it. The effort made him sad.

He had not greatly relished the thought of facing a pile of letters from Alice on that desk when he returned from Chicago, but having found none he discovered he was disappointed. Never before had she gone so long without communicating with him. It was very peculiar. With a sigh he took up his pen to write to her.

His letter did not altogether satisfy him. Under the circumstances, however, it was the best he could do; he hoped she would not notice the gaps. He sealed it, affixed a special-delivery stamp, dropped it in the mail chute in the hall, and returned to the living room.

How different it looked now, with the new lamp, the piano turned around and Rita's picture on the mantelpiece! That, of course—the placing of her picture there—was the great change. A grim little allegory of the love life of a man!

Next morning he gave Ito explicit directions about that evening's dinner. They would have cocktails, and for hors d'œuvre, fresh caviare; the soup would be Russian borsch; then *filets mignon* with mushrooms under glass, and crisp little potatoes gaufrette, followed by salad, cheese and coffee. He would bring some of that special coffee home with him this afternoon.

From his well-stocked wine closet he took the two bottles he most prized: A Chartreuse which had been extremely choice even in pre-Volstead days, and his last quart of Krug 1908.

He wore a fur-lined coat that day. Winter had come back. A fine snow driven by a gale from the northwest stung h as he walked to the Elevated, leanin the wind.

Anyway, her cold was better; sh sung last night.

The roadbed of the Elevated wa ered with a thin layer of snow, like fr on a cake. The man at the ticket-ch box had the collar of his blue clot turned up; his face was purple wi cold, and frozen breath clung t mustache. Now and then he would p woolen mittens to his ears as he in his felt boots, his back to the A fashionably costumed woman sta near him, waiting for the train, w turban and cape of caracul, under her arms were folded and her sho hunched, elevating the cape and mak and the skirt beneath seem even sh than the fashion of the day demande her face one could see only a pair of b eyes, a bit of upper lip and a saucy On her feet were light patent-leather pers with French heels, and these, an trim length of taupe-colored silk sto she exhibited—stockings the shade of burned legs—seemed the more inade in contrast to the warm bulk of the Parrish shivered as he looked at her.

All day the storm continued, the wind sweeping the hard little pelle snow out of the streets and into cor like a hasty housekeeper cleaning u company; and when as he opened the of his apartment that evening he was gr by the pleasant odor and cheerful cr of burning logs, he had an inspiration

"Ito," he said as he gave his servan package of special coffee, "set a little for dinner in the living room beside the

When, after dressing, he returned critically surveyed the arrangement.

"Excellent," he said to the Japan "except, instead of placing the lady o site me, seat her here facing the fire."

To-night Rita surprised him by arri ahead of time. He was aware of the grance of fresh air about her as he took sable cape, and as Ito carried the garm to the other room he did not waste the portunity. Her cheek felt like a rose fr from the refrigerator of a florist.

Perceiving the table set by the fire, exclaimed with pleasure, and, cross rested a slippered foot upon the fen holding her hands toward the burning l

On her wrist his bracelet sparkled spl didly, sending out needles of brilliance, green and white. The wavering flames changing lights and shadows on her a and face, and touched the folds of her bl velvet gown with a mysterious rosy hue

A woman and a grate fire—Rita be his hearth! He tingled with a sense domesticity.

Ito came in with the cocktails. Sta ing beside the table they touched gla and drank. Setting down her glass h found the orchids at her place and b them against her gown.

"But I won't put them on now," said, laying them beside her plate. want them here where I can see them."

The dinner pleased her. With the thusiasm of one playing truant from a she praised it, course by course.

"And this wine—delicious!" she said.

"The last quart of my 1908 Krug," told her, gratified. "I've been saving for a great occasion."

"It is nice of you to have made it t occasion, but you shouldn't have open it for me. I don't need stimulation."

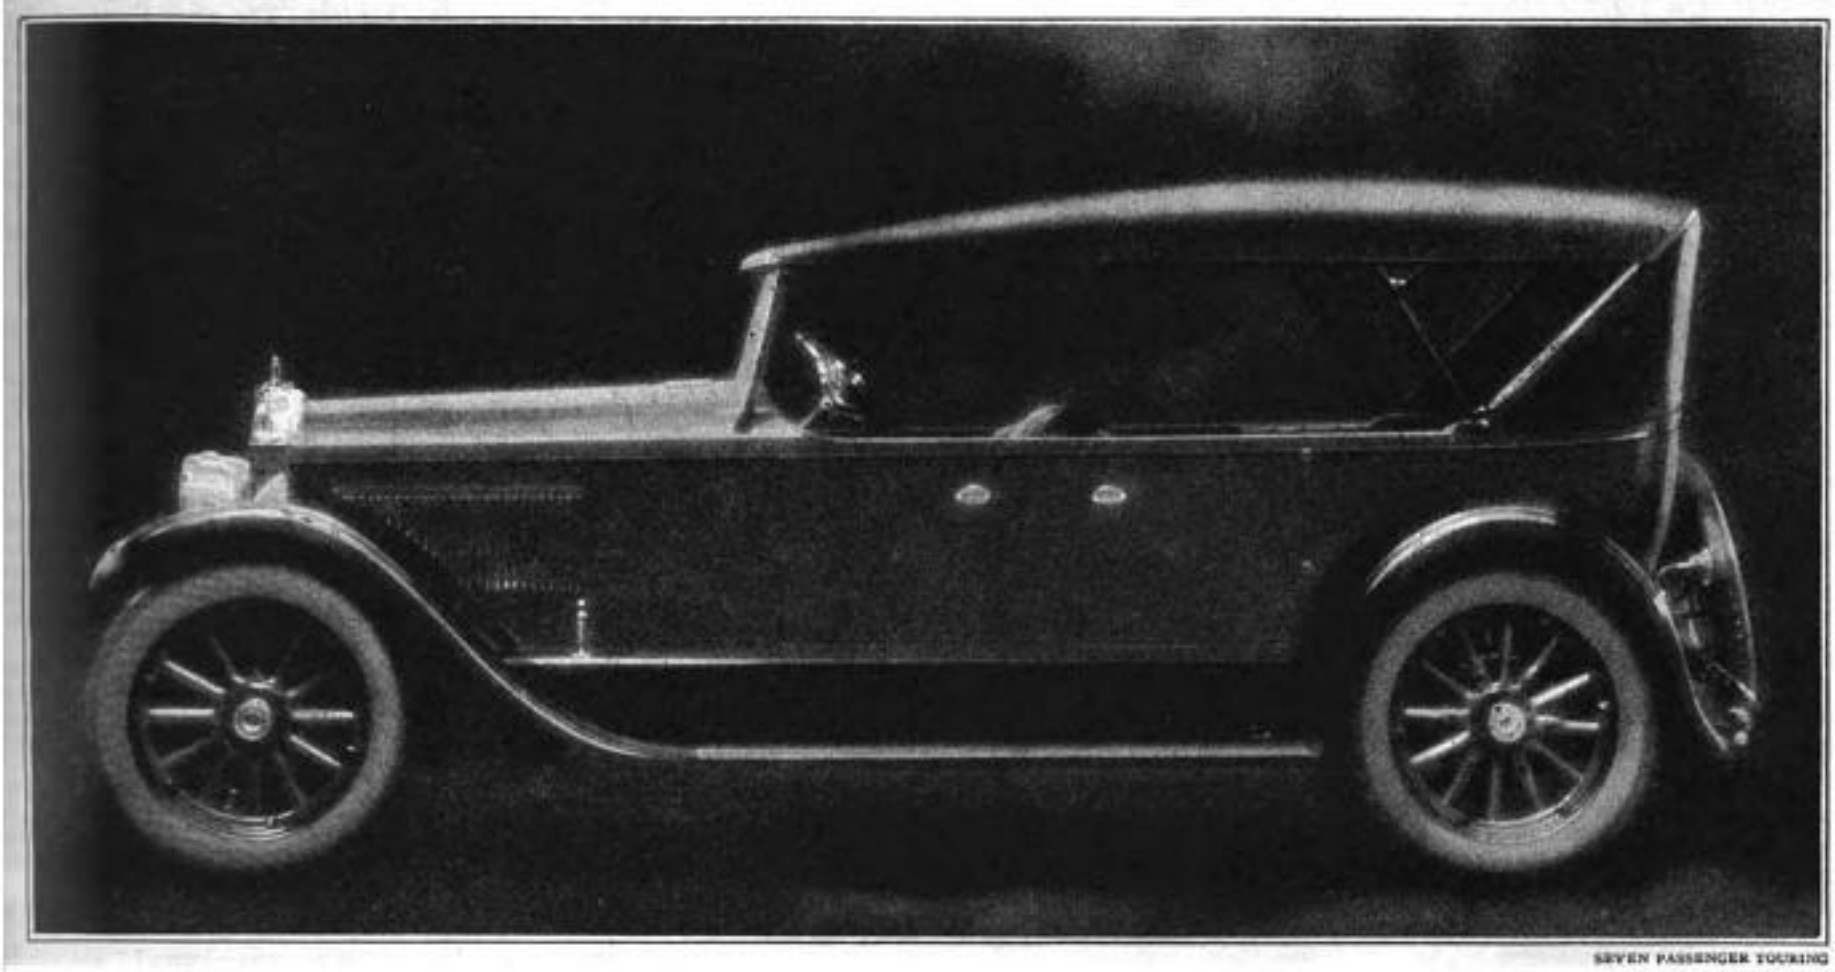
"If you mean you don't need it t evening," he returned playfully, "I co distill a compliment out of that."

"Help yourself."

As Ito was in the kitchen he mischi ously chose to place his own construc on the invitation; whereupon she feign a great demureness, singing:

Je ne savais que dire, et j'ai rougi d'abo

"Yes," he said, greatly pleased with hi self because he recognized the fragment from Faust, "but Marguerite was Ea Victorian. I prefer Louise's idea of lo Marguerite is a wax doll in a bleed w She's so good and so pathetic. Instead being victimized she should have marri some worthy burgher and become th mother of a happy family."



"Let's send her out boat riding in t park with Lohengrin," said Rita.

"All right, but Louise—she's the o I'm interested in. She stands out fro

PACKARD

SEVEN PASSENGER TOURING

—a new, a larger, a more beautiful

Single-Six

With the advent of this new Packard, we believe that a definite turning-point has been reached in the manufacture of the better motor cars.

Packard resourcefulness in producing motor carriages of incomparable charm, and brilliant, dashing performance, has, in this instance, surpassed itself.

But—something infinitely more important and impressive has also been accomplished.

The new Packard conveys an instant and vivid conviction of value so very great as to be almost epochal.

We are sure that this group of eight inimitable cars will compel you to comparisons which are certain to give the new Packard a position of overwhelming advantage.

Packard dealers are prepared to demonstrate these new cars

The price of the new Single-Six five passenger touring is $2485 at Detroit
The new price of the Twin-Six touring is $3850 at Detroit

other operatic heroines as you do from other women. Her poet may quarrel with her later on, but she'll never bore him. If they quarrel it'll be because he's jealous of her."

"Yes," she agreed, "Louise isn't an easy lady to hold. Undoubtedly she'll tire of him. And when she does, let's give her a career. Let's have her take up with Lieutenant Pinkerton and pay him off for jilting Madame Butterfly by eloping with Parsifal."

"By all means," he agreed. "An affair with Louise would be a good thing for Parsifal. It would teach him something about life."

Over their coffee and liqueur they laughed together. As they rose he lighted a cigarette. Rita picked up her orchids and moving to the piano tried it with an arpeggio.

"A good tone," she remarked, as if she had not expected it.

"You're surprised?"

"A little," she said, seating herself and laying the orchids on the music rack.

"May I ask why?"

"Oh—bachelors' pianos." She spoke airily.

"What do you know about bachelors' pianos?"

Rita laughed.

"They're apt to be like their owners—a little battered," she said. "Give me a cigarette."

"Excuse me. I thought you smoked only to tease Busini." He hastened to offer his case.

"This time," she answered as he gave her a light, "it's because your dinner was too good."

After a few puffs at the cigarette she laid it down and began to modulate softly from key to key.

"Some friends brought a Southern girl to my house the other day," she told him as she played. "They wanted me to hear her. She had some negro songs—the real thing. Have you ever heard that plantation song, All God's Children Got Shoes? And she did some modern ones—blues—very funny. Of course I can't sing so soon after dinner, but ——" She played an accompaniment and began, half reciting:

"I got de blues and I'm too dahn mean to cry . . ."

ending with:

"Some people say dose weary blues ain't bad. It's jus' de wuss ole feelin' dat I ever had!"

Now and then she would glance up at Parrish as he leaned on the piano, and there was an amused expression in her eyes which told him she was taking a childish delight in doing something so remote from her usual repertoire.

"I've been teaching it to Frémecourt," she said as she ended. "You ought to hear him try to get the negro accent." Then with sudden enthusiasm: "There's an idea! I'll give a party and have him sing some of these songs. We'll call it a week from to-night—unless you hear from me to the contrary." She rose from the piano. "Now what about those treasures you were going to show me?"

He led her about, keeping close to her as he exhibited the portraits and the more important pieces of furniture from Blenkinswood: the Gilbert Stuarts, the Sully, the St. Memins; the Duncan Phyfe dining table, sideboard and chairs; the old silver punchbowl; the Lowestoft china; the card table at which Washington had played when visiting Blenkinswood; the armchair of his host, a signer of the Declaration; and the Chinese Chippendale clock ordered out from England by Parrish's three-times-great-grandfather Blenkin. There were letters about that clock—written in the old gentleman's distinguished hand, in ink now brown with age, on sheets of handmade paper. Parrish had found them in a chest in the attic of the plantation house and had sent the most interesting specimens to an expert who had reënforced them with silk at their worn folds, and mounted them in portfolios, along with steel engravings of the venerable house and of several of his ancestors.

The table having been removed from beside the fire, and the couch pushed back to its usual position, Parrish brought the old papers from the library and, seating himself beside Rita, placed the first portfolio in her lap, turning the sheets for her and explaining as he went along.

They had looked at a number o and had come to an engraving sho house with its new wing—added in when the old clock slowly boomed t It was ten.

"What day is this?" suddenly de Rita, turning to him sharply.

"Tuesday."

"But—the date?"

"March first. What's the matt

"The first!" she exclaimed, sta her feet. The open portfolio slipp her lap to the floor, the papers sc on the rug, but she seemed not t them.

"Heavens! I've had a feeling ning—— Now I *have* done it! A in my honor to-night—at the Kra

"Oh, that's too bad," said Par lieved.

From her agitation he had feared be something worse. "Yes, it's t But"—he shrugged—"well, you weren't there, that's all."

"But you don't understand! It' bly important! If it wasn't for H Krauss there wouldn't be any oper heaven's sake get me my wrap! rush right up there!"

"Nonsense! It would be half p when you arrived—they'd be going And your car—where's your car?"

She was near the door. Now she swiftly back, stepping on one of the

"Don't argue!" she cried, clench two fists. "Quickly! Get my cape a taxi! I must get there if I have in the snow!"

In spite of his reluctance he was to action by her vehemence. Slow sentfully he moved toward his room, the sable cape lay on his bed. But h did not suit her.

"Hurry! Hurry!" she cried, fol on his heels.

A fine ending, this, for their ev Before picking up the cape he turn make a last appeal.

"Rita," he began, "have a little How can you ——"

"Will—you—hurry?" she cried s

He took up the cape and half fl around her. Then in a paroxysm of longing he seized her in his arms an ered her face with kisses.

"There's no time for this!" Her was smothered. She pushed away him, beating with one fist upon his

He let her go.

She rushed from the room.

"Wait!" he called after her. "Give chance to get my hat and coat, anyw

"You don't need to come! I don't you!" The words streamed back to as she raced toward the outer door.

He ran to the hall, seized his coat struggling into it as he went, joined h the corridor, where she was waiting fo elevator. She did not look at him. did not speak.

The door man hailed a passing taxi it stopped it skidded in a pocket of beside the curb. Parrish, endeavorin help her in, had only a sense of the swe fur upon his finger tips.

"I don't need you!" she reiterated the darkness within.

"Get over!" he said roughly, and giving the driver the address he showe way through the narrow door and slam it shut.

At the end of their short, silent driv alighted, ceremoniously assisted her a the walk and rang the doorbell. Then, footman opened the inner door, he l his hat and gave her a stiff good night

"Good night," she replied pleasant And as she passed in she added over shoulder, "Good night, Bruin."

He got back into the taxi and d home. His feet were cold and wet: s had leaked in over the edges of his pum It would serve her right if he got pneumo and died.

His apartment was still redolent of When with her he had never noticed t she used perfumery, but now that she gone the place was haunted by her gh like fragrance. The cheerful fire was a mockery. He went to his bedroom change his pumps, and crossing the fl kicked something with his foot. It prov to be a gold-mesh bag with a diamon studded frame. Undoubtedly it had va able contents. She would worry about Let her, then! He put it in his safe, she wanted to find out about it she ca telephone!

PAIGE

MOST BEAUTIFUL CAR IN AMERICA

The Meaning of Might

When you step on the accelerator of a motor car you want *action*—prompt and unfailing. You want to feel the gas "take hold" in grim earnest and sweep you along in a thrilling burst of speed.

Action is half the joy of motoring. The other half is independence of mile-posts, creature comforts, and pride of ownership. In the Paige 6-66 you get the full hundred per cent—plus.

For that great, deep chested, 70 horse power engine is much more than a mere master of flight. It is an economy factor of the first importance. It assures unlabored effort—long life—uninterrupted service.

Remember, it is the peak load and overstraining that crush the spirit of most machinery. But not the 6-66. For no man—in a full season of driving—would call upon that giant power plant for its maximum effort.

All you need is just one ride behind the wheel of a 6-66 and you will realize instantly the comfort and economy of vast reserve power. You will realize the benefits of 131 inches of wheelbase and 61-inch rear springs. Then, too, you will understand why this car has won for itself the title, Master of the Highway.

Take this ride today. Get out in the open where you can experience the joy of truly responsive power, perfect spring suspension, and steady, restful riding qualities. Then, remind yourself that this is the car—the champion of them all—that you can now buy for $2195.

The New 6-66 Prices

6-66 Lakewood, 7-Passenger Touring	$2195	6-66 Sedan, 7-Passenger	$3155

ALEMITE

Graphite Penetrating Oil

Your car will be squeakless if you apply Alemite Graphite Penetrating Oil at the following points of friction:

Springs

Fenders

Hood and hood catches

Body-bolts, doors

Floorboards and sills

Steering column

THERE is nothing like Alemite Graphite Penetrating Oil to take squeaks out of a car and keep them out, to dissolve rust and loosen "frozen" bolts and nuts. Apply this oil on the side of the spring leaves. It bores right through to the other side, coating the leaves with a smooth layer of graphite, stopping the creaks and squeaks, making the car ride easier, prolonging the life of the car. For stubborn locks and rusty hinges, for squeaky doors, wherever there is need for Alemite Graphite Penetrating Oil. Price $1 a pint, at all Alemite dealers'.

In his slippers he returned to the living room. The Blenkinswood portfolio and its contents still lay upon the rug where she had dropped them; his indignation flamed anew as he got down to pick them up. Such frail old papers! She could so easily have laid them aside! One of the Signer's letters had been torn in falling; and in the center of the engraving showing Blenkinswood with its new wing—added in 1791—was the ruinous imprint of a sharp little French heel.

Having gathered the papers he sat down on the sofa to arrange them in their proper order.

The fact of the matter was that Rita hadn't been interested in them. He saw that clearly now. She had been bored. Her attention had wandered. That was how she came to remember her engagement at the Krausses'. Bored with these things! Priceless old Americana! Bored with Blenkinswood—his house! Alice wouldn't have been bored! She was always asking him to show her those portfolios.

With a tenderness he had never before felt for them he carried the portfolios to the library and laid them in their place. Rita had only looked into the library; there he seemed for a moment to elude her, but upon his return to the living room that subtle scent again assailed his nostrils. Maddening! He must get it out of here. Cold though it was, he would open dow. Passing the piano on his wa window he stopped short. The orchi picked them up. Already they were ing.

The window was frozen shut; he hammer with both hands at the open it. When it did open it flew cause of the momentum from hi blow, and a great gust of freezing a in, snapping the window-shade and the draperies awhirl. With his left h seized the agitated curtains, holdin aside. Then, drawing back, he pois self and hurled the orchids out into blackness.

Women! They talked of love! W they know about love? Devotion yes, they'd accept plenty of that plenty of everything else too! Bu it came to reciprocating—showing consideration for a man—they weren't there! The least little thi engagement, or anything—would se flying off at a tangent. They were unreliable, luxury-loving, selfish pus Give them a cozy cushion by the fi they'd purr for a while, but just wh began to trust them they'd sink thei in you. Women!

Sullenly he closed the window, p the lights and went into his bedroo

(TO BE CONTINUED)

A WOMAN NAMED KATE

(Continued from Page 25)

There were other things—other memories—one sharply outstanding—of the Etheridges and Rick, only last summer at the Hallowell house. After all, hedge or evade, the nucleus of her meditation was the Etheridges—Lily Etheridge, in her widowhood, soft and appealing in her half mourning, with little four-year-old Paul, a baby cherub with red-gold hair.

Paul had fallen and hurt himself down at the end of the wide green lawn, and Rick had gone to pick him up. They came back together, Rick carrying the little chap, his shoulder cradling Paul's bright head, and Lily at his side, her face turned up to him.

Kate had heard an out-of-town visitor exclaim: "So that's the father of that lovely baby! What a stunning couple!"

"Oh, no, that's our Mr. Alverdy—Richard Alverdy, of our mills. He has no children. But they do make a charming picture—quite *en famille*. Lily's so sweet and pretty, and such a perfect little mother too."

A queer little lightninglike flicker of pain had tightened Kate's body for an instant as Rick and Lily had come up to the porch. Then she had gone to meet them—this and a dozen, a hundred, similar scraps of remark floated up into her consciousness now.

She had always accepted the implications of condolence in them for herself. Wasn't it her denial, the stultification of all her latent instinct, that the warm little clinging bodies she took up and embraced—the little Paul, her little nieces, all the others—should be the children of other women? And she herself cheated! This thought always brought her to the edge of a dark abyss of disillusionment, a sort of spiritual tarn in which she had drowned certain bright hopes and expectations, cultivating on its brink substitute flowers of more material character. You had to take what life served to you—be satisfied.

But now she realized she had been concerned chiefly with her own denial—she hadn't thought of Rick. Though he was four years her senior, he was a still-young man. Why, men of his age every day founded new dynasties! If she—what was Miss Conway's hideous forthright word?—if she abdicated there was still time for—her lip curled, even while it trembled—for a Queen Louisa of Prussia—Lily Etheridge! Rick could have Lily like a shot. A man of Rick's looks and achievements could marry anybody, Kate thought confidently. Women were always falling in love with him, and Lily drooped like a ripe pear on a bough—courting protection. They were together so often—why, it was obvious ——

Kate pressed her hands together again, with something like a mingled sob and snort of contempt. She threw up her head with a quick, imperious movement, shrugged like one throwing off a burden and ran upstairs. She uttered at her bedroom door "The woman's wooden oath"; but, once inside, her valor drooped again.

She heard the hum of Rick's car o up the drive. They were going out to together, and she must not be unpun But when she had got out the chosen l eon frock, a georgette of the delicate that was her favorite color, had sl from her morning dress and drawn the pins out of her thick hair, her pace slow and torpid. She heard Rick's step on the stair, heard him come his room and presently set up a spla in his bathroom. But she only sat before her dressing table and stared her glass.

She could see behind her head all the tour and coloring of the pretty room called her own, the lilac rose of the w the warm ivory of her Empire furni the big sunny bay where her personal stood with certain special books, manif tions of her secret wish—a Stevens Child's Garden of Verse, a Field, a R a Walter de la Mare, Pater's Child in House. Above it a little cast of a D Robbia *bambino*, some photographs—haps a dozen—of little friends, her tin But for these and Petunia Rosyblow houses would have worn no trace of c presence.

To the right she could glimpse the terior of her bathroom, a symphony nickel and enamel, and to its left Ri door. His bedroom was the replica of except in furnishing: mahogany for R with dull maroon rugs and hangings, w tortoise-shell fixings to dress with, a br blanket on his day bed, and on the w an odd motley of pistols, Old World wa ons, the head of the big moose he killed in the Alberta country, and in drawers and cupboards the rows of Ri shoes and ties and shirts and socks, th intimate, plain, mannish things whose or and replenishment she supervised, t formed her particular *milieu* in Ri masculine world. All these things, act ally and unconsciously, made the ba ground for the head and face that look out of Kate's mirror.

Men called Kate Alverdy handso They had been frank about it to her and she was conscious of it, quite d passionately and free of all vanity. S had had no particular beauty in her youth only a sort of gawky, ardent grace. S was of that type that comes into its ow tardily; that in the September or Octob of life shames swiftlier blossoming sist with a persistent accent of youth deferre of girlishness. There was a virginal loo a freshness about Kate's bare throat th was the despair of the masseuse ridde Her chin and throat might have been young girl's; her arms were round but slen der; as Miss Conway had said, nothing ma tronly—motherly. Above the finely drawn sweet line of her neck her face gleame back at her, a good ten years younger than her actuality. Her oval cheeks were smooth

A Growing Investment in Sewell Cushion Wheels

The Texas Company during the past three years have purchased Sewell Cushion Wheels for 95 motor trucks. They have recently ordered 40 additional sets. Today they are operating 135 motor trucks Sewell equipped.

This company not only recognized the value of resiliency for motor trucks, but sought the special advantages of the Sewell type of flange construction.

The Flanges are One-Half The Sewell Wheel

The secret of Sewell success lies in this exclusive flange construction which accounts for one-half of Sewell efficiency.

The flanges protect the rubber cushion, keeping it soft and free acting for years of service. Thousands of owners of Sewell Cushion Wheels are thus assured of a resiliency that is a positive factor in prolonging the life of the truck and in reducing operating costs.

(Continued from Page 48)

and firm, her eyes clear, candid, scarcely marked by line or wrinkle. Only her hair—Kate's hair had always been her pride; a dusky, silky, too heavy mass that rippled below her waist. Now, of late years, a little fan of silver had crept up on her temple, like a white elflock thrusting in. It was curious, fantastic, even a little quaint. Rick called it a granny lock.

Rick had always been proud of her hair. He had liked to touch it, and once, even, he had brought her a poem—a little sheepishly—with a line in it referring to another woman whose hair "smelt of apples and lavender."

"Just like yours, Kate," he had said. But that had been many years before.

She could hear Rick moving briskly about, and she wished suddenly he would come in and speak to her. She was too experienced in matrimony to expect him to remember her birthday. Sometime before night it would probably occur to him, or at least in the next few days, and he would be contrition itself and write her a sumptuous check.

It was not for this she wanted him. And presently she called to him.

He came into the open doorway. He was in his shirt sleeves, tying a cravat, his chin elevated to a supercilious angle, his hair tousled from his scrubbing. Even thus, under circumstances detrimental to ordinary masculine beauty, Rick was, Kate reflected, the handsomest man of her acquaintance—tall and shapely, with his finely poised head.

"I had a caller this morning, Ricky—she's just gone—a Miss Camilla Conway."

"Oh, yes, the little health fiend! Regular little dynamo, and fresh as a daisy. Lily Etheridge is helping her with her stunts here. They've been at me hammer and tongs to give them a booth at the fair. Oughtn't you hurry a little, Kate? I'm late myself, but Lily was in the office this morning going over her plans, and I nearly forgot this spree."

Into the reflected image of Kate's face there stole a change. She was aware of it herself—watched it like a curiously detached spectator. Something dimmed it, as though it had been breathed upon, pinched it with a delicate frost, struck from it all its prettiness. Even Rick ——

"You look tired, old dear. What's the matter?"

But Kate, watching the sudden blight, was only thinking how disunited body and spirit might be—what a lie the flesh was at times. Under the newly white, fatigued face her spirit was caught into a vortex of seething emotion. Her face looked cold—old, even—but her heart was half suffocated under an engulfing warmth, a wave of desperate emotion, of human love for Rick, for this man opposite her engaged in his homely personal task of dressing. It was like an echo of some old, fragrant, half-forgotten memory caught up with strands of despair and a strangely spiritual and sacrificial passion. But marriage develops reticences; she gave no sign of it. She put out a hand to gather some little appurtenances from her dresser and said in a bright, level voice: "Oh, I'm all right, Rick! Be ready in a minute!"

II

IT HAD been a genuine love match. Kate had grown up in a shabby little house in Baxter Street, where her experience in married or family life—in the outer, or manifest, phenomena of what is called love—had not been especially happy. She was one of a family of five—two sisters, her mother, her father. Her father had been an ineffectual, poorly provident sort of person, with certain inartistic—his wife called them coarse—predilections.

Early in their life together her mother had become quite unconsciously a matrimonial apple borer; a small, inconspicuous, gentle little woman, but, like the borer, capable of deadly and effective havoc. She produced it by references to "your father's disposition," "your father's sort of investments," "your father's unfortunate appetite," with an effect of disclaiming any participation. She had a decided taste for gentility. She read the society items and noted deaths and alliances of the city's leading families—of even larger places. She was very punctilious in her table etiquette, curling her little finger carefully over her teacup handle. She wore little jabots of lace, and belonged to a small, shabby-genteel club which discussed and studied Browning. She was a lady by instinct, in short, and Kate's father was—well, otherwi used the word "earthy."

He wasn't very neat about hi the brushing of his clothes, and grew earnest in his conversation certain gestures with his thumb had a taste for rather vulgar, food—onion soup. He seemed dis rather silent most of the time, rare intervals, when he laugh them, Kate discerned in a flash ence of a quite different person someone securely hidden from eye.

By reason of these contrast eternal deprecation, a constant st terness, home was rather unpleas father offered a mutely resigne passive front; her mother con bore. Kate sometimes though sad, because they had—presumal ried for love. Indeed, her mothe it was immoral to marry for reason. Neither parent was a They supported their obligation t they accepted their rôle, the world imposed on them. It wa the girl sometimes thought, a mat world, anyhow. They couldn't gether here—that was all. People like that. She had an idea that when they shuffled off their morta went to some other place, where s ters as Browning and onion so matter, they might come to love

Anyhow, when Kate was eigh was firmly resolved to evade ma She had observed in her own and o perience that it wasn't a success so why bother? She had to say th firmly to still a little hidden inn that kept urging her to certain gol vagaries of thought that cropped u moments, urging upon her the fallacy of special exemption, of her to make something special and ros of what had proved a common fail

Kate would have none of it—ou She was going to be practical, and end she enrolled in a day normal coming home across the city every to help her mother get tea. Kat this time a tall, slim, rather awkw with a fresh color, handsome eye teeth and tons of fine hair. Her were atrocious—worn discards of h sisters, a shabby made-over fur t her mother's, shoes that were delic tions of cobbling art. But she w happy, serene even in shabbiness. she was healthy and young; perha because she never succeeded in that inner seductive voice which queer, reassuring way defied her prove that something lovely was p to happen—as it did.

One raw, blustery February evenin staying for extra work, was given sage by her principal to deliver on t home. It was for her principal's si matron of the woman's wing of Ch Municipal Hospital, the low, yell bulk of which covered a whole b Kate's homeward way.

In the dim February glow she the single door that interrupted thi façade, and quickly found the sen Block in her scrubbed and disinfect office. It was a cheerless place, en its long, lean, brown corridors as K entered, but when she emerged fr office the lower corridor had bloom human activity.

She saw a group of well-dressed m women coming through double doo by, and heard Miss Block's referen just-completed trustees' meeting. A at the same time a narrow door op opened, and Kate caught a glimpse derelict women—old or middle-aged some of them in bandages—who sat of chairs, their heads bent over scra They were singing—it sounded like ing—to a nasal-voiced melodeon ac by a woman with a frightfully scarre a crutch against her knee; and a woman—little, old, wizened, in the less calico of the free hospital, wit withered, useless arm—came into the songbook in her good hand. Her ba pock-marked face was frankly vacant as she stepped forward, half hesitatin inviting in her gesture to the appra trustees.

"It's our evening service. Won come in?"

The men passed her with perfu but polite negative. The women proached more slowly, and Kate sur

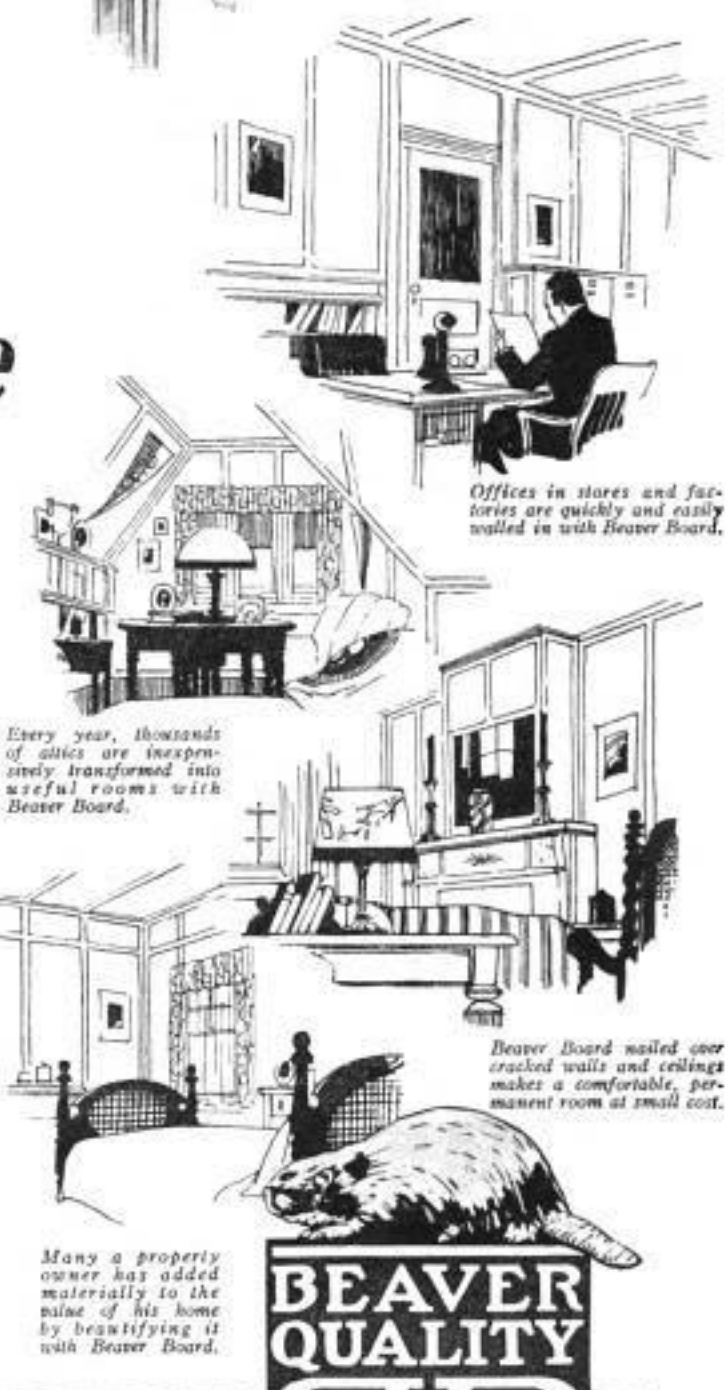
This is Beaver Board time



Beaver Board is more popular this spring than ever before. Because a lot of long-postponed repairing and remodeling is being done. And *genuine* Beaver Board is a wonderfully economical and satisfactory material for this sort of work, as well as for new interior construction.

Not only is Beaver Board exceedingly inexpensive, but the work of application is very simple. At most, there are only three steps to any Beaver Board job: (1) nail the big, flawless panels over old plaster or directly to joists and studding; (2) apply paint if you want a decorated job; (3) add the finishing wood strips.

Walls and ceilings of Beaver Board cannot crack, chip or fall. Because Beaver Board is real manufactured lumber, made from long, tough white spruce fibers. You handle it just like ordinary lumber, only far more easily, with little sawing and practically no waste, muss or litter. Each panel is sized by our *patented Sealtite process*, which provides a perfect surface for painting and decoration.

Ask any carpenter or lumber dealer for an estimate on the Beaver Boarding you want to do. You'll be surprised at the low figures. Or, write direct to our Builders' Service Department in Buffalo. Send a rough sketch, giving dimensions, designating the type of room, location of doors and windows, and receive a finished plan for the work at no cost or obligation to you.

Don't put off that repair or remodeling work you've been counting on doing *sometime*. Do it now—quickly, easily and economically with Beaver Board.

Offices in stores and factories are quickly and easily walled in with Beaver Board.

Every year, thousands of attics are inexpensively transformed into useful rooms with Beaver Board.

Beaver Board nailed over cracked walls and ceilings makes a comfortable, permanent room at small cost.

Many a property owner has added materially to the value of his home by beautifying it with Beaver Board.

THE BEAVER BOARD COMPANIES

Administration Offices, Buffalo, N. Y.; Thorold, Ont., Canada; London, Eng.
District Sales Offices at New York, Atlanta, Buffalo, Chicago and Kansas City

But insist upon having genuine Beaver Board with the Beaver Quality trademark on the back of every panel. That's the only way to be sure of the result.

the little wizened woman had recognized one at least. She ran up to her and touched her on the arm.

"Won't ye come in to service a bit and sing a piece for us, lady?"

Kate had recognized the trustee too. She was Mrs. Helen Thornby, whose wealth and musical culture were legends; a beautiful, spoiled, still-young woman, whose rich voice had been trained in Europe, and who in certain hours of caprice favored specially advertised gatherings in the name of altruism. She saw Mrs. Thornby now in her costly apparel push the old woman aside as one brushes aside a stray, annoying dog. It was not an inhuman gesture—rather it denied the implication of humanity at all. It was so abstracted, so unaware, that a thrill of hot, quixotic rage sped through Kate—stirred her to one of her strange, swift impulses.

She stepped out in all her shabbiness, in the flare of the dingy gaslights, her books dangling on their leather strap. She laid her hand on the forlorn old woman's shoulder.

"Ask me," she said clearly, a little defiantly. "I'll come in and sing for you."

What followed was never quite clear. She found herself seated at the melodeon with a queer trembling on her. She realized the blur of unlovely, elderly but interested faces around, a darker bulk at the doorway that meant some curious individual out of the hallway group, and an actual horror settled on her. She was not a singer. She couldn't sing a note. Nobody had ever accused her of such a thing. Sometimes she sang in church or in school, her voice lost in the common vocal sea; but here—alone—a solo! She was completely crazy. It wasn't as if she felt any special compassion. These old women were well enough off, cared for respectably. Kate had all of youth's healthy distaste for poverty, disease. Her spark of anger had carried her here, and now it was gone. But she must do her part. She pressed down the melodeon keys and opened her mouth. It was really the worst voice she had ever listened to—wabbly, reedy, hideous.

"I am far frae ma hame,
An' I'm weary aftenwhiles,
For the langed-for hame bringin'
An' the feyther's welcome smiles ——"

It was really unthinkable! There was a roaring in her ears, a deep shame at her heart. Perhaps it was Mrs. Thornby who listened. How she would laugh! Kate finished the song and turned. There was no one there, only her charity audience, who thanked her and smiled upon her. One or two of them were in tears, and several were actually oppressive—demonstrative. Kate wanted to get into the air.

She escaped quickly to the hall, completely empty now. But with her hand on the door latch, he came out of the matron's office and faced her. Kate saw a tall, lean, cleanly built young fellow, with a finely molded head, a brown face under a crest of dark hair and eyes of a clear, penetrating light blue—strange, with his dusky coloring—that looked at her appraisingly, almost sternly, between close, thick, short lashes.

"I'm Richard Alverdy," he said. "I took my father's place at the meeting here, and I heard you sing. I think"—he blurted the words almost rudely—"I think you're a sweet woman."

The word "woman" startled Kate, at the very top of her girlhood years. She clutched her books tightly against her breast and stared at him.

"Oh," she cried, "I shouldn't have done it! I sing just like a frog."

He didn't deny this—couldn't.

"It wasn't the singing—you know that," he said, still sternly. Indeed, he was so stern, so dominating, so utterly virile and so beautiful that Kate found herself slipping away into a strange confusion of values. She could have died to think he had heard her sing; yet if he had bade her sing again she would have felt compelled—masterful, that was it! And quite—blinding to the eye. To hers ——

He stood looking at her, and Kate looked back. She would have sworn afterward, though, that they spoke together—even through their silence—of many things. For all his sternness, his virility, his eyes on her called up in her a strange emotion, a doglike desire to prove herself; yet a subtle recognition of some splendid, queer mutuality ——

He spoke quite abruptly.

"Well, good night," he said, and K
then did a rude, an inept thing. She tu
her shoulder, without a word, and ran
into the darkness. She cried a little to
self as she walked on under the yellow
At least tears rolled down her cheeks.

"Darn, darn, darn!" she sobbed,
being the profane expletive of Kate's
eration. "Why didn't the earth open
swallow me?"

As if it really mattered! He was Ric
Alverdy, whose father owned a fairly
perous woolen mill at Fairvale, and sh
just Kate Hallock, studying to teach.
emotion was really unnecessary and
surd. It didn't matter a picayune to R
ard Alverdy what she did—or
like—or looked like. Their ways w
never cross. She would never see
again, anyhow.

Never is a long time. In Kate's ca
lasted just three years. She had taught
years, an assistant in Miss Dell's Schoo
Small Girls, and on a blowy, windy eve
as she came out of the building and
to put up her umbrella he spoke to
She didn't recognize the approaching fig
at all—stood tussling against the pres
wind, tugging vainly.

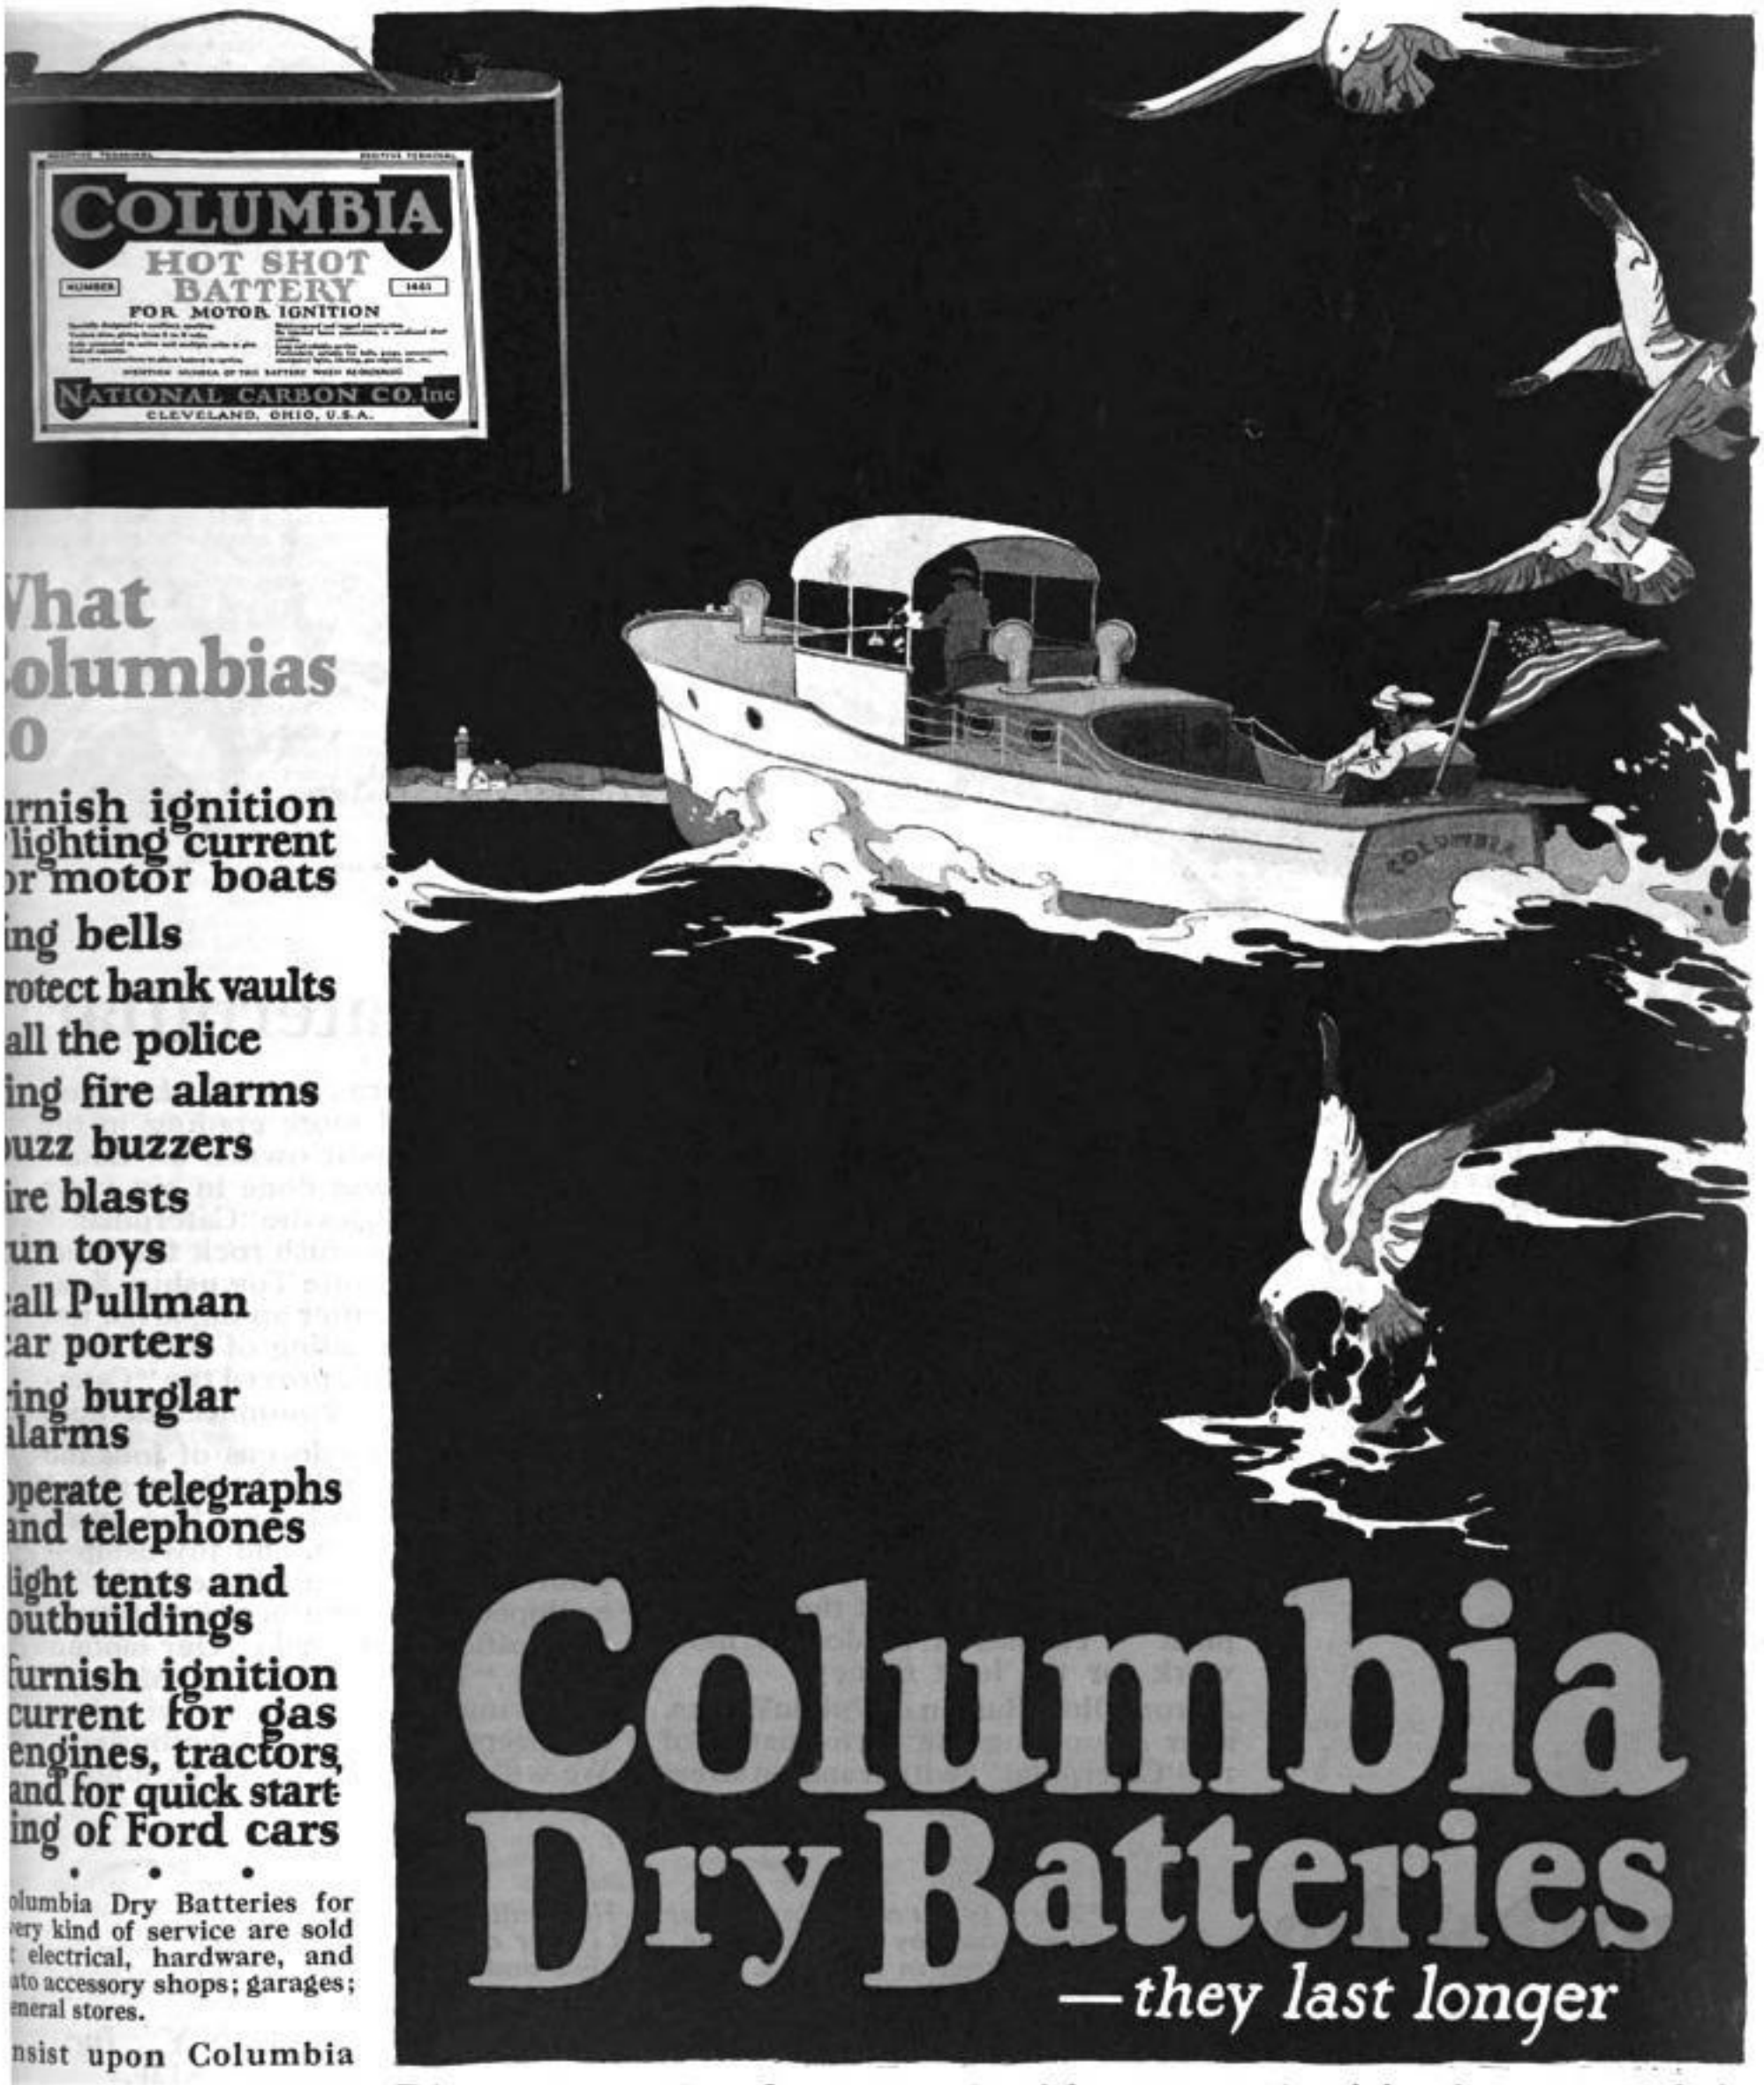
"Please allow me," a voice said,
added almost immediately, "Why,
you!"

Kate made no effort to conceal her i
tity—only the slight sense of happy sh
she knew. She responded conventionall
his next phrase, and as far as the nea
corner they were simply two people thr
together afresh after a common, un
ventional experience of years before. Th
conversation was, indeed, meteorologi
They spoke of the weather—its quality
this time of year. They compared it w
other weathers of other years, and K
stated a preference for moderate weat
of any kind—that she actually hated
weather. And Richard said he liked w
ter—real winter weather—because of
sports, and the weather lately had b
worse than last year's.

But at the corner he said sudden
"Where've you kept yourself all this tim
My father died right after I saw you h
there at the hospital, and I've been busy
the deuce, but I've thought about you
hundred—yes, a thousand—times. Y
were beautiful. Where have you be
Tell me."

The words were so proprietary that Ki
thrilled. She began to speak rapidly, p
sionately, but Richard didn't listen. H
speech crossed hers; they were speaking
gether, their words mingling rudely, i
petuously breaking down a barrier of tim
revealing a hidden inner niche where ea
had kept the other.

At the corner Kate realized that Ric
ard's hand had clasped hers—that she w
clinging to him. Being young, they dre
apart, a little ashamed at their lack of co
vention. It took five weeks to bring the
together again. In these five weeks th
played a game of make-believe. They we
outwardly compliant to every convention
demand, but in each other's eyes they re
the truth, and Richard one evening voiced



"Look here, Kate," he said, "why do w
beat around the bush so? Why do w
Kate, darling? I love you—you know
and I know you love me. We're not th
kind that need words—we knew it tha
night! Why, I wouldn't let you have any
body else! If your name's Kate, mine
Petruchio. I'm your bully and you're m
love—my Katy. Speak up and say some
thing, Katy!"

Kate spoke up. By these processes ha
she and Richard been married in the sprin
and come to live together in the Alverdy
family house, in whose reception room sh
had presently hung Cousin Julius Page'
gift of Napoleon Breaking the News t
Josephine.

Nor had Kate ever regretted for one
least fleet moment. Rick was her one and
only love—her romance. For in spite of the
prose and platitudes of daily life he still
offered her mystery in certain phases—the
very essence of romance. The change and
interplay of his moods—Rick's lowerings—his moments of recurrent difficulties
wrought upon by his responsibilities, his
apparent utter helpless need of her at times,
the sympathy and bond between them,
their walks and talks and books and plans
in common, their oneness, enhanced apparently by the very lack of family obligation—all these factors were knit deeply,
strongly together into the inner fabric of
Kate's consciousness. They made her life.

Why *Your* Community Needs a "Caterpillar"*

The "Caterpillar's" field of usefulness is by no means limited to building and maintaining roads. There is a "Caterpillar"* of size and capacity for every power need. On farm or ranch, in the mining, oil and lumber industries, for snow removal and other civic work—wherever power and endurance are at a premium, the "Caterpillar"* has no real competitor*

As a year 'round producer of economical power the "Caterpillar"* Tractor appeals especially to public officials who seek a means of handling public works with direct savings to taxpayers. Large cities operate these tractors in fleets. Hundreds of counties, townships and cities find a single "Caterpillar"* able to show big economies over other methods.

The "Caterpillar"* Tractor meets every emergency of soil, grade and weather. In grading, widening, scarifying, ditching, or maintaining streets and roads, removing snow, or hauling refuse disposal trains, the superior power and endurance of the "Caterpillar"* enables it to do the most work for the least money.

Akron, Ohio, Bureau of Public Works, after comparing the performance of the "Caterpillar"* with teams on street grading, found the "Caterpillar"* method far more economical. Denison, Texas, did more grading in the first six months it owned a "Caterpillar"* than was done in six years with teams. It uses the "Caterpillar"* power pulley to crush rock for street repairs. Wyandotte Township, Kansas City, Kan., after an impartial test including the grading of some forty miles of dirt road, proved the "Caterpillar"* the most economical method.

Because there are dozens of jobs the "Caterpillar"* will do better and cheaper than any other method, every county, city, town, and township—yours—should be "Caterpillar"* equipped. It is the best investment your officials can make. Our motion picture, "The Nation's Road Maker," is proving of great interest to highway engineers and good roads enthusiasts. We will gladly arrange an exhibition on request.

III

SEEMED to Kate as the train swung
er along over the rails with a swift hum-
g rhythm that she was like one dead—
ring into a region where there was no
ed or possibility of thought or
on. She felt disembodied—numbed,
er—as she lay back in her chair watch-
the gray smoke ribbon flatten against
pale sky. It seemed to her the train
—the rails chanted to this disem-
bled self of hers with a monotonous itera-
t.

"Going—going—going—going—going—gone! Going—going—going—going—going—gone! And a-going—and a-going—and a-going—going—gone!"

There was something chuckling, hideous, even derisive, about its murmur. Kate tried to fix her mind on other things—on the hours that lay directly ahead—but the future, being too veiled and opaque, offered nothing. She remembered instead the tension of the past week; her silently, swiftly crystallized decision; last of all the letter she had written to Rick and left on her desk—the letter in which she had tried to tell him that she was going away, like that absurd piece of femininity, Nora, in A Doll's House, who wanted a life of her own. Only here, of course, it was because she wanted to give Rick his more completely. This was the part that had been so difficult to let him see. It seemed like bathos—an absurd quixotism set on paper. She had done what she could to transmit her frame of mind. Writing it had been the only possible way. She felt she could never have spoken to Rick about it. He would have made all conventional protest, and here was something to be evolved from her soul, worked out for him, only set crudely on paper—black and white.

It had been a poor letter. It said merely that she had decided to go away; that she believed it was better for them both; that it would make for their eventual happiness for her to leave him; that she had been selfish not to have done so earlier; that she particularly wished to give him his freedom; that she believed life would offer him better things without her—would be better for them both. She had written this last with trembling fingers. It must appear a dual benefit in Rick's mind.

If the letter had been vague, it was at least irrevocable. She had left no address, and Rick would not suspect her—he would not suspect a haven with Willa Herbert in a city only seventy miles away.

Kate sat now, her hands inert on the book she could not see, watching the smoke flatten, break like an ill-defined flock of birds, melt away. Willa had written she would meet her at the Moxbury Station. She had not seen Willa in some years; remembered her chiefly as a rather handsome, rangy, loud-voiced girl who had made a disastrous matrimonial move, and followed with a second. It was fitting she should hunt up Willa.

"Divorcees should flock together," Kate thought ironically.

Suddenly in the midst of her abstraction she saw the outlying reaches of Moxbury. If Willa failed her she had no other immediate sanctuary.

But Willa had promised and had kept the promise. Kate recognized the tall, strikingly dressed, quick-glancing woman of artfully suppressed middle years moving toward her through the crowd.

"Katy, girl, I was so tickled to know you were coming to visit me! How fresh you look! I'm a fright with the pace I've gone. Come and tell me everything."

"Oh," said Kate, "there isn't much to tell." Something caught in her throat, a strangling desire to cry. She felt a sudden wild longing to burn all her bridges in a word, here on a station platform. "I haven't come to talk about myself at all, Willa," she cried with forced gayety. "I want to get away from everything for a little rest, so I thought of you."

Willa looked at her with canny gaze.

"I believe you've left your husband, Kate. Well, my dear, if you ask me, that's what husbands are for. Give me your baggage checks. My coupé's over there on the left. Don't look so bucked, Katy, if I've hit the bull's-eye." She laughed suddenly. "You're only going the way of all flesh."

"How absurd you are, Willa!" Kate laughed nervously.

A few minutes later Willa was crushing her silks and scent and beads into the coupé beside her.

"Well," she said vigorously, "it's nice to have you here, whatever the reason that sent you. Oh, Kate, don't look shocked! I'm a very wise woman. One gets that way. I had an idea when I got your letter that something was wrong. They can be so horrid, Kate, though just what ailed yours—wine, woman or song? It was song with my first one. Ted Royle was a waster—just whistled away the money dad left me. But I got it back from Ed Herbert. He was a sosh, though. There's always something. Oh, don't look like daggers and pistols, Kate! You shan't say a

Always a welcome guest

The "spare" room becomes the guest room in reality when an Indestructo trunk arrives.

It is a real pleasure to have an Indestructo visit you—a guest has arrived to whom comfort and convenience are matters of course—no need to clear out closets and drawers to "make room" for this visitor—she probably prefers the roominess of her Indestructo to either.

She will be "unpacked" when she opens her trunk and "ready to go" when she closes it.

That's the exhilaration of traveling with the Indestructo—you are always comfortable—and always prepared for any emergency. There is a satisfaction, too, in knowing that you travel as you live—just as much at home amid surroundings that are especially prepared for guests as in your own boudoir.

A new Indestructo for $40

A new Indestructo makes its appearance in May—a full size wardrobe trunk—44 inches high—full riveted construction and insured for one year—it sells for $40.

This new trunk achieves a goal for which we have worked faithfully and long—it answ once and for all the question, "Isn't Indestructo a high priced trunk?"

The Indestructo "44-40" (forty-four inc high and forty dollars) will become popu immediately.

Dealers in good trunks will marvel at the pe —those who travel will buy the "44-40" becau it is an Indestructo—because it is guarante and represents a most unusual value for $40.

The Indestructo Z—a steel edge square tru —sells for $45 to $125. It is insured again travel abuse for three years.

The Indestructo round corner model test by a U. S. Gov't Laboratory to 5000 falls in 15-foot testing wheel can be had in various a rangements and finishes for $60 to $250. It insured for five years from the day you buy

Consider the name "Indestructo" as th proven standard of travelability—make up you mind what you will pay for a trunk—go to th Indestructo dealer—he will show you an Inde structo which will fulfill every requirement price, arrangement or finish.

The Indestructo line of hand baggage includes a limited number of suit cases, overnight cases and bags which are exclusive in design and utility.

Indestructo Sanitary Hampers are indispensable for linen storage. They are sold in the house furnishing departments of the better stores.

nless you like. I've been through it Plays the deuce with a woman's —the first shock. That's why I'm ou came to me. You've come to the erson."

u're very mistaken, Willa!" Color into Kate's cheeks. "I don't know ou should infer—Richard and I have been so happy. He is the finest man . If there were any fault, any least n our situation, it would lie with me." ice rose passionately.

at's awfully heroic, Kate, but fright- ut of fashion. Well, my dear, I beg pardon if I was wrong. Only I nt—one learns to be so suspicious! 's lovely to have you, and you shall hile you're here all you like."

s," Kate said, "rest—that's what I Willa."

least filament of desire to confide in ightly hard, vulgarly kind friend had ed away. All in a minute they were lla's flat.

e're tiny, but we're cozy, Kate. I'll you on the davenport, and you can n my room. Wait, I'll pour you some y, and you'll find cigarettes there on ble."

don't smoke," said Kate. "Not that I , but my husband doesn't care it."

ell, but you haven't got a husband— re," Willa laughed. "I can see that nerves are bad," she added, "and you need chirking up. You're bound t it here. We've got a little group of d souls who meet twice a week to oh, economics and books and biol- psychology—that sort of thing—and problems, love and marriage. You'll it."

hat will be nice," said Kate vaguely. ill be nice to stay with you and rest. k I want a lot of sleep, first of all." Kate did not sleep. Perhaps the port arrayed like a robed catafalque bed her—or other things. She got up ressed before daybreak, and stole out he sleeping streets. That morning she d between park and library, and Willa was up put in a feverish orgy of ping with her. In the evening they d patience. It was a day of desperate eshifts, mental evasions.

ou look haggard to-day, Kate," Willa . "but we'll chirk you up. Our little p of kindred souls will meet to-morrow t at the Hotel Fothergay. We're going iscuss social parasites."

That's what I was—what I am no er," thought Kate. "Now why am I happier?"

he second day was no better than the . Kate seemed not to have chirked up ny appreciable extent at all. But in evening she forgot her preoccupation a e with the kindred souls. They were st-talking, rather clever bunch, she ught, the women either absolutely dy or blondined and enameled like la—very experienced.

This is what is open to me," thought te—"this or living in a room in a board- hotel, eking out some sort of lonely stence. Well, but for Rick's sake ——"

The mere memory of his name raised a louding emotion, blotted out the impas- ed utterance of a little moon-faced, mpling, beardless man quoting from a ssian play.

"That's Sigmund Hall," a neighbor ispered. "He's so temperamental! He's n named in three divorce cases."

A tide of sickness flooded Kate. She sat re in an encompassing cloud of tobacco oke, and brooded. That was one beauty the kindred souls. Her presence made no ference. They accepted an introduction thout question. They stood, they de- red, for an absolute freedom.

But one thing was clear: Her soul was t kin with theirs. She must get away in a y or two—try some other situation. She d not even the strength, the courage to clare her status here. This, in the face of r unalterable decision, was manifest ly. The world must know sometime. An pulse to bitter humor seized her as she membered a certain advertising slogan: ntually—Why Not Now? It was ex- tly applicable. What was she evading, oping for? She must give her decision to indifferent or coldly disapproving judg- nt of the world. Why put it off? It was e intention to declare herself frankly, to ept full onus for the separation, to sup- ly, if necessary, a certain element of pub- city. And here was her opportunity—in this freest of free atmospheres, where only individual will counted. Yet she was silent.

"I couldn't do it here," she told herself. "I'll go away at the week-end. New York would be better."

But she did not stay the week. It was on her third morning that she met Sigmund Hall in the park. He swept off his broad-rimmed felt hat with one dimpled, womanish hand and stood very close.

"I followed you deliberately. I saw you turn in here. You don't mind, do you, Mrs. Alverdy? I felt the other evening I wanted to know you. You know, you are very lovely—poetically lovely to look at. Er—you suggest emotion."

Kate's torpid sense of humor stirred. She looked at his broad, flapping tie; his pointed, effeminate little feet; his smooth, childish cheeks; his little quick-glancing green eyes, assuming what she supposed he considered was an intense look—and almost laughed.

"Emotion—that's the only thing that counts," he swept on. "You suggest it immediately, as though your name were really Lilith."

"Indeed," said Kate, "you are not very complimentary."

"Oh," he said, "that's the reaction of a fettered soul. But I want you to hear me talk to-morrow on this line. Our group—I'm to lead our discussion on our social evil—marriage, and its cure—divorce."

"But," said Kate, "you're not married! What do you know about it?"

"I know life—women," he said, and gave her a peculiar smile.

She remembered suddenly his legend, with an utter revulsion. He was not merely a plump little absurdity after all, but a cunning and miniature satyr with infinite potentialities to undermine. She drew away coolly and quickly. Indeed, her whole spirit was remote and withdrawn, gone into some definite inner sanctuary listlessly unaware of passing events or people.

She felt this the next night sitting by Willa, listening to Willa's friends, to Sigmund Hall, to passionate excoriation, debate, declamation among the freed ones. They talked on and on in their aura of thick blue smoke, dissecting matrimony, the adjustment of life for man or woman, the question of individual liberty, prerogatives.

"There's only one thing, one beautiful solution," cried Sigmund Hall, "and that's divorce. Of course we all know that; but the question is, what are we going to do to bring it more freely into our lives, to give it fuller play?"

It was here that Kate's sickened spirit moved her to one of her old frank impulses. She rose suddenly, conspicuous, isolated, the only fettered soul present, and spoke. Her face was pale, almost compassionate.

"You know," she said, "you're like children—playing with weapons you do not understand. There is no such thing as divorce, not if people have really been married, and the real thing's all that counts. The other thing's different. But marriage—it's bigger than all this you've been talking about. It's not made of contracted-for things, or of—or of habit-channels, or even of posterity, but something else—divine ——"

Her voice broke, trailed away. She was aware of the horrified, frozen kindred staring at her. After all, they were by-products, irrelevant.

"I—beg your pardon," she faltered. "I—I must be going."

She went out of the room and back to Willa Herbert's. Her black bag and the train for New York! Willa should have a note. Notes! Was she going through life leaving a paper trail? But she had had enough of it.

In an hour she was sitting on a late train bound toward Fairvale. Oh, but not to return—of course not! All that she had said back there to those people was true, but could alter her plans in no way. She had made them irrevocable. She was going toward Fairvale because there she must change for the New York train—only in the station for a little—in the late evening. Breathing the Fairvale air and then leaving it!

But when they were two miles outside of Fairvale the train stopped and the conductor came through.

"There's a spread rail, and we'll have to back to Shoreton, the last stop. We'll wire back for an engine and a coach, and passengers for New York can probably make the train at Perleyville flag station. We're a mile and three-quarters down the turnpike

The Price You Pay

For dingy film on teeth

Let us show you by a ten-day test how combating film in this new way beautifies the teeth.

Now your teeth are probably coated with a viscous film. You can feel it with your tongue. It clings to teeth, enters crevices, and stays. It forms the basis of fixed cloudy coats.

Keeps teeth dingy

Film absorbs stains, making the teeth look dingy. Film is the basis of tartar. It holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay.

Millions of germs breed in it. They are the chief cause of many troubles, local and internal. Thus most tooth troubles are now traced to film. And, despite the tooth brush, they have constantly increased.

Attack it daily

Careful people have this film removed twice yearly by their dentists. But the need is for a daily film combatant.

Now dental science, after long research, has found two ways to fight film. Able authorities have proved their efficiency. A new-type tooth paste has been perfected to comply with modern requirements. The name is Pepsodent. These two film combatants are embodied in it, to fight the film twice daily.

Two other effects

Pepsodent also multiplies the starch digestant in saliva. That is there to digest starch deposits which otherwise may cling and form acids.

It multiplies the alkalinity of the saliva. That is Nature's neutralizer for acids which cause decay.

Thus every use gives multiplied effect to Nature's tooth-protecting agents in the mouth. Modern authorities consider that essential.

Millions employ it

Millions of people now use Pepsodent, largely by dental advice. The results are seen everywhere—in glistening teeth.

Once see its effects and you will adopt it too. You will always want the whiter, cleaner, safer teeth you see. Make this test and watch the changes that it brings. Cut out the coupon now.

Pepsodent PAT. OFF. REG. U.S.

The New-Day Dentifrice

Endorsed by modern authorities and advised by leading dentists nearly all the world over. All druggists supply the large tubes.

A delightful test

Send this coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear. In several ways this test will be a delightful revelation.

"200% Faster 200% Cheaper"

The Expensive Way *The Clipper Way*

Two Clipper Lacers Cut Operating Costs $500.00 a year

"Twice as fast—twice as cheap. Save us $500 a year"—that's how one plant engineer (name on request) describes the Clipper method of lacing belts. In this plant 2,000 small belts operate half as many machines. Before the first Clipper was purchased, each broken belt cost the company 15 to 20 minutes idle machine time. Now the machines are running in five minutes after the breakdown occurs, because one of several Clippers is always handy and because the workmen use the Clipper themselves to make a smooth, lasting joint instead of waiting for a millwright.

This means 333⅓ machine hours saved *each year*—a reduction of $500 in operation cost. Yet the Clipper machine which effected these savings was the largest of three sizes and cost only $25!

A partial list of Clipper users reads like a directory of America's leading manufacturers. From many of these plants we have statistics which show the sound, cost-sheet economy of lacing belts with the Clipper. Send for this convincing material—it's free.

Sold by Mill Supply Dealers in Principal Cities

CLIPPER BELT LACER COMPANY
Grand Rapids, Michigan, U. S. A.
(14)

Anyone can lace a belt with the

"Clipper"

from Fairvale now, if any passenger for Fairvale cares to walk."

It seemed there was only one passenger for Fairvale at that hour—a woman with a small black bag.

"It's past ten, madam, and beginning to rain," the brakeman uttered. "You could get a motor over from Shoreton."

But she drew away and melted, bag and all, into the darkness.

IV

IT WAS utterly futile and inconsistent, Kate reflected, that she should be walking back to Fairvale at this hour; walking back over a wet, deserted turnpike between ghostly hovering rows of stubble, a heavy bag dragging in one hand, her umbrella tilted in the other to a spray of cold, pelting drops. Walking back for what? She was not clear. She would be compelled to stay the night in Fairvale—a matter for talk possibly. Her presence was absurd, whether she remained in the station or sought a hotel, and there was no other refuge.

The rain seemed to accelerate, blew in under her umbrella. It smote her face like little cold, stinging fingers, clung there, but it was not rain that lay on her eyelashes. She shifted bag and umbrella from hand to hand.

"I should have gone back to Shoreton. I could turn back, even yet."

But she walked doggedly ahead. It occurred to her she might not reach Fairvale. The way was long, black, gray, empty—or almost. Distantly ahead of her some hundreds of feet Kate discerned a man's shape striding, head low, before her. He had emerged from a diverging lane. He walked without an umbrella, indistinct, misty, and in instinctive feminine reaction Kate realized what ambush the shrubbery and cornfields offered. Any one might lurk there—spring out.

She cared very little—nothing—what happened to her now, but atavistic instinct moved her. Her hand tightened a little on her umbrella. She suited her gait to the figure ahead. She would keep well behind, just in case, at the same time near enough, just supposing ——

She pulled her umbrella low and strode along. Walking so, her pace was nicely calculated to her interval from the figure beyond. But after a little, looking out, she saw that he was closer. He had seen her—had stopped, was coming back! She set down her bag and put down her umbrella instinctively in an at-bay gesture. But as he came up, foursquare, walking swiftly in the fine gray spray, she grew very still, frozen, like one participating in a long-expected, incredible dream. And as he drew a flash light from his pocket and threw its light on her she spoke, with a single strangling sob:

"Rick!"

He held the light rigidly on her a moment. In its tipped glare she could see his face, lined, dark, fatigued. Their eyes held each other, startled, full of question.

"Rick!" cried Kate, but she could only utter the trivial, the imminent thing. "What are you doing out here, Rick—this rain? You haven't even your raincoat!"

"I've been to a damned eugenic funeral!" he cried.

"A funeral!"

"This Conway woman and her committee—they had a contest on; but their prize old man, Jake Knorr, died day before yesterday. Then they planned a special service late this afternoon to celebrate his model life. I'd got to be there. I was late, and there was trouble with the car. They waited for us two hours and a half at the East Wellsville Church. But they couldn't have it after all—the good-health committee's service—because the old man had died of eating too much kidney pie. Co back we broke the differential. walked—that's all."

But now the light was out, and they remembered.

"Kate," Richard cried, "where hav been, and what did you mean—tha letter you wrote? What kind of a s was it—going away to leave me?"

"Well," said Kate, "that's what I went away and left you. But I was ing back. I didn't realize it until a m ago. I had to be near you, Rick."

"Near me!" cried Richard. "Giv your bag!"

"Oh, but Rick, wait! I couldn't sa the letter, but there's something back all. It's grieved me so, all through about—not having a family. And thought—well, another chance for Richard. I thought there might be one else. I—I was sure there was—l like Napoleon and Josephine."

"I see," said Richard. "I was to be and you were Josephine. Now, let m there was another party, wasn't th Queen Somebody-or-Other—Queen T ummy? Had you by any chance sel her, Kate?"

"I thought—I thought perhaps young pretty woman—Lily Etheridg

"I see," said Richard. "Jealous, of that little doll baby—was that it?"

"Yes," said Kate honestly. "But was more than that. It was to be all rig if you wanted it. You're entitled everything. I'd have given it to you."

He went up to her in the darkness.

"Oh, Kate," he said, "you're an a brick, but you're an awful ass! I wond care for you at all, Kate! Why, just would we do that, when I'm you and yo me—the way we've been? If we hav had everything, isn't it worse for you t me? Give me your bag, woman, and if love me, never put me through anot quarter hour of hell like these last d Don't say a word! You come stra home!" He bent and kissed her abrup sharply.

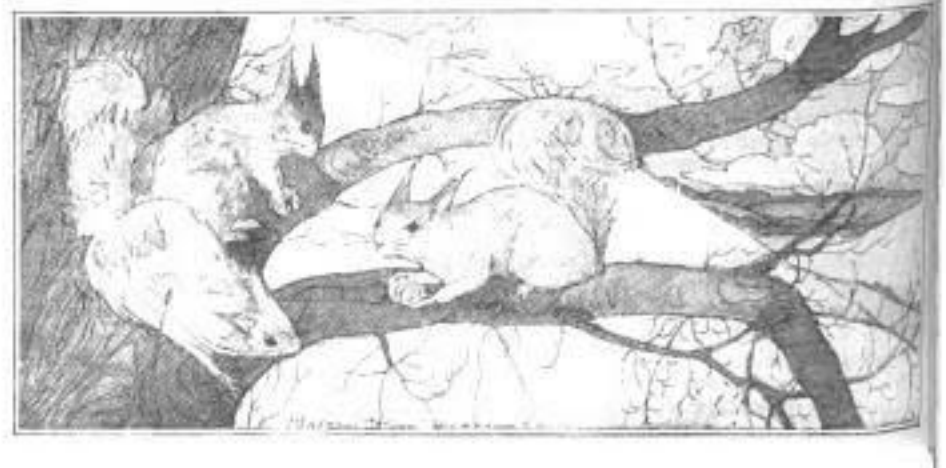
"Oh, Rick, you do care for me?" K sobbed.

"Care!" snorted Richard. "Care! Ca along; we've got to get home!"

"I wonder why a man hates to te woman he loves her after he's married her?"

"A man never tells a woman he lo her. He tells himself," said Richard, st ing ahead. "In the beginning he makes statement to his own consciousness. Wh it's thoroughly stamped it isn't necess to mention it."

Kate dimpled through her tears at tall figure before her, but Rick whirled s denly round to her.



"This matter of a family," he cried "what do you call my kind of life?—pe ple—thousands of 'em for my famil dependent on me, on my strength and h piness, and through me, on the chap th looks after me. You, Kate"—he thun about, walked on three feet, stopp again—"I'll ask you a riddle out of m boyhood: 'What's worse'n a woman wit waterfall in her hair, a crick in her back a spring in her heel?' The answer is, woman with a notion in her head.' O Kate, you ought to be ashamed!"

Kate laughed brokenly.

"Oh, Ricky, such vulgar puns! Don turn again, dear. I heard you step in puddle, and you'll be sick."

But Rick disobeyed her. He went tw feet and stopped again, and this time neith arrogance nor certainty spoke.

"Katy," he said huskily, "I do love you. If you knew what I've suffered—if you ever do that again! Come here, you sil billy! You—come—here to me!"

New Standards Now In Choosing a Motor Car

Old ways faulty because only first cost was revealed

EVERY man faces, in buying a motor car, two considerations: First cost and operating cost. Up to now, only first cost has been revealed and advertised.

Up to now, operating cost has been guess-work. No man ever knew what he was to encounter. Service has been offered, but the owner has had to wait until the bill came before he knew what the cost would be.

It has been a faulty principle of doing business. Every great maker has tried to overcome it. Leading associations in the industry have advocated various methods of ending this evil.

But no car up to now has ever been able to stand out and proclaim its fitness to adopt Standardized Service. Then came the inevitable: Marmon is first to arrive at this perfection.

A startling climax

That is why the Marmon announcement of Standardized Service by Marmon Distributors has created such a nation-wide discussion. It confirms Marmon's right to first place as The Foremost Fine Car.

Marmon has always been conceded first place in performance. It is known the world over for its superior driving qualities and comfortable riding, for its power and acceleration, its speed and distinction.

Now it stands pre-eminent in the field of economical operation. The evidence is overwhelming. To publish prices, as we do in our new book,—"Modern Transportation Costs"—is a revolutionary idea, conclusive, undebatable. Facts are facts.

Now all guess-work is ended. Now everyone can figure operating costs. Fine car ownership is no longer so vague that only the very rich can afford the speculation.

Now more men can own The Foremost Fine Car—any hesitancy, such as surrounded any high-grade car, is now removed. No man need content himself with a lesser car.

Marmon's sturdy and rugged qualities are now established. Its dependability, its simplified, vibrationless six cylinder motor, its lower upkeep, its long-life and its wonderful performance make it worthy of first consideration. It has established a new standard of comparison.

No one can now afford to buy any car until he knows how economical it is to own a Marmon. Then he can make comparisons. No one can afford to buy merely because of first price and blindly pay unknown service costs. It is as needless as it is extravagant.

Learn new standards

So important is this announcement of Standardized Service that we have published a book, "Modern Transportation Costs"—fully describing the new idea. Herein are the 16 average service operations, and others. Herein are tabulations as to time required for each job and cost of parts.

For instance, a major operation on 1920 and later series, such as rebuilding the motor, which is not necessary until after 35,000 to 50,000 miles, with reasonable care, costs only $265.00,* and only four days' time. This includes complete replacement of all parts liable to wear except crankshaft bearings, as records show that they do not wear within this mileage. Read about this in detail in "Modern Transportation Costs." Note how it is about half the usual price and half the usual time.

This and other new economies are now offered for the first time in automobile history. So mail the coupon now for your copy of this book. Its contents will surprise you.

PRATT & LAMBERT
VARNISH PRODUCTS

Painted by Harry Townsend. Copyright 1928, P&L

A FEW strokes of the brush, and lo! there *is* a chair! The magic of Vitralite, *the Long-Life Enamel*, gratifies that inherent desire to beautify the home. And with Vitralite, this is accomplished at small expense.

Correct shades of Ivory and Cream, a beautiful Gray, a rare Leaf Green, Chinese Blue and White, provide a choice of authoritative shades for the most elaborate home decoration or the painting of a single chair.

These rare Vitralite tints possess character and decorative charm; they have none of the harshness of the common, heavy, "painty" enamel colors.

Vitralite is self-leveling, shows no streaks, laps or brush marks and dries with a smooth, porcelain-like gloss. It is so unlike ordinary enamels that the difference is apparent the moment you dip your brush into it.

So durable is Vitralite that it lasts longer than paint. It is guaranteed for three years on both inside and *outside* work, although inside it lasts indefinitely.

en to my dismantled table and my ally eaten dinner there arrived Mr. els and, hard on his heels, Mr. Bryan Mr. Lind.

The Daniels' Only Wet Guest

ere was another catastrophe, the e knowledge of which was mercifully ed to me at the time. It was one of last for the season, because as the dman trouble began in the spring we lled the invitations which we then had for dinners, not feeling that we could ntertaining when our troops were at border.

t this dinner the table was centered h a tall silver vase from which long sters of flowers were arranged in showers hey would hang from the branches of a sh. I had not then learned the danger ding in this form of table decoration, and had not weighted the vase.

When the dinner was about half over the ry sultry air changed. A storm was ring up and little gusts of wind began to blow into the dining room through the open doors. There was one of the woman guests about whose health I was particularly concerned, and I called the butler to me to tell him to shut the door behind her. Just as he moved to the door a strong breeze blew shut the door on the opposite side of the room and the draft which was created blew the vase of flowers over.

I could not imagine what had happened to the water in the vase, for as the butler lifted it up not a drop was visible on the table. The next morning I asked the man what had become of the water.

"Why, madam, didn't you know?" he answered. "The water all went between Commander Jones' shirt and vest!"

Commander Jones happened to be Secretary Daniels' aide, and when I told the story to a high marine officer he answered, "What is an aide for if not to take the hardships which should come to the secretary?"

There were sometimes difficulties owing to the late arrivals at dinners and luncheons, but not often, for Washington is notably prompt in attending functions. Officials especially have to manage their affairs on such a strict time schedule that the regular hour for luncheons is always 1:30 to 3 o'clock, and for dinners 8 to 10:30 o'clock. It is usual when any guest is more than fifteen minutes late for the hostess to give the signal to go to the table. There were two exceptions to this within my recollection. One was on a busy evening when a dinner was being given for Mr. Daniels and myself at the Army and Navy Club. After a particularly irksome forty-five-minute interval we discovered that we had been kept waiting for a retired lieutenant commander of the Navy and his wife. The other occasion was in my own home, when a young woman kept a distinguished guest of honor and a luncheon company waiting because her shopping that morning had proved especially fascinating.

"If it's Right it's Right"

There was one occasion which might have been rendered difficult for others than myself which was saved by a reminder from one of my boys. I returned home one evening exceedingly weary from a day of heavy social duties, and Mr. Daniels came from the office only to say that he must go back to it immediately after dinner. We had promised to sit in a box that evening at an entertainment for the Florence Crittenden home, the other guests in the box to be Vice President and Mrs. Marshall, the Secretary of State and Mrs. Bryan. As we discussed how hard it would be for me to go to the entertainment Mr. Daniels said to call up Mrs. Bryan and see what the Bryans were going to do.

"The secretary has to go to speak at a banquet, but he says I ought to go," was Mrs. Bryan's response.

At that moment there came from the adjoining room in solemn tones from one of my sons a statement which I frequently had made to him and his brothers when they had tried to make their acts dependent upon what other boys were permitted to do. "If it's right it's right. If it's wrong it's wrong," said the boy.

A dress was ordered out and I went to the entertainment; fortunately enough, for when I arrived I discovered that neither Secretary Bryan nor Mrs. Marshall had been able to come, and I sat there for the evening with Vice President Marshall and Mrs. Bryan.

Catastrophes may be turned to even greater account than to provide a laugh, as was proved one February night when Henry van Dyke was among our dinner guests. In some way a few drops of soup were spilled beside Doctor Van Dyke's plate. He was greatly embarrassed and exclaimed, "Oh, Mrs. Daniels, can you forgive me?" I told him that I had seen in New Hampshire, just a few days before, a rug proudly displayed because once Lafayette had spilled wine upon it. "Who can tell, Doctor Van Dyke," I asked, "but that in future years I shall be showing this table solely because you once spilled soup upon it?"

"You shall have a further reason to remember the dinner," said Doctor Van Dyke, and shortly afterward I received a beautiful copy of one of his books, autographed in memory of the dark spot which was to brighten many a day.

Use PLATE Glass ©

Get Ease of Eye from the Driver's Seat

Ease of eye, and ease of nerves, come through a plate glass windshield—because the road ahead is seen as it is. You don't see double through plate glass. You don't have to contend with swirls and scrolls. You don't see little curlicues nor blisters.

Plate glass hasn't accidental prisms, nor waves, bumps or hollows. It helps you drive naturally, relaxed. For you don't have to peer nor squint—as you do through flawful common glass. When mishap breaks your auto glass, replace it with plate glass.

Eye-glasses are ground and worked, trued and polished. Wearing spectacles with a flaw or swirl in them is beyond conception. For the spectacles on your car, or for the windows, use the kind of glass that is ground and worked, trued and polished—plate glass.

FYRAC
Spark PLUGS

One INCH *firing surface is* PATENTED

One INCH *firing surface*

instead of

one firing POINT

This Hill-Test PROVES
more power - less gasoline

WE invite you to make this test. Go to the longest and steepest hill you know of. Leave your present spark plugs in the motor and drive up. Then change to FYRACS. Put a FYRAC in *every cylinder*. Climb *again*—and note the difference.

Prove for yourself, in this way, the extra power that comes from FYRAC'S INCH of firing surface. FYRAC sparks simultaneously at 7 to 10 places along its stout firing wires, igniting ALL the gas vapor. The result is more snap and power, quicker pick-up, easier starting and greater mileage from gas. Because FYRAC means less carbon in your motor, it eliminates much of your spark plug cleaning.

Ask your dealer to demonstrate why a FYRAC in every cylinder will give your car a smoother, sweeter running motor.

FYRAC MANUFACTURING CO., *Rockford, Ill.*
Canadian Address: CAMPBELL AGENCIES
23 Richmond Bldg., Toronto, Canada

SPECIAL NOTICE

We have arranged with Fyrac dealers to present you with a certificate worth $1 to apply on purchase price of a set of Fyrac plugs for your car.

To get best results from any motor we have always recommended the use of a set of Fyrac plugs and make this offer to get you started.

If your dealer cannot fill your order, write us—we will see that you are supplied on this basis.

$1
In Canada $1.25

If your dealer can't supply you write us.

PROOF "After I had put Fyrac Spark Plugs in my car, my daughter took an 80-mile trip over a road with many long, stiff grades. My daughter knew nothing about the Fyracs. On her return she asked if the engine had been overhauled. She said it had more pep and ran better than ever before. It took all the hills on high, at moderate speed, whereas gear shifting had always been necessary on this road. My experience with Fyracs has been exactly the same as my daughter's, and I can fully recommend them."
—S. C. Parker, Salem, Oregon

A near catastrophe at an international convention during our stay in Washington was averted by a most ingenious stroke of the presiding officer. Many other attractions were making inroads on the attendance of the delegates to the convention and one morning when a famous foreign visitor was to make an address there was literally no audience to hear him. The presiding officer made a hurried trip to the telephone, called two of the largest hotels, and asked them to send one hundred of their best-looking waiters to his assistance. The waiters marched in, took the seats of the delegates, and diligently applauded the speech of the distinguished foreigner.

Mr. Daniels and I came to be known in Washington as the givers of cabinet-making dinners.

Once a year each cabinet member has the privilege of entertaining the President at dinner. At the beginning of the season the member and his wife send an invitation to dinner to the President, who, in replying, indicates the day on which he will be able to accept the hospitality. The list of guests is then made up and submitted to him for his approval. This has not always been so. Up to the time of Mr. Roosevelt's Administration only cabinet members and their wives were guests at these dinners. Mr. Roosevelt became tired of meeting the same group of people, and intimated that he would be glad to have other guests asked. This policy was therefore adopted, and the custom of submitting the list for his approval, which was then inaugurated, has been continued ever since.

Mr. Daniels and I felt that those who lived in Washington had other opportunities for meeting the President and Mrs. Wilson, and we therefore invited guests from out of town for our presidential dinners. We had the pleasure of having for our first dinner Mr. and Mrs. Newton Baker, of Cleveland. Later, there was a cabinet vacancy which Mr. Baker was asked to fill. At subsequent dinners we had for our guests Mr. and Mrs. Meredith, from Iowa, and Mr. and Mrs. Bainbridge Colby, from New York, both Mr. Meredith and Mr. Colby later being offered and accepting cabinet portfolios. This led to a facetious friend saying that our dinners were like horse shows with possible candidates paraded before the President for his inspection.

A North Carolina Dinner

To me, whether one is entertaining the President or anyone else, the atmosphere to provide is the one to which you are accustomed, the one which to you is most natural. So in planning our first dinner, for February 19, 1914, I decided to have a North Carolina setting.

We began with chicken-gumbo soup. It was early shad season and we had written to friends who sent us beautiful fish from Eastern Carolina. Our roast turkey and suckling pig came from North Carolina, too, both to be roasted, and the pig to be served with the proverbial red apple in his mouth. It was before the days of the wine mess order issued by Mr. Daniels, so I allowed myself wine flavoring for my dessert, something which we never did after the order, for we would not serve ourselves what was denied to the naval officers living on the reservations or the men on the ships. Our dessert was tipsy cake, a Southern delicacy, made with sponge cake filled with as many blanched almonds as you can make it hold. Over the cake is poured sherry, a heavy boiled custard is placed on that, and the whole is topped with whipped cream.

For the house decorations we had bamboo or Southern smilax and gray Spanish moss. The table was centered with double red camellia japonicas, single blue violets and white hyacinths. After the dinner there was a prophecy of the many future times when Mrs. Baker was to give Washington society pleasure with her voice, for she sang a group of songs.

Proof of the fact that the President did give his personal attention to the list of proposed guests for these affairs is a letter which Mr. Daniels received from President Wilson under date of January 4, 1917, which reads as follows:

My dear Mr. Secretary—Just a line with my own pen (this little machine is my pen) to say that this list is entirely acceptable to Mrs. Wilson and to me, and to thank you for sending it for our approval.

Faithfully yours,
WOODROW WILSON.

The list thus approved for our 1 ner, containing a number of Mr. newspaper friends, whom he wa have meet and to know the Preside did, was as follows: Mr. and Mr Cobb, New York City; Mr. a Adolph Ochs, New York City; M Bass, Bangor, Maine; Mr. and Mr Howell, Atlanta, Georgia; Mr. a Richard Hooker, Springfield, M setts; Mr. and Mrs. A. W. McLea berton, North Carolina; Mr. a Don C. Seitz, New York City; Mrs. Thomas Edison, Orange, New Mr. and Mrs. E. T. Meredith, Des Iowa; Mr. and Mrs. E. A. Alderm versity of Virginia; Mr. and Mrs Ford, Detroit, Michigan; Mr. a Meredith Nicholson, Indiana; Mrs. Grozier, Cambridge, Massac Mrs. Carrie Chapman Catt, Ne City; Mr. and Mrs. Thomas Rees, field, Illinois; Dean Sills, Bowdo lege; Mr. and Mrs. Bainbridge Coll York; Mrs. Adelaide Worth Bagley ington.

Very different from the easy atm of our first dinner was this one on th the declaration of war. President had spoken before Congress on Sa evening, February third, announci he was recalling Ambassador Gera Germany and presenting passports German Ambassador to this co Count Bernstorff. Our dinner was o day evening, February fifth. The intensity in the air everywhere in the try during those days, and especi Washington, where public officials f great weight of responsibility for the

In the Midst of Alarms

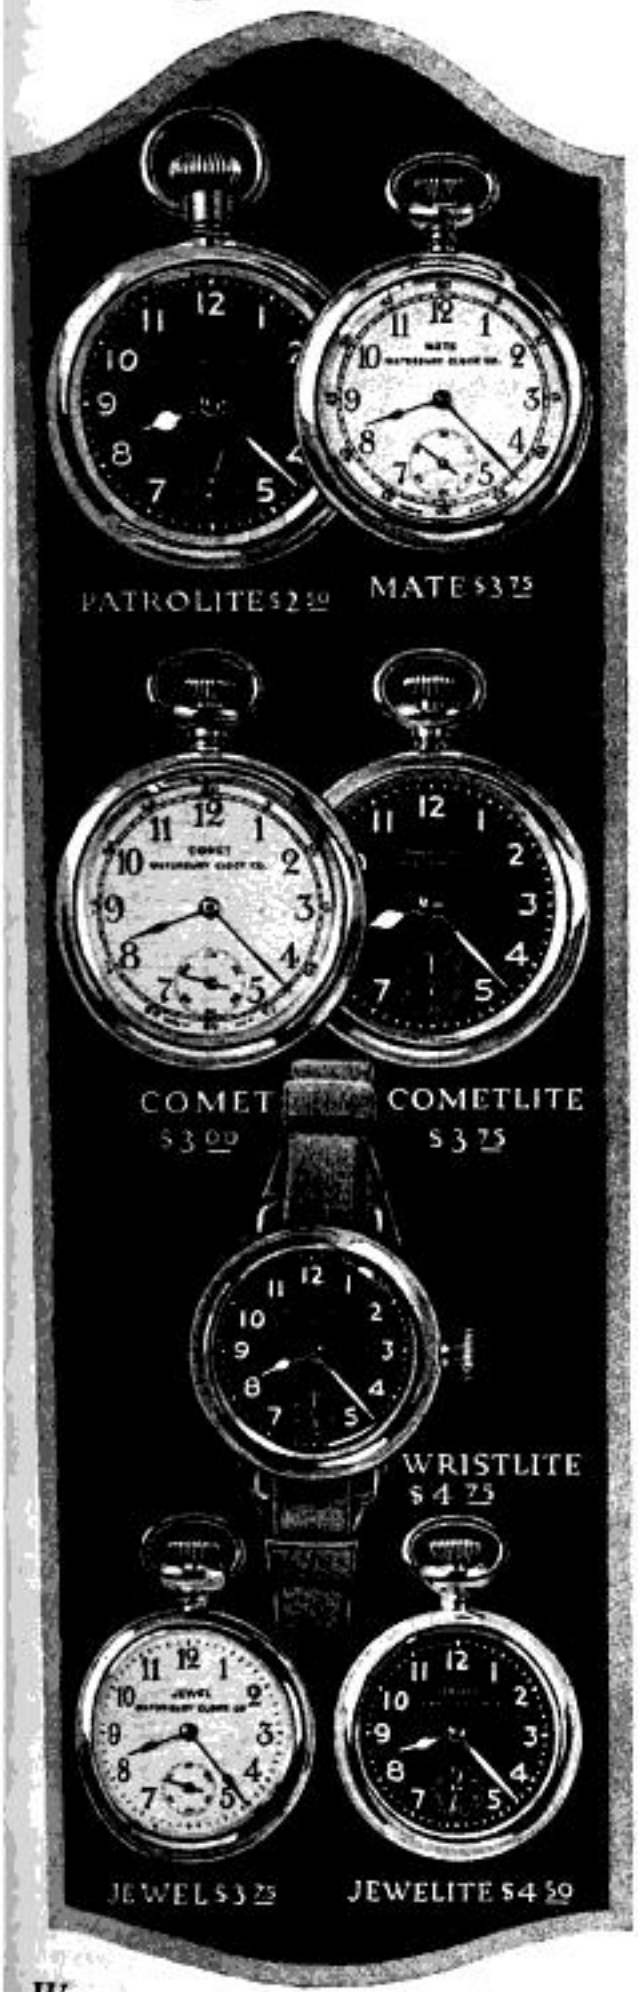
On the afternoon of the day on whi dinner was to be given I asked my manservant to search the basement. minutes later Major Pullman, then h the Washington police force, telephon say that he understood the Presiden to dine with us. I explained the pr tions which I was taking and told him I would be glad to have him send a m well. He did so, and the man remain the basement throughout the dinner. W I told Major Pullman that I was h only my own servants, who had been me for years, and that they were all col he said, "I am glad of that."

As was usual when the President dining anywhere he was accompanied carload of secret-service men. This w accordance with the law which prov that as soon as a President is elected shall be protected, although it was e cially irksome to President Wilson and often worried the men appointed to be him by slipping off to take walks alone

On this night extra men must have b sent, for in the middle of the dinner th was a loud popping sound like the shoo of guns, and members of the family w were not attending the dinner said that they looked from the windows they s men seeming literally to rise everywh from the ground. The explosion proved be nothing more serious than a case Apollinaris which had been left on the ba porch without due thought to the freez weather.

A little later one of my boys set forth call on a neighbor, and slammed the gate he went out. A man rose in the darkne and a second later exclaimed in warm accents, "Son, I'll forgive you this tim but don't you ever do that again."

That night the President, of course, w on my right, and Henry Ford, who ha made such strenuous efforts for peace, wa on my left. During the dinner Mr. Ford leaned over to say, "Mister President, th day I have been to see the Secretary of th Navy and have tendered him my plant fo the construction of any war material whic it can produce." In that plant were made the Eagle boats which, though they were not finished so early as we desired them went as far as Russia.



On the occasion of one of our presiden tial dinners Mrs. Wilson's carriage shaw and outer wraps were removed by the old colored mammy who had slept in my chil dren's nursery for many years. When th slipped out of the drawing-room for a mo ment after dinner while the gentlemen were still lingering over their cigars in the library I met her in the hall, her eyes shining be neath her bright bandanna. "The Presi dent's dun shook hands with me!" she murmured tremulously.

Waterbury Watches

Now at Your Dealer's

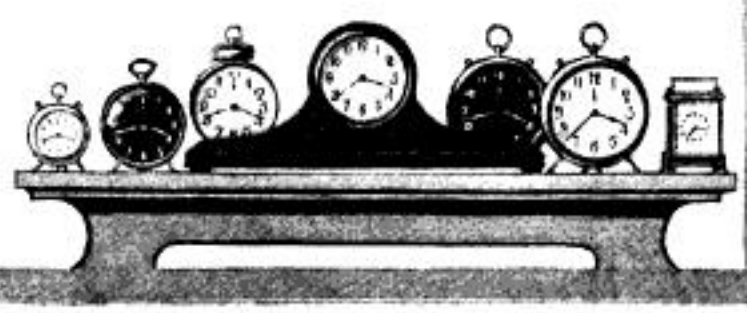
Patrol
$1.65

THE watches made by the Waterbury Clock Company are old friends of the public. Tens of millions of them have been sold throughout the world, and every watch of Waterbury make has given satisfaction, or the company has made good.

The Waterbury Watches at your dealer's are therefore new to you only in the progressiveness of Waterbury quality, and in the new brand names on their dials.

We were the originators and developers of the modern type, non-jeweled watch. For many years our watches were sold under a private brand by a marketing organization. We are now undertaking the responsibility of sale ourselves—that is the only significance of the change in brand names.

Our plants today have a production capacity of more than 20,000 watches per day—a capacity probably greater than that of all other watch manufacturers combined. And Waterbury-made watches have been carried to a higher point of quality than ever before.



They are honest, sturdy, dependable time-pieces.

Waterbury Watches are sold with a positive guarantee of serviceability and accuracy. Good dealers everywhere are now ready to supply you.

STEADFAST THROUGH THE YEARS

It was midsummer. In the forest a traveler paused beside a mighty fir tree to rest. Seated there he was attracted by the beauty that surrounded him—gay wild flowers caught and pleased his eye; a darting dragon fly, brilliant in green and gold, excited admiration; the cheerful babbling of a little brook brought him delight.

The fir tree that sheltered him he scarcely noticed.

Months later the traveler passed that way again. Winter winds had driven away the flowers, the dragon fly had lived its little life and died; the brook lay silent, a twisted ribbon of ice.

But the fir tree stood as in the summer—strong and straight, its branches covered with eternal green.

Every industry produces its commercial fir trees—business houses rooted deep in honesty and trustworthiness, whose growth is steady and sure, whose products are of one high quality under all conditions.

Since 1858 the chemical and pharmaceutical business of E. R. Squibb & Sons has been of this type. Its products are always as pure and efficacious as it is possible to make them. Its laboratories conduct a constant search for better methods of manufacture.

The fact that you find a Squibb product for sale upon the drug store counter is a guarantee that its ingredients are correct. Rather than lower its standards Squibb has frequently suspended the manufacture of certain products until the right materials could be secured.

When you use a Squibb product its finer quality is immediately apparent. Examine Squibb's talcum powder for example. Note its exquisite smoothness, its fineness of texture, its velvety touch on the skin; or try Squibb's cold cream and note how cooling and soothing it is. This fine quality is the result of years of laboratory experiments directed to the one end of producing a perfect powder, a perfect cream.

Most of the Squibb products are intended for use only by the physician and the surgeon. But *every* Squibb Household Product is made with equal regard for purity and efficacy.

For some of the Squibb Household Products described below you may have only an occasional need. But for Squibb quality your need is endless.

Squibb's Bicarbonate of Soda—exceedingly pure, therefore without bitter taste.

Squibb's Epsom Salt—free from impurities. Preferred also for taste.

Squibb's Sodium Phosphate—a specially purified product, free from arsenic, therefore safe.

Squibb's Milk of Magnesia—a distinctive product of great purity. Pleasant and free from grittiness and acrid, alkaline taste.

Squibb's Olive Oil—selected oil from Southern France. Absolutely pure. (Sold only through druggists.)

Squibb's Sugar of Milk—specially refined for preparing infants' food. Quickly soluble. In sealed tins.

Squibb's Boric Acid—pure and perfectly soluble. Soft powder for dusting; granular form for solutions.

Squibb's Castor Oil—specially refined, bland in taste; dependable.

Squibb's Stearate of Zinc—a soft and protective powder of highest purity.

Squibb's Magnesia Dental Cream—made from Squibb's Milk of Magnesia. Contains no detrimental substance. Corrects mouth acidity.

Squibb's Talcum Powder—a delightfully soft and soothing powder. Boudoir, Carnation, Violet and Unscented.

Squibb's Cold Cream—an exquisite preparation of correct composition for the care of the skin.

Squibb's Pure Spices—specially selected by laboratory tests for their full strength and flavor. (Sold only through druggists.)

Sold by reliable druggists everywhere, in original sealed packages.

"The Priceless Ingredient" of every product is the honor and integrity of its maker.

(Continued from Page 62)

s the same old nurse who, when we l from the Baltimore Convention at dr. Wilson was nominated for his n, had said, "You say Mr. Wilson's run for President?"

Mr. Wilson's going to run," we

Wilson's a-gwine to run for Presi- Why, I thought Mr. Bryan most lly run."

y came only to visit and not to stay while we were in Washington, and I received a telegram calling me Raleigh because she needed me. vo weeks of watching by her bed the swung low and she was taken up to r that great day of judgment when ll be known as good and faithful s well as good and faithful servant.

nvitation to the White House is a nd, and indeed there are few persons e not glad to have it so, and to break her engagements they may have in o attend a function there.

t series of events is given for official each year at the White House, be- with a dinner to the cabinet in the l ending with a dinner to the Speaker fore Lent. In the intervening period s and receptions are given to the rs of the judiciary, the diplomats, mbers of Congress, the justices of the ne Court and the officers of the Army avy.

hour for the receptions is always 'clock, and just before that time the resident and his wife and the mem- f the cabinet and their wives as- in the large circular library on the floor of the White House. On a table the door are beautiful bouquets of s from the White House conserva- nd one of these is presented to each y the President's aide. Just before 'clock the President and his wife join rty, and exactly at the hour the bugle s and they start down the grand ay, the Vice President and his wife he members of the cabinet and their following.

ere was an unusual event during the nistration of Mr. Wilson when the r of a former Secretary of State, John Foster, stood at the foot of that ray, and watched coming down it her daughter, Eleanor Foster Lansing, on rm of her husband, Robert Lansing, Secretary of State.

e President and his wife with the wife e Vice President and the wives of the et members form in line in the Blue n, and the reception continues for t three hours, the guests passing by lly, with only a moment for a hand- e and possibly a murmured name.

ere is a great honor which is accorded few guests at White House receptions, of standing behind the line. During ears that I was in Washington as wife e Secretary of the Navy I never stood he line receiving without wondering ther the women whispering back of me as thrilled as I was the first time that s taken behind the line. It was when husband was chief clerk of the Interior it was the Secretary of the Interior, e Smith, who took me behind the line. ong the other interesting persons I met he charmed circle that day I recall Jo- Jefferson.

In the Receiving Line

tanding in the line is good discipline for woman's vanity, for there she is made realize that she represents her husband not herself. Women would come down line, reach out their hands with no in- est whatever until I murmured "Mrs. niels," and then they would say, "Oh, —Mrs. Josephus." A woman knows n that she is in the front line of the tle—but only as a substitute.

It is interesting to watch the effect, upon se receiving and those received, of the sic played by the Marine Band. When numbers are gay and lively the people p by briskly. Often the President has exercise a firm handclasp to keep a hus- d from stepping upon his wife's train. t let the music be slow and the line antly lags, while the spirits of those eiving suffer a corresponding drop. I member well one evening, when nearly ery number had been a classical selection, at I sent for Admiral Grayson and asked n if the music might be changed to some- ing with a march step. The change in tempo had its immediate effect and the crowd began to pass by more rapidly.

It is a curious feeling to have one of your best friends approaching and to be unable to say even one word to her, for it is the President who sets the pace. His handclasp is quick, and if anyone beyond him delays a second it means that the line stops directly in front of the President—a faux pas of which no woman of the cabinet would willingly be guilty.

After the last guests have been received the President and his wife retire to the upper apartments of the White House and the women of the cabinet are at liberty to break line. It is remarkable that women who have scarcely felt tired during the evening, in the excitement and pleasure of meeting distinguished guests, find after the line breaks that they have stood in one position for so long that minutes will pass before they are able to bend their knees.

Refreshments are usually brought to the members of the cabinet and their wives in the Blue Room, and chairs are placed for them. It is sometimes a little taxing to be regarded as an exhibit in a zoo, for it is the habit of many guests to stand in long lines to watch the animals eat.

Besides these formal events many small informal affairs are given at the will of the President or his wife. Sometimes the invitations to these are worded differently from those for the formal events, and say that if Mrs. So-and-So has no previous engagement she will be welcomed on such a day and at such an hour. Under such circumstances any lady who is invited is privileged, if she so desires, to write a note to the White House and state what her previous engagement is. Few, however, wish to do so.

The Mistress of the White House

Anyone may call upon the wife of the President and leave cards but without seeing her. If a lady desires to be received she must write a note to the White House and state her request. If the wife of the President grants the audience she usually issues other cards for the same time and sees several women at once, for the obligations upon the mistress of the White House are heavy, and her secretary keeps an appointment list which sometimes almost rivals that of the President himself.

It was into this atmosphere that Edith Bolling Wilson came after her marriage to President Wilson, in December, 1915. The first formal occasion on which she was entertained as the wife of the President was the dinner given by Vice President and Mrs. Marshall on January 14, 1916. I remember how charming and natural she was that evening, and how when Mrs. Burleson approached a group in which Mrs. Wilson was seated she rose and said, "Please take this chair, Mrs. Burleson. It is far too large and too grand for me."

Shortly afterward she displayed the same tactful courtesy at a dinner which Mr. Daniels and I gave for the President and Mrs. Wilson. The men were still in the library with their cigars and the women were gathered in the drawing-room, each of them anxious for a word with the new first lady of the land. She sat in one little group for a few minutes and then helped me as hostess very greatly by rising, walking about the room and making comments concerning some photographs which she knew would please me, and then seated herself with a different group of guests.

Her tact and her cordial democratic spirit had endeared Mrs. Wilson to many persons before the coming of the war curtailed the official entertainments. She has charm in a high degree—and charm has been defined as "something which, if a woman has, she needs nothing else; and if she lacks it, nothing supplies its place."

After that her days followed a certain routine. In the very early morning she played golf with the President, seeing to it that he had the exercise which those around him realized was so vital to his well-being. When she returned she wrote notes, and in many humble homes to-day there are treasured letters in the handwriting of Mrs. Wilson expressing gratitude for some kind thought for Mr. Wilson. Many letters were written to her concerning the men in the service. Mothers asked her about the welfare of their boys, and young wives begged that their husbands might be sent home to be with them as they passed through the great ordeal. These letters were not ordinarily referred to Mrs. Wilson's secretaries to be sent to the departments, but instead she would inclose them

Kyanize KY-A-NIZE WHITE ENAMEL

Sets perfectly even
—without a brush mark or "lap"

From kitchen to porch pillars your home can be made a brilliant, lustrous, sanitary white.

And why not, when a white enamel like Kyanize is so easy to obtain?

Use it inside or out,—durable in the extreme, it will not crack, chip, peel or soften through abuse or exposure.

Its extraordinary spreading capacity enables it to cover more square feet to the gallon.

Leading architects specify Kyanize White Enamel and prominent painters prefer it.

Our free booklet, "The Inviting Home," illustrated in colors, will tell you much that you ought to know about Kyanize. Ask for it on a postal. With it will come the name of your Kyanize Dealer.

Use this Coupon for Trial Can

To acquaint yourself with the merits of Kyanize White Enamel, in case you are yet unfamiliar with it, take this coupon to the Kyanize Dealer in your locality, pay him 15 cents for a good clean brush to apply the enamel and he will give you a trial can ABSOLUTELY FREE OF CHARGE.

Real Protection— *No Mis-Fires*

IN protecting your home you want to be *sure* the cartridges in your pistol are dependable.

In a crisis there must be no uncertainty—no mis-fires.

Oil necessary to lubricate a pistol seeps past the bullet and primer of ordinary cartridges into the cartridge shell and spoils the powder. Or, it destroys the priming materials which ignite the powder. Mis-fires result.

Remington Oil-Proof automatic pistol cartridges are *sure fire* always. They are positively sealed against oil or moisture—an exclusive Remington feature.

The best pistol is dependable only if loaded with cartridges that are sure fire. For protection—for dependability—replace old cartridges in the clip of your automatic—whatever make or caliber—with Remington Oil-Proof cartridges, and eliminate doubt.

The nearest Remington dealer can supply them.

The Remington automatic pistol in .32 and .380 calibers is dependable, light, compact and safe. Magazine quickly removable; can be instantly replaced. A cartridge left in the chamber *cannot* be fired with magazine removed—the most important safety feature ever incorporated in an automatic—makes it perfectly safe to have about the home. Magazine capacity of .380 caliber, 7 shots; of .32 caliber, 8 shots.

Remington

with personal messages to the members of the cabinet asking what could be done to make it easier for the writers. Later in the day Mrs. Wilson cut and made garments for the Red Cross. Many an overseas man, too, will remember how incredulous he was when he was told that the beautiful woman in canteen uniform who had just handed him chocolates and sandwiches was the wife of the President of the United States.

There was the trip to Europe with the President, when her charm and grace, as well as her great strength of character, carried her through new and strange experiences in a manner which reflected credit upon her country.

Then came those trying months of the President's illness, when Mrs. Wilson was constantly at his side, and there was fresh cause for the display of her tact and thoughtfulness as she endeavored to spare her husband the vexations which might retard his recovery and at the same time strove to avoid making decisions which might appear like the assumption of political authority. It is my belief that for her service then the nation owes far more to Edith Bolling Wilson than ever will be understood by the majority of its citizens.

Old shirt tails of my husband to make into bazaar aprons, money for college courses, fresh eggs for charity patients in tubercular hospitals, positions in government departments—requests for everything under the sun come to a public official and his wife.

Sometimes the requests are small in themselves and therefore may be granted, although these little gifts make up a considerable financial burden in the aggregate. For instance, there are hundreds of requests for handkerchiefs to be sold at bazaars, and almost every woman in public life in Washington accedes to these. Sometimes the givers of bazaars are courteous enough to write and tell how the handkerchief, raffled, has brought a considerable sum into the coffers of the charity. Dolls are asked for almost as often as handkerchiefs. I have dressed many of these, usually in Southern-negro costume. For one bazaar I remember I sent to Charleston for a real mammy doll.

With four boys of our own of school age it was impossible to gratify those other mothers and fathers who believe that cabinet members can bestow free college courses as easily as they can autograph their photographs.

Not all these requests, of course, reach a cabinet member or his wife. In the case of the husband, all mail goes through his department. If it is official business it is referred to the chief clerk of the department. If it is personal business it goes to the secretary of the cabinet member. If it is confidential business it is read by the confidential clerk. And—adds one who is familiar with Washington procedure—if the letter is sent to the house—it is read by the wife.

One friend of my husband's who desired to send him personal letters tested out this scheme, and when he had found that all that I have said about official procedure is true he sent letters to the house, starting them with a message to me. He learned that what I have said about cabinet women reading the letters is true, too, for I always received the messages—and at first hand.

Reading One's Husband's Letters

There is more than curiosity in a woman's reading these letters as they come to the house, for often she spares her husband some slight unpleasantness or unhappiness contained in them whose barb may be very keen under the cloak of anonymity. The letters of a cabinet wife are also sifted for her, her secretary reading practically all of them.

Mr. Daniels and I had to give consideration to working out a scheme by which we might write each other free of censorship. And during all the eight years of our residence in Washington, when out of town myself, I sealed my letters to him in an envelope marked for him personally from me, and inclosed this envelope in still another addressed to him in care of his confidential clerk.

The war increased the burden of these communications which might be termed peculiar, because every care must be then. Much time and effort was wa following up such communications.

I remember one evening when Mr. iels was called to the telephone by a w who refused to give her name but wh that she had absolute information th submarines were on their way from many to the United States. She give the details only to the Secretar wanted him to meet her at a certa dress on the following morning. Daniels felt suspicious of the giver formation, but to be on the safe s said that he would send a trusta representative to her the following m

At four o'clock in the morning sh phoned again and said that the spirit fighting her, but that she must giv information and she wanted the Sec to come and hear her story. I pers her to wait until morning. When the intelligence officer proceeded that m to the address she had given he disc that it was an insane asylum. In the of terrible anxiety when everyone was for the defense and protection of the try this poor soul was grieving un weight of imaginary troubles, adde those that were real.

The Man With a Bomb

A North Carolina man appealed during this time in a trouble which p to be very real. He had invented a which he took to Washington. The Department referred him to Admiral S who was much interested in the inve and asked the man to test out s things concerning it. The inventor little accustomed to city ways an walked down Pennsylvania Avenue t Raleigh Hotel, where he asked a ma the street to direct him to a place whe could test out a bomb. The streets crowded, the man interrogated was ar for the safety of the crowds, and he the inventor jailed. Mr. Daniels ha send down to have him bailed out an assure the authorities that the bomb for the preservation and not the des tion of Americans.

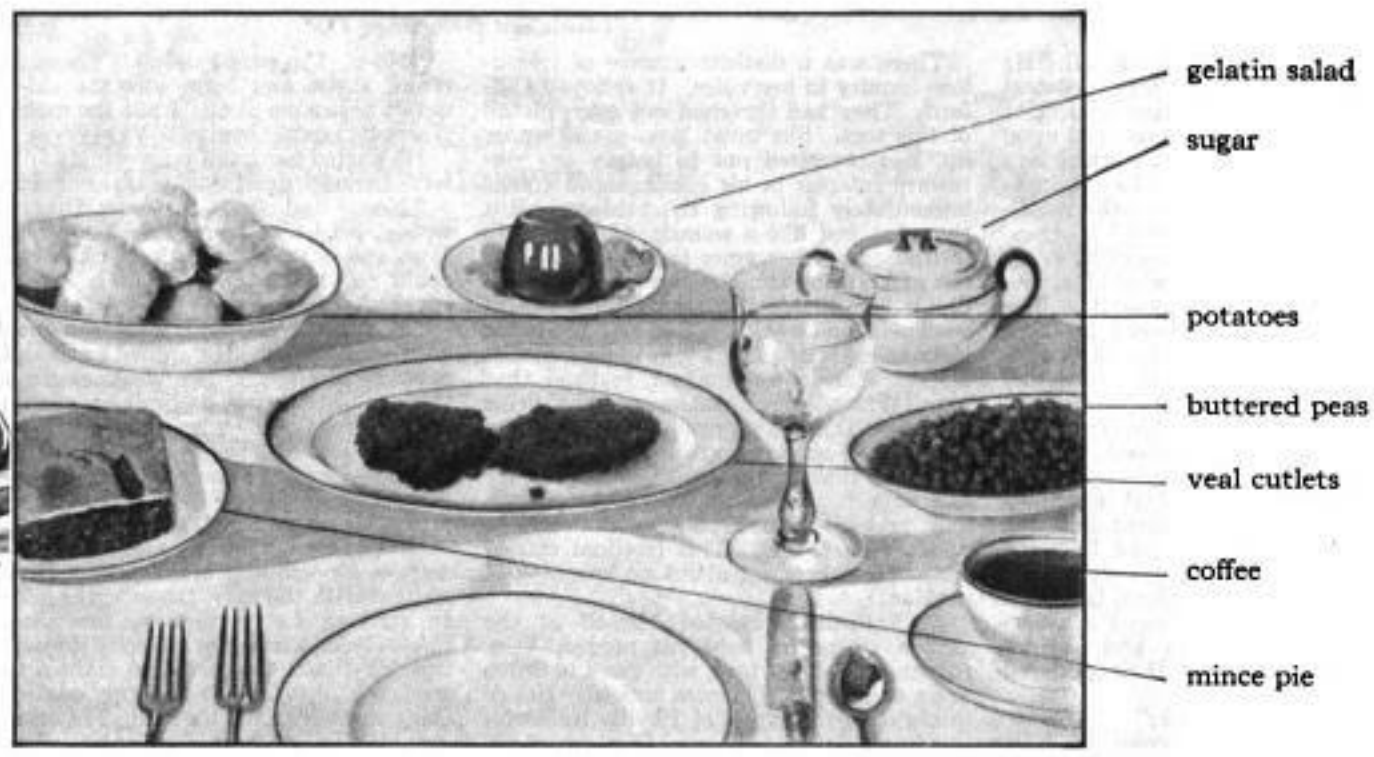
Mr. Daniels was called to the telep on another occasion by a very much exc woman who said, "Do you know that C tain So-and-So has been here in Wash ton for ten years, and that he claims t nothing but God himself can get him of here; while Captain So-and-So, who came on shore duty and who has a and baby, has been ordered to the fron

Mr. Daniels said no, he didn't know and the woman snapped back, "You do know much about the Navy, do you!"

During this time many sad letters c to me from mothers who felt that I co get their boys into the Navy, or out of Navy, or secure information about miss sons. After the Marines had fought Belleau Wood there were many of th missing men who were not immediat reported.

One North Carolina mother wrote that she had been unable to obtain formation about her boy after this batt We investigated and as nearly as co be determined from his position at t time of the battle it appeared that he ma have been in a group of Marines who w blown into bits.

The first man lost on armed guard w from the staff of the Dolphin, the sh assigned to the use of the Secretary of t Navy. The mother of the young sailor w in Washington and later lost another s in the war.



I felt close to all such mothers becau two of my own boys were in the servic and my brother, Commander David Wor Bagley, was reported missing for twenty four hours after his ship, the Jacob Jone was torpedoed off the Scilly Islands. T those who knew our family history it di not seem possible that my mother could b called upon again to bear such a loss, h my older brother, Worth Bagley, had bee the first American officer to lose his life i the Spanish-American War. But the hour of torturing anxiety before we knew of hi safety helped me to understand the agony o mind and soul through which other wome were passing.

Editor's Note—This is the second of two article by Mrs. Daniels.

The crime you commit against your body tissues

Each year over 100,000 men and women still young pay the penalty for this wrong habit of eating

VEAL cutlets, boiled potatoes, buttered peas, gelatin salad, mince pie and coffee—all good foods. Recognized thousands of American families as a tisfactory dinner.

And yet this dinner, unless supplemented th certain vital food factors, is a crime ainst your body tissues. Because thou-nds of men and women do not sup-ement this diet with these factors they ıdermine their health and succumb to seases which prove fatal.

It was easy for primitive man to secure ı abundance of vitamin and other neces-ıry food factors from his fresh meats and reen leafy vegetables. But our modern iet—constantly refined and modified—o often lacks these vital elements.

A protective food—not a medicine

Yet with no trouble at all each one of s can make good this lack. By adding Fleischmann's Yeast to their daily diet, nen and women all over the country are ecuring for themselves the health and igor that are their birthright.

As a result many are being freed from minor ailments, are building up increased resistance to disease; and best of all are feeling a vigor and energy they have not known for years.

They have better appetite and their digestion is greatly improved. They also find that waste matter is eliminated regularly and naturally as a result of supplementing their diet with Fleischmann's Yeast.

Fleischmann's Yeast is a fresh food. It contains in a natural form the elements your body tissues crave. It is rich in the water-soluble vitamin, for yeast is its richest known source. In addition Fleischmann's Yeast contains a number of important mineral salts and other food factors essential to health.

What laxatives can never do

Doctors are agreed that laxatives never remove the cause of the trouble. Indeed one physician says that one of its chief causes is probably the indiscriminate use of cathartics. Fleischmann's Yeast as a food is just the natural corrective you need.

A noted doctor says fresh yeast should be much more frequently given in cases of intestinal disturbance, especially if there is a constant need for laxatives.

Hundreds of men and women who have long been in bondage to laxatives are now free. The addition of Fleischmann's Yeast to their daily diet has restored normal action of the intestines.

The ways they like to eat it

Many like to nibble Fleischmann's Yeast from the cake a little at a time. Some prefer it spread on crackers or bread. Others take it in boiling hot water, still others like it in milk, fruit-juices, coffee or cocoa. It is very nourishing with malted milk drinks. You will grow to like its distinctive flavor just as you grew to like the taste of olives or oysters.

The vitamin which Fleischmann's Yeast contains in such abundance improves the appetite, stimulates and strengthens digestion. Because Fleischmann's Yeast is a food it does for you naturally and permanently what habit forming drugs do only artificially and temporarily. One cake of Fleischmann's Yeast gives you ten times the amount of yeast-vitamin found in most of the so-called yeast-vitamin preparations to which drugs of various kinds have been added. Be sure you get Fleischmann's fresh yeast. Do not be misled by substitutes.

Begin today to eat Fleischmann's Yeast—2 to 3 cakes every day.

Place a standing order with your grocer. 200,000 grocers carry Fleischmann's Yeast. If your grocer is not among them, write to the Fleischmann agency in your nearest city—they will supply you.

Send for free booklet telling the fascinating story of "The New Importance of Yeast in Diet"—what it has done for others—what it can do for you. Address THE FLEISCHMANN COMPANY, Dept. 609, 701 Washington Street, New York, N. Y.

Fleischmann's Yeast corrects these wrong habits of eating

FISH EYES

(Continued from Page 13)

important and succeeding not at all. He believed it incumbent upon him to detect something or somebody, felt that the weight of the world suddenly had descended upon his shoulders. But his brain worked in a single unfortunate channel. His attempts at deduction led invariably into the *cul-de-sac* of "It just couldn't happen."

That was the reaction expressed by every bank employe who knew what had occurred. The thing was impossible. The paying tellers, who had worked in team preparing for the rush of the day, were all reasonably certain that the cash had been correct at the beginning of the day—as certain as they were that it was not now correct. Through it all Clifford Wallace worked with them. Tiny lines of worry corrugated his forehead. And when, at seven o'clock, it became evident that the money was positively gone and had disappeared probably during the course of the day's business, the president, the cashier and Clifford Wallace retired to Warren's office. The president and cashier were smoking. Cliff declined their proffered cigar.

"I never smoke, you know."

"The point now is," spoke Warren, checking off that particular point on his thumb, "that the money has disappeared and we must do something. The question is, what?" He turned his gaze upon Wallace. Cliff met the stare steadily and answered in a matter-of-fact voice:

"The obvious thing is to place me under arrest, Mr. Warren."

"Obvious, of course."

"But Mr. Warren"—it was the nervous little cashier—"you don't believe Cliff stole that money, do you?"

"Certainly not, Mr. Jenkins. Of course I don't. And equally of course I am not going to have Mr. Wallace placed under arrest."

A flicker of triumph crossed Clifford Wallace's face, to be followed instantly by his habitual stoniness of expression.

"I am perfectly willing, Mr. Warren ——"

"It isn't a case of willingness, Wallace. If I thought for a moment you were guilty—or even could be guilty—I wouldn't hesitate. Not if you were my brother. But the thing is impossible. You've been negligent—probably; I'm not even sure of that. I understand banks well enough to know that a certain laxity of routine is naturally and excusably developed. It is my personal opinion that the money did not disappear from the bank. It either never was here or it is still here."

"Yes, sir." Cliff was calmly attentive.

"I am going to search every employe as he or she leaves the bank. That will insure its remaining here to-night. By to-morrow morning the bonding-company detectives and the representatives of the Bankers' Protective Association will be here. Whatever action they care to take, Wallace, will be strictly up to them. Personally, I wish to take occasion to assure you of my confidence in your integrity and to express the belief that this is an explainable mistake of some sort, which will be set right to-morrow."

"And you are not even going to keep me under surveillance to-night?"

"No."

"Pardon me, sir, but I believe you are making a mistake. You will be criticized ——"

"They can criticize and be damned to them."

Wallace returned to his cage, where he busied himself arranging the shelves for the following morning. Then quite as usual he closed his vault doors, set the time lock, visited the washroom, and left the building after undergoing a thorough search. Once outside, his shoulders went back unconsciously. He knew that he had won. The very simplicity of his crime had caused it to be crowned with success.

But he did not allow his elation to strangle caution. Every move in the game had been thought out meticulously in advance. He did not deviate a hair's breadth from his regular evening routine. He went to a cafeteria and ate a hearty meal, although the food almost choked him. At the desk he telephoned Phyllis Robinson.

"May I come to see you this evening, Phyllis?" He did that four or five evenings a week; they were secretly engaged.

"Yes."

There was a distinct nuance of tremulous inquiry in her voice. It annoyed Clifford. They had threshed out every detail of this sort. She must keep a stiff upper lip, had promised not to betray any untoward interest in his comings and goings immediately following the robbery. But that was just like a woman, making plain in the tone of her voice the vast relief she felt at knowing that he was free. Wallace didn't like that. It was an indication of weakness, and weakness had no place in his elaborate scheme. Besides, he knew well that Robert Warren was no fool, realized that for all Warren's protestations of belief in his integrity, the bank president already had a detective shadowing him. He had anticipated that and a good deal more. He had expected to spend this night in jail, and perhaps several others. Certainly under observation. This freedom caused elation, but brought about no lessening of caution.

At 7:45 he presented himself at the garage where he kept his modest little roadster, filled the tank with gas and drove down the street. This was a nightly ritual. Straight to the home of Phyllis Robinson he went; it was a rambling two-story structure set well back of a high-terraced front yard, its wide veranda blanketed cozily with honeysuckle—a modest place, one which had seen decidedly better days. Phyllis, an orphan, lived there with an aunt. The place was a boarding house. All very discreet and proper.

She greeted him in the hallway. He was irritated by the patent effort of her casualness. He directed their conversation, they chatted about innocuous nothings until they were safely out of the house and in his little car, headed into the country. This, too, was a not uncommon procedure. Cliff was well satisfied with himself. The most suspicious watcher could have found no food for speculation this night. His actions had been the normal actions of an innocent man. He was acting just as he would have acted had he been innocent of the theft of one hundred thousand dollars.

They mounted a gentle acclivity. The broad smooth highway dipped from the crest through a small woods. Overhead the full moon shone benignly over the valley, behind them the city, ringed about by furnaces and steel mills, gems of fire in the setting of silvered night. A red glow in the sky. The man at the steering wheel, calm and self-possessed, eyes focused on the ribbon of road ahead, thoughts busy with the epochal events of the day. Nor did he mention the subject uppermost in his mind until the girl spoke, spoke with a quaver in her voice as her hand closed tremulously about his.

"You—you're free, Cliff?"

"Obviously." The man was a poser; this was too perfect an opportunity to miss. He wished the girl at his side to be impressed with his own granite imperviousness to emotion. Phyllis shook her head; she loved him despite the fact that she knew his weakness.

"They don't suspect you?"

"Certainly not. They couldn't. I went in to the old man and told him the money was gone. I didn't protect myself a bit. Suggested that he had better lock me up. And of course he didn't." He smiled grimly, pridefully. "The only danger point in the whole scheme has been passed, Phyllis. We're safe."

"And I'm frightened."

"Of course. That's natural."

"Aren't you?"

"Not at all." He stopped the car as if to light a cigarette. "You put the money in the vault at the City Trust?"

"Yes."

"When?"

"Immediately after I left the office for lunch."

"You went straight from the Third National to your office?"

"Yes. And the cashier commented on how quickly I got back."

"Fine! Great! Sooner or later they're bound to connect us in this matter, and when they do they'll investigate your actions. It'll disarm them to learn that you got back to the office in record time; that you couldn't possibly have gone anywhere between the bank and your place of business. And now about the vault—you didn't attract any particular attention there, did you?"

"No-o. I'm sure I didn't. There was a crowd there, and I am sure the old man didn't notice me at all. I put the money in Harriet's box, not mine."

He patted her hand reassuringly. "You were a trump, dear. And you're not sorry?"

"No-o—and yes. I know that it is wrong, yet—oh, well, we need the money. It means so much more to us than it ever could to that bank. If we're only not caught."

"We won't be." His narrow, rather hard face was set. He argued as though to reassure himself. "The weakness in anything of this sort is preliminary planning. The average man who sets out to steal one hundred thousand dollars"—the girl winced—"makes plans so enormously elaborate that he cuts his own throat, minimizes his chances of getting away with it. For every detail that such a man plants he sows a possibility of detection. He isn't content with the easy, the safe, the normal. In striving for perfection, for absolute safety, he lays traps for himself. Remember this, Phyllis: a detective can make a thousand mistakes and, by doing one single thing correctly, land his man. The criminal cannot afford a single mistake. Understand?"

"Yes." And then the feminine side of the girl flooded to the surface. "Cliff dear, you're so—so hard!"

That pleased him. He wanted to be hard, cultivated a gelid philosophy.

"Sentiment serves no man well, Phyllis. My hardness has made possible financial ease for us—and consequent contentment. I have no conscience. Neither has the average man. Conscience is the fear of being caught. We are all inherently unmoral. It was not wrong for the primitive man to steal. He took what he could get away with. Right and wrong are products of legislation, of artificial ethical culture. They are not part of us; we are inoculated with them. They are utterly foreign to us. In taking this money I have committed no natural crime. By statute only am I a criminal. I am not ashamed of what I have done. I would be ashamed of detection."

Silence fell between them. The girl shivered as though with a chill.

"You are very convincing, dear. But I'm afraid that I'm terribly a victim to the morality of education. Of course you've convinced my intellect. But—since this afternoon—I'm afraid you can never convince my conscience."

He flashed her a sudden apprehensive glance. "You're not getting cold feet?"

"No." She shook her head sadly. "It's too late for that."

"But you're afraid?"

"Yes. I'm afraid."

"Then you're silly. We're safe now. The minute you walked through those revolving doors with that hundred thousand in your bag I knew that we were safe. The scheme is successful because of its very simplicity. We are to go ahead in our normal ways. There is to be no variation whatsoever in our way of living. In a year we will marry. A year from then I will get a position somewhere else. And then—and not until then—will we begin to make use of the money which we got to-day. We're safe."

"From the law—yes. But not from ourselves."

"Harping on conscience again?"

"Yes."

"Pff! I have no conscience, no fear of the intangible."

She sighed. "I must agree with you, dear. I've gone too far not to. But I wonder—whether it's worth the price."

He laughed harshly and the car leaped ahead as his finger caressed the gas lever.

"It's fortunate, Phyllis, that I'm practical. The thing that counts in this world is what you have—not how you got it."

They returned to the girl's boarding house at eleven o'clock, stood chatting for a while on the front porch. Cliff wondered whether the man who must be shadowing him was witness to the tableau. He knew that the man must have been bewildered and apprehensive when they went off for a ride together—and pleased by their return. He fancied he could discern the person lolling in the shadows of the big oak across the street. He swung down the steps, whistling jauntily.

Phyllis slept not at all that night. Cliff, serene and untroubled, slumbered heavily. For two years he had planned this thing,

had surveyed it from every angle. He made an intensive personal study of men with whom he would have to d Of Robert Warren, the president; of G Jenkins, the cashier; of each membe the board of directors. He had stu their mental processes, had deliber built up their confidence in him and hi tegrity. He had known in advance Warren would do just about as he had and that his opinion would sway the b of directors. He knew that the ma would be hushed up and that the invest tion would be conducted with the most secrecy. He knew that detectives w appear the following morning, would main there for some time—and that would find nothing. He knew that eve ally the conclusion would be reached there had been, in fact, no robbery a but that the hundred thousand dollars never reached the bank vaults.

He would be watched carefully for month, two, three. Then the matter w be filed away as an unsolved myst Above everything, the bank was not sirous of a scandal. In the absence sufficient evidence to convict they'd pe him his freedom. And the perfect norm of his life would convince them spee that he was free from guilt.

He reached the bank the following m ing at precisely his regular time, not a ute early or a minute late. He held a b conference with the three assistant pay tellers and apportioned to each his quot cash from the vault, which was a part of individual cage. Then quite phlegmatic he answered a summons to the office of president. And as he entered the door recognized in the three strangers who fa him the detectives.

Cliff was somewhat amused. He in that the glances they bestowed upon were surcharged with deep and dark picion. Money had disappeared from cage of the chief paying teller; ergo, chief paying teller had stolen it. The start out on that theory—and butt th heads against a stone wall. He reali that Robert Warren was talking, that was being introduced.

"The detectives; this is Mr. Peter Jam son, representing the bonding compa And Mr. Carl Burton, of the Banke Protective Association." He hesitated moment as he turned toward the thi stranger. Then: "This other gentleman also here to represent the Bankers' Prot tive Association. Mr. Wallace, Mr. Ha vey—Mr. James Hanvey."

Cliff started visibly. Jim Hanvey! He heard of the man—a detective with an viable reputation. But he had envision Jim Hanvey as a person tall and sinew and with a saturnine face and deep-s flashing eyes. This man ——

The hand which the great detective tended to him was limp and clammy, t man himself utterly negative. He was large man, true; but his shoulders we rounded and from them the coat of h cheap ready-made tweed suit hung like smoking jacket. Above a thick red nec rose the head—huge, fat, shapeless. Thr floppy chins, an apoplectic expression, wide, loose-lipped mouth. And eyes —

Those eyes fascinated Wallace, not be cause they were marvelous eyes but b cause he could not reconcile himself to th fact that they were capable of seeing any thing. They were large eyes, and roun like a baby's. In color they were a passiv gray—fishlike. They rested on Wallace's their hands met, and then the lids close slowly over them like a film, rising just a deliberately. It was more an ocular yaw than a blinking of eyes. Cliff felt within him a contempt for the man, instant and instinctive, then pulled himself together with a jerk. He knew that would never do Jim Hanvey bore an international reputa tion, such a one as could not be attained through inefficiency.

Jamieson was nearer Cliff's conception of an efficient detective. Medium build, dap per, dynamic, with blazing eyes and a competent manner. He liked Jamieson, knew that he would know how to cope with him. Jamieson was a practical detective, and Jamieson was there in the rôle of a friend. It was most decidedly to the interest of the bonding company to establish his inno cence. Burton, too, radiated efficiency. He was tall and broad and had deep-set brown

The vital instant

in a motor comes when compression is complete, piston at top and spark fires. Every ounce of traction delivered to the rear wheels results from the action of the gas at that vital instant. Upon the degree of volatility of the gasoline depends the translation of every molecule into maximum energy at that vital instant.

TEXACO GASOLINE

THE *VOLATILE* GAS

(Volatility is the readiness with which gasoline gives up its power)

The high volatility of Texaco Gasoline comes into evidence in many ways; perhaps most unmistakably in the congestion of city traffic, where its delivery of quick impulse in response to the accelerator is sure to be observed and appreciated.

Texaco Motor Oils are heavy-body lubricants and are distinguished by their clear pale color. Light, medium, heavy and extra-heavy—they fit all cars and all conditions. You will find them wherever you see the Texaco red star*.

THE TEXAS COMPANY, U. S. A.
Texaco Petroleum Products

*In ten years the consumption of Texaco Lubricating Oils has increased from 300,000 gallons per month to 7,500,000 gallons per month.

To Soda Fountain Customers:

Here's *Real* Lemonad Delicious-Refreshing

And You See It Mad before your eyes on this Machir

You want real *fresh fruit* lemonade genuine old-fashioned kind.

Here's proof that you're getting it—ar cient and sanitary machine that makes i few seconds.

The dispenser presses the halved fruit t swiftly revolving extracting bulb and the rich juice gushes into your waiting glass.

You sense the natural fresh fruit ar There's no mistake about *this* lemonade.

It's the real old-fashioned kind—the you want. You see the machine produce

And there's no other refreshment that equals this classic beverage.

Simply seek the stores that use the Su Juice Extractor, and you will get *your lemonade.*

Sunkist Ju

You will want one when you see it work

The Sunkist Extractor is a trade magnet, a business builder, a sales creator, not only for your fountain, but your entire store. It does not hurt other fountain business—it increases it. Hundreds of users have told us this.

Apply halved orange or lemon to revolving extracting bulb. The juice instantly gushes into the glass. Revolving at the rate of 2,000 times per minute, the bulb extracts every last drop of the juice. Juice never touches operator's hands.

The solid china juice-bowl is guaranteed to be absolutely acid proof—not merely acid resistant—but positively acid proof. Bowl and spout are in one piece, and easily removable for rinsing in water—

The extracting bulb not only extracts the juice, but the well. It breaks up and shreds the pulp. Crushes thousa cells, not affected by other extracting methods. Releases of the pure, luscious, natural fruit juice from nature's store

You serve genuine lemonade—made to order from the f before the customer's eyes. All done in a few seconds.

Hundreds of soda fountain owners, now using this Extr seen their lemonade sales increase 1000 per cent, and more, i

$1000.00 in prizes

What is she saying?

THERE is no fixed answer to guess! Your idea of what this woman is saying may be the prize winner! What is she saying to the clerk that is making him turn to Sealpax?

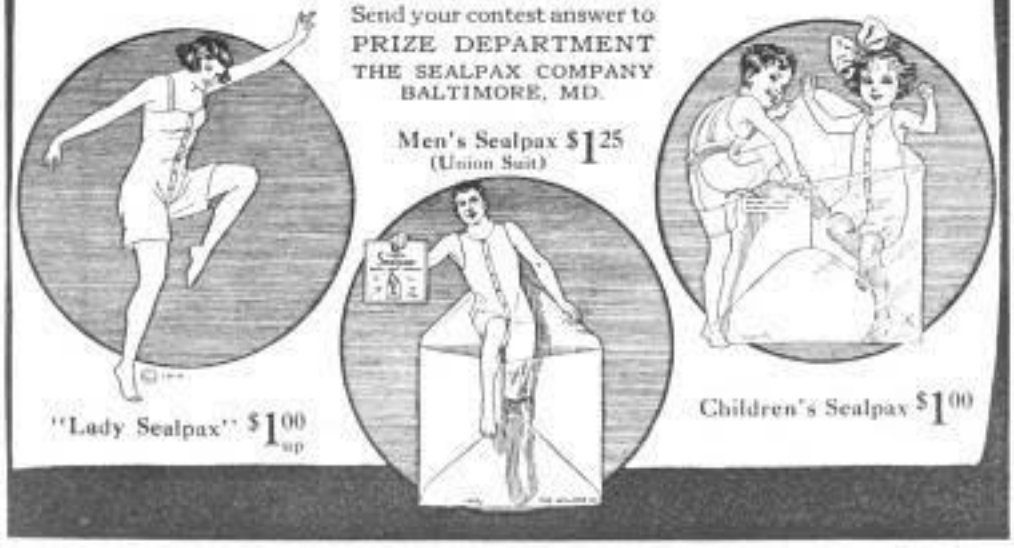
Study the picture—study the facts about Sealpax below. Then, write your answer in not more than twenty words and send it to the Prize Department, The Sealpax Company, Baltimore, Md. Competent neutral judges will award prizes. Contest closes July 29th, 1922. And winners will be announced in The Saturday Evening Post, October 28th, 1922.

Best answer	$500
Second Prize	$200
Third Prize	$100
Fourth Prize	$50
Next Best Five	$15
Next Best Five	$10
Next Best Five	$5
Next Fifty (each)	one suit of Sealpax

(In event of a tie for any prize offered the full amount of such prize will be awarded to each tying contestant.)

Sealpax
Athletic Underwear

THERE are men all through the country who do not have to read about Sealpax to know what the customer in the contest picture is saying about it. They *wear* it! They *know* that wonderful free-and-easy Sealpax comfort—that light-and-breezy Sealpax coolness!



Why don't you slip into Sealpax and treat yourself to a new summer comfort? The snug athletic cut—the cool fabric—webbed shoulders and wide roomy legs—are a revelation in underwear comfort.

You begin to appreciate Sealpax when you buy it—because it comes to you packed in a sealed sanitary envelope, crisp and clean as driven snow.

Women and children may also enjoy the cool comfort of Sealpax. "Lady Sealpax" for women is "Just as Comfortable as Brother's" athletic underwear—just as dainty as a woman could wish it to be. "Little Brother" and "Little Sister" Sealpax bring "Dad's Comfort to Dad's Kids"—cool, comfortable athletic underwear for children, reinforced to wear long and well.

Sealpax for all the family—sold everywhere!

eyes which looked out keenly from under heavy lashes. He was there to convict, but Cliff did not fear him. Burton, like Jamieson, was too normal a man to inspire apprehension. But Hanvey, Hanvey of the slow-blinking, fishy eyes—Hanvey was a disturbing quantity. Cliff didn't like Hanvey.

Hanvey was speaking. Cliff noted that the others deferred to the ponderous, uninspired-looking individual.

"H'm! You're the paying teller, Mr. Wallace?"

"Yes, sir."

"Kind of funny—the hundred thousand gettin' lost thataway, wasn't it?"

Cliff was annoyed. The man wasn't even grammatical.

"Rather peculiar—yes."

"Ain't got any idea how it happened, have you?"

"No."

"No chance of anyone sort of slippin' an arm through the cage window and grabbin' it, huh?"

Bah! the man was an idiot.

"Hardly that."

"Kinder makes us believe that it must have been done by somebody inside the cage. Ain't that so?"

"That is the obvious conclusion."

"Well, now—so it is. So it is." Hanvey produced a golden toothpick, which he regarded fondly. "Awful funny thing how money gits to go thisaway. Awful funny. Ain't it, Jamieson?"

"Yes—yes indeed." Cliff glanced curiously at the competent Jamieson. He fancied that Jamieson would appear annoyed by Hanvey's cumbersomeness. But instead he saw the two other detectives hanging worshipfully upon Hanvey's words.

Peculiar—it was impossible that Hanvey possessed keen intelligence. And yet ——

Hanvey nodded heavily. "That's all, Mr. Wallace. I reckon that's about all I need from you."

All? It was nothing—less than nothing. One or two absurd, meaningless questions; a ridiculous voicing of the thought that someone might have stolen a hundred thousand dollars in currency from under his very eyes. And Jim Hanvey was reputed to be a great detective.

Cliff Wallace was bothered. The very somnolent heaviness of Jim Hanvey begot apprehension. He had no idea how to cope with it. The man was too utterly guileless, too awkward of manner. His ponderous indifference must cloak a keen, perceptive brain. Jamieson and Burton—well, Cliff knew just what they were thinking. He'd always know what they were thinking. But Hanvey—never. He didn't even know that Hanvey was thinking. He was an element which the paying teller had not foreseen. Frank suspicion was easy to combat. Through his head there flashed the shibboleth of the Bankers' Protective Association: "We get a man if it takes a lifetime—even though he has stolen only a dollar. It's the principle of the thing."

He shook off the thought of Jim Hanvey, but throughout the day watched the ponderous, big-jowled man lumber about the lobby and through the cages, those great fishy eyes blinking with a deliberation which reminded him of a man making physical effort to remain awake. Occasionally Cliff looked up to find the glassy eyes staring at him through the bars of his cage, the detective's unpressed tweed suit against the marble shelf. His eyes would flash into those of the detective, then would come that interminably slow blinking, and Hanvey would move away apologetically. Once Wallace shivered.

That was the beginning. Hanvey during the days that followed did absolutely nothing. Jamieson and Burton, on the other hand, worked busily and thoroughly. They pored over the list of customers for whom checks had been cashed on the day of the money's disappearance. And finally they came to the pay-roll check of Sanford Jones & Co. They called Cliff into conference with them, Burton doing the questioning.

"Who presented the Jones company check, Mr. Wallace?"

Cliff steeled himself to impassivity. "Miss Phyllis Robinson."

"You are acquainted with her?"

"Yes. We happen to be secretly engaged."

"Ah-h!" Cliff saw a meaningful look pass between the two detectives. "Your fiancée?"

"Yes."

"Did you personally cash her ch day?"

"Yes."

"You are positive about that?"

"Yes. I cash all of the pay-roll and besides, I remember talking while she was at the window."

The detectives nodded at each ot Cliff was dismissed. Immediately J and Burton checked up the mover Phyllis Robinson on that particul They learned that she had cas company's pay-roll check as usual she had been absent from the offic short time. Yes, the puzzled cas positive of that—he remembered particularly that she'd hardly left t before she was back with the mo answer to their query as to whet had time to stop somewhere en rou office from the bank, the little ma nantly protested that he recalled e tail of the morning and that she possibly have done so. "I never k to get back so quick before, and sh was one to loiter."

So much for that. The girl h doubtedly gone straight from the her office. The Jones cashier insist she delivered the satchel to him per Jamieson and Burton then visited th of the city and its suburbs. Th National was the largest in the distr they went meticulously down the the order of importance. At the Cit they were informed that Phyllis R rented a safety-deposit box. An ins of her card disclosed the fact that not visited the box in two months had she a box at any other bank. had Cliff Wallace.

News of the investigation, receiv the puzzled cashier, via the frig Phyllis, elated Cliff. He was deligh know that the two detectives were s and supremely confident that they discover nothing.

But Hanvey did nothing. All da he lounged about the lobby or sat of the cages with his feet propped shelf, surrounding himself with a h rancid cigar smoke. And always blank, stupid eyes were turned up cage of the chief paying teller—bli blinking.

Wallace did not vary a hair's h from the established routine of his life. He breakfasted at his usual pl the usual hour, snatched a lunch as h always been in the habit of doing, at his favorite cafeteria, called upon lis Robinson in the evenings and walked with her or took her riding little car.

On Thursday he drew his monthl check—two hundred and fifty dollars hundred dollars of it he immediate posited to his own credit in a savin count. He had done this for years.

On Friday he received a shock. It light pay-roll day—not more than a ter million dollars had been set asi the pay rolls. In the line was Ph satchel in hand. He greeted her as counted the packages of bills and re silver. And then, as he unlocked the window of his cage to return to he satchel, he visioned the ponderous figu Jim Hanvey lolling indifferently ove shelf; round idiotic eyes fixed unsee upon him. Fear flashed into Cliff's and the color receded from his ch What was the significance of that? it possible —— With an almost hyste gesture he slammed shut the win Hanvey's eyes blinked once, slowly second time, more slowly. Then he m heavily away, playing with his gold to pick.

That night as Cliff was driving Phyllis in the country—"That was H vey standing by the window to-day I cashed your pay-roll check."

The girl shuddered. "Ugh! He's ho Like a jellyfish."

"I wonder why he did that? He's n done it before."

"Did what?"

"Hung over the counter while I cashing your pay-roll check. I wonde he suspects ——"

"That man! He looks like an imbecil

"Looks like, yes. But he is supposed be a great detective."

"It's impossible."

"He's getting on my nerves, Phyllis. can't help but believe that he suspe something. At times I feel a contempt his obtuseness. Then I know that I

THROUGHOUT South America there persists a saying: "Good packing, bad packing, and then American packing." Who can estimate the damage done to American export trade by such a reflection!

This crate is a striking example of slipshod packing of goods for foreign shipment. It shows the condition in which a crated motorcycle reached an American port presumably ready for export. The manufacturer saved lumber and nails in making this crate. In order to save the motorcycle the forwarding agents had to rebuild the crate before it could be loaded into the ship.

A single shipment received in damaged condition may destroy the good will assets of a shipper or may injure the trade relations of a whole nation.

And for every needless damage, somebody pays—usually the consumer, through higher prices and transportation costs.

Do American Shippers Pay Sufficient Attention to the Packing of Their Goods?

TAKE a walk into a freight house and look at the crates that are expected to deliver merchandise safely to customers a hundred or a thousand miles away.

Too much lumber in one crate; too little in another; weak corner construction; lack of bracing; too few nails or nails of the wrong size, some too small to hold, others so large that they split the wood; nails driven into end grain and consequently of little holding power; insufficient protection for contents; contents not properly braced—these are the most obvious weaknesses in the crates of average American shippers today.

Weaknesses, too, that in large measure account for the enormous losses in damaged goods that the American people each year are obliged to pay.

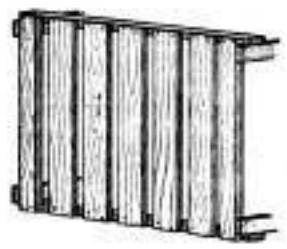
SHIPPERS who have looked into this matter of shipping containers are securing startling results. They find that the elimination of damage claims and the delivery of goods in uniformly better condition, speeds up collections and increases sales.

In some instances, too, large savings have been effected through proper crate construction.

One manufacturer is saving 350,000 feet of lumber annually and has cut his shipping weights over a million pounds. Another saved $30,000 in materials, labor and water transportation through redesigning the container for a single product.

PROPER crate construction is no longer a matter of guesswork, but is based on definite engineering principles now thoroughly established by the experience, observation and experiment of the U. S. Forest Products Laboratory, the railroads, and many large shippers as well.

The Weyerhaeuser organization has for years been at work on this problem—collecting and analyzing the facts, so that every foot of lumber it sells for crating purposes will deliver 100% service and at the same time effect the greatest saving for the shipper.



As a result, this organization now offers to the industrial user of crating lumber the services of a crating engineer who, without cost to you, will come into your plant, check up your crates, and, with the cooperation of your shipping department redesign your shipping containers to fit in each case the products to be packed.

Lumber is the standard material for shipping containers. For this purpose this organization offers to factory and industrial buyers, from its fifteen distributing points, ten different kinds of lumber of uniform quality and in quantities adequate to any shipper's needs.

A BOOKLET outlining the principles of crate construction and explaining the personal service of Weyerhaeuser engineers will be sent on request to manufacturers who use crating lumber.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 So. La Salle St., Chicago; 1015 Lexington Bldg., Baltimore; and 4th and Robert Sts., St. Paul; and with representatives throughout the country.

MERELY adding more lumber to a crate does not necessarily increase its strength. Much more important is the manner in which it is used. The construction shown above could easily be thrown out of plumb if dropped on to one of its corners. Likewise such a crate might so lose its rigidity, as a result of rough handling and the weaving action of a freight car in motion, as to force the contents to bear the weight of any objects that might be loaded on top of it.

In the illustration below, correct construction has saved a considerable amount of lumber. Properly applied diagonal bracing prevents the distortion and racking of a crate frame and renders the contents immune to the damage often resulting from the friction between crate members and contents. Proper crate design in all cases recognizes transportation hazards and, through least material properly applied, protects against them.

Fifth Avenue looking north, showing one of the new towers to control traffic

Traffic has trebled in five years—

A way to prevent this from becoming an increasing menace to motorists

ALMOST three times as many cars crowding the streets and roads today as in 1916—9,500,000 as compared with 3,500,000.

On Fifth Avenue, New York, a system of control by towers and lights has been installed to meet this alarming increase in traffic. Between 34th and 59th Streets all Avenue traffic moves and halts at the same time.

It has become imperative everywhere that precautions be taken to prevent accidents from increasing traffic.

Tests which the San Francisco Police have conducted revealed the startling fact that *the brakes of every fourth car are in dangerous condition.*

Don't let any emergency find your car with faulty brakes. The chart at the right shows how quickly you *should* be able to stop. *Have your brakes inspected regularly by your garage man.*

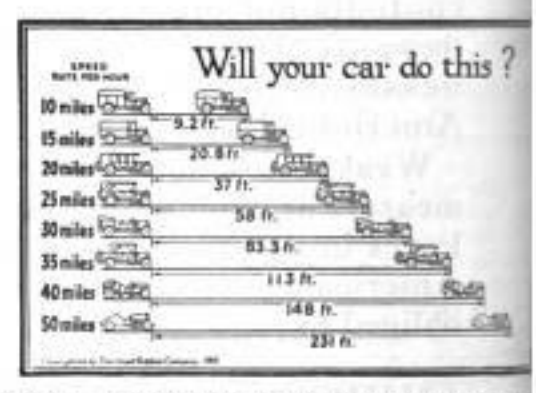
Perhaps you need new brake lining. Ordinary woven lining wears down quickly and unevenly—it may fail unexpectedly. It grabs and slips after the first few hundred miles. You can never be *sure* that your brakes will hold.

40% more material—hydraulic compressed

To overcome these faults of ordinary brake lining, Thermoid Hydraulic Compressed Brake Lining has been perfected. It maintains its gripping power even when worn as thin as cardboard.

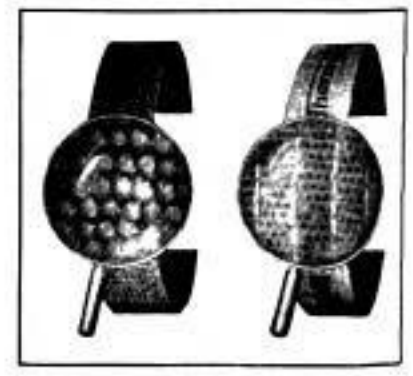
40% more material than can be put into ordinary brake lining is compressed under *hydraulic pressure* of 2,000 pounds into a tight, close-textured mass. Each layer of material in Thermoid is *Grapnalized*. This exclusive process makes it oilproof and waterproof. Brakes lined with Thermoid can never grab or slip.

Because of its unfailing efficiency, the manufacturers of 50 of the leading cars and trucks use Thermoid.



Don't take any more chances with faulty brakes. **Next time you need new brake lining, specify Thermoid.**

Write for "The Dangers of Faulty Brakes," the first complete publication on the subject ever published. Sent free.



THERMOID RUBBER COMPANY

Factory and Main Offices: Trenton, New Jersey

New York, Chicago, Los Angeles, Detroit, Atlanta, Boston, Cleveland, Seattle, London, Paris, Turin.

Famous Thermoid Standard Chart of stopping distances, now approved by Police Officials and Automotive Engineers. Chart shows distances in which cars should stop if brakes are efficient. Brakes lined with Thermoid meet these standards.

Ordinary woven lining

Notice the loosely woven texture.

Wears down quickly and unevenly.

Loses its gripping power as it wears.

Thermoid Brake Lining

Hydraulic Compressed.

Notice the compact texture.

Wears down slowly. Gives uniform gripping surface until worn wafer thin.

g. He couldn't be what he is and be ool he looks. And he doesn't do any- g. He's never questioned me. He's r questioned anyone. He just sits and watches and watches—like— a Buddha."

r did the weeks which followed alter situation. Jamieson reported to the officials that in his opinion there had no robbery. Burton concurred. They arrived at the definite conclusion that money had never reached the bank. swer to Cliff's statement that it had, admitted that Cliff believed so—but n error. Cliff refused to be convinced, thus established more firmly than ever eir minds the fact that he was innocent mplicity in the crime. It was the y of Jamieson and Burton that in ing the unusually large amount of from the district Federal Reserve to meet the heavy pay rolls of that cular day, a miscount had been made e sending source and the checking up he Third National had been faulty. , the accounts of the Federal Reserve showed no surplus of one hundred sand dollars, but both Jamieson and on were optimistic that it would even- y come to light.

iff Wallace knew that he had been essful. No hint of suspicion had fallen him. The worst that had been said nst him was that he had been careless unting the money as it came into his ts. He was sorrowful about that—os- atiously so, just as he would normally exhibited grief at any suggestion of in- iency. The bank officials did not blame . Most of them had climbed the ladder dy and they were familiar with the ging routine of the paying teller's cage, inevitable liability to error. Undoubt- , they thought, the money would ap- eventually. It was absurd to doubt ford Wallace. Two detectives had lowed him meticulously. The orderly tence of the chief paying teller was un- ed. He went his way serenely.

'o Wallace it seemed more than worth trouble. Lying in the vaults of the y Trust was one hundred thousand dol- in cash, an amount sufficient to yield en thousand income invested with mod- te acumen. That meant leisure and e for himself and Phyllis through life. did not want anything more. He knew t he would never again be tempted to ne; not that he was morally opposed it, but because it wasn't worth the ger.

One hundred thousand dollars was ade- ate to their needs. He had planned this ng for two years. Now it had been cked successfully.

If it only wasn't for Jim Hanvey, those le-staring eyes. He couldn't get away m those eyes, from the insolent indolence the man, his apparent indifference to the stery he was supposed to be solving. l day he lounged around the bank; ig- rant, bunglesome, awkward, inactive. He spected no books, asked no questions, ex- bited no suspicion of Cliff Wallace. Yet iff felt those inhuman eyes focused upon m at all times. And that incident of anvey's presence at the cage when he shed Phyllis' pay-roll check—that was ught with deep significance.

"He suspects me," proclaimed the pay- g teller furiously to his accomplice. "He nows that I did it and is just trying to nd out how."

She held his hand between both of hers. I'm afraid, Cliff. Horribly afraid."

"If he'd only say something! I wish e'd arrest me."

"Cliff!"

"I mean it. If he'd arrest me they'd rosecute, and they couldn't possibly con- ict. They haven't a thing on me. I'd be equitted in jig time. Then he could go to he devil—Hanvey and those fish eyes of is. I'd be safe then—even if they found ut later that I had done it."

"You mean that you couldn't be tried wice for the same offense?"

"That's it."

"Then why not induce them to—to prosecute?"

He shook his head. "I can't. I've tried it, but old Warren and Garet Jenkins are convinced that I'm innocent. Jamieson and Burton both believe the money never got to the bank. And Hanvey just sits around like a hoot owl at noon and does nothing. It's Hanvey I'm afraid of. He knows! The only thing he doesn't know is how!"

Two more weeks passed. Wallace's hope that Hanvey would depart proved ill-founded. The big, awkward man was there at eight o'clock every morning, and there he remained until the books were closed at night. He spoke to nobody save in the most casual way. Every other employe of the bank came to take him for granted. They were interested in him at first, but later accepted him as they accepted the marble pillars which stubbed the lobby. He was big and lumbering and uncouth, and gradually they forgot his reputation as a bank detective.

But Clifford Wallace did not forget. In his eyes there had been born a hunted, haunted look. Hanvey's flabby, rather coarse face had a hypnotic effect upon him. He found himself wondering what obliquitous course this man was pursuing, what method there might be in his madness of inactivity. He felt like an ill man who finds himself daily in the room with a coffin. Hanvey's stolid demeanor generated an association of ideas that was irresistibly horrible.

It was obvious that Hanvey suspected something, someone; equally plain that he did not suspect anyone else in that bank. It must be, then, that he did suspect Cliff. And then he commenced visiting Cliff's cage.

He did it only a few times. His manner was friendly, almost apologetic. But he had a mean insinuating way of appearing at the cage door and rattling the knob. Cliff would whirl and find those dull inhuman eyes blinking slowly at him.

"Can I come in, Mr. Wallace?" And then once inside the cage: "Jest wanted to pass the time of day with you."

Invariably, then, the same formula. A browsing around the tiny cage. A peeping into the money-stocked vault of the paying teller. "Gosh! That's a heap of money."

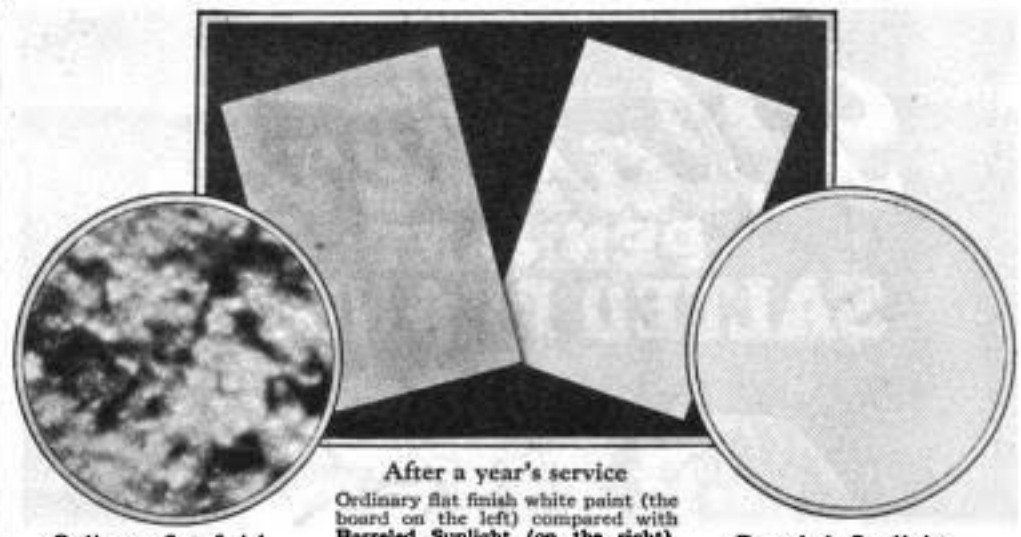
"Yes." Cliff found himself on edge when Hanvey was in his cage.

"Never knew there was that much money in the world."

Damn the man! Always obvious in his speech.

"Didn't you?"

"Nope. Sure didn't."



Hanvey never mentioned the robbery. His indifference must be studied; all part of a net-spreading process. Cliff was frightened. He recalled the adage that a detective can err a thousand times and yet win; the criminal cannot afford to slip once. He regulated his daily life scrupulously. At the end of another month he again deposited his regular amount of savings. He saw to it that Phyllis did the same. But the strain was telling on him. His appetite had gone, dark circles appeared under his eyes. He wished daily that he'd be summoned into Warren's office to face the thing out with Jim Hanvey. He knew they couldn't convict, that they didn't have a thing against him. Even the box in which reposed their hundred thousand dollars stood in the name of Mrs. Harriet Dare, Phyllis' dead sister. Before her death Phyllis had been authorized in writing to be permitted to the box. Cliff had taken care that the box remained in the name of the estimable and defunct lady.

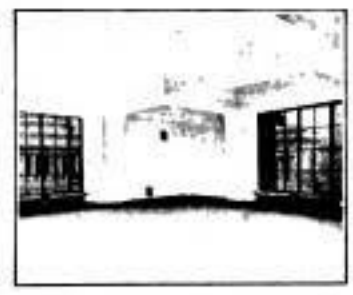
He became moody and depressed, obsessed with speculation as to what was happening behind the bovinely expressionless face of the detective. The man's countenance was blank, but Cliff was no fool—he knew that it masked an alert mind. True, he'd seen no indication of that alertness, but he knew that it must be so. And Hanvey's inactivity was telltale. Hanvey knew that he had done it, and was waiting with oxlike patience to discover how.

Sooner or later he'd learn. How, Cliff didn't know. But no scheme is so perfect that it can stand the test of unflagging and unceasing surveillance. And when he did learn—Cliff shuddered. He knew full well what they did to crooked bank employes. Robert Warren would be hard in such a situation—very hard, merciless.

Then came another big pay-roll day, and Phyllis' weekly visit with the modest check from her firm. This time Hanvey fell into line behind her. Cliff saw him coming, and his face blanched. Phyllis noticing his pallor turned and stared into the expressionless countenance of the big unkempt detective. The color receded from her cheeks, too, and her hand trembled visibly as she shoved her satchel through the little window of Cliff's cage.

His fingers were trembling as he counted the money. He chatted with Phyllis, the effort being visible and unnatural.

Ordinary flat finish white paint, highly magnified.



After a year's service

Ordinary flat finish white paint (the board on the left) compared with Barreled Sunlight (on the right). The accompanying photographs taken under the microscope show why one collected dirt while the other remained white.

Barreled Sunlight, magnified to same degree.

Find out now through the microscope

How the white paint you buy will look after a year's service

Massachusetts Institute of Technology. *Barreled Sunlight was selected by the world's greatest technical institution for use in its own buildings.*

Grinnell Plant.
The interior of this well-known fire extinguisher plant is painted with Barreled Sunlight.

Barreled Sunlight *has made walls and woodwork in this kitchen white and washable as tile.*

"Save the surface and you save all"

All white paint looks well when first applied. How will it look when it has been on walls or woodwork six months or a year?

That is the question you should answer in selecting your interior white paint.

Taken under the microscope the photograph of ordinary flat finish white paint above shows with startling clearness why most white walls and woodwork collect dirt.

The surface of such paint is seen to be actually rough and porous to an astonishing degree. In this surface dirt and dust catch readily—and stick. A permanently soiled, spotty finish soon results.

Notice in the circle on the right, the photograph of Barreled Sunlight. Seen even through this powerful lens it is smooth and unbroken!

That is why Barreled Sunlight resists all forms of dirt. It offers no lodging place for the tiny dust particles. Smudges cannot sink in. It can be washed clean like tile—even after years of service.

Barreled Sunlight is being used today in buildings of every description—apartment houses, office buildings, stores, hotels, industrial plants, etc. Ideal also for woodwork throughout the house and for the walls of bathroom, kitchen, laundry, etc.

Made by the exclusive Rice Process, Barreled Sunlight is guaranteed to remain white longer than any gloss paint or enamel applied under the same conditions. Easy to apply. Flows readily and leaves no brush marks. Comes ready mixed in cans from half-pint to five-gallon size—barrels and half-barrels.

'If your dealer does not carry Barreled Sunlight communicate with us for name of nearest distributor.

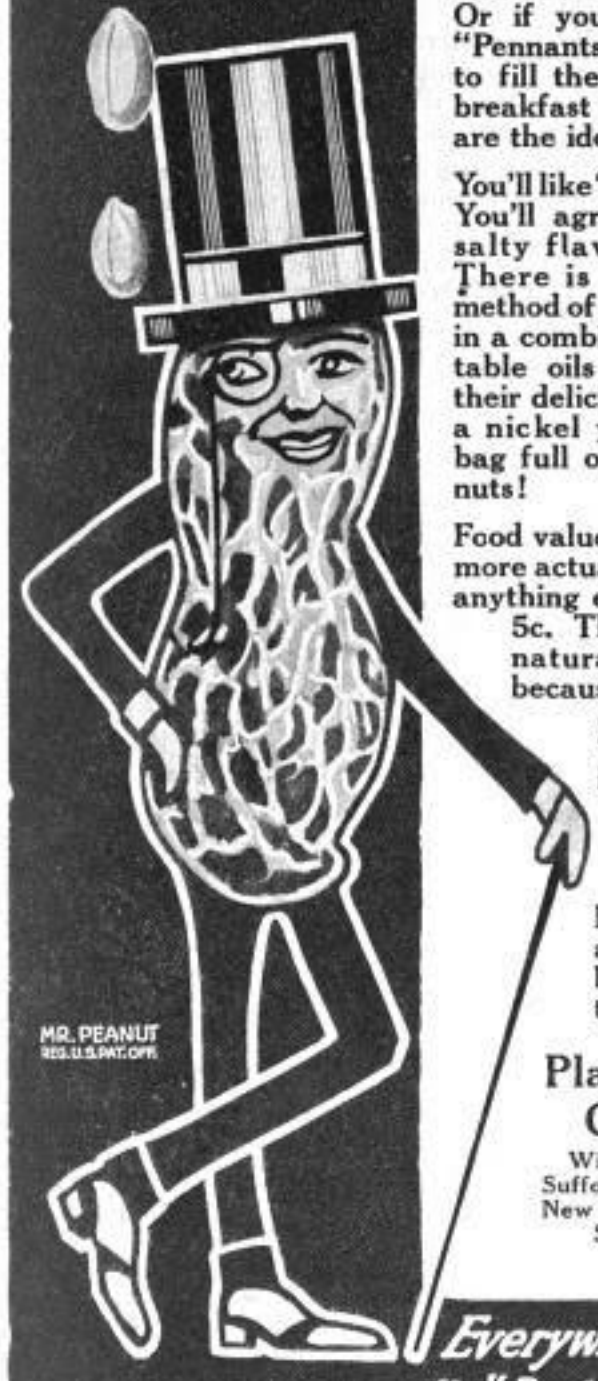
Planters
PENNANT SALTED PEANUTS



Eat "Planters Pennant Salted Peanuts"—

chase away that "hungry feeling". At the office in the forenoon, when you just can't wait for lunch-time, satisfy your craving for a bite with "Planters Pennants." Or if you miss your lunch, "Pennants" are just the thing to fill the long gap between breakfast and supper. They are the ideal "desk-lunch".

You'll like "Planters Pennants"! You'll agree that their crisp, salty flavor can't be beat. There is a very particular method of roasting "Pennants" in a combination of rich vegetable oils that accounts for their delicious flavor. And for a nickel you get a glassine bag full of these big selected nuts!

Food value? "Pennants" have more actual nourishment than anything else you can buy for 5c. They're an actual and natural aid to digestion because of their high oil content. A 5c bag of "Planters Pennants" is as rich as a slice of roast beef—250 calories by actual test.

Buy "Pennants" anywhere—5c a bag—eat them any time.

The girl moved away and Hanvey looked after her trim blue-suited figure. Then he turned his froglike eyes back to Cliff Wallace and blinked in that maddening way of his.

"Durned pretty girl."

"Yes." He was short, nerves ajangle.

"Friend of yours?"

"Yes."

"Awful pretty girl."

Hanvey moved away. Cliff staring after his waddling figure restrained with difficulty an impulse to scream. And when he left the bank that day he did something he had seldom done before in his life—he took a drink of whisky. Then he went to see Phyllis.

He was but a nervous shell of himself when he took her riding that night. He was a victim to nerves. Insomnia had gripped him—insomnia interrupted by a succession of nightmares in which he was hounded by a pair of glassy eyes which blinked slowly, interminably.

"It's all off, Phyllis."

"What do you mean?"

"Hanvey knows I did it. Sooner or later he'll figure out how."

"I thought—to-day—when he hung over the counter ——"

"I'm afraid he's about worked it out. We're near the ragged edge."

She commenced to cry. "Cliff ——"

"Don't weep. It isn't going to do us a bit of good. The man is driving me crazy. I tell you there's only one thing to do."

"And that is ——"

"Confess."

"Oh-h-h!"

He laughed bitterly. "Don't worry. They'll never know you had anything to do with it. You get the money out in the morning. Bring it to me just as it stands—wrapped in brown paper. I'll carry it to old man Warren. I'll offer to solve the mystery and see that the money is returned in exchange for a promise of immunity."

"Will he keep his promise?"

"Absolutely. He's that sort. He'd not prosecute anyway. It would injure the bank's reputation. A bank always prefers to hush up this sort of thing. They prosecute only when it's been very flagrant or when they have to secure a conviction so that the bonding company will be responsible for their loss. So, to-morrow ——"

She rested her head briefly against his shoulder. "You're right, Cliff. And I'll be glad when it's all over. So very, very glad. I've been afraid, dear."

She delivered the money to him at eleven o'clock the following morning. It was Saturday; the bank closed at twelve. He saw the eyes of Jim Hanvey blinking accusingly at him through the morning, and found himself trembling. Suppose Hanvey should accuse him at this moment, when he was on the verge of confession?

Noon. The great doors of the bank were closed. Cliff locked his cage, tucked the brown paper package under his arm and closeted himself with the president. During the walk across the lobby he had felt the horrible knowing eyes of the detective fastened upon him, leechlike.

The scene with Robert Warren developed just as he had anticipated. The president readily promised immunity, the cash was produced and counted. Warren was shocked and genuinely grieved. He was considerate enough to refrain from questioning as to the identity of the accomplice, although Cliff felt that the man knew.

Of course, he said, Cliff could consid himself discharged. The matter wou never become known; the bank sought such notoriety. Mr. Warren trusted th this would be a lesson to Cliff; he w sure that conscience had wrung this co fession from the young man. Cliff act his part adequately.

But all the time his heart was singing. load had been removed. His fear of Ji Hanvey had turned into a deep, passionat personal hatred. He felt that he'd like fasten his fingers in that fat, flabby throa

He swung out of the president's offic The loss of the hundred thousand dolla meant little as against the relief he exper enced in the freedom from fear of tha mesmeric, expressionless eyes. As he steppe into the lobby he felt them fastened upo him.

Cliff couldn't resist the impulse. Pent-u emotion demanded expression in word Cliff knew that he must tell this heav set, slow-moving man that he had be outwitted. He strode across the lobby an pulled up short before the detective.

"Well, Hanvey, you're too late."

The eyelids dropped slowly, then open even more slowly. "Huh?"

"I beat you to it." Cliff was gripped b a moderate hysteria. "I've fixed ever thing—for myself. You don't get a bit glory. And I wanted the satisfaction telling you that I've known from the fir you suspected me."

Jim Hanvey's fishy eyes opened wid then narrowed. His fat fingers fumble awkwardly with the glittering gold toot pick. His demeanor was one of bewilde ment and utter lack of comprehension.

"What you talkin' about, son? Sus pected you of what?"

Cliff felt suddenly cold. There was disquieting ring of truth in the drawlin voice. Was it possible that this hulk of man had not suspected him, that the con fession had been unnecessary? His trem bling hands sought the pudgy shoulder of the detective.

"You've been watching me and my cage haven't you?"

"Sure."

"Well—why?"

The big man's manner was genial friendly. His dull round eyes blinked and his voice dropped discreetly. "Jest between us, son, I reckon there ain't no harm in me explainin'. 'Bout three years ago Spade Gorman, cleverest forger in the country, pulled an awful neat job in Des Moines. Then he dropped outa sight. We ain't heard nothin' of him till Headquarters got the tip he was operatin' in this district. We knew good and well if he was he'd sooner or later try to slip a bum check over on this bank, it bein' the biggest one hereabouts. So as I know Spade pretty well an' personal, they sent me down here to loaf around until he showed up."

Cliff Wallace's hands dropped limply to his sides. It was hard to understand. "Then you weren't even working on my case?"

"No, I wasn't workin' on your case. An' if you went an' confessed anything, you probably done yourself an awful dirty trick. Far as I'm concerned, son, I ain't even been interested in your case since I got an inside tip it had been dropped."

BOOTLEGERDEMAIN

(Continued from Page 15)

lying, half squatting, Dorner wabbled irresolutely, his hand straying again to his hip.

One of the policemen from the Crescent Hill substation loafed into view around a bend of the steep road. Dorner's hand left his hip. The patrolman came bustling up. The sound of his hurrying footsteps made Mackellar glance about. At once the two humans in the bellicose group proceeded to become normal and a trifle sheepish, as is the way of squabblers at sight of the police. Jamie relaxed his hold on Bobby's ruff with a sharp command to the dog to come to heel. Dorner scrambled to his feet and returned busily to his almost completed task of tire changing. The policeman loitered to an inquiring stop alongside the three.

"'Smatter?" he demanded tersely.

"Nothing, sir," spoke up Dorner with cheery friendliness. "This gentleman's dog tried to take a nip at me, but he didn't land. His boss yanked him back and I kind of slipped on—on the grease and sat down. That's all."

As he prattled he watched closely for any possible effect the mystic and slightly emphasized word "grease" might have upon his hearer. But this was a city patrolman, not a rural constable. And as the Greased Road merely skirted Midwestburg, there was no arrangement between the local police, under a new reform administration, and the professional runners of the road. Wherefore the password made no sense at all, and Dorner was glad he had spoken so conciliatingly.

The bluecoat glanced for confirmation at Mackellar, whom he knew. Jamie nodded, his ancestral dread of the law visualizing police courts and a possible magistrate's order for Bobby's execution as a vicious dog.

"That was all, of'cer," said he. "Only this feller misjudged Bobby wrong in thinking

Hitting the nail on the head

HITTING the nail on the head is not a matter of mechanical skill alone; it depends largely upon the hang of the tool. The carpenter, who drives nails constantly, appreciates the "feel" of a perfectly balanced hammer. Of course the carpenter uses a Plumb!

The weight is in a chunk just back of the face—to give you driving power and accuracy. The extra size face makes it easy for you to hit the nail. The Plumb hand-comfort handle is formed to rest in your hand as cozily as a $10 bill—to give you ease and perfect control without the tiring grip necessary on ordinary hammers.

It's true economy to buy the Plumb. "They're worth more" because of Plumb special analysis steel, double forging, by die press and drop hammer; Double Life tempering—hard for service, tough for wear; knife-edged claws that pull any nail; non-rust, hand-forged black finish and handsome mahoganized hickory handle.

Ask your hardware man to show you a Plumb. To see it is to covet it. To swing it is to buy it. Retire that hard-to-use, battered veteran and know the satisfaction that comes with using a Plumb. Price $1.50, except in Far West and in Canada.

The feet that tread dirt-laden street

Lysol Disinfectant

Reg. U.S. Pat. Off.

Kills Germs

Streets are breeding-places for germs of all sorts of contagious disease.

The same shoes that tread germ-laden streets enter your home and walk the floors of your rooms. In this way, millions of disease germs are tracked into your home every day.

Whether these germs will spread and perhaps inflict sickness on someone in your family, or whether they will be killed by disinfection—is a matter that rests with you.

Proper disinfection kills germs. It also checks the breeding of germs.

If your floors were cleaned once a week with water that contains a little "Lysol" Disinfectant, they would be kept safely free from germ life. "Lysol" Disinfectant is a soapy substance that helps to clean as it disinfects.

A few drops of "Lysol" Disinfectant, mixed with water, should be poured frequently into your sinks, toilet, drain-pipes, garbage-pails, tubs. Such places also breed disease germs. A 50c bottle makes 5 gallons of germ-killing solution. A 25c bottle makes 2 gallons.

"Lysol" Disinfectant is also invaluable for personal hygiene.

Send for free samples of other Lysol products

You can purchase a 25c bottle of "Lysol" Disinfectant for trial purposes at any drug store. We shall be glad to mail you free samples of the other Lysol products.

Shall we send a sample of "Lysol" Shaving Cream for the men folks? Protects the health of the skin. Renders small cuts aseptically clean. We will also include a sample of "Lysol" Toilet Soap. Refreshingly soothing, healing and helpful for improving the skin.

Send name and address on a postcard.

Manufactured only by LYSOL, Inc.

dog tried to hurt him. It was only bby's play, sir."

the patrolman not only knew Jamie, knew Jamie was kennel manager for gust Rufus G. Belden, a magnate lightest word in the right quarters metimes sufficed to make or mar a an's record. Urbanely he smiled e fidgeting Mackellar. With almost diction he petted the unresponsive Lochinvar Bobby. He favored the led Dorner with a cold stare. Then lled on.

ley look wherewith he had swept the had taken in the details of abraded and of the torn coat lying beside Also it had conned and rightly tabu- he two increasingly red lumps on the jaw, even as it had appraised Jamie's knuckles.

st be on your way," he adjured over his shoulder as he continued st.

er was more than willing to obey nt. The tire was in place by this The driver slung his kit aboard and for his perch. As he passed Bobby a furtive look at the departing blue- back. Then he took a chance. He an emphatic kick on the dog's ribs. etically the same motion he swung lf up to the seat, far out of reach of reprisal. Then he pressed the self- and got under way with astounding considering the size of his truck.

kick, thanks to its deliverer's haste, glancingly. It stung rather than But it was the first kick Bobby had known since his long-vanished puppy in Lucius Frayne's Lochinvar Ken- With a wild-beast roar, Bobby hurled lf at the man who had offered him ile affront. But Malachi Dorner was out of reach. Jamie dragged the dog from under the truck wheels. He elf was white with wrath at the cow- action.

Come down here and finish it!" he ed, heedless now of the chance that policeman might hear him. "Come here, you dog-kicking swine! I——" e truck sped uphill, leaving him shak- in impotent and knuckle-torn fist after grinning driver. Mackellar released by and stooped to pick up his own aged coat.

Quiet down, Bobby boy," soothed Jamie he dog continued to snarl in helpless after the vanishing truck. "We both e rare fools of ourselves, you and I. what have we got to show for it? e's my best everyday coat ripped to ons. And there's you, with a kick in ribs to shame you. The coat'll mend er than you'll be forgetting that same , if I know anything about the inside of r brain, Bobby lad. But that's all the d it'll do you. So why not cool down me? Losh, but these knuckles of mine im to sting me! Not so bad as them two s on the jaw are fashing him, says you? d right you are, Bobby, like you're apt be."

Bobby, at the fascinatingly frequent etition of his own name, deigned to se growling murderously up the hill in wake of the departed truck and to give nething of his usual heed to his master's rangue.

"So that's that, Bobby boy," resumed mie as he tucked his wrecked coat under arm and resumed his journey downhill. nd let it be a warning to you never to y to be human. When two dogs fly at e the other in the street we call them ute beasts, Bobby. But how about two own men—men with souls and intellects d pants and all that, Bobby? Here I and at stranger don't even know each other's mes! And yet before we'd seen each her sixty seconds we were acting like we as two mongrels in the dog pound. Fine amples to set you, Bobby lad! Mistress ill scold and ask me when do I plan to ow up, Bobby. I'd best get this poor at mended downtown and say I cut up y knuckles stumbling against a door. Come on and stop havering."

He strode downhill at a swinging gait, Bobby trotting at his side. The little Scot was trying to walk and talk himself out of his ground swell of rage against the man who had tackled him and kicked his dog. Thus again he drifted into speech.

"I was wrong to scold you, Bobby," he said contritely. "You pitched into him be- cause he manhandled me, just as I tried to pitch into him when he kicked you. That was fine stuff, Bobby lad. I'm apologizing to you for calling you a fool. It's a splendid breed of fool who takes such risks just to stand by his pal. Did ye see him reach back to his hip, Bobby? Twice he did it. Was it a gun or a flask he wanted? In the old days when a man reached for his hip t'other feller would hold up his hands and look scared. Nowadays t'other feller holds out his hands and looks hopeful. But I'm doubting he was offering us a drink, Bobby boy. Maybe the cop did us no ill turn strolling in on us all when he did."

It was perhaps a fortnight later that a sample batch of summer climate was tossed into mid-April as a specimen of what might be looked for in mid-July. The cool of the Northern spring was changed in a trice into torrid August weather that endured for two days thereafter and broke up in a spectacular thunderstorm.

With the thermometer deserting the forties for the nineties, the heavy-coated collies of Beldencroft panted and fretted and drank much water and sought out cool angles of their runs to drowse in. The premature change got on their hair-trigger nerves. Their great blankets of unshed outer-and-inner coats caused them acute discomfort.

Lochinvar Bobby carried the heaviest coat at Beldencroft. But his luck was greater than that of his kennel brethren, for he could lounge at ease in a cool cellar or wander down to the brook and put its chilly waters to far more practical use than had been intended by the landscape gardener who had designed its ornamental course.

At midnight of the hot spell's second day Bobby lay asleep on the handkerchief-sized veranda of Jamie Mackellar's cottage. His tawny coat was still damp from immersion in the brook, and on the porch corner he could catch the faintest tinge of a breeze which wafted from the northeast. Apart from this tiny breeze the night was breathless. The sky was murkily lurid where the city's lights tinged its low-hanging clouds. From the horizon's rim in two directions pulsed and ever intensified a shimmer of heat lightning.

Bobby got up once or twice in search of a cooler or softer section of the porch boards for his nap. Failing to find what he sought, he would lay himself down again, sighing, and with a discouraged bump of his mighty body. The heat and the breathlessness were making him pant as though from a long gallop, for it is through the tongue alone that a dog can perspire.

After one of these vain quests for a spot that should be mysteriously cool and soft, Bobby checked himself as he was about to lie down. His tired body stiffened. Up went his chiseled nose to the faint breeze. His nostrils drew in quick whiffs of air. That air was tainted vaguely with something which caused Bobby's hackles to bristle. His teeth began to show in something which looked like a smile and was not a smile. Far down in his shaggy throat a half-audible growl was born.

Even as humans tabulate folk by their faces, so do dogs remember them by their odor. The dog is the most nearsighted of all domestic animals, and his uncanny scent and hearing serve him in the place of vision.

To-night, borne on the fitful puff of northeast breeze, came to Lochinvar Bobby a far-off odor which awakened not alone recollection, but wrath as well. A second and stronger whiff of breeze verified the scent. Bobby forgot his search for a comfortable sleeping place. He remembered only a man who had assailed his adored master and who had inflicted on himself the unforgivable, unforgetable insult of a kick.

Lochinvar Bobby cleared the low porch rail and made for the northeast. The largest of the kennel runs was in his path. He circled two sides of this at a tearing gallop. That was quite enough for the seven young dogs who, because of the heat, had been left out there for the night. To their feet sprang the imprisoned pack as Bobby sped halfway around their inclosure, and the night's silences were split by frantic barking from seven rackety throats.

The clangor, of course, was taken up instantly by every other collie in the Beldencroft kennels, for even better than dog men do collies know how to translate a bark. If some lonely or sentimental or cranky dog in the kennels had begun to bark, in order to voice his woes, not a collie would have echoed him. But the vocal efforts of the aroused septet bespoke indignation and much angry excitement. Such a bark never goes unanswered. Thus fifty-odd strong-lunged collies shattered the midnight with a galaxy of din. The place was in a turmoil.

Bobby, the unconscious cause of it all, did not heed or stay. Every stride was bringing to him more distinctly that fury-provoking scent. Raging, he sped on.

Malachi Dorner, of Canada and St. Louis and points between, was in the middle of his night's southward drive—at one dollar and seventy-five cents a mile—and planned to skirt and pass Midwestburg before one o'clock in the morning. For his cleverly constructed and pneumatic-tired truck was heavy laden with goods whose market value increased at every southerly mile of the journey, and he wanted to leave the ungreased city far behind him as soon as might be.

The garage and road house where he was scheduled to make his next twelve-hour halt—or stache, in the vernacular of his trade—was but seventy miles beyond. If by putting on extra speed he could convert an hour or so of driving into an hour or so of extra sleep, so much the better. He stepped on the accelerator. His nerves, like those of the Beldencroft collies, were frayed and on edge from the heat.

Dorner was topping Crescent Hill when he put on an extra burst of speed. At the hill's summit was the gaudy Belden estate. Then would come the steep pitch down into the edge of Midwestburg, and after that the smooth miles of open and friendly and well-greased country, with the hospitable garage and road house ahead.

Up the easy slope toward Beldencroft sped the truck. Dorner put on more gas. He knew he must use the brakes more than he liked on the steep and winding pitch beyond the crest. Hence the extra speed on the easier incline. As he topped the gentle rise he did not bother to ease up on the gas. The furlong of more level road was an ideal sprinting place.

The overstrained treads gripped the smooth stretch and the truck sprang forward. One of the tires incidentally gripped a semiflat and keen-edged shard of glass, remnant of a broken milk bottle dropped there from a wagon an hour earlier. The shard was lengthwise across the tire's way, and it cut like a knife blade.

The truck was going at something over thirty miles an hour. The collapse of the tire gave a wrench to the front axle which all but tore the steering wheel from Dorner's careless grip. Too late, the man twisted the wheel back into line. The truck had swerved an inch too far. Its right front wheel smote with terrific force the first of a heap of piled telephone poles which adorned that section of the road edge in preparation for a branch line to be run into the city.

The axle snapped like rotten wood under the jarring impact. The truck careened drunkenly, plowed its way a little deeper into the heap of prostrate poles and banged to a halt. Dorner was flung hard against the steering wheel, and clung convulsively to it in order to keep his balance on the sideways-listing seat. There he sat till the breath, expelled by the colliding of diaphragm with unyielding steering wheel, came back to his deflated lungs. Then, shaking both fists heavenward, Malachi Dorner launched into a pyrotechnic monologue addressed to his Creator.

At best it is not pleasant to ditch a car and smash an axle, at midnight, a mile or more from the nearest garage. But when one is carrying cargo salable at many thousand dollars, and when that cargo is of a sort confiscatory by law, the situation becomes all at once acute. Nor was the incident likely to enhance Dorner's popularity or wage value in the eyes of his Canadian employers. The driver's brimstone harangue to high heaven took on a note of added fervor. As if in chorus to his solo, a fanfare of wild barking surged forth upon the night.

Then, after swearing himself breathless again, Dorner decided on his only course. A hundred yards or more in front of him was the big estate he remembered so well. Thence, apparently, came the reverberant volley of barks. The best thing to do was to go thither, ask for the use of the telephone and call up the nearest greased garage. A wrecking crew could reach the spot in short order.

The hour was late. The road was lonely and was ill-patrolled by the police. It was not likely that any outsider would interfere. At worst he would reach his sleeping place somewhat later than he had hoped to.

Young feet should have a chance

THE feet of young growing girls are tender and easily distorted. Equipped with proper shoes—Educators, they will grow up shapely and strong, as nature intended.

Don't bend and twist young feet out of shape in narrow, bone-crumpling shoes. Give them a chance.

The vogue of today is trending more and more to a sensible shoe with room for all five toes. Insist on Educator Shoes because they are made scientifically to "let the feet grow as they should." Your daughter will never know the meaning of corns, fallen arches and other foot troubles in later life if she wears Educators. They will suit you too. Conservative, good looks, and oh, so comfortable! All the family should wear them.

Our interesting booklet "Bent Bones Make Frantic Feet" will tell you some startling foot facts. Send for it.

Phone your local TEL-U-WHERE Bureau for name of nearest dealer.

ANNIVERSARY

FULLY appreciate how Sellers in 30 years has blazed the way for greater kitchen convenience, ou need only seat yourself before one of these beautiful and complete kitchen cabinets.

nusual ease with which things are done—the many wants, usually ignored, which this cabinet antic- will at once be evident. At present reduced prices, and with its many unusual conveniences, the is undoubtedly the greatest value in our 30 years' experience. Thousands of dollars extra are added cost of the Sellers each year, to give you these extra conveniences. Some of them are described . Read these descriptions. Then judge for yourself if you can be fully served without them.

THE FAMOUS AUTOMATIC LOWERING FLOUR BIN —A SELLERS INVENTION

xperts found early in the history itchen cabinet that the lifting of oads of flour, to fill the flour bin, e eliminated. So the now famous ATIC LOWERING FLOUR BIN rfected. This bin comes down ith the work table where you fill ease. Then with a little lift it back into place. No heavy lifting herous climbing is necessary.

ther feature which women im- ely appreciated was the snow sanitary Porceliron Work Table.

nen, we found, were complaining and other which got heir cabi- o make this able in the s, the fa- Ant-Proof s were in- l. By the in- us use of powder, ants and other insects are vely barred.

his same year the first Glass Drawer were used, because they are more ry, will not rust, corrode, etc.

ith most kitchen cabinets women it hard to get pots and pans from ower cupboard. To overcome this trouble on the Sellers, a device was perfected which automatically brought the lower shelf out as the door opened. This improvement makes it ble for the worker at the cabinet to needed pots or pans from her chair, out digging into the dark cupboard. recently this has been improved so now both shelves are automatically ght forward.

irt and dust frequently work their in under the sliding top and down into the cupboard of the ordinary kitchen cabinet. So that Sellers users would not be troubled with this, we designed the Dust-Proof Base Top underneath the Porceliron Work Table. This invisible top keeps the inside of the lower cabinet section absolutely dust-proof.

For several years our experts experimented with a finish that would be beautiful yet resist atmospheric changes in the average kitchen. The result was our handsome Oil, Hand-Rubbed Finish, which was applied to all Sellers cabinets beginning in 1905. No superior Golden Oak finish has ever been used.

For greater durability all Sellers Kitchen Cabinets were built with Dovetail Joints instead of ordinary construction.

While Sellers Cabinets had always been made in the standard size, our investigations among hundreds of women proved that many homes could use a larger size more conveniently. It was due to this fact that the first beautiful Sellers Mastercraft model with a capacity of over 400 articles was placed on the market. This is the model shown in the picture —the ideal size for the average family.

Today the Sellers shows the results of 30 years of constant endeavor. Never in all those years have we ceased in our search for practical improvements. In 1920 Sellers introduced the wonderful Apartment Kitchen Cabinet—the smallest cabinet built. This innovation now makes it possible for thousands and thousands of apartment dwellers to enjoy the Sellers. To make it more widely available, the Sellers Apartment Cabinet is made in three sizes: (1) full size; (2) to fit in space under high windows; (3) to fit under a low window.

Another event of importance in this year was the introduction of the beautiful Sellers Majestic, the largest cabinet made. To furnish real convenience in extra large kitchens, this larger size was needed. Therefore, Sellers produced it.

In this past year three of the most important of all Sellers improvements were brought out. One is the Double Base Shelf Extender referred to.

Another is the Extending Drawer Section under the work table. As the work table is drawn out the drawer section comes with it. When the table is fully extended and covered with things, you pull the drawer out and reach into it just the same as usual. You can always get what you need from the drawer. This is one of the greatest improvements ever made. Alone, it would cause many women to choose the Sellers.

The third improvement is the new Silverware Drawer just above the roll curtain. It is plush lined and a most convenient place for the knives, forks and spoons in frequent use in the average home.

In addition there is an added drawer and 20% more shelf capacity in the base.

These are just a few of the main features. Many more are discussed in our Blue Book.

A Sellers costs no more than any other good kitchen cabinet. And it costs only about half as much as building-in a cabinet. Besides, no built-in cabinet ever has the many wonderful features of the Sellers. Occupies only the space of your kitchen table.

See a demonstration. Your dealer will gladly arrange terms to suit your income. In the meantime, write for a FREE copy of the new Sellers Blue Book. It pictures and describes all Sellers cabinets and features. [326]

For window shades of enduring beauty—Brenlin

At left, the flimsy, loosely woven material in ordinary window shades; at right, the fine, strong, closely woven fabric in Brenlin

BRENLIN gives you two or three times the wear of an ordinary window shade. Every step in the making of Brenlin is closely watched to *make sure* of that.

The cloth from which it is made is finer and more closely woven—like linen in texture. The number of threads per inch in every bolt is counted to make certain it is fine and strong enough to go into a Brenlin shade.

Such fabric needs none of the chalk or clay "filling" that causes cracks and pinholes in ordinary shades. Brenlin has no "filling."

And experts apply by hand the beautiful colors that resist fading and will not show water spots.

At every step *long wear* is built into Brenlin window shades.

Rich and beautiful in a wide range of colorings is Brenlin. It is supple, not stiff, yet always hangs straight and smooth.

See Brenlin Duplex, made for perfect harmony with a different color on each side.

Look for the name Brenlin perforated on the edge. If you don't know where to get this long-wearing window shade material, write us; we'll see that you are supplied.

Scratch a piece of ordinary window shade material lightly. Tiny particles of chalk or clay "filling" fall out. Brenlin has no filling

"How to shade and decorate your windows correctly"—free

We have your copy of this very readable and instructive booklet on how to increase the beauty of your home with correct shading and decoration of your windows. Send for it. Actual samples of Brenlin in several colors will come with it.

For windows of less importance Camargo or Empire shades give you best value in shades made the ordinary way.

Every foot of Brenlin is finished by hand by experts for beauty of appearance, long wear, and smooth operation

THE CHAS. W. BRENEMAN COMPANY, Inc.
Cincinnati, Ohio
"The oldest window shade house in America."

Factories: Cincinnati, Ohio, and Camden, N. J. Branches: New York City, Philadelphia, Dallas, Texas, and Portland, Ore. Owner of the good will and trade-marks of the J. C. Wemple Co.

the long-wearing WINDOW SHADE *material*

(Continued from Page 79)

Reasoning himself thus into calmness, Malachi Dorner got up from his tilted seat and began to make his way to earth. He chose the side of the truck highest in air, lest his weight cause the precariously swaying vehicle to topple. It was a long way to the ground. Malachi Dorner began the descent backward, as if climbing down a ladder. He did not finish the descent at all.

From the seat to the top of a dished wheel he made his first step. Thence gropingly he lowered his exploring foot to the wheel's hub. As his toe found and balanced itself on the slanting surface Malachi Dorner addressed his Maker once more, this time in a screech of astonished pain, and instinctively he swarmed up the tilted side of the truck to the safety of the seat.

Lochinvar Bobby, following the guidance of his own unerring nose, had swept down the driveway of Beldencroft and out into the highroad. Body low, tiny white feet flying, he dashed along in dead silence toward two dimmed and slanted car lights. He reached and passed these lights. From the skies or elsewhere was descending into his reach the body of the man whose scent he had caught—the man who had kicked him, the man who was his master's foe and his.

Bobby was too much in earnest to use finesse, far too angry to give voice. He sprang upward, his mighty jaws driving for the nearest and most obvious part of Malachi Dorner's anatomy. Through trousers seat and underclothes and skin and flesh sheared the curved fangs, grinding against the very bone.

It was the shock and fiery anguish of that onslaught which wrung from Dorner the ear-torturing howl and which sent him sprinting up the sloped side of the truck like a monkey on a stick.

If Bobby had been a bulldog or a bull terrier he would have held his grip with locked jaws, and would have accompanied and impeded Dorner's upward flight. But a fighting collie has his wolf ancestor's way of abandoning one hold for a better with bewildering swiftness, thereby giving the impression of being everywhere at once. Bobby's teeth struck the bone, and at once he knew he had done all the damage with this particular hold that there was scope for.

He let go and slashed for the ankle as it climbed past him. His eyetooth found a goal just above Dorner's shoe top. But the dog's next leap was fruitless. The snapping jaws closed upon nothing. His victim was on the truck's tilted seat, well out of reach.

Dorner stood there—it was obviously out of the question for him to sit down either then or for some days thereafter—nursing his abraded ankle with one hand, while with the other he repeated his familiar hipward gesture. But he paused before drawing forth what he was reaching for.

Obviously, in the present condition of his body and of his truck, tact forbade him to introduce himself to the neighborhood by a succession of shots at the leaping and vaguely seen collie. The killing of a pet dog must lead to inquiry, after the firing of the shots should have brought the world at large running to the scene. Inquiry is the very last thing desired by the travelers of the Greased Road.

Malachi Dorner began to hunt, in the jumble of tools under the seat, for the truck's crank. Finding it, he prepared to climb down and to do battle with the dog who stood between him and his chance of telephoning for a wrecking crew. A hard-enough blow on skull or backbone with the heavy crank would put the collie well out of fighting trim, and the racket of barking at distant Beldencroft could be counted on to drown all lesser sounds of strife.

But, listening, he found the multiple barks had ceased. Except for the low incessant growling of Bobby, the breathless silence had settled down once more. Dorner made his painful way toward the ground, poising the crank for a blow. Bobby ceased growling and stood alertly watching the maneuver. Goaded by keen pain and by the keener need of getting himself and his truck on their journey again, Dorner slid to the road.

Bobby met him with a rush. The crank whizzed downward for the dog's skull. But Lochinvar Bobby was not there when it fell. Wolflike, he leaped back from the swashing blow, gauging his distance perfectly and flashing in with the same speed as the crank's key hit the ground. Before Dorner could swing the weapon aloft again Bobby had raked his hand and wrist and was once more alert to dodge the crank.

Bobby was having a beautiful

A Mark to Trust

All great men, all great organizations are inspired by great aims. Ours is to have the Berloy symbol, on steel products, deserve your trust as does the carat mark on gold. To that end our thirty-five years' experience, our huge facilities and our daily labors are devoted.

We are spurred on by the confidence long reposed in us by many thousand users of steel products, typical of whom are Procter & Gamble, Kelly-Springfield and Westinghouse.

Ask your dealer or write nearest branch.

The Berger Manufacturing Company
Canton, Ohio

Branch Warehouses: Boston, Philadelphia, St. Louis, Minneapolis, Los Angeles, New York, Chicago, Kansas City, San Francisco, Dallas, Roanoke, Jacksonville

Berloy Products: Roofing, Spouting, Reinforcing Plates, Floor Cores, Metal Shingles, Foundry Flasks, Culverts and those illustrated below

BERLOY

Berloy Products are fabricated either from anti-corrosive Toncan Metal or Open Hearth Steel made by the United Alloy Steel Corporation, Canton, Ohio

Steel Filing Cases
Made in sections. Economical—buy only those needed. Add more later. Attractive appearance. All styles
BERLOY

Reg. U.S. Pat. Off. **BERLOY**
STEEL PRODUCTS —the pride of veterans in the craft—exemplify the character, experience and service of lives devoted to constructive progress and excellence

Ribplex Metal Lath
Prevents cracks, stops fire. Flattened strands firmly grip plaster, stucco, concrete
BERLOY

Steel Tire Rack
Displays tires effectively. Makes sales easier. Keeps stock clean. Saves floor space
BERLOY

Steel Utility Cabinet
Protects personal belongings from petty theft, or fire and dust
BERLOY

Metal Lumber
Joists and studs of pressed steel, cut to fit. Unburnable. Strong, light, and everlasting
BERLOY

Metal Ceilings
Permanent. Can't burn, crack or fall. Designs of simple beauty, clear in detail

"Brother," cooed Dorner, leaning over with a gesture of appeal, "I'm a hasty man with a rotten disp'sition. I acted bad to you. I'm apologizing. I'm sorry. What more than that can one white man say to another? I ——"

"What one white man can say to another don't figure in this. I ——"

"Listen, brother!" broke in Malachi Dorner pleadingly. "To show I mean it, I'm going to put you next to a chance to earn the softest handful of coin you ever got. Here's the idea: I got a friend who runs a garage a coupla miles back. If you'll phone him for me to send a wrecking crew here in a rush it's fifty dollars to you. If you'll do that, and call off your cur—your fine big dog—why, it's fifty dollars in your pocket. That's no bluff. Here it is."

Rufus G. Belden, wandering to his estate's gateway in search of Jamie, had caught sight of the slanted motor lamps. Down the road he had puffed to investigate. He drew within earshot in time to catch the trend of this eloquent appeal. Rufus G. had heard rumors of the Greased Road traffic. The careening truck and the fifty-dollar offer of its driver for telephonic aid told him the story with entire clearness.

Belden paused outside the dimmed radiance from the lamps. Indeed, he slid behind a clump of bushes to make more certain of concealment, for here promised a little drama worth watching unseen. Jamie Mackellar's solid honesty was a continual wonder and delight to this magnate who had won his own wealth by Napoleonic methods and whose average employe sought with much industry to cheat him at every turn. Now Rufus G. prepared to hear the vials of Mackellar's honest rage launched upon the tempter. It ought to be well worth listening to.

But to his growing astonishment the outburst did not occur. Instead, Jamie abandoned his own belligerent attitude at the truck side and took a hesitant step backward. His clenched fists relaxed. He even chirped Bobby away from the truck. For perhaps half a minute he pondered in silence. Then he said, with no trace of his former heat:

"I—I kind of hate to do that, mister; not that I count myself a saint, not that I cheer every time the Volstead Law is spoke of; not that I don't like a drink or two, or maybe three. But —— Well, it's one thing to feel like I feel, and it's another thing to help bust the law and the Constitootion the way you're asking me to. I—I dunno."

There was a waver in his voice. Belden had a queer sensation of losing his scant crop of remaining ideals. He was annoyed that the little Scot's hesitation should affect him so. As to Malachi Dorner, the kennel-manager's signs of weakening were sweet music to him. But he dreaded the loss of every minute, and he urged eloquently:

"I honor you for feeling that way, brother, only you're all wrong. This stuff is for a hosp't'l, down below. You wouldn't want a bunch of sick folks to suffer for it, would you? Say, I'll make that an even seventy-five dollars. How about it?"

"I'm a poor man," surrendered Jamie, "and if it's reelly for sick folks —— Well, what's the garage number you want me to ring up?"

"It's 9999 Arcady," replied the delighted Malachi. "Jump, won't you, please? I've lost a passel of time already. Some bull might stroll past or —— Hustle, won't you? The coin'll be here waiting for you as quick as you get back and tell me you've phoned. Remember, it's 9999 Arcady. Quick!"

Obediently Jamie pattered off down the road in the direction of Beldencroft, with Bobby at his side. He passed, unw within ten feet of Rufus G. The dog rally knew by scent that Belden was behind the clump of bushes, but th no concern of Bobby's. Belden was enemy or even a stranger.

"The mangy little crook!" grunted G. to himself as darkness swallow Mackellar and the dog. "Yep, eve has his price. Nothing truer, and isn't the one exception I'd have g he was. But seventy-five measly He could have cheated me of ten as much, any time. Gee, but this g in the stomach! I'd have staked on him. The wall-eyed fool! He such a rush to earn his bribe he nev out for advance payment. Yet th the Scotch are shrewd! He'll have time collecting a cent from that bir the phoning is done."

Foreseeing sport in the coming c between the briber and bribee wh former should refuse to make good, stayed on where he was. The n dragged by, and still Jamie did no back for the price of his crookedness. or twice Belden could hear Dorner about and swear.

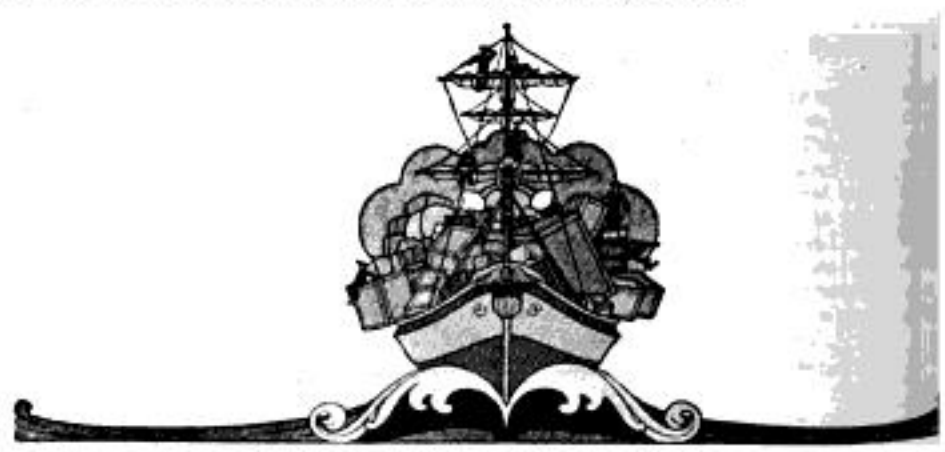
Then up the hill came chugging a mobile.

Belden peered from his cover to the wrecking crew descend as the car close to the truck. Then he caug breath and ran out into midroad to fun, for the dimmed lamps had re to him two or more men in uniform automobile police patrol apparenti chanced to be passing and had stop investigate. They had reached the ahead of the garage car.

Sturdily trudging footsteps behin interrupted Belden's enjoyment of t max. He turned to confront the bel returning Mackellar.

"You lost that seventy-five dolla was never going to give you," scoffed G. "The police got here before the you phoned to. Behold the glitteri wards of sin! You'll do better with a more practice."

"Yes, sir," assented Jamie with unu meekness. "I take it you heard passed. He offered me a handful of to phone the garage for him. I—yo I've a vile memory, sir. I couldn't fe life of me remember that garage nu I—I couldn't seem to remember bu phone number in the world. So I call that one. A fine, grand-sounding nu it was—12,000 Montmorency. I neve get that number. But this was the time I ever had need to call it. I'm ha it'll be the last, sir."



Rufus G., with fat jaw ajar, was blin down at Mackellar in utter amaze.

"Montmorency 12,000!" he blith "Why, man, that's police headquarte

"Yes, sir," said Jamie timidly. " sir, I—I know it is. You see, sir, he kl Bobby, and he called him a cur, an wasn't man enough to come down fight. So I—I had to carry the figh him the only way I could. Besides, he—he tried to bribe me. All those th aren't on the free list, sir. I was despe afraid he'd try to make me take the beforehand. But when he said that t about paying me afterward, then I k he was playing true to form, sir, and I k my conscience needn't fash me for sic the police onto such a man. He ——"

"Lord help American business me breathed Rufus G. in something akin awe. "Lord help American business me if ever there's a wholesale emigration f Scotland to the United States!"

"Come on home, Bobby!" Macki was exhorting the interested collie. " bit into carrion a while back. I'm goin wash your mouth."

THE GALLOPING TIGER

(Continued from Page 32)

for the purpose, leaving us only a lon filterful in the cabin—well, when as discovered the social atmosphere just about as dense as the fog, instead of clearing off, grew thicker cker.

vere all pretty worried by then, I'll world—all but Ted, who somehow ed to keep cheerful and even tem- no matter what happened. In fact, re quarrelsome and nasty the rest the more suave Ted grew, until Harry Binz, and, rather to my sur- nother, were the only calm people

ight drew near, Shack's anxiety and sness increased. He got out the and compass, but of course he could them in all that fog. And to cap max, when Harry Binz suggested ng to get our bearings Shamus lost d off the line! It was too much. We ompletely lost, with no water and ittle common courtesy left aboard, alvina started babbling about Kan- how nice and dry it was, until we eady to choke her.

uld not sleep that night, but lay in row berth over mother, restless but ring to toss about for fear of disturb- r, and wondering what on earth had ttracted me either to the South Seas these dreadful people who were sail- ere with me. They were all right in rates' Den on Fourth Street, but I 't help realizing more and more that this voyage would have suited better if The Galloping Tiger had ned tied to Pier 13 and they had d it up as a tea shop.

ought, too, of my father's lovely big ment on Park Avenue, and my sweet taffeta bedroom in it, and my own bringing in a hot breakfast that had cooked in a kitchen instead of in a t. And I thought of bathtubs and in- ons to bridge teas, and motor cars and underwear and privacy and—oh, lots ngs. And in the watches of the night, were made a great deal less dreadful e fact of Ted's being on them, I began e the truth. And the truth was this: not a radical. I was not and never d be an artist of any kind. I was ly a commonplace, conventional female a little extra pep—and my career, if was more than likely to be along the which Ted had suggested. And, with wful clearness which comes when you wake at night, I saw that not only was I real artist but that none of the rest of unch were, either!

was terrible, but it was true. And I contemplated voyaging on and on them, cooped up in that little ship for ths, and then being marooned with upon an island full of savages which batiked where they weren't tattooed, uld hardly endure the thought. To say ing of the trip home! The mental sure became simply unendurable when ctured that homeward voyage; and it g now dawn I got up, dressed quietly stole out on deck.

here was nobody about except Ted at wheel, and old Prince Kropushkin, and latter was acting in the most peculiar r. The Russian was doing the same sort hing with the sextant and compass that ack had fumbled over. But Kropush- did not fumble. He knew what he was ng, I could tell from his businesslike air. ry much puzzled and wondering deeply, withdrew into the main cabin before her of the men saw me, and busied my- f setting the table for breakfast.

During breakfast, a silent, sulky meal, t with everybody present except the tch, Shack's voice rang out excitedly. "Land ahead!" he cried.

And I wish you could have beheld the ay that cabinful of long-distance voyag- s turned out on deck! It was a stampede see who would get the air first, and there, re enough, not very far ahead, a tall, eculiar mountain loomed dimly through e mist, shapeless but threatening and wfully high. A sigh of relief went up from he decks at the sight.

"It must be the Azores!" said Shack nitedly. "Gee, it's an ugly-looking stern nd rockbound coast to make a landing on, ut I think we'd better try!"

"There may be dangerous reefs!" warned Alvina nervously. "Oh, do look out for reefs, Shack!"

"Sure and I don't hear any surf breaking over them then!" put in Shamus. "Only a dim pounding, like!"

"We'll have to chance it!" shouted Shack. "We're short of water, remember, and we really must land somewhere!"

Well, nobody objected to that. In point of fact landing appealed strongly to everybody in the crowd, and for once we were of a single mind.

"Better go ahead slowly," said Harry Binz. "You can't ever tell what's ahead."

And you couldn't, either, for scarcely had he said it when the kicker went dead; stopped absolutely. And there we were, helpless. Of course Ted and Harry Binz did their level best to start her up again, but to no avail. For half an hour they worked and got all hot and dirty while the rest of us stood about foolishly and watched our ship drift slowly toward that awful mountainous island and a possible wreck. But for once Ted's efforts did no good at all. That motor was as dead as a doornail. And then when we were in utter despair a puff of wind stirred the curls against my face.

"Why, there's a wind!" I exclaimed. "Can't we manage to sail in?"

But I was not the first one who had noticed that sudden breeze. Prince Kropushkin, who had been standing apart in lonely grandeur like a statue, had miraculously come to life and was frantically stripping off his tight-fitting blouse and sash. With one hand he tossed the astrakhan cap overboard, and with the other threw his smock aside with a gesture of loathing, revealing a red flannel shirt and blue suspenders as he bellowed orders in a mighty voice.

"I'm running this ship from now on, and ye'll take yer orders from me!" he shouted with a perfectly good New England twang.

Then he marched up to the astonished Shackelton and shook a mighty fist into the poet's face.

"Ye would say I had an inferior complexion!" he shouted. "Well, get out there and help with that mains'l or I'll inferior your own complexion for ye!"

Then he turned on Edouard, who shrank before him, positively melted.

"And as for you," he shouted fiercely, "I'll show you which of us has an inhibition! Get over there to the fores'l and do what Harry tells ye to!"

"Yes—ha! Aye, aye, sir!" gasped Edouard, terrified.

"I'll take the wheel!" shouted the old man. "Ted, you show these boobs how to h'ist the sails and, by Godfrey, we'll bring the Sadie in in spite o' hell and poetry!"

"Say, fellows, you do as he says," shouted Ted. "Jump to it, quick! He's Captain Billy Hicks, the finest navigator going, and he'll land us safely! By heck, this is just the emergency I brought him along for!"

Well, I can hardly describe the scene which followed, with the men hopping about getting the canvas up, very awkwardly, all except Ted and Harry, whom Captain Kropushkin Hicks called son. But dazed as I was by this revelation, it was nothing to the shock I got the next time I looked toward land. The fog had melted rapidly under the whip of the on-shore wind—and behold, we were just off Atlantic City, and our terrible mountain was the Traymore Hotel!

An hour later we were safely on the Boardwalk, a disconsolate crew, very droopy and crestfallen, yet awfully though secretly relieved as well, and huddling about Ted, awaiting his command.

"What'll we do now?" said Shackelton. "This trip is ruined. It can never be the same again, as far as I am concerned!"

"I suggest," said Ted, cheerful and resourceful as ever—"I suggest that we acquire that flock of roller chairs over there, and all ride down to The Shelburne for a good lunch on me!"

"Thank God for that!" said Shamus fervently. "I've gone as far south as I've any wish to. And I'll write all the better about the South Seas for not having me mind too much confused by facts!"

"How about you, Pet?" asked Ted, turning to me. "What do you say?"

"Well," said I, smiling into his eyes, "I'm willing to go home. I suppose I can still find romance in the dictionary!"

"I'm going to help you look it up!" said Ted.

(THE END)

HAUGHTON ELEVATORS

The new George D. Harter office and bank building, at Canton, Ohio, completely equipped with Haughton passenger elevators of the geared type

WITH the strong temptation nowadays to buy for a low cost price, it is well to bear in mind the reasons governing the selection of elevators for the George D. Harter office and bank building.

First cost was considered, as it must be. But due consideration was given also to the important question of upkeep and operation expense.

Haughton Elevators were chosen for their demonstrated ability to give uninterrupted service over a long period of years at a minimum cost of operation and maintenance.

An installation of Haughton Elevators is a true economy

"M-m-m-goody, Mother! Coconut cookies"

Coconut cookies are wholesome, delightful, body-building food when made with Baker's Coconut. In the Baker air-tight can all the flavor and food value of fresh, ripe coconut are retained, because the natural moisture is there.

Use Baker's Coconut in home-made cookies to get the real, coconutty taste. The shreds are moist, rich and tender. Only perfect, selected nuts are grated for Baker's canned Coconut. The delicious freshness is sealed up and brought direct to you—a treat from the tropics.

THE FRANKLIN BAKER COMPANY, *Philadelphia*

Coconut Cookies

Cream three-quarters cup granulated sugar, one-half cup butter and one-quarter teaspoon salt together; add two well beaten eggs and one-half can coconut. (If the blue can coconut is used, thoroughly press out the coconut milk before using.) Sift one and one-half cups flour with one and one-half teaspoons baking powder and add mixture. Dust bake board with flour, roll out quite thin (one-eighth inch)—cut with cruller cutter. Brush top with well beaten egg and sprinkle with balance of coconut. Bake in hot oven ten to twelve minutes.

Three Kinds

In Baker's blue can—the pure, fresh, white meat of selected coconuts grated and sealed up in the wholesome, natural coconut milk.

In Baker's yellow can—the pure, fresh, white meat of selected coconuts shredded and sweetened; sealed up while still moist with its own wholesome, natural juices.

In Baker's blue cardboard container—the dry shredded meat of selected coconuts, carefully prepared for those who still prefer the old-fashioned, sugar-cured kind.

BAKER'S COCONUT

THE COVERED WAGON

(Continued from Page 21)

But this brought them within pistol range. The reports of the white men's weapons began, carefully, methodically, with deadly accuracy. There was no panic. The motionless or the struggling blotches ahead of the wagon park grew and grew. A few only of the Crows got off with bodies of their friends or relatives. One warrior after another dropped. They were used to killing buffalo at ten yards. The white rifles killed their men now regularly at a hundred. They drew off, out of range.

Meantime the band from the westward was rounding up and driving off every animal that had not been corralled. The emigrants saw themselves in fair way to be set on foot.

Now the savage strategy became plain. The fight was to be a siege.

"Look!" Again a leader pointed.

Crouched low, advancing under cover of the shallow-cut bank, the headdresses of a score of the Western tribesmen could be seen. They sank down. The ford was held, the water was cut off! The last covering fringe of willows also was held. On every side the black-painted savages sat their ponies, out of range. There could be no more water or grass for the horses and cattle, no wood for the men.

There was no other concerted charge for a long time. Now and then some painted brave, chanting a death song, would ride slowly toward the wagon park, some dervish vow actuating him or some bravado impelling him. But usually he fell.

It all became a quiet, steady, matter-of-fact performance on both sides. This very freedom from action and excitement, so different from the gallant riding of the Sioux, was more terrifying than direct attack en masse, so that when it came to a matter of shaken morale the whites were in as bad case as their foes, although thus far they had had no casualty at all.

There lacked the one leader, cool, calm, skilled, experienced, although courage did not lack. Yet even the best courage suffers when a man hears the wailing of his children back of him, the groans of his wife. As the hours passed, with no more than an occasional rifle shot or the zhut! of an arrow ending its high arc, the tension on the nerves of the beleaguered began to manifest itself.

At midday the children began to cry for water. They were appeased with milk from the few cows offering milk, but how long might that last, with the cattle themselves beginning to moan and low?

"How far are they back?"

It was Hall, leader of the Ohio wagons. But none could tell him where the Missouri train had paused. Wingate alone knew why Banion had not advanced. He doubted if he would come now.

"And this all was over the quarrel between two men," said Caleb Price to his friend Wingate.

"The other man is a thief, Cale," reiterated Wingate. "He was court-martialed and broke, dishonorably discharged from the Army. He was under Colonel Doniphan, and had control of subsistence in upper Mexico for some time. He had the regimental funds. Doniphan was irregular. He ran his regiment like a mess, and might order first this officer, then that, of the line or staff, to take on his free-for-all quartermaster trains. But he was honest. Banion was not. He had him broken. The charges were filed by Captain Woodhull. Well, is it any wonder there is no love lost? And is it any wonder I wouldn't train up with a thief, or allow him to visit in my family? By God, right now I wouldn't, and I didn't send for him to help us!"

"So!" said Caleb Price. "So! And that was why the wedding ——"

"Yes! A foolish fancy of a girl. I don't know what passed between her and Banion. I felt it safer for my daughter to be married, as soon as could be, to another man, an honest man. You know how that came out. And now, when she's as apt to die as live, and we're all as apt to, you others send for that renegade to save us! I have no confidence that he will come. I hope he will not. I'd like his rifles, but I don't want him."

"Well," said Caleb Price, "it is odd how his rifles depend on him and not on the other man. Yet they both lived in the same town."

"Yes, one man may be more plausible than another."

"Yes? I don't know that I ever s man more plausible with his fists Major Banion was. Yes, I'll call plausible. I wish some of us—say, Woodhull, now—could be half as plau with these Crows. Difference in Jess!" he concluded. "Woodhull there—and now he's here. He's here- now we're sending there for the other m

"You want that other man, thief dishonest as he is?"

"By God, yes! I want his rifles him too. Women, children and all whole of us, will die if that thief do come inside of another twenty-four ho

Wingate flung out his arms, w away, hands clasped behind his back met Woodhull.

"Sam, what shall we do?" he dema "You're sort of in charge now. Y been a soldier, and we haven't had of that."

"There are fifteen hundred or two sand of them," said Woodhull slowly hundred and fifty of us that can fight. to one, and they mean no quarter."

"But what shall we do?"

"What can we but lie close and bol wagons?"

"And wait?"

"Yes."

"Which means only the Missouri m

"There's no one else. We don't k that they're alive. We don't know they will come.

"But one thing I do know"—his face gathered in a scowl—"if he do come it will not be because he was asked! That fellow carried a letter f Molly to him. I know that. Well, wha you-all think of me? What's my stan in all this? If I've not been shamed humiliated, how can a man be? And w am I to expect?"

"If we get through, if Molly lives, mean?"

"Yes. I don't quit what I want. never give her up. You give me leav try again? Things may change. She consider the wrong she's done me, honest man. It's his hanging around the time, keeping in her mind. And we've sent for him—and so has she!"

They walked apart, Wingate to wagon.

"How is she?" he asked of his w nodding to Molly's wagon.

"Better some ways, but low," repl his stout helpmate, herself haggard, d circles of fatigue about her eyes. won't eat, even with the fever down. If was back home where we could get thin Jess, what made us start for Oregon?"

"What made us leave Kentucky for diana, and Indiana for Illinois? I do know. God help us now!"

"It's bad, Jesse."

"Yes, it's bad." Suddenly he took wife's face in his hands and kissed quietly. "Kiss Little Molly for me," said. "I wish—I wish ——"

"I wish them other wagons'd com said Molly Wingate. "Then we'd see!"

XXXII

JACKSON, wounded and weary as was, drove his crippled horse so hard the night through that by dawn he h covered almost fifty miles, and was in sig of the long line of wagons, crawling like serpent down the slopes west of the Sou Pass, a cloud of bitter alkali dust hangi like a blanket over them. No part of t way had been more cheerless than th gray, bare expanse of more than a hundr miles, and none offered less invitation f a bivouac. But now both man and hor were well-nigh spent.

Knowing that he would be reached with an hour or so at best, Jackson used th last energies of his horse in riding bac and forth at right angles across the trai the Plains sign of "Come to me!" H hoped it would be seen! He flung himse down across the road, in the dust, h bridle tied to his wrist. His horse, now nearly gone, lay down beside him, nor eve rose again.

And here, in the time a gallop coul bring them up, Banion and three of hi men found them, one dead, the other bu little better.

"Bill! Bill!"

The voice of Banion was anxious as he lightly shook the shoulder of the prone man.

"Say, Folks,–let ME tell you about Corn Flakes"

Your Grocer

HAVE you ever realized what he means in relation to public health and economy? Handing things over the counter and making deliveries are perhaps the least of his service in your behalf.

He must be continually alert, exercising unerring judgment, so as to supply you with the best at prices you can afford to pay. His is not a light task and his importance to the community, in the service he renders, is inestimable.

"EVERYBODY knows I've got to keep a pair of sharp eyes wide open, so's not to miss the good things that come along in the grocery line.

That's why I didn't miss Jersey Corn Flakes.

The first taste told me you'd like them. I *knew* you'd appreciate something different and delightful in corn flakes."

Jerseys give you a new thrill in tastefulness. They stay crisp in milk to the last spoonful—*large* flakes thoroughly steam cooked, evenly rolled and carefully toasted.

Packed in our famous triple-sealed, waxed-lined and wrapped package which insures their delivery to you fresh and appetizing.

Learn the Jersey Difference.

t sunset of that day the emigrants, now
mad of thirst, and half ready to despair
succor or success, heard the Indian
me sound and the shrilling of the eagle-
e whistles.
The Crows were chanting again. Whoops
se along the river bank.
"They're coming!" called out a voice.
There was a stir of uneasiness along the
, an ominous thing. And then the
nage hosts broke from their cover, more
an a thousand men, ready to take some
s in their hope that the whites were now
re helpless. In other circumstances it must have been a stirring spectacle for any who had seen it. To these, cowering in the sand, it brought terror.

But before the three ranks of the Crows had cleared the cover the last line began to yell, to whip, to break away! Scattering but continuous rifle fire followed them, war cries arose, not from savages but from white men. A line of riders emerged, coming straight through to the second rank of the Crow advance. Then the beleaguered knew that the Missourians were up.

"Banion!" said a voice which few stopped to recognize as Woodhull's.

He held his fire, his rifle resting so long through the wagon wheel that Caleb Price in one swift motion caught it away from him.

"No harm, friend," said he, "but you'll not need this just now!"

His cold eye looked straight into that of the intending murderer.

The men in the wagon park rose to their work again. The hidden Bannocks began to break away from their lodgment under the river bank. The sound of hoofs and of shouts came down the trail. The other wing of the Missourians flung off and cleared the ford before they undertook to cross, their slow, irregular, deadly rifle fire doing its work among the hidden Bannocks until they broke and ran for their horses in the cottonwoods below. This brought them partly into view, and the rifles of the emigrants on that side bore on them till they broke in sheer terror and fled in a scattered *sauve qui peut*.

The Crows swerved under the enfilading fire of the men who now crossed the ford. Caught between three fires, and meeting for their first time the use of the revolver, then new to them, they lost heart and once more left their dead, breaking away into a mad flight west and north which did not end till they had forded the upper tributaries of the Green and Snake, and found their way back west of the Tetons to their own country far east and north of the Two-go-tee crossing of the Wind River Mountains; whence for many a year they did not emerge again to battle with the white nation on the Medicine Road. At one time there were forty Crow squaws, young and old, with gashed breasts and self-amputated fingers, given in mourning over the unreturning brave.

What many men had not been able to do of their own resources, less than a fourth their number now had done. Side by side Banion, Jackson, a half dozen others, rode up to the wagon gap, now opened. They were met by a surge of the rescued. Women, girls threw themselves upon them, kissing them, embracing them hysterically. Where had been gloom, now was rejoicing, laughter, tears.

The leaders of the emigrants came up to Banion and his men, Wingate in advance. Banion still sat his great black horse, coldly regarding them.

"I have kept my promise, Captain Wingate," said he. "I have not come until you sent for me. Let me ask once more, do I owe you anything now?"

"No, sir, you do not," replied the older man.

"And do you owe me anything?"

Wingate did not answer.

"Name what you like, Major Banion," said a voice at his shoulder—Caleb Price.

Banion turned to him slowly.

"Some things have no price, sir," said he. "For other things I shall ask a high price in time. Captain Wingate, your daughter asked me to come. If I may see her a moment, and carry back to my men the hope of her recovery, we shall all feel well repaid."

Wingate made way with the others. Banion rode straight through the gap, with no more than one unseeing glance at Woodhull, near whom sat Jackson, a pistol resting on his thigh. He came to the place under a wagon where they had made a hospital cot for Molly Wingate. It was her own father and mother who lifted her out as Will Banion sprang down, hat in hand, pale in his own terror at seeing her so pale.

"No, don't go!" said the girl to her parents. "Be here with us—and God."

She held out her arms and he bent above her, kissing her forehead gently and shyly as a boy.

"Please get well, Molly Wingate," said he. "You are Molly Wingate?"

"Yes. At the end—I couldn't! I ran away, all in my wedding clothes, Will. In the dark. Someone shot me. I've been sick, awfully sick, Will."

"Please get well, Molly Wingate! I'm going away again. This time, I don't know where. Can't you forget me, Molly Wingate?"

"I'm going to try, Will. I did try. Go on ahead, Will," she added. "You know what I mean. Do what I told you. I—why, Will!"

"My poor lamb!" said the strong voice of her mother, who gathered her in her arms, looking over her shoulder at this man to whom her child had made no vows. But Banion, wet eyed, was gone once more.

Jackson saw his leader out of the wagon gap, headed for a camping spot far apart. He stumbled up to the cot where Molly lay, her silent parents still close by.

"Here, Miss Molly, gal," said he, holding out some object in his hand. "We both got a arrer through the shoulder, an' mine's a'most well a'ready. Ain't nothin' in the world like a good chaw o' terbacker to put on a arrer cut. Do-ee, now!"

XXXIII

THE Missourians camped proudly and coldly apart, the breach between the two factions by no means healed, but rather deepened, even if honorably so, and now well understood of all.

Most men of both parties now knew of the feud between Banion and Woodhull, and the cause underlying it. Woman gossip did what it might. A half dozen determined men quietly watched Woodhull. As many continually were near Banion, although for quite a different reason. All knew that time alone must work out the answer to this implacable quarrel, and that the friends of the two men could not possibly train up together.

After all, when in sheer courtesy the leaders of the Wingate train came over to the Missouri camp on the following day there came nearer to being a good understanding than there ever had been since the first break. It was agreed that all the wagons should go on together as far as Fort Bridger, and that beyond that point the train should split into two or perhaps three bodies—a third if enough Woodhull adherents could be found to make him up a train. First place, second and third were to be cast by lot. They all talked soberly, fairly, with the dignity of men used to good standing among men. These matters concluded, and it having been agreed that all should lie by for another day, they resolved the meeting into one of better fellowship.

Old Bill Jackson, lying against his blanket roll, fell into reminiscence.

"Times past," said he, "the Green River rendyvous was helt right in here. I've seed this place spotted with tepees—hull valley full o' company men an' free trappers an' pack-train people—time o' Ashley an' Sublette an' my Uncle Jackson an' all them traders. That was right here on the Green. Ever'body drunk an' happy, like I ain't now. Mounting men togged out, new leggin's an' moccasins their women had made, warriors painted up a inch o' their lives, an' women with brass wire an' calico all they wanted—maybe two-three thousand people in the rendyvous.

"But I never seed the grass so short, an' I never seed so much fightin' afore in all my life as I have this trip. This is the third time we're jumped, an' this time we're lucky, shore as hell. Pull on through to Bridger an' fix yer wagons afore they tumble apart. Leave the grass fer them that follows, an' git on fur's you kin, every wagon. We ain't likely to have no more trouble now. Pile up them braves in one heap fer a warnin' to any other bunch o' reds that may come along to hide around the wagon ford. New times has come on the Green."

"Can you travel, Jackson?" asked Hall of Ohio. "You've had a hard time."

"Who? Me? Why shouldn't I? Give me time to pick up some o' them bows an' arrers an' I'm ready to start. I noticed a right fine horn bow one o' them devils had—the Crows allus had good bows. That's the yaller-an'-red brave that was itchin' so long to slap a arrer through my ribs from behind. I'd like to keep his bow fer him, him not needin' it now."

Before the brazen sun had fully risen on the second day these late peaceful farmers of Ohio, Iowa, Illinois, Indiana, Missouri were plodding along once more beside their sore-footed oxen; passing out unaided into a land which many leading men in the Government, North and South, and quite aside from political affiliations, did not value at five dollars for it all, though still a thousand miles of it lay ahead.

"Oh, then, Susannah!" roared Jed Wingate, trudging along beside Molly's wagon in the sand. "Don't you cry fer me. I'm going through to Oregon, with my banjo on my knee!"

Fair as a garden to the sun-seared eyes of the emigrants seemed the mountain post, Fort Bridger, when its rude stockade separated itself from the distortions of the desert mirage, whose citadels of silence, painted temples fronted with colossal columns, giant sphinxes, vast caryatids, lofty arches, fretwork façades, fantastically splendid castles and palaces now resolved

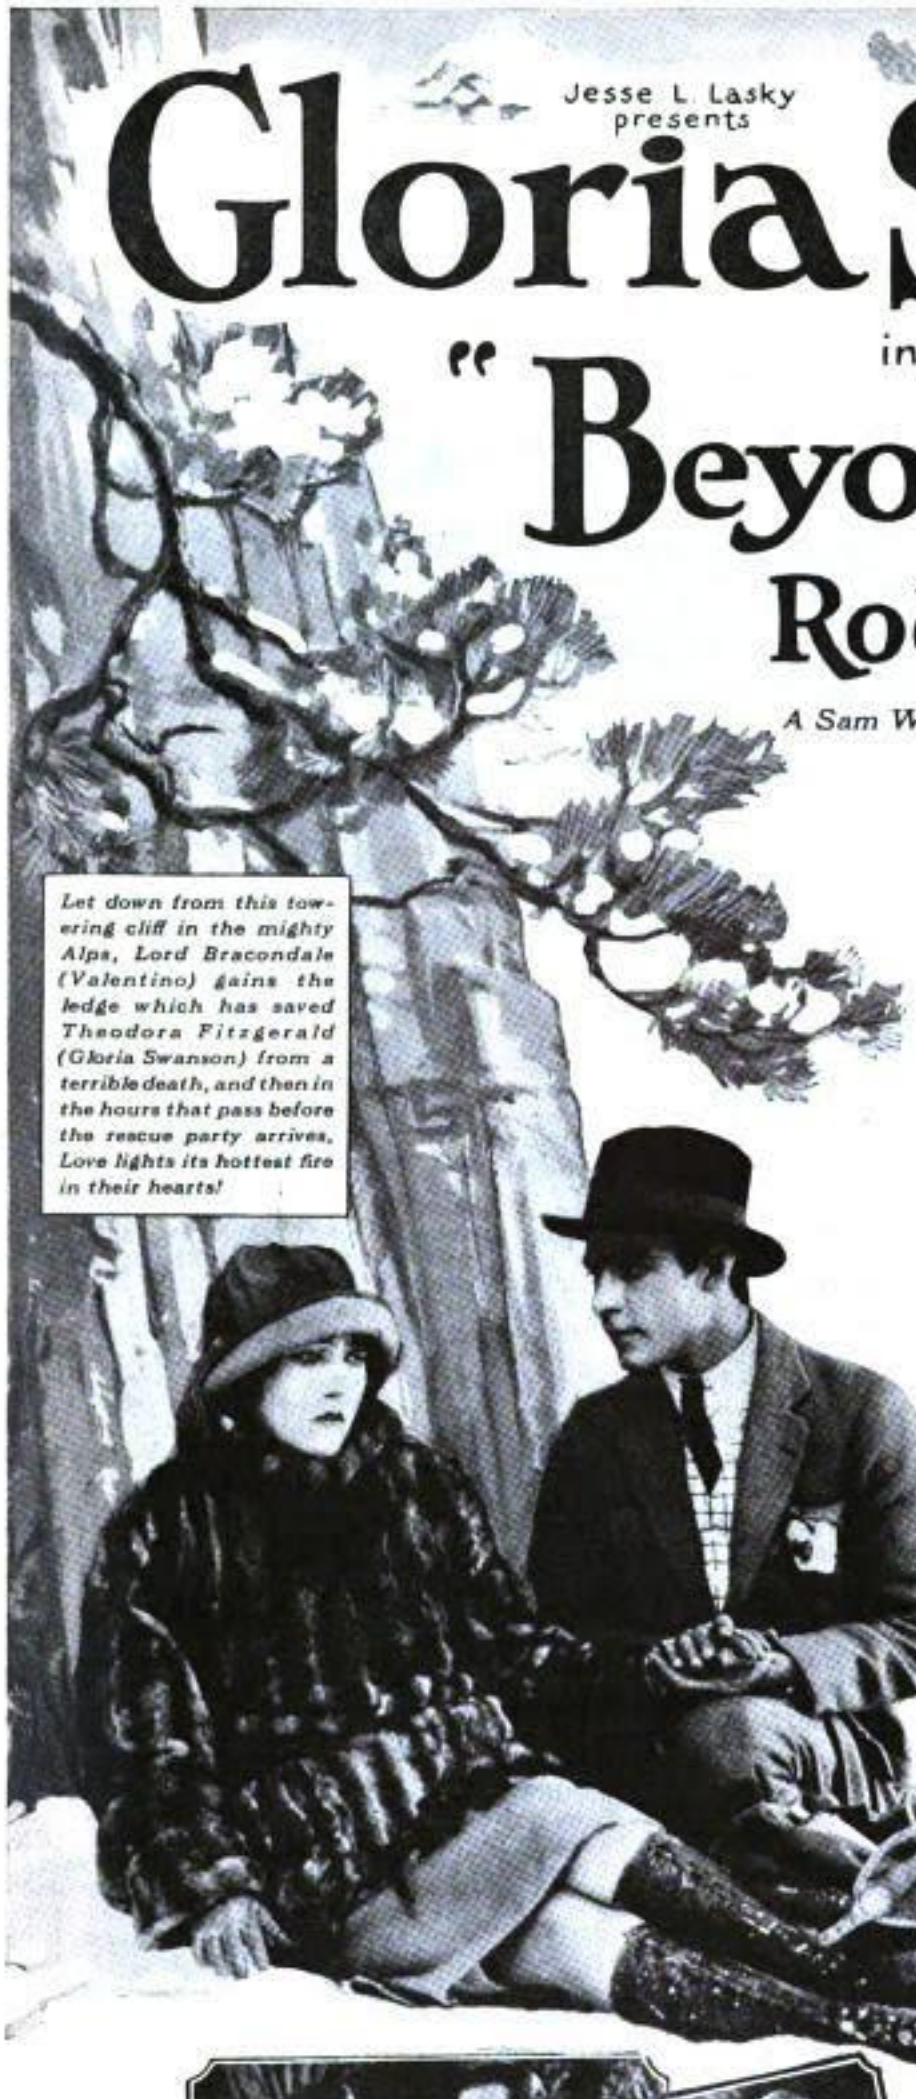
Jesse L. Lasky presents

Gloria Swanson



in ELINOR GLYN'S

"Beyond the Rocks"

with

Rodolph Valentino

A Sam Wood Production *Scenario by Jack Cunningham*

Let down from this towering cliff in the mighty Alps, Lord Bracondale (Valentino) gains the ledge which has saved Theodora Fitzgerald (Gloria Swanson) from a terrible death, and then in the hours that pass before the rescue party arrives, Love lights its hottest fire in their hearts!

Here is *Gloria Swanson*, supported by *Rodolph Valentino*, in a great *Paramount* Picture by *Elinor Glyn*.

What more could you want for certainty of great entertainment than those four names?

You remember glorious Gloria in Elinor Glyn's "The Great Moment"! You remember her in "He Husband's Trademark"!

You remember Rodolph Valentino in George Melford's "The Sheik"! You remember him in Rex Ingram's "Four Horsemen"!

Memories of these will be eclipsed by the still more thrilling memories of "Beyond the Rocks",

—the photoplay of passionate young love,

—and of luxurious life in a Paris setting with all the latest chic in gowns and coquetry!

Above all, don't miss the thrilling scenes of the rescue in the mighty Alps!

First showing next week at more than 200 leading theatres.

Is your favorite theatre showing it?

Amid luxurious scenes in gay Paris their love deepens. Theodora luring him on with all the arts of Paris pomade and eloquent glances.

Dad knows his daughter's plight, but he knows also that Grant Circumstance is the only power to relieve it. See for yourself how Circumstance comes to the rescue!

"Oh to be free of this fat husband!" That was what Theodora (Gloria Swanson) found herself terribly wishing! And yet, he had treated her well. laid his wealth at her feet.

It's a Paramount

3,000,000 now use it

NO other automobile accessory has ever approached the enormous popularity of the BOYCE MOTO-METER.

The reason is obvious—

This instrument, unfailingly, detects approaching motor trouble ten to fifteen minutes before you can.

The BOYCE MOTO-METER prevents costly repairs by indicating approaching trouble in ample time to avoid it. It adds thousands of miles to the life of your car.

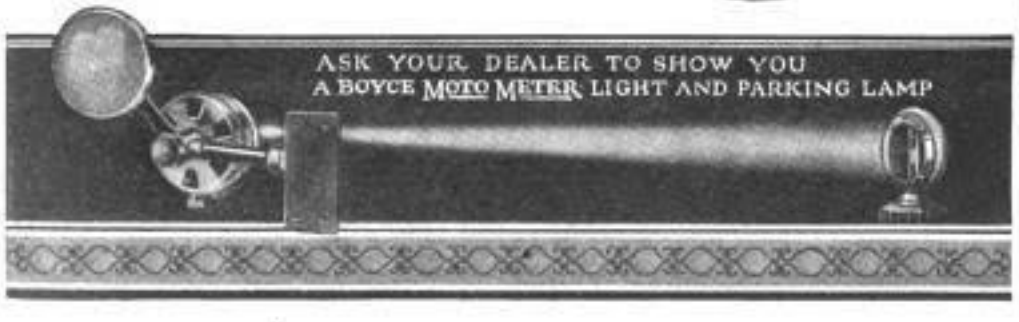
The more you know about your car, the more you need this instrument.

The BOYCE MOTO-METER, as its history shows, is the best buy of all motor accessories.

Your car deserves one *today*—tomorrow may be too late.

BOYCE MOTO METER

"Your Car Deserves One"



Your garage or dealer carries the BOYCE MOTO-METER in stock, or can quickly obtain one for you.

Seven Models $2.50 to $15.

Trade with the dealer who offers service. Look for the BOYCE MOTO-METER Service Sign.

The instrument shown on the right is the Standard Model. Recommended for use on all high grade cars.

(Continued from Page 89)

themselves into groups of squat pole structures and a rude stock corral.

The site of the post itself could not better have been chosen. Here the flattened and dividing waters of the Black's Fork, icy cold and fresh from the Uintah Mountains to the southward, supported a substantial growth of trees, green now and wonderfully refreshing to desert-weary eyes.

"The families are coming!"

Bridger's clerk, Chardon, raised the new cry of the trading post.

"Broke an' hungry, I'll bet!" swore old Jim Bridger in his beard.

But he retired into his tepee and issued orders to his Shoshone squaw, who was young and pretty. Her name, as he once had said, was Dang Yore Eyes—and she was very proud of it. Philosophical withal, though smarting under recent blows of her white lord, she now none the less went out and erected once more in front of the tepee the totem Bridger had kicked down—the tufted lance, the hair-fringed bull-neck shield, the sacred medicine bundle which had stood in front of Jeem's tepee in the rendezvous on Horse Creek, what time he had won her in a game of hands. Whereupon the older squaw, not young, pretty or jealous, abused him in Ute and went out after wood. Her name was Blast Yore Hide, and she also was very proud of her white name. Whereafter both Dang Yore Eyes and Blast Yore Hide, female, and hence knowing the moods of man, wisely hid out for a while. They knew when Jeem had the long talk with the sick white squaw, who was young, but probably needed bitter bark of the cottonwood to cure her fever.

Painted Utes and Shoshones stood about, no more silent than the few local mountaineers, bearded, beaded and fringed, who still after some mysterious fashion clung to the old life at the post. Against the newcomers, profitable as they were, still existed the ancient antipathy of the resident for the nonresident.

"My land sakes alive!" commented stoical Molly Wingate after they had made some inquiries into the costs of staples here. "This store ain't no place to trade. They want fifty dollars a sack for flour—what do you think of that? We got it for two dollars back home. And sugar a dollar a tin cup, and just plain salt two bits a pound, and them to guess at the pound. Do they think we're Indians, or what?"

"It's the tenth day of August and a thousand miles ahead," commented Caleb Price. "And we're beyond the buffalo now."

"And Sis is in trouble," added Jed Wingate. "The light wagon's got one hind spindle half in two, and I've spliced the hind ex for the last time."

Jackson advanced an idea.

"At Fort Hall," he said, "I've seed 'em cut a wagon in two an' make a two-wheel cart out'n hit. They're easier to git through mountains that way."

"Now listen to that, Jesse!" Mrs. Wingate commented. "It's getting down to less and less every day. But I'm going to take my bureau through, and my wheat, and my rose plants, if I have to put wheels on my bureau."

The men determined to saw down three wagons of the train which now seemed doubtful of survival as quadrupeds, and a general rearrangement of cargoes was agreed. Now they must jettison burden of every dispensable sort. Some of the sore-necked oxen were to be thrown into the loose herd and their places taken for a time by cows no longer offering milk.

A new soberness began to sit on all. The wide reaches of desert with which they here were in touch appalled their hearts more than anything they yet had met. The grassy valley of the Platte, where the great fourfold tracks of the trail cut through a waving sea of green belly-deep to the oxen, had seemed easy and inviting, and since then hardship had at least been spiced with novelty and change. But here was a new and forbidding land. This was the Far West itself; silent, inscrutable, unchanged, irreducible. The mightiness of its calm was a smiting thing. The awesomeness of its chill, indifferent nights, the unsparing ardors of its merciless noons, the measureless expanses of its levels, the cold barrenness of its hills—these things did not invite as to the bosom of a welcoming mother; they repelled, as with the chill gesture of a stranger turning away outcasts from the door.

"Here resolution almost faints!" one.

A general requisition was made o scant stores Bridger had hurried thr To their surprise, Bridger himself ma attempt at frontier profits.

"Chardon," commanded the moody ter of the post to his head clerk, down your tradin' bar and let my peop Sell them their flour and meal at w has cost us here—all they want, do what the post will need till my pa Vasquez brings in more next fall, if he does. Sell 'em their flour at four dol sack, an' not at fifty, boy. Git out flag I saved from Sublette's outfit, don. Put it on a pole for these folks give it to them so's they can carry acrost to Oregon. God's got some u them folks out yan or hit wouldn't be penin' this way. I'm goin' to help acrost. Ef I don't, old Jim Bridger liar!"

That night Bridger sat in his lodge moodily smoking. He heard a shaki the pegs of the door flap.

"Get out!" he exclaimed, thinking it was his older associate or else som truding dog.

His order was not obeyed. Will B pulled back the flap, stooped and ent

"How!" exclaimed Bridger, and fists smitten on the blankets made sign to "Sit!" Banion for a time smoked in silence, knowing the moody of the old-time men.

"Ye came to see me about her, Molly, didn't ye?" began Bridger af long time, kicking the embers of the fire together with the toe of his moccas

"How do you know that?"

"I kin read sign."

"Yes, she sent me."

"When?"

"That was at Laramie. She told m come on with you then. I could not."

"Pore child, they mout 'a' killed She told me she'd git well, though—me so to-day. I had a talk with her." wrinkled face broke into additional cre "She told me more!"

"I've no wonder."

"Ner me. Ef I was more young and Injun I'd love that gal. I do, anyhow, sake o' what I might of been ef I ha had to play my game the way the c said fer me.

"She told me she was shot on her wed night, in her weddin' clothes—right pla to the time an' minute o' marryin' then thar. She told me she thanked God Injun shot her, and she wished to God h killed her then an' thar. I'd like such a bride, huh? That's one hell of a wedd huh? Why?"

Banion sat silent, staring at the emb

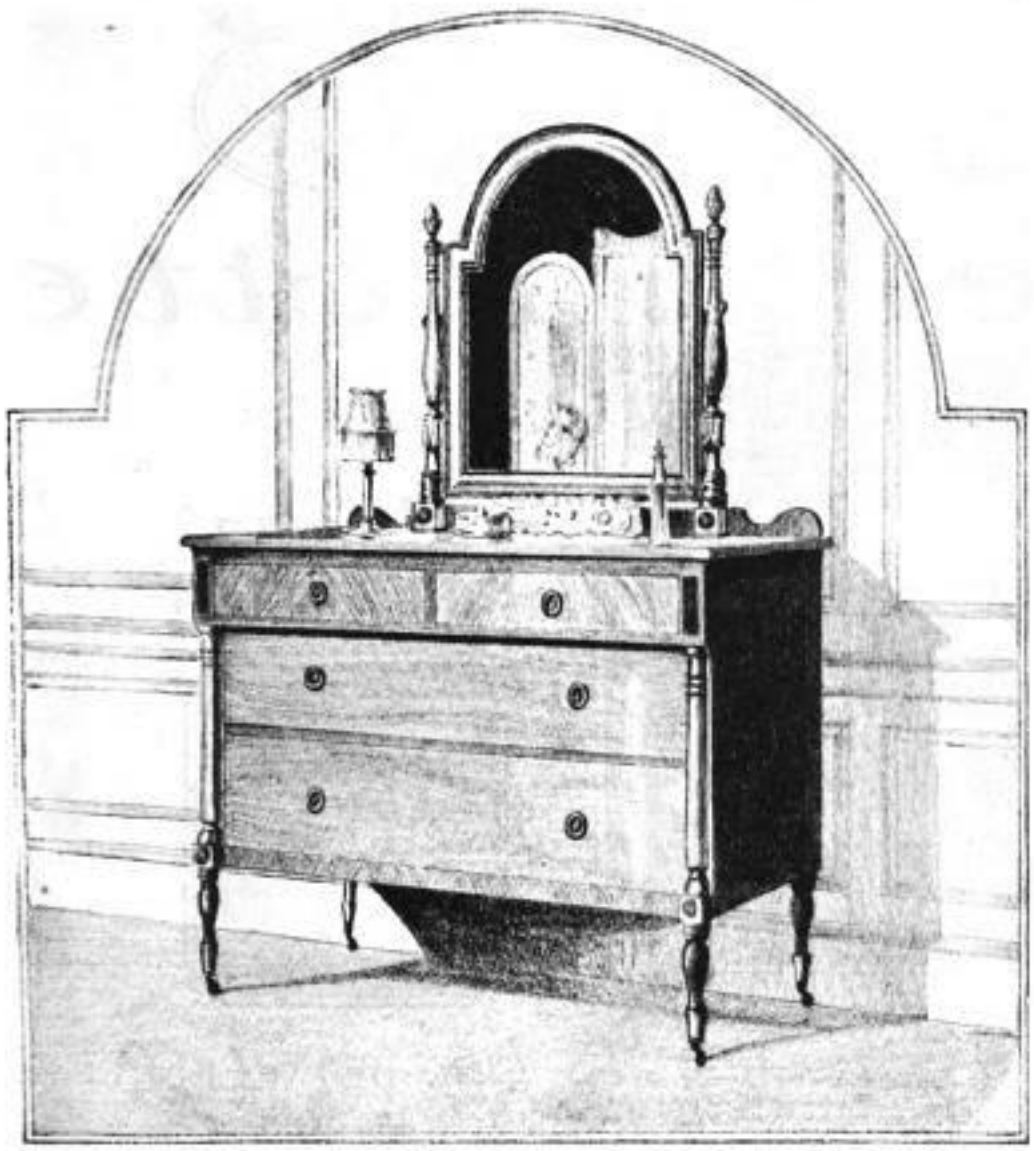
"I know why, or part ways why. Kit me was drunk at Laramie. I kain't rem ber much. But I do ree-colleck Kit s something to me about you in the Ar with Donerphan in Mayheeco. Right t I gits patriotic. 'Hooray!' says I. Then taken another drink. Atter that we fell arguin' how much land we'd git out Mayheeco when the treaty was signed. said hit war done signed now, or else wan't, I don't ree-colleck which, but was one or t'other. He had papers. I see Kit again ary time now I'll ast him wh his papers was. I don't ree-colleck exact.

"All that, ye see, boy," he resume "was atter I was over to the wagons Laramie, when I seed Miss Molly to s good-by to her. I reckon maybe I was ot side o' sever'l horns even then."

"And that was when you gave her t California nugget that Kit Carson h given you!" Banion spoke at last.

"Oh, ye spring no surprise, boy! She to me to-day she'd told you then; said she begged you to go on with me an' beat the others to Californy; said she wante you to git rich; said you an' her had parte an' she wanted you to live things down. was to tell ye that.

"Boy, she loves ye—not me ner th other man. The Injun womern kin love dozen men. The white womern kain' I'm still fool white enough fer to believ that. Of course she'd break her promis not to tell about the gold. I might 'a knowed she'd tell the man she loved. Wel she didn't wait long. How long was hi afore she done so—about ten minutes Boy, she loves ye. Hit hain't no one else.



"I think so. I'm afraid so."

"Why don't ye marry her then, right here? Ef a gal loves a man he orto marry her, ef only to cure her o' bein' a fool to

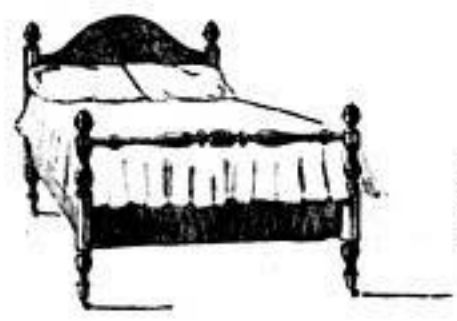
ERKEY & GAY *Furniture*



In the epoch that produced the Boston Tea Party, American artisans were creating the style of furniture known as Colonial. It was simple, substantial—eminently suited to the prim old homes where independence was the watchword; yet where false seeming was heartily despised and only true worth treasured

n the "Spirit of '76"

Our May Quality Demonstration Presents This Particularly Delightful Study of the Late Colonial Styles in Furniture

cture a fine old Colonial home with modern ing and electric lights, and you have the per- setting for this Berkey & Gay Chamber Suite. e 1776" is truly American—an interpretation he best creative thought in American furniture gning during the Revolution and for fifty rs thereafter.

t was during this first half-century of our pendence that much of the finest "Colonial" niture was produced. Naturally the American igners of the day were influenced by the styles England and France. But the exquisite pieces y developed were not copies; they had a ightful individuality; they typified the spirit independence that was everywhere.

In the same spirit, Berkey & Gay have inter- eted their ideas in creating "The 1776." Each ce has a character and charm distinctly its own; t all form a harmonious group.

This was the age of mahogany. But in America ahogany was rare and expensive; it was used rgely in combination with New England curly aple, as in this group, achieving a beautiful color effect. To "The 1776" this coloring gives a friendly warmth and livableness that will make its companionship ever more enjoyable as the years pass.

Into the building of this suite has gone the same honest craftsmanship that makes old Colonial pieces still sturdy and strong. For sixty years Berkey & Gay have built furniture in this manner. Each piece has been wrought with a structural soundness and an adherence to true principles of design that give it timeless beauty. In the homes of the discriminating throughout America Berkey & Gay Furniture has a cherished place—earned through more than a half-century of service.

It is with pride that we invite you to see "The 1776" at foremost furniture stores during May. In a nation-wide quality demonstration, it is featured as convincing proof that furniture worthy of the best American traditions may be bought within the popular price range. It offers extraordinarily attractive value.

Our Brochures, illustrating and describing "The 1776" and other Berkey & Gay Furniture, together with name of nearest dealer, sent on request

This shopmark is inset in every Berkey & Gay production. It is the customer's protection when buying and his pride ever after.

Dr. West's TOOTH BRUSH

WECO Product

Cleans Teeth Better

Cleans INSIDE

Cleans OUTSIDE

Cleans BETWEEN the Teeth

Try This New Brush Today!

ANY TOOTH BRUSH will brush the grinding surface of the teeth, but Dentists say that isn't enough.

Dr. West's Tooth Brush is purposely small—only nine rows of bristles—notice the slightly concave shape and how the bristles are set—how they are trimmed and braced near the top—and how the brushing surface conforms to the teeth.

Glance at the four photographs at the right—the proper way to clean your teeth. Never brush up *and* down with the teeth in contact because this method will injure the gum tissue and crowd the gums *away* from the teeth. Brush the upper teeth *down* outside and inside and brush the lower teeth *up* outside and inside.

Your dentist will tell you that Dr. West's Tooth Brush is scientifically correct.

THE WESTERN COMPANY
402 W. RANDOLPH ST. CHICAGO
1170 BROADWAY NEW YORK

A brush for every member of the family —numbered 1 to 6

1. Brush upper outside down.

2. Brush upper inside down.

3. Brush lower outside up.

4. Brush lower inside up.

ey man. Why don't you marry her
ow?"
cause I love her!"
ger sat in disgusted silence for some

ell," said he at last, "there's some
o' fools that kain't be cured no-
I expect you're one o' them. Me, I
o highfalutin'. Ef I love a womern,
r me, somethin's goin' to happen.
s this here like? Nothin' happens.
it's when nothin' happens that
ain' else does happen. She marries
r man—barrin' 'Rapahoes. A fool
k—that's you. But there mightn't
be a Injun hidin' to shoot her when
s dressed up agin an' the minister
ditin' to pernounce 'em man an' wife.
whar air ye?"
went on more kindly after a time, as
ched out a hard, sinewy hand.
ch as her is fer the young man that
white man's full life to give her.
purty as a doe fawn an' kind as a
ghbred filly. In course ye loved her,
How could ye a-help hit? An' ye was
to go to Oregon—ye'd plow rather'n
ight o' her? I don't blame ye, boy.
s her is not supported by rifle an'
Hit's the home smoke, not the tepee
e her. I ask ye nothing more, boy.
t ask ye what ye mean. Man an'
've followed the tepee smokes—blue
novin' an' a-beckonin' they was—an'
r set this hand to no plow in all my
but in my heart two things never was
out—the sight o' the white woman's
n' the sight o' the flag with stars.
lp ye all I can, an' good luck go with
Work hit out yore own way. She's
more'n all the gold Californy's got
!!"
s time it was Will Banion's hand that
uddenly extended.
ake her secret an' take her advice
" said Bridger after a time. "Ye must
ahead to Californy. Fust come fust
l on any beaver water. Fer me 'tis
I kin hold my hat an' the immi-
'll throw money into hit. I've got
rtune here, boy. I can easy spare ye
ye need, ef ye do need a helpin' out'n
late. Fer sake o' the finest gal that
crossed the Plains, that's what we'll
Ef I don't, Jim Bridger's a putrefied
o help me God!"
nion made no reply at once, but could
ail of understanding.
'll not need much," said he. "My
is to go on ahead with my men. I
think there'll be much danger now
Indians, from what I hear. At Fort
I intend to split off for California.
I make you this proposition, not in
ent for your secret, or for anything
If I find gold I'll give you half of all
as soon as I get out or can send it."
What do ye want o' me, son?"
ix mules and packs. All the shovels
picks you have or can get for me at
Hall. There's another thing."
n' what is that?"
I want you to find out what Kit Carson
and what Kit Carson had. If at any
you want to reach me—six months, a
—get word through by the wagon
s next year, in care of the district court
regon City, on the Willamette."
Why, all right, all right, son! We're all
be talkin' in the air, but I more'n half
erstand ye. One thing, ye ain't never
y intendin' to give up Molly Wingate!
re a fool not to marry her now, but
e reckonin' to marry her sometime—
n the moon turns green, huh? When
s old an' shriveled up, then ye'll marry
huh?"
arion only looked at him, silent.
"Well, I'd like to go on to Californy
h ye, son, ef I didn't know I'd make
re here, an' easier, out'n the crazy fools
'll be pilin' in here next year. So good
k to ye. Kit had more o' that stuff,"
suddenly added. "He give me some
re when I told him I'd lost that fust
ne he give me. I'll give ye a piece fer
mple, son. I've kep' hit close."
He began fumbling in the tobacco pouch
found under the head of his blanket
d. He looked up blankly, slightly alter-
g the name of his older squaw.
"Well, damn her hide!" said he fer-
ntly. "Ye kain't keep nothin' from 'em!
a' they kain't keep nothin' when they
t hit."

XXXIV

ONCE more the train, now permanently divided into two, faced the desert, all he men and many women now afoot, the kine low-headed, stepping gingerly in their new rawhide shoes. Gray, grim work, tolling over the dust and sand. But at the head wagon, taking over an empire foot by foot, flew the great flag. Half fanatics? That may be. Fanatics, so called, also had prayed and sung and taught their children, all the way across to the Great Salt Lake. They, too, carried books. And within one hour after their halt near the Salt Lake they began to plow, began to build, began to work, began to grow, and made a country.

The men at the trading post saw the Missouri wagons pull out ahead. Two hours later the Wingate train followed, as the lot had determined. Woodhull remained with his friends in the Wingate group, regarded now with an increasing indifference, but biding his time.

Bridger held back his old friend Jackson even after the last train pulled out. It was midafternoon when the start was made.

"Don't go just yet, Bill," said he. "Ride on an' overtake 'em. Nothin' but rattlers an' jack rabbits now fer a while. The Shoshones won't hurt 'em none. I'm powerful lonesome, somehow. Let's you an' me have one more drink."

"That sounds reas'nable," said Jackson. "Shore that sounds reas'nable to me."

They drank of a keg which the master of the post had hidden in his lodge, back of his blankets; drank again of high wines diluted but uncolored—the "likker" of the fur trade.

They drank from tin cups, until Bridger began to chant, a deepening sense of his old melancholy on him.

"Good-by!" he said again and again, waving his hand in general vagueness to the mountains.

"We was friends, wasn't we, Bill?" he demanded again and again; and Jackson, drunk as he, nodded in like maudlin gravity. He himself began to chant. The two were savages again.

"Well, we got to part, Bill. This is Jim Bridger's last rendyvous. I've rid around an' said good-by to the mountings. Why don't we do it the way the big partisans allus done when the rendyvous was over? 'Twas old Mike Fink an' his friend Carpenter begun hit fifty year ago. Keel-boat men on the river, they was. There's as good shots left to-day as then, and as good friends. You an' me has seed hit; we seed hit at the very last meetin' o' the Rocky Mountain Company men, before the families come. An' nary a man spilled the whisky on his partner's head."

"That's the truth," assented Jackson, "though some I wouldn't trust now."

"Would ye trust me, Bill, like I do you, fer sake o' the old times, when friends was friends?"

"Shore I would, no matter how come, Jim. My hand's stiddy as a rock, even though my shootin' shoulder's a leetle stiff from that Crow arrer."

Each man held out his firing arm, steady as a bar.

"I kin still see the nail heads on the door yan. Kin ye, Bill?"

"Plain! It's a waste o' likker, Jim, fer we'd both drill the cups."

"Are ye a-skeered?"

"I told ye not."

"Chardon!" roared Bridger to his clerk. "You, Chardon, come here!"

The clerk obeyed, though he and others had been discreet about remaining visible as this bout of old-timers at their cups went on. Liquor and gunpowder usually went together.

"Chardon, ye git two fresh tin cups an' bring 'em here. Bring a piece o' charcoal to spot the cups. We're goin' to shoot 'em off each other's heads, in the old way. You know what I mean."

Chardon, trembling, brought the two tin cups, and Bridger with a burnt ember sought to mark plainly on each a black bull's-eye. Silence fell on the few observers, for all the emigrants had now gone and the open space before the rude trading building was vacant, although a few faces peered around corners. At the door of the tallest tepee two native women sat, a young and an old, their blankets drawn across their eyes, accepting fate, and not daring to make a protest.

"How!" exclaimed Bridger as he filled both cups and put them on the ground. "Have ye wiped yer barrel?"

"Shore I have. Let's wipe again."

Each drew his ramrod from the pipes and attached the cleaning worm with its twist of tow, kept handy in belt pouch in muzzle-loading days.

A "Cracker Jack" Saver for The CRACKER JACK Folks

The Cracker Jack Company, Chicago, makes Cracker Jack, Angelus Marshmallows, and other popular confections.

An average of 50,000 orders come to their factory annually.

From 1 to 28 copies of each order are required—the average is 8, or over 400,000 copies per year.

They formerly used the old-fashioned carbon-paper-and-typewriter method.

That Method Required 6 Girls

It cost 13 2/5¢ to prepare each order.

Then . . . three years ago they installed Ditto

Now-with Ditto, 4 Girls handle the Work

Ditto saves 4½¢ on each order!

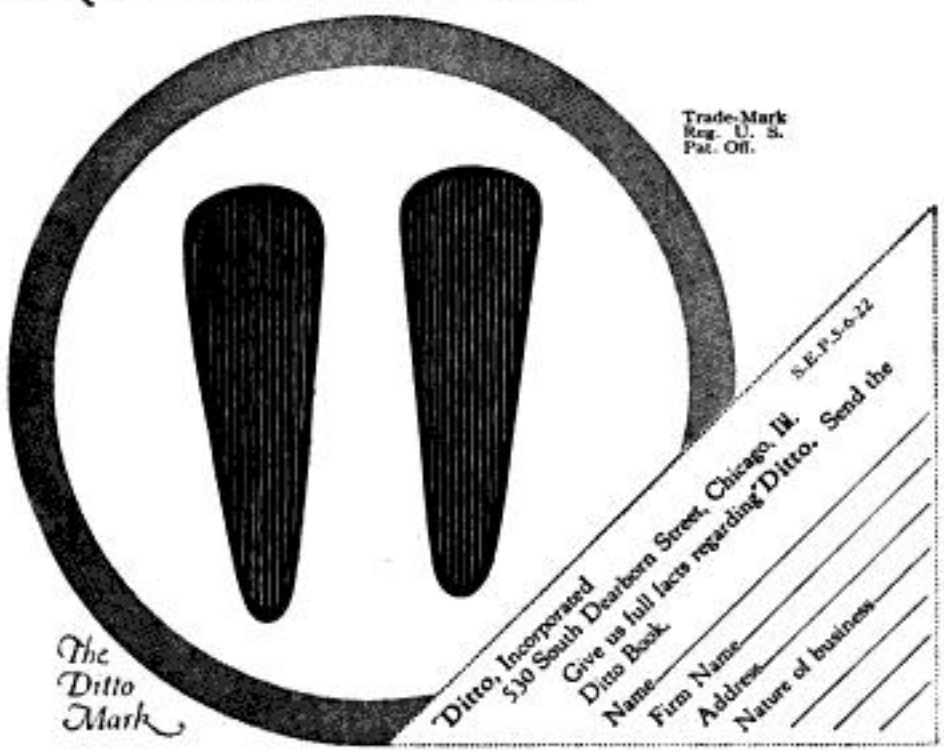
"Time is saved, too," they say. "And Ditto copies are accurate and more legible. Ditto helps increase efficiency throughout the organization. It is the ideal copying method for this kind of work."

And the handling of orders is only one of hundreds of profitable uses for Ditto.

Wherever there is copying to be done Ditto effects marked economies.

Thousands of progressive firms are saving with Ditto.

Use the coupon below—it costs you nothing to find out what Ditto can do for you.



This is DITTO—

Ditto is a duplicating machine that swiftly provides up to 100 *exact* copies of any matter that can be typed, written or drawn. All or any part of the original is reproduced in facsimile, without re-writing. Colors can be used, if desired. Ditto speedily handles the forms essential in any business—bulletins, orders, invoices, statements, reports, stock records, etc. In many concerns, Ditto produces every required form—from order to shipping tag—from a single writing. Ditto adapts itself to existing systems or provides new methods of handling routine or emergency tasks.

as a whistle!" said Jackson, ut the end of the rod.
mine, pardner. Old Jim Bridger graced hisself with a rifle."
ne," commented Jackson. "Hold l, Jim, an' cut high the top o' the t'll be safer fer my skelp, an' hit'll hisky out'n the hole. We got to at's left. S'pose'n' we have a ?"
we both shoot we kin drink," re- friend, with a remaining trace of . "Go take stand whar we marked ch. Chardon, damn ye, carry the an' set hit on his head, an' ef you op I'll drill ye, d'ye hear?"
gagé's face went pale.
Monsieur Jim ——" he began.
't 'Monsieur Jim' me or I'll drill a e anyways! Do-ee-do what I tell Then if ye crave fer to see some shootin' come on out, the hull o' ake a lesson, damn ye!"
e ye shoot first, Bill," demanded "The light's soft, an' we'll swap fust fire, to git hit squar for the t, an' no shine on the side o' the ht."
we'll toss fer fust," said Jackson, out a Spanish dollar. "Tails fer " he called as it fell. "An' I win! ust, Jim."
e I will ef the toss-up says so," re- is friend. "Step off the fifty yard. rt o' iron ye carryin', Bill?"
do ye ask? Ye know ol' Mike n Virginia never bored a better. er changed."
l from my old Hawken. Two good ' two good men, Bill, o' the ol' he ol' times! We kain't say fairer'n we, at our time o' life, fer favor o' imes, Bill? We got to do somethin', ind o' git rested up."
man kin say fairer," said his friend. shook hands solemnly and went on- ith their devil-may-care test, de- a historic keel-boat man's brain, as l then by alcohol as their own w.
wed by the terrified clerk, Bill Jack- l, thin and grizzled, stoical as an and too drunk to care much for ences, so only he proved his skill courage, walked steadily down to en spot and stood, his arms folded, aning his own rifle against the door trading room. He faced Bridger a tremor, his head bare, and Chardon for a coward when his embled as he balanced the cup on 's head.
an ye," he exclaimed, "there'll be lost without any o' your spillin'!"
ye all ready, Bill?" called Bridger is station, his rifle cocked and the e triggers set, so perfect in their nism that the lightest touch against ger edge would loose the hammer.
ready!" answered Jackson.
two, jealous still of the ancient art rifle, which nowhere in the world ed nicer development than among ch as these, faced each other in what was considered the supreme test of and skill; for naturally a man's hand tremble, sighting three inches above nd's eyes, when it would not move a ghting center between the eyes of an r.
iger spat out his tobacco chew and ly raised his rifle. The man opposite tood steady as a pillar, and did not his eyes. The silence that fell on who saw became so intense that it ed veritably to radiate, reaching out the valley to the mountains as in a of leagues.
r an instant, which to the few ob- rs seemed an hour, these two figures, which motion seemed to have passed er, stood frozen. Then there came a t of whitish-blue smoke and the thin rack of the border rifle.
e hand and eye of Jim Bridger, in of advancing years, remained true to long training. At the rifle crack the up on the head of the statuelike figure osite him was flung behind as though by blow of an invisible hand. The spin of bullet, acting on the liquid contents, ed apart the seams of the cup and g the fluid wide. Then and not till then Jackson move.
le picked up the empty cup, bored ber directly through the black spot, and thing walked with it in his hand toward dger, who was wiping out his rifle once re.

"I call hit mighty careless shootin'," said he, irritated. "Now look what ye done to the likker! If ye'd held a leetle higher, above the level o' the likker, like I told ye, she wouldn't have busted open thataway. It's nacherl, thar warn't room in the cup fer both the likker an' the ball. That's wastin' likker, Jim, an' my mother told me when I was a boy, 'Willful waste makes woeful want!'"

"I call hit a plumb-center shot," grumbled Bridger. "Do-ee look now! Maybe ye think ye kin do better shootin' yerself than old Jim Bridger!"

"Shore I kin, an' I'll show ye! I'll bet my rifle aginst yourn—ef I wanted so sorry a piece as yourn—I kin shoot that close to the mark an' not spill no likker a-tall! An' ye can fill her two-thirds full an' put yer thumb in fer the balance ef ye like."

"I'll just bet ye a new mule agin yer pony ye kain't do nothin' o' the sort!" retorted Bridger.

"All right, I'll show ye. O' course, ye got to hold still."

"Who said I wouldn't hold still?"

"Nobody. Now you watch me."

He stooped at the little water ditch which had been led in among the buildings from the stream and kneaded up a little ball of mud. This he forced into the handle of the tin cup, entirely filling it, then washed off the body of the cup.

"I'll shoot the fillin' out'n the handle an' not out'n the cup!" said he. "Mud's cheap, an' all the diff'runce in holdin' is, ef I nicked the side o' yer haid it'd hurt ye 'bout the same as ef what I nicked the center of hit. Ain't that so? We'd orto practice inderstry an' 'conomy, Jim. Like my mother said, 'Penny saved is er penny yearned.' 'Little drops o' water, little grains o' sand,' says she, 'a-makes the mighty o-o-ocean an' the plea-ea-sant land.'"

"I never seed it tried," said Bridger, with interest, "but I don't see why hit hain't practical. Whang away, an' ef ye spill the whisky shootin' to one side, or cut ha'r shootin' too low, your *caballo* is mine—an' he ain't much!"

With no more argument, he in turn took up his place, the two changing positions so that the light would favor the rifleman. Again the fear-smitten Chardon adjusted the filled cup, this time on his master's bared head.

"Do-ee turn her sideways now, boy," cautioned Bridger. "Set the han'le sideways squar', so she looks wide. Give him a fa'r shot now, fer I'm interested in this yere thing, either way she goes. Either I lose ha'r er a mule."

But folding his arms he faced the rifle without batting an eye, as steady as had been the other in his turn.

Jackson extended his long left arm, slowly and steadily raising the silver bead up from the chest, the throat, the chin, the forehead of his friend, then lowered it, rubbing his sore shoulder.

"Tell him to turn that han'le squar' to me, Jim!" he called. "The damn fool has got her all squegeed around to one side."

Bridger reached up a hand and straightened the cup himself.

"How's that?" he asked.

"All right! Now hold stiddy a minute."

Again the Indian women covered their faces, sitting motionless. And at last came again the puff of smoke, the faint crack of the rifle, never loud in the high, rarefied air.

The straight figure of the scout never wavered. The cup still rested on his head. The rifleman calmly blew the smoke from his barrel, his eye on Bridger as the latter now raised a careful hand to his head. Chardon hastened to aid, with many ejaculations.

The cup still was full, but the mud was gone from inside the handle as though poked out with a finger!

"That's what I call shootin', Jim," said Jackson, "an' reas'nable shootin' too. Now spill half o' her where she'll do some good, an' give me the rest. I got to be goin' now. I don't want yer mule. I fust come away from Missoury to git shet o' mules."

Chardon, cupbearer, stood regarding the two wild souls whom he never in his own more timid nature was to understand. The two mountain men shook hands. The alcohol had no more than steadied them in their rifle work, but the old exultation of their wild life came to them now once more. Bridger clapped hand to mouth and uttered his old war cry before he drained his share of the fiery fluid.

"To the ol' days, friend!" said he once more; "the days that's gone, when men was men, an' a friend could trust a friend!"

Your Wife Knows the Worth of a Skinner Lining

One of the first things she will look at in your new suit or overcoat will be the lining. If it's Skinner's she'll be glad—for your sake and her own.

Skinner's Satin

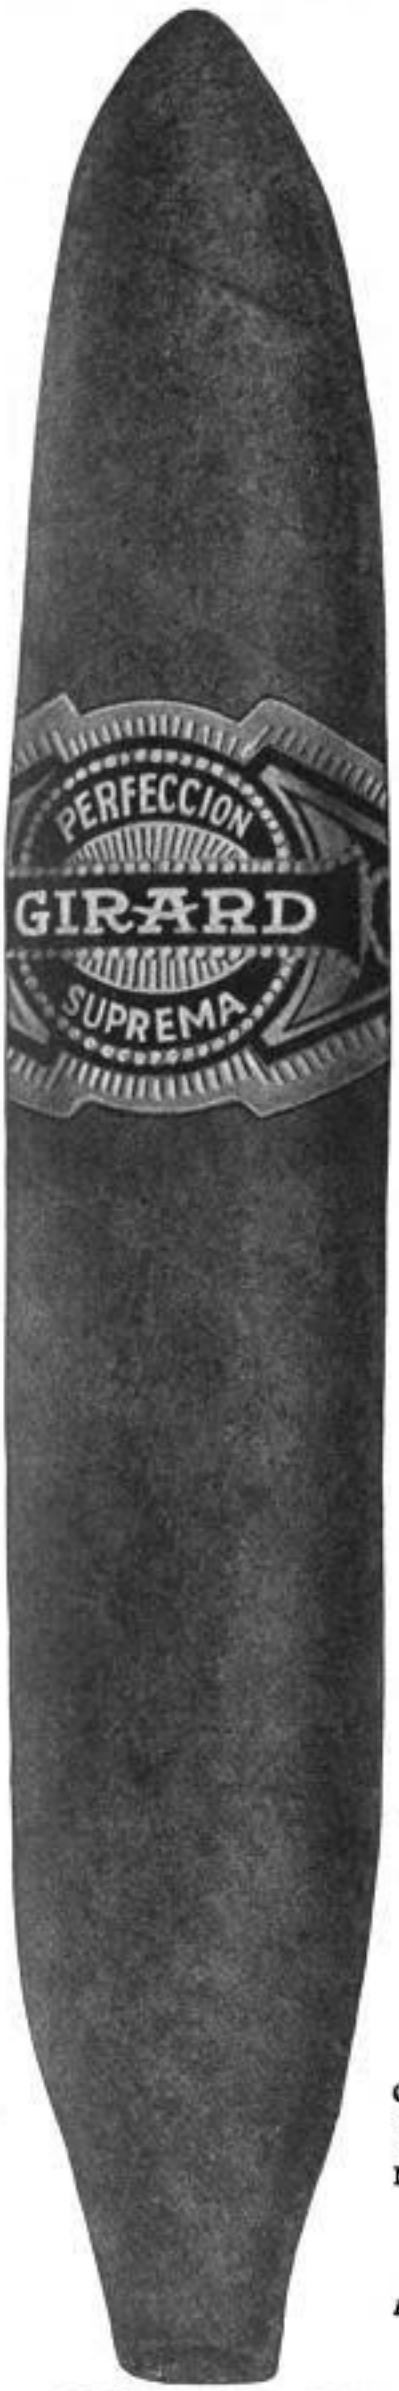
All-Silk or Cotton-Back

adds much to the distinction of a garment and does not require constant mending. It is the overwhelming choice of those manufacturers and merchant tailors who use only the best materials—and has been for three-quarters of a century.

In ready-to-wear garments look for the Skinner label shown below. In custom shops ask to see the satin and

"Look for the Name in the Selvage"

WILLIAM SKINNER & SONS
Established 1848 Mills, Holyoke, Mass.
New York Boston Chicago Philadelphia



The world's largest manufacturers of satin linings—both all-silk and cotton-back. Also makers of the famous Skinner's Serges and Merveilleux and Skinner's Dress Silks.

On request we supply this label to clothing manufacturers

GIRARD

America's Foremost Cigar

"To the ol' days!" said Jackson in turn. "An' I'll bet two better shots don't stand to-day on the soil o' Oregon! But I got to be goin', Jim. I'm goin' on to the Columby. I may not see ye soon. It's far."

He swung into his saddle, the rifle in its loop at the horn. But Bridger came to him, a hand on his knee.

"I hate to see ye go, Bill."

"Shore!" said Jackson. "I hate to go. Take keer yerself, Jim."

The two Indian women had uncovered their faces and gone inside the lodge. But old Jim Bridger sat down, back against a cottonwood, and watched the lopping figure of his friend jog slowly out into the desert. He himself was singing now, chanting monotonously an old Indian refrain that lingered in his soul from the days of the last rendezvous.

At length he arose and, animated by a sudden thought, sought out his tepee once more. Dang Yore Eyes greeted him with shy smiles of pride.

"Heap shoot, Jeem!" said she. kill-um. Why?"

She was decked now in her finest to use all her blandishments on h and master. Her cheeks were pain her wrists were heavy with copper thong at her neck hung a piece o stone which she had bored through awl, or rather with three or four aw much labor, that very day.

Bridger picked up the ornam tween thumb and finger. He said n but his fingers spoke.

"Other pieces. Where?"

"White man. Gone—out there answered in the same fashion.

"How, cola!" she spoke aloud. say, 'How, cola,' me." She smil much pride over her conquest, and two silver dollars. "Swap!"

In silence Bridger went into th and pulled the door flaps.

THE INSIDE STORY OF THE A.E

(Continued from Page 11)

decisive effect in forcing a withdrawal of German troops from northern France. The military and economic situation of the enemy, therefore, indicated Lorraine as the field promising the most fruitful results for the employment of our armies."—Pershing's report to Baker.

So the winter dragged along and the A. E. F. remained a feeble growth. Small wonder that our Allies took alarm and lost patience. Where was the American help on which they had counted? So far it had consisted merely of the appearance of certain small forces of troops and then their disappearance into training areas; no Americans had engaged in the fighting in units. The French became openly skeptical and scornful. They dubbed Americans "boy scouts."

The French and British authorities pressed their efforts to have the American troops incorporated in their armies instead of waiting to build up an American Army. They kept pleading the emergency, even when no possible emergency could arise before two or three months.

"My conclusion was that, although the morale of the German people and of the armies was better than it had been for two years," reported Pershing, "only an untoward combination of circumstances could give the enemy a decisive victory before American support as recommended could be made effective, provided the Allies secured unity of action. However, a situation might arise which would necessitate the temporary use of all American troops in the units of our Allies for the defensive, but nothing in the situation justified the relinquishment of our firm purpose to form our own Army under our own flag."

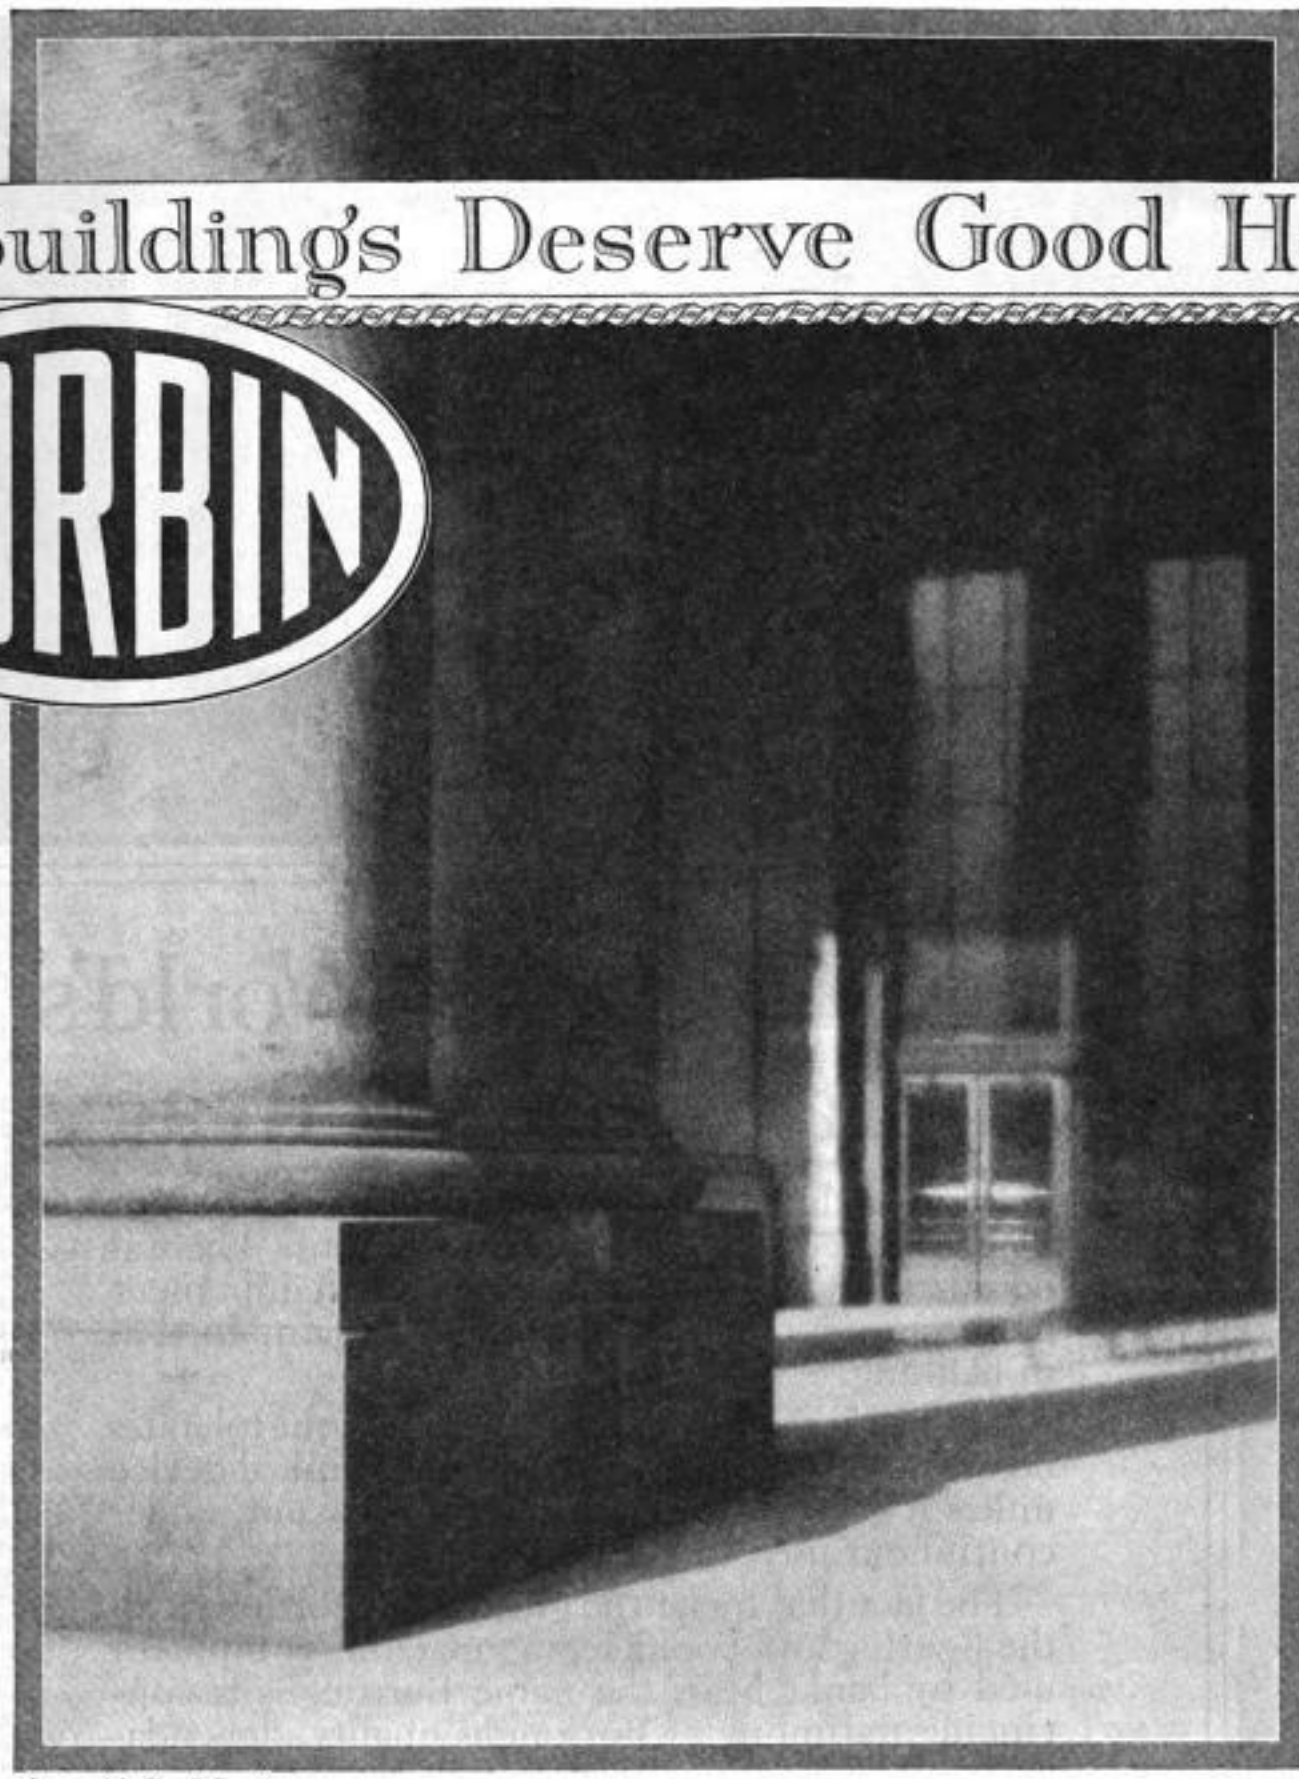
The chief trouble at this time was Allied morale. They were in the dumps. "Well, here's the war; you take it," was a common salutation from individuals in the Allied armies when our troops arrived from overseas, and the losses and sufferings they had gone through rendered this state of mind easy to understand. But their depression had the effect of confining their efforts and plans to defensive trench warfare, whereas the Germans were then practicing for open warfare and concentrating the pick of their men in shock divisions. The American command felt that only offensive methods and open warfare could end the war, and decided that any sort of permanent amalgamation of United States troops with the French and British would have a disastrous effect on their usefulness in attack.

Some American troops went into the line in the middle of January, and discussions were held with the British authorities on their renewed proposals for bringing over troops from the United States for incorporation in the British armies for training and experience. The outcome of these negotiations was the six-division plan, which provided for the transportation in British tonnage of six entire divisions, without interference with the American shipping program. The infantry and auxiliary troops were to be given experience with British divisions, the artillery was to be trained under American direction, using French *matériel;* and it was agreed that when these battalions of infantry had received sufficient training they should be united for service in American divisions their own officers. It was planned t period of training should cover ab weeks. By this arrangement the A commander in chief secured the stip for which he had held out in the con described in a previous article.

The Supreme War Council appro agreement and adopted a memo which concluded "that France w safe during 1918 only under certain tions: (a) that the strength of the and French troops in France are o ously kept up to their present total s and that they receive the expecte forcements of not less than two A divisions per month."

And then came disaster. On twenty-first the Germans opened a sive against the British with the m midable military machine the wor ever seen. They crashed through th ish line, crossed the old Somme batt took 90,000 prisoners, and swept forw an irresistible flood, clearing ever before them to a depth of fifty-six k ters. The railroad center of Amie peared to be doomed; French and B reserves were eaten up in a vain ef stem the onrush. A plan adopted— of a supreme command—by which e the Allies was to furnish a certain n of divisions for a general reserve to b under direction of the Supreme War cil chiefs failed tragically; these re were not available in the crisis, and hundred thousand first-class troops cess of the country's requirements ha held in England. A. F. Pollard, pro of English History in the Univers London, writes: "Those hundreds of sands of troops shown to be superflu England by the subsequent dispat France were kept at home because p in authority believed they were need defend our shores against a Germa vasion."

The blow to Allied morale was sh ing. It looked like the beginning of th and something had to be done instu The lack of complete coöperation a the Allies was proving fatal. The F and British representatives got togeth Doullens on March twenty-sixth and n Foch to coördinate the operations o Allied armies, but they did not confe him supreme command in all its i pretations. Just why reservations made in his appointment is explained cable from Secretary Baker to Pres Wilson under date of March thirtieth:



"The situation seems to be that L George is personally in favor of a sup commander, but fears British opinion be the other way because such a comma could sacrifice the Channel ports to defense of Paris. The arrangement th fore is that General Foch is to be supr enough to coördinate, but without b called Supreme Commander. . . . venture to suggest that in replying to t part of Lloyd George's message you m go further than he asks and say that we willing to accept a general supreme c mand whenever the French and Bri are. Perhaps the relative smallness of present force and our having no immedi defensive object in France would mak unwise for us to urge the point, though

ood Buildings Deserve Good Hardware

CORBIN

Photograph by Clara E. Sipprell

Main approach to Pennsylvania Station, New York.

This monumental and useful building has good hardware—Corbin.

The finest buildings *have* Good Hardware

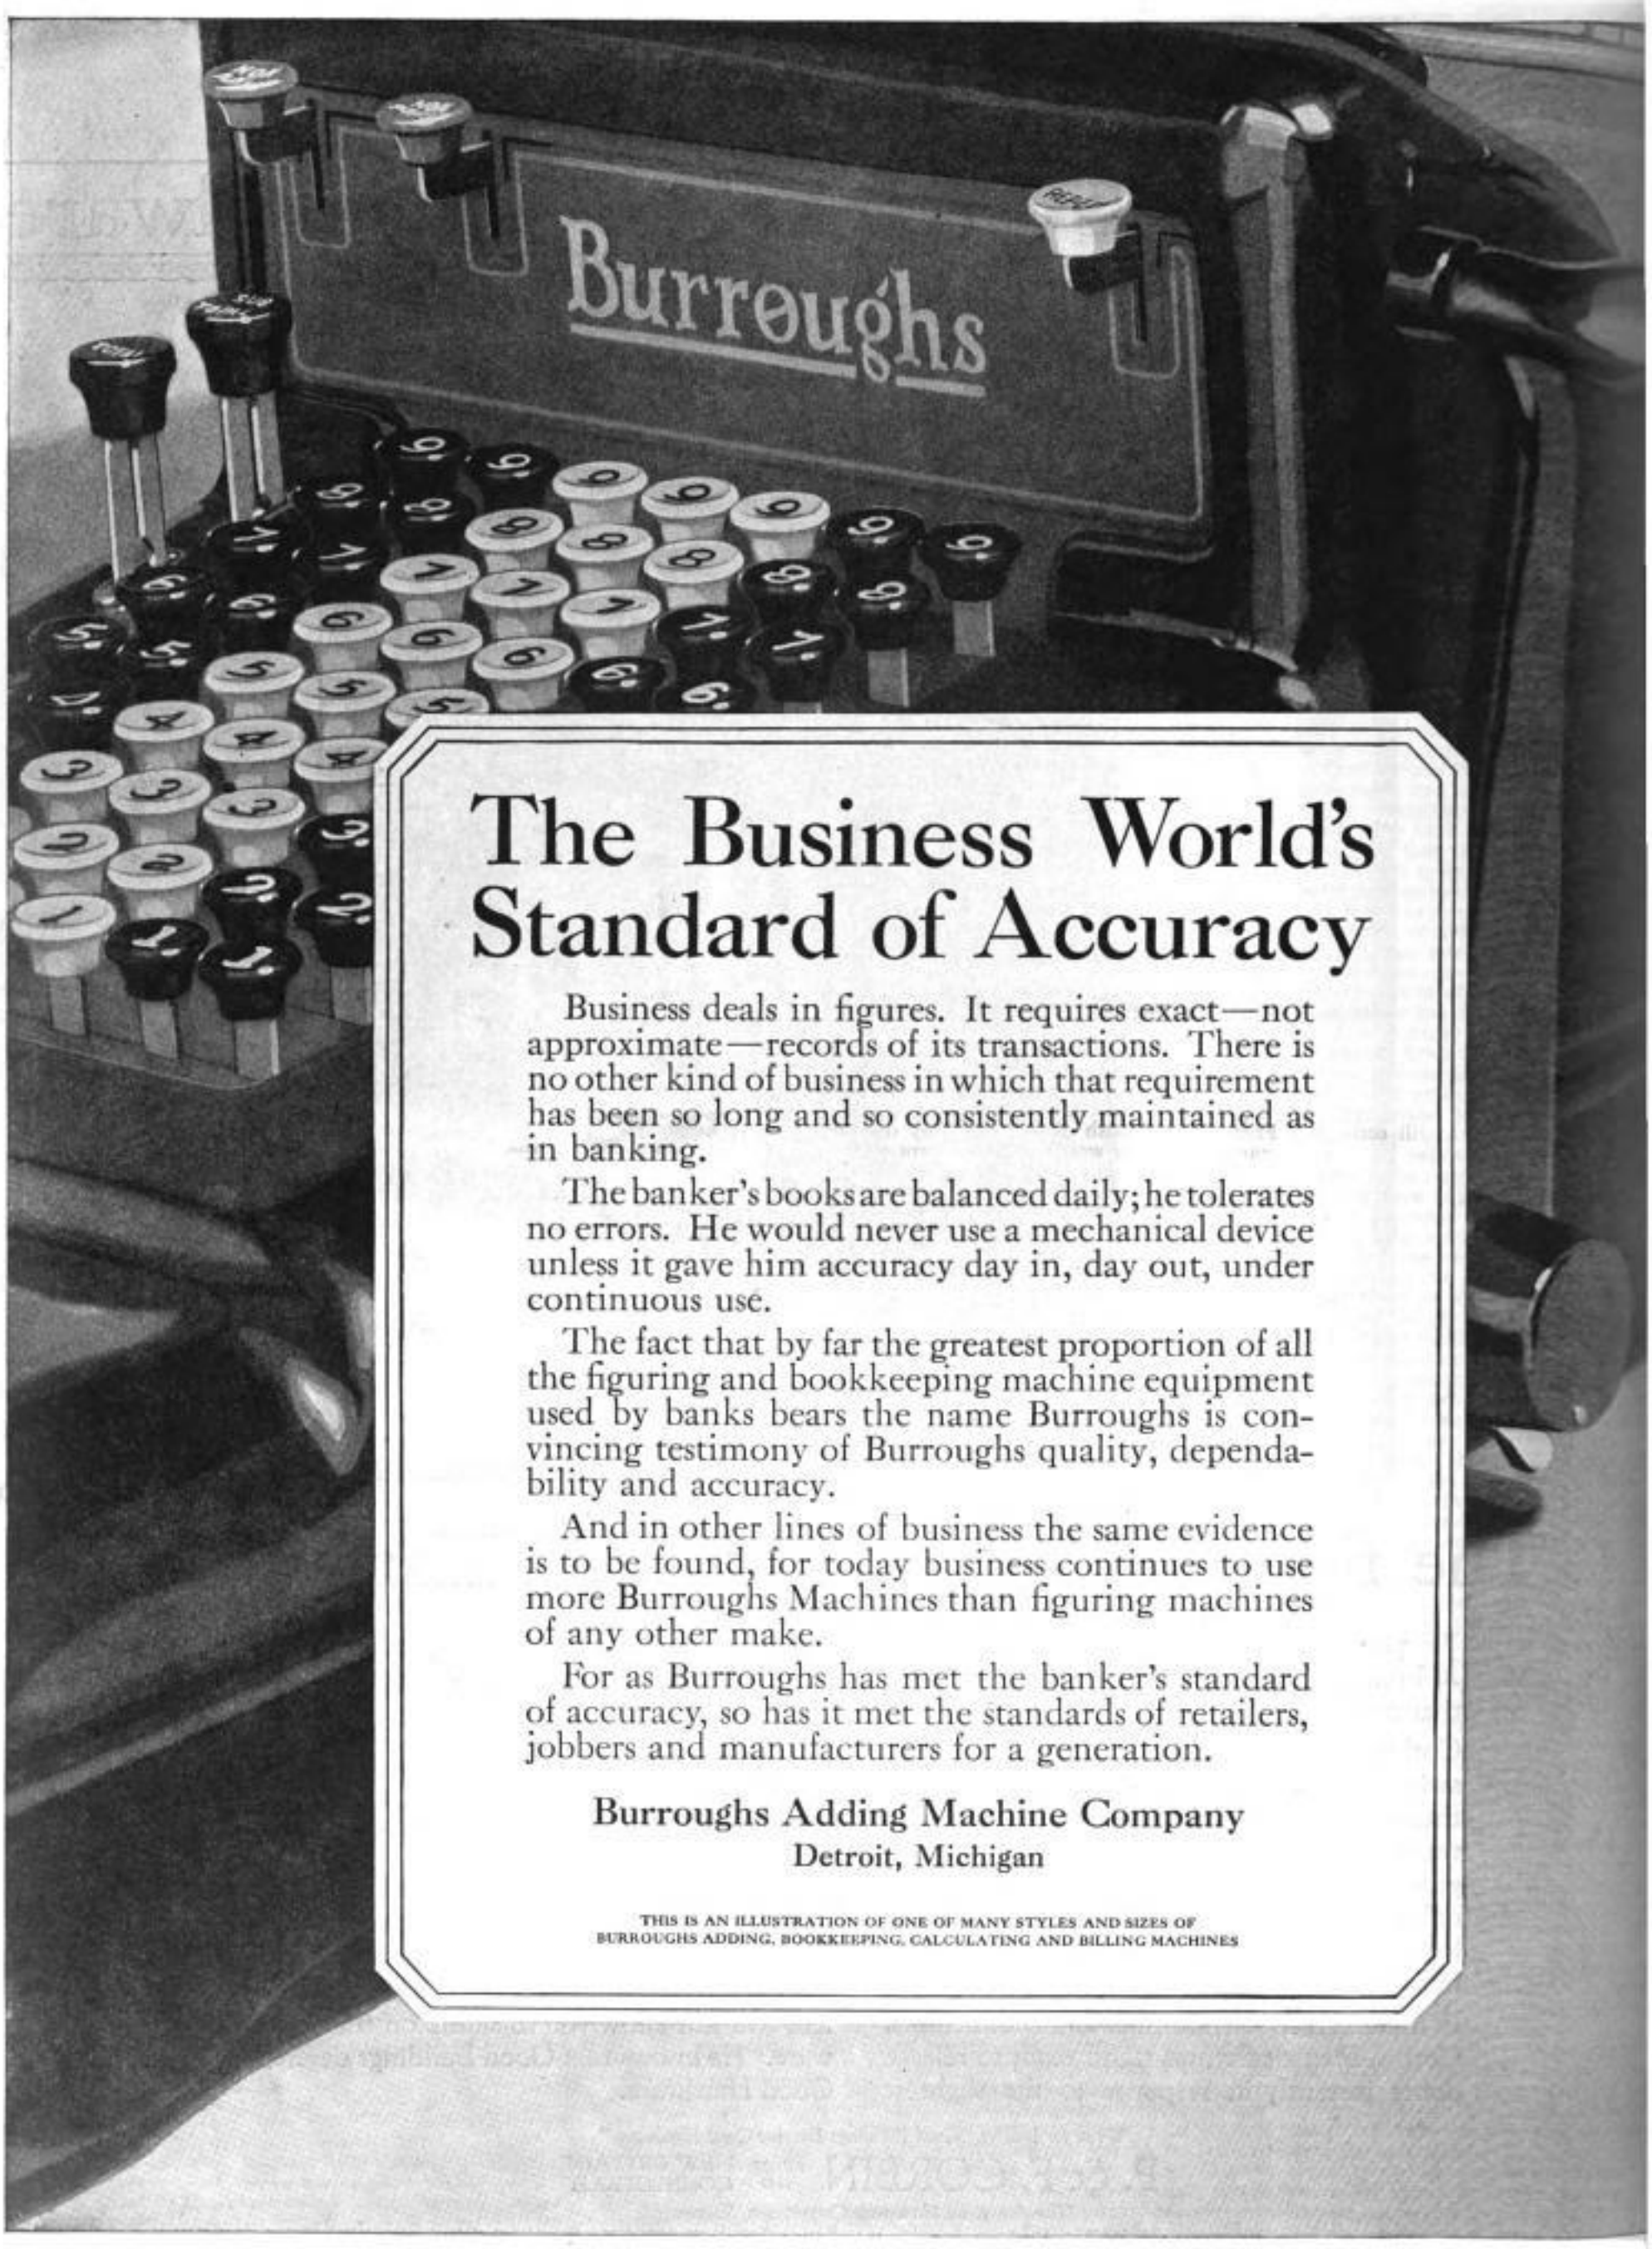
IF you examine the hardware in the fine buildings of your community, you will find that much of it is Corbin.

Corbin butts and hinges help the doors to swing smoothly. Corbin door-checks close them without slamming. Corbin locks lock them securely. Corbin master-key systems guard thousand-room hotels, thirty-story office buildings, government and institutional buildings and more residences than you imagine.

In theatres, schools, factories and auditoriums, Corbin fire exit fixtures stand ready to release doors instantly in response to the slightest pressure. When the emergency comes, *they work*. Therein lies the true worth of Good Hardware—*it works*.

Corbin hardware not only *works*. It *lasts*. You can say to yourself, when you put it in your home, "This hardware is a part of the house and always will be."

Are you about to build? Give to hardware the attention it deserves. Nothing reflects the character of a building, or the good taste of its owner, so surely as the hardware. Your architect will not allow you to skimp on the hardware. He knows that Good Buildings deserve Good Hardware.



Write for booklet, "Good Buildings Deserve Good Hardware."

The Business World's Standard of Accuracy

Business deals in figures. It requires exact—not approximate—records of its transactions. There is no other kind of business in which that requirement has been so long and so consistently maintained as in banking.

The banker's books are balanced daily; he tolerates no errors. He would never use a mechanical device unless it gave him accuracy day in, day out, under continuous use.

The fact that by far the greatest proportion of all the figuring and bookkeeping machine equipment used by banks bears the name Burroughs is convincing testimony of Burroughs quality, dependability and accuracy.

And in other lines of business the same evidence is to be found, for today business continues to use more Burroughs Machines than figuring machines of any other make.

For as Burroughs has met the banker's standard of accuracy, so has it met the standards of retailers, jobbers and manufacturers for a generation.

Presently eau and Petain went out into the nd General Pershing told Foch had come for.

rench newspapers of the day quoted : "I have come to tell you that erican people would consider it a nor for our troops to be engaged in eat battle. I ask you for this in me and my own. Infantry, artilation—all that we have is yours. as you wish. More will come, th equal to requirements."

A Dramatic Moment

ve come especially to tell you that erican people will be proud to take the greatest battle of history." was manifestly touched. He grabbed erican commander by the arm and at M. Clemenceau must hear of this . The two hurried into the garden, they perceived the French Prime er in conversation with Petain. Holdking by the arm Foch strode across n and briefly told them the news.

Tiger's eyes lighted; even Petain, ossesses what is known in America poker face, reflected appreciation. iscussed what arrangements should de, and Foch said that the details tting this offer into effect could be between Petain and Pershing.

is published final report the Amerommander in chief has only this ent to make on the incident: "The ance of this offer meant the dis- of our troops along the Allied front consequent delay in building up a tive American force in Lorraine, but erious situation of the Allies de- ed this divergence from our plans."

the end of eight days the German drive s impetus, but a couple of days before spent the military representatives the Supreme War Council prepared a which ran in part as follows:

he battle which is developing at the nt moment in France, and which can d to the other theaters of operations, very quickly place the Allied Armies erious situation from the point of view jectives . . . and the new situation res new decisions.

The Military Representatives are of ion that it is highly desirable that the rican Government should assist the d Armies as soon as possible by perting in principle the temporary service merican units in Allied Army corps and sions. Such reinforcements must, how- , be obtained from other units than e American divisions which are now rating with the French, and the units so porarily employed must eventually be rned to the American Army.

"The Military Representatives are of the opinion that from the present time, . . . and until otherwise directed by the Supreme War Council, only American infantry and machine-gun units, organized as that Government may decide, be brought to France, and that all agreements or conventions hitherto made in conflict with this decision be modified accordingly."

Commenting on this note after a conference with Pershing and Bliss, Secretary Baker cabled to the President:

"This ought to be conceded only in view of the present critical situation and continued only so long as that situation necessarily demands it. The question of replacements will continue to embarrass the British and French governments, and efforts to satisfy that need by retaining American units assigned to them must be anticipated, but we must keep in mind the formation of an American army, while at the same time we must not seem to sacrifice joint efficiency at a critical moment to that object." He recommended that the preferential transportation for infantry and machine-gunners should be approved, and added: "He"—the commander in chief of the American Expeditionary Forces—"will use these and all other military forces of the United States under his command in such manner as to render the greatest military assistance, keeping in mind always the determination of this Government to have its various military forces collected, as speedily as their training and the military situation permits, into an independent American Army, acting in concert with the armies of Great Britain and France, and all arrangements made by him for their temporary training and service will be made with that end in view."

These recommendations were accepted, and preliminary arrangements were made with the French and British for training and early employment of such infantry units as might be assigned to each.

The Wishes of Our Allies

By now, however, the Allies were clamoring for indefinite continuation of priority for the infantry, and urging complete incorporation of these American troops in the French and British divisions. They demanded, in other words, entire absorption of the American forces to make up French and British losses and give them sufficient numbers to combat the Germans. So the A. E. F. commander found it necessary to cable the War Department on April third that the priority of infantry should be limited to four divisions, plus 45,500 replacements, and that the necessity for any priority in the future should be determined later.

The efforts made to obtain the employment of America's troops varied considerably. The British proposed to Secretary Baker late in March that engineer and other American troops employed in making the communications for the American Army should suspend that work and be drafted behind the Allied Front to construct defensive lines. They also asked for American batteries in excess of our divisional requirements, and wanted American artillerymen to be sent to British batteries to replace losses among the British artillery personnel through the recent German offensive. Also, they suggested that one of the American divisions reported to be complete with transport should be employed to increase the infantry in British combat divisions.

On the French side, in a conversation between Petain and Pershing about the same time, the French general asked for American divisions to relieve some French in the line, which he wanted to use elsewhere in the battle front. The American commander in chief agreed to this proposition, but wanted his troops united on the front as an American corps.

Petain objected that they had not had sufficient experience to justify this, never having functioned as a corps. He considered the plan too hazardous.

This gave Pershing the opportunity to emphasize the need of following a policy looking to the building up of an American corps and army. General Petain approved of the idea, but said he could not at present fix a date for the organization of an American corps. In asking for the incorporation of American troops in the French Army he wished to drive home the extreme urgency of the crisis.

General Pershing agreed that American divisions should take their place as soon as possible in quiet sectors of the line, and the

Breakfast Comfort—

Yes,—we mean just that!

In thousands of America's electrically lighted homes, breakfast-table comfort is being enhanced by use of the Marion Flipflop Toaster.

The Flipflop adds charm, convenience and pleasure to the art of table toast making for—

— It saves time. No trips to the kitchen; no dirt, fuss or worry over the breakfast toast.

— Flipflop makes it unnecessary to use a fork or to handle the toast with the fingers. So simple too—just a flick of the grid, down and back, and the other side is a-toasting near the cherry-red coils.

— Flipflop is strong and sturdy—no springs to get out of order and its glittering polish adds distinction to your table.

Your toast will be hot and savory, of a crunchy brownness or lightly toasted, as you wish it.

Other willing Marion Electrical Servants are ready to bring happiness to every room of your home or the home of some friend.

Ask your dealer to show them to you.

Rutenber Electric Company, Marion, Indiana

Wonderful!

The strangest way to kill flies you ever saw!

2 FLIES or 100 Flies in a room—no matter how many. Three to five minutes, and *every fly dead!*

A dozen or so shots of Flyosan, sprayed into the air—that is all.

Nothing like Flyosan was ever heard of until a Chief of Sanitation in the government service discovered it—a great step forward in the science of insect riddance.

Flyosan is a non-poisonous liquid which you apply with an ordinary garden sprayer.

Thanks to Flyosan, the butter, the milk, the nipple on the baby's bottle—are now safe from the filth-carrying habits of the fly, that spreader of disease.

To human beings, animals, birds and fowl, Flyosan is harmless—absolutely. After use, it leaves no cleaning up to do. Its odor is aromatic and pleasant.

You can now rid your home of flies by the roomful.

If Flyosan should in any way fail to live up to your expectations, we will refund the retail price.

If your drug, grocery or hardware store does not carry Flyosan, send us a dollar and we will send you an introductory package containing a pint of Flyosan and a sprayer.

conversation turned on the American divisions being trained with the British. The commander in chief wanted to withdraw them for use with his other forces. Petain did not oppose withdrawing them from the British, but remarked he could use these American divisions advantageously in service with depleted French divisions. Perhaps, he said, it could eventually be arranged to have two French regiments and one American regiment per division.

Later—on April tenth—General Petain wrote to General Pershing as follows:

"No matter how appreciable it may be, the aid which you will be able to bring us will necessarily be limited and will be very far from making up the wearing out of our units in the battle. On the other hand, the effectives which we have available are also limited; thus, as I told you, it is necessary for us to plan for the suppression shortly of a certain number of our divisions. . . . This depression is of a kind to have a considerable influence in the result of the campaign of the year 1918. I can see only one way of escaping it, which is to obtain from America—which alone has the necessary resources in men—a sufficient support to compensate for our losses.

"It is for the infantry that our needs are imperious and urgent; it would therefore be advisable that priority be given to the transportation of American infantry during the approaching months, so that the effective strength of our divisions during the battle, which may be prolonged during the whole of the summer, may be maintained."

General Petain then proceeded to recommend that the shipping allotted to the transport of the American Army be devoted to transport of infantry, instead. "I allow myself to make this suggestion to you because I see the solution of the grave problem of effectives in the present campaign only in American coöperation in infantry."

Evidently the restrictions placed upon Foch's elevation to commander in chief of the Allied armies had provoked friction and difficulties, because another conference was found necessary to straighten out the misunderstanding. It was held in Beauvais on April third. Mr. Lloyd George, M. Clemenceau, Foch, Haig, Sir Henry Wilson, Bliss and Pershing attended.

Clemenceau opened proceedings by explaining that there existed some disagreement in the understanding of Foch's powers as conferred on him at the Doullens conference of March twenty-sixth.

Foch stated that the powers conferred by the Doullens conference were limited to coördination of action between the Allies. They were conferred while the action was in progress, and the power to coördinate had been construed to be limited to the time the Allies were in action. That step was taken on March twenty-sixth. It was now April third, and since the armies were no longer in action, but were facing each other, there was nothing to coördinate. He thought there should be authority to prepare for action and direct it. "We are right back where we were before," declared Foch.

Unity of Action

Mr. Lloyd George said they had had three years of war and had not had unity of action during that time. During the year just gone they had seen two kinds of strategy, one by Haig and another by Petain, and nothing had really been gained. The only thing the Allies had accomplished occurred while General Nivelle was in supreme command.

The Germans, continued Lloyd George, had done exactly what General Nivelle tried to do. Recent happenings had stirred the British people very deeply, and such things must not happen again, as the people would demand why they had happened and somebody would be called to account. The British wanted some sort of unity of command. General Foch was at present empowered to coördinate the action of the Allied Armies, but this did not go far enough, as he had no authority to control except by conferring with the respective commanders in chief. He needed authority to prepare for action, and Mr. Lloyd George thought that the resolution adopted at Doullens should be modified so that they might have a better understanding.

General Pershing remarked that the principle of unity of command was undoubtedly the correct one for the Allies to follow.

"I do not believe it is possible to have unity of action without a supreme commander," he said. "We have already had experience enough in trying to c the operations of the Allied Armi out success. There has never unity of action. Such coördination two or three armies is impossible, ter who the commanders in chief Each commander in chief is inte his own army, and cannot get commander's point of view, nor problem as a whole. I am in f supreme commander and believe cess of the Allied cause depends I think the necessary action should by this council at once. I am in conferring the supreme comma General Foch."

The British Prime Minister warm approval. "I fully agree eral Pershing. That is well put." turned to Sir Douglas Haig and for an expression of opinion.

Sir Douglas declared that the had practically complete unity He had always coöperated with th whom he regarded as in contr strategical questions of the war, placed under the command of Nivelle and General Petain he ha worked well with them. Sir Dougl with Pershing's general idea th should be unity of command, bu ered that they already had it.

Foch in Supreme Comm

After some further talk a resolu adopted to confer the supreme c on Foch, but it referred only to th and French armies.

Pershing said this resolution sh clude the American Army, whic soon be ready to function as s should therefore be included as a like the French and British armies

Petain said: "There is no Americ yet as such—its units are either ing or are amalgamated with the and French."

General Pershing replied: "Th not be an American Army in fo tioning now, but there soon will b want this resolution to apply to it becomes a fact. The American ment is represented here at this con and in the war, and any action supreme command that includes t ish and French armies should also the American Army."

An agreement was reached as "Gen. Foch is charged by the French and American Governmen the coördination of the action of th Armies on the western front; to there is conferred on him all the necessary for its effective realizati the same end, the British, Fren American Governments confide Foch the strategic direction of operations.

"The Commander-in-Chief of the French and American Armies will to the fullest extent the tactical d of their armies. Each Commander-i will have the right to appeal to his ment, if in his opinion his Army is in danger by the instructions receiv Gen. Foch. (Signed) G. Clemenceau; F. Foch; Lloyd George; D. Haig. Henry Wilson, General; Tasker H General and Chief of Staff; John shing, General, U. S. A."

The tail of the agreement was of the devil of distrust which lurke the Allied dispositions throughout years of war. The curious reservati each commander in chief had the r appeal to his government if he deem of Foch's orders endangered the ex of his army was inspired by the dread that the French might, in a sacrifice the Channel ports to protect The French lived in constant fear tha British allies would permit the fall o in order to save the Channel ports. feeling had a very injurious effect early conduct of the war.

The British assumption that the ential shipment of American infant employment in the British and F Armies was to be continuous develo a meeting in Paris between Secretary and Pershing, and Major Generals ham and Hutchison. At that meeting eral Whigham stated that the British be able to ship 60,000 troops per m and the Americans 60,000, making a of 120,000 per month.

These figures seemed to puzzle Secr Baker. He pointed out that no figure

Being "handy" is just owning the right tool

For clogged drain

As emergency clamp or vice

On any nut or bolt (a cloth will prevent scratching)

To turn screw-driver when screw is rusty

To turn or grip anything—any shape; as furnace shaker

DO you qualify as a "handy-man-round-the-house"? Do you flinch when she pleads "Can't you fix it?"? When a rusted screw sticks, when the stove shaker hides, when a nut on the baby carriage gets loose, do you putter at it with a makeshift tool, bung your knuckles and bungle the job? When a faucet drips, or the radiator leaks, do you quit cold and call the plumber?

The plumber doesn't want "piker" jobs. He has more profitable work to do. He'll advise you to save time and money by owning a genuine WALWORTH Stillson Wrench. "Take your Stillson to it" has been a by-word with two generations of mechanics. Now it is getting into the household, because it will turn things that an ordinary wrench can't hold on to—such as a pipe.

Dan Stillson invented it in the Walworth plant over forty years ago. It is the best known wrench in the world. The working parts are drop-forged from the best tool steel, finely finished, and heat-treated to give strength and toughness, combined with hardness, without brittleness.

Ask your hardware dealer for a 10-inch genuine Walworth Stillson Wrench (be sure to look for the diamond trade-mark). Also write for descriptive folder.

been mentioned in the Versailles agreement, and he would like to know the origin of those given by General Whigham. Mr. Baker emphasized the fact that there had been no obligation on the part of the United States to send any given number of troops per month or for any particular period. He did not think it was clear that the Versailles agreement annulled the original six-division plan adopted at British behest. The Versailles agreement provided that priority of shipping for infantry should be given only until further orders—and those orders might come to-morrow.

Whigham said the British War Office interpreted the Versailles agreement as wiping out all previous agreements.

Baker replied: "What is pertinent to the present discussion is that American troops are going to the British for training. I don't want the British public or army, or the French public or army, to get an exaggerated idea that this scheme provides, or will provide, a means by which their losses are to be made up in future. I want no feeling of disillusionment when General Pershing calls for the return of the troops intrusted to them for training."

General Whigham replied that this was perfectly understood.

However, I venture to remark in passing that this arrangement Mr. Baker warned against was precisely what the British and French were trying to bring about. They had an uncanny knack of interpreting any concession made to help them out in a pinch as a fixed policy to be followed indefinitely, and their honest indignation knew no bounds when checked in their disposition of American resources among themselves.

Hardly had the battle lines of the March offensive by the Germans become stabilized when they delivered another crushing blow against the British in the vicinity of Armentières and along the Lys River. Passchendaele Ridge, whose capture had cost the British such a fearful toll of lives in 1917, had to be evacuated. The German attack was launched on April ninth on a forty-kilometer front, and losses were so heavy that the British were hard put to it for replacements.

Consequently they put forth extraordinary efforts to increase the shipping available for American troops. General Pershing went to London on April twenty-first to reach some agreement, and while there was shown a copy of a note which had been handed to Lord Reading, the British Ambassador in Washington, on April nineteenth. This note recognized the principle of priority of shipment of infantry and machine-gun personnel throughout the months of April, May, June and July. It was another instance of the Allies going over Pershing's head to Washington.

The Program Adopted

But the note assumed a shipping capacity of only 120,000 men per month, whereas the London authorities saw in sight enough British tonnage alone to carry 130,000 in May and 150,000 in June, with a greatly increased capacity for July. Finally an arrangement was arrived at providing that American troops should be sent over in the following order: Infantry, machine guns, engineers and signal troops, and headquarters of divisions and brigades, during May, for training and service with the British Army in France; but only up to six divisions. Any excess shipping was to be used for transporting troops necessary to make the American divisions complete.

It was stipulated that the artillery personnel of these divisions and the corps troops requisite to build up American corps organizations should follow immediately thereafter, and that the artillery personnel should receive its training with French *matériel* and join its own divisions as soon as trained.

Upon completion of this program, if the military situation made advisable the further shipment of infantry of American divisions, "then all the British and American shipping available for transport of troops shall be used for that purpose under such arrangement as will insure immediate aid to the Allies. . . . (d) That it is contemplated American divisions and corps when trained and organized shall be utilized under the American Commander-in-Chief in an American group. (e) That the American Commander-in-Chief shall allot American troops to the French or British for training, or train them with American units, at his discretion, with the standing that troops already tra by British shipping, or included i divisions mentioned in paragraph to be trained with the British Arm

Of course the French chose to s agreement an indefinite assignment ican infantry to British units; so, that the United States had accep principle, they wanted it applied to Therefore, at the opening of a me the Supreme War Council at Abbe May first, they started with a st that the first business was the allot American troops to the Allies.

This calm assumption of Amer ceptance of the rôle of replacemen voir was rather bewildering, and th ner of introducing the subject le doubt that the American comma chief, in their opinion, had no lon voice in the matter. That they ju a hasty conclusion seems evident f wording of the agreement reache prolonged debate:

"It is the opinion of the Supre Council that, in order to carry the successful conclusion, an Americ should be formed as early as possib its own commander and under its o In order to meet the present emer is agreed that American troops sh brought to France as rapidly as transportation facilities will perm that, as far as consistent with the n of building up an American Army, ence be given to infantry and machi units for training and service with and British Armies; with the unde ing that such infantry and machi units are to be withdrawn and unite its own artillery and auxiliary troo divisions and corps at the discretion American Commander in Chief afte sultation with the Commander in C the Allied Armies in France." T mainder of the agreement was prac an indorsement of that concluded i don, for it carried the same provisio

Mr. Baker's Cablegram

Apparently the arrangements ma priority of infantry were not so ext as the Allies wanted, because a litt they were pressing further demands Secretary of War cabled Pershing on twelfth:

"The President asked me to say t that he has been much impressed an turbed by representation officially m him here by French and British Am dors showing the steady drain upon F and British replacements and the number of replacement troops now able. He feels that you on the ground full opportunity to know the situatio fully trusts your judgment as to how ought to give additional priority to try and machine-gun units, in view fact that such troops seem to be the immediately serviceable and un needed. The Abbeville agreemen course, provides less priority for inf and machine-gun units than was r mended by the Supreme War Counci with shipping at present in prospec result in practically 120,000 infantry machine-gun units, signal corps, and neer corps per month during May June. It has been suggested to the P dent that General Foch may reopen subject with you, and the President h you will approach any such intervie sympathetically as possible, particula the suggestion as to replacements w has been presented to him is as critic it seems."

Orders were issued on May second b Eighth French Army for withdrawal o American Twenty-sixth Division from sector for service in another. This r called forth the following comment f General Pershing in a note to the Chi the French Military Mission: "Inasm as the final decision as to the Amer divisions to be sent to the battle front r be made by these headquarters, it is gested that in the future I be informe to the proposals of the French comm before any action is taken."

The French opinion of the Americ under training at this time is of inter In a memorandum issued May 1, 1918, Petain's headquarters, on instruction American units attached to large Fre units, these observations occurred:

hy connoisseurs prefer Johnston's

olates differ greatly. Johnston's are noted for a thick, rich chocolate coating. As this costs more than the center, makers etimes tempted to thin it.

We make our own chocolate. Thus we control its quality. We use only the finest of the 110 grades of cocoa bean, from which chocolate is made.

Every process gets the utmost in time and care. For instance, the longer chocolate is whipped, the better it becomes. Ours is worked four times as long as the average. It costs more, but is worth it.

We make our own syrups. Also our cream fondant —the inside of chocolate creams. We use only the costliest Cuban cane sugar—much finer than ordinary sugar. We accept only whole nuts and fruits. Thus we are sure of luscious fruit centers. Of nut centers full flavored and tasty.

All Johnston's chocolates are dipped and packed in rooms where the air is washed.

We have never compromised on quality. A Johnston confection must be the finest of its kind that can be made.

THE SIGNATURE THAT BECOMES THE MAI OF A PRICELESS CRAFTSMANSHIP

YOU have heard of the craftsmen of the ancient Guild of Watchmakers, and of the great love they bore their guild.

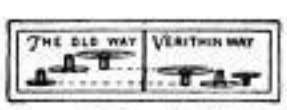
Ofttimes, beneath the arched windows of the old guildhall, a worthy guildsman toiled for half a year over a watch which one day would weight the pocket of some European nobleman.

Proud of the skill which made possible his fine achievements, he was prouder still of the guild spirit and traditions. They were ever with him as he worked, lending a greater deftness to his hand, a greater beauty to his masterpieces.

And when he had completed a timepiece worthy of his name and a credit to his guild, he would sign it, even as Raphael signed a painting or Cellini a golden vase.

Centuries have passed since first a master's signature became the symbol of a priceless craftsmanship.

But today descendants of the old-time guildsmen labor in a modern guild, building for the name Gruen a prestige greater even than that of the most famous of the ancient masters.



It is natural that the name Gruen, reflecting as it does the ideals and traditions of fine craftsmanship, should be found in a watch of greater perfectness, and that in the mind of every American this name should have come to stand for beauty and endurance, for timekeeping accuracy.

Announcing the new Gruen Pentagon

The Gruen Pentagon — the newest genuine Verithin — is a striking example of that craftsmanship which has made Gruen Guild Watches pre-eminent among today's finest timepieces.

Of unique design, it is so formed that it won't tip over in the pocket. It is fitted with the famous Gruen Precision Movement, and guaranteed to come within railroad time requirements.

You may see the Pentagon and other Gruen Watches at the best jewelry stores in each community, to which their sale is confined. Look for the Gruen Service Emblem displayed by leading jewelers.

How the Gruen Pat. Wheel Construction made an accurate watch logically thin. It isn't a Verithin unless it is a Gruen

e French population saw these things wondered. A new hope stirred in . Underneath all these activities—in mping of countless feet, the ceaseless ble of troop trains—they could feel the mighty power of a roused nation flowing in resistless flood. So they gave a cheer and knocked off to follow the marching troops; and the poilu took a hitch at his breeks, lit a cigarette, and decided to take another fall out of Heinie.

Meanwhile the Germans, checked in their advance on Paris, were organizing for another effort. The prospect gave the British and French commands intense concern. Where would the new blow fall? How could it be met? Where were replacements to come from?

The whole question of man power was threshed out at a conference in Versailles on June second. Present at this meeting were Prime Minister Lloyd George, Viscount Milner, Gen. Sir Henry Wilson, Sir M. P. A. Hankey and Maj. Gen. Sir H. A. Lawrence, representing Great Britain; Clemenceau, Foch, General Weygand and General Mordacq, representing France; Pershing, General McAndrew, Colonel Connor and Colonel Boyd, representing the United States. Professor Mantoux acted as interpreter.

The announced subject of debate was the June and July transport program. General Foch opened it by saying that he and General Pershing had been unable to agree at a meeting the previous evening, and he inquired of the American commander in chief if he had any proposal to make.

General Pershing's Position

General Pershing suggested that, in view of the emergency, preference should be given in shipping during July to such infantry and machine gunners as were trained and ready, but he was emphatic in declaring that the United States must not be denuded of trained men. He was just as strongly opposed to bringing green, untrained men who would be unable to get into the fight within thirty days after landing, anyhow. The point he particularly stressed was that at the end of June there would be only a small proportion of infantry scattered among the eighteen divisions left in the United States.

In reply to this General Foch urged that every infantryman in the United States should be brought over, after sufficient instructors for the new levies had been excepted. It wasn't necessary to leave riflemen for instructional purposes, he argued.

The American commander in chief reminded the conference that this was a matter for the War Department at Washington to decide. He reiterated his opposition to any attempt to drain the United States of trained men, because it would oblige America to improvise an entirely new army.

At this point Mr. Lloyd George took part in the discussion. He remarked that they must be quite clear what General Pershing's proposal meant—that is, the Allies would receive practically no infantry from the United States in July. If President Wilson really intended this, they could understand, but he, Lloyd George, had not hitherto understood anything of the kind. He quite realized that the number of men to be retained in the United States was entirely a matter for the War Department at Washington to decide, he said, and he referred with his customary tact to the debt the Allies owed to President Wilson for generous and chivalrous aid in the manner in which he had agreed to meet their needs; but Mr. Lloyd George understood that 50,000 men were to be left in the United States as a nest egg, and if such a nest egg were left there they would have nothing but new levies to bring to France.

General Pershing replied that he did not say no part of these 50,000 would come, but the question must be left to the American War Department to determine. Upon which the British Prime Minister remarked that all they could do was to represent to President Wilson their needs and hopes, and make an appeal to him to come to the rescue—more especially of France—at a time of the most terrible necessity in which that country had ever been placed. The Allies were, of course, in the hands of the United States of America, he added.

General Pershing stated, "But in July there will be very little left in the United States except troops of one or two months' training."

Mr. Lloyd George's comment on this was that even these partially trained troops should be brought over, as a month's training on the spot would be worth more than three months' in America, and by training in France the American drafts would come into contact with their own men and would get the atmosphere of the war, which was an infinitely better atmosphere for training.

General Pershing said the troops should certainly have some training after they arrived, but in July they would be still too green. Drafts were being called up in June, and consequently in early July they would have had only one month's training, he said.

M. Clemenceau broke in with "In the meantime, what is to happen to the war?"

General Foch added: "They should bring over every available man, leaving only a certain number of instructors." His information was that ample tonnage would be available in July, and he urged that it be devoted to bringing infantrymen, filling the ships with the most advanced recruits.

The American commander in chief remarked that the question seemed to have become more or less complicated. The previous day he had explained his desire to ship more men for the railroads and ports, but the conference appeared altogether to ignore this, and he felt he was receiving short shrift. Generals Foch and Weygand knew the enormous difficulties under which the United States was forming an army in France, and they surely realized the impossibility of running an army without sufficient ports and railways. Owing to the necessity of bringing over infantry during the past month, in order to meet a grave emergency, these matters had been lost sight of; he was of opinion that a settlement could easily be arrived at if the matter were left to Lord Milner, General Foch and himself for arrangement.

M. Clemenceau said, "For the first time I understand to-day that the United States of America is short of men. At Abbeville the discussion proceeded on the basis that this could never happen." He went on to say that Lord Milner had spoken the previous day of 200,000 men arriving from America in June and July. Now he learned that only 50,000 instructed men could be brought.

General Pershing replied, "Not as many as 50,000. If you ship 170,000 in June, as contemplated, there will be only 40,000 trained troops in July."

After some further discussion of the number of available men Clemenceau remarked that he was terribly disappointed. Could General Pershing tell him when the embarkations would recommence?

General Pershing said, "In August." He mentioned, also, that 484,000 men had been called up in the United States during the month of May.

Mr. Lloyd George's Proposal

At this juncture Foch proposed that the June program should be allowed to stand and a plan worked out for July shipments on the basis of sending as many men as possible.

The French Premier wished to supplement this suggestion. He agreed with Lloyd George that the situation should be explained to President Wilson.

Mr. Lloyd George then addressed the conference. He opened by saying that he quite realized, of course, the importance of sending the supplementary troops mentioned by General Pershing; but they were confronted with a pressing need; and he proceeded to read the following message which he proposed should be cabled to President Wilson by Generals Foch and Pershing:

"We recommend that the reinforcements to be sent from America in the immediate future should come in the following order: During the month of June, infantry and machine-gunners should have absolute priority to the number of 170,000. During the month of July the same arrangement should hold good as far as possible. Inasmuch as this would exhaust all the infantry and machine-gunners recruited before May, the numbers of men of these classes should, if possible, be made up to the figure contemplated by sending some of the May levies. It is recognized that it is undesirable in principle to send out men having so short a period of training at home, but we consider that the present emergency is such as to justify a temporary and exceptional departure from this principle.

"In making this recommendation we base ourselves upon the assumption that combined American and British tonnage will render possible the shipment of at least 250,000 in each of the months of June and July, so that even if a maximum of 170,000 infantry and machine-gunners

The Hoover is guaranteed to prolong the life of rugs

A Simple Test Will Convince You

Next cleaning day, after your rugs have been vigorously swept, telephone one of our Authorized Dealers to send out a representative with a Hoover—*no obligation, of course.*

Just let him glide The Hoover over your cleanest rugs, after first showing you that its bag contains no dirt.

You will be appalled at the dirt he will soon empty from the Hoover bag. You will be surprised that such apparently clean rugs could in reality be so unsanitary.

Naturally such a condition is no reflection upon you. To dislodge all buried dirt from rugs they need beating, electric sweeping and air suction. The Hoover is therefore an absolute necessity.

Electrically it beats out all the nap-wearing disease-laden grit from rug depths; electrically it sweeps up the stubbornest litter, erects crushed nap, freshens colors and cleans by air—in one easy, rapid, dustless operation *guaranteed to add years to the life and beauty of all your rugs and thereby to repeatedly save its cost.*

Have a free home demonstration of this time-perfected cleaner and its attachments.

Phone any Tel-U-Where Information Bureau, any Hoover Branch Office, or write us for the names of Authorized Dealers.

Offered in three sizes, all moderately priced. Convenient terms if desired.

s get a clear understanding of what
roposition involved. The British
rging that even fresh American
should be brought over; this pro-
provided that, no matter how green
roops might be, no matter how unfit
hting, these American troops could
rown into the battle any time the
commander in chief decided they
eeded. It aimed at taking control of
n men out of the hands of the Amer-
mmander in chief.
eems hard to reconcile this proposal
Mr. Lloyd George's usual common
probably he would look on it to-day
oisterous, and chuckle; for I venture
that no government in the world
have the hardihood to make any
proposition to the government of
Britain or the government of France,
atter how desperate "the emergency."
e American commander in chief de-
d emphatically that he could not pos-
accede to this proposal. He himself must be the authority to say when the American troops should go into the line. This proposal had never been discussed at all with him; it was thrust on him for the first time. And he wanted it distinctly understood that he could not have matters taken out of his hands as proposed.

The Prime Minister retorted that present arrangements were such that the American troops would very likely never be available for the battle.

This remark of Mr. Lloyd George's exemplifies a faculty the French and British possess of making it appear that you aren't playing the game whenever you decline to play it the way they want. Each government had its mind set on utilizing American aid for its own effort, and so each made continual demands on the plea of emergency, and if the United States refused to recognize that an emergency calling for such measures existed, then our ally tried to make it appear that the United States was not doing its share in the war.

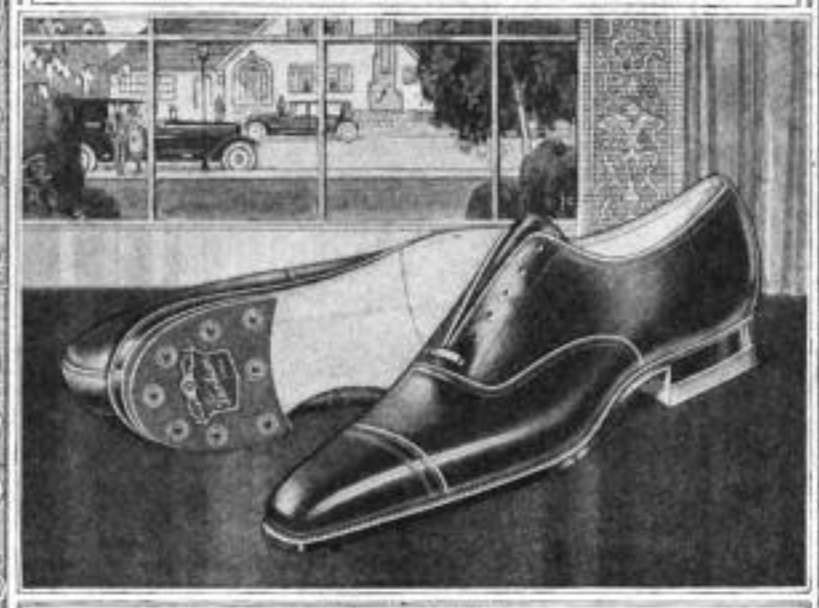
General Foch's Memorandum

The tactics were probably familiar to General Pershing, for he merely replied to Mr. Lloyd George that he was ready to put the United States Army into the line whenever it was required, but in the case of troops in training he must preserve his own right to say when the moment had arrived. Moreover, he considered this matter was not one for the conference to decide, but he would be glad to give careful consideration to General Foch's recommendations for urgency. After some further talk it was agreed to leave the question of the July shipping program to Foch and Pershing for discussion.

The next thing on the program was a memorandum read by General Foch appealing to General Pershing to increase the American effort to 100 divisions, which would entail the calling up of more than 300,000 men a month. Now 100 American divisions would be numerically equal to 200 French or British, and so the proposed effort aimed at an American Army in France superior in size to the French and British armies combined—more than 4,000,000 men.

General Pershing readily agreed to this. He assured the conference that the sentiment of the American people would approve such an effort if it were required to win the war, and he heartily approved of General Foch's opinion being forwarded to Washington.

At this point Orlando and Sonnino, of Italy, entered the room, and then M. Clemenceau abruptly switched the discussion. He wanted to know how many British divisions could be maintained in France.



Prime Minister Lloyd George replied that it would be best not to discuss that question until the return of the expert M. Clemenceau had promised to send to England to determine the man power available there.

General Foch informed the conference that the Allies had only 150 divisions against 204 German divisions. If these 150 could not be maintained at strength, then the Allies would be bankrupt. No matter what the reply of M. Clemenceau's expert on their man power, the British must make a strong effort to maintain their fifty-three divisions. If they failed to do so he could see nothing but disaster. It was impossible for him, Foch, to carry on the war in behalf of the Allies against an enemy whose numbers increased whilst the Allies' diminished.

Here Viscount Milner expressed concern over some of the figures he had heard bandied about. He deplored their use. For instance, General Foch's figures of 150 Allied divisions—he wanted to correct those. He pointed out that the Allies had 169 divisions. This slip on the part of General Foch appeared to occasion the British representative considerable chagrin, because he referred to it again later. As regards British divisions, said Lord Milner, their reduction was due to the fact that losses had been out of all proportion to what they had anticipated. They had taken steps to replace the losses, but those measures would hardly produce the troops before August. Viscount Milner was referring to the new levies.

General Foch accepted Lord Milner's correction: the Allies had 169 divisions. But he wanted to point out that eleven Belgian divisions were being opposed by only seven German divisions, so the Allies lost in balance there. And it was incontestable that the Allies had a great numerical

inferiority, and he was not prepared to conduct the war on the part of the Allies if the British divisions were further reduced. He demanded again to be told the British intentions as to the number of divisions they would maintain.

Gen. Sir Henry Wilson said that it was impossible to give an absolute guaranty that they would not reduce below the present number. Only the last week or so they had had to reduce two more divisions. General Wilson hoped the British would not have to reduce below forty-seven divisions, of which ten would be American as regards infantry.

Once more Lord Milner drew attention to the fact that figures were being recklessly used, and many of them were incorrect. He said he could not accept Sir Henry Wilson's statement. General Foch persisted in his query. He demanded to know of General Wilson the minimum number of divisions the British would maintain.

Sir Henry Wilson replied that it would be forty-seven instead of fifty-three. The British had recently been maintaining fifty-three divisions. He hoped to increase the number later.

Foch asked, "Then that means that if the American troops with the British are withdrawn, the British Army will actually drop to thirty-seven divisions?"

By way of explanation the American commander in chief informed the conference that, according to their arrangement, the American troops were being put into British divisions on the understanding that the American infantry would be withdrawn as soon as the auxiliary troops arrived. However, he thought that by that time the new British drafts ought to be ready.

Mr. Lloyd George said the whole business seemed to simmer down to the assumption that no German divisions were being done away with. Were the German drafts like the widow's cruse, he asked, the oil of which was always maintained? The Prime Minister pressed General Foch to explain why it was that, before the recent fighting, only 400,000 German drafts were reported by the Allied Intelligence as available, yet now, after months of fighting and heavy reported German losses, there still remained to the Germans 300,000 drafts. He wanted to know how that could be.

Further Negotiations

General Foch made no attempt to explain. He said he was talking of British divisions, and of a fact, not a hypothesis. Out of fifty-three British divisions, ten would be completed with American troops; if the British reduced the number of their divisions to forty-seven, then only thirty-seven of them would be British. He pointed out that Germany, with a population of 68,000,000, was able to maintain 204 divisions. Great Britain, said General Foch, with a population of 46,000,000, could maintain only forty-three—excluding the American troops with her armies—and was considering cutting down the number to thirty-seven.

These remarks naturally produced some slight temperature, and Mr. Lloyd George apparently sought to create a diversion by returning to the problem of how Germany could possibly maintain 204 divisions on the Western Front with only 300,000 men in her depots. He urged that the British Government was entitled to a reply on this point. The Prime Minister then went on to offer a possible solution—he suggested that perhaps the Allied losses were much heavier than the Germans'.

General Foch agreed that such was possible, and again Lord Milner protested against bringing these figures into the discussion. Foch replied by demanding to know when the British would reconstitute the ten divisions mentioned as having been laid up. He reiterated his warning that if the British armies were not maintained at strength the Allies would head for disaster.

Finally M. Clemenceau closed the incident by remarking that he was sending an expert to England to determine British man power and to make proposals. The conference thereupon referred to Generals Foch and Pershing the matter of reconstituting the ten broken British divisions with American infantry.

Lord Milner, General Foch and [illegible] Pershing subsequently concluded [illegible] lowing agreement as to shipping [illegible] based on the assumption that 250 [illegible] could be transported in each [illegible] June and July—by combined Bri[illegible] American shipping: Priority for [illegible] combatant troops in June, infan[illegible] machine gunners; also 25,400 me[illegible] railway services, of which numb[illegible] had been asked for by the Fre[illegible] ister of Transportation; balance [illegible] categories to be determined by [illegible] Pershing. In July, priority for [illegible] combatant troops—our divisions [illegible] tillery, or 84,000 men, plus 56,000 [illegible] ments—balance of the 250,000 to [illegible] of troops designated by General [illegible]

"We recognize," the agreem[illegible] forth, "that the combatant troo[illegible] dispatched in July may have to [illegible] troops which have had insufficie[illegible] ing, but we consider the present em[illegible] is such as to justify a temporary an[illegible] tional departure by the United Sta[illegible] sound principles of training, especi[illegible] similar course is being followed by [illegible] and Great Britain."

The Premiers' Message

It will be seen that this agreem[illegible] tains practically all the points for w[illegible] American commander in chief co[illegible]

Out of the Versailles meeting [illegible] described came the following:

"The Prime Ministers of Franc[illegible] and Great Britain, now meeting [illegible] sailles, desire to send the following [illegible] to the President of the United Stat[illegible]

"We desire to express our [illegible] thanks to President Wilson for the [illegible] able promptness with which Ameri[illegible] in excess of what at one time [illegible] practicable, has been rendered to th[illegible] during the past month to meet [illegible] emergency.

"The crisis, however, still ex[illegible] Gen. Foch has presented to us a sta[illegible] of the utmost gravity, which po[illegible] that the numerical superiority of the [illegible] in France, where 162 Allied divisi[illegible] now opposed to 200 German divis[illegible] very heavy, and that, as there is [illegible] bility of the British and French in[illegible] the number of their divisions (on th[illegible] trary, they are put to extreme str[illegible] keep them up), there is a great dang[illegible] war being lost unless the numerica[illegible] ority of the Allies can be remedied as[illegible] as possible by the advent of Am[illegible] troops.

"He" [Foch] "therefore urges w[illegible] utmost insistence that the maximu[illegible] sible number of infantry and m[illegible] gunners, in which respect the shor[illegible] men on the side of the Allies [illegible] marked, should continue to be s[illegible] from America in the months of Ju[illegible] July, to avert the immediate dange[illegible] Allied defeat in the present campa[illegible] ing to the Allied reserves being exh[illegible] before those of the enemy. In addi[illegible] this, and looking to the future, he [illegible] sents that it is impossible to foresee[illegible] mate victory in the war unless Am[illegible] able to provide such an army as will [illegible] the Allies ultimately to establish num[illegible] superiority. He places the total Am[illegible] force required for this at no less tha[illegible] divisions, and urges the continuous [illegible] of fresh American levies, which [illegible] opinion should not be less than 300[illegible] month, with a view to establishing a[illegible] American force of 100 divisions at as[illegible] a date as this can possibly be done.

"We are satisfied that Gen. Foch [illegible] is conducting the present campaign [illegible] consummate ability, and on whose ma[illegible] judgment we continue to place the [illegible] absolute reliance, is not overestimati[illegible] needs of the case, and we feel con[illegible] that the Government of the United S[illegible] will do everything that can be done, [illegible] to meet the needs of the immediate [illegible] tion and to proceed with the contin[illegible] raising of fresh levies, calculated to [illegible] vide, as soon as possible, the num[illegible] superiority which the Commander-in-[illegible] of the Allied Armies regards as essenti[illegible] ultimate victory."

Editor's Note—This is the second of a se[illegible] articles by Mr. Pattullo. The next will appea[illegible] early issue.

the aged in the wood pipe tobacco

MILD and MELLOW

© 1922

"Here's the reason why-"

MEN who know good pipe tobacco are appealed to by Velvet's old-in-the-wood mellowness.

Right after the Kentucky Burley tart leaf is sun-ripened, it is packed inside of wooden hogsheads to age slowly for two full years.

Then we take the tobacco out, *it's different.*

Nature has improved it. Time has mellowed it. All the bite and harshness have evaporated.

And the *only way* to make pipe tobacco so mild and mellow is by two years' ageing in the wood.

It is significant that Velvet is the fastest growing brand.

equently Henry Boucher, a trainer,
ed into Snyder's life with all the
the launching of a yacht when his
per resigned a few years ago. The
at gradually accepted his new mas-
en came to love him. Two years
in which Boucher held the big
ner safe from runaways, stampedes
emperamental outbreaks. Then, a
go, in Salina, Kansas, the trainer
became violently ill and was forced to leave the circus on short notice.

The next day Snyder grunted and snorted and trumpeted in vain. His trainer was gone. That afternoon the beast was kept out of performance, and he weaved uneasily at his picket chain, slapping his trunk viciously at every passing candy butcher—how every elephant hates them—even refusing food. His eyes began to cloud slightly, the first indication of must. The matinée performance ended, and an assistant, assigned to the position of substitute trainer, released the chain which held the betusked brute and led him into the empty big top, or main tent, for a first rehearsal under new management.

Snyder listened to just one command. Then with a rush he knocked the substitute from his path, splintered the quarter poles which crisscrossed before him, smashed a path through a tier of seats, broke through the side walling, lowered his head, then with a great butting lurch overturned the first wagon he saw, headed back through the side walling of the menagerie, seized the monkey cage at its tongue base with his trunk and threw it from him like a boy throwing a baseball. The cat animals began to roar and screech; he made for the dens, one by one, and overturned them. The hippopotamus grunted excitedly in his five-ton den, and Snyder rushed for it like the maddened thing he was; an impact followed like the crashing of runaway engines, and the den with its bulky freight catapulted through the side wall and ten feet clear of the tent.

Kas and Mo Start Something

They tried to surround him by peaceful elephants, to mingle him with the rest of the herd and thus return him to captivity. It was useless. Snyder had turned renegade; he recognized no superior and he fought the leader of the herd with the same frenzy that he fought any inanimate object which blocked his path. So at last they sent for rifles; nor was it long before twenty-five thousand dollars in elephant flesh became only an object for a museum. Four steel bullets in his brain had ended the career of an elephant which had refused to recognize anyone but the master of his choice.

So you see there are grounds for that circus saying regarding inconsistency. Once an elephant becomes thoroughly angry, little else than death can block his path. Yet in the regular course of events that same elephant actually can be afraid of his own shadow!

On one of the big shows are Kas and Mo, named respectively and respectfully for Kansas and Missouri. Both are what are known to the bull men as agitators, both flighty, unreasoning, seemingly always anxious to find something that will serve as an excuse for trouble. Both also are punks, the circus name for anything not yet full-grown, and the lack of maturity in age may account for the equal absence of steadiness in character. In any event their course has been a stormy one. Their first day on the show, when they arrived fresh from India in the care of a Singhalese, ended with a general stampede of the entire herd when the two punks decided to run straight through it without an introduction; the panic, although it lasted only the length of a city block, resulted in nearly a thousand dollars in damages. The first windy day after their arrival brought a breakaway on their part, and the danger of a like action on the part of the adult members of the herd. The first parade was one of constant attempts at runaways and the smashing of a two-hundred-dollar plate-glass window. Finally there came the time when, at the slightest hint of any unusual happening, Kas and Mo were loaded hurriedly into the first available wagon and sent unceremoniously to the cars. This continued during the entire first season.

However, elephant trainers are persistent beings, and all that winter the keeper of the herd labored with Kas and Mo to bring them to a condition of dependability. To every possible noise, action and circumstance that might cause fear on their part were they subjected, until the flighty brutes were considered proof against anything that might occur on a circus lot. Then they were turned over to Lucia Zora, wife of the menagerie superintendent, for a novelty in elephant training—the driving of the diminutive pachyderms in tandem style before a flower-bedecked two-wheel cart. It really seemed that Kas and Mo had reformed. They learned quickly; they obeyed every command.

Springtime came and the show went forth to its first exhibition stand, rehearsing, as is usual, for three days before the opening date. Everything was lovely. Kas and Mo, garlanded and festooned with strands of paper flowers, took their place in the grand entrée like veterans. Zora was pleased. So was the keeper of the bulls. So was the owner of the show. So was everyone. The past was forgotten.

The opening day arrived. Kas and Mo went into parade with their woman trainer, their garlands of roses and their high-wheeled cart, looking neither to the right nor to the left. At the afternoon performance they moved into their position in the elephant section of the grand entrée in a manner both joyous and faithful. Night arrived, the chandeliers gleamed, the signal to prepare for entrée sounded from the whistle of the equestrian director, and the punks took their place at the head of the section, awaiting the time when the rest of the entrée should emerge from the flags, or performers' entrance, that they, with the remainder of the menagerie exhibits, might enter at the other end of the tent, thus filling the hippodrome track simultaneously. At the head of the tandem was Kas, somewhat anxiously awaiting the signal to start. At the left was a low-hung chandelier which caught the beast's body and silhouetted it against the near-by side wall of the menagerie tent. Beyond was a main tent filled with gaping spectators, staring vapidly toward the empty rings and stages and hippodrome track, waiting for the show to begin. And just then Kas saw its shadow on the side wall.

The punk grunted and raised its trunk. Over at the side wall that mysterious thing raised its trunk also. Kas fidgeted. So did the shadow. The big ears of Kas distended in fright. Over there a pair of black ears moved in unison. Everything that Kas did was immediately aped by that thing on the wall. It was too much.

A squeal, a snort, then suddenly the crowded tent saw a tandem team of elephants pitch through the gay dividing curtain and swing into the hippodrome track at full speed, the rose-bedecked cart careening behind them on one wabbling wheel, and behind this the entire elephant herd, following excitedly and without a reason save the fact that Kas and Mo were leading the way. A moment later the cart hit a ring curb, while the bespangled Lucia Zora dived gracefully and far through the air to a dazed position on a pile of canvas—and the runaway elephant parade went on!

Back in Line

Around the hippodrome track they thundered, two squealing baby elephants in the lead, ten excited, bewildered adult beasts in the rear, and the whole shouting, panting menagerie force trailing vainly in their dust. The first curve came and the punks left their cart leaning in drunken, awry fashion where it had collided with a center pole. The second, and they tangled in their flower-decorated harness, but they went on! A third curve, a fourth, then straight through the dividing curtain they plunged again, the rest of the herd after them, and back to their places in the picket line! Meanwhile out there in the main tent a dazed crowd stared again at an empty hippodrome track, not knowing whether the whole thing had been an accident or some new form of elephant race! So swift do breakaways happen sometimes in the circus, especially if the culprit be an elephant!

In fact there is more than one breakaway, more than one panicky, dangerous minute or hour in which the very persons whose lives are threatened stand by without fear, without even the knowledge that a stampede is in progress!

Naturally it is an impossibility for any man or set of men to maintain an unbroken record of halting panics. Their charges are too big, too possessed with temperament, too prone to become frightened at the most puerile things for a keeper always to outguess them and outmaneuver them. However, the number of panics on the part of

Keeps Out the Germs

Big infections result from little germs. A break in the skin—no matter how small it may be—should be attended to at once.

Keep out the germs that cause infection. Protect the wound with an antiseptic dressing, under which nature can do the healing undisturbed. Use New-Skin promptly.

In the home, keep New-Skin on hand, in the larger sizes. In your pocket, carry the convenient vest-pocket package with you. Have New-Skin always ready for emergencies.

"Never Neglect a Break in the Skin"

Be sure it is New-Skin, not an inferior substitute.

"It's Quick Action that Counts"—

says Happy Van

A shock absorber that needs time to get into action is all right for a big bump. But it is mighty little help against the countless little jars and vibrations you meet on the average road. That's where you need lightning quick action.

The Gilmer Bull Dog Bounce Absorber is the quickest absorber you ever saw or heard of. Its simple mechanism requires no time to get set. It takes up all bumps as quickly, smoothly and easily as a good brake checks the forward motion of a car.

Gilmer costs less and lasts longer. It is easy to install. It is instantly adjustable to any weight of car, any stiffness of spring and any driver's preference. It requires no oiling or care.

Let your dealer explain the Gilmer principle to you. Or write us direct.

L. H. Gilmer Co., Philadelphia, Pa.

Gilmer BULL DOG BOUNCE ABSORBER

"They got it all!" he managed to say, and sank into a chair

And Now Their Cashier Carries a Colt

SATURDAY A.M. Pay day! At eleven o'clock precisely, methodical John Morse, cashier for Keith & Company, took the small, black bag in which he carried his payroll and hurried over to the Merchants' National Bank.

"One hundred and fifty tens, one hundred and fifty fives, one hundred twos and fifty ones this time, please."

"There you are, Jack," said the teller as he placed the various piles of greenbacks under the wicket, "twenty-five hundred dollars."

John Morse dropped the package into the black bag as he had done on a hundred Saturday mornings before and left the bank.

Five minutes later, breathless, speechless, pale and disheveled, he burst into Mr. Keith's office *minus the bag*.

"They got it all!" he managed to say, and sank into a chair. "I did my best to save it, but they got it all!"

"Only last night when I read about that Everett robbery," said Mr. Keith, glumly, "I was thinking 'it might happen to us.' It might happen to anyone—*once*. But we'll take no chances again. Here, John, run over to Stevens' right now and get the best Colt Revolver they carry. Hereafter you and the payroll will come back together—safe."

The newspapers are full of stories of payroll robberies. It happens every day—everywhere. Yet you need not fear. You can go and come in safety protected by a trusty Colt.

A Colt Revolver may save your money and your life. A small investment for a great protection.

Your dealer will gladly show you various models of Colt's Revolvers and Automatic Pistols.

If you write to the Colt's Patent Fire Arms Mfg. Co., Hartford, Connecticut, they will send you "The Romance of a Colt," an interesting book sent free for the asking.

the various elephant herds in which damage is caused or the big brutes actually succeed in getting away is so far overshadowed by the attempts at revolt which are broken up in their inception that there is not an opportunity for comparison. Hardly a day passes among the various circuses that at least one elephant does not decide to pit his will against that of the man in charge. But actual panics, with consequent damage, happen only a few times a year. One hears of the latter through newspapers and damage suits; the other events, in which a cool-headed human outgenerals an assorted tonnage of elephant flesh, is neither heralded nor announced; it's only a part of the game. In the life of the keeper of the bulls his failures become public property; his successes are reflected in his pay envelope only, and the crowd often goes home without even the thrill of knowing that an elephantine revolution was nipped in the making.

For instance, few persons in Berkeley, California, remember an elephant stampede in that city. The very persons who saw it probably would be willing to take oath that nothing of the kind ever happened.

Yet there was a stampede, and one that for at least five minutes threatened the lives of hundreds of persons, to say nothing of the property damage that might have ensued. If the street had not been long and straight ——

Berkeley, in the circus dictionary, is a rah-rah town—a feared thing to a menagerie department. It means a college, and the traditional enmity that has grown up between tent shows and student bodies through long years of fights and troubles occasioned by the overexuberance of youth, and the disturbances that almost invariably follow the attendance at a performance of a large body of students with their class yells, their chain steps and snake dances. Circuses are composed of high-strung persons who risk their lives as a part of their daily work, and of equally high-strung horses and other animals. Disturbances during the performances are not to their liking.

But on this particular morning in Berkeley things apparently were going exceeding well.

The parade had started on time from the lot, and now was traversing the longest and most crowded street of the whole route. The bands were blaring happily. The bull section, numbering some twelve animals, was shuffling along the asphalt in peace and contentment.

The Stampede in Berkeley

Suddenly from around a corner there swung into line with the parade a lock-step crew of some three hundred students, their feet stamping the pavement in unison, their lips chanting a monotonous college song, joining the procession directly behind the bull section. The elephant keepers spurred up their horses and attempted to stop the demonstration. The college men simply grinned at them and tramped steadily on. Time after time the bull men gave warning of what the result of the monotonous chant and still more monotonous tramp-tramp-tramp of hundreds of stamping feet might be. The parade marshal searched wildly for police. They were somewhere else. He strove to block the marching line with his horse. They circled him and went on, still beside the shuffling bull line.

Now ears were distending. Piglike eyes were rolling in their too small sockets. Heavy skins were beginning to wrinkle.

At last there came a call from Shorty, the head keeper, and the elephant men gave up their task. "Don't try to break up that line. If they won't stop let 'em go. These bulls'll break at the first rough-house. Stand by to tail 'em down!"

Into position shot the assistants, each ready to dig his spurs into his horse at the first sign of a break. Far ahead went Shorty, taking his position just behind the gigantic trembling Mary, bearing the Ten Thousand Dollar Queen of the Harem at the head of the section, a harem beauty who, incidentally, just at that moment wished she was back in Coshocton; in fact, anywhere except in that bobbing howdah. Leader Mary was beginning to shimmy slightly with increased fright, and her shuffle on the hot asphalt carried a new wiggle of impending danger. Then the marching three hundred broke into a weird class yell—and the stampede began.

Straight forward went Leader M scrape a lion's cage, to swerve slig one side, then, with the Ten Th Dollar Queen of the Harem squ aimlessly in the howdah, to lead wild scramble straight down the with the rest of the herd smashing her rear. Then it was that the prep of Shorty, the keeper of the bulls, w execution.

At the first move of the elephant the horses of keepers moved also furious pace, for the speed of an ele a deceptive thing, and it is a goo that can keep abreast of him, eno limbers into full steam ahead. The ing college men were left behind no the front section of the parade suddenly hushed band and blar clowns was passed almost in an Out of them all only the Ten Th Dollar Queen of the Harem was bouncing in her howdah, still squea squawking, while, spurs deep horses, the elephant men strove th to keep abreast of the fast-travel section, echoing and reëchoing the Shorty at the head of the line:

"Hi there! Mule up! Mule u Mary! Frieda—Frenchy—Sultan Tails there—tails!"

Elephant Psychology

It was a double command, whi eled along the line and back again as men could voice it, the order to at the same time for each elephant the tail of the beast before him. passed while throats grew hoarse, a the thick-packed throngs of the stared vacuously, wondering why th should be in such a hurry to get phants out of the line of march.

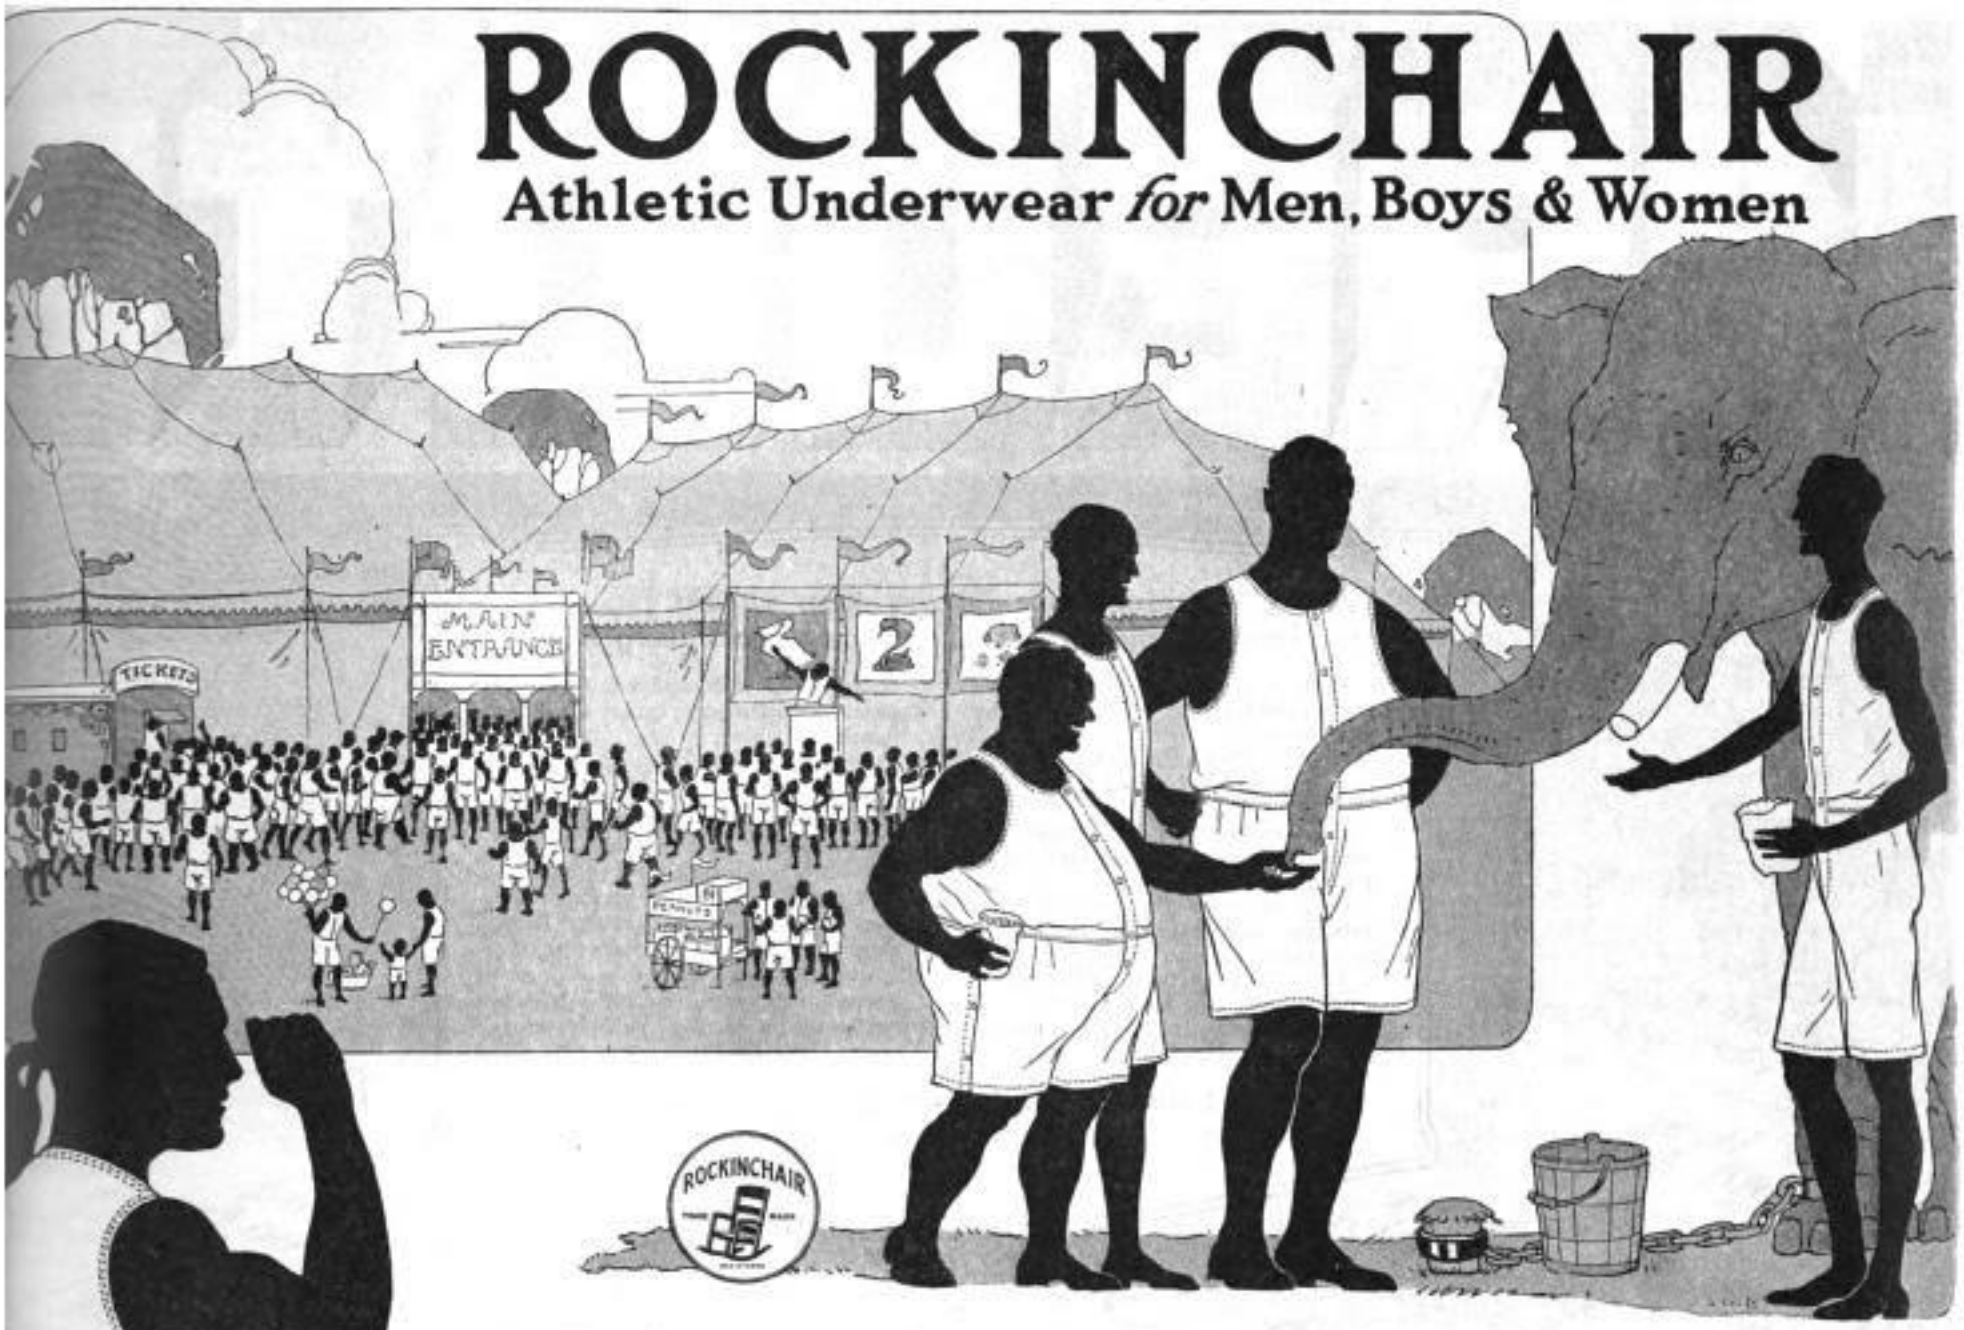
But never a warning sounded, hint that a panic was in progre that repeated and rerepeated en "Tails there! Mule up, you! tails!"

All of it meant an experiment in psychology—and one that had be many times before. At last the sank in. The second elephant of grasped the tail of Leader Mary—tinued to run. The third elephant the fourth, the fifth, and on thro whole section.

But the command continued: " there—mule up! Tails!"

Another two blocks and the changed; more, the elephant line A block after that, and the whole was peacefully shuffling along aga ply through the fact that the fri beasts had been made to believe th trainer really desired them to run, in their breakaway they were merel ing out orders. Nor could they kn in obeying the command of tai handicapped themselves so that th of one could be no greater than another, and that as long as the lea to a straight line, so must the rest

Further, the occupation of thei track minds in the execution of which coincided with their natural cies had wiped out in forgetfulness that something had threatened th brought to them the belief th trainer merely was running ther from an obnoxious thing. Therefo the command came to slow down so in confidence, and in the assura any danger was over. Many a pers that day from watching the para dering perhaps why the elephant should desire to put his beasts their paces. But few of them reali the little play of speed had saved the circus but the downtown se Berkeley, with its thronged sidewal disaster.



The trick works time after tim the stand-by of the elephant kee first hope at the beginning of a bre A few years ago, in Parkersburg Virginia, a circus had just arrived lot, with the consequent confusion ting up, of yowling caged anim lumbering, trucking wagons, and ring stock as the various element show traveled into position. Stand the menagerie tent were two ele secured side by side with neck which fastened one to the other keeper of the herd was within th superintending the staking out picket line, and leaving the two big in the care of an assistant until he

ROCKINCHAIR

Athletic Underwear *for* Men, Boys & Women

Why Rockinchair Fits Better

When you buy a suit of Rockinchair you don't ask simply for a "38." You ask for a "38 Regular," or a "38 Short Stout," or a "38 Slim Jim" (tall slender) or a "48 Big Bill" (tall large). And you get a union suit that *fits perfectly* not only at the chest but in *trunk* and *girth* also!

Because each chest size of Rockinchair is made in all these four models, so that men of the same chest measure *but with greatly varying figures and trunk and girth measures* can be accurately fitted with the greatest degree of *comfort*.

Here is practical underwear *service* for the wearer, an improvement in fitting that you can enjoy.

With it you also get in Rockinchair the further comfort provided by the full blouse above the waist that allows unusual bodily freedom, the sanitary closed seat and crotch (exactly like your trousers) and the side-leg opening that is adjusted in a jiffy.

You can have all this union suit *value* at reasonable prices, by simply asking your dealer for "Rockinchair" Underwear.

There are imitations but no substitutes.

HENDERSON & ERVIN **331 Fourth Avenue** **New York City**

CHICAGO: 234 S. Wells Street BOSTON: 52 Chauncy Street ATLANTA: 601 Silvey Building

Duofold for Winterwear *Rockinchair for Summerwear*

Dainty, Comfortable "Rockinchair" for Women

Not "mannish"—an appropriately feminine union suit that brings to women the same degree of comfort and freedom from restraint as Rockinchair does for men and boys.

One button on the side, a closed seat and crotch, a blouse effect above the waist, and shoulder straps adjustable by use of neat, lingerie pins are advantages that have popularized Rockinchair among women.

Not to forget the beautiful materials and truly exquisite tailoring.

Ask your dealer or write us.

you two come over here and up this damage!" commanded r, and meekly the twain obeyed, ir trunks under the sides of the ey had capsized, and unprotest- e them into position again. Five later they were in place at the e, peaceful and calm, their fright eady for the bugle call of parade. all, the life of a bull keeper is a constant gambling. He has none surances with which the perform- er beasts are blessed; the lion or ner has his cages, and the knowl- even should a vicious cat escape, or two from a heavy-calibered at close range can finish him. It teel-jacketed army bullet to make nt even realize he's being shot! the beasts are too big to be caged. too strong for anything except a network of drop-forged chains. n, nothing short of a pile driver ood deep enough into the ground em when they really desire to run. ly a matter of a good leader of the d princesses working under her, that there are few agitators or nists in the rest of the monarchy— ong trust in fate and the breaks stance. For even the elephant ever knows what may start the . An invasion of fleas in the sandy of the West can do it; an ele- hide can turn a leaden revolver t it can't stand fleas! There's ven from mosquitoes.

Pesky Mosquitoes

e flea and the mosquito evidently e judgment regarding the points of ility in an elephant's hide than ullet. They select the soft spots the ears, the eyelids and tender nd flanks for their work, and once ive in numbers, trouble begins. It all unusual to see elephants being ith flea preventives. The mosquito far more rare, but at least one le is chargeable to this cause. entally, the instance formed an- redit mark in the career of Old nd another example of at least one t with common sense. The show king a Sunday run in Canada by bridged a long expanse of territory money-making stands, heading the north of the Dominion, where few shows had exhibited and where the natives would be glad to part with a double admission price for the pleasure of seeing a bigger circus than usual. The run had been preceded by several days of moist, mosquito-breeding weather, with the result that when the show train made a feed stop at a small prairie settlement, and the elephants were unloaded for a trip of a half mile to the nearest water, the insects swarmed in such millions that they almost obliterated the lettering of the railroad cars. About the railroad tracks several hundred smudges were lighted, thus freeing that exact territory from the pests, but the elephants weren't fortunate. They were forced to travel out into the country for water, and the mosquitoes went with them.

By the time the watering process was finished every elephant was crusted with stinging, poisonous insects and squealing with discomfort. They pulled from their keepers; in vain Old Mom, obeying the commands of Alispaw, strove to hold them in line. She bellowed, she butted, she lashed with her trunk—but to no purpose. A moment more and an inveterate agitator made the break, followed by two others, and instantly the rest of the herd rushed after them. More, Old Mom broke from the bull-hooked grasp of her keeper, and with Alice, her handmaiden, beside her, swung madly into flight also!

It seemed that at last the ability of Old Mom to command a situation was lost. Faster and faster she went, passing the slower members of the herd, and at last forcing her way to the very front of the stampede, Alice puffing along in her wake. For a full eighth of a mile she led the rush straight out into the prairie; then the pursuers, far in the rear, noticed that she was beginning to turn in her course. Soon she had made a semicircle and was leading the plunging herd straight back in the direction of the cars.

Old Mom's Leadership

Thundering on they went, the workmen and clustered performers parting spasmodically as they approached the runs, Old Mom still in the lead, and heading, it seemed, on a straight path for the sleeping cars and the crash which seemed inevitable. Once an elephant loses its head it takes no cognizance of what may be before it—its mentality knows a bee line only, no matter if the obstruction be a stone quarry.

Nearer, nearer—then it suddenly became evident that Old Mom evidently was in full possession of her faculties—and a bright idea. At the tracks she swerved, and while horses and workmen scurried for safety she led the way straight to the elephant cars—and climbed in!

The runs, or running board by which the beasts usually made their entrance and exit had been removed in preparation for the switching of the cars. So the climbing operation was a literal one. With the rest of the bulls behind her Old Mom, grunting and squealing, made the ascent, and Alice followed.

Then in the semidarkness of the smudge-filled car she trumpeted happily, and the rest of the herd crowded in after her. A stampede of nearly a mile was over without a cent of damage.

In fact, Old Mom, with her faith and her level-headedness, has meant salvation in many an instance. I once saw this sensible old elephant lead her herd across the cable bridge which connects Wheeling, West Virginia, with the Ohio side, with a storm in progress, the surroundings inky black, the rain pelting, the keepers almost as terrified as the brutes, with the beams of the bridge cracking from overweight, and the structure itself swinging fully eight feet from side to side! Below was a sheer drop to the Ohio River; two elephants had become panic-stricken and had broken from the bull man in attendance, rushing frantically forward to the protection of their leader. The rest of the herd had begun to mill, with only a thirty-foot width of bridge as their arena; bull men were befuddled and nearly blinded by the pelting rain. Yet Old Mom held true to the commands of her trainer, and with weird trumpetings which sounded sharp above even the rush of wind and crackling of thunder, someway, somehow reassured her herd. Then with the ever-present Alice at her side she began to lead the way, slow step after slow step to the opposite side.

That very slowness was the salvation of the herd; instinctively they knew that she was testing the bridge, and by some sort of

Why walk on pebbles?

CALLOUSES on the sole are caused by a lowered bone in the ball of the foot pressing against a sensitive nerve. Naturally, the slightest pressure causes pain. It's like walking on pebbles.

No matter of how long standing, callouses can be quickly and permanently relieved by supporting in normal position the bone which causes the trouble.

This is done by placing in the shoe a pliable leather device so formed as to counteract the tendency of the bone to lower. By this principle applied to different bones, the Wizard Lightfoot System successfully corrects fallen arches, callouses, leaning heels and other foot troubles without pain or discomfort.

The most progressive shoe dealers employ one or more experts who have studied the subject and know how to correct foot troubles by the Wizard Lightfoot System. Ask your dealer if he can provide you with this service. If not, phone Tell-U-Where Bureau or write us and we will tell you where you can get relief.

Wizard Lightfoot Co., 1764 Locust St., St. Louis, Mo.

OF FOOT CORRECTION

animal understanding, did likewise. The rocking lessened. A half hour later Old Mom brought her charges safe out at the other side, every elephant walking in comical, gingerly fashion for a full block after leaving the structure, for all the world like overgrown fat boys trying to negotiate an area of eggshells.

Yet even Mom has her failings, her likes and dislikes; and once, at least, her discipline has ended in tragedy. Woeful is the life of the subject elephant that defies Old Mom, ancient though she may be. Well past the hundred-year mark in age, dependable when every other bull of the picket line is frantic, there is one failing—Old Mom is a disciplinarian to the point of being a martinet. More than that, she is as foolish in her likes as a person in second childhood, and her favorite is the worst trouble maker of the whole herd!

Long ago they named him Billy, a quarrelsome, snobby little runt of an elephant that spends half his time in winter quarters striving to slap the daylights out of the hoglike old hippopotamus that wallows in his permanent tank near the picket line, and the remainder of his existence in stealing feed from the rest of the elephants. Nor does one of that bull line dare to protest! Immediately there comes a squeal from Billy, and from farther down the line a bellow of anger from Old Mom, where, eyes glaring, trunk twisting, ears wide, she wheels forward toward her picket pin and prepares to free herself that she may punish the offender. For in addition to her other accomplishments Old Mom is an elephant Houdini. There never has been a man on the circus who has been able to invent a chain tie that Old Mom has not been able to loosen. With her a chain is only a formality, to be discarded from a stake at will and with only a few swift movements of her trunk. As to the ordinary half hitch, Old Mom can not only release herself from it but with a quick twist she can put that half hitch on a stake again!

So bondage means nothing to her, especially when a squeal of rage comes from the piggish Billy, and punishment is swift and sure to those who offend her by offending her pet. Billy, to Old Mom, is a little angel. He can do no wrong. To the rest of the herd he is an obnoxious, selfish, obtrusive little devil that can do no right. They hate him. But they submit—rather than feel the thump of Old Mom's trunk, or the pile-driver impact of her hard skull. Winter quarters or the road, it is all the same. Old Mom has taught her little angel her secrets of escape, with the result that he wanders the elephant line at will in spite of stakes, bonds or even keepers. Old Mom's protection of Billy extends even to humans, and the runt does as he pleases.

Floto, the Rebel

For eight years had this continued when the tragedy came. For eight years, Floto, the stodgiest, most amiable male member of the herd, had submitted to every indignity one elephant can heap upon another. Billy had stolen his feed. Billy had edged forward when visitors arrived with peanuts, and literally taken them out of Floto's trunk. Floto had protested and been punished, and so Floto had endured. But all during those eight years the hatred was being stored against a day of judgment. And near the end of last season, at Orange, Texas, it came.

The press services which carried the story of that day's event announced that someone had given Floto a chew of tobacco and that he had gone mad because of it. But that was only tradition—and a guess. Floto was one of the best tobacco eaters of the picket line. And Floto had something more on his mind than a bad taste. The story of his death is one of rebellion and revenge.

Old Mom was out on the lot busily pushing the wagons into position for the loading of the night. The matinée was over. The menagerie tent was drowsing in that calm which intervenes between the afternoon show and the gleaming chandeliers of night. Floto was at his picket pin, glorying in his portion of hay. Then came Billy.

He rooted in as usual and began to gobble Floto's feed share, even as he had done for eight years. But this time Old Mom was not there to protect him, and more, Floto had in his eyes the slight cloud which indicates the badness that comes to nearly every male elephant in the autumn. He snorted and warned the runt out of the way. But the fat little Billy only g and reached for another trunkful the final insult.

A weird trumpet blast, and the th Floto rose high on his haunches. Th a sudden thumping drop he came fours again, and seizing his piggish in his trunk raised him squealing head, only to throw him, breathless ground, and then breaking his stay to leap upon his pudgy enemy be smaller elephant could regain his moment of mauling followed, in thundering hoofs knocked resistan the fallen beast, and then, using for a combination roller and b ram, the angered elephant scraped of the beleaguered animal along t sandy ground until the heavy fl torn from the runt's body in great and the blood flowed from fully wounds.

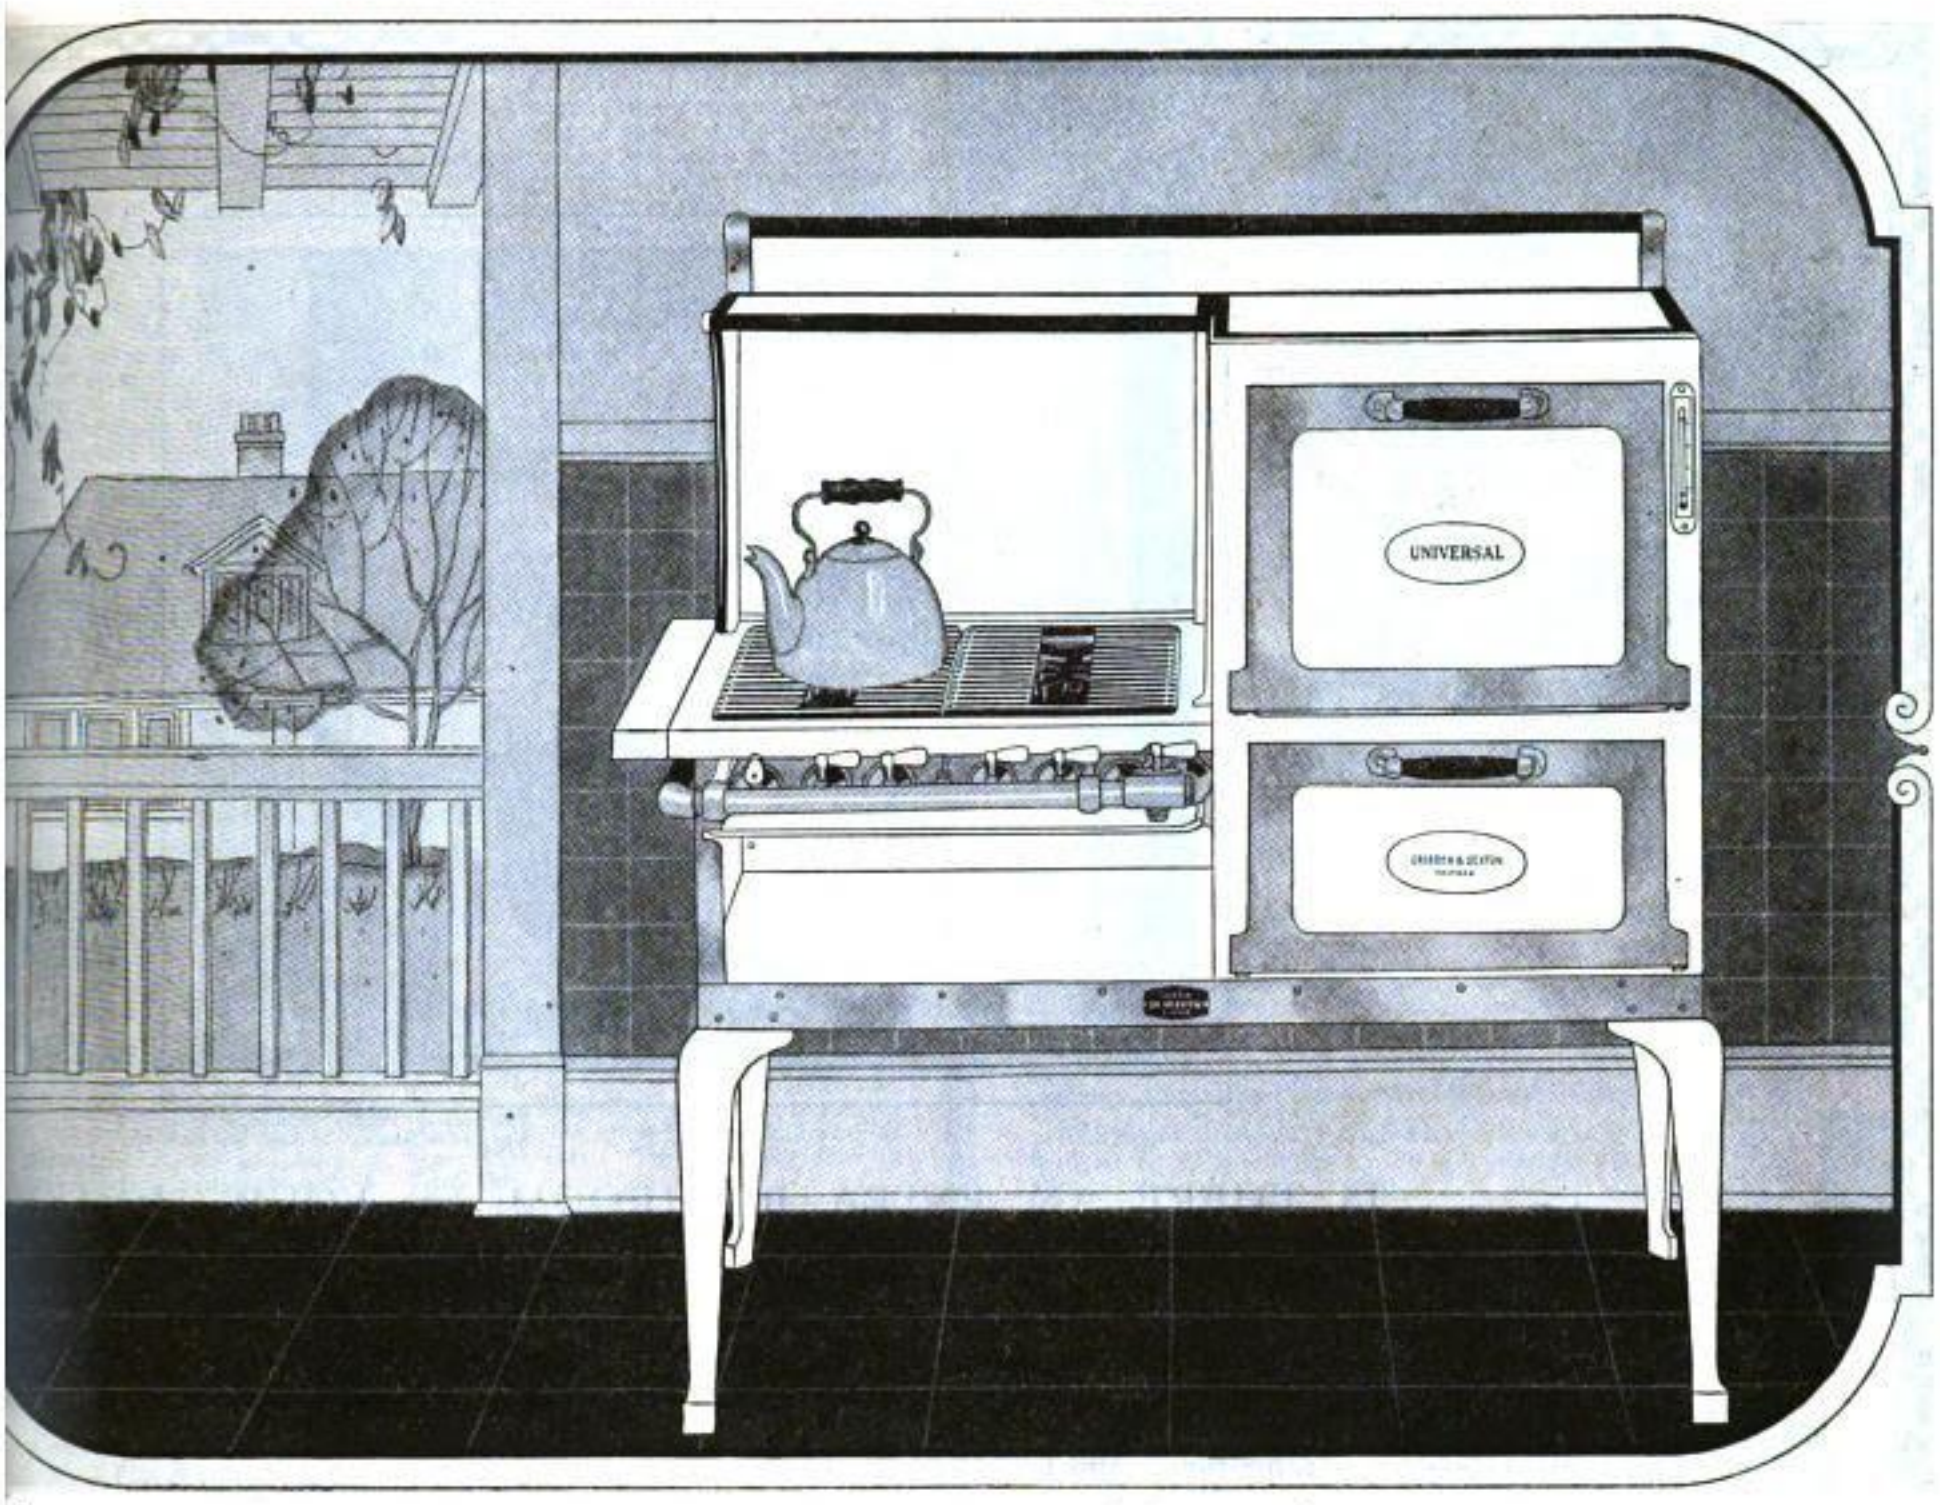
Animal men with bull hooks futilely to pull him away. He sho off and began to pound the prostr with flail-like blows of his trunk—a to halt and wheel, trembling, yet Old Mom, with Charles Churchill, ent keeper, at her head, was swingi the side wall to restore order. time for that was past.

A Solo Performance

Floto was in the position of a criminal. He had disobeyed the e of the mistress of the herd—and defied her. He did not even wait Mom to approach him. Head trunk tightly curled, he swung fo the attack, butted her out of the plunged through the side wall, out sparsely peopled circus lot, an o last.

Wagons tumbled out of his w crashed into them. Ticket boxes matchwood when he caught th crushed them with swift stampi of his heavy forefeet. Ropes pa strings before his plowing pro workman crossed his path; the caught him in his trunk and th thirty feet into an irrigation dit to the menagerie he went, to h elephant that faced him, to overt to seize frightened, screaming pe break their backs. Then they call rifles.

Only thirty-thirties were in th wagon, equipped with leaden bull the animal men felt that enough sh them might suffice; at least they able to hold the maddened beast until a rushing automobile, alre townwards, could return with ar Hurriedly the guns were distribu the magazines filled. Then as fast could work the levers thirty sh fired at the head of the outlaw, e striking its mark.



But the bullets did little more th the heavy flesh; some of them dr the ground without even break thick armor of skin that covered phant's skull.

He stood and took the shots, another, hardly seeming to noti impact. Then suddenly, as tho wildered, as though seeking a rea all, he whirled for a moment in circles, then headed straight for th big top. The bullets had not ent animal's thick skull, but something a thought had. The stinging of th ing lead in some way seemed to co idea to the brute that the humans commanded him now were striving him to do a certain thing, and in moment of obedience he hurries execution as swiftly as possible—thing he knew!

Into the center ring he rushed, a single elephant in the middle serted circus tent. There, alone, music, *sans* the crowds, *sans* the b and the brightness which usually a nied the performance, Floto the out blood streaming from thirty bulle without guidance, without even a c through the every figure of his act, the connections the men of the circ and watched, unable to cope wi unable to kill him, unable to him—watched while he waltzed ab ring, while he knelt over an im trainer, while he walked on his hin and while, with a sudden change of t he crashed across the stages, tore

he gas range women have always wanted

THOUSANDS of women have never found a satisfactory gas range. Some have pointed out one fault—some another. Practically all have felt the need of a better oven. Two years ago we determined that these women should be satisfied. We decided to build the gas range they have always wanted. The new Universal is this gas range. It is new in conception as well as execution. Its oven is a truly epoch-making achievement.

One feature of this oven is a remarkable new burner, equipped with the new two-way, single valve Universal Safety Gas Economizer. With this feature, a slight turn of the valve gives seven lines of flame—gives baking heat in only five minutes—permits *even* broiling and toasting. Another turn of the valve gives three lines of flame—permits baking and roasting with minimum gas consumption. All or *part* of burner can be used with high or reduced flame. No guesswork, but *positive* oven heat control.

The new Universal Mercury Oven Thermometer also gives *visible* control of oven heat. No chance of error when following recipes. No chance of burning or under-cooking. Instead, the oven heat is always accurately registered. We have inset the thermometer in front to permit easy reading.

The new Universal Gas Range is now on display in stores everywhere. Go and see it. Note the beauty of its exterior. How doors are made flush and corners square. How bolts and unsightly projections have been eliminated. You will say it is the gas range you have always wanted. If you do not know a nearby Universal dealer, mail the coupon to us. We will send dealer's name and interesting free literature. (117)

The Universal Safety Gas Economizer gives seven lines of flame for quickly heating oven and for toasting and broiling—gives three lines of flame for baking and roasting with minimum gas consumption. Gives countless oven heat adjustments.

This five-foot "Viceroy" built-in tub is the type used in thousands of homes and hotels

IS THERE AN EXTRA BATHROOM IN YOUR HOME?

THINK of the convenience of another bathroom in your home. You know the congestion and delay in the morning "rush hour" when everyone is anxious to wash, bathe or shave at the same time. And when guests come the condition is actually embarrassing.

You can utilize a large clothes-closet, a spare room that is too small for a regular bedroom, or waste space in the attic can be walled off inexpensively, to obtain the added comfort and convenience of the modern bathroom pictured above.

This bathroom is designed to cover a floor space only five by seven feet. It is compact and complete. The fixtures are standard size.

A five-foot, luxurious Kohler "Viceroy" Built-in Enameled Bath is the type used in thousands of homes and in many apartments, hotels and clubs. The lavatory shown is the full size famous Kohler "Columbia" style.

This fine Kohler bathroom can be installed in your home at a very small cost. It will be a source of pride to you. It will add to the money value of your house.

It will mean added comfort and convenience to every member of your family.

Kohler Enameled Plumbing Ware—bathtubs, lavatories and kitchen sinks—is famous for its beauty and durability. The glistening, snow-white enamel is easily cleaned, and it preserves the attractive appearance of the fixtures during their entire life.

There is a Kohler plumber near you who will be glad to give you an estimate of the cost of installing this Kohler bathroom in your home. Consult him now! You will find him a reliable source of information on all questions relating to sanitation in the home.

Send for interesting, free booklet illustrating modern arrangements of bathrooms. Write today.

Every piece of Kohler Enameled Plumbing Ware is distinguished for (1) the snowy whiteness of its durable enamel (2) the uniformity of this whiteness in every fixture (3) the name "Kohler" in dainty blue letters inconspicuously but permanently fused into the enamel for your protection

f seats, and then, bursting through wall, ran for the open country.
st night they trailed him, a trail of e, of broken fences, of wrecked yards, of wide swaths through crops. Coincidentally enough, the ecked place of the whole country- the ranch of the county sheriff, leading the circus posse! The next they found Floto a bare half mile rn, where he evidently was circling the circus. But he still was the still the renegade. He sighted the en, and trumpeted. Then with a vement he turned toward a tele- ole and wrapped his trunk about e was a sharp crackle. Wires spit g as they popped. Floto had the pole off clean at its base and, it even as an angered man would club, had headed straight toward ers! There they killed him, with ift volleys of steel-jacketed bullets, he charged them—Floto who had scipline enough to become a rene-

all of which may be gathered that f the keeper of the bulls is far from xistence. From one minute to the a gamble, from one day to another e of life and death is played, with standing between a tremendous otential destruction and the safety v, of people and of property.
it always a matter of a spasmodic ay or a single bad animal that must l. Sometimes the whole herd must it, not only for a day but for a ason. Such was the misfortune of gling Circus a number of years tampede that began in the spring ening of the season and which did until winter quarters had come The life of an elephant man that

o the story: There had been a the men commanding the herd, a change, and one which the ele- id not like. At least, they gave of a displeasure that was not only lasting. The show, as was usual, its season in the Coliseum, in and according to the ordinary held its rehearsals for three days he beginning of the regular per- e.
ay for dress rehearsal came—the e of practice, in which the whole om spectacle to races, is run —and twelve elephants of the herd y-two, each with its heavy velvet , its trappings and its howdah, into position to await the signal e. Which was also the signal for

coustics of a building are far differ- those of a tent. The minute the rted, so did the elephants. Some t the arena by the front entrance. ot down the chutes into the base- me headed straight for the horse ipping a number of the ring stock, became wedged in another chute, time threatened the safety of that of the building. At last sweating, bull men corralled them and for the only possible thing—to re- heir charges all night if necessary them ready for the next after- how.

Specialties in Noises

rogram was followed; dawn found hants still being forced through trance and their tricks. But even elve hours of practice only four of beasts were found sufficiently trac- risk in entrée.
time came, with the blankets again, pings and the howdahs. The ele- made their entrance. The audience led enthusiastically. All of which other new noise to the nervous Off went the four, heading for icket line in the basement, and a panic among the pachyderms d been left behind. Three hours e tired elephant men reported peace but only for a short time. The how brought another near-panic, "preposterous poundage of pon- pachyderms" was eliminated from gram of the circus—at least as far Coliseum was concerned.
e two weeks of the show's engage- which followed, the trainers prepared future. Every unusual noise, every e thing that might be the cause of fright on the part of the beasts, was provided for. Horses dragging sacks were ridden up and down in front of them; guns were fired behind them, tin cans dropped in a pile in front of them; they were even entertained every few hours by a pair of fighting dogs! Whenever an animal trainer thought of a noise or thing that might frighten an elephant, the picket line immediately was introduced to it, with trimmings.

On the last day of the engagement the trainers reported that they believed they had made progress sufficient to allow the presentation of one elephant act. The presentation was all. The only action was that of the entire herd stampeding wildly for that dearly beloved basement and its comparative safety.

The Futile Cow-Punchers

But now there came a new chance—the show left the indoors and went into the open, back to the land of canvas. Therefore at the first stand, Danville, Illinois, the doors of the bull cars were opened confidently, and out came the entire herd, except two, one of these being the chief agitator, of which every herd, it seems, has the misfortune to possess from one to three.

Never, incidentally, could there be a better comparison for the agitator of an elephant herd than that of the man who yells "Fire" in a crowded theater or the revolutionist who throws a bomb at a Sunday-school picnic. The elephant agitator occupies as much of a place in a herd as the nihilist occupied in Russia, or an anarchist in America. There is only one difference: With humans, the rest of the nation or state promptly does its best to squelch the alarmist or the trouble breeder. In elephantdom, the agitator, once he gets started, all too often has the following of the entire herd. This was the case in Danville.

The agitator started the trouble by refusing to come out of the car. Then he changed his mind and came forth on a run, milling the rest of the herd and starting a stampede of the entire twenty-two which lasted until late afternoon and which resulted in two things—a damage bill of close to fifty thousand dollars in the city of Danville, and a city ordinance which barred all elephants until five years later, when the herd of another circus, bearing many recommendations for sense and sobriety, were, under heavy police guard, allowed to parade.

The result of this sortie was that all the herd, save twelve working elephants, was confined to the cars for the next three weeks, when they again were brought forth, apparently pacified and evidently repentant. For three months there was nothing more dangerous than minor breakaways and lone recalcitrants, and it was believed that trouble at last was over. Then, at Rawlins, Wyoming, where the cow-puncher population of the entire surrounding country had congregated to watch the unloading of the big circus, the bulls were led forth as usual—and a dog fight started!

A rampage began less than a minute later. Five minutes more and the railroad yards were filled with wandering, frightened elephants; a passenger train was stalled at the station, the engineer fearing to pull out lest his coaches be overturned by an elephant galumphing forth from a hiding place behind a box car; the passenger station filled with refugees; and the cow-punchers eagerly volunteering to rope the darned critters an' bring 'em in, draggin' behind a saddle pommel. More, when six of the bulls took to the open prairie the offer was accepted—anything that looked like aid was a welcome thing to the circus just then—and the strangest roping contest in Wyoming's history began. Also the greatest defeat that a bunch of Western cow-punchers ever knew.

Not that they didn't succeed in roping the big beasts—for they did. But that was the end of the capture. The minute a rope settled about an elephant's neck the pachyderm decided to go elsewhere, taking rope, horse and cow-puncher with him until the lariat snapped. As a last resort some thirty of the cow hands decided upon a form of elephant round-up, an attempt to force the elephants to submission by the usual methods of a cattle round-up. It lasted only until the six recalcitrants decided to move on. Whereupon they lowered their heads, pushed the horses and riders out of the way and loped gayly

REZNOR

Reznor Gas Bathroom Heater

The Reznor Gas Bathroom Heater is the only appliance of this kind on the accepted list of the underwriters' laboratory, established and maintained by the National Board of Fire Underwriters.

(Also made for Electricity)

Bathroom Comfort *A la Carte*

IN these days no home is complete unless provision has been made for adequate heat in the bathroom.

When you build or remodel, do not fail to provide for this by installing a Reznor Bathroom Heater. It gives you instant heat the moment a match is applied.

The Reznor Bathroom Heater occupies no floor space—is always in place—easily installed in any type of wall of either new or old houses—and being of handsome white enamel, harmonizes with modern bathroom furnishings.

The Reznor Bathroom Heater is not only the finishing touch to the modern bathroom, but also adds the last word in the way of perfect comfort.

Write for our free booklet of complete information. Then consult your architect, building or plumbing contractor, and be sure "Reznor" is on the heater you install.

"The Happy Daisy Boy"

Different Daisy models range in price from $1.00 to $5.00. Ask any hardware or sporting goods dealer.

His First Gun

Most parents—mothers as well as fathers—want their boys to learn how to handle a gun correctly, and to shoot straight.

It is a sport that makes for real character and manliness.

Millions of American boys, now grown, first learned to shoot straight with a Daisy Air Rifle, and were then ready for a hunting rifle. For over thirty years it has furnished safe fun and training for American boys.

forth to new fields and broader prairies. Late that night a new relay of cow-punchers, accompanied by a half dozen of the captured elephants which had been thoroughly pacified, and headed by the bull keepers, found the truants a full twenty-five miles from town, and by mingling them with the passive beasts finally returned them to the cars. After which another full three weeks passed in which the elephants were missing from performance, followed by another period of passivity.

This lasted, however, only until the show reached Bakersfield, California, and a canvas man chased a frightened rabbit, which had bobbed up about the show grounds, under the side walling and into the menagerie tent. The rabbit went out the other side of the tent. So did twelve of the parade elephants, wrecking everything from the menagerie to the side show, and heading for an irrigation canal at the other end of the lot. Here they were dragged from the water, the parade paraphernalia muddy and ruined, and brought back to the picket line once more—where they remained peaceful for a whole twenty-four hours. The next day, at Santa Barbara, an agitator chirruped—a queer, almost bird-like call which precedes a panic—and away they all went again! Some chose town and the wrecking of fences and small buildings. Others made the outer circle, disrupting the garden hopes of residents for weeks to come. Two more made for the fish market—and ruined it. Another struck an automobile, wrecking it and injuring two persons. The remaining six of the runaways, smelling the open water, made for the bay and hopelessly mired themselves in the salt marshes, with the result that forty horses and nearly three thousand feet of rope were required to pull each of them from the mud.

A few days later, at Tucson, Arizona, the bull cars were run fifteen miles out of town, and the agitators were put to death.

But even with the agitators out of the way it was impossible to take chances. Every bull that remained was hobbled until it was weighted with chains to a point of uselessness. At New Orleans, a few weeks later, they were brought forth, assembled, appraised—and taken back into their cars, not to leave for the rest of the season. The risk was too great; it had cost the show nearly a fifth of a million dollars already for a herd of elephants that did nothing but cause trouble.

The Herd Goes Swimming

All of which has its antithesis in another stampede which stands alone in circus history, for it actually made money. Usually the toll is in the other direction, with the circus treasury wagon closed on the night of the stampede, and with the ticket takers receiving cash at the gate to guard against attachments until such time as the legal adjusters of the show can ferret out the damage—human or property—and make proper amends. But the gods sometimes favor even a keeper of the bulls, and such was the case in the stampede of the Sells-Floto herd at Idaho Falls.

The day had been hot. The elephants came out of the performing ring of the matinée tired and "juggy," as a bull man terms lassitude, to be led quite indifferently to a near-by irrigation ditch to drink. There, by their straining against the elephant hooks, they indicated that a mere drink would not satisfy.

"What're we goin' t' do?" inquired an assistant as he scrambled at the end of a bull hook. "They want in an' they're goin' t' have in!"

"Hold them bulls!" came the curt reply of the keeper. "Sink that hook deeper an' hold them bulls."

"What's the matter?" It was a new voice. "They just want a swim, don't they?"

"Yeh." The keeper touched his cap to the owner of the show. "Yeh—that's what they're after."

"Then why don't you let 'em have it?"

"Afraid. Snake River's just over this hump here, and they might make for it. It's deep an' swifter'n 'ell. Been a half a dozen horses drowned right here; nothing's ever come out of it alive."

"But," argued the little owner, "that isn't this ditch, is it? Why should they want to go over to a river they can't see when there's all this water right here?"

The keeper grinned in sickly fashion.

"You don't know bulls. They'll——"

"Quit your kidding. Let 'em go. The poor things are hot."

"All right." The keeper sighed with a good-by in it. "You're bo men! Turn 'em loose!"

There was a rush, a splash of then shining bulky forms that flo scrambled out of the water at t side of the irrigation ditch. The b entirety, had smelled broader ex water, and almost abreast they it—all but Old Mom, who tr wildly, who squealed and bello roared, but who for a moment alone. Even her faithful Alice her, running wildly with Snyder a over the edge of the hump an down a proclivity of solid rock raging waters of the Snake Rive Behind them the two remaining of the herd halted, stood a momen then whimpering returned to th Old Mom, while the circus owner, he had sent a valuable elephant h death, hurriedly decided to move than the range of the baleful ey keeper of the bulls.

A Good Publicity Stu

Down in the rapids, with its dangerous suck holes below, the phants floundered a moment, then out in different directions. Alice, mon sense aroused at last, swam her strength straight for the oppos finally landing in safety just above But Trilby and Snyder, forget swiftness of the current in their en of the water's coolness, drifte along—until too late. A moment the hundreds of excited sightseers gathered atop the banks saw the tossing, suddenly frantic beasts plu the falls and into the suck holes an pools beneath, from which no livi ever had emerged.

By this time the owner was fa and seeking even more speed. A m automobile hastened to overtake to break the news that his elepha in the Snake River death trap. He glumly and went on, while below the whirlpools ——

The elephants now were in a s which formed the main amusement boys of the town who, when the other games had faded, were wont large logs over the edge into the waters and watch them churned to the fierce action of the boiling Trilby had vanished. Only the Snyder's trunk showed at long in Atop the bank the keeper of th breathed another good-by to two best elephants.

Then a shout. Fully three hund below the suck hole Trilby, immer what had seemed hours, had come surface and was fighting valiantly shore. Finally she gained it, to cr rocky ledge, to stagger, then to exhausted. Five minutes later Sny beside her, equally fatigued. An they remained, moaning with human intonations, until their keepe Old Mom, came to their rescue.

All through the town the word that a living thing—two living t fact—had survived the death t crowds gathered; it was as though ing heroes had returned from a w townspeople even forgave Alice a damages when it was learned that ambled from her landing point to yard and caused a panic among th stabled there. That night the te unable to contain the crowds that to see the elephants which had be whirlpools. And in the years to co simple announcement of the comi circus was enough to insure the thousands of dollars—as long as tained the assurance that the de elephants would be a part of th formance.

But such a happy thing as this i of a bull keeper is almost too go true. His usual lot is a succession haps, of plunging fights against ev ceivable odd, of the fear of what may bring, and all too often the fu of every foreboding. In the circ the young man seeking adventure told to go West, nor to become a tor, nor to drive in motor-car speed nor to aspire to the Northwest M It is merely suggested that if he's earnest and doesn't care what ha might be a good idea to learn the ru of being a keeper of the bulls. Afte he isn't satisfied he's hopeless!

Why do women "shop" better than men?

They do. Once a woman knows what she wants, she gets it. A man is more likely to accept a substitute.

Women who have had experience with products made of "Armco" Ingot Iron know precisely what they want. They insist that the enameled refrigerator or the stove they are buying bear the blue and gold "Armco" trademark.

There *is* a difference in appearance between enameled refrigerators and stoves made with "Armco" Ingot Iron and those that are not. The difference is a richer gloss, a smoother surface, and no "pinholes" or rough spots. You cannot see the real value of "Armco" Ingot Iron. It is hidden beneath the enameling—but the enameling will give many years of service because of the pure iron base which holds it.

Some women—many women—insist on buying refrigerators and stoves of "Armco" Ingot Iron when they know of its beauty and long life.

Spark-C Ignition Tester is 7¼ inches long

Sees all
Knows all
Tells all
about your ignition

$ Price 1.50

in the United States

Does your car make a hill of a level road?

It does if the ignition system is faulty

IF every cylinder does not fire properly every time, the effect is to rob the engine of power—to make it climb on level ground.

The live cylinders must drag the dead or crippled cylinder and fight against the unfired compressed gas. It is like an invisible air-brake holding back the car.

Many cars have faulty ignition due to trifling things. The spark gap is too wide or not wide enough; the plug points are dirty; the contact surfaces in the distributor need wiping with a cloth or a little rubbing with sandpaper; the insulation on a wire is oil-rotted or cracked, causing current leaks.

Spark-C Ignition Tester will tell you almost instantly whether or not every plug is firing properly every time. Anyone can use it. You simply touch the spark plug with the point of Spark-C and read the result in the little window in the side.

You can only be sure of getting the most power from the gas you use if you know that every plug is firing right.

If you have a car, a motor boat, an airplane, or an electrically ignited stationary gas engine, get a Westinghouse Spark-C Ignition Tester from your dealer or garageman.

It is made by Westinghouse—a name that is a guarantee in itself.

is elegance. He has always re-
d in his memory. One of his pas-
the clothing of abstruse thoughts in
anguage. It is his belief that there
uncertainty in American law, and
is uncertainty is due solely to the
draftsmanship of the laws. He
he income-tax act to be a thing of
and a horror forever, for the
reason that the people who drafted
inapt and obscure English. Having
d hazy and meaningless clusters
ls, the well-intentioned folk in the
ry attempted to clarify them by
interpretations; but unfortunately
rpretations were frequently couched
n more obscure language than the
ey purported to interpret. Thus the
ountry was plunged into confusion.

Pepper gave an excellent demonstration of a simple but airtight legal document when he wrote the uniform player's contract now in use in the American and National Leagues. There are no whereases in it, no parties-of-the-first-part, no to-wit's, no hereinbefore-mentioned's. It is as simple as a telephone bill; and the player who signs it "pledges himself to the American public to conform to high standards of fair play and good sportsmanship." When he had written this contract he proceeded to write a little contract for all the hard-boiled club owners to sign, so that all the promising shouldn't be on the part of the players.

"We, the undersigned," ran this contract or pledge, "earnestly desirous of insuring to the public wholesome and high-class baseball, and believing that we ourselves should set for the players an example of the sportsmanship which accepts the umpire's decision without complaint, hereby pledge ourselves loyally to support the Commissioner in his important and difficult task; and we assure him that each of us will acquiesce in his decisions, even when we believe them mistaken, and that we will not discredit the sport by public criticism of him or of one another." This was signed by twenty-nine club owners, but not until some of them had emitted a plaintive howl of protest.

Some Big Cases

No Pennsylvania law library is complete without one little trifle for which Pepper is responsible, together with Prof. William Draper Lewis. The title of this bit of hammock literature is Digest of Decisions and Encyclopedia of Pennsylvania Law. It contains a digest of every case in every court in the state of Pennsylvania from 1754 to 1898, and is in twenty-two volumes. Each volume contains about a thousand pages. It was an eight-year job, and may be regarded as one of Pepper's after-hour relaxations.

Pepper represented Gifford Pinchot in the famous Ballinger-Pinchot struggle between the Forest Service and the Department of the Interior in 1910. He represented Pierre Du Pont in the litigation respecting the purchase of stock of the Du Pont de Nemours Company. Sixty million dollars were involved, and Pepper won the case. He represented the United Fruit Company in the longest jury trial ever held in Philadelphia, when Fruit was sued by the Bluefields Fruit and Steamship Company for alleged restraint of foreign commerce; and won the case after a twelve weeks' fight. He tried the case for organized baseball when it was sued by the Federal League for being a combination in restraint of trade. He lost the case in the District of Columbia, but the verdict was reversed in the Court of Appeal. He argued it before the Supreme Court a short time ago. And it was Pepper who drew up the documents under which Landis was made commissioner of baseball. He is as persistent a lawyer as he is a mountain climber; in one day, not long ago, he argued four cases before the Supreme Court of Pennsylvania.

He is frequently cursed fluently by the labor people as being the pal of the plutocrats and the lambaster of labor; yet from time to time he has been chosen as arbitrator in disputes between capital and labor, and he has refused to take cases against labor unions where the question involved was a dispute between an employer and employes. He has taken cases against labor unions—and always won them—where the unions were undertaking what is technically known as a secondary boycott. If you, for example, are building an office building, and the union notifies all laborers on the job to walk out unless you break your contract with a heating man who refuses to discharge nonunion laborers, you would be the victim of a secondary boycott. Since he won these cases Pepper's position would seem to be less that of a lambaster of labor than that of one who remembers the basic principles of the square deal.

When the Great War began he campaigned with General Wood in an effort to make the country realize that we were going into it eventually, and that we weren't prepared. When the first Plattsburg camp was started, in 1915, Pepper

HAVE you ever wondered why quick fortunes are never made by funeral directors and why you never hear of millionaire undertakers?

Public need for broader service and improved facilities has resulted in large investments in motor cars, scientific equipment, funeral homes and chapels. These bring about a heavy and continuous operating expense.

Another reason is that the funeral director has taken over all the tasks formerly looked after by neighbors and friends. He also performs scores of additional services which modern conditions and modern sensibilities demand.

In the funeral director's bill, the cost of this service and overhead (often a large proportion of the total cost) usually is included in the charge for better understood items. Such charges should be judged with this fact in mind.

MADDOCK

THOMAS MADDOCK'S SONS CO., TRENTON, N. J., U. S. A.

went up as a rookie and was made color sergeant of the First Provisional Training Regiment. He went back on the following year and took the training course again. He not only wanted the training but he wanted to stimulate younger men to do likewise. He made an attempt to get into the army bill a provision that men over military age, if bodily sound, could be accepted for line duty. Failing in this he signed up with Colonel Roosevelt's provisional division. Pepper is driven by the same type of internal engine that drove Roosevelt, and the sight of him was always enough to make Roosevelt click his teeth together in approval and delight.

During the war he was chairman of the Pennsylvania Council of National Defense. After the war he started a fight on the League of Nations. He decided at once that our participation in that league meant that we would be a party to the settlement of every boundary dispute in Europe—and that for the next few years Europe would have as many boundary disputes as Polish emigrants have cousins. He fought the League of Nations with the League for the Preservation of American Independence, of which he was vice president. That organization was formed to coöperate with Senators opposed to the league; and on it, to a large extent, was built Harding's fight for the Presidency. The most dramatic incident in Pepper's fight was his debate with Senator Hitchcock in the Metropolitan Opera House of Philadelphia. The house was jammed; and Pepper and Hitchcock, after the fashion of all those who opposed each other on the League of Nations, thought that they got the better of each other. Pepper's efforts seem to have helped, at any rate; for not long after he had been appointed to the Senate to fill the place of the late Boies Penrose he overheard a guide leading a party of brides, grooms, corn farmers and pilgrims toward the Senate Chamber. "Now, ladies and gentlemen," said he, "I'm going to take you to a place of extreme interest—the place where the League of Nations was killed."

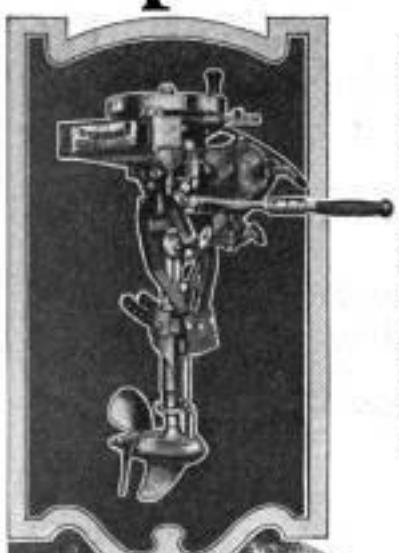
Friends High and Low

For twenty-one years Pepper has been a member of the Board of Missions of the Episcopal Church. He has written religious books, and he has been keenly interested in religious and missionary work in the Philippines, China and Japan. Some, too, would call him an uplifter, because he is always doing something to better the lot of jailbirds. He would admit, if asked, that he has a large number of friends who are murderers, burglars and forgers. Burglars, however, he views pessimistically. He has hopes for almost every other sort of criminal, but he feels that you can never be sure you've reformed a burglar. Burgling, he thinks, combines the joys of big-game hunting and those which come to the gambler when he gets something for nothing, so that the burglar never loses his aptitude for this fascinating profession, following or avocation.

But in spite of his tendency toward uplift, he packs, as the saying goes, a powerful wallop, and is apt to remember some of the more militant precepts before he remembers the one about turning the other cheek. If, therefore, anybody were to come right out in the open and accuse Pepper of representing any particular class of people he would probably be the recipient of a quick stiff-arm jolt [illegible] shape of an abrupt reminder that [illegible] represents murderers and millionaire[s] ployers and employes, beggars [illegible] players—that he has more friends [illegible] different sorts of people than any [illegible] American with the exception of Roo[sevelt]

Simplicity is elegance. That be[ing] case, Pepper could not, if he tried, be elegant in his beliefs on various [subjects] that will soon set a few tireless men [in] that august body, the United States [Senate], to spouting passionate and [meaningless] rivers of words that will [probably be] listened to by more than ten or [twelve] bored Senators, a couple of [industrious] stenographers and a few heartily [disposed] reporters. You can call it being [regular]; you can call it climbing aboard the [band]wagon or roller or you can call it anything else you like, but when you are through calling it [by] names you might try calling it [common] sense or an application of the old [adage] that a straight line is the shortest [distance] between two points.

Old American Stuff



For example, Pepper holds that [the] problem that confronts this country, [whether] it be levying taxes or adjusting [tariff] schedules or fixing railroad rates, [must be] solved if it is solved in the interest [of a] class or locality or at the expense [of] other class or locality. This applies [to the] so-called farm bloc and to special [interests] that may be working on the tariff, [on] immigration and to matters of [health] kidney.

Many, for example, use their [taxing] power to levy excess-profits taxes, [to] gratify them enormously because they [do] seem to come largely from rich [men's] pockets and to bear comparatively [little] on their own resources. The actual [eco]nomic effect, however, is to make [men] do things in industry which result in [unem]ployment. Therefore the thing [is] done by the poor against the rich [turns] to be an evil from which the poor [man] suffers intensely and the rich man [feels] little.

As regards the military situation, [Pepper] views the surrounding scenery with [an] equally kindly and simple smile. On [the] one side are arrayed the "sexless [critics]" who infest the shoals of pacifism; [their] words are Pepper's; and on the other [side] is arrayed an idle regular army. [Pepper] idleness automatically breeds disaffection, pugnacity and militarism. To [devote] to either would be fatal. Therefore the [cry] less sirens must be ignored, and the Army officers and enlisted men both—[who] set to work training a yearly crop [of] serves. Thus there will be no idle hands [in] the Army, so that dissatisfaction and [grie]vers will vanish from it; and at the [same] time the country will be insuring [itself] against future ills by storing up a [vast] increasing number of trained reserves.

A straight line is the shortest distance between two points. Simplicity is elegance. Honesty is the best policy. Pepper's memory has never failed him; [it's] mostly the good old prewar stuff; [that] to say, there's none of the new, long-haired foreign-born stuff to be found in it; [none] of the offshoots of that "organized [lawless]ness and transfigured crime masquerading under a high-sounding Russian name. [I'll] quote Pepper again. It's all the old [stuff]—old and straight; and old friends are [the] best.

ıe friction-proofed tire now a reality!

Friction, the primitive means of creating flame, is today the big problem in tire-making; the source of road-burn, of 95 blowouts in 100.

4% Proofed
gainst friction
-against road-burn!

ontradicts all previous onceptions of tire service

omes a tire to change men's views of ndurance—84% friction-proofed!

ks a new era in tire-making. An era of endurance, of reduced tire troubles, of hingly increased mileage.

n is the greatest enemy of tire life. It . And heat destroys rubber. It weak- es; makes them susceptible to stone , to easy puncturing. It lessens resist- ne-half.

very turn of the wheel creates friction. are friction-heated in gaining road hold. ch on the brake multiplies it.

there is a constant fight between man- ined materials and the natural element destroys them.

owouts in 100 are charged to friction— d-burn.

A problem 20 years old

the development of the first pneumatic friction has been the great problem in aking.

recognized that fact when first we started ld tires. We knew if we could solve it, ge conceptions would be changed. So for years we experimented. World-experts worked with us. Innumerable processes were tried, only to be discarded. Expense was not considered.

What 84 Per Cent Friction-Proofed Means

Friction is the enemy of every tire in service—the source of 95 blowouts in 100. By special process, Brunswick Tires are 84% friction-proofed. A new conception of tire endurance is thus effected. Service is multiplied; road troubles reduced to an amazing minimum.

Now we've 84% succeeded

Today, we offer an 84% friction-proofed tire. The process is a special one—the final solution as we see it. Time may come when 100% friction-proofing is achieved. But we doubt it, for that would effect virtually everlasting service.

But 84% means, we believe, such tremendous road endurance that thinking men will scarcely ask for more.

Hence, in this new and greater Brunswick, we feel the Supreme is being offered.

At standard prices!

For 76 years we have specialized in super-quality products. Yet our prices have always been held to standard.

So throughout the world, the name Brunswick stands for that which is best in manufacture, at lowest consistent prices.

Thus, the friction-proofed Brunswick conforms to the standard list—is delivered to the user at the price of an *ordinary* tire.

We urge all motor car owners, all operators of delivery trucks, as a simple matter of good business, to *get the facts* about this new Brunswick—cord or fabric—before re-equipping with new tires. Any Brunswick dealer will gladly explain them.

Tom Macklin Wins a $5,000 Job

Good news for Tom Macklin—he has just been picked for a five-thousand-dollar job.

Fairly surprised him, the promptness with which he won promotion, and the actual fun that he got in going after it.

Tom, you see, was just an average chap who had been slaving for years in the general offices of the Marbury Company. Meanwhile, other fellows his own age had been stepping into the big-pay positions.

Then one day, less than twelve months ago, Tom Macklin woke up. He did the thing that he should have done five years before—he enrolled with LaSalle Extension University.

And suddenly he made a very happy discovery—he found home-study training under the LaSalle Problem Method downright interesting.

Fascinating, so he called it, to take those problems just as they were put up to him by highly successful business men and to work them out for himself.

For the first time in his life he began to see real progress. Tasks he would have side-stepped a month or so before he performed quickly and satisfactorily. His chief was quick to see the improvement, both in his work and in his attitude toward the job. The result was inevitable. When Johnson left to go with another concern, Macklin was named to succeed him—at a salary to start of $5,000 a year.

Your Shortest Route to a Big-Pay Position

Typical, Macklin's experience, of that of thousands of ambitious men who have found their path to success in the LaSalle Problem Method.

Letter after letter in the files of LaSalle Extension University tells the same thrilling story. If the men now in low-pay jobs could see those actual letters, literally thousands of them, telling of rapid advancement to positions paying $3,000, $5,000, and up to $10,000 a year, they would never rest until they had mastered the specialized training that they absolutely need to win success.

Send for "Ten Years' Promotion in One"

What are you going to do with your spare time during the next few months? Will you use some portion of it to help you on your way to bigger things, or will you continue to drift—drift—drift—and be forced to content yourself with your present earnings?

One thing, mighty important, you should do at once—you should get the facts. The coupon will bring them to you without obligation, together with particulars of our convenient payment plan; also your copy of that inspiring book, "Ten Years' Promotion in One." "Get this book," said a prominent Chicago executive, "even if you have to pay five dollars for it." We will send it *free*.

now that he'd drifted into a way of saving up these business jokes to make Edith laugh. That was the whole trouble, he thought bitterly—Edith had forgotten how to laugh. A darned shame too. She had had such a jolly little tune of a laugh before she'd changed.

He spread the photographs on his desk before he rang for a stenographer. They ought to help construct that letter to Miller. They were even better than he'd thought. He could use some of those ideas in place of the suggestions he had tentatively sketched in his interviews with Miller. Beyond the prints he began to see the woman who had devised and posed and photographed them. An extraordinary girl, sure enough. It wasn't impulse that ——

Evidently this thing wasn't curable! He scowled at his obstinate delusions and punched the call button with needless emphasis.

III

"YOU'LL have to fix things so that I can deal with you on this Miller job. I simply bar your Mr. Carey."

W. John Simpson became conscious of an inner brightness. He might have known that Carey would disgust Dora Willet. He ought to have given her credit for so much taste, to say nothing of sense. Carey, whose notion of pleasing a lady was mainly a certain audacity in timing the adoption of "kid" as his form of address.

"All right. I can arrange that, I guess." He spoke confidently. Since the acquisition of the Miller account he had perceived a new and grateful attention to his suggestions at the office. McIntyre would back him on this if Carey tried to fuss. He chuckled. "I don't blame you. Carey ——"

"Oh, he's the regular thing. There are only two kinds; and his kind's less poisonous than the other."

Simpson lifted his brows. He objected to such inclusive generalities. He refused to choose between classification with Carey and being graded as yet more poisonous.

"I don't get that. How do you mean?"

She waved her hand wearily. "I suppose not. You wouldn't. It doesn't matter."

"But it does! I want to know which class I'm in, and why ——"

"That places you. You're the other kind."

"And why? I don't see any crossbones on my label."

"They never do. You're the type that takes its sentiment seriously. Carey's the sort who just makes it absurd, cheap. He's the male of the vamp species."

W. John Simpson sat very still, holding his unbelieving breath. It just couldn't be true. There really wasn't any such woman.

"And you think I'm the opposite sort—the kind that can't see anything to a kiss but a first degree in matrimony? Thanks!"

"Oh, you won't admit it of course. They never do; the he-coquettes would make Gibraltar look like a weathervane if you'd let them tell it; and the others are all positive butterflies. Let's drop it. I'm busy, and Carey's kept me way behind with this new series."

He held his peace. Words wouldn't convince her, but time could do it. Besides, how did he know that she wasn't only pretending? After all he didn't know anything about her yet. He could wait. But if she was real ——

The fatalistic theory acquired a new force, however, in the light of what had been said. Probably, just as she claimed, all man, like Gaul, was divided into three parts, of which W. John Simpson was one. If it proved that she occupied a similar division of the other gender there must be something in the idea of destiny. You couldn't account for it on any other theory. Billion-to-one shots couldn't win unassisted.

McIntyre justified his confidence. The man who had solved the long-standing mystery of Andrew Miller was more important than any number of fat art directors; Carey, rashly venturing on a veiled hint of resignation if his province were subjected to trespass, heard a pungent reference to the difference between producers and spenders that sent him back to his desk with the look of one suffering from a slow leak. Striking shrewdly while the metal glowed W. John Simpson adjusted the salary matter rather effectively. Seventy-five dollars a week, after this, and a commission on new business too. Very different from the forty-dollar status at which he had seemed to stick for the last year and more. His chest needed more room, somehow, than his vest allowed. He meditated on suitings over his work. Tweeds, probably—something that would combine dignity with—with class.

Collaboration in the photograph matter led, as he had foreseen, to a rapid progress in less commercial directions. It was necessary rather often to interrupt protracted sessions in the studio with brief luncheons at the tea room in the basement; a pressure of rush work required a pause for dinner and a return afterwards to work under artificial lights. The actinic quality of this illumination would have been severe on some complexions, but Dora Willet seemed to profit by it instead of losing. She paid for her own food always. He had the wit to offer no protest about this. *Suaviter in modo*—he amended the tag hastily—*et suaviter in re* too. Edith had insisted on going Dutch, at first.

He suffered still from a sense of undeserved reproach when he thought about Edith. He couldn't help holding her responsible for this. It was another grievance, although in justice to her he had to admit that she was taking it nicely. She'd only phoned a few times, and his uneasy references to night work and the Miller account had satisfied her. She wasn't going to pester him, he saw. That was something. But it was her fault that he persisted in feeling mean about dropping her. If she'd been what she'd pretended to be, what Dora Willet seemed, there wouldn't have been a single parting pang.

He became gradually aware of a reassuring background behind Dora Willet. At a late interview in her studio he encountered her mother, a Victorian survival, to whom, he instantly perceived, this daughter was as mysterious as a duckling to the aggrieved hen responsible for its incubation. Mrs. Willet visibly disapproved of a business intimacy unsanctified by social and domestic preliminaries. It was she who invited Mr. Simpson to regularize this relation by calling at the apartment. To his surprise there was no objection on Dora's part.

"You might as well," she declared. "Come along now and have dinner with us if you've nothing else on hand."

He hesitated. It undeniably had the look of the usual trap. The minute the family element entered the equation you could expect trouble. Still, Dora's tone was almost a release in advance from any inferences on Mrs. Willet's part.

"I'd like to," he decided.

After all, it would be just as well to get a line on her people. You could learn a lot about a girl by watching her relatives. More than once he'd avoided distressing entanglements by a timely glimpse of the family group.

There were three other Willets, he discovered, besides Dora's mother, and it needed only a few minutes to enlighten him unmistakably as to their attitude and hers. Mr. Willet addressed his daughter with a cautious deference which W. John Simpson instantly interpreted, before Dora's conversation revealed the fact that Mr. Willet was looking around. Miss Mamie Willet, appealing from the decisions of the lower court in a plea involving the propriety of a screen drama entitled The Hundred-and-First Kiss, confirmed a guess which had already become almost a conviction, and the unfilial tone of Master Clarence in the same dispute became sulkily submissive when Dora handed down a confirmation of the previous finding, which was at once and silently accepted as final by all concerned.

He departed early, his doubts dissipated. There couldn't possibly be any room for sappy sentiment in a girl who carried this family on her charming neck. Probably she harbored a lively desire to excoriate the parties who had invented marriage. And even if she was like all the rest of them, here was an impassable rock in the path. No woman would expect a man to shoulder that crew, and it was quite obvious that this was what a man would have to contemplate if he ——

She went to the door with him and shook hands. He discovered a distinct thrill at

the contact. Somehow he hadn't expected that her hand would be like this; it wasn't a business hand at all. He had a sudden stab of anger against the other Willets. Letting a girl like this support them!

"You're great!" he said, on impulse. "I—you're a double wonder."

"I don't exactly hate myself either," she admitted. "I'll have those washing-machine ideas ready sometime to-morrow. Phone you. Good night."

He restrained a buoyancy in his feet as he walked home. Absolutely no nonsense about her; and yet —— He opened and closed his right hand reminiscently. This began to look as if a dream could come true, even a wild dream. She wasn't a bit the hard, emotionless, business type or her hand wouldn't be like that to the touch.

He remembered the way she had seconded her mother's invitation. "You might as well." He understood that tone now. She was serving notice, in effect. She'd classified him among the men who needed such a warning. He didn't resent this so much, now that he knew; at least she had also given him credit for enough intelligence to see and heed it. She didn't take him for the usual sapheaded male anyway. And she'd find out very soon that she was wrong about the rest of it.

He enjoyed his state of mind scientifically. It was the way he had felt before, when he had clung to the same hope, but this time there was less doubt in the background, less of that sophisticated scoffing from his enlightened self. Here was a girl who wouldn't ever let sticky sentimentality spoil things and yet could —— He moved his remembering fingers gently. That was what you got for being different; the ordinary fellow would never get any such reaction from a casual contact of hands. He was humming softly as he climbed the stairs to his room.

IV

DORA didn't move. She was so still that for a moment he had a sharp fear that she was angry, disgusted, after all, at what had happened. He held his breath, waiting. It was a climactic instant, with all the future wavering in a balance. If she took offense ——

"That," she said softly, with just a whisper of a laugh behind the word, "that was a nice kiss, Johnny."

He breathed again, relief quickening his delight. She took it perfectly. He might have known all along that she was real.

"The night needed it—to be perfect."

He had used the phrase before, under similar circumstances, but it was, he felt, as good as new. It was another test. If she resented its delicate hint as to the episodic nature of that kiss ——

"Why, Johnny!" She faced him quickly. There was light enough from the thin moon to let him see that her eyes were wide. "You're a clairvoyant! How did you know I was going to say that?"

He laughed softly. "I didn't. I felt that way, that's all. It's true, isn't it?"

"Of course it's true! But you ——" She paused. "I thought—oh, it doesn't matter. It spoils things to dissect them. Let's not talk."

He smiled triumphantly at the silvery night. She knew! Very gently he touched her hand, relaxed and motionless on the scuffed wood of the pier. She turned slowly toward him as if she waited, as if ——

"It's late. We'd better go."

He rose at once, helped her scramble up from the timber.

"Yes. And it's easy to spoil things when they're perfect, isn't it?"

He laughed again. She wasn't sure of him even now. He heard her breath catch in her throat.

"Are you pretending, Johnny? Because if you are it's rather brutal. And you can't possibly be real."

"That's what I've been telling myself about you, Dora. I wasn't sure till just now that there were two of us. But there are. It isn't possible, but it's true."

She stood facing him. "Don't you want to—to kiss me again, before we go back, Johnny?"

He caught himself in time. "Not any more than you want me to. It's perfect, isn't it, as it is?"

She laughed softly. "That wasn't fair, I admit. But I had to know. Oh, Johnny, it's going to be wonderful! I've always dreamed of somebody who could feel as I do about it. Somebody who could ——"

"I told you there were two of us. I don't more than half believe it myself, but the thing's happened. It's true."

The lights at the station, the homing holiday crowd, brought them back to another reality. Their eyes met and laughed together. In the car they were silent, sharing an esoteric amusement at the frank emotions of the common herd. Dora put it into words: "They don't know when to stop, poor things."

He nodded. But the word jarred unpleasantly on his mood. It suggested an end of even this radiant miracle of coincidence. He and Dora knew when to stop; the time would come when they would go their ways without rancor or regrets. He discovered a sudden savage hostility to the thought. Perfect things should endure forever. A comradeship like this ought not to fade and die, like ordinary friendships. If it could only last —— He asked himself sharply why it couldn't? Why couldn't they go on and on, as they'd begun, in this soft twilight zone of gentle emotions, never overstepping the boundaries like the unthinking who couldn't let perfection suffice?

The conceit took hold of his fancy, thrilling him. Forever and forever! It needn't even end with age; he saw them, white haired, still under the spell of a romance unspoiled by excess. It might go beyond, even —— He drew his breath very deep. Dora would see it too. He turned to tell her eagerly.

"I've been thinking about that Larned business, Johnny. I believe you could make him see reason if you keep pounding away at one definite point, instead of arguing on generalities. Let's work out a specific campaign in advance, and sell him that, instead of debating about advertising itself."

"Something in that, I guess."

He was annoyed to find a mild disappointment below his approval. Of course she was right to be severely practical in this atmosphere; you couldn't possibly talk about misty, fragile fancies in the seat behind that pair of gum-chewing cuddlers. But it was a pity, all the same, to surrender that thinly sweet instant of romance so suddenly. One should approach reality, after a rare and exquisite excursion into dreams, by a gently graduated descent.

He listened to Dora's elaboration of her theory, compelled to agree and to admire, and yet faintly discontent. Nothing was absolutely perfect, after all. His thought moved in some groove of association to that other evening, by the little Jersey lake. Edith hadn't taken it any more seriously than Dora, in one sense. But she hadn't talked all the way home about advertising aluminum kitchenware either. He resisted a twinge of conscience. Of course it was a long time since he'd seen Edith! Why shouldn't it be? It would be longer now before he saw her again. Hadn't he found Dora?

"It's a bully scheme, Dora. We'll have a shot at it."

He frowned as the girl in the seat ahead snuggled in the hollow of a weedy shoulder. But the frown was directed chiefly against a disgraceful, unbidden envy. It was sickening to think of himself and Dora in that artless, vulgar juxtaposition; he despised himself because in the teeth of this doctrine he continued to harbor the belief that it would be pleasant.

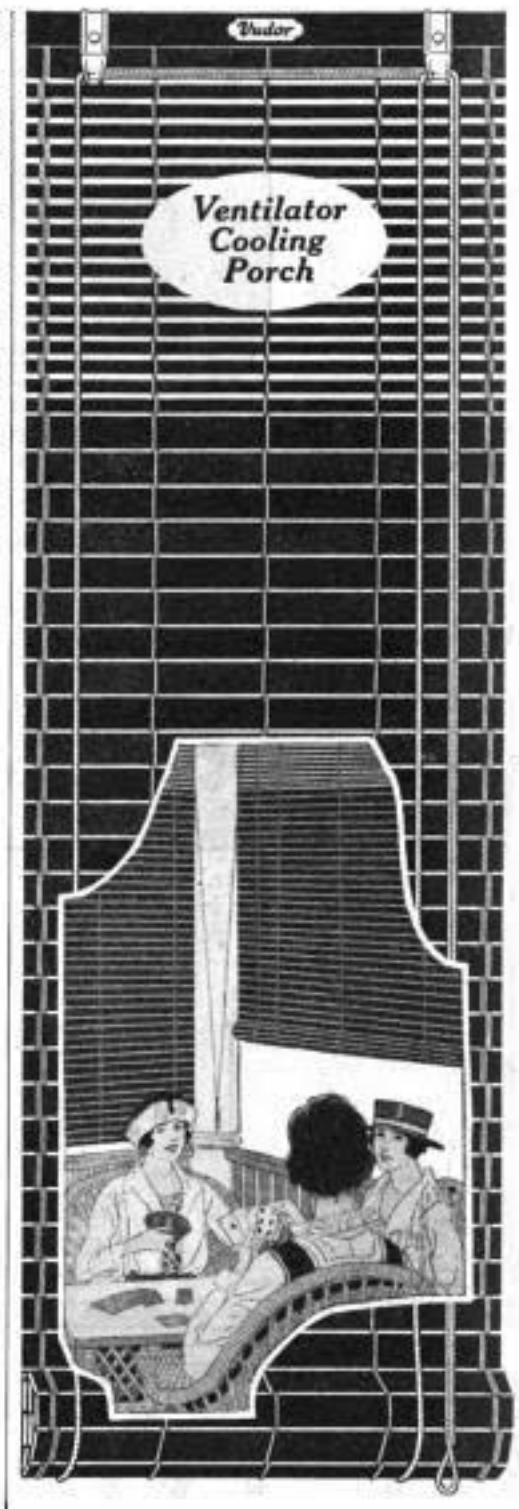
Even in the taxicab he governed that debased impulse. Their hands barely touched as they parted. Dora's smile praised him.

"I hardly hoped you'd play up so beautifully, Johnny. If you only knew ——"

He laughed shortly. "Think I don't? It's just as bad, being a man. You can't have anything unless you want it all!"

She shook her head. "They can't drive you frantic—begging you. If I give them the slightest excuse they think ——"

He untangled the obscure speech. Most men—any man except W. John Simpson—would certainly justify her complaint.



"Well, you can trust me, that's sure." He spoke grimly.

"And you can trust me. Good night; Johnny."

He paid the cabman and walked back to his room. If it could only last!

▼

A DIVIDED mood went with him to the ground-glass door of the studio—a door which had mysteriously acquired overnight a new and portentous aspect. He was at once eager for this interview and afraid of it. If he had been wrong about her, after all, he would find it out now. She'd be different anyway. They were always different after such revealing occasions as last night.

Invitingly Shady and Comfortable

The porch enclosed with VUDOR Shades is invitingly shady and comfortable in the hottest part of the day. Cool air is kept in circulation through the ventilator at the top (an exclusive VUDOR feature) and the light plays softly between the tinted wood slats with the heat and glare filtered out.

VUDOR Porch Shades are greatly reduced in price. A shade 6 feet wide with a drop of 7 feet, 6 inches, now costs only..... $6.25
north of Alabama and east of Colorado. Sizes to fit any porch priced proportionately.

SONNEBORN PRODUCTS

At Last- Leakproof Roofs

Just brush a covering of Stormtight on your old or new roofs, and they will be leakproof, year after year, for many years.

You can protect your roofs against the deterioration and leaks, which otherwise will surely come.

You can make your *old*, leaky, apparently worthless roofs as good as new, without tearing them off.

You can save the money which constant re-painting or expensive re-roofing will cost.

Stormtight

FOR USE ON ANY ROOF IN ANY WEATHER

has no weak points, open to weather attacks. It provides a one-piece covering without laps, seams or nail holes—several times as thick and durable as a paint film. That's why it lasts for so many years.

The Points Where Most Roofs Leak

Anyone can apply Stormtight on the tin, paper composition or canvas roofs of homes, factories, garages, outhouses, etc.

Sold by your dealer in all quantities for patching, or enough for your whole roof. If he does not yet carry Stormtight, write us at once.

Send for booklet, "Leakproof Roofs," and testimonials covering years of use.

There was a sharp relief at the sight of her, crisp and brisk and unmistakably businesslike, and her greeting finally shamed his lingering doubts. He listened to brief and pungent comment on the character of photo-engravers in general and of McIntyre's pet firm in particular, a discourse illustrated with proofs of the new Miller cuts.

"You're right, Dora. They've gummed the job. I'll get right after them."

He might have known she wasn't like the others. Nothing about her remotely suggested that she had watched the moonlight on the surf last night. A faint uneasiness subsided so quickly that he was conscious of a vacuum in its place. In the relentless morning sun she was prettier than under a feeble moon; her clear color, the glints of light in her hair, the soft, lovely curve of her cheek stimulated an ache in his throat. There was something out of tune here. A girl like this—what a pity that circumstances obliged her to think about the sins and shortcomings of engravers! He thought of that family group with a sudden vindictive animosity. All sponging on her, so that there was room in her waking life for only rare brief moments of that faërie thing for which Nature had so patently cast her!

"Dora, I—last night ——"

Her smile flickered through her annoyance and was gone.

"Business hours, Johnny. Nine to five, except Saturdays and Sundays."

Oh, she was wonderful! She remembered, and yet memory didn't govern her. She could keep things separate. That ache in his throat quickened and throbbed. What a crime that she had to!

"I knew you'd say that," he said slowly. "Dora, I can't get over it. It doesn't seem possible that it's true."

"Nine to five," she repeated. Again the smile flitted away almost before he saw it, and the slight frown came back. "I've got something worked out on that Larned account. Thought of it last night. Moving-picture effect—tell the whole story in photographs."

She fumbled for a scratch block and drew rapidly. He watched her, his admiration doing battle with that persistent aching compassion. Even last night, instead of thinking about what had happened, she'd worked out this idea for selling Larned's Eternalastic Saucepans! He put a protest into words when she paused:

"Last night, Dora? I thought you said that business hours were from nine to five."

He barely saw the smile this time. She spoke abruptly:

"Oh, don't, please! This is serious for us both. If you can get that contract it means ——"

"I'm sorry."

He was mollified at once. It wasn't business, altogether, after all. She'd lain awake to puzzle out this plan on his account. He touched her hand gratefully. She drew it away.

"It means five or six hundred net for my end of it," she finished sharply. "I'm counting on you to get it for me."

"I'll get it."

He was not deceived by that subterfuge of hers. He took his leave presently, upborne by the reassuring discoveries of the interview. She was even more marvelous than he had thought.

The conviction was forced upon him as a magic summer slipped away in almost daily business contacts, relieved by rare brief lapses into the pianissimo sentiment for which he had longed in vain, exquisite moments which inevitably ended in an abrupt complete return to the wholesome sanity of their workaday relation. There were other moonlit evenings at the less congested public beaches, late prolonged rides home from the play in open taxicabs that dawdled through the park or past the river, interludes of that precious intimacy generated by the seclusion possib in a crowded noisy restaurant earthbound souls. And always th that entire assurance that each was complete in itself, that here serial romance, leading to a climax barely connected series of distinct tures, ending exactly where they

He knew that it was perfect. Ex those excursions along the border mance he found no least excuse persistent sense of something lackin grew upon him with dismaying ob Dora was exactly the woman of hungry, hopeless dreams. And yet

Sometimes when he saw Andrew on affairs of business he found pervaded by a queer compassion. have hit this old bachelor pretty ha infatuation with Dora. Of cours was common clay and couldn't stand how Dora looked at things. have hurt him. Dora could be when she chose. And she wasn't ev for poor old Miller. She spoke of h a kind of exasperation—a man rated with sappy sentiment that insisted on marrying the whole family!

"If you hadn't come along I'd h to charge off about four hundred worth of work I'd done for him," clared. "I had to break it off altoge was such a pest."

W. John Simpson winced and himself for it. She was absolutely course. Hadn't he dropped Edith abruptly?

Dora's hand touched his as if dent. They were going home thro park after a play. That was one those sentimental moments—their pectedness. Somehow to-night he sense of discord. She didn't mea thing by that; she didn't care an about W. John Simpson than she drew Miller. It wasn't real. He d hand away and muttered an apol if it had been his fault.

"How does Larned like the te series, Johnny?"

He sighed. It was perfect. Abs perfect. But ——

VI

HE SURVEYED Edith imperv aloof, observing that his co silence did not in the least disturb h she was wholly content to hear th little clock, the friendly whit-whit the gas grate, her attention seemin gaged with her seam, her lips dra gether in an absorbed pout. His softened. Edith was so different!

He deliberately catalogued the in her superficial appeal, confirming curate mental list of them. She look meeting his eyes above her sewing, a lips relaxed in the smile for which, knowing it, he had been waiting.

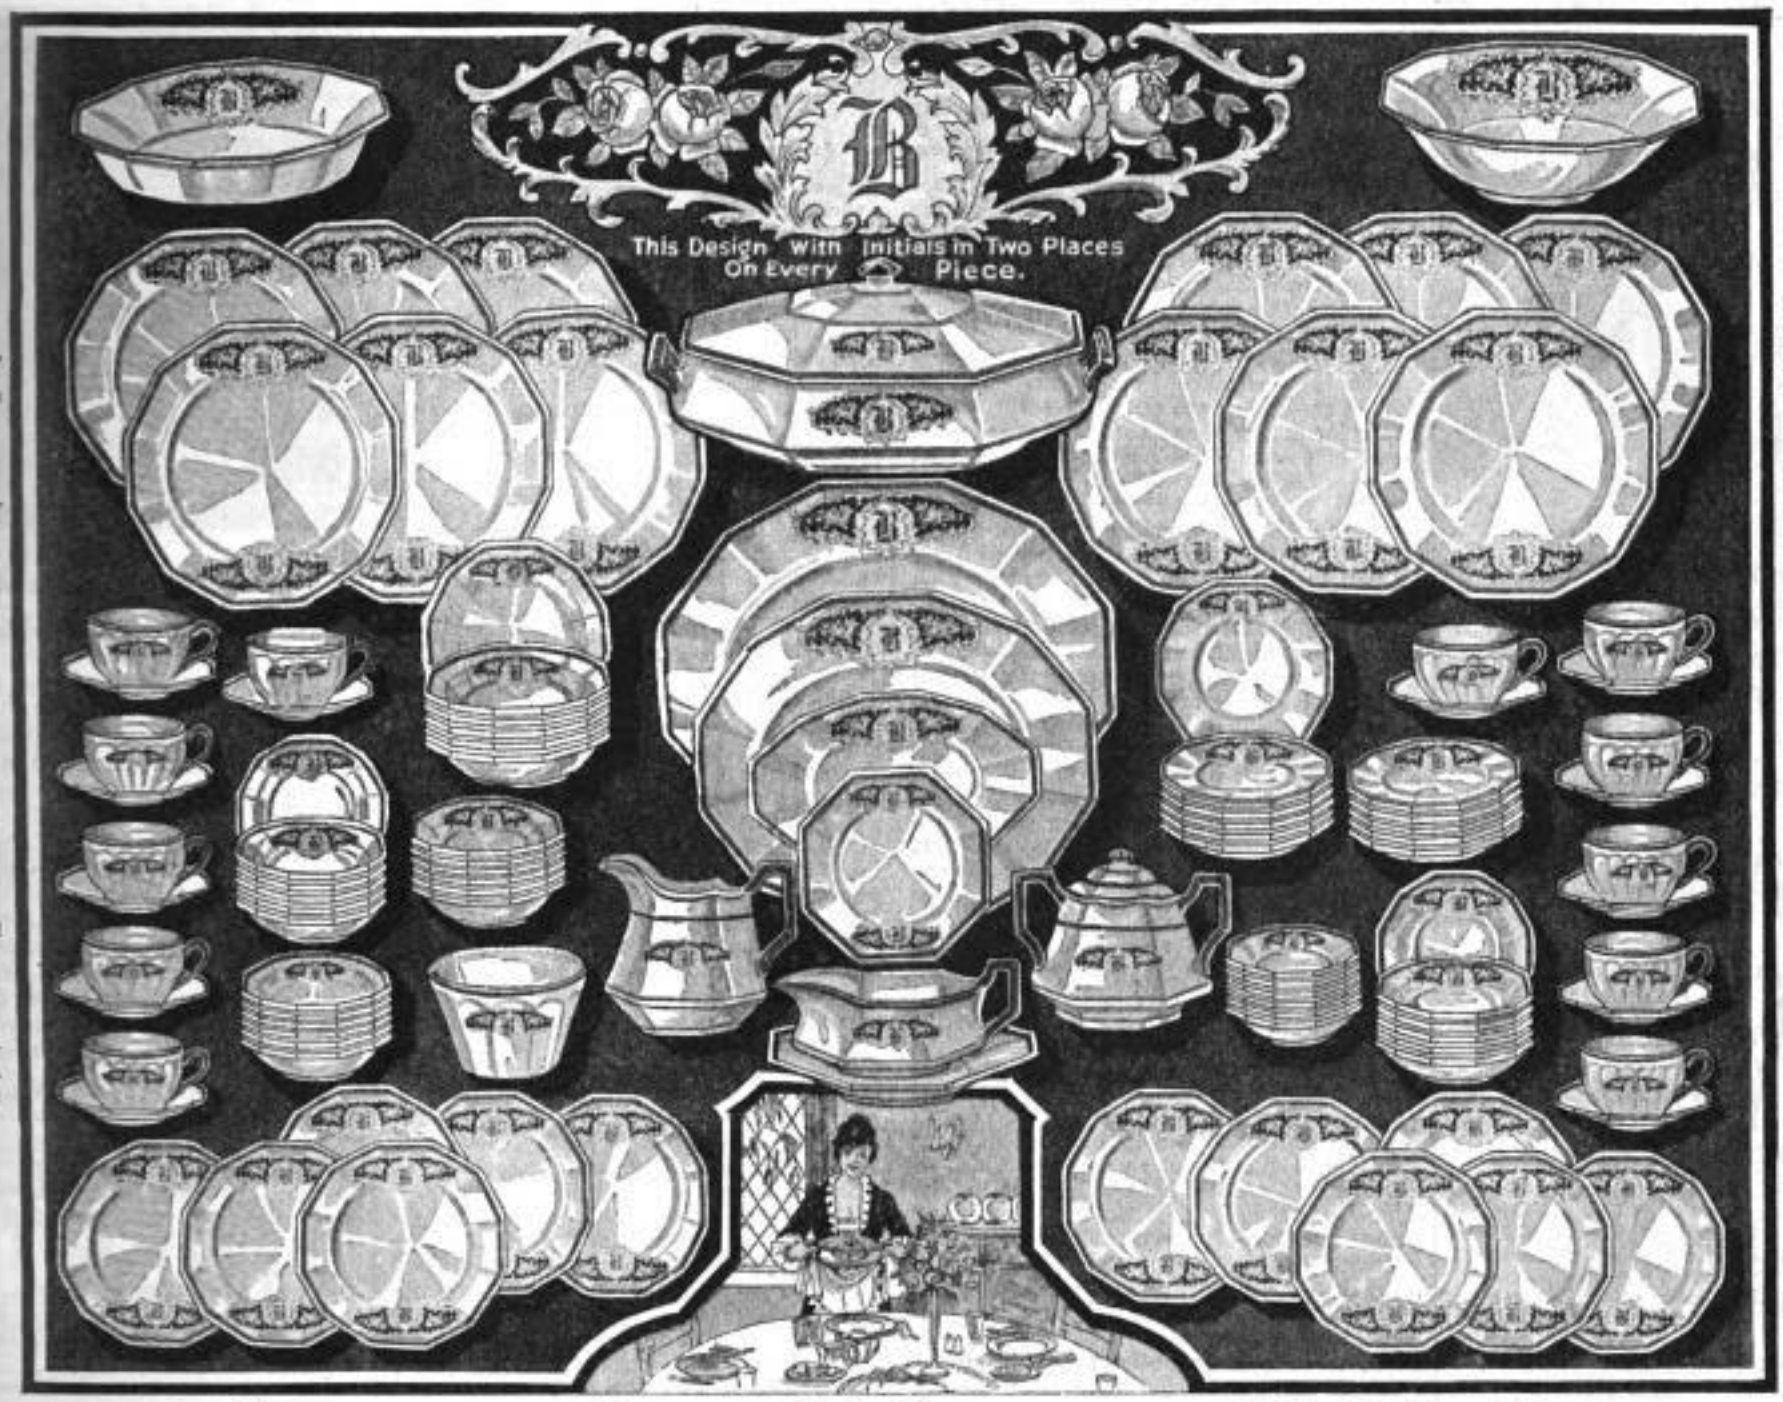
"I saw Dora Willet this afternoon said. "She said the nicest things you, John. I don't understand men If I were you I'd be simply mad a girl like Dora."

W. John Simpson permitted his contemplate the mauve flame of the in Edith's new ring.

"Oh, Dora's all right," he concede erously. "But nobody could possibly about her—that way. She"—he g for a suitable phrase, at once chiv and emphatic—"she hasn't any ca for deep feeling. She—she just plays."

Edith's eyes widened.

"Plays? Why, nobody works harder ——"



"I didn't mean it that way. She serious enough about things that matter—business and all that, you kn but she only wants to play with the that count."

He leaned forward and rested his on hers.

"Like—like this, Edith!"

Nowhere Else In The World Could Such Scenes Have Been Filmed

A Passionate Love-Tale of the Desert—

the desert with its mystery . . . its glamour . . . its fierce, primitive emotions of men nurtured under the burning sun.

THE SHEIK'S WIFE

was actually *filmed* in the desert.

HERE is a production abounding in big scenes, surcharged with true-to-life local color. To make this vibrant photodrama, Henry-Roussell, greatest of all French directors, led his company thousands of miles from civilization, into the heart of the shimmering desert.

There, with thousands of splendidly-mounted Arabs assisting, the unbelievable gorgeousness of the country of the Prophet was used as a background. The rendezvous on the crumbling steps of the ruined Temple of Isis, the sword duel by torchlight, the interiors of the dazzling tent-harems—all are exquisite scenes to thrill you.

But, woven through it all, is a great **story**—a passional epic of a fair-haired English girl's swooning infatuation for a handsome young Arab sheik. Hadjid Ben is a polished product of Oxford education and London haberdashery, but in his eyes is the mystery of the land of his fathers.

The couple marry—with the understanding that the girl shall be the sole light of Hadjid's harem. Then follows the clash of his oath to his bride and allegiance to the faith of his sires.

If you seek the **unusual** in motion picture entertainment, see

"THE SHEIK'S WIFE"

which thrilled jaded Broadway. Its love story is dramatic, primitive, almost brutal—but it reveals the human heart.

This picture is coming to your favorite theatre—ask about it.

PROTECTING THE SMALL INVESTOR

(Continued from Page 4)

to follow. No one will argue that the blue-sky laws have accomplished nothing. Some swindles have been prevented or checked. Yet some of the biggest stock swindles in history have flourished in recent years in sections of the country where the blue-sky-law idea has been popular.

Even where the operations of swindlers have been checked by blue-sky commissions or other state authorities the initiative for action seems to have come in the case of several of the most notorious fakers from other and outside sources.

But Mr. Cromwell emphatically denies that the Stock Exchange has shown no interest in this subject. It helped to bring about the passage of the Martin Bill, which became law in New York State on May 7, 1921. This is an exceedingly drastic blue-sky law, which gives the attorney-general of the state sweeping powers to investigate and prosecute criminally those "engaged in the fraudulent, fictitious or pretended issuance, sale, promotion, negotiation, advertisement or distribution of any stocks, bonds, notes, evidences of interest or indebtedness or other securities within the state." It reaches not only persons but partnerships and corporations, and the attorney-general is empowered not only to go after those who are engaged in fraudulent practices but also those "about to employ any device, scheme or artifice to defraud or for obtaining money or property by means of any false pretense, representation or promise."

Not only authorities connected with the Stock Exchange but many bankers and lawyers familiar with the sale of bogus investments have long maintained that the chief difficulty is not so much the lack of laws as of enforcement machinery. The problem, they say, is not one of having more laws but of self-starters for those that already exist.

"If you really want to know the fundamental difficulty I will tell you," said a lawyer whose familiarity with crooked brokers and stock promoters probably equals that of any in the country. "The average district attorney although possessing great powers does not like to start something which he cannot finish. This whole subject of brokerage and stock promotion is complicated and abstruse to the lay mind. The district attorney has no time to study the subject; he has a thousand other things to do. He is poorly equipped to meet this special problem, and he knows, besides, that the crooks will employ the best lawyers there are to fight him, lawyers who know every detail of the game."

Laws That Lack Self-Starters

"But make no mistake about it, there are plenty of laws to meet the situation. Take the case of the great bucket-shop ring which an assistant to the attorney-general of the State of Pennsylvania in coöperation with the Stock Exchange cleaned out of the western part of that state a few years ago. The assistant knew nothing about it when he started out, but he studied the subject for months before he made a move. He found that the ordinary gambling laws used in conjunction with the bucket-shop law would meet the case. He took no chances on the local authorities being friendly with the bucket-shop people. He suddenly swooped down upon the bucket shops with the state constabulary; and that was the end of those swindlers.

"If the laws in all the different states relative to the issuance of and dealing in securities could be made uniform and then intelligently and effectively enforced without adding any new ones, the whole situation would be cleaned up."

Of course there is usually more glory to be won in the political arena by urging new and sweeping legislation and posing as the reformers of Wall Street than by merely enforcing existing laws that are dead on the statute books and of which the public has never heard.

The mere piling up and enactment of new legislation, commissions, bureaus, departments and forms of control means nothing unless laws already on the books are enforced. There have been laws in New York State for more than ten years aimed at the bucket shops, and yet there has been very little enforcement under the statutes. Moreover, there appears to have been very little effort, if any, made to enforce the relatively new Martin Act, and the bill has been much criticized by those who want still newer legislation, although it would appear to the layman to be a powerful and efficacious weapon.

Such at least are the facts which those familiar with and sympathetic toward the operations of the Stock Exchange are sure to call attention to. When asked specifically what plan or program the Stock Exchange has to combat bucket shops and bogus investments, Mr. Cromwell, besides referring to the Martin Act, which the Exchange helped to put on the books, pointed out two other lines along which the Exchange is working.

Remedial Agencies

One of these is the formation of an organization for popular education in thrift and sound investment. Among those on the organization committee, besides Mr. Cromwell, are representatives of several very large public-utility corporations engaged in the direct sale of their own securities to the public, and bankers representing both the commercial and investment banking interests.

Another purpose of the association is to assist in providing machinery whereby securities may more effectively be distributed to small investors. It is hoped to do this by inducing a larger number of banks and employers to buy sound securities for their customers and employes. The effort is to get the banks to break down the awe which the small investor feels for banks and bankers, and which is one reason why he would rather deal with the smooth, slick stock salesman than with his own bank.

It is hoped also to interest newspapers and advertising agencies to shut out more effectively the advertisements of swindlers, and also to prevent these gentry from getting bank references. Another most important purpose is to inform the public where facts regarding fraudulent promotion and stock swindles may be promptly had and handed over to the legal authorities or other agencies qualified to prosecute.

It is very difficult, of course, to get a large number of business organizations together for coöperative purposes of this kind. There is no immediate profit in it and each business organization prefers to carry on such work in its own way. But many of those who have studied the subject carefully agree that there is no other way of really waging an effective war upon the financial swindler. There is no single existing agency that is powerful enough by itself to follow up the constant violations of law. If the banks, insurance companies, investment bankers, stock exchanges and the larger corporations could act together something might be accomplished for the first time. Whether these various agencies can actually work out such a plan of coöperation remains to be seen.

Mr. Cromwell stated that another method to be followed by the Stock Exchange to protect the purchasers of securities will be a more frequent and accurate investigation of the financial condition of its own members. It already possesses almost absolute powers of discipline, which it frequently exercises. But it has long been urged to supervise its own members, under this complete power which it now has, far more actively than in the past.

"We are going to require from our members, at periods as frequent as twice a year, the answering of a questionnaire which will cover all the points necessary to disclose their condition."

He said that the Exchange would also adopt a system of requiring its members to take off trial balances as often as once a month. Mr. Cromwell readily agreed that the failure to do this in the past has been a piece of carelessness and that certain member firms have been unaware of their own condition for considerable periods of time, becoming involved sometimes without really knowing it. It has been asserted by Mr. Cromwell, however, on another occasion that in the last ten years fewer Stock Exchange members, relatively, have failed than banks.

"What is the attitude of the Stock Exchange toward what might be called

indiscriminate speculation?" I asked. "Should everyone speculate, or only those with means and special equipment?" Which question, of course, refers to margin purchases.

"My personal advice, given in Boston to a large audience and since then by letter to our members in outlying districts, has been that if a man with a small amount of money comes into the house he should be advised to take his money and put it in the bank; and that it is very much against the interests of the public, which, after all, is the interest of the New York Stock Exchange, that people with small amounts of money should be allowed to speculate. When they get enough money to buy and hold outright a share or two shares of good stock, fine!"

Mr. Cromwell said that he doubted if any, or at least if many, decent brokerage houses on the Stock Exchange would refuse to buy stock outright for the smallest investor or in the smallest quantities. He said that upon all occasions he urges members to accept such business despite the smallness of the commission. Although Stock Exchange firms are allowed to charge a minimum of a few cents a share commission when buying stocks in hundred-share lots, they are not expected to take any order where the total commission is less than one or two dollars; and this may prove quite an item to an investor who buys only one or two shares at a time.

Mr. Cromwell believes that it would be better for investors to keep their money in a bank until they have perhaps $500, when they could purchase several shares of stock, and the commission paid to the broker would then be only a small percentage of the total amount.

In reply to a further question, as well as in speeches to members of the Exchange, he said that he did not believe in the partial-payment plan, which, it may be remarked, practically all stock-exchange authorities have always regarded as merely a disguised form of margin speculation and subject to all the evils thereof. If a small investor wishes to buy stocks he should save his money in a bank, according to Mr. Cromwell, until he can buy something outright.

Bucket Shops Still Popular

Upon being asked whether he thought small investors would do better to buy stocks outright through brokers or through banks Mr. Cromwell replied that he did not see that it made much difference. He said that this was a case where the public interest should be served and protected as much as possible, and that no matter how extensively people purchase stocks through their banks the Stock Exchange would not be injured, because the competition would be of the respectable kind. In fact he added that efforts are now being made by Stock Exchange interests to persuade the rural banks to act for persons who wish to buy stock outright.

The competition to be feared, he indicated, is the unfair kind of the get-rich-quick promoter and broker, who makes promises which cannot be lived up to and who by mere display of office space, multiplicity of telephones, clerks and the like attracts the ignorant and gullible.

Upon being asked whether he did not believe that if proper efforts were made vastly larger numbers of people could be started as investors in conservative securities rather than as speculators in more or less fraudulent stocks, Mr. Cromwell replied that though this is no doubt true, the other side of the question is that "you cannot stop the cheap gambling speculator from going to cheap bogus brokers any more than you can prevent people from buying gold bricks or from buying cigars from the peddler who said he smuggled them in from Cuba without paying the duty."

There is a certain type of speculator, he pointed out, who really seems to prefer bucket shops and other cheap places where he is made to feel at home and not asked too many embarrassing questions. Provided he has a hundred dollars or so he is accepted without question, and often feels at home much more than he would in a legitimate brokerage office, where his financial credentials are more carefully looked into.

"One of the facts that make difficult the suppression of some of the most objectionable practices is the readiness and willingness of the public to buy securities through irresponsible dealers in stocks and bonds. It seems to be only necessary to place a gold-lettered name on an office window to attract a certain class of investors ready to put their money into the hands of men who are without standing or conscientious scruple, and who are only masquerading as brokerage firms.

"This type of investor seldom or never inquires into the legitimacy of the firm with which he is risking his money, but goes to the dealer's office much as he would go to the first hardware store, had it been his purpose to buy nails instead of stocks or bonds. He appears willing to take the so-called broker's advice as to the character of what should be his investment or speculation as readily as he parts with his money, and in this way he makes himself an easy prey to stock-swindling transactions.

"He has no knowledge of whether the dealer is or pretends to be a member of a reputable Stock Exchange or has a connection with a reputable Stock-Exchange firm. It is enough for him that the dealer has an office—until he loses his money; and then he in his ignorance is only too ready to blame it all on the Stock Exchange."

Reprehensible Practices

It is said that as a result of a recent bucket-shop failure the fact came out that a man who is a prominent capitalist in his own town and who buys very large quantities of bonds and other conservative investments from some of the largest banking and brokerage houses in New York had an account for about $120,000 in the bucket shop. The truth was of course that he wished to speculate or, it might be more correct to say, gamble there, because he was in wholly different company from his ordinary business and financial associates. He was afraid that if he speculated in this way through a recognized stock-exchange firm of standing the fact might in some way become known to his friends and associates.

This sort of speculation is quite common, and the writer has known of numerous cases where people seek out questionable brokers in order to get as far away from their usual connections and associations as possible. Mr. Cromwell also referred to the evils of speculation upon the part of the poorer members of the working classes, of chambermaids, bootblacks and the like. He spoke of cases where such persons had been hired by bucket shops to induce their friends and fellow servants to speculate.

"I will say this: If we found a house of ours that had been responsible for a thing of that kind and had not looked carefully into the position and standing of these people, we would take most drastic action. But how to prevent them dealing in these other outside houses, I do not know."

Mr. Cromwell also declared that he would take a very strong attitude against members of the Stock Exchange calling up strangers on the telephone as contrary to proper standards of conduct. This has been one of the greatest evils and nuisances of the bucket shop and get-rich-quick swindles. It is of course perfectly legitimate to call up customers, but the fly-by-night brokers have made it a practice to telephone or telegraph to strangers urging them to buy ten shares of this or that.

Another subject touched upon was the criticism directed against the Stock Exchange for restricting the advertising and business-getting freedom of its members. All advertising of Stock Exchange brokers is scrutinized with the utmost care by the authorities of the Exchange, and it has been asserted that the rigidness of these requirements has driven business into the arms of the swindlers. But the difficulty is that stockbrokers, if allowed complete freedom of statement, will always be tempted to prophesy—in other words, to give tips on the market.

It is clear that the problems of the Stock Exchange are not simple or easy to solve. The facts as stated in this article are purposely those which are presented in behalf of the Stock Exchange. There may be other points of view to consider in protecting the investor. It is possible that the Stock Exchange has not been anything like vigilant enough in the past. It may not have been active enough in suppressing the evils of speculation or in putting itself in a position where it can be more clearly dissociated in the public mind from the swindling fraternity. But the problem cannot be understood unless the facts as seen and presented by those interested in the Stock Exchange are first understood.

Editor's Note—This is the first of a series of articles by Mr. Atwood. The next will appear in an early issue.

Point guaranteed 25 years

FROM a tray of assorted pens 62 men in 100 selected the new Parker Duofold first of all when we asked them to pick out the most appealing pen.

"Handsomer than gold!" was the verdict of many who saw this large, graceful barrel in Chinese-red with smart black-tipped ends, and neat gold pocket-clip.

This classic Pen was created by Geo. S. Parker, inventor of the leak-proof "Lucky Curve." It took him 30 years to perfect it, but it took America only six months to make the Duofold the leading seller at hundreds of prominent counters.

Its native Iridium point is as smooth and life-enduring as a hard jewel bearing, and is guaranteed 25 years for wear and mechanical perfection.

Its over-size barrel holds nearly twice the ink of the ordinary pen—step up to the first pen counter and give your hand the pleasant sensation of the Duofold's business-like feel. Take one away for 30 Days' Free Trial.

If your dealer's supply is not in, give him your order, subject to your approval after trial. Or write us, giving your dealer's name.

ONE CROWDED HOUR

(Continued from Page 7)

"She's worth more," he told himself softly. "If she was mine I'd give a hundred times that much to get her back again." And he thought of this husband of hers, whom she wished to torture, and wondered what he had done to her, and hated this man he had never seen because the woman hated him. "He's not going to get her back," Jeff swore in his thoughts. "If I can help her keep away from him he'll not get her again." There was nothing possessive in the feeling which was awakening in him. His devotion to her was a completely unselfish force.

It was also the most powerful emotion Jeff had felt in all his fifty-seven years.

III

WILL BELTER stopped at the farm next morning, and lingered, talking with Jeff, watching furtively for a glimpse of the woman; asked at last, point-blank, if it was true that Jeff's niece had come to visit him. He and Jeff were on the porch, outside the kitchen door; and Jeff nodded and, raising his voice, called to the woman, who was inside. He called her by his niece's name.

"Mary!"

She came slowly to the door, dreading this contact with a stranger.

"This here's Will Belter, one of our neighbors," Jeff said by way of introduction. "He lives up on the ridge beyond the village."

Will, greedy eyes upon her, said, "Howdo, ma'am?"

The woman watched him through the screen door, and answered, "How do you do?"

He said no more, and after a moment she turned back into the obscurity of the kitchen.

Will told Jeff, "She's older than I figured she'd be."

"She looks older," Jeff agreed. "That long train trip was pretty hard; and she was kind of sick."

"Ain't but twenty two or three, is she? I'd think she was thirty, anyway."

"Twenty-four," Jeff told him.

When Will presently went on his way Jeff watched his disappearing figure with stern eyes, and there was trouble in his countenance when he turned and saw the woman standing inside the screen door and also watching.

"Who was that?"

"I'd as soon he hadn't come here," Jeff confessed. "He's a mean hound. A natural-born talebearer. Maybe we fooled him though."

She made no comment, but both understood that her desire to remain hidden was imperiled by this man's appearance. The shadow hung over them all that day. In the evening they read the paper together, found in it little that was new.

Afterwards the woman sat for a long time, thoughtfully silent, and at last said abruptly, "I think I'd better tell you why I ran away."

Jeff looked across at her in surprise, hesitated. Then: "You needn't, 'less you're a mind to," he assured her. "It don't matter to me."

"It is your right to know," she decided. "And—I'd like to be able to talk about it with you. It would be a relief, I believe."

Jeff nodded. "I expect that's so," he assented.

She took the paper from him, opened it to an inner page and pointed to a paragraph under a separate headline, beneath the story of her own disappearance.

"You saw this about Mr. Viles' secretary being arrested?" she asked.

Jeff looked at the paper. The paragraph recited the fact that after a preliminary hearing Franklin Gardner, secretary to Leander Viles, had been held for the grand jury on a charge of stealing gems belonging to the missing woman.

Ranney nodded. "I heard about his being arrested, in town that day," he told her.

"That was why I had to run away!" she cried, a sudden passion in her tones. "That was why I had to get away. Because it was I who saw him take them, and if they made me tell he would have to go to jail."

She was leaning across the table, resting on her elbows, her fingers twisting together; and she watched Jeff anxiously, hungrily, as though to be sure he understood.

Jeff considered what she had s moment, and at length asked slowl him steal them?"

"It's a necklace," she explai perately. "Pearls, and a pendant diamonds, very beautifully. Mr. V to boast how much he paid for it. ever so proud of it, you see. He w show it to a man who is on the ya him, and that's why he asked m down to the cabin and get it from t

Jeff was trying to fill out the gr story. "That's when you found necklace was gone, eh?" he inquir

She nodded. Her words came i

"I saw Mr. Gardner come ou cabin door, with the leather ca hand. He dodged away; and I su thought I had not seen him. And opened the little safe in my cabin t lace was gone."

Jeff grinned a little at that. husband didn't get to show it off, a about it, after all?"

His antipathy toward this hus hers was increasing.

The woman shook her head. "I go back and tell him it was go assented. "And he went into on terrible rages. I was frightened. T tors have warned him. So I trie assure him, told him that Mr. Gard the necklace." Her hands were clasped, the knuckles white. "Oh, I sh have let him know!" she cried "But I thought he must have ask Gardner to get it, must have given combination of the safe. Only I had it."

Memories silenced her; and Jeff prompt her with a question: " hadn't done that?"

"He hadn't! He hadn't!" she a in a voice like a wail. "And when to find Mr. Gardner he was gone. G the yacht. Had run away. So th Viles went ashore himself, and by he came back, very well pleased, a they had caught Mr. Gardner on t and had the necklace back again."

"Did you run away right then asked, when he saw she had forgo go on.

She hesitated, as though choosi words.

"No," she told him. "That was t before. I was very unhappy even But until the next day I did not Mr. Viles made me see. It was just dinner, and I met him in the main He was very expansive and very humored and triumphant. He spoke Gardner. And he said this to me."

She repeated the words in a curiou rotlike tone, as though they were em upon her memory. "He said: 'It's you saw him, Lucia. If you hadn't a seen him come out of your cabin wi necklace in his hands we probably co send him to jail, even now!'"

Jeff was watching her attentively, ing.

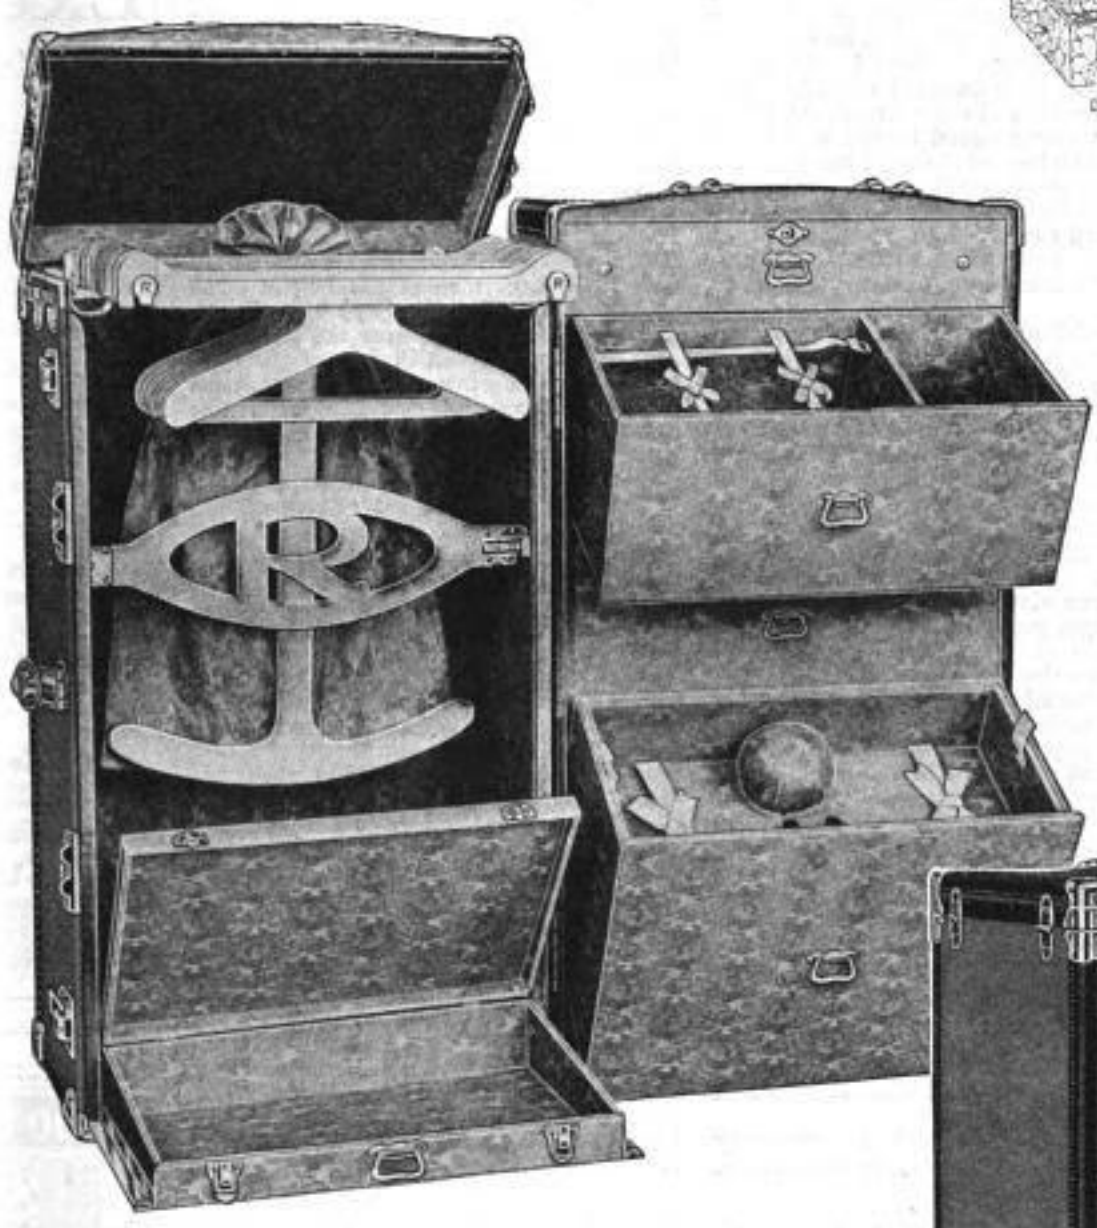
"I hadn't really understood, before they would send him to jail," the w cried. "I asked Mr. Viles if he meant that, and begged him not to; and h laughed at me. He said: 'He'll d years for this little piece of work. I And you'll be the one whose testimon send him up. That ought to be a sat tion to you.'"

She added, with a movement o hands as though everything were expla "So I ran away. There was a sailor helped me and gave me his coat, and away, and got in your car because i raining so hard and that was the place I saw where I could hide and be tered from the rain."

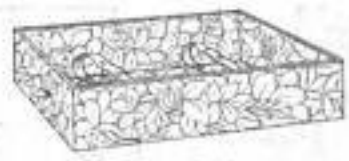
She broke off abruptly; and neith them spoke for a period, while Jeff sidered that which she had told him.

At length he asked gently, "You d want to see this here Gardner in jail?"

The woman cried passionately, " No! Oh, he was wrong to steal. If I not seen him I would never have lieved —— But I didn't want to put in jail!"



"I guess you liked him pretty w Jeff said. His tone was sympathetic, inquisitive.



"Yes," she nodded sadly, as though spoke of one who were dead. "Yes, I di With a sudden confidence she added, "I

(Continued from Page 134)

he was my best friend. We knew each other so well. It was through him I met Mr. Viles. And then Frank had to go to Europe on business for Mr. Viles, and he was away so long, and I did not hear from him. I used to work, you know. I was a buyer in one of the New York stores. And Mr. Viles was ever so good to me, and I was tired, and he begged me so. That was how I came to marry him."

"I don't figure you ever loved him very much," Jeff suggested after an interval.

"He was good to me at first," she protested. "I think he meant to be good to me."

Silence fell upon them both once more, and this time it persisted. By and by Jeff rose from his chair, passed behind hers and touched her shoulder roughly with his heavy hand.

"I wouldn't worry too much," he said cheerfully. "I wouldn't worry too much if I was you."

She looked up at him and smiled through sudden tears. "You're good to me," she told him.

"You run along to bed," Jeff bade her. "Just forget your bothers and run along to bed."

But when she had gone upstairs the man remained for a long time in his chair beside the warm lamp, thinking over what she had told him, supplying for himself the things she had not told. Jeff had a shrewd common sense; he was able to fill in many of the gaps, to see the truths to which even Lucia was blind. And as he thought, his eyes clouded with slow anger and his brows drew somewhat together; and when he got up at last to turn toward his bedroom there was a ferocity in his expression that no one had ever seen on Jeff Ranney's face in all his fifty-seven years. He spoke slowly, half aloud, addressing no one at all.

"Damn the man," he muttered. "I'd like to bust him a good one. It'd do him good."

Upon this wish, which had a solemnity about it almost like a prayer, Jeff went to bed.

IV

NEXT morning, when Andy Wattles drove by the farm with Will Bissell's truck on his way to East Harbor, Jeff saw that Andy had a passenger. Will Belter was riding to town with Andy. They hailed him as they passed the barn, and Andy waved a hand in greeting as they disappeared. Jeff's perceptions were quick; it was no more than half a dozen seconds before he understood that there was menace in this move on Belter's part. His first thought was to stop the man and bring him back, but the truck was already far away along the townward road. He shook his head; there was nothing he could do. If Belter meant harm the harm was done.

But the incident put Jeff on his guard, so that he made it his business to stay about the house that day; and when, in the early afternoon, an automobile stopped in the road before the farm he saw it and was ready. He had given the woman no warning, but she heard the machine, and came to his side in the dining room and looked out through the window. Themselves hidden, they could see the car. Three men were in it—the chauffeur, Will Belter and another. Jeff knew this other man; it needed not the woman's exclamation to inform him. Her husband had found her hiding place.

When Lucia saw him she sank weakly in a chair beside the table, said in a voice like a moan, "He's found me! He's found me!"

But for this crisis of his adventure Jeff was ready; he rose to meet the moment, gripped her shoulder.

"Just mind this," he told her swiftly. "Keep your head, ma'am, and mind what I say. You don't have to go back with him unless you want. He can't make you, ha'n't no legal way to make you; and if you don't want to go you don't have to go. I'll see't he don't take you unless you say the word."

She looked up at him in swift gratitude; and he smiled at her and asked, "Now can't you take a little heart from that, ma'am?"

"He's coming," she whispered.

And Jeff looked through the window again and saw that Viles had left Belter and the chauffeur in the car he had hired in East Harbor. He himself came steadily toward the kitchen door, while the two other men watched him from the road. Jeff and the woman heard his loud knock upon the door.

At this summons Jeff left her where she sat, her strength returning. He opened the kitchen door and faced the man he had learned to hate so blindingly that the passion intoxicated him. Yet his countenance was calm, his features all composed.

Viles was a large man without being fat; one of those men who have about them the apparent solidity of flesh which is the attribute of such dogs as Boston terriers. He may have been six feet tall, but he was inches broader across the shoulders than most men of his height. His countenance was peculiarly pink, as though rich blood coursed too near the surface of his skin. Jeff marked that he was subject to a certain shortness of breath, that his eyes were too small, and that even now a little pulse was beating in the man's throat.

Yet Viles spoke in a smooth and pleasant voice, said a jovial good afternoon and asked if this was Jeff Ranney's farm. Jeff said it was.

Viles asked "Are you Ranney?"

"I'm Ranney," Jeff assented. He had not asked the other to come in; the screen door still separated them.

"Ah," said Viles. "I am told your niece from California is visiting you. I have a rather important bit of business to transact with her."

Jeff shook his head. "She ain't my niece," he answered frankly. "She's your wife, that had to run away from you."

His voice was stony; but at his words Viles moved backward a step, as though under the impact of a blow, and Jeff saw the swift rage mount his cheeks in a purple flood. Then the rich man laid his hand upon the screen door, opened it.

Jeff did not move to one side, and Viles said hoarsely, "Get out of my way, you impudent fool!"

Jeff shook his head. "Listen, mister," he said softly. "This is my house. You can't come in here on your own say-so. I'm not fooling with you either. If you want to come in, you ask."

Viles lifted one clenched hand as though to sweep the other aside; and Jeff added, "I've heard enough about you so I'd like right well to mix it up with you a little bit—if you want to try anything like that. Do you?"

"I want to come in," said Viles hoarsely.

Jeff considered this for a moment, then he spoke to the woman, over his shoulder. "Do you want to see him?" he asked her.

"I suppose so," she told him wearily.

Jeff nodded. "All right, mister," he said to Viles. "Come in and take a chair."

Viles had somewhat recovered himself. He followed Jeff's indifferent back into the dining room. The woman did not rise. Jeff set a chair across the table from her, and Viles sat down in it while Jeff himself crossed to shut the door that led into the parlor, then came back and leaned against the kitchen door, watching this husband and wife, waiting for what they would say.

Viles had drawn a velvet glove over the iron hand. He asked the woman gently, "Are you all right, my dear?" She nodded. "You are well?"

"Yes," she said slowly. "Yes, I am well."

He looked toward Jeff. "Mrs. Viles is unfortunately subject to moments of great depression," he explained courteously. "In these moments ——" He stopped, arched his eyebrows meaningly, as though Jeff must understand.

"You mean she has crazy spells?" Jeff asked bluntly. Viles protested wordlessly. "She don't act crazy to me," Jeff commented. "But you may be right. She married you."

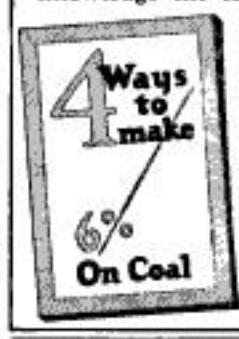
He was seeking quite deliberately to goad the other man into violence, but Viles controlled himself, said across the table to his wife, "We have been greatly concerned, my dear."

"I'm sorry," she said unconvincingly.

"It is a relief to know that you have not suffered. That scratch across your temple ——"

Lucia touched with her fingers the slight wound. "It is nothing."

"You must have a good rest in bed when we get back to the yacht," he told her. There was an elephantine sportiveness in the man's demeanor. "I'm going to enjoy taking care of you."



She was silent for a moment, then slowly shook her head. "I don't think I'll go back," she told him. "I don't think I'll go back at all."

He tried to laugh easily. "You're fancying things, Lucia. It is your home. You belong there."

She faced him with a moment of decision. "If you withdraw the charge against Frank I'll go back with you, Leander."

"Withdraw it?" he asked in pretended astonishment.

"I can't bear to have him go to jail," she cried softly.

"But, my dear, the man's a thief; has betrayed the trust I reposed in him."

"I can't help it. I can't help it. I don't want him to go to jail."

Viles dropped his eyes to the oilcloth that covered the table and drummed upon it with his fingers for a moment, then turned to Jeff.

"I'd be obliged for a few moments' talk with my wife alone," he said, a sardonic note in his tone.

Jeff held his eyes for a minute, then looked toward the woman. "What shall I do, ma'am?" he asked, as though it were a matter of course that he should defer to her.

She made a weary gesture. "He has a right to that," she said.

Jeff nodded. "I'll come back in fifteen minutes, mister," he told Viles menacingly.

But Viles smiled in affable assent. "That will do finely," he agreed.

Jeff went out through the kitchen into the shed. When he was gone Viles rose and crossed to listen at the door, and heard Jeff go on into the barn. He returned to the dining room and stood above his wife, and when she did not move he gripped her chin harshly and turned her face up to his. No velvet glove upon the iron hand now. She winced a little with the pain, but made no sound. There was triumph and malice in his grin.

"Thought you could get away with it, did you, Lucia?" he asked. She said nothing. "Thought I wouldn't find you?" Still she made no sound. "Where'd you pick up this rural squire of yours?"

His tone was insult, and her continued silence seemed to anger him; he loosed her chin with a gesture as though he flung her aside; rounded the table again and sat down facing her and lighted a cigar, watching his wife through the smoke. For a long minute neither of them moved or spoke; then she lifted her head, very slowly, and met his eyes.

After an instant he laughed at her mockingly and leaned forward, gesturing with the cigar, dropping flecks of ash upon the oilcloth.

"Lucia, my dear," he said, "you haven't played fair with me. You and that tame cat of yours. And now I'm going to even the score. If you loved him you shouldn't have married me. Or having married me you should have ceased to love him. Isn't that a fair statement of the ethics of the case?"

"I didn't know, Leander," she said pitifully. "He had been so long away."

"I sent him away," the man admitted harshly. "I wanted a clear field, and got it and got you. Thought I was getting the whole of you. But when he came back I saw within six months' time that it was only the husk of you I had won."

"You're unfair!" she cried. "Frank never spoke to me—there was never anything ——"

"What do I care?" Viles demanded. "Don't you suppose I know that? Don't you suppose I've seen to it that you were both pretty closely looked after? But you loved him, and he loved you. A blind man could see that whenever you were together."

"I played fair with you," his wife pleaded. "And he did too."

"That's because you were afraid to do anything else," he assured her scornfully. "That's because you're weaklings. I'm not a weakling, my dear. In his place I'd have you. In my place I've evened the score—against both of you."

She began to sense that there was something more, something she did not know. "What?" she asked faintly. "What have you done to him?"

He puffed at his cigar, relishing it, relishing the situation. "You two blind fools! Did you think I was also blind?"

She shook her head helplessly. "What are you trying to say?"

The man swung around for a moment to look toward the road and make sure the two men who had come with him were still in the car, then leaned across the table toward her, speaking softly.

"I gave Frank the combination of your safe," he told her, grinning with delight in this moment of his triumph. "I told him to get the necklace, and take it to Boston. To have it restrung; a surprise for you. Told him not to let you see him, not to let you know. The poor fool believed me."

She was staring at him, half understanding. "He didn't steal it? He didn't steal it, then?"

"And the pretty part of it was the way I rang you in," her husband assured her mockingly. "Sending you down to the cabin at a moment when I knew he would be there. So that you might catch him in the very doing of it. So that your own testimony, my dear, might send this sweetheart of yours to jail." Her eyes widened, she was white as snow; and he threw back his head and laughed aloud. "Ah, you see it now?"

Lucia came swiftly to her feet. "He didn't steal it? He didn't steal it?" she cried. "Oh, he won't have to go to jail!"

Her husband chuckled, watching her narrowly. "Not so quick on the trigger, Lucia. Not so fast. He'll go to jail, right enough. Don't worry about that. And you'll send him there."

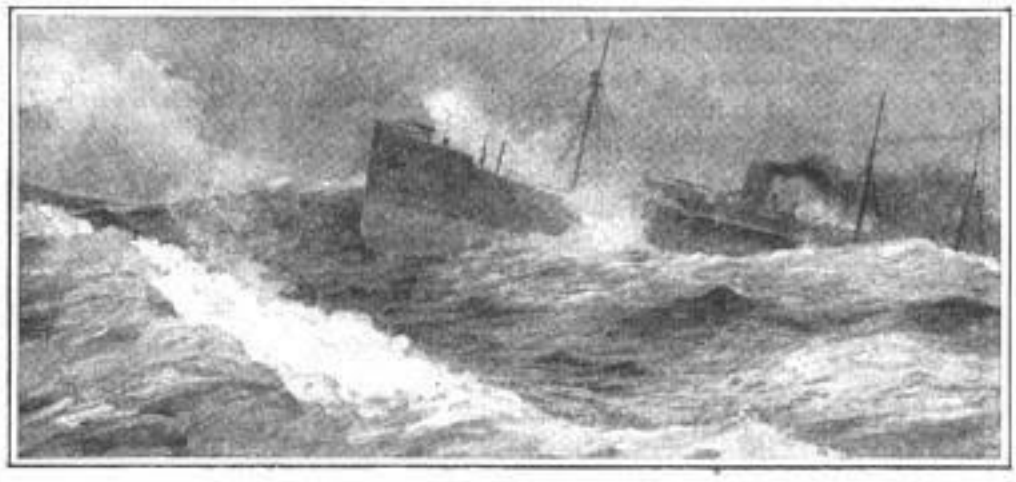
"But he didn't do it, Leander?" she urged pleadingly. "He's not a thief at all!"

"Of course he isn't," Viles assented. "That's the beauty of the little trap I laid."

Flames were burning in her cheeks now; her head was high. "I won't testify against him," she said swiftly. "You can't do it without me, and I won't ——"

"That was why you ran away?" he asked casually. "To avoid testifying? I thought as much."

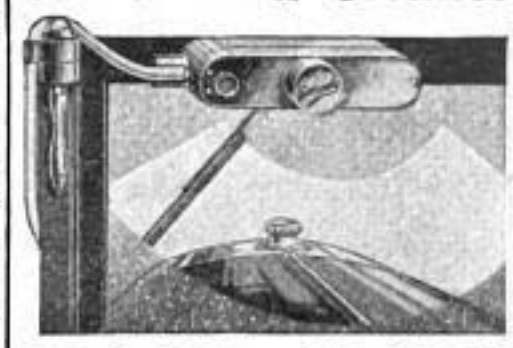
"I won't go back!" she cried. "I'll go away again!"



He smiled. "There were others who saw," he told her mildly. "Do you suppose I would be content with so loose a plan? They saw him, as well as you. Saw you also." He leaned toward her ferociously. "You'll testify, and you'll tell the truth, or I'll convict you of perjury on your own lie, my dear. He'll go to jail certainly; and you also if you choose."

The woman was very intent, her thoughts racing. And suddenly she laughed in his face. "And I'll tell what you've just told me," she reminded him. "How long will your scheme stand then?"

He shook his head. "Oh, no, you won't, my dear."



"I will."

"There is," he said equably, "a little provision in the law of evidence which will prevent you. A wife cannot testify to any private conversation between herself and her husband. Did you suppose I would be so mad as to let you slip out of this trap so easily? The judge himself will forbid your saying one word as to what I have told you here."

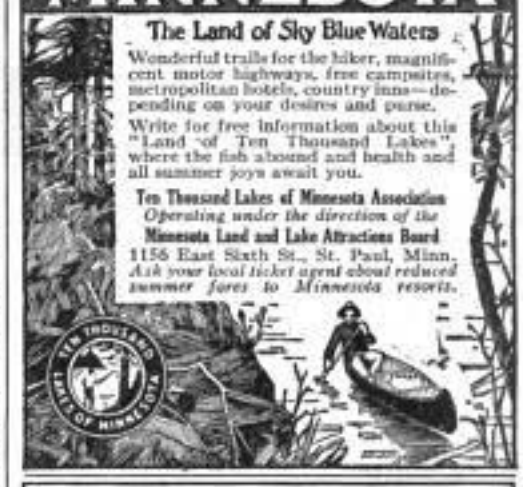
Eveready Automatic Windshield Cleaner

CRASH! CRASH!

A moment, a second, it's over, and out of the jumbled mass of broken glass and twisted metal a body is brought forth, maybe two or three. They may be only slightly injured, perhaps permanently crippled or even worse—DEAD.

If the driver lives to tell the story, he says, "It was the storm, my windshield was blurred, I couldn't see." That same excuse has been given over and over again but now there should be no occasion for such an excuse. The EVEREADY Automatic Windshield Cleaner keeps the windshield clear. Both hands are left free for the wheel and the levers. The horror of the accident sketched above is eliminated. A simple little device is all that is necessary. There is no investment worth mentioning considering the protection and service rendered. Attached in a few moments at a small cost, your car is rendered safe in stormy weather. Isn't such protection worth $7.50? Ideal for summer touring, removes **dust, fog and rain.**



The EVEREADY is also very attractive, beautifully finished in nickel. Every instrument thoroughly tested and fully guaranteed. Self-lubricating and non-rusting. If dealer can't supply you, order direct. Price $7.50 complete. Money refunded if not entirely satisfied.

Will fit any gas car or truck. No cost of operation. Approved by the leading automotive engineers.

Canadian Price $10.50

THE CURTIS PUBLISHING COMPANY

She was trembling with despair. "I won't obey him!" she cried. "I'll tell anyway. The jurymen will believe me."

"If you blurt out such a thing against the order of the court you will be jailed for contempt, and the jury will be forbidden to believe you, will be told to forget what you have said." He shook his head mockingly. "No, Lucia, my dear, there's no way out. I have told you this simply in order that you might appreciate the pains I have taken." He laughed a little. "What a thoughtful husband you have!"

He was still sitting, watching her with a cruel satisfaction; but she was trembling, broken, her knees yielding beneath her. By littles she sank into her chair, and put her head down upon her arms and wept bitterly.

Her husband watched her from across the table and puffed at his cigar.

Then Jeff Ranney opened the parlor door and came into the room. Viles, at the sound of the opening door, looked up in surprise, looked toward the kitchen through which Jeff had disappeared, looked at Jeff again.

"What were you doing there?" he demanded, coming to his feet in sudden anger.

"Listening to you talk," said Jeff equably.

"Listening? How long?"

"Oh, I came right around the house and in the front door, soon as I went out the back. Heard all you said, I guess."

Lucia had stopped crying; she lifted her head and dried her eyes and looked at Jeff. He looked down at her and smiled, a reassuring smile that gave her somehow comfort.

Viles swung toward him, cried aloud, "You dog! I'll teach you manners!"

"Yes, sir," said Jeff slowly. "I'd like right well to mix it up with you."

Viles stopped in his tracks; the man was convulsed and shaking with his own ferocious rage. "But it ain't fair to pick on you," Jeff decided; "you're such a fool."

Lucia came to her feet, turned to Jeff appealingly. "You heard what he said?"

"Yes, ma'am."

"Is it true? Can he do this? Is the law that way?"

Viles reached toward his wife, s have taken her arm. "Lucia!" he "Come away from here. Come away here with me."

But Jeff put an arm between them, the big man back against the table. I instant no one of them moved. The said slowly, "I had a lawsuit once happen to know. What he says is all On private conversations. But yo this wa'n't private. I heard."

"You heard?" she whispered, not s standing.

Jeff nodded. "Sure. And I can tel thing I heard; and I guess—not sur it don't matter much, anyhow—I you can tell it, too, if I heard what he

He was looking down at her, ha the moment forgotten her husband. Lucia had not forgotten, and it was L cry that warned Jeff. Viles was tug pistol from his pocket.

Jeff swung his right leg upward, k cunningly at the big man's hand. pistol flew across the room; and roaring with pain, swung in at J grapple him. They came breast to b stood thus for an instant, each str terribly, exerting utmost strength.

Then Viles' big head drooped w little snapping jerk as all his body l and he slid limply through Jeff's ar the floor. Jeff's one great hour was do

An hour later Jeff drove Lucia ba town. He would send a man who such matters his profession, to car what was left of Leander Viles.

A day or two later Mrs. Ranney home from Augusta. By that time Jef settled into the old routine once more life had become again as uneventful a life can be. Save for one or two echo his great adventure—when Lucia w that she and Gardner were to wed, when their first baby was born—his e ence continued in its old accustomed He lived some dozen years or so or farm eight miles out of East Harbor. winter, while working in his woodlot became overheated and then chilled the coming of night; and a few days l he died.

amatized Facts out of The Day's Work

No. 14

of the incidents depicted in s advertisement are facts—ts gleaned from the daily rk of Grinnell engineers, esmen and artisans. If you interested in knowing the ies, places or other details these facts, we shall be glad answer your request.

ay," yelled the Production anager, bursting in, "the valve on the Blooming ill line has cracked."

Father's economy lesson explodes in his hand

at, son, is the kind of economy that keeps this steel mill paying lends," said the father, tapping the paper before him. "That Mill pipe line you had done under contract cost $1,800 more the Blooming Mill line Henry put in with our own men. And les he utilized most of that old material you wanted to junk."

It's no use, Father," replied the young man, "we'll never agree t. I'd better resign. Any consulting engineer will tell you the way to figure costs on a line like that is on the horsepower de-ed over a period of years and not on initial expense."

ut right here they were interrupted. The door to the office imed open.

Say," yelled the Production Manager, bursting in, "the big valve he Blooming Mill line has cracked. It won't last the day out. 'll have to work all night with a crew to get a new valve hooked up."

And that's the old valve from the saturated steam line," gasped engineer, sinking into a chair. "We'll have to comb the country nd a special dimension valve like that in stock."

That means a month's shut-down," cried the President, "and the oming Mill can't be shut down—it can't!"

What's it worth, Father, to have the mill running again in 24 rs?"

Worth? It's worth $7,000—and it's—it's nothing for you to in on."

Four times what you think I wasted on the Bar Mill line, eh?" led the son. "Will it square it if I have a new steel valve on that by 7 o'clock tomorrow morning?"

He's kidding," snapped the engineer.

"No, I'm not kidding. I requisitioned a *real* valve long ago. The people who installed my job advised it when they saw Henry putting that cast iron valve from the old saturated steam line into the new 'super-heated' Blooming Mill line."

"You mean the Grinnell Company advised it?" asked the President.

"Yes, and more than that, I had them test the gaskets you're using in the 1100-foot line. Their micro-photographs show them up—about as worthless as chewing gum in those joints. Take their word for it, Dad, and save another $7,000. Pull out every gasket on that line and use the kind they furnished me on the Bar Mill line. If you don't, some day you'll have a long shut-down while you are digging up a trench, stripping off steel lagging and insulation to get at a bunch of leaky joints."

"Chewing gum gaskets that might cost me $7,000! I thought gaskets were just gaskets!"

"You'd know the difference if you had sat through just one lecture on 'Purchased Material as a Factor in Power Piping.' Every Senior class gets it in the course on engineering economics. Old Professor Holborn taught us that we've got to depend upon a concern like Grinnell Company, for instance, to be sure of the right materials. They know through experience in hundreds of power piping jobs and from the results of their investigations in their big testing laboratory. They buy materials on the basis of fact, not on the basis of price!"

The milk on the Nation's doorstep

EVERYWHERE in the U. S. A.—to door-steps the country over, grocers are every day delivering Borden's Milk. American housewives now buy their milk from the grocer, for Borden products supply their milk needs.

Eagle Brand is the accepted baby food. More children are fed on Eagle Brand than on all other infant foods combined. Three generations of healthy babies have been raised on it.

Borden's Evaporated Milk is pure country milk, with the cream *left in!* It is best for household purposes—wherever milk is needed. Delicious for coffee—excellent for every cooking use.

And the new Chocolate Malted Milk—just like the regular malted milk, but with the chocolate flavor added—has quickly become popular as a home health beverage.

Borden's Confectionery is *rich in milk.*

Whatever the purpose for which it is used, the milk on the nation's door-step is *most often* Borden's Milk—pure, rich, wholesome.

Ask for it when ordering at your grocer's.

2 TRUCK TIRES in One

The nationwide topic of talk among owners and drivers of trucks—
THE GOODRICH SEMI-PNEUMATIC.

The *solid* tire with the *air chamber* center. *Two* truck tires in *one*, *solid* combined with *pneumatic*. *Air space* where you need it; *solid rubber* where you must have it.

To see Goodrich Semi-Pneumatics at work on a truck is to know them at once for the greatest contribution to the truck in years.

Think of it. All the *puncture-proof*, heavy-duty *durability* of solids with none of their drawbacks.

Most of the smooth-running, easy-riding resilience of pneumatics, yet none of their risks. Semi-Pneumatics multiply the work *one* truck can do—the amount of work and the variety of it.

[Write for the full story of the tire that is revolutionizing old ideas of truck service. Ask for our booklet, "Two Truck Tires In One."]

THE B. F. GOODRICH RUBBER COMPANY
Akron, Ohio

Goodrich Semi-Pneumatic TRUCK TIRE

The Solid Tire with the Air Chamber Center fits any S. A. E. standard wheel. No special wheel equipment. No flanges. No bolts. No extra costs. Applied by any Goodrich Distributor with a hydraulic press the same as solid tires. Just as quick and easy. There are Goodrich Distributors in all large cities and truck centers, and their friendly, efficient co-operation is a vital service in keeping your truck at work.

Whenever soap comes in contact with the skin—use Ivory

HOW can you decide whether the soap you are using is the best to be had? Though its virtues be suggested in the pictures of pretty faces and extolled in claims almost impossible of fulfillment, the practical man—or woman—determines the *real* worth of a soap by asking these simple questions:

1—Does it lather abundantly?
2—Does it rinse easily?
3—Does it feel mild?
4—Has it the purity to insure perfect safety?
5—Has it the whiteness that indicates highgrade ingredients?
6—Has it the unobtrusive fragrance that refined people prefer?
7—Does it float?

If you must answer "No" to any of these questions, you are not enjoying the greatest possible satisfaction that soap can give.

If your answer is an unqualified "Yes", you undoubtedly are a user of Ivory Soap. All seven of the fundamental qualities that soap should have are developed to so high a degree in Ivory that its superiorities are an open book to its millions of users. They *know* that Ivory is as nearly perfect as soap can be, and they are given fresh proof of it every time they use it for toilet, bath, shampoo, nursery and fine laundry.

IVORY SOAP..... IVORY IT FLOATS .....99 44/100% PURE

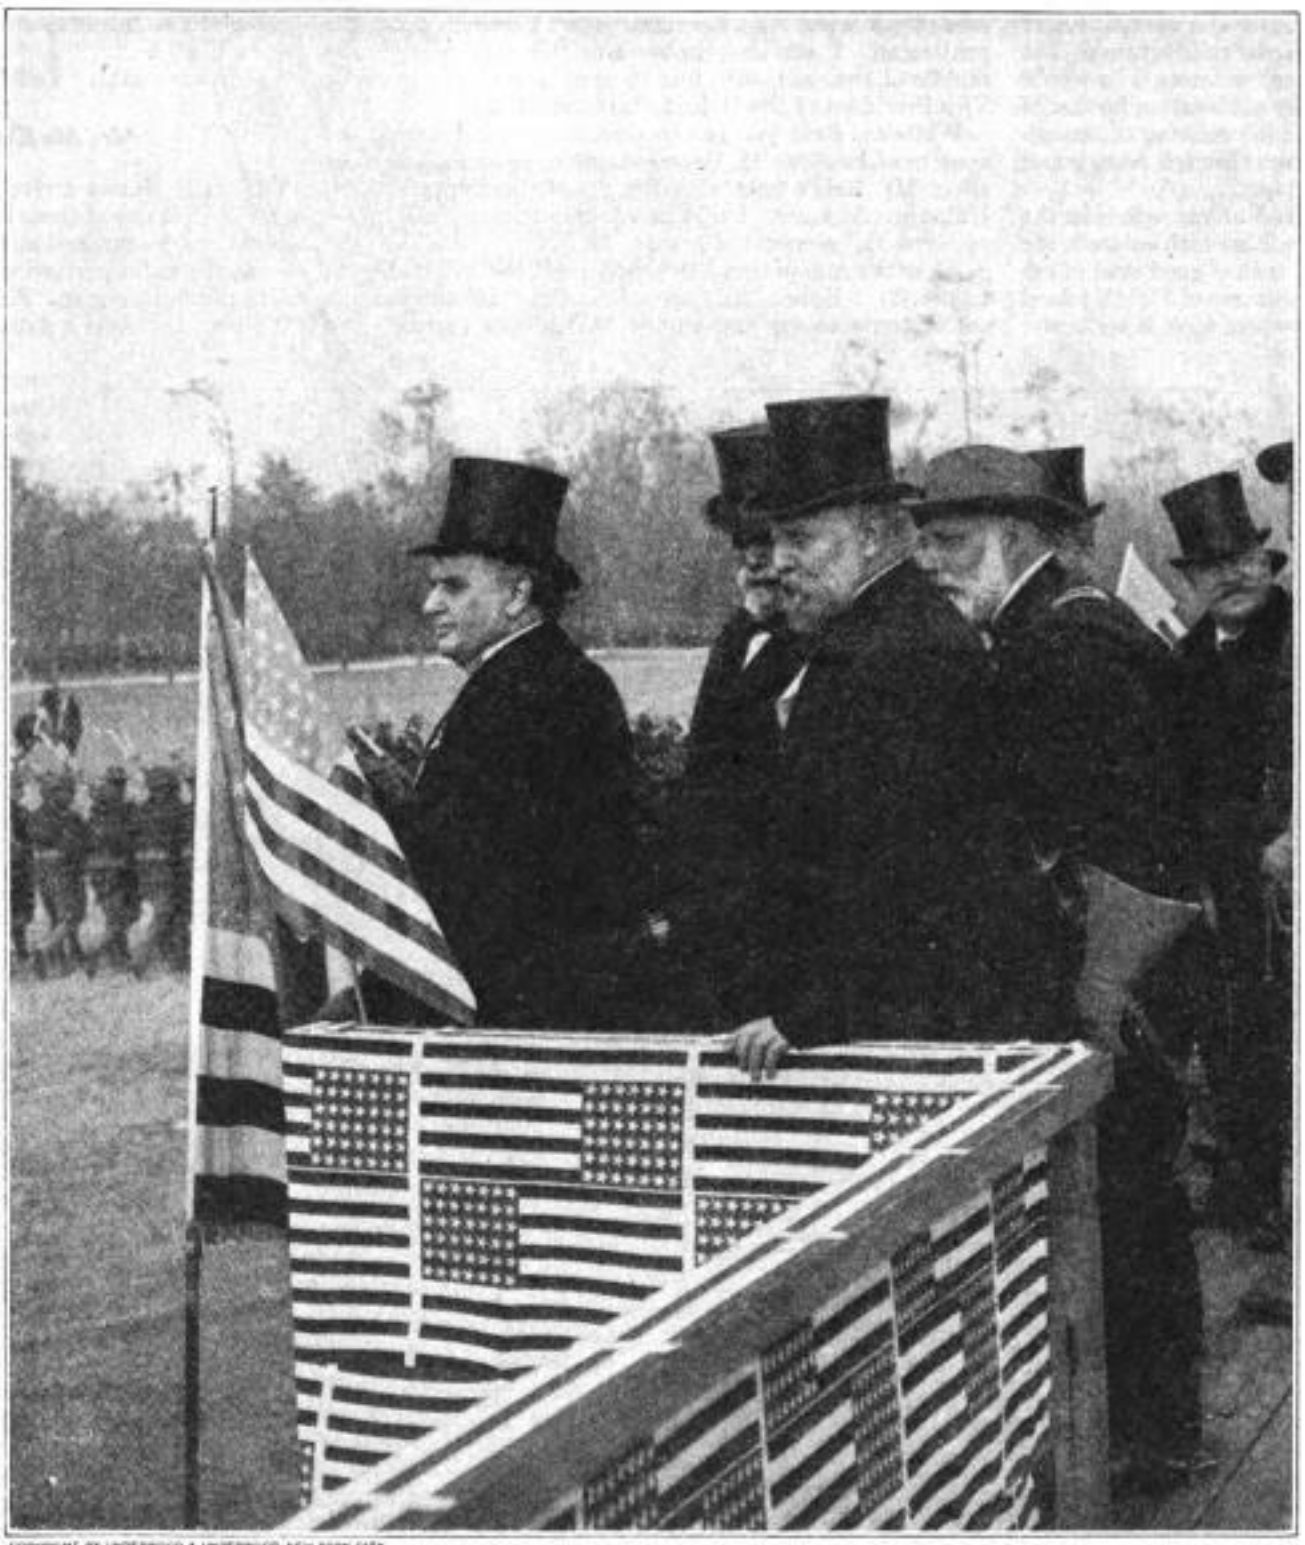
...ROM McKINLEY TO HARDING

Personal Recollections of Our Presidents

By H. H. KOHLSAAT

...IE first time I met ...laj. William McKinley was in Canton ...he day after the ...tial election of 1876. ...s Dannemiller intro...ne to him with the ..."Let me introduce ...our next congress...This is Major Mc...s first term; he will ...d from."



...Kinley was an ex... handsome young ...f thirty-three, with ... of distinction that ...e to him at once. I ... years his junior, and ...d Mr. Dannemiller ...ht when he said "He ...heard from."

...seldom met until I ...alternate in the Re...n National Convention 1888, in Chicago. ...ght before the con... met, speakers of na... reputation addressed ...udience in the Audi..., among them Col. ... G. Ingersoll. He ...ceived with great ap...and as he praised the ...ates to be voted for ...s loudly cheered by ...artisans.

Loyalty

...DENLY he switched ...m politics to religion ...ade one of his characteristic attacks upon Christianity. For a few moments the men and women present were silent; then suddenly someone hissed, and all over the house came a sympathetic response. It sounded like the escaping ...of a locomotive. Ingersoll stood like a man in a ...a by the sudden transition from cheers to hisses. ...aised his hand for si... The audience refused to allow him to proceed and one impulse left the hall. ...he convention met next ...

McKinley was chairman of the Ohio delegation. ...n the nominations for ...ident were made McKinley in an eloquent speech nominated John Sherman, of Ohio. ...ng the balloting someone cast a vote for McKinley. It received great applause ...the spectators. When the cheering subsided McKinley mounted a chair. His face ...white and tense. In a voice full of emotion he said, "No true friend of mine will ...me in a position of being a traitor to John Sherman." The effect on the convention ...dramatic. For a moment there was dead silence; then they broke into cheers, and ...Kinley was more than ever the popular favorite. The Illinois delegation was ...ructed for Judge Walter Q. Gresham. He was nominated by Colonel Ingersoll. What ...ce he ever had was killed by Ingersoll in his speech the night before.

COPYRIGHT BY UNDERWOOD & UNDERWOOD, NEW YORK CITY

President McKinley at His Inauguration, March 4, 1897, Washington, D.C.

As the fight developed against John Sherman, Indiana put Senator Benjamin Harrison in nomination. Mr. Harrison, who was in Chicago when his name was proposed, left for Indianapolis, his home. He was finally nominated, and was elected in November.

In the years from 1889 to 1891 I saw McKinley frequently, and when I purchased the control of the Inter Ocean, in 1891, we came in contact very often. I never lost my youthful ambition to see him President.

In 1892 the Republican organization offered me a place on the Illinois delegation to the National Convention in Minneapolis. I accepted with the understanding that after the first ballot, for the renomination of President Harrison, I was free to vote for whom I pleased. Only one vote was taken, however, and Mr. Harrison was renominated.

The Limit

MY VOTE was for Harrison. My choice was McKinley. I did not like President Harrison. Although I recognized his ability and honesty, his manner chilled me. Many people admired him, but he had very few warm friends. It was said of him by Tom Reed that Senator Harrison carried his lunch in his coat-tail pocket during the Senate session, and then ate a cold lunch.

I came in personal touch with him two or three times, but there was no contact of enthusiasm. Perhaps I was somewhat prejudiced by our Illinois senator, Charles B. Farwell, who hated Harrison with all his nature. There was little in common between the two men—both Presbyterians, but of different schools. Senator Farwell was famed as a poker player and sat in many a game with Marshall Field, George M. Pullman and John W. Doane. It is told of Mr. Farwell that his wife, a devoutly Christian woman, remonstrated with him at one time, saying, "Charlie, I wish you would stop playing poker. It has a bad effect on the children." He answered, "Why, mother, don't you worry; we only play for a five-cent limit!" "I know," she answered, "but why have any limit?"

President Harrison and Senator Farwell fell out over patronage. It was said of Mr. Harrison that when he gave a man an office he did it in such a churlish way the recipient went away angry. In contrast in manner was McKinley. Senator Billy Mason used to say that when McKinley could not give a man an office he looked so unhappy about

Digitized by Google

it the seeker would go away filled with sympathy for the President.

I was present once when a labor leader asked McKinley for some favor he could not grant. The man was hurt and rather truculent. McKinley told him how pained he was to refuse his request, and as he shook hands with him asked him if he was married. Taking a carnation from his coat he gave it to him, saying, "Give this to your wife with my compliments and best wishes." The astonished man smiled and said, "I would rather have this flower from you for my wife than the thing I came to get."

McKinley made lifelong friends of that man and of his wife.

During the preconvention days of 1892 Eugene Field, in his Sharps and Flats column of the Chicago Daily News, printed an item to the effect that I was going to Minneapolis to work for the nomination of a colored man on the ticket for Vice President, and that I would pay the expenses of any colored man who would go to Minneapolis to help secure the nomination for one of his race. Field knew of my interest in bettering the condition of the colored people in Chicago through library and reading rooms, and played on that fact.

The next morning when I arrived at my office in the Inter Ocean Building the halls were filled with colored men and women eager for the trip. It took a good deal of explaining to convince them that it was one of Field's jokes! Some of the small Southern newspapers took it seriously, and I was subjected to a lot of comment more forcible than elegant.

William E. Curtis, of whom Field had borrowed $150 some years before, came to Chicago from Washington en route to the Minneapolis convention. He called on Field and reminded him of his debt. Next day Field printed this paragraph in his column:

> William E. Curtis, the well-known correspondent of the Chicago Record, is in the city for a few days looking after some of his permanent investments.

Not Too Big

THERE are few places in the country hotter than Minneapolis after the middle of June, and the June of 1892 was no exception. The convention was held in a newly erected building, finished on the inside with fresh unseasoned pine, from which the rosin dripped continually under the awful heat from the sun and the 15,000 or so human beings crowded under its roof. My seat in the Illinois delegation was directly in front, close to the platform. McKinley was chairman of the convention. When the balloting began he was fanning himself gently with a large palm leaf. Without any warning somebody started voting for him for President. He looked down at me and shook his head and began to move his fan faster and faster. As the voting proceeded he became very much agitated, and when Ohio cast her vote for him he challenged it, as his proxy had voted for him. But President Harrison won, although it is doubtful if he could have done so on a second ballot. Blaine and McKinley polled within one-half of a vote of each other.

During the nomination for Vice President a delegate from Tennessee, with a delicious Southern accent, got up and said, "I nominate for Vice President that grand old man from Maine, Thomas B. Reed."

One of the Maine delegates asked him by what right he proposed Mr. Reed, as he was not a candidate. The Tennessee man came back with, "By no right, suh. I do not know the gentleman. I wouldn't know him if I met him in the middle of the road, suh; but no man is too big, suh, to be Vice President of the United States, suh!"

Whitelaw Reid was put in nomination, and during the speeches Chauncey M. Depew came to me and asked what effect Mr. Reid's fight with Big Six of the Typographical Union would have. I told him I didn't know. Mr. Reid received the nomination.

After the convention adjourned I left the hall and went to the West Hotel. As I arrived at the hotel entrance an enthusiastic crowd surrounded McKinley's carriage and

VASPS

By JOSEPH HERGESHEIMER

ILLUSTRATED BY C. D. WILLIAMS

S just like that, Glenn Thenamy told himself; the was a wasps' nest. He was sitting alone, through vening, in the narrow drawing-room of Morris narrow house on a narrow street. Glenn never id stayed in a dwelling so crowded in upon, and sed him. He had been in the city now, at Caner's, ys, and the time, reaching forward and back, had seem interminable. Thenamy was there, so far nings County, in Kentucky, with a most splendid e Morris Caner, who had connections in Louis- d incidentally for himself. Glenn Thenamy knew e tract of oil-bearing land on which he could, he ain, force a foreclosure, and then secure for the small sum of twelve thousand dollars. It was in est of that he was North. Caner, he had thought— nterested in the by-products of oil —might well furnish the money for erty.

ct was that Morris Caner had prac- ecided to do this for the purpose of g gasoline; but he had to be sure e depth of the oil, and an analysis g made. In the meanwhile Caner voidably gone to New York, leav- amy the hospitality of his roof and . Those servants, together with a l else, bothered Glenn. They didn't east embarrass him im ill at ease; noth- e sort; they simply him. They were, for , in the way princi- his eating. But if his was restless, his hands, and thin, were abso- composed: the fingers twitched; they rested, ever they happened to ith an inexorable quiet. hand moved now in a smooth precision to dumsy old gold-cased watch in his waist- pocket. It was not yet nine, and he re- d the watch with a sigh. He would have to bed at eight, but there was a chance of r's return after dinner—Morris Caner d it dinner—with, it might be, a decision rtant for Glenn. He spoke aloud, wonder- what in the name of a bitterly qualified ipotence kept the other. Why didn't he luce the designated sum of specified money let Thenamy get back to Lexington and Bennings County, where, the further elaborated Creator knew, he had an overwhelming amount to attend to.

Glenn Thenamy had at first gone out with Caner, and alone, to stores and public buildings and parks, restaurants and theaters; but, unaccountably, it had tired him physically. Then he was a little past all that in years, fifty-four in a little while; and in addition he was anxious to get back South to his wife and to the oil lands situated in a country where nothing could be predicted from day to day. The weather as well was bad, a November of icy rain. Thenamy had never noticed the weather in Bennings County, but here in the city it was like an uneasy knife at his back. No, while he was obliged to stay here he preferred sleep, the slow chewing of tobacco and an easy-chair to excursions for any improvement of mind or amusement.

It was reasonable to suppose that, here on a relatively quiet street, he would feel comparatively free; but this was not the case. Quite on the contrary, the houses crushed against Caner's on each side, with partition walls that blurred but didn't deaden the voices and sounds on either hand, particularly bothered him. There was, every little while, an audible sharp buzzing, often angry and threatening; and that was what made him think of a wasps' nest.

"You Know James Heming Pretty Well, and You Realize He's Uncertain and Vicious. You Can Gather He's Desperate Now as Well"

He was, shortly and comprehensively, uneasy. These weren't his conditions and people and dangers. Danger, in swift red spurts of explosions, was an integral part of his existence. In the faces of the varieties he understood he was almost serene; but, conscious of a pervading inimical influence here, he couldn't recognize it, he didn't know how it was to be met. Caner's servant had, with an expression Glenn Thenamy had wanted to pound into his skull, brought him a spittoon; and Glenn, with a foot, moved it to a more convenient situation. It was by no means close, but not a stain fell short to disfigure the gray velvet carpet. Glenn bit a fresh semicircle from an oily wedge of tobacco, and, comfortably uncomfortable, determined to stay up until ten o'clock.

An automobile passed, swift and silent but for the sudden stuttering blare of its horn, and an assault of rain-heavy wind beat upon the two front windows. There was a light under a ruffled green silk shade at the back of the room—if they wanted light, why, in an exact characterization, did they cover it up?—and a floor lamp with a bell of bronze-colored glass beside him. Between them the gilded eagle on the mantel clock seemed to flutter its lifted wings. Glenn's eyes, no matter where in that interior they rested, always glanced back at the eagle. There was something familiar, satisfactory, about that effigy of a bird, anyhow.

The rest of the furnishings—the scrubbed marble and soft velvet, the chairs and hangings and pictures specially—only added to his vague discomfort. They weren't easy; that was it! The pictures, Glenn severely thought, belonged in the saloons of the past; they ought to have no place in a home; and with the corners of his lips relaxing he imagined his wife with such scenes to hang. That one with the girl in a swing, her skirts flying! Yes, the wickedness here he was ignorant of; it had a misleading air of being something else; there was a pretense that all was right. Glenn Thenamy, though, knew better. What, he supposed, made him nervous was that it was a wickedness not controlled, frankly, with the leveling of a gun.

There, exceptionally equipped, wholly adequate, Glenn was at ease. This menace, like the wind, played at his back in an ambush that was itself invisible. No, it couldn't be shot at, stopped with the shock of a steeled bullet. No stones were handily to be picked up, and there was nothing really to throw them at. He diverted his mind by the thought of the actual dangers that waited for him in the Bennings oil tract. It was difficult to exaggerate these, yet they didn't disturb him. His hands, along the arm of the chair, were as still as the hands of a sleeper, of a dead man; but there was a tenseness in their immobility far from death.

The sound of voices behind him, in the other house, grew louder, clearer and angry, and he could almost distinguish the words. They were, as usual, the tones of a man and a woman; the woman cold, biting—and young—the man speaking, but it was nearly shouting, in rushes of uncontrolled anger. Glenn speculated about them. He had seen them both, in passage, on the adjoining exterior steps. The woman, muffled in a blue cape, a blue cloth hat low over her eyes and with a concealing brown veil, was slender enough to be described as a girl; the man, too, was young, with a flushed face and bright, hard blue eyes.

Glenn Thenamy had asked Caner about them; but he, knowing them both well, had been indifferent in his reply. They were the Hemings, James and Ava. She had been someone or other—Glenn couldn't see the importance of this—and she rode horses very well—a fact Glenn seized on at once. James—no one, it seemed, called him Jim—had a bad temper, made worse by the whisky he continuously drank. That was about all there was, Caner pronounced, to James. Oh, yes, he was

Digitized by Google

a good live-pigeon shot; and, younger, his taste for fighting had been celebrated.

Glenn was interested; and now, with the contention beyond penetrating to him, he wondered what in a named locality the trouble was. He could, he thought, detect whisky in the masculine voice. The clamor rose and then sank, stopped, abruptly; there was a loud closing of the door; and then after a short space a second shutting of an outer door.

This was followed by the sound of steps at Morris Caner's entrance. The servant went noiselessly through the hall, and the woman, infinitely more like a girl in a simple white dress with a low neck and no sleeves, came into the drawing-room.

She was surprised but not disturbed as Glenn Thenamy rose, and continued to advance with a light security. She had thought Morris was at home, she explained. He frequently sat here in the evening and she often informally ran in. She was Ava Heming.

"I knew that," Glenn replied. "I asked him about you."

When, naturally, she demanded why, he was embarrassed, and in answer shifted his tobacco from one flexible cheek to the other.

"Don't bother to think out a lie," she continued, dropping into a low chair and crossing slim knees. "You see, I really don't want to know. I was just talking. Your name is Glenn Thenamy, isn't it?"

"Yes, ma'am," he said.

"You are here about oil in Kentucky, and you met Morris in Lexington."

"All correct," he indorsed this. "I'm right flattered to have you know so much."

The servant, undemanded, entered, and on a low table between them arranged a filled decanter, tall glasses, small blocks of ice and a pitcher.

"No water," Glenn directed sharply.

"I thought only women took it straight," his companion observed.

"No, ma'am!" he replied with emphasis. "In my country we like it small and quick. And not so small, either," he added with a gleam of humor.

"I was going to stop you there," she admitted. "It's always pleasant in here," she went on; "I suppose because it's usually quiet. James and I have so many rows our house is like ——"

She paused.

"A county circus," he suggested. "That's why I asked about you," he admitted; "you can hear them in here."

"The deuce you can!" she exclaimed. "I never thought of that. Well"—she made a gesture of indifference—"Morris understands it, and the Jaynes, on the other side, are in Egypt." She clouded her straight features, her straight gray gaze, with cigarette smoke.

Glenn Thenamy was shocked. He was displeased at the legs free of covering, at the cigarette, and particularly at the fact that she swore. His uneasiness at the city grew. Before him obviously was what he must describe as a fine lady, a thoroughbred; and she had the manner of—of a mere creature. At the same time he liked her. Against so much that he couldn't penetrate, account for, in her there was a great deal that he could. If Caner hadn't told him that she rode well he would have guessed it. There was no mistaking her lithe, poised body, the weather-hardened skin of her face, the sinuous strong fingers. Amazingly, at that exact moment, she said:

"Do you know, I like you, and I am specially glad you are chewing tobacco. Somehow it is a tonic for me. The spittoon, in Morris' drawing-room, on this street, is a scream. I'd like to lead a hundred people, all within a hundred yards of us now, around it."

"That," Glenn told her in an impulse of confidence—"that is what I don't rest against up here. There are too many people too close; you can't tell what they are about."

She studied him coolly.

"You don't seem to be a coward."

"I am," he assured her cheerfully, "in an assortment of ways. I've been scared clean out of my boots any number of times. It—well, it goes with my life."

She leaned forward.

"What is your life?" she demanded.

"Oil, I guess, as much as anything; though it didn't used to be that. When it was opened up in Bennings County I sort of opened up with it. For a while, back there, I had a good piece of money. Then it ran dry. But if Caner'll listen to me now we'll both be right. I've stepped plumb on a fat rattler this time."

She asked, "Won't it bite you?"

He smiled.

"Not me; I've been handling snakes too long; I'm expert."

"I believe you are," she said slowly, gazing thoughtfully at him. "Do you know, I believe you are the worst-looking man I ever saw. Yes, the very worst. That, I suppose, is why I am attracted to you."

"Not to boast," he assured her, "I have just that reputation. You ain't a lamb yourself."

"I am not," she answered crisply. "Though my opportunities for anything decided are not very good—they're no good at all."

"Mine," he put in, "have been nonpareil."

They Had Killed—and Been Killed

"You fill me with envy. The truth is I hate all the slush I'm caught in." Her gaze, he thought, was the coldest he had ever seen in a woman. "I want to kill somebody, but it would cost so much—more than it's worth. I'd lose what liberty I had, the only thing that keeps me on my feet."

"There you are wise," he agreed with her. "It's a mistake to kill anyone if you haven't got things kind of fixed in your direction. Most of the men I knew who had right bad luck set out to kill in a place—a town, maybe—where they were strange. You can't get it done safe to yourself."

She plainly showed that she was fascinated, and to his enormous relief she didn't ask if he had killed anyone. She seemed to realize that, emphatically, he had. Settling back silently into her chair, her expression was gloomy. Glenn nervously changed his position and set his gaze upon the ceiling, the gilded eagle whose wings seemed to be gathering for flight. He, Glenn, wished intensely that he might fly too; back to Bennings County and the life, the perils, he knew. A grinding of brakes sounded outside. It was one of those taxicabs, with Morris Caner back from New York, decided, probably, about the oil tract.

"Never," Morris Caner declared, "have I seen two worse characters in consultation!"

A large man, vigorously made, he wore clothes which misleadingly appeared to be carelessly chosen and worn. His features were heavy, but his eyes held a perpetual light of humor, so that it was difficult to know when he was serious. Glenn Thenamy could never quite decide this, and in consequence he was always at a slight disadvantage when talking to Caner. A curious thing, in connection with that individual, had happened to Thenamy.

"Your Kentuckian," Ava Heming observed, "I like very much; we have exchanged everything but his tobacco. I know him, I fancy, as well as he does me; and that is more than a dash. At the same time, Morris, he enrages me; he makes me perfectly furious—he is so satisfied with himself."

"Why—that—that's not so!" Glenn protested. "How could it be—a man like myself? Whatever put that in your head to say?" he demanded, turning to her.

"It's quite true." She rose. "Thanks, Morris; I must see you again, and I want James to meet you—you'd appreciate each other. He really is fit to associate with us."

When she had gone Glenn directed a silent question, a series of questions, at Caner.

"You see it all," he replied. "There is nothing mysterious; no sleeve to hide it in. Good stuff—I like Ava immensely—but wasted. She'd be better off without any of her spirit. Discontent! All the good ones have it here. James is sullen; I can't find more in him than that."

Glenn Thenamy speculated over what he had been told. Caner, he decided, hadn't been satisfactory. Sleeve or no sleeve, there were qualities in the Hemings that absorbed him, qualities hidden. She was, she had said, lost in slush. It was too bad. Not like his wife or any other woman he had encountered, Mrs. Heming was superior in her coolness. His thoughts were interrupted by Morris Caner's voice. Was it light or serious? Glenn wished desperately that he could make out.

"Look here, Glenn, I have had a very bad report o I don't mind telling you they couldn't well have m worse. It included murder; but, of course, arson, pretenses, accessory in any number of crimes, an cially treachery. I don't know what to say to you; I and that's a fact. It's the treachery that disturbs m rest we could talk over, but there is something in he I can't touch."

Glenn Thenamy rose, straightening out his b stoop.

"Mr. Caner," he began—to his own surprise he tears rolling over the rough inequalities of his ch "I've been all of that," he went on again, "and som forgot to mention. I've been a bad man, and in Be I'm supposed to be, right now.

"But where you are concerned, where anythin belongs to you comes up, I'll take care of it for yo the last motion miserable hide. I friend and you a friend, and nothi ever change threaten me a that." He rais right palm. "You my oil, Mr. Caner.

"You will ha swear to that, G Caner retorted. report from the tra good; so promisin at the price it looks suspicious. The man who went for us doesn't think you can get it done."

Glenn Thenamy's expression relaxed; he chew curely.

"Leave that to me," was all, however, that he sa

"You see," Caner went on, "the conditions, in sp the price, are not entirely favorable. Twelve tho is only a half of the purchase, and in order to get th have to put up a thirty-thousand-dollar bond that bore four wells within six months. I don't know these holders. They might be more interested in the t thousand than in developing the oil."

"Leave that to me," Glenn repeated calmly.

Caner's voice developed a note of impatience.

"That's a curious way to do business."

"This business is right smart curious all thro Glenn was undisturbed, patient, almost ruminative.

"But it's a queer way to invest money," Caner insisted. "Even with what I've done, I can't see how are going to run it."

"Now, lookahere, don't bother me!" Glenn exclai "If you think you'd like to hear all the little details y wrong; your system couldn't stand them. I said—d I?—that we'd go in with a half of this and come out it all. Ain't that enough?"

"No murder," Morris Caner directed sharply.

"Murder!" Glenn was plainly disgusted. "Who a word about that? I warned you not to run me corner. You're not fitted, as you stand, to do busine Bennings. By yourself your money would be pl wasted. The—hark to this! I used to use her when I those elegant offices—personal equation is what co there. Yes, sir, just that! At the same time, underst I don't want you to give me a hard look if there' accident. That's mighty apt to happen with the raw they're drinking now. Oil's a chancy thing too; don' and forget it."

Morris Caner sighed and laughed.

"You ought to be hung, Glenn," he asserted: "I pect we all ought to be. Well, it was left to me; h won't make a decision to-night. To-morrow's Saturd you can go back to Kentucky, Sunday."

"I don't believe I can stand it that long even with y Glenn Thenamy admitted. "I reckon I'll get on, and can send me a telegram to Lexington. This city has worried. Why, a simple shooting, that seems to stir all up, is nothing to what's going on here all the time can't see it for the walls, but she's there just the same. badder'n I ever dared to be."

"Nonsense! Either you're small or romantic."

"I expect they're bad names, but they don't upset I tell you, this is a wasps' nest!"

"Why, you old fool," Caner cried, "there's not a wasp it that can touch you!"

"They've got me a lot of ways," Glenn insisted d gedly. "I'm not just green. Take that in with the He ings, that wicked buzzing, and her in here with her fro eyes, and bold legs, her drinks and cigarettes. You t about me, but have another look at Heming's face—h a killer. That ain't the worst—I hate the house on y other side, with that man crying at night."

"I told you Foreham had temporarily broken down Caner said impatiently. "It's not to be wondered at wh you remember that he is in the foreign-exchange departme of a great banking firm."

"That's it, and again it isn't." Glenn rose. "I'll g along down to-morrow."

d Been Carried for Dead, Shot ough a Lung

will not!" Caner "It's not quite as that. There e questions I must swered. No, you'll put up with it here day. I don't mind admitting that I think—I think n. And there's your friend Ava Heming; don't bout her. I could see she was interested in you." ery much embarrassed, Glenn loudly disclaimed. 't right, he insisted, and with them all married. e would comb him if she caught any such loose lowever, Morris was a bachelor, and they were the es; everybody knowed that.

s flowing, coarse, white nightshirt, with the minute in red Jenny had worked about the neck, Glenn ny's appearance had a grotesqueness contradicted—aps caused—by the grimness of his face. When he ne, or thinking, he seemed older than his actual then he showed the effect of the strain in which a eal of his life had been passed. The room in he slept lay across the house, at the back, with ctuating anger of the Hemings on one side, the nes like steel and the hammering voice like a on the other was the man who sobbed spas-ally. He was still now, but at any moment, knew, he would begin again a hopeless, dead-rying with a catch in the breath.

s, somehow, brought back to Glenn Thenamy e stormy course of his life; it lay before him ed and, as it were, visible at a glance. He was—minded himself he had always been—sort of us; that is, if anyone decried religion or the h he permitted himself a sarcastic difference of n; it hardly went further than that. He was, dition, a good husband; he recognized that y. The girls, to speak generally, had no power cination over him. He was true to his Jenny. this brought him to his feeling, his loyalty to or Morris Caner.

that he was steadfast, beyond assault. He had as Caner had proclaimed, false to associates in ust. Mark Sonders he had killed—but it was able that Mark had intended to kill him; he had led oil and falsely testified about it later; politically—there was no use in going into that. The politics of ings County, like its business, was peculiar. What the feeling he had for Caner? It was respect, but that 't enough to account for his attachment. It was—as dogged if he knew what.

That actually occupied his mind was the unusual ulation of exactly how bad he was. The city, which he ed—yes, and feared—had put that question in his d. Suddenly he didn't want to be a part of the city. crying was resumed, long and hopeless. To Glenn many it seemed not sorrowful, but evil, the suffering mented out of a man by —— That was what he did not understand. He wanted to take the victim to the peace—he thought of it here as that—of Bennings County. How bad was he? Pretty supernally damn bad! But this mysterious thing around him was worse. He opened his windows, feeling choked; but at the subdued menace flowing in, the sound that was no sound, and which yet filled his hearing with its threatening, he slammed the sashes shut.

The room was furnished in gray, with touches of pink; a soft luxurious bed with fleecy blankets, deeply comfortable chairs, small intricate lights, and a bathroom inconceivably filled with means of cleaning. He had forgot to fetch up the spittoon, and he spat gingerly into a porcelain basin. Glenn wished for Jenny. She would have appreciated all these traps and fixings. This, he told himself, was no way for a man to live; it was for women.

The bed was so soft that he found it uncomfortable; anyhow, sleep evaded him. He wished that he had his life all to live over again; he'd be different. He would have made a regular thing of saying his prayers—no use to begin now. It would look like he was cowardly. The stinging accents of the Hemings started up. As it was, he reflected, there was little could be done there. They were too much alike, fighters; a woman for Glenn's taste must be—well, like a woman. Jenny had as sharp a tongue as any; but it was only sound, the evidence that she had been worried about him. This Mrs. Heming was more like a man; no, that wasn't right, he didn't know what she resembled. He thanked a designated grace that he was not tied to her. But she was different from the city—the riding had done that for her.

He had seen women a little like her in the horse-show rings of the South, and on the great Kentucky racing estates; but he had never, as he phrased it, met up with one before. Mrs. Heming was like that, only more so, a great deal more so; and at the same time she had a hardy look. He could see her in worn calico, dusted with dried clay, in the doorway of a mountain cabin; he could see her with a pipe clenched in her teeth and a baby at her bared breast. The Hemings had no children, Glenn had discovered.

It was lucky, he thought, that his absurd vision was his own, unrevealed. How he would be jeered for it by Caner, by Mrs. Heming herself, by everyone! She was a lady, and he had been picturing her as a mountain woman! That vision, though, persisted. He even saw at her back the single room of the cabin, or perhaps an interior cut in two. He saw the small wood-burning stove, the pipe led through an informally cut hole in the wall; the walls themselves, chinked with mud and partly covered with the faded and flapping colored sheets from past newspapers; the beds, bagged straw, in the corners.

God, how often he had stayed in such cabins, slept in them beside a husband and wife, male and female relatives and uneasy children! They had got up before dawn, with the room filled with the odorous sputtering of bacon; and, the women subdued in voice, the men silent, hurried through breakfast and gone out with rifles into the flush of morning. They had slipped through the underbrush like shadows, like wasps on foot; or ridden along the rocky courses of dried streams, winding about the bases of the mountains. They had killed—and been killed. He had been carried back for dead, shot through a lung; but he had recovered, except for a pain that sometimes now burned within him. He had been slashed with a knife, in Lexington, at noon, in the midst of the day's throng, and he—he had stood on his feet again. He reckoned that he, Glenn Thenamy, was a very tough man.

That was all to be expected; it was regular. It was his present situation, in a room of gray and pink, with a bathroom like a conundrum, that was strange. What had brought him here? His badness, he supposed; but he hoped that it was something else. He wanted it to be his feeling for Morris Caner, whom he was going to treat squarely; for whom, if it were strictly necessary, he would sacrifice so much. He fastened on that, for it alone seemed to give him some security, something to hold to in the rottenness around him. Strangely enough, although it wasn't real, like, for example, the little lamp he could put his hand out and touch, Glenn felt that it was more solid than the lamp, than the floor or the walls of the house. Stronger, he added, by far than walls through which came such dirty sounds.

The crying had stopped, but the Hemings hadn't; that, Glenn realized, couldn't go on. Something—with those two—ugly was bound to happen. They were like that; two dangerous individuals tied together. Any self-control was leaving them fast. It wasn't his concern. Whatever happened would happen after he had gone, when he was free from the city. He would naturally forget the Hemings. It wouldn't do for him to stroll about Bennings with his mind away from the concerns surrounding him, but now he was sorry. He liked her in spite of her brazen manner.

At noon on the day following, still without committing himself to the purchase of the oil tract, Morris Caner told Glenn that Ava Heming had asked him to dinner at eight o'clock that night.

"I reckon we'll go," Thenamy replied.

"I wasn't invited," the other explained. "You see, I am not a—a novelty to them." He paused obviously to alter his phrasing.

Glenn said instantly, "That's not right. Why, I'm with you! So far as they're concerned, I am you."

"In Bennings County, yes," Caner informed him; "that is your form of

How Do They Get That Weigh

By Nina Wilcox Putnam

ONE'S personal point of view certainly has a big effect upon what one can accomplish. You can go just as far as you can see in this world, and by that I don't mean the horizon which is discernible to the naked eye or with cheaters doctored to your proper prescription either, but as far beyond as you are capable of perceiving with a healthy imagination.

Let me illustrate: One day I was driving my tin Lizzy along over what purported to be a country road, when I came upon what was pretending to be a town. Not that it was making any very obvious effort about it, however. I should say that sometime in the past a couple of tramps had been thrown off the train thereabouts and, feeling too discouraged to go any farther, they established Presto. At any rate, whoever got the idea of making this town had so far accomplished a post office and general store on the Siamese-twin style of architecture, a cow barn, a hen coop which had lately been promoted to the rank of gasoline station, besides two half-portion bungalows. The railroad company had thrown in a second-hand depot, and there was also the usual real-estate signboard to the effect that this was

PRESTO-ON-THE-RAILROAD. BEAUTIFUL HOME SITES. LOTS FOR SALE. ONE DOLLAR DOWN AND A DOLLAR WHEN WE CATCH YOU. WHY NOT BUILD HERE?

Stopping Lizzy beside the only citizen in sight, I aroused him from his Rip Van Winkle long enough to answer a question.

"Why Presto?" I asked.

The old boy untangled his whiskers from about his feet and stood up. "Young lady," says he, pointing, "it's called that because we are very centrally located here. Do you see that railroad station yonder? Well, you can go any place in the world from that!"

This remark of Father Time's registered heavily with me, and I at once read into it one of those personal interpretations which can be suggested by anything if we are ripe for a particular bit of knowledge. I took him to mean that one can accomplish wonders, provided one really desires to. Of course he may not have intended any such wise crack, but acting upon my understanding of it I have since made many a long journey, and of these none has been more astonishing to me than the road from slimness to fatness and from fatness to a perfectly normal weight.

A few months ago I wrote an article for THE SATURDAY EVENING POST in which I told half the truth concerning this experience. That is to say, I described the alchemy by which one might grow thin. Having by certain methods got rid of a lot of weight, I thought it would be a kindly act to pass along the how. The fact that I had lost fifty pounds in seven months, after having jumped from ninety-eight pounds to one hundred and eighty-seven, would, I believed, bring forth a large, interested response. It did. From thin folks who wanted to know how I had grown fat. I will now oblige with the story of that earlier experience.

Three Causes of Light Weight

AT THE age of nineteen, and the weight of ninety-eight, I was not extra-specially worried about my slimness except as it affected my collar bone. Of course in those quaint, old-fashioned days us society buds wore, with our evening gowns, waists which were recognizable as such. But unfortunately even these naïve bodices did not go all the way up, if you get me. They left the collar bone entirely exposed except for the conventional dangling fresh-water pearl on its thread of woven gold chain.

In those days I was so thin I could have worked as a model in a spaghetti factory. You might have parked a pint of water in the hollows of my neck, and when I got out of my bath I had to lean over and let the water run out before I could get dry. As I look back upon those lean years I recall with gratitude that legs were as yet officially unknown. Even my bathing costume, purchased in England, had full and mercifully concealing bloomers, and at that time all ladies also wore a corset into the briny deep—a stalwart corset, capable of holding a substantial amount of padding.

Once She Wanted to be Fat

Of course in an age when hips were an asset and it was considered chic to reveal, upon lifting the ruffled skirt at a street crossing, a fat leg coyly overlapping the top of a tightly laced boot, it was a nuisance to be so slender. But except in the matter of one's décolletage skinniness could be camouflaged very effectively if not in complete comfort. The bustle manufacturers were still in business, and it was a comparatively simple matter to ruffle up a little muslin at home and pin the result across the front of one's corset cover, so that one's Gibson shirt waist stuck out satisfactorily.

And so, taking things by and large, I was struggling along with my slimness without undue discomfort, when quite unexpectedly a serious reason for discontent overtook me. I threatened to pull a Camille.

I put it lightly, but it was no light matter for me, except when I stepped on the scales. Ninety-eight pounds and a spot on one lung is a pretty poor combination, particularly if one is also a wage earner whose money is needed by the rest of the family. The doctor said it nicely, but it was hard to stand up under, just the same. Two years, if I obeyed him implicitly, was what he gave me. He was a leading authority on tuberculosis, but he was wrong about me. For he counted on perhaps a 50 per cent adherence to his rules on my part, whereas I made it 100 per cent faithful, and fooled him. At the end of that two years I weighed one hundred and eighty-seven pounds and he pronounced me cured. I have had no return of the trouble, although I have, since my period of probation, lived a perfectly normal life, have a healthy child, and have done my work with joy and regularity.

Now just for luck I am going to give the regimen which cured me. It may not suit your case. Indeed, I hope sincerely that you have no such case to suit. But at least it certainly cannot hurt you to try my methods if you are desirous of putting on weight. However, the cruel fact is that if you persistently remain thin in spite of a normal diet, and are only moderately active, the chances are that there is something wrong with you. For heaven's sake see a doctor. See him anyway before you try my prescription; let him read it through, and that me out. Passengers will take th at their own risk.

Roughly speaking there are thr causes for a twelve-and-a-half coll neck which ought to demand a sev First, disease; second, an easily cor chemical deficiency in the orga your body; and third and most misspent lunch money. I want to separately on these three subjec am going to grab off the most imp one first and get rid of it, partly T. B. is the instinctive fear of ever thin individual, and also because thickening-up process occurred connection. And again because so obviously curable, provided, fir you catch it in time; second, that low the rules absolutely; third, th keep on doing so until the doc sa you can have one smoke a day.

High Life in New York

IT WAS the belief of the physici effected my cure that tubercular p should and could get well in the where they are obliged by their h to live. He considered it a mistake a man from Long Island out to C unless the Long Islander was going for the other trunk and ice box and thing, and make Colorado his hea ters for the rest of his life. In other the theory was that though C would probably cure, a return to Island would occasion a relapse. by reason of my circumstances, to New York City, and so the roof apartment house was the change mate prescribed. For a period of months I spent twelve hours a day in a steamer chair on that roof, and there that I wrote my first novel. winter was severe that year, as it way of being in Manhattan, and th of 501 Fifth Avenue was often co with snow. I wore gloves, and m over the gloves, and wrote eighty sand words with a lead pencil up o snow-clad city peak. The novel, in tally, found a publisher. By which I mean no brag b pointing out that I could and did keep on with my Two hours a day were spent indoors, receiving friend so on. I even gave, during that winter, a costume to which I went in the character of Madame Récami a part of the treatment was that on days when I ra temperature I was to lie down and not get up unt temperature departed. So life, you see, for such a p need not be all hardship. At the end of the eight m I weighed one hundred and thirty pounds and wa sidered well enough to move about occasionally.

Now here are the rules I followed:

I. Never under any circumstances or in any we remain in a room or a conveyance where all the win are closed. Never.

II. Never walk an unnecessary step if you have half a degree of rectal temperature. Lie down. The will pass, and next day, most likely, you can about in moderation. Take the temperature twice

III. Eat no sweets. That seems a curious rule, bu a vastly important one. Eggs and milk, green vegeta simple meats cooked plainly, and fruit in moderation the best diet, supplemented by thoroughly cooked ce

IV. Take no medicines. Especially no cough medi I implore you. During the two years of my illness the medicine I took was an occasional dose of old-fashi sirup of rhubarb, as required.

V. Don't cough. I know that sounds like nonsense it can be done. Fully 50 per cent of any cough is h and coughing, once you permit yourself to start, spr worse than poison ivy when you scratch it. Concent on not coughing. When you feel the cough coming tent yourself with a mild "Ahem!" You can positi control it if you will use your will power. The rac uncontrolled coughing soon becomes uncontrollable, the resultant exhaustion will be your worst hardsh Don't sneer at this last recommendation. It is feasi and of incalculable help.

VI. Keep occupied and happy. You can't get avoirdup without poise.

. Milk contains a larger assort-
of the various elements requisite
ılanced diet than any other single
but milk alone will not make a
ıl person fat. There are certain things which I would advise cutting out if you are serious about not liking your slimness, and here is a list of them:

FORBIDDEN

All pastry.
Candies, excepting chocolate or milk chocolate in moderation, and that only in place of dessert, after meals.
Ice-cream sodas and fountain drinks containing charged water.
Synthetic fruit drinks.
Bananas.
Cake.
Rich sauces on ice cream.
Rich sauces on meat.
Highly spiced sauces.
Relishes, such as pickles, green olives, chili sauce, catchup and other meat sauces.
Russian and Roquefort salad dressing.
Fresh pork, dried beef, canned meat and canned fish.
Pickled tripe, pigs' feet, calves' head.
Liver, kidneys, brains, sweetbreads and other innards.
Raw meats.
Pickled fish, lobster and crab.
Cole slaw.
All but a very little raw or canned fruit.
Fritters, waffles, griddlecakes, hot breads.
Fried foods.

Above all, avoid richness in cooking. Thickened gravies, sweets, starches in excess are fatal. And lay off of candy. Folks have heard a lot about fat being undigested food. And a great deal of surplus fat comes from just exactly that cause. But no wholesome meat can be put on your bones unless you first of all digest what you eat, and cake, candy and many of the starches are not digestible under certain conditions. I'm not saying they are not pleasant. I don't myself like a big box of homemade fudge much more than I do my right eye, but I also have a pretty good notion of what it does to my tummy if it is given the opportunity. Rich eating may bloat you if you keep it up long enough, but it will never give you your normal weight.

There are still a few enjoyable things left on the menu, however. You may have all you need of anything on this next list, but don't stuff yourself. Just remember that you are not preparing yourself for the market—that is, not unless you are the skinny daughter of an impatient Oriental parent. And even if you were attempting to land a job as fat lady in a circus, stuffing wouldn't speed things along.

Eat until you are satisfied, and then stop. Don't overeat. "Let," as the poet says, "good digestion wait on appetite." And don't ever forget that you must assimilate what you take aboard.

PERMITTED

Milk.
Eggs.
Bacon, much bacon; this may be fried.
All cereals with cream and sugar.
Baked potatoes.
Macaroni with cheese, not with tomato.
Baked beans.
Rice.
Butter, of course.
Chicken, chops, steaks, lamb, beef.
Ripe olives.
Fish.
Grapes.
Oysters and clams, not fried.
Green corn, peas, beans, squash, spinach, okra, carrots, beets or any fresh vegetables, creamed or plain.
Bread of any kind, except newly baked hot breads. Gluten, whole-wheat or Graham breads are preferable.
Mayonnaise dressing.
Peanuts or peanut butter.
Rice pudding, baked custards, tapioca, rennet, plain ice cream.

What and When to Drink

CONFINE yourself to these desserts, supplemented by an occasional bite of sweet chocolate. And don't you dast to go and jazz those puddings up with a lot of spice and sugar and fancy sauces! Make 'em in boiled custard or rich milk only. A few currants or raisins may be added if desired. As a matter of fact, nuts, raisins and dried figs are about as good a dessert as one could wish for, and are extremely desirable for the would-be fat. Stewed prunes are good too, or any other home-cooked stewed fruit. I said stewed, not preserved.

When you lean up against the soda fountain you are to remain on the wagon. Three drinks are to constitute your entire repertoire, and the first of these is milk. The second is malted milk, and the third is fresh orangeade made with plain water.

Which leads naturally to drinking with your meals. And drinking at any time leads, even nowadays, to the subject of alcohol. Now the first thing I want to say about alcohol is that where you are concerned it is out. Very likely you have heard that it is fattening. It is not. It will merely bloat you. In acid cases alcohol is most injurious, and in tubercular patients the use of it is a fatal mistake. It increases temperature, gives a false stimulation, inducing unwarranted exertion, and is in every way objectionable. To the skinny dieter it is of no help, for it merely creates an abnormal appetite for food and induces the eating of more than the system can properly take care of. Lay off of all alcohol, even if you are able to get it.

Drinking water is another matter, but water must be taken in moderation at mealtimes. Don't swill your food around in it, for if you do the gastric juices won't get a chance to do their duty by their country. Take one glass of water with your meal and try to remember to drink a quart between meals.

And by the way, don't eat between meals unless you do it at stated hours. What I mean to say is, don't go around nibbling at things. No candy or crackers in the pockets. This habit annoys your friends and it won't make you fat. All it will do is to spoil your appetite for your three squares a day. But if you comfortably can, take a glass of milk and a cracker in midmorning and a moderate tea in midafternoon. Don't eat cheap bakery foods at these times; take a malted milk or a bit of standard sweet chocolate and a ripe orange or apple, if you prefer them. But shun the intricacies and the elaborations

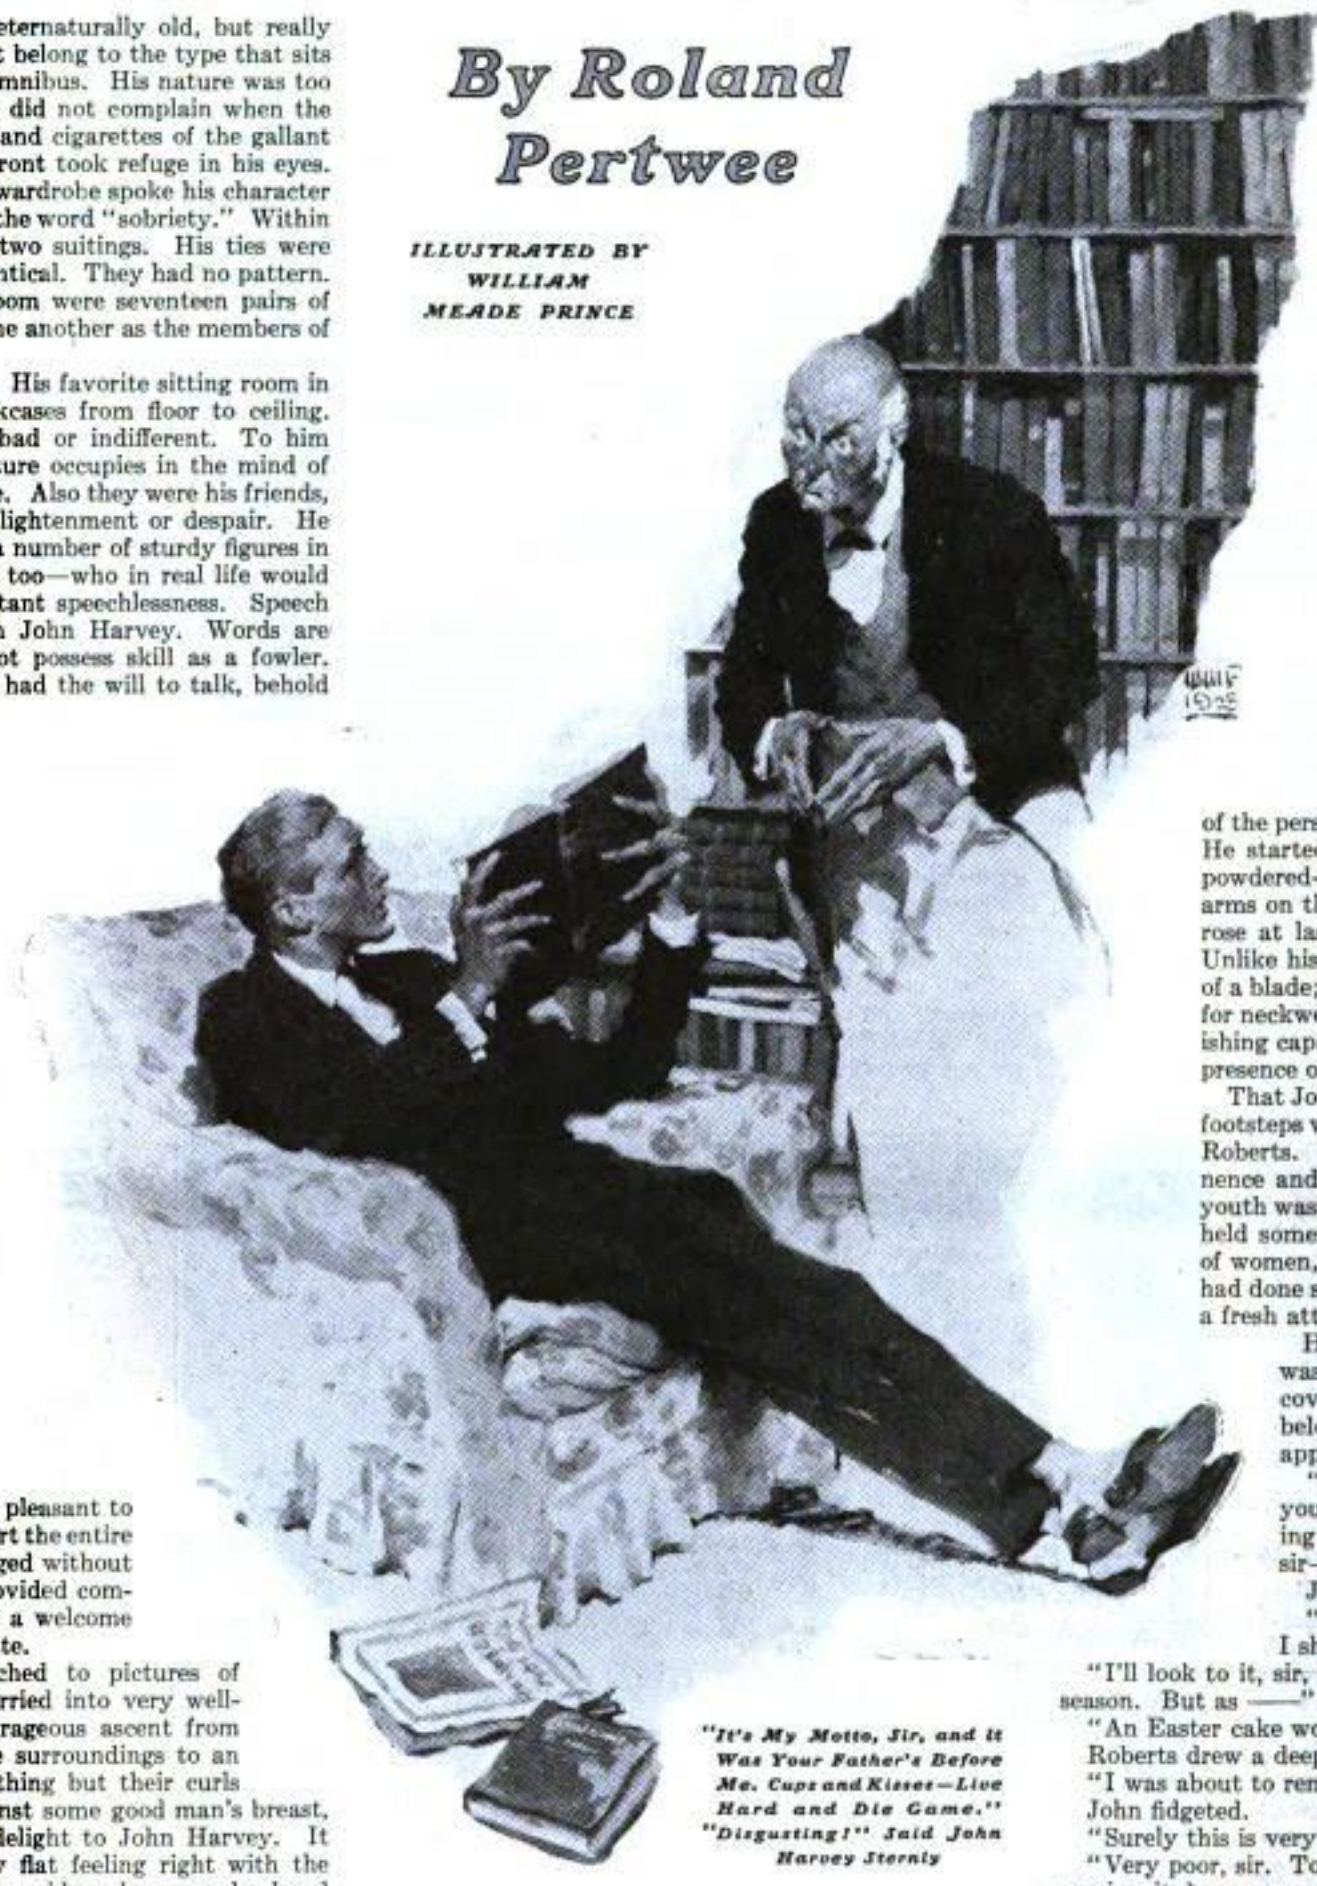
THE CHAP UPSTAIRS

By Roland Pertwee

ILLUSTRATED BY WILLIAM MEADE PRINCE

JOHN HARVEY was preternaturally old, but really quite young. He did not belong to the type that sits on the front seat of an omnibus. His nature was too retiring. He sat behind and did not complain when the flying sparks from the pipes and cigarettes of the gallant and debonair passengers in front took refuge in his eyes. He was too forbearing. His wardrobe spoke his character in simple phrase. It intoned the word "sobriety." Within were fifteen suits, but only two suitings. His ties were numerous, but in pattern identical. They had no pattern. On a shelf in his dressing room were seventeen pairs of shoes as closely resembling one another as the members of a temperance society.



He had got into a groove. His favorite sitting room in the flat was lined with bookcases from floor to ceiling. He read everything—good, bad or indifferent. To him books filled the place adventure occupies in the mind of the average man of thirty-five. Also they were his friends, his enemies, his source of enlightenment or despair. He was on excellent terms with a number of sturdy figures in literature—men and women, too—who in real life would have paralyzed him into instant speechlessness. Speech was always a difficulty with John Harvey. Words are winged, and, alas, he did not possess skill as a fowler. When occasion arose and he had the will to talk, behold his sentences died stillborn. But he could talk uncommonly pleasant stuff to persons who had no interest in listening. Men who laid carpets or cleaned windows, women whose mouths were full of pins while they fitted loose covers to chairs and sofas—to such as these he was eloquent. But of what avail?

Silence makes for loneliness, and he was desperately lonely, although he would never admit it even to himself. To allay the poignancy of loneliness he indulged in a secret vice, and like all other vices it grew upon him and was his master. He became a devotee of the movies—secretly at first, but later with growing brazenness. The movies became part of his life far more readily than the theater could have. The lowered lights gave rise to private thoughts, and it was pleasant to him to see in this mysterious art the entire gamut of emotions being ranged without a single spoken word. It provided comforting reflections, it offered a welcome and a refuge to the inarticulate.

Particularly was he attached to pictures of unhappy foundlings who married into very well-furnished rooms. Their courageous ascent from melancholy and uncharitable surroundings to an approved finale in which nothing but their curls could be seen, storming against some good man's breast, was an unfailing source of delight to John Harvey. It sent him home to his lonely flat feeling right with the world. It was only the screen maiden whose eyes he dared to meet. In their company his courage was immense. He could look them squarely in the face, even when, to express the immensity of their emotions, the projector had need to multiply their normal proportions by eight diameters. In real life a close-up would have filled him with terror, but at the cinema he accepted it unflinchingly and his sympathies were aroused in direct ratio to the grief or gladness reproduced. He found the spectacle of eyes that measured three feet across and shed half-pint tears was particularly moving.

But these intimacies taught him no lesson of valor which he might apply to everyday life. In female company he remained as self-conscious and retiring as heretofore. In a crowded railway carriage he would offer his seat only to women of advanced middle age, for he did not dare to meet the grateful or reproachful glances of the fair. Here was a failure of courage, not of chivalry, since the agony he suffered while remaining seated drove needles of remorse into his very foundations.

The flat in which he lived was comfortable and expensive, but not so stoutly built as to exclude all neighborly sounds. Thus, when the youngest daughter of the tenant below, inspired by hopes of a musical career, embarked upon five-finger exercises, her occasional failures to strike the right note were as audible in John Harvey's study as in her mother's drawing-room. If both windows chanced to be open at the same time he could hear the words passing between pupil and teacher, the slaps provoked and the shrill protests.

"It's My Motto, Sir, and It Was Your Father's Before Me. Cups and Kisses—Live Hard and Die Game." "Disgusting!" Said John Harvey Sternly

"*Mon Dieu!* 'Ow must I often tell you to keep up the wrists?" Whack!

"Woaow! You're a horrid beastly beast! I hate you. I hate all mam'zelles! I wish I was dead!"

Tears.

Then John Harvey would close the window, because he did not like tears.

But the sounds that came from above were very different. Quiet footfalls, bath water, chair springs that squeaked luxuriously, softly closed doors—and never any voices.

John Harvey decided that the tenant above must be a man after his own heart. Their hours of rising and of retirement synchronized, and in all sorts of silent ways their lives seemed cut from a single pattern. He had never seen the man, never tried to see him, but he devoted an extraordinary amount of time to thinking and making up stories about him. The attractive stories, too, invested the mysteri known with honor a virtue.

Often John Harvey suddenly cease reading, ear at the ceiling and lis smiling content, to th sounds which per through from above. his solitude to reflect th low creature was occupy such a room as his, fel perhaps, the same pu killing, perhaps, the sa unproductive hours; perhaps, the same qu wistful loneliness.

"I've half a mind to on the fellow one of thes mused John. "Still, I I never shall."

Half-a-mind is a retro state. It seldom has been to mount a flight of ste

John Harvey was the of Roberts, his mana Roberts was an heirloo of the personal estate of John Harvey's He started his career as a small silk- powdered-haired youth, who rode with arms on the box of the Harvey barou rose at last to the post of confidenti Unlike his son, the late Mr. Harvey w of a blade; he had a roving eye, a pret for neckwear in Spitalfields silk, and an ishing capacity for remaining unmoved presence of mixed drinks.

"H'm!" said John. "I don't like to send her away. Roberts, do you think I should be safe in seeing this young person?"

Roberts' smile was paternal.

"I think it would do you good, sir."

John Harvey looked up for guidance, and there were such a lot of rainbows on the ceiling.

"Show her in," said he.

He was quite unprepared for what was to follow. He had risen with the vague intention of securing a large book behind which he might retire in case of need. He never did look where he was going; not a week in the year went by but that he ran into a lamp-post, the back of a cart or some other obstruction; it was the penalty of watching his feet rather than their direction.

Roberts' announcement, "Miss Mary Merrow," must have synchronized with the girl's entrance. She came in with a sort of run, and John, who was not fitted with efficient brakes, walked straight into her.

It was a most unfortunate introduction.

Stammering awkwardly he stumbled back a few paces, bumped into a bookcase and stood aghast. Roberts had gone out and closed the door. In the center of the room stood Mary Merrow, rather breathless and blinking her eyes very fast indeed.

She presented an astonishing picture. It would be difficult to describe what.

She had a great deal of hair—wayward and curly—which was enjoying a riot beneath an absurd little Mercury cap. Her skirt was very short; she wore very large black boots and white stockings, which rucked and stood in urgent need of suspendering. Round her neck was a ridiculous fur boa, with the ends hanging down behind. It looked more like a compress. She had a white blouse with a blue rosette pinned to the left breast and a pair of carefully mended white cotton gloves. In her left hand she carried, by a ring that protruded from the top, a large square parcel, done up in oil cloth. The conformation of this parcel and the ring by which it was held suggested the accommodation of a wild beast in captivity.

The girl's expression was baffling—at the same time familiar. It contained a happy mixture of expectation and awe. She did not appear to be in any way embarrassed by the oddness of her attire; on the contrary, she seemed quite satisfied about that.

John Harvey was thunderstruck; he could not believe his senses. He touched the bookcase to reassure himself that he was in his own study and not at the cinema. For the first time in his life he realized the meaning of a "film descending on the eyes." It was the only explanation. He had seen Mary Pickford in Daddy Longlegs, Pollyanna, Soapsuds and a score of other screen plays. Secretly, too, he had loved her. As we know, the spectacle of beauty arrayed in rags and her father's boots had never failed to touch him with romance. But as a prosaic and practical young man, of sane convictions, he had never believed such characters had real existence—that lovely orphans with a passion for tamed rabbits, and with stockings that refused to keep up, had any being outside the range of the cinema. The discovery of his mistake was staggering.

She stood in the middle of the room blinking and breathing very fast.

Something would have to be done. John took a grip on himself and spoke.

"I—er—Miss Merrow—that is to say—how do you do?"

"Thank you very much," said Mary, as artless as you please.

It was difficult.

"Oh!" said John. "I see. Um! Please forgive me—I—er—wasn't for the moment expecting—that is—er—you wish to see me?"

"Yes, please." She nodded.

Her simplicity gave him a measure of self-confidence.

"Well, here I am—at least, I think so." The sentence ended there. He started a fresh one. "Do you sit down—I mean will—won't you sit down?"

And again Mary said, "Thank you very much."

Dash it! The girl talked like a subtitle.

He put a chair for her and took another himself, announcing as he sat down, "My name is John Harvey."

"Yes, isn't it?" said she.

Assuming she had regarded his name as an observation on the weather, he politely subscribed, "Very for the time of year."

"I know," said Mary.

She had pulled off her gloves and was rolling them into a ball. Her hands were surprisingly smooth and white. John marveled at that. He found himself watching them.

BALLIOL

By THOMAS BE

ILLUSTRATED BY CLARK

BALLIOL was pretending to be a savage beast. For a small and rather plump West Highland terrier, born in Surrey and largely bred in London, the little dog did it quite well, his master thought. Balliol lay on the baking turf below the veranda and horribly growled at the village of Rawling's Hope; at the vast and placid valley beyond the trickle of white wooden houses; at the Rawling sawmill, which wailed on the edge of a shimmering basin in whose waters great logs were rolling with an animal laziness. In his growl he defied this valley of the Pennsylvania hills, with all its lumberjacks, their dogs, their offspring and their rattlesnakes. He was magnificent.

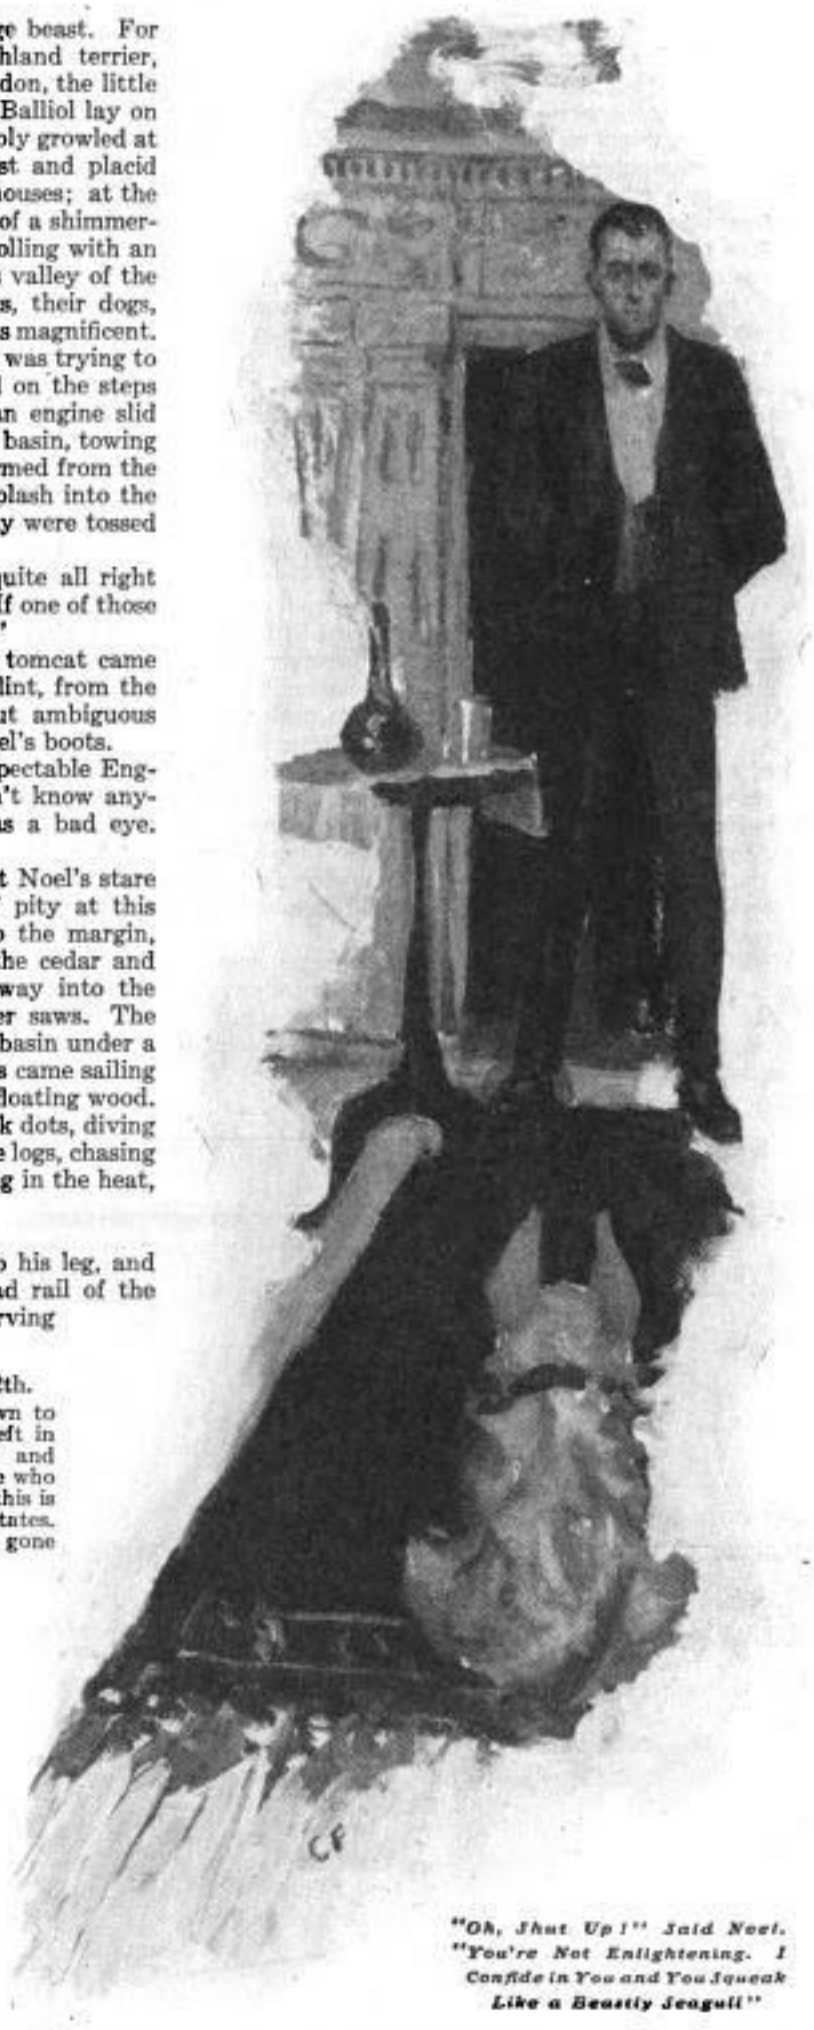
It seemed to Noel Bretherton that his pet was trying to wave his tail. The young Englishman stood on the steps admiring Balliol, whose growl swelled as an engine slid to view on the narrow track by the dammed basin, towing three flat cars covered with logs. Men swarmed from the waterside and the huge trunks began to splash into the basin as chains were loosed. Fluffs of spray were tossed into the fierce sunlight and Balliol barked.

"Yes, dear heart," said Noel; "that's quite all right when you're half a mile from the trenches. If one of those logs happened to light on you, though ——"

Balliol stopped his noise. A large black tomcat came sauntering easily about the house of gray flint, from the stables, and approached in a composed but ambiguous gait. The terrier paddled up and nosed Noel's boots.

"Just so," Noel told him; "you're a respectable English household dog, old thing, and you don't know anything of that fellow's antecedents. He has a bad eye. Come along. We'll write letters."

But the logs splashing into the basin kept Noel's stare for a moment. He looked with a sort of pity at this process. Men hauled the turning bulks to the margin, using long poles. A spiked chain caught the cedar and pine lengths and dragged them up a runway into the droning mill, to a swift assassination under saws. The spinal stream of this valley flowed into the basin under a bridge of whitewashed timber, and more logs came sailing on its brightness. The pool was dense with floating wood. On the farther shore boys were visible as pink dots, diving from the bank, and some ran carelessly on the logs, chasing each other. A smell of massacred cedar hung in the heat, and mist darkened the valley's depth.



"Stunning," said Noel.

He lounged into a chair, let Balliol climb his leg, and began a note to his father, using the broad rail of the veranda as a desk, aware of the cat observing him from the slope of lawn. He wrote:

RAWLING'S HOPE, PENNSYLVANIA, July 12th.

Dear Parent: Sanford Rawling motored down to Oil City very early this morning and I am left in possession of the Rawling territories, powers and dominions. It is a ghastly responsibility for one who has been here only three days. I perceive that this is a feudal state which has got lost in the United States. I feel rather like a medieval clerk whose lord has gone to the Crusades on short notice. A deputation of savage old women arrived while I was shaving, to complain that the village butcher is profiteering in pork. While I was at breakfast came an old patriarch who is supreme boss of the sawmill, swearing terribly that someone has been raiding the dynamite which they use to blast out rocks for logging paths. Then a Swede lumberjack at least nine furlongs tall came pounding in with some woeful yarn about his foreman. Sanford's father is in New England somewhere and Sanford is in complete charge of the place. These people treat him as God, absolutely, although they call him San.

I am a fearful failure as a deputy deity, and am growing nervous. The Rawling cat obviously suspects me of intentions to run away with four hundred square miles of valuable timber and the house, which has six bathrooms and is lit electrically although it is fifteen miles from the railroad. Three giants are approaching from the village. They probably want me to decide which one of them is to marry Gertie Jones. Women are rather scarce hereabouts.

"Oh, Shut Up!" Said Noel. "You're Not Enlightening. I Confide in You and You Squeak Like a Beastly Seagull"

He halted his pen. Balliol scrambled down the steps and went to meet the three tall men, whose overalls were peculiarly foul below shirts of black muslin. Noel braced himself. He had been taking messages for Sanford Rawling all day. The men stooped over Balliol's pale fur and two of them stayed so.

The tallest came swinging his naked dirty arms up the steps and said cordially, beaming at Noel, "Hey, they say San's went to Oil City?"

"Right," said Noel; "he'll be back late to-night."

"Well, dog-gone," the caller drawled, "and I wanted a gun."

He squatted on the planks and wiped his face with a filthy wrist. A mixed smell of oil, sweat and acids swelled in the veranda. He took a peaked black cap from his head and released a mass of curly black hair. Under his mottlings of coal and grease he was extravagantly handsome, young, white skinned. He gazed at Noel with bright blue eyes and announced, "I ain't had time to come up and meet you yet. I'm Nate Sears. Those are my brothers. They're twins. Hey, kids, you'll get his dog all dirty. . . . We run the train."

The twins tramped up the steps with Balliol trotting between their shoes of soiled canvas, and looked at Noel placidly. They were not so long or so handsome as Nate Sears, and their twinship was startling. It was obvious that they ran the logging train. They must take turns in shoveling coal for the engine. They might be eighteen. Noel murmured "How d'you do?" and the twins nodded politely. Then they sat down to play with Balliol. Balliol's vanity bloomed under their caresses. He sent haughty little barks to the calm cat on the lawn.

"It's a good pup," Nate Sears said, loading a pipe from Noel's tobacco pouch on the arm of the chair. "Well, say. You give me one of San's guns, will you? Tell hi it 'cause old Conor's actin' nasty. He's been whis damn tune all week. Last night the kids was slee side 'cause it was so hot in the house and they h whistlin' by the bridge. So I need a gun." He lit

Noel lit a cigarette and tossed two more to t Here was a young and healthy male, sensible e be trusted with the logging train and allowed inviting him to hand over a revolver—gun meant re by reason of the acts of Conor. Who was Conor?

"You mean that this Conor—er—is dangerou

"Sure!" said Nate Sears. "Damn dangerou San asked him if he was goin' to make a fight o came back from Oil City he said he wouldn't lay a us. And he ain't tried to. We've been back a we he ain't spoke to none of us, and he's whistlin' t And the kids say he was whistlin' round our p night. Conor's a good shot for a left-handed ma

The less-soiled twin said shyly, "Hey, Nate; what you're talkin' about." And the murkier twin

Nate Sears drawled, "Oh, mebbe he don't! way. Conor raised her. She's an orphan. He to marry her, see? Only she run off with me. W Oil City all June boardin' with an aunt I have do But she and the twins got awful homesick, se hadn't never lived nowheres but here, see? So I San to see how Conor'd act if we come back. An said he wouldn't lay hands on us—which don't me ain't revolvers—so we come back. She didn't com with this aunt I've got in Oil City. She wrote say she was sorry, and like that, and he ain't w nothin'. I don't want her back here unless I Conor ain't goin' to be nasty. Only, she's homes killed his second wife, see?"

"Oh," said Noel, "he did?"

"Sure! He caught her holdin' hands with a feller, and killed her. He's kind of jealous in his tion," Nate Sears explained. He rubbed some s the rosy bloom of his left cheek and pondered. Mamma took me to the funeral. That Dane was sight in his coffin. I seen remains in France that in mind of him. Of course I'm some bigger'n Con dunno exactly could I lick him or not."

The twins said comfortably in twin voices, "S could, Nate," as if this had been much discussed a Balliol barked.

"But this fellow has given San his word to—to hands off you?"

"Yeh. Only he keeps on whistlin', see?"

A twin murmured, "He don't understand abou whistlin', Nate."

"Oh! Well, when he takes to whistlin' it's wha call a bad sign. I ain't got a thing against Con He's a nice feller but when he's mad. And he's awf And just as mad at the kids as me, see? 'Cause the brothers."

The twins seemed highly gratified. Twin grins a under their dirty noses. They sat patting Ball looked at Noel in a pleased way.

One of them observed, "We was sleepin' out las On a blanket. Down by the water. We coul Conor whistlin'. If he'd got a gun with him he plugged us."

"'Cause it was bright starlight," said the other

"Where do you lads live?"

Nate Sears stood up and pointed. "Across th Over where them kids are swimmin'. That's our where the big tree sticks up. See?"

Noel saw a tree that soared far above the genera across the basin, but verdurous shadow hid any hou said "Oh!" and watched the pink points which wer on the margin of the water. What in law and order one do? What would Sanford Rawling do?

"You think this is liable to end in a shooting?"

"Conor keeps on whistlin'," said Nate Sears; "a means he's boilin' mad. I'll take one of San's guns be sure to tell him I took it." He went tramping t the wide doors of the house and sang out to the butler inside, "Hey, Cooper, expect you're feelin' sassy now you got an English feller to wait on! laughed against the servant's horrified mumble.

Noel blushed. The twins finished their cigarett threw them away with uniform jerks of grimy hand said, "Nate got a medal in the Army for shootin', the other added, "He could thrash Conor. He a heavy, but he can hit awful hard."

"Just who is Conor?"

They said responsively, "Bosses the gang down runway. He's a old Irishman."

"And he's been married before?"

"Oh, sure. Three times. Two of 'em died. He lucky with women. He was goin' to marry her, but

les of Good Society. Noel wanted to laugh. He
'Do you know this chap Sears, Cooper?"

"Quite a pet of Mr. Sanford's, sir. Very decent lad, I believe. Quite a commotion in the village when he absconded with Conor's intended, sir. She 'asn't come back, I notice."

"And who's this Conor?"

The butler said less readily, "A very rough old fellow. A prize fighter formerly, sir. If I might suggest ——" He spread his fingers on the Rules of Good Society and gave a butler's meek cough.

"Yes?"

"Mr. Sanford has what you might call a most hextraordinary method of 'andling these people. I shouldn't—if I were in your—predicament—sir ——"

"You'd let it alone?"

"If I might suggest, sir."

Noel thanked this burst of tact with a smile. The exiled apostle of good society bridled. Noel said, "Tell them to saddle a horse, please."

"Thank you, sir," said the butler with passion.

Noel rode down the slope, thinking. Sanford would be back by midnight, and nothing would come of this before that hour. Should one do anything? He worried. It was comic. He imagined the flight of Nate Sears and the nameless bride, attended by the twins. And yet the girl was so frightened of Conor that she stayed in hot Oil City. She must be frightened! No girl would want to leave Nate Sears footloose where other women could sympathize with him. Another blast echoed. Noel could not see its source above the trees of the village. He let the horse walk past the smithy, where old men sat in the sunshine on a bench; past the closed schoolhouse; past the red-brick office of the Rawling Lumber Company. Children spotted the dust and chirped over Balliol, who had forgotten his wolfishness and paced with dignity beside Noel's horse. Outside this patch of dwelling was the forest, intricate, hot, solemn.

The horse stopped, unbidden, in an open space by the basin. The engine was moving into a small roundhouse of mossy brick. It vanished, carrying Nate Sears. The twins beckoned to Noel from one of the emptied flat cars. He reined his mount and asked, "Which is Conor?"

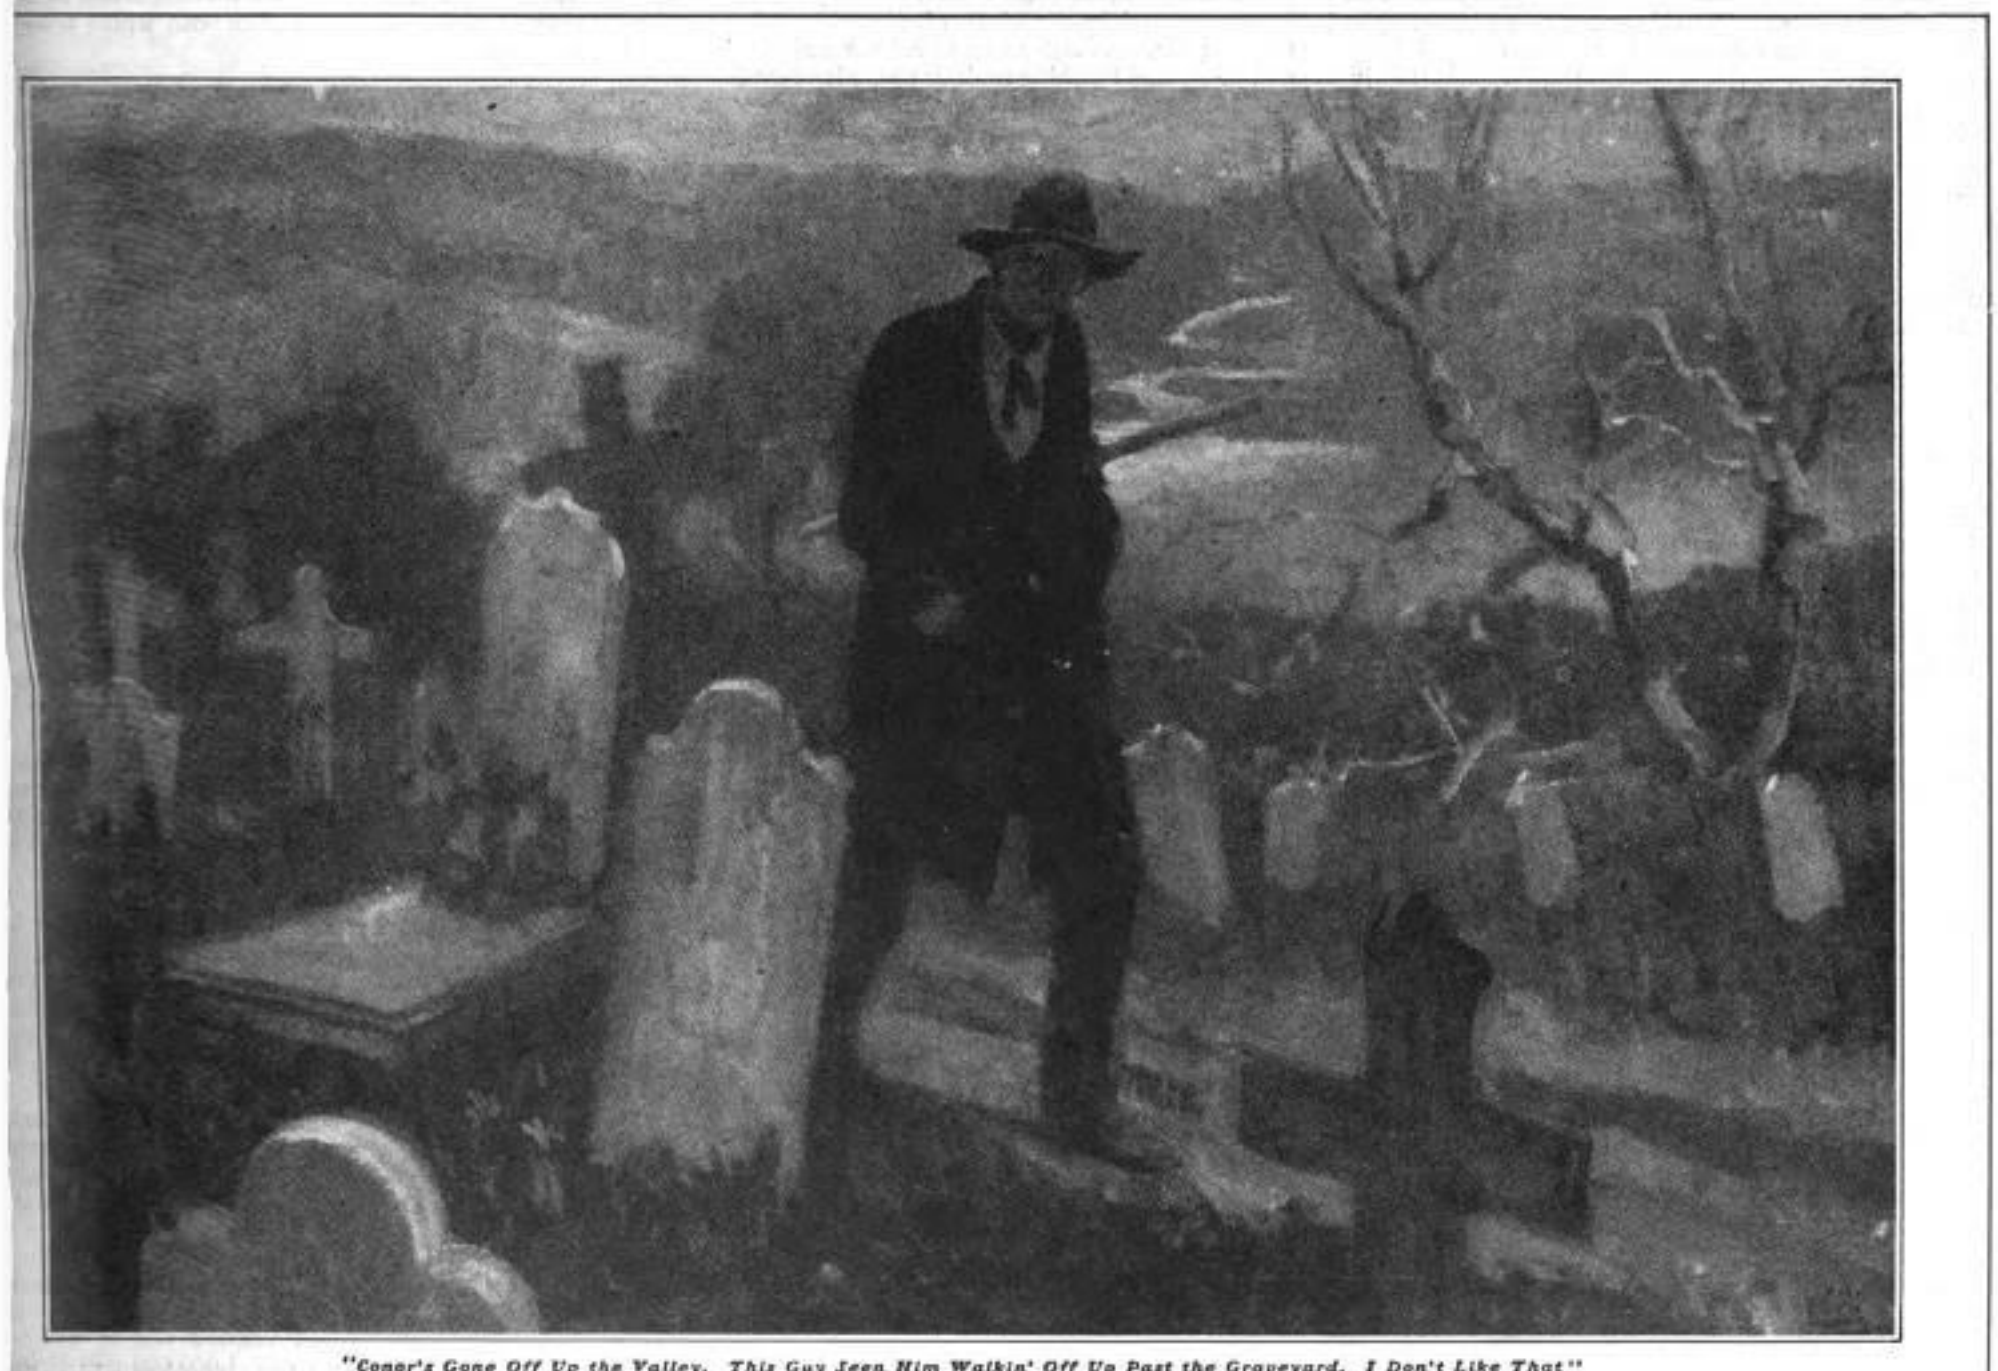
"Him in the blue shirt. With the black hat. Lookin' at us," said the twins.

Ten men were pulling logs toward the wooden rim of the basin. The hooked poles splashed. The mounting chain of the runway caught and dragged, rattling. A man at the foot of the wooden trough seemed to watch the chain and its load of wood. His chest was prodigious in a blue shirt. He stood with pink fists on lean hips, and his cavernous hat brim hid his face.

"Lookin' at us," a twin whispered.

"Certainly," said Noel. "If you lads look at him he'll look at you. Don't stare so."

The twins were abashed and swung their long legs feverishly. They muttered, "He keeps lookin'. He come right up to the engine, now, when Nate was cleaning her, an' looked at Nate. Nate didn't pay any attention. He's whistlin'."



The hat brim rose a trifle and showed a shaved jaw, a pursed mouth. Conor might be whistling. The shrillness of blades chewing logs inside the mill drowned any noise less than a shout from the workers. Then the saws stopped. An inhuman lazy whistle came from the pipes of the shingled roof. The chain of the runway fell idle. The men's voices gabbled as they straightened, and a sound of logs gently bumping came from the water. In this peace trembled an air, the sound of a jig whistled merrily. Balliol dropped a cedar chip and jumped over the grass to examine Conor's shoes. A twin murmured, "Ain't it funny? A dog'll always run and talk at him. Look at that, now."

Balliol was hopping up and down before the whistler in exhibition of liking. The little dog's white tail wagged. He was happy. He hopped, absurd and delightful. The twins giggled. A sense of utter inconsequence gripped Noel. This man might kill them. They gurgled because a dog liked him. He had probably doted on their brother's wife and this jolly whistle was a note of defiance, rage, a growl at the world. Odd, frightfully odd. And yet two Danes had stabbed each other to death over a stolen shirt on the day before Noel's coming into this upland. A smell of cedar drifted from the pool. Conor sat down on the moist planks and patted Balliol. Noel dismounted and gave his horse to the nearest twin.

Balliol was in ecstasy, wriggling all over. This man knew how to pat him and did it amiably with his square fingers. Noel approached and deliberately clicked a spur on the wood.

Conor looked up and easily said, "It's a fine pup, sir," in the most melodious way.

The Inside Story of the A. E. F

By GEORGE PATTULLO

Some of the Men of the 314th Infantry, Composed of Pennsylvania Troops, After They Had Pushed the Germans Back More Than Four Miles in Less Than Twenty-four Hours

THE American troops already engaged in the battle are the unanimous admiration of the whole French Army," wrote Petain to Pershing on June 6, 1918, referring to the fine performance of the Second American Division at Bois de Belleau and the Third Division's prompt action in defense of the river crossings near Château-Thierry.

"I therefore willingly accept the offer of all the units which you place at my disposal. The five United States divisions which are to come down from the British zone will be placed on calm sectors in the east, and as soon as possible each will hold a divisional sector."

This was all very fine; but still no move to indicate any intention of building up an American sector! Instead, every step seemed directed toward postponement of this project. For a long while this policy was partly inspired by doubt of what the Americans could do, and fear of intrusting a sector to them, but after the offensives of July there could linger no doubt in the French mind of the value of the Americans for fighting purposes, because they were from then on the shock troops of the toughest operations. Yet even after July no effort was spared to delay operation by the American forces as an American Army under American command.

At a meeting with Foch and General Weygand at the American General Headquarters in Chaumont on June seventeenth, Pershing reported that the War Department in Washington planned to call out enough men to place 3,000,000 troops in France by the end of March, 1919. To this the Allied generalissimo replied by dwelling on the improved morale of his troops through the arrival of the Americans. All the French troops which had contacted them rapidly renewed their fighting spirit, he said.

General Pershing seized the opportunity to urge once more the importance of uniting the Americans into one army. Such a step would not only help morale but add to the usefulness of the Americans very materially.

Postponement

THE Allied commander in chief agreed with the idea in principle, but when Pershing outlined a proposal for grouping a few American divisions—the Second, Twenty-sixth and Forty-second—as a starter for an American field army, Foch requested him to consider turning over from some of the divisions going into the American training sectors a few of the best regiments of infantry to serve in the most fatigued French divisions—again that persistent idea of utilizing the Americans in small units as replacements!

Foch dwelt at considerable length on this proposition, his pet argument being the necessity of stimulating French morale, and he contended that it would be a matter of a few weeks only. Later these regiments could be returned to American command for incorporation into American divisions—he felt sure this could be done the latter part of July or early in August—and he wanted Pershing to draw up a plan for the scheme.

"We have two tasks facing us," said Foch—"to build up the British Army in man power, and second, to build up the morale of the French Army and in August assemble the American Army."

General Pershing's answer was that he would study the proposal carefully with regard to the needs of the situation.

About this time M. André Tardieu, French High Commissioner to the United States, had one of his inspirations. Of all the Allied spokesmen M. Tardieu was ever the boldest in presenting demands and the most tireless in

We arrive now at what has come to be regarded by most military authorities as the turning point in the war. The first half of 1918 had been disastrous to Allied arms.

The German offensive in March had carried all before it until the depth of its own penetration stopped its impetus; their second grand assault on April ninth menaced the coal supply of France and the Channel ports. French reserves had to be diverted as far north as Ypres to help stem the tide. On May twenty-seventh the enemy again smashed through the Allied front and swept over the Chemin des Dames, crossed the Aisne, and thence marched almost unopposed as far as Château-Thierry on the Marne. Allied losses were so heavy their reserves sank to the vanishing point. The German armies were now close to Paris; they were flushed with victory; Allied morale was correspondingly low. The capital had never seemed in such peril; people fled from it in hundreds of thousands.

Infantry of the First Division Lined Up for Their First Meal After Twenty Days in the Trenches

Mangin's Counter Attack

ANOTHER German attack, but on a smaller scale, was launched on June ninth. It gained the enemy nine kilometers and was then brought to a standstill by a counter attack of five French divisions under General Mangin. This counter attack stands out as one of the heroic feats of the war; the French losses were appalling, but they stopped the enemy.

Up to the middle of July all the Allied fighting was on the defensive. If they could check the onrushing Germans they were well satisfied. The power of the German offense loomed as irresistible; it became an obsession. The Allied infantry, discouraged by disastrous failures or ruinous partial successes in 1917, worn out by the Germans' savage onslaughts in overwhelming numbers in 1918, had no longer the heart for attack. Some units of them had; there were troops among the French and British which would have kept on fighting until doomsday; but the bulk of the armies had spirit only for defensive warfare.

The Test of Lochinvar Bobby

By ALBERT PAYSON TERHUNE

ILLUSTRATED BY CHARLES LIVINGSTON BULL

IT BEGAN simply enough, with a late winter walk. The walkers were little Jamie Mackellar and his big collie, Champion Lochinvar Bobby. Jamie was kennel manager for the great Rufus G. Belden, financial giant of Midwestburg. Bobby was Mackellar's chum—the dog that had spent nearly a year of his youth running wild in the forests and had been reclaimed and humanized by his diminutive Scotch master.

This morning's walk was uneventful enough for both dog and man, until Bobby chanced to pursue a cat down an alleyway. He took a short cut through a mud puddle during this blissful chase. His flying feet slipped on a film of ice and he fell sprawling in the puddle's muddiest depths.

Rolling over, Bobby regained his feet in something like a tenth of a second, but not before his magnificent tawny coat was one thick smear of mud. The cat vanished over a fence; and Bobby, at Jamie's first call, galloped merrily back to his master. Mackellar, frowning ruefully, surveyed his disreputable chum.

"Eh, Bobby, you miserable tatterdemalion!" he sighed. "Not three days ago you had your bath—a grand bath, Bobby, lad!—and not an hour ago I brushed you till you shone. And look at you now! Look at you now, I'm asking you, Bobby. Did you ever see the like of you, for fair filthiness and muck? 'No,' says you, being at heart a truthful tike, 'I never did.' What'll Mistress say when I lug you home looking like one of the children's mud pies on four legs? And what'll I be thinking when all the folk hereabout set eyes on you and get the idea that Jamie Mackellar knows no better than keep a collie in such shape? Home we go, Bobby, lad; home to a bath. Come along!"

Now, naturally, Lochinvar Bobby understood the meaning of only a tithe of Mackellar's words, despite the fact that Jamie had always talked to him as to a fellow human. But from long experience he read the voice and the face of the man with perfect ease. From these he gathered that he was being scolded, but that Mackellar was not really angry at him and that he himself had not committed any sin.

Yet Bobby listened, downcast; and he fell into step behind Jamie with drooping head and brush. Not alone because he was dirty and because he loathed dirt, but chiefly because he had three times heard his master utter that detested word "bath." And Bobby's heart sank dejectedly at thought of the scrubbing and the abhorrent reek of soap in store for him. A few collies really enjoy swimming, but almost none of them like a tub bath.

For some distance through the outskirts of Midwestburg on their return journey to Beldencroft, at the summit of Crescent Hill, the two hurried along. The mud was drying on Bobby's glorious coat. This and his morose anticipation of a bath gave him a furtively tramplike air at utter variance with his wonted proud beauty.

Once only did he rouse himself from his lethargy of gloom. That was when he and Jamie chanced to pass the white-fenced front yard of a house about a mile from Beldencroft. From the steps of this house sprang up a dozing collie—pale gold and white of hue, dainty of line, classic of head. At sight of Bobby this dog cleared the steps in a bound and came charging down toward the pickets, barking in strident challenge. As a rule Bobby paid no heed to swaggering advances from dogs he met on his walks with Jamie. At worst, an impatient growl or a momentary glint of teeth was his answer to such defiances. But to-day he neither showed his teeth nor growled. Instead he cast aside his air of misery and trotted up to the palings with tail awag. For a well-bred collie does not resent the barking insults of the female of his species.

He and the gold-and-white little beauty touched noses through the picket spaces. The new dog wagged her tail hospitably and did a series of dance steps, then galloped madly off for some ten or twelve feet and wheeled to see why Bobby did not accept the invitation for a romp.

Bobby Drove These Off Fifty Times Between Sunrise and Dusk, But as Often They Clamored Back Greedily

The picket fence was Bobby's sole reason for not accepting. Now, as she glanced back at him over her shoulder, he cleared the fence top with ridiculous ease and trotted over the scrap of lawn toward his new friend.

Jamie, missing him, turned about just in time to see an obese and overdressed woman emerge from the house, squalling shrilly, "Lass! Lassie! Come here at once! Get away, you nasty brute! Scat!"

The last half of her speech was addressed to the mud-coated Bobby. He stopped short as she advanced shooingly upon him. He surveyed the woman with no fear at all; but also with no favor. Instinct told him this was not an understander of dogs. His sensitive eardrums, too, were irritated by her shrilly raucous voice. The other collie crouched, terror-stricken, at approach of her mistress, and began to slink away. Plainly experience as well as instinct warned her of danger.

Jamie Mackellar's brows creased in disapproval at sight of Lass' fear. It could spring from but one cause. Knowing collies as he did, he had scant patience with any man or woman who by needless brutality produces that look of terror in their eyes and that cringingly panic way of slinking off.

Tersely he called Bobby back to him. The dog, with one wistful glance toward his frightened new playmate, cleared the palings again and stood at his master's side. The woman, in mid-lawn, scowled after him.

Then turning on the timid-looking little Mackellar she snapped, "I'll thank you to keep your dirty cur off my premises! He ——"

"Asking pardon, ma'am, in Jamie, "he's no cur. Champion Lochinvar ma'am. There's not his America. He's a wee muddy, but that's by a little accident with a mud puddle. That's young collie you have finished conciliatingly. compliment you on her."

"She was given to week," said the woman "And she's a pest. I'll either teach her or I'll thrash the life out of her. She ——"

"H'm!" commented Jamie, eying the ened dog. "You've made a grand start way or the other. Come on, Bobby, lad!

It was as they rounded the next corner ice truck skidded on the slippery pavement knocked Jamie Mackellar under its wheels. When the policeman came puffing found an overturned truck with a senseless crushed driver wedged under it. Some farther back he saw Jamie Mackellar lying unconscious, with a scalp abrasion and compound fracture of the left leg.

A momentarily increasing crowd surrounded the two victims, but they pressed less around Mackellar than around the driver, because a huge and mud-streaked collie guard over Jamie's oddly crumpled body.

Lochinvar Bobby by turns bent whining and quivering above his master, licking muddy face in an agony of grief; then ing erect again to snarl murderous defiance the spectators. One Good Samaritan had to lay hands on Jamie to carry him to the walk. Bobby had flown at the man with centrated fury that not only had frustrated kindly attempt but had kept everyone at arm's length. There stood the great dog—broken, bereft, savage—above the unconscious little man who was his god. And none break in on his vigil.

The policeman turned in an ambulance. Then, being prudent, he decided to call attention on the mishap's other victim. While he was still examining the the ambulance came up.

At the same instant Jamie Mackellar awoke, dull-headed but sentient enough to know himself to be in the of anguish. Stupidly he blinked ward into Lochinvar Bobby's wise dark eyes.

"Bobby, lad," he whispered dazedly "whatever on earth's happened Are we ——"

The ambulance surgeon bustled up. Bobby growled stood between him and Mackellar.

"Let him be, Bobby, boy!" panted Jamie. "He right. Leave him alone! He ——"

Pain and the effort to speak were a combination strong for Mackellar's tortured nerves. He fainted.

But his order had been given and had been understood. This white-coated human, who stank of pungent fectants, was to be let alone. So much Bobby knew. had said the man was all right and must not be molested and Lochinvar Bobby had never in all his life disobeyed questioned a command of his adored master.

Unwillingly, and still growling a little under his the dog drew back. Quivering with misery and craving to interfere, he none the less stood quiescent the white-coated man and another put Jamie in the bulance. Jamie had said: "He's all right. Leave alone!" And Jamie's order must be obeyed.

Presently the ambulance drove off. Bobby followed galloping close behind it through the straggling outskirts of Midwestburg and later through the choked traffic of city's streets. At last the vehicle stopped in front large building, a building which, even from the outside gave forth to Bobby's acute senses the same dislikeful as had the clothes of the white-coated man.

Jamie was borne carefully indoors. Bobby followed close behind the stretcher. A man at the side reached out to bar the dog's way. Bobby paused only enough to slash at the outthrust hand. The man stepped back and aimed a kick. The dog wheeled upon him with such an aspect of silent rage that the man hopped nimbly up on a table. Bobby paid him no further heed, but followed the stretcher-bearers.

ackellar meant one and the same thing. He had
Mackellar cottage, back of the Beldencroft
that morning in company with Jamie. Wherefore
anine logic Jamie was not at the cottage. The
pot whither he had traced Mackellar was this ill-
hospital, and search and scent showed him Jamie
nger here. Distracted, the collie trotted out of the
and made his aimless way up the street.

Bobby was the chum and the devoted adorer of Jamie Mackellar, but to no one but Jamie had he ever given allegiance. True, he was moderately fond of Jamie's big Yorkshire wife—who, by the way, felt only the mildest interest in dogs. But he was not devoted to her. Also, he was fond of Jamie's two children. But both of those children were away at school just now. In a patronizing and tepid fashion he was on friendly terms with the august Rufus G. Belden, and with the kennel men. But none of them counted for much in his life.

No, there was no reason for hurrying home, or indeed for going home at all, now that Jamie was no longer there. Nor could he pursue any logical quest for his lost master without a single clew. He must needs accept heartache and bewildered loneliness unless fate should in some way bring him and Mackellar together again.

Yet, collie fashion, before giving up all hope he cast back upon his trail. He retraced the long journey from midcity to outskirts; to the place where Mackellar had been struck down. There he sniffed about the spot on the greasy street where Jamie's body had lain.

As he was giving up this unprofitable task another recognized scent assailed his keen nostrils. Around the corner, from her home in the next block, was walking the large and raucous-voiced woman who had called him a dirty cur and had shooed him out of her yard. By a flimsy leash she was leading the gold-and-white young collie, Lass. In the woman's other hand swung a plaited dog whip—an object unfamiliar to Bobby.

Wagging his tail in friendly welcome Bobby advanced toward his new collie acquaintance. Lass at sight of him sprang forward in playful eagerness. The spring caused the loose-hung leash to dig into the woman's fat wrist and gave her arm a sudden wrench. Angry at the hurt and the jar she yanked vexedly on the leash, jerking Lass back on her haunches.

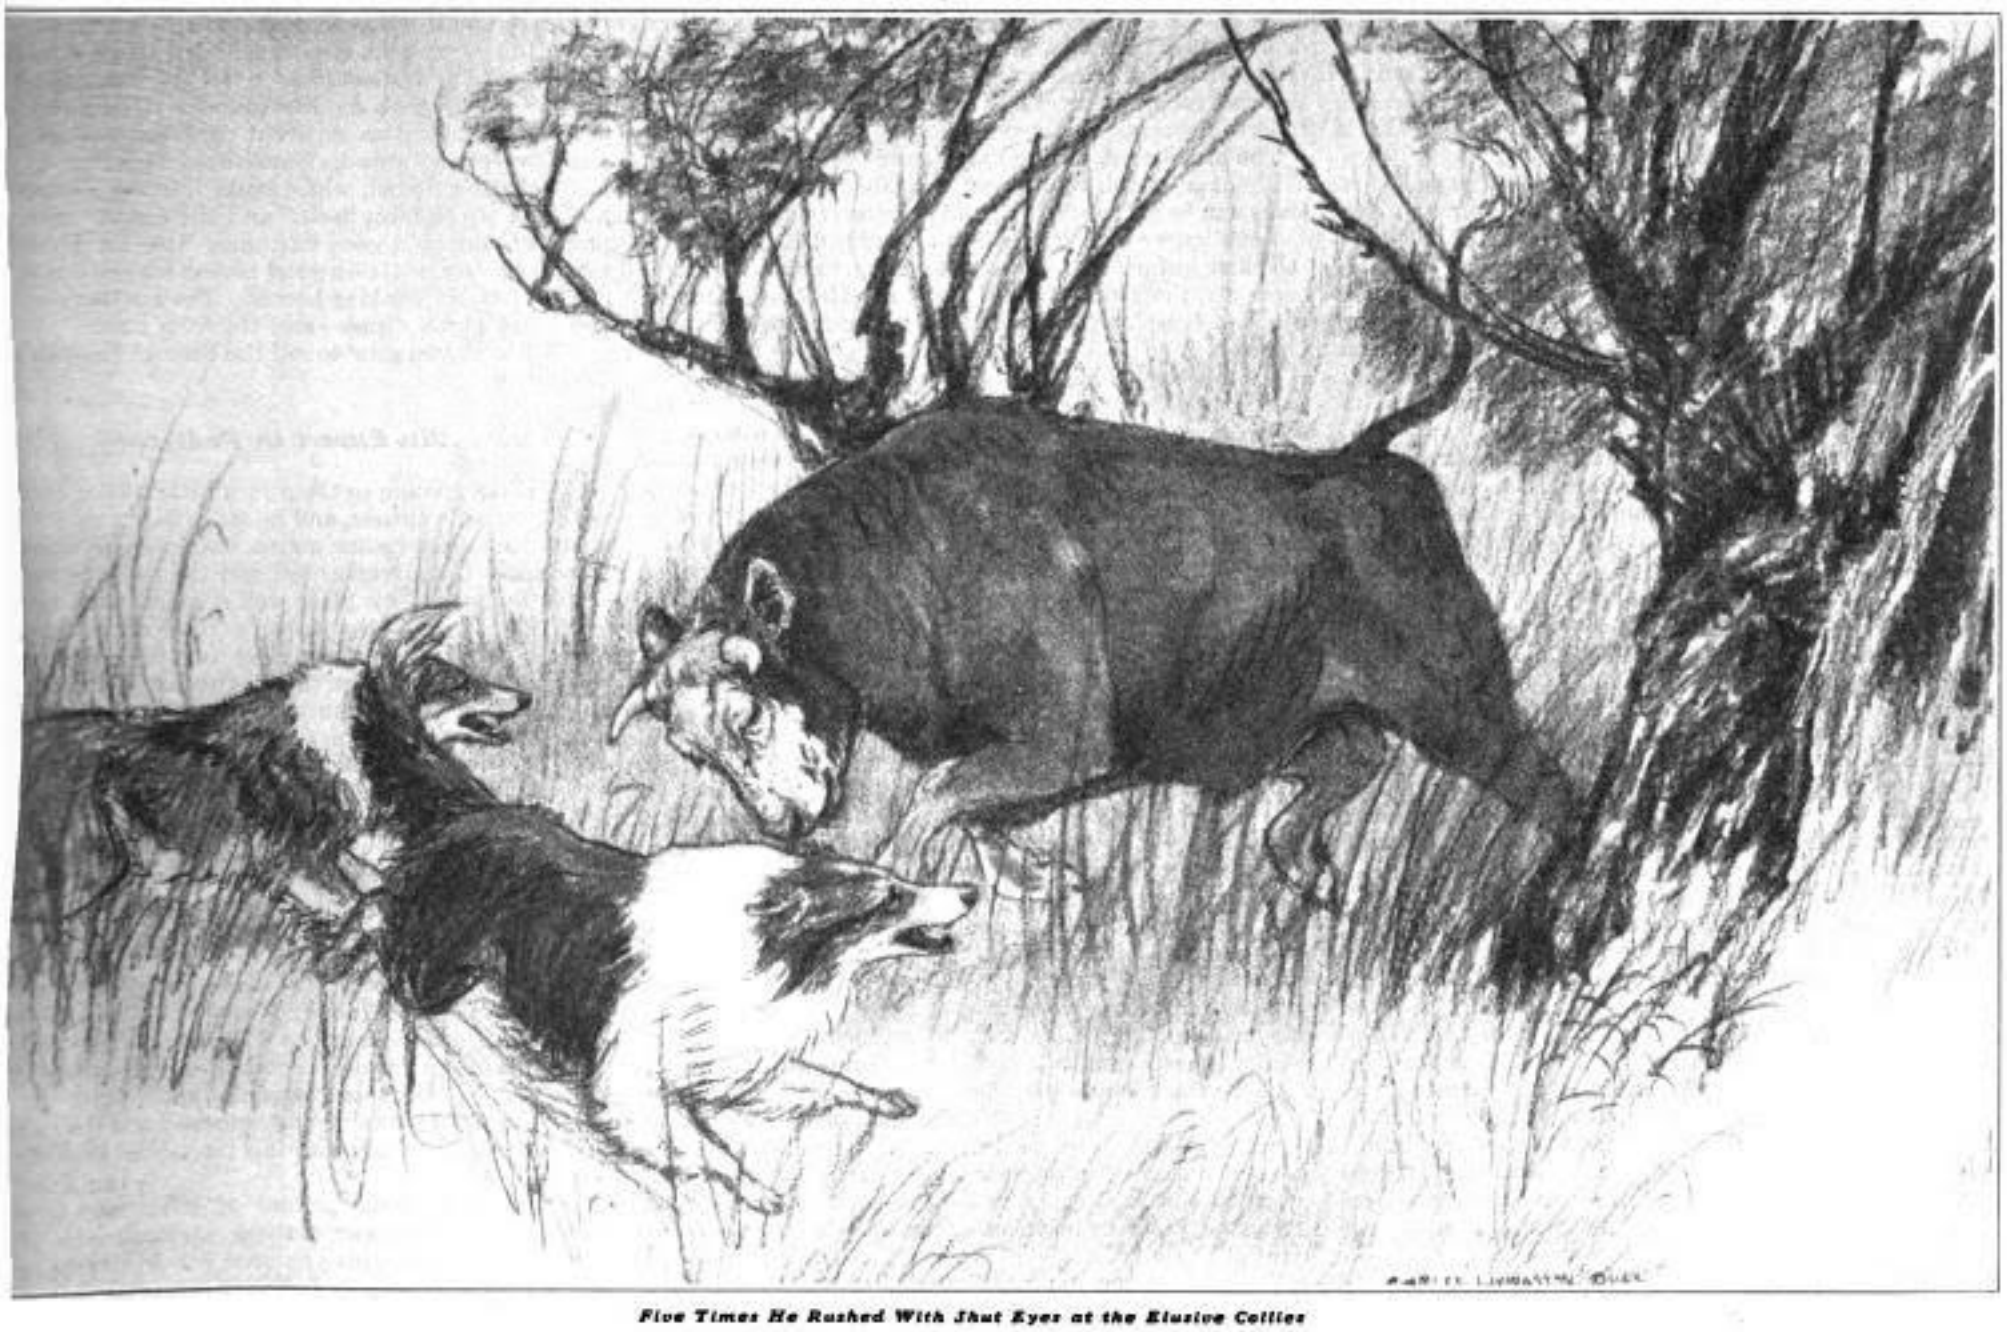
Lass, foreseeing punishment, dodged behind her mistress' skirt. She did this just as the woman turned to strike her. As a result the leash looped itself around the beefy ankles. Without waiting to extricate herself the woman brought down the dog whip swishingly across Lass' dainty back. Then several things happened.

At sound of the blow and of Lass' pitiful cry Bobby sprang forward, every line of his powerful body abristle with hostility. But there was no need for him to interfere. For as she cried out Lass bounded as far as possible to one side to escape further punishment. The woman, leaning far to that side, aimed another blow. As a result the looped leash not only tightened about her fatted calves but was pulled sharply to the left by Lass' jump.

The woman sat down; very hard indeed. Lass, running backward to get out of the way of the swooping avalanche of flesh, strained against her collar. The collar being loose slipped off over her back-pulled head. The woman scrambling up, purple with rage, flourished the whip and made a wild rush at her dog. As she rushed she bellowed ferocious threats. Lass did not wait to be caught. Incontinently she turned and fled. And shoulder to shoulder with her galloped Lochinvar Bobby.

Life was taking a new turn for Bobby. His mind, dazed by the bitter grief of his loss, yearned toward this new friend of his own species. Having no desired home to return to he followed the runaway steps of gold-and-white Lass.

Aimlessly Lass fled, her one idea at first being to escape from the swishing dog whip and from its bad-tempered wielder. Her brief stay with this mistress of hers had been a period of terror and of pain. In the far-off kennels of her birth she had always been treated kindly, but the woman had made life a horror to her and she was eager to put as much distance as possible between them.



Presently, as she ran, she was aware of Bobby's comforting presence at her side. She slackened pace and touched noses with him. Then she glanced back for her pursuer. The woman was not in sight. The two dogs relaxed their gallop into a leisurely trot. In another minute Bobby came to a stop.

They were at the summit of a hill. Below, in front, was a straggling suburb of the city they had left behind. Beyond the suburb was a plain. Beyond the plain towered a ridge, which separated Midwestburg and its outskirts from the miles of rolling forest and farmland that stretched away almost to Canada.

The sight of the ridge and a whiff of the odors blown thence by the March wind awoke strange memories and stranger impulses in the masterless Bobby. Over that ridge, as a gangling scared puppy, he had scrambled his tired way on a winter night years agone; and he had traveled on to Blake's Woods, beyond it, where under the rotting dance pavilion of other days he had made a lair. Thence for nearly a year he had sallied at nights to ravage hen roost and fold and rabbit warren and partridge copse.

He had loved that wild life and he had thriven mightily on it. He had left it because Jamie Mackellar had found

Selling to a Crowd—The Auctioneer

By JAMES H. COLLINS

IF YOU have something to sell and want to get the best possible price sell it at auction. But if you want to buy something at a bargain price go to auction sales where that something is sold; people are picking up bargains at auction every day.

Eat your cake and have it too? How is it done?

Partly by the fellow who does the selling, the auctioneer; and partly by the peculiar mechanism of auction selling itself.

The auction sale multiplies the number of possible purchasers, and pits them against one another. Each bidder has his own idea of values—very often wrong. Or he has his own idea of the price he is willing to pay—and will probably pay more if some other bidder tries to get the article away from him.

Some years ago there was an empty factory in a New Jersey town to be sold in receivership. A near-by manufacturer wanted it and was willing to pay fifty thousand dollars for the building. The receiver advertised for offers and got only one—a forty-eight-thousand-dollar offer from this manufacturer. He decided to put the property up at auction. On the day of the sale several bidders appeared. The first bid was fifty thousand dollars, which was quickly raised to fifty-five thousand, then to sixty thousand. At this point one of the bidders went out to telephone, and coming back, bid more, eventually getting the property for seventy-two thousand dollars. Then all the bidders went to lunch together, and it was disclosed that the purchaser had acted as agent for a New York real-estate operator who had bought the property for a client. Ultimately it proved that the factory was not worth what had been paid for it, and the manufacturer who wanted it in the first place was glad that it had gone to somebody else.

People get bargains, too, because some things are sold below value at every auction. There are bound to be certain articles that few bidders want, and they are knocked down cheap. It is important in auction salesmanship that there be such bargains, for the auctioneer uses them to stimulate buying.

The word "auction" usually brings up a picture of the establishment found in every sizable town where brass watches and glass jewelry are sold to the unsophisticated, with the aid of cappers. This kind of auction room, called a grind shop, is often as crooked as crooked can be—an interesting place we will investigate later. Or people think of auction selling as a sort of last resort to get rid of property that cannot be sold otherwise.

An Old-Fashioned Country Sale

ACTUALLY auction salesmanship is used to market a very large share of the world's products and merchandise, and most of the selling is honest. Moreover, this is one of the quickest and least expensive methods of selling. Rare books, valuable manuscripts, famous paintings and works of art, with other articles sought for collections, are sold largely at auction. So are secondhand household effects, particularly fine furniture, rugs, plate, China, napery and the like. Auction selling moves great quantities of staple raw materials cheaply, such as furs and wool; also the output of some industries, like carpet making. Much of the fresh fruit marketed in big cities is sold at auction, and a great deal of city real estate. It is estimated that thirty thousand country auctioneers throughout the United States are busy most of the time disposing of farms, livestock, implements and household effects for farmers who are moving, retiring, liquidating estates or undergoing the shifts involved in the changes and chances of farming as a business.

In pretty much every other kind of selling the salesman's objective is the individual customer, one prospective buyer whom he wants to talk to alone, leading him through the four standard steps of a sale: First, he gets his attention; second, arouses his interest; third, secures his confidence; and finally, gets his action in the shape of an order. If other people are present they often distract attention and delay or block the sale. Sometimes the salesman sells to a group—a board of directors or a conference gathering. But generally, wherever it is a matter of choice, he prefers to have the single customer alone.

The "Going-Going-Gone" Chant on a Small New England Farm

The auctioneer, on the other hand, sells to the crowd. Without a crowd, or at least a sizable group of people, there can be no auction. The bigger the crowd the better the auctioneer likes it. Selling to a crowd is based upon the same principles followed in selling to an individual: there are the four standard steps of attention, interest, confidence and action. But the methods are decidedly different.

Getting and holding the attention of a crowd is often easier than getting and holding the attention of an individual customer. But in the crowd there may be potential trouble of kinds seldom encountered by salesmen in other fields. The auctioneer has the advantage of working with customers who already want to buy. That is why they have come to the sale. But they are looking for bargains. They are there to match their wits and their wills against his and buy things for less money than he wants to get for them, if they can. He matches his wits against theirs and also pits one bidder against another. He gives them bargains, and at the same time generally realizes higher average prices for all the property sold than it would bring at private sale.

"Ladies and gentlemen, we are now about to start the sale," announces the auctioneer, climbing into his rostrum.

It is a country dooryard, and a farm is to be sold with standing crops, livestock, machinery and household effects. There are more than a hundred people present—neighbors who have been walking about inspecting the property to be sold. Their interest has already been secured, but it is concentrated on one point: What do I want to buy and how cheap can I get it?

If the auctioneer were a book agent or an implement salesman, talking individually to any of these folks, they would expect him to magnify the value of his goods. Rather strangely, they seldom expect this at an auction. Their chief thought is that Neighbor Stubblefield has been forced to sell out, and that the auctioneer is going to get as good a price for everything as he can, but that they are going to buy as cheaply as they can. If the auctioneer knows his business he takes advantage of this viewpoint right at the start.

"I will state the terms of the sale," he continues, when the crowd has drawn together, and briefly enumerates them: Goods becom highest bidder's pr the moment they knocked down; are paid for in cash, or deposit made; to be away under such-and conditions; and so Then he begins to the value of his good like a book agent—t them in the show w as it is called. He interested crowd, b interested only in things.

There are plows, p pickle dishes to be so horses happen to be what scarce in that borhood just then, an of the crowd have c the auction hoping t up one of Stubblefiel work teams.

"Come, let's be says the auctioneer assistant impati "Hand up something thing—that bundle o and hoes. Why aren ready?"

He cracks a joke this lot, and the laughs. As he calls fo it is discovered that the forks is broke scolds the assistant f calling attention to defect.

"We don't want to sell such stuff without letting know it's damaged—this lot goes 'as is.'" It is k down cheap. The crowd has been drawn together, in good humor, it has seen a neighbor get a bargain begun to think that the auctioneer is an honest fe Other things are sold, sometimes big things first, eve farm itself, and sometimes a lot of bargains in things—dishes, tools and like plunder. The auctione a definite plan in this apparent carelessness, based character of the crowd. Sometimes bidding is slo has to be stimulated, while again interest centers purchase of the farm itself; and the bidder who g property may be a good customer later for livestock machinery to work it—a good reason for selling it fir

The crowd is thinking horses. The auctioneer is plows and pickle dishes—and thinking pigs.

"When are you goin' to sell the horses?" asks a pro tive buyer.

An Expert in Pedigrees

"WE'RE coming to them in a little while," is the tioneer's answer, and he takes half a minute to about Stubblefield's fine mares, his ability as a farme standing in the neighborhood and the pride he has al shown in keeping his place well stocked with the be everything. Thus the crowd's interest in horses Farmer Stubblefield's standing in the community cleverly utilized to get their attention for the nex brought under the hammer. It is a penful of pure pigs. He sells them not as pigs but as possibilities, dwe upon the advantages of having good pigs of this parti breed, talking about their pedigree, ancestry, record

The capable country auctioneer knows more about different breeds of horses, cattle, hogs and other live than the average breeder, for the breeder is likely t well informed about one kind of animal, and one bree that, and honestly prejudiced against other breeds, w the auctioneer must know all breeds and carefully a having a favorite breed. He follows pedigrees as closel the racing fan follows dope. Many of his sales are of stock alone, and he must be able not only to talk a expert upon any breed of animal brought under the h mer but about individual animals, and to give the cr fresh, convincing facts about the breed and the indivi and the successes made with this particular breed by ot people.

He paints a mental picture of what may be acc plished by the purchaser of these particular pigs. Wh man who owns them may become a leader in the comm nity, and a real benefactor! Bidders mentally fit themsel

g with the old bus," is his
. "It never acted like that
re."

ll for the reason that it never
before been in mountains!
there's a difference. The hill that seems straight up in a flat country is only a medium grade or fairly level country when one bucks up against the professional grades of the various roads the vacationer must travel in the Rocky Mountains. Any car in the world can make a 10 per cent pull for a distance of a few hundred feet. But what happens when that grade extends for miles? A mountain range is not merely a ragged ridge starting out of level country, and smoothing off again on the other side. It is a succession of ridges, each piled upon the other in four or five waves or projections, which gradually mount until the backbone of the continent has been reached, receding on the other side in the same fashion. Fifteen miles out of Denver one can climb a mountain range, and then, at the top, really be at only the beginning of the mountains. There are two more ranges piled on top of this before ever the crest of the continent is reached!

Consequently, once a person really gets into the mountains all sense of perspective seems to be lost. Grades appear to be only flat stretches, while the heavier pulls farther on seem to be only slight things of 1 or 2 per cent, which should be taken easily with the motor breezing along on high. But for some strange reason the machine coughs and gasps and slows down. The inexperienced driver begins to fight his engine, releasing the clutch, allowing the engine to race, then throwing in the clutch hard again, for a spurt. But still the gasping comes, accompanied by cuss words directed toward the carburetor.

At last, disgruntled, peevish, into second go the gears, while the engine is raced again, and thrown once more into high. Ding that carburetor! Again and again is it tried—and then something goes wrong with the cooling system. The darned thing's boiling! First time it ever did such a thing in its life. Ever see it to fail, something always goes wrong with a car when you're a long way from a garage? Of course the driving hasn't had a thing to do with it!

Nothing at all—only this much: I have driven many, many thousand miles of mountain roads in Colorado, Wyoming, Utah, New Mexico and Arizona. I have an ordinarily good car, neither cheap no. high priced. With that automobile I can climb one grade of six miles in which the lift starts at 8 per cent and finishes with a grand finale of 32 per cent, experiencing neither an appreciable strain on my motor nor any trouble with the cooling system. The nearest my car ever came to boiling was when I towed a disabled machine up a part of the terrific grade!

A Matter of Practice

THERE is another grade, which extends for fourteen miles, on which the "level" stretches run a minimum of 5 per cent, and the heaviest grade is 18, meaning a steady pull of more than ten miles in second and low. I have never had radiator, oil or engine trouble on that hill. Yet one day I lent my car to a man unaccustomed to mountain driving, and that car of mine, which had sailed over the hump with hardly a realization of the difficulty, boiled eight times in those fourteen miles! The hand at the wheel has a great deal to do with the work of the engine.

More, because the hand at the wheel isn't a practiced one, and because the brain behind that hand at the wheel has either refused to understand the difficulties of mountain driving or has been kept in ignorance of them, there are at least ten accidents a week during the summer months in the driving regions of the Rocky Mountains, and on the various passes leading over the Continental Divide. What may seem strange to the uninitiated, and not at all strange to those who know the hills and who see the occupants of every fourth or fifth car literally shaking dice with death, is the fact that most of these accidents happen when the car is either stopped or going downhill!

Naturally there is a logical explanation. The usual man, when he stops on a hill in town or in the country, sets his emergency brake; and then, if this does not hold tightly enough, reënforces this by throwing the car into low gear or reverse, thus making the engine accomplish what the brake bands do not. On the ordinary grade, when the time comes to start again, the pull of the hill is so slight that if the emergency allows movement at all it is so slow as to be almost imperceptible. But on a mountain grade conditions are different. One can't throw the car out of gear and then step on the starter, trusting the brakes to hold until the engine starts. The pull of gravity is so strong that the minute that extra bindage is released the car starts downhill, and with speed! The result is that the driver, frightened by the strange actions of his car, loses his head for an instant—and that instant is enough. Mountain roads are narrow. They also are crooked. Upon the usual pass road a fifty-foot progress or regress in a straight line inevitably brings a car either to the edge of a precipice or into the stone wall of the mountain itself. There's a crash either way.

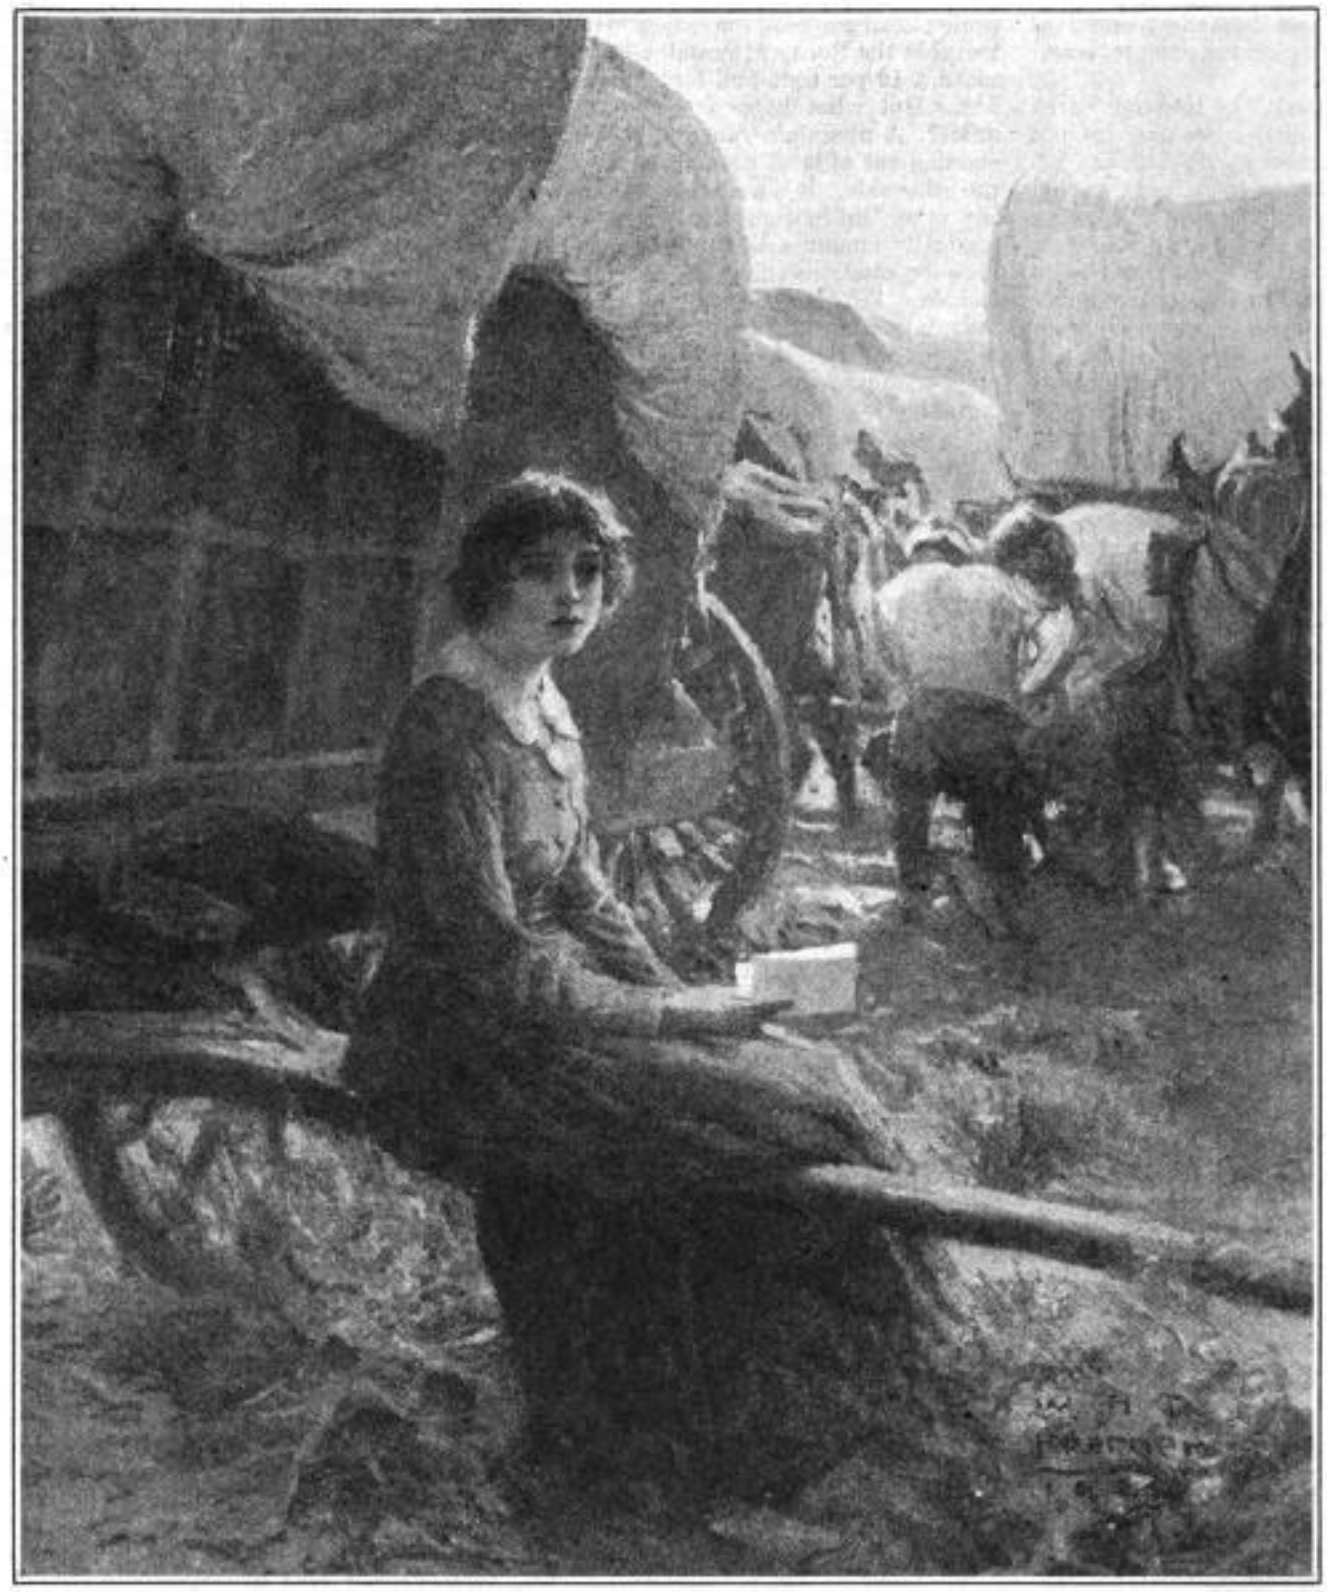
THE COVERED WAGON

XXXV

By Emerson Hough

ILLUSTRATED BY W. H. D. KOERNER

MIDSUMMER in the desert. The road now, but for the shifting of the sands, would have been marked by the bodies of dead cattle, in death scarcely more bone and parchment than for days they had been while alive. The horned toad, the cactus, the rattlesnake long since had replaced the prairie dogs of the grassy floor of the eastern plains. A scourge of great black crickets appeared, crackling loathsomely under the wheels. Sagebrush and sand took the place of trees and grass as they left the river valley and crossed a succession of ridges or plateaus. At last they reached vast black basaltic masses and lava fields, proof of former subterranean fires which seemingly had forever dried out the life of the earth's surface. The very vastness of the views might have had charm but for the tempering feeling of awe, of doubt, of fear.



They had followed the trail over the immemorial tribal crossings over heights of land lying between the heads of streams. From the Green River, which finds the great cañons of the Colorado, they came into the vast horseshoe valley of the Bear, almost circumventing the Great Salt Lake, but unable to forsake it at last. West and south now rose bald mountains around whose northern extremity the river had felt its way, and back of these lay fold on fold of lofty ridges, now softened by the distances. Of all the splendid landscapes of the Oregon Trail, this one had few rivals. But they must leave this and cross to yet another, though less inviting, vast river valley of the series which led them across the continent.

Out of the many wagons which Jesse Wingate originally had captained, now not one hundred remained in his detachment when it took the sagebrush plateaus below the great Snake River. They still were back of the Missouri train, no doubt several days, but no message left on a cleft stick at camp cheered them or enlightened them. And now still another defection had cut down the train.

Woodhull, moody and irascible, feverish and excited by turns, ever since leaving Bridger had held secret conclaves with a few of his adherents, the nature of which he did not disclose. There was no great surprise and no extreme regret when, within safe reach of Fort Hall, he had announced his intention of going on ahead with a dozen wagons. He went without obtaining any private interview with Molly Wingate.

These matters none the less had their depressing effect. Few illusions remained to any of them now, and no romance. Yet they went on—ten miles, fifteen sometimes, though rarely twenty miles a day. Women fell asleep, babes in arms, jostling on the wagon seats; men almost slept as they walked, ox whip in hand; the cattle slept as they stumbled on, tongues dry and lolling. All the earth seemed strange, unreal. They advanced as though in a dream through some inferno of a crazed imagination.

About them now often rose the wavering images of the mirage, offering water, trees, wide landscapes; beckoning in such desert deceits as they often now had seen. One day as the brazen sun mocked them from its zenith they saw that they were not alone on the trail.

For an Hour Molly Sat, and the Sun Sank. The Light of the Whole World Died

"Look, mother!" exclaimed Molly Wingate—she now rode with her mother on the seat of the family wagon, Jed driving her cart when not on the cow column. "See! There's a caravan!"

Her cry was echoed or anticipated by scores of voices of others. They pointed west and south.

Surely there was a caravan—a phantom caravan! Far off, gigantic, looming and lowering again, it paralleled the advance of their own train, which in numbers it seemed to equal. Slowly, steadily, irresistibly, awesomely, it kept pace with them, sending no sign to them, mockingly indifferent to them—mockingly so, indeed; for when the leaders of the Wingate wagons paused the riders of the ghostly train paused also, biding their time with no action to indicate their intent. When the advance was resumed the uncanny *pari passu* again went on, the rival caravan going forward as fast, no faster than those who regarded it in a fascinated interest that began to become fear. Yonder caravan could bode no good. Without doubt it planned an ambush farther on, and this sinister indifference meant only its certainty of success.

Or were there, then, other races of men out here in this unknown world of heat and sand? Was this a treasure train of old Spanish *cargadores?* Did ghosts live and move as men? If not, what caravan was this, moving alone, far from the beaten trail? What g had it here?

"Look, mother!" The girl's voice rose again, but this time with a laugh in it. A assurance passed de line, others laughin lief at the solution.

"It's ourselves! Molly. "It's th Morgana—but ho velous! Who could it?"

Indeed, the mira taken that rare and o dinary form. The of their own caravan was reflected, mirro some freak of the de and air, upon the fi blown in the air at tance from the tra was, indeed, then they saw, not known a vast primordial m the desert gods. N the discovery of th lessen the feeling of fort, of apprehensio laughter was at best until at last a turn trail, a shift in the wi of the heat waves, br the ghostly caravan sent it, figure by figu hicle by vehicle, in unknown whence i come.

"This country! claimed Molly Wi mother. "It scares Oregon's like this —

"It isn't, mother. rich and green, with There are great trees, mountains, beautiful where we are going, there are fields of There are—why, the homes!"

The sudden pathos voice drew her mo frowning gaze.

"There, there, c said she. "Don't mind. We'll always a home for you, your and me."

The girl shook her

"I sometimes think better teach school an alone."

"And leave your ents?"

"How can I look father in the face ever knowing what he feels about me? Just now he ac me of ruining Sam Woodhull's life—driving him away of the train. But what could I do? Marry him, after I can't—I can't! I'm glad he's gone, but I don't k why he went."

"In my belief you haven't heard or seen the last of Woodhull yet," mused her mother. "Sometimes a gets sort of peeved—wants to marry a girl that jilts more'n if she hadn't. And you certainly jilted him a church door, if there'd been any church there. It wa awful thing, Molly. I don't know as I see how Sam s it long as he did."

"Haven't I paid for it, mother?"

"Why, yes, one way of speaking. But that ain't way men are going to call theirselves paid. Until married, a man's powerful set on having a woman. I don't, he thinks he ain't paid, it don't scarcely make difference what the woman does. No, I don't reckon forget. About Will Banion ——"

"Don't let's mention him, mother. I'm trying to fo him."

"Yes? Where do you reckon he is by this time—h far ahead?"

"I don't know. I can't guess."

The color on her cheek caught her mother's gaze.

"Gee-whoa-haw! Git along Buck and Star!" re manded the buxom dame to the swaying ox team that w

lachians, two generations earlier, wholly pales.
lid they need, here at Fort Hall, on the Snake,
last settlement of the two thousand miles of toil
ver and exhaustion? They needed everything.
question first was asked by these travel-sick,
ing people: What was the news?

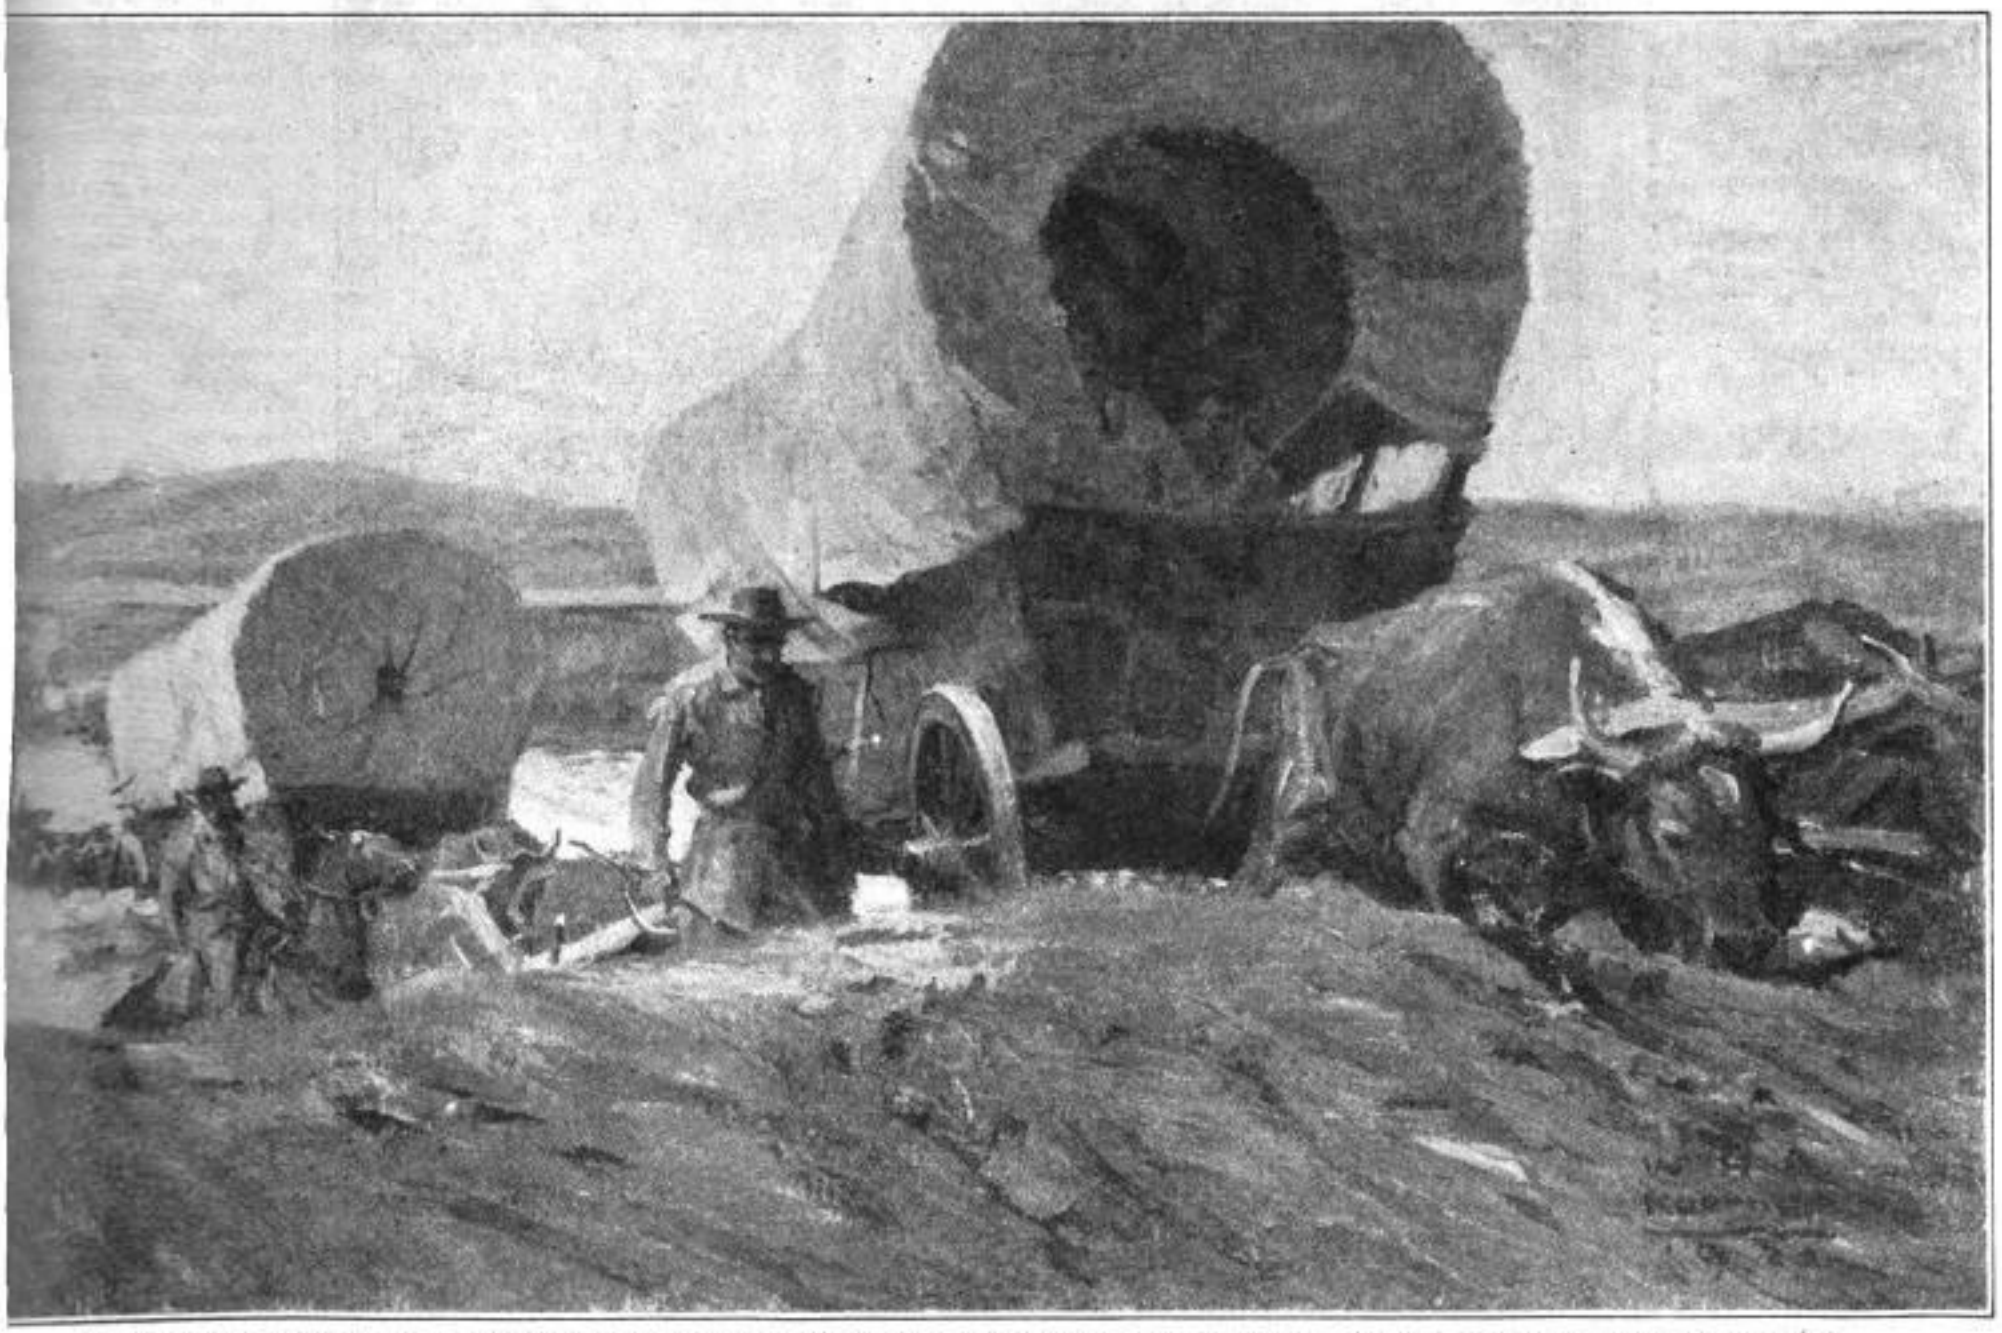
How could there be news when almost a year
ıpse before Fort Hall would know that on that
—in that very month of August, 1848—Oregon
ıred a territory of the Union?

How could there be news, when these men could
for much more than a year that, as they out-
here in the sage, Abraham Lincoln had just de-
e governorship of the new territory of Oregon?
le did not know. Why had these men come here?
not know.

The Horned Toad, the Cactus, the Rattlesnake Long Since Had Replaced the Prairie Dogs

But news—the news! The families must have the news. And here—always there was news! Just beyond branched off the trail to California. Here the supply trains from the Columbia brought news from the Oregon settlements. News? How slow it was, when it took a letter more than two years to go one way from edge to edge of the American continent!

They told what news they knew—the news of the Mormons of 1847 and 1848; the latest mutterings over fugitive negro slaves; the growing feeling that the South would one day follow the teachings of secession. They heard in payment the full news of the Whitman massacre in Oregon that winter; they gave back in turn their own news of the battles with the Sioux and the Crows; the news of the new army posts then moving west into the Plains to clear them for the whites. News? Why, yes, large news enough, and on either hand, so the trade was fair.



But these matters of the outside world were not the only ones of interest, whether to the post traders or the newly arrived emigrants. Had others preceded them? How many? When? Why, yes, a week earlier fifty wagons of one train, Missouri men, led by a man on a great black horse and an old man, a hunter. Banion? Yes, that was the name, and the scout was Jackson—Bill Jackson, an old-time free trapper. Well, these two had split off for California, with six good pack mules, loaded light. The rest of the wagons had gone on to the Snake. But why these two had bought the last shovels and the only pick in all the supplies at old Fort Hall no man could tell. Crazy, of course; for who could pause to work on the trail with pick or shovel, with winter coming on at the Sierra crossing?

But not crazier than the other band who had come in three days ago, also ahead of the main train. Woodhull? Yes, that was the name—Woodhull. He had twelve or fifteen wagons with him, and had bought supplies for California, though they all had started for Oregon. Well, they soon would know more about the Mary's River and the Humboldt Desert. Plenty of bones, there, sure!

But even so, a third of the trains, these past five years, had split off at the Raft River and given up hope of Oregon. California was much better—easier to reach and better when you got there. The road to Oregon was horrible. The crossings of the Snake, especially the first crossing, to the north bank was a gamble with death for the whole train. And beyond that, to the Blue Mountains, the trail was no trail at all. Few ever would get through, no one knew how many had perished. Three years ago Joe Meek had tried to find a better trail west of the Blues. All lost, so the story said. Why go to Oregon? Nothing there when you got there. California, now, had been settled and proved a hundred years and more. Every year men came this far east to wait at Fort Hall for the emigrant trains and to persuade them to go to California, not to Oregon.

But what seemed strange to the men at the trading post was the fact that Banion had not stopped or asked a question. He appeared to have made up his mind long earlier, and beyond asking for shovels he had wanted nothing. The same way with Woodhull. He had come in fast and gone out fast, headed for the Raft River trail to California, the very next morning. Why? Usually men stopped here at Fort Hall, rested, traded, got new stock, wanted to know about the trail ahead. Both Banion and Woodhull struck Fort Hall with their minds already made up. They did not talk. Was there any new word about the California

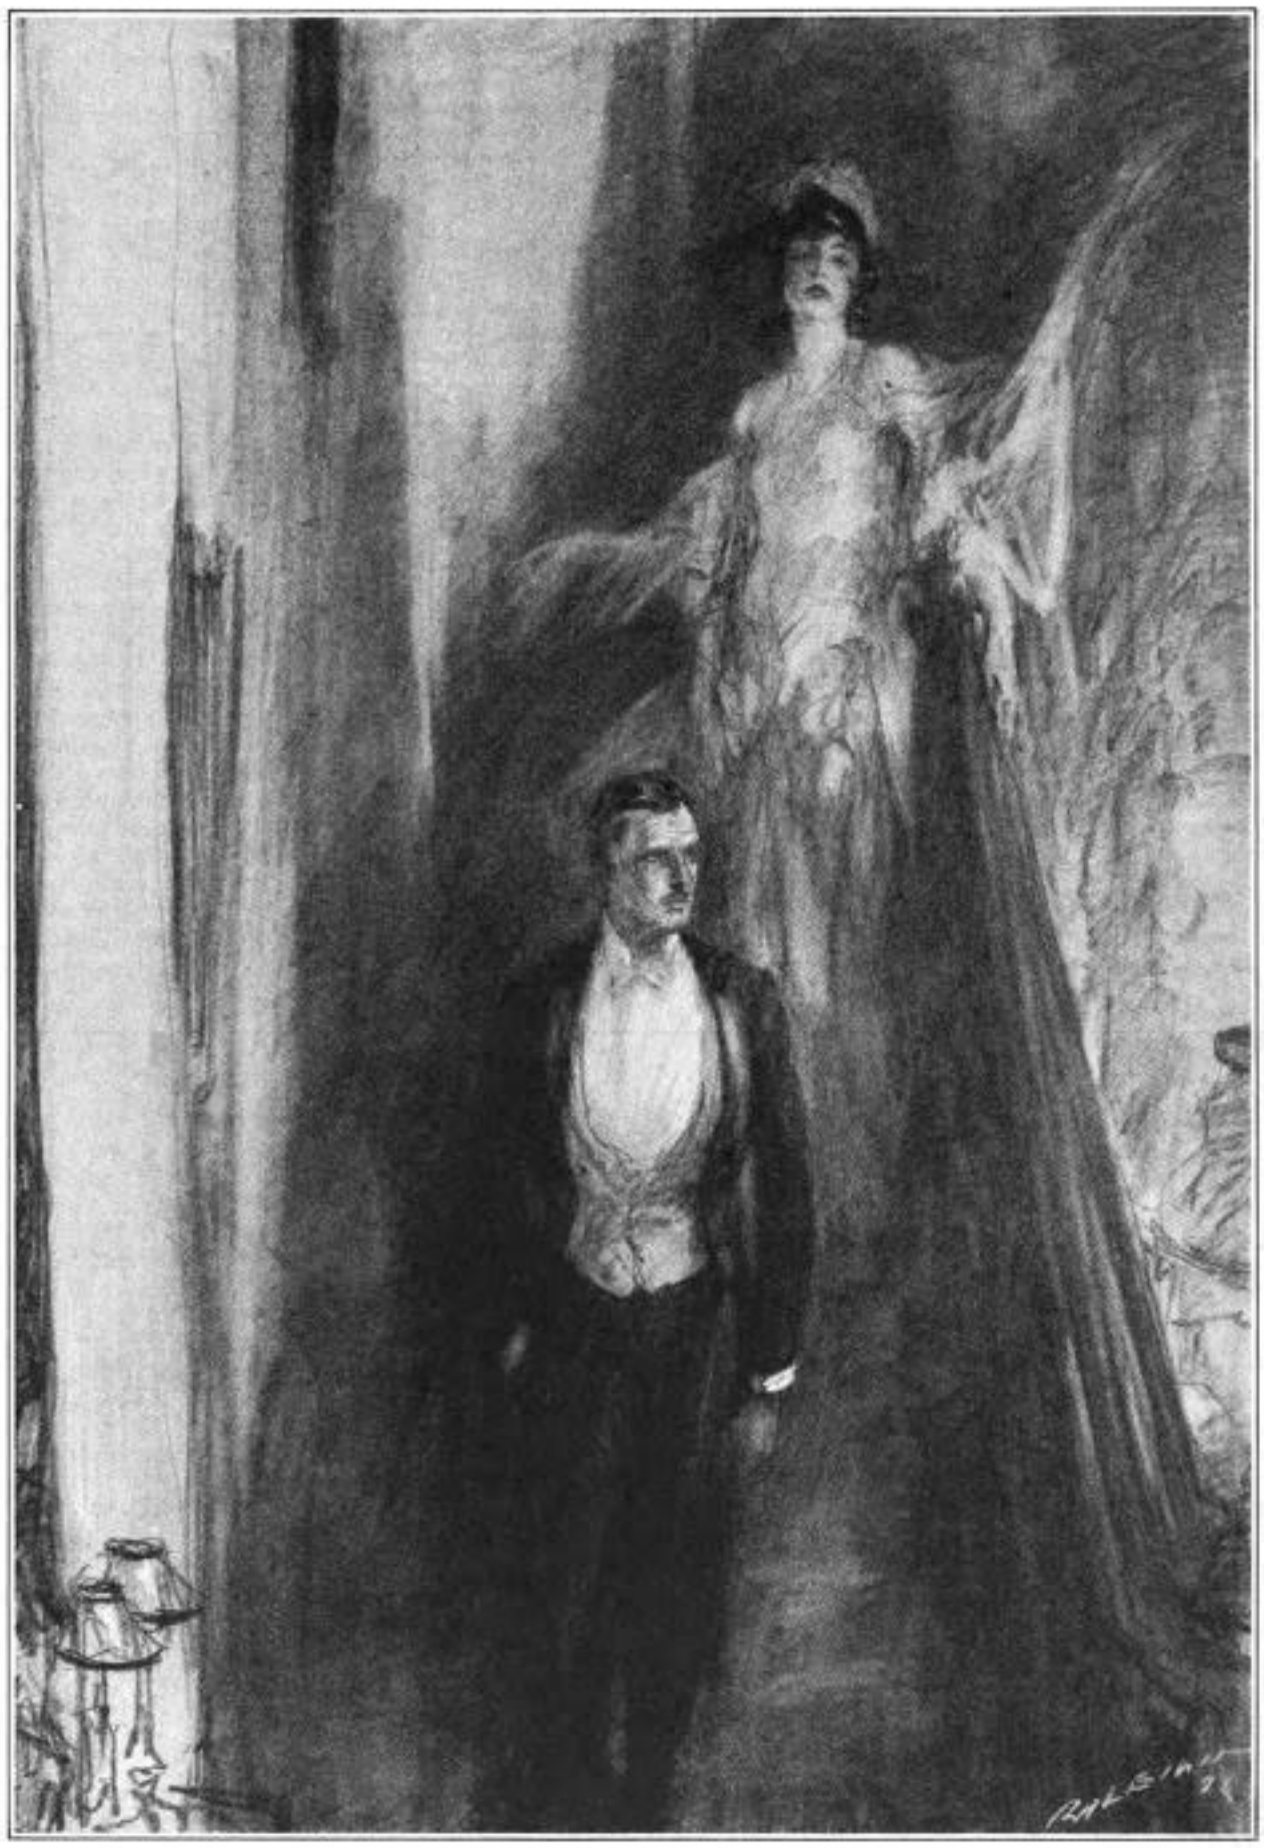
RITA COVENTR

XXVII

By Julian Street



ILLUSTRATED BY HENRY RALEIGH

THE Bement baby had arrived while Parrish was in Chicago, and now Bement, craving diversion after his sufferings in paternity, suggested to his partner that they make a night of it in town, going to a show and later to the Midnight Frolic. Of course it would have been nice if Mrs. Bement had been well enough to join them, but she and the baby were getting on all right, and he really needed to get away for an evening from that house and those tiresome trained nurses.

The proposal, finding Parrish in the bitter mood in which he had been left by Rita's abrupt exodus from his apartment, appealed to him. He, too, had suffered. Two nights of white horror. His fatigue instead of inducing sleep expressed itself in a gnawing restlessness. Moreover, his apartment had become hateful to him—for the ghosts which haunt us most persistently are not those of the dead. The perfume of Rita was gone, but something of her lingered; he was continually aware of her gold-mesh bag in his safe, and of her photograph upon his mantelpiece. That photograph picked itself out for him in the room as if a spotlight shone upon it; he had a thought of removing it, but felt a curious embarrassment about doing so; to remove it would be to admit that he had reversed himself, and he was not ready to admit that.

In his need for comfort his thoughts turned to Alice, as those of one in trouble turn to a neglected deity; he gazed for a long time at her photograph upon his desk, but that photograph disturbed him, too, though in a different way. Strange, there seemed to be a look of sadness in the eyes. Why had she not answered his letter? He was beginning to feel just a little hurt by her neglect.

He wrote and told her so.

She Kept Coming. He Heard Her Behind Him on the Stairs

On Thursday afternoon the partners came uptown together to Parrish's apartment, where Bement and his suitcase were duly installed. As men will when their nerves need soothing, they dined at a Broadway restaurant where there was continuous dancing and jazz music. In the play which they subsequently attended a fat comedian, the victim of unjust suspicion, was obliged to hide under the bed of a pretty but virtuous lady whose husband was jealous of her. The comedian's chief humorous effect was achieved when he crawled from under the bed like a turtle and wistfully eyed the audience. This he did three times, and the play was over, leaving Parrish and Bement free to continue on their round of gayeties.

Through the after-theater crowds they slowly worked their way to Forty-second Street, and passing into the wide corridor of the New Amsterdam Theater, entered the elevator. Within, a little group was already waiting for the car to ascend, and among them Parrish recognized Sam Burke, who bowed to him; then as those within the elevator stirred to admit newcomers he saw behind Burke the latter's wife and Clara Proctor. He advanced toward Clara and was about to ask if she had heard from Alice when her stiff little nod stopped him; and as if further to repel him she turned to converse with Mrs. Burke.

He was surprised. Though he did not like Clara and was aware of her dislike for him, hitherto as if by tacit understanding they had been carefully polite. Well, if she did not wish to continue the effort he was satisfied, though he thought it stupid of her to reveal so plainly what he considered to be a jealousy of his hold on Alice.

All evening Parrish remained in a sardonic mood, and when after returning to the apartment the partners sat up for a time talking, Bement found himself amazed at the acidity of the other's observations upon women, life and love. Though he had known Parrish since their college days he had not before realized him to be a misogynist. It must have been coming over him gradually. Bement had never been able to understand why Parrish did not marry, but this, he thought, explained it. A protracted bachelorhood was to him incomprehensible—the world was so full of lovely girls, and married life, in his experience, so happy. He and his long harbored a secret hope of finding the rig Parrish, but he now concluded that the fulfi such a hope was, if still a possibility, exceedingl

Next morning at however, after Par drunk his coffee a was infinitely more in had Bement but kn read his mail, he wa ably more cheerful.

The junior partn mented upon this.

"It worried me," "to hear you so cy night."

"What did I say cynical?"

"About women."

e," she demanded, calling half across the room, the young genius you promised us?"

oked at the clock and shrugged.

"That's what I've been wondering," she answered. "I do hope he is not going to disappoint me. But he is an uncertain quantity—*un vrai type*, I assure you."

Parrish standing near was looking at her, wondering if he knew of whom she was speaking, when she, catching his eye, seemed to catch as well the question in his mind, for she added, "Mr. Parrish can tell you what a gifted young man he is." There was a mischevious gleam in her glance. "Mr. Parrish discovered him." And to him she explained parenthetically: "I am speaking of Delaney."

With that she turned quickly away and engaged in conversation elsewhere, leaving him at the mercy of the inquisitorial lady, to extricate himself as best he could.

"How very interesting!" she exclaimed. "And where did you find him, Mr. Parrish?"

"I didn't find him at all," he answered shortly. Then fearing she would think him rude he continued, "Rita's just being playful. It was she who found him. I had nothing to do with it."

"But who is he?"

"That I really don't know," he returned dismissively.

"I heard dear Rita when she sang his songs in concert a week or so ago," the lady went on.

"Then," returned Parrish, "you know more about him than I do. I was out of town."

"He accompanied her, you know."

He nodded.

"There's something interesting about him—so young—and so good-looking, don't you think so?"

Parrish, wondering how Rita could put up with such a woman, said he did think so.

A moment later, as he was speculating on a means of escape from Mrs. Fernis, he saw Delaney enter the room. He was in evening dress and looked very well in it, though obviously the suit was not made by a good tailor. With some surprise he noticed that Delaney appeared perfectly at ease. He paused inside the door and looked about the room; then, seeing Rita, strolled over and with that detached air of his, greeted her. "Excuse me, I must go and speak to him," Parrish said, thinking he saw his opportunity.

But: "I'll go with you," said the lady. "His looks fascinate me. So Hellenic! I want to meet him."

Silently he escorted her across the room to where a little group was gathering around Rita and the young man.

"Of course you remember Mr. Parrish," Rita reminded Delaney.

"Oh, yes," he answered vaguely. "How do you do?"

"How do you do?" responded Parrish. He held out his hand, and when the other had shaken it presented him to Mrs. Fernis, identifying her by saying: "Mrs. Grace Etheridge Fernis, you know." Then as no light of recognition showed in Delaney's face he made a further effort to assist him, adding: "Of course you've read Sifting Sands?"

"Shifting Sands," corrected Mrs. Fernis quickly.

"Well, anyway, I haven't read it," announced Delaney.

"He reads nothing but the Russians," Rita hastened to explain; and to Delaney: "When you get through with those eight volumes of Tolstoy's War and Peace you really must read Mrs. Fernis. One can't be au courant without reading her."

While she was speaking the young man looked at her with a curious intentness that was characteristic of him. It was as if he were listening with his eyes.

"I see," he answered indefinitely. Then after a glance about the room he asked, "Isn't that Wildenstein—that man over there?"

"Yes," Rita answered. "Come over and meet him."

But Delaney did not move.

"I was just wondering," he said ruminatively, "why he took the third movement of the Tschaikowsky Fifth so slowly the other day."

Rita gave a little shuddering laugh.

"Well, don't you go and ask him that!"

"Certainly not. But just the same he ought to stick to Beethoven and Brahms. He hasn't the temperament to do Tschaikowsky."

Again she laughed.

"Since Wildenstein doesn't measure up," she said, "let us see if we can't find someone here who will. Would you care to know Paldowski?"

"Yes, I'd be glad to meet him."

"That," said she, her eyes brimming with amusement, "is probably as great a tribute as he ever received—though perhaps he wouldn't know it."

Some late guests entered and she crossed the room to welcome them.

INSIDE THE BOOTLE

By an Anonymous Bootlegger

DECORATIONS BY GUERNSEY MOORE

ON THE first of next month I'll be winding up my business in New York and moving on to a proposition that has just opened for me in the Middle West. I've closed a deal to take $1000 for the goodwill—just my list of customers and an introduction to them. Then I'll kiss booze peddling good-by and go while the going is good. I have been one of the small fry—I got into the business a little late—but, at that, I have enough saved up, besides that $1000, to give me a start in something else.

The fellow who is helping me to put this down asked me the other day why I am cutting it out just now, when the business sits so pretty. Well, in the first place I've been watching something going on in bootlegging circles. Last fall, when prices ran rather low, I found that one of the big fellows was storing 10,000 cases for a rise. In the bootlegging business the general rule is to get the stuff off your hands as soon as possible. It's dangerous to have. Well, the Christmas rise in prices came along. You'd have thought he'd let go then. But he didn't. The bottom fell out of prices just after Christmas, and then rose again in February. But still he held on. I figured, and I still figure, that something is going to happen. He needn't worry for fear he'll lose. He is too well protected. But the little fellows like me—we'll be ruined. There are other signs. I don't like this dilution business that's going on now. More and more you find that the stuff you get and are obliged to handle is cut with water or worse.

Fortunes Made by Insiders

THERE'S another reason too. When I was eleven years old five of us were playing bandit down on Avenue A. We found the back door of a cigar stand unlatched, and filled our pockets with cigarettes. We were going over the fence, when the cop on the beat spotted us. He got three of us, including me. My folks were away that day, and I had to spend the night in jail. The turnkey looked me over before he locked me up, and I can remember just what he said: "Young fellow, you've got a fine start. I guess it's the electric chair for yours." Well, I was just enough of a kid to think he meant it—that I was going to be sentenced to death in the morning. They got in touch with my father next day, and he fixed it with the district leader; but ever since I've had a horror of jails. That's probably the reason why I've always stayed small fry.

The biggest money in bootlegging is made by fellows on the inside of politics who control the game and collect the graft. Outside of them, the best line is running it in from Canada. But sometime on that Canadian route you may bump something—a free-lance agent from Washington who's been sneaked on to a beat unbeknownst to the fellow you've fixed, or an honest country cop who believes in prohibition. I've always told people that I didn't go into rum running because I didn't have the capital. That's not so. I could have raised it at any time. It was the fear of going to jail. And now I know that if there is a smash-up a lot of us small people may bump against something right here in New York. So I'm pulling out before that happens to me and I have to spend my savings for a lawyer's fees. I'm trading an easy graft for security. The graft won't be so easy from now on, at that.

Before the war I was bartender for Jim Malloy. He had an old-established café in a good location down by the Brooklyn Bridge. That was the time when the breweries were running wild, setting up new saloons. All you needed for a start was a license. Some brewery would put in your plant, furnish you the liquors and cigars, and take in return a lead-pipe mortgage. Then they'd set up two or three more in the same block; or if they didn't some other brewery would. You remember how New York used to look in those days—block after block, you'd find a saloon on all four corners, with a big brewery sign over the door and a little sign giving the name of the proprietor down in one corner of the window. Which was how it should be, for the brewery owned you—lock, stock and barrel. There were so many of these places that the saloonkeeper had to do some kind of dirty work in order to keep going—anything from selling dope up to colonizing floaters. But Malloy had been in business a long time. He'd gone to school and grown up with a lot of the politicians, always worked with them, and could deliver a big bunch of votes at election time, legitimate. He had pull enough to keep these fly-by-night brewery saloons away from his location. Everybody liked him, and people came to the place just to see Malloy. He had been making money ever since he started. Most of it he had tucked away in tenement-house properties, but he kept a floating fund to invest on tips he got from his influential friends.

Jim Malloy's Advice

WHEN the war came I enlisted. My outfit was a long time in France. I was discharged just before prohibition came in, and saw Malloy to get back my old job. And Jim advised me to cut out the business complete.

"You're a young fellow yet," he said, "and you can start in something new. I'm old and I've made my pile. I'd been thinking of retiring anyway." In those days almost nobody in New York really thought it could possibly happen. But Malloy knew the big fellows, and politically he was a wise guy. Though he never bet on an election, he could have made a fortune if he had. I never but once knew him to call the turn wrong. "It's coming and it will be forced," he said. "And it's a Federal proposition. Did you ever see the militia foolin' round with a strike in the old days, and did you ever see what happened when Uncle Sam's regulars showed up? Well then!"

Jim Malloy was a wise guy, but not quite wise enough. Nobody was. A fellow was telling me the other day that in the beginning of the p picture game rank outsiders big money. Not one of the cal managers had the sens what was coming. The ori saloonkeepers like Malloy and the wholesale liquor made the same mistake. They thought it was goi enforced—soon, if not right away. They cashed in a

The big money the first year was made by a lot eigners. They didn't know a state law from a law, and they didn't much care anyway. Going meant nothing in their lives. In those days the drawal permit was the cream of the game. The big held by the Government for medicinal purposes were withdrawn blind. You got a wholesale-drug license, permitted you to sign withdrawal orders. That requ political pull, and you needed about $22,000 in money. If you could prove your ability to get a you could generally borrow that—at pawnbroker terest—and pay it back in a few weeks from your ear First you fixed the grafters. That cost from $15,0 $22,000 at various times; it averaged about $1 Then you got an office somewhere with a bookkeepe stenographer, bought for a blind about $1500 of ea drugs like peroxide, calomel and Epsom salts, and as a wholesale-drug broker.

You sold some of your drugs at cut rates to ret That was to have something on your books. You ready now to do business in withdrawals.

How the Profits Figure Out

YOU never handled the stuff yourself. That wa beauty of the game. Acting as broker, you signe permits for your clients—wholesaler bootleggers—wh the rest. You charged eighteen dollars a case for signing these permits. When the money was passed men were present—you, the roundsman for the gra and your client. You kept half of the money, or nine lars a case. The rest went to the grafters, who sp between the big boys. You were allowed to with 1500 cases a week. The demand was so great that never failed to take the full quantity.

There was fast rotation in office among the prohi forces. It was figured that any crew was good fo average of thirteen weeks—a quarter of a year. In time you could figure about like this: Every week withdrew 1500 cases, on which you made nine dol case, or $13,500 a week. So your gross business for teen weeks was $175,500. You had paid on an ave $17,500 for your original permit. You had invested $ in drugs, which you just about had to give away and c call a dead loss. Your office wasn't very expensive you needed about two clerks. You kept a chauffeur was also a gunman and personal guard, at $100 a week your transactions were in cash and sometimes you $5000 or $10,000 in bills on you. Another gunman to watch over the place stood you about seventy-five dol a week. Occasionally you tipped a cop. Say, $100 a w

things changed you had to pay for your permit you could get it. Often you'd find you couldn't. go to someone who had worked up a longer pull. so, the business was a partnership, and profits t between two or three men. If a fellow played a l and stuck it out for a year it is easy to see that nearly $600,000 to the good. But for most of guess, it lasted only about six months—from the s of this good graft began getting round, to the h-off. On the other hand, some firms fixed it so y could withdraw a great deal more than the es a week allowed by law—sometimes as high as en a week. When that happened you made less ut of the excess. You were allowed to keep only ven dollars a case of your graft money. Further, these birds doubled their money financing the ning business. There is one foreigner who landed Island a little before the big blow-out in Europe a dollar in his pocket or a word of English in his But he knew how to handle the East Side gangsters made himself so useful politically by national- ion time that he got into permits early. Now he ole strings of tenement houses.
rse not everyone who had a wholesale-drug license after. No more, by any means, was everyone in hibition-enforcement offices. But if you held a e permit for legitimate purposes and refused any to men higher up you were likely to have a hard he grafters managed to sidetrack you and pigeon- all along the line. The old-established wholesale ns, working on a profit of 5 per cent on their capi- ed the game straight as a string. And some of t into trouble on account of it too—the grafters discipline them.

The Details of the System

E was one firm so afraid of doing something illegal when the inspectors came to look over the stock nager wouldn't even give the boys a drink. In the of a shake-up some of his staff called the attention rfectly honest prohibition chief to an irregularity permit of this firm. It was just a technicality—mount to a dern. But this firm woke up one morn- nd nearly $500,000 of liquor—practically its whole held up. They tell me that before noon the presi- f the company was called up by two men whose would surprise you. They applied to take the attorneys, and they wanted $15,000 apiece in fees. graft couldn't last forever. One day the big boss p from Washington and broke the whole thing wide He slashed the force right and left, he reduced the awal permits from sixty or seventy to about twenty. t time withdrawals amounted to 15,000 gallons a Afterward they were about 11,000 a month. The wholesale-drug permits blew up with a bang.
l, bootleggers have to live, and the big boys who this game see further than day after to-morrow. y there was a good deal of business done in running ff over from Canada. Withdrawals hadn't furnished h booze, anyway, to supply New York and New . And men who couldn't get permits but who d in just the same were trucking it down, taking r chances then they do t present; for the graft t yet really organized. the state enforcement had come in by now. fore that happened I e in. I'd been working along in the West, going from one job to another. The hard times came and I was out of work entirely. I wrote to Jim Malloy, asking if he could find me anything in New York. He wrote back suggesting that I peddle booze for a while. He's sitting on the sidelines ever since he retired, just watching the game. He may be doubling a bit of money financing a rum runner now and then, but that's the most he does. Jim wrote that the business was pretty nearly a cinch for safety, now that everything was organized under the new state law, and that I couldn't lose if I kept my eyes open.

I took his advice. I spent a couple of days round New York finding just how it was done, and then struck a bit of luck. Down near our old joint by Brooklyn Bridge is a big establishment—call it a printing shop—employing 300 or 400 men. In the old days pretty nearly all the drinkers among them used to patronize our saloon; and they knew me. They had a regular bootlegger who called at the shop every day for orders. Well, just before I showed up in New York this bird distributed round the place, in one or two bottle lots, a case of bad booze. I don't know what was in it, but it made several of the force sick for two or three days. Everybody said wood alcohol—that's always the tag put on bad booze. He didn't do it purposely; he'd been stung himself by a crook on the docks; but it all came to the same thing. When he returned for orders the men in the basement kicked him halfway round the block.

Setting Up in Business

I WENT to see the head guy. I'd done him a favor or two in the old days. I got Jim Malloy to call him up and guarantee me as knowing how to get the safe stuff. Before I was through the boss had issued orders that I was the only bootlegger allowed round the place. They weren't buying much for a week or so. They were too scared. But I did pick up, that day, orders for three cases—one in bulk and the rest in single bottles.

I was living in a lodging house then and had no place to keep any small lots. I had to hire storage with a produce dealer on the East Side. Later I took a small flat in a good safe district where the cops are right. The broker gave me prompt delivery. By the end of the second day I had distributed it all. After paying ten dollars for storage I found I had cleared nearly fifty dollars for two days' work. The shop began to buy more freely after they got over the scare. Though other bootleggers raid my custom a little now and then, I manage to keep this place pretty well to myself, and I've branched out too. Since I really got started I've never made less than $200 in any one week—clear profit.

Before I open up the details of the business I'd better tell how the system works. It's like a flight of steps, with the profits getting smaller as you go down the line. At the top are the big boys who protect the whole game and sometimes help finance it. They're politicians, leaders in the underworld, and bankers. They never show their hands, but they get the biggest slice of the pie. Next below them are the importers, who run it either by truck from Canada or by ship from the Bahamas, Canada or Europe. Next are the brokers who sit in their offices in New York and keep touch between the importer and the retailer. Finally come the peddlers, like me. In the business small fry are never called bootleggers. We give that name to the importers or the big boys.

The importer starts the whisky on its way to New York. He takes a truck or a fleet of trucks to Canada. Each truck has a driver and a guard. He goes along in a touring car and he has a guard too. In Canada he buys standard Scotch whisky at—present prices—thirty-five to forty-five dollars a case. For that sum it is also repacked—taken out of its original boxes, which are too dangerous, and made up into packages of various sizes and shapes. Early in the game they used to load 200 cases on a truck. A case, of course, is twelve bottles. But that was too risky. You lost too much if you were caught. An experienced importer seldom carries more than fifty cases nowadays. When they start back to the U. S. A. the boss in his touring car rides before or behind with a wad of ready money in his pocket, always keeping in touch with the truck and fixing things as he goes. At night he travels very close, so as to be ready with his gun or his wad in case they're held up by high-jackers or cops. At about the time they cross the border he makes his first graft payment—five dollars a case. Farther down the line he pays five dollars more a case, making ten dollars in all. This explains why the big boys are rolling in easy money.

The ten dollars takes him to the vicinity of New York City. After that he has to make his own way into the city, which sometimes takes a little planning. The danger is from flying squadrons of prohibition agents or from such city cops as haven't been fixed and can't be. Those flying-squadron agents are likely to be pretty hard-boiled and to refuse to take money. Still there are a hundred ways to get into the city without looking suspicious.

Somewhere along the line the boss in the touring car flashes to the broker, by long-distance telephone or code telegram, just what he has and when he expects to arrive. They have already arranged a meeting place in New York. There the broker's agent picks him up and tells him where to take it. All the importer wants from this time on is quick delivery. A lot of booze is always a dangerous thing to keep in your possession unless you have a long pull. Usually it's off his hands and turned into ready money within a few hours.

The Bootlegger's Overhead

HIS earnings figure about like this: Let's say he's carrying a fifty-case lot. He will pay for it in Canada from thirty-five to forty-five dollars a case—an average of about forty dollars. He pays as regular graft on the way ten dollars a case. His chauffeur on the truck draws $100 a week, and his two guards from seventy-five to $100. It takes four days to go up and back, and it costs about $7.50 a day to the man for living expenses—say, $120 for the crew of four. Gas, oil, and incidental automobile expenses will average $100 a trip. Sometimes you have to come across to country constables or New York cops. You distribute those charges as overhead over a number of trips. By the time you sell it in New York, averaging trip with trip, the stuff has cost you about sixty dollars a case. You get for it about ninety dollars a case if it is bulk delivery or about ninety-five dollars if you drop it in small lots. Last Christmas bulk wholesale prices to the importers went up to ninety-five dollars; in the March slump, after people had just paid their income taxes and felt poor, it fell to eighty-eight dollars. But ninety dollars is a fair average. That's thirty dollars a case clear profit, or $1500 for a fifty-case lot, provided everything has gone well.

Of course your staff can't turn straight round and do it again. It is hard work, and both the chauffeur and the guards have been on edge every minute of the run. You must rest them a day or two in New York and a day or two in Canada. Then there are other delays, like weather and uncertain help. Guards and chauffeurs are always getting drunk or quitting on you, and you have to rustle round for new men. Month in and month out, a truck will make less than one round trip a week. But even at that, if the importer has the luck not to bump anything he ought to average $1000 a week, even allowing for deterioration of

THE NINTH WAY

By Carl Clausen

ILLUSTRATED BY J. E. ALLEN

"We'll Give You One Hour to Pull Out—or be Starved Out"

MR. HORACE BLASS, president of the Blass Investment Company, took the letter from Frisbie, his partner's, hand and laid it upon the plate-glass top of his ornate mahogany desk. A wolfish smile rode upon Mr. Blass' salmon-pink face.

"What did I tell you, Frisbie?" he chuckled. "There ain't no criterion about suckers not biting the second time. A sucker's a poor fish once, always and forever."

Frisbie, tall, thin and with a funereal droop of his mouth, leaned back in his chair and fumbled his tie nervously with his long, bony fingers.

"I wasn't thinking about suckers or any other kind of fish," he stated very clearly, as if his partner had misunderstood. "But we're better fixed now than we've been for years. Our cash balance is over sixty thousand, and the results from the Platinum Ridge prospectus will begin coming in in a week or two. There's no reason why we should take any risks. Drilling an oil well is no sucker-list proposition. It takes real money, Mr. Blass." Frisbie always addressed his partner with the prefix of Mr.—perhaps from force of habit, certainly not as a mark of respect.

"Sure it takes money, Frisbie. But don't forget that there's nine ways to skin a cat," he quoted erroneously, "and that I know eight of 'em."

Frisbie heaved a sigh.

"Of course if you insist on risking our hard-earned money on a wildcat oil proposition ——"

"Wildcat nothing!" Mr. Blass interrupted with heat. "You don't suppose a hundred-million-dollar concern like the Buena Vista Oil people would waste time on wildcatting?"

"They haven't begun drilling, have they?" Frisbie objected.

Mr. Blass favored his partner with a pitying glance.

"Your pessimism, Frisbie, makes me sick. No, they haven't begun drilling yet; but ain't you wise to the fact that oil companies never"—here he paused and tapped the edge of the desk with his stubby forefinger—"never begin drilling until they've grabbed all the land they want? Besides, I got Blair's word for it, ain't I?"

"Blair is a crook," Frisbie stated without malice. Being a crook was to Frisbie merely a species of business man.

"Sure Blair is a crook," Mr. Blass agreed heartily. "If he wasn't we wouldn't 've got the tip. But also he's a fine geologist, Frisbie. And Blair ain't gonna give us a bum steer. He's getting too much easy money out of this concern."

"Geologists sometimes make mistakes," Frisbie objected. "The Martinez field, f'r instance. On the reports of Cooper, the Texas oil cruiser, the Consolidated sunk half a million in three holes, and didn't get enough oil to lubricate a sewing machine."

Mr. Blass' pink face clouded a slightly darker shade.

"The Consolidated made the mistake of employing a Texas man to look for oil in California," he replied impressively. "Might as well have sent a Hottentot to Greenland to hunt for ivory, Frisbie. Blair is a Californian. What he doesn't know about California strata and—things, ain't worth knowing."

Frisbie spread out his flat, bony palms with a gesture of resignation.

"Of course, as I said before, if you insist on throwing our hard-earned money into a hole in the ground ——"

"I insist on—nothing," Mr. Blass interrupted coldly. His small gimlet eyes glittered angrily. "I thought we agreed once that personal opinions should not interfere with our business." He picked up the letter from the table and tossed it into Frisbie's lap. "File it away and forget about it."

Frisbie picked up the letter and glanced at it uneasily. For the third time he read the following:

INCA, CALIF.,
June 11-'21.

Dear Mr. Blass: Your kind offer came to us in this morning's mail. I will be in Los Angeles June the fifteenth, and will call at your office at two P.M. to talk the matter over with you. Sincerely yours,
NORA MARSH.

Frisbie fingered the letter with his long, bony digits. His glance traveled from the calendar on the wall opposite to the marble clock on Mr. Blass' desk. The calendar said June 15. The hands of the clock pointed to 12:30.

"Thirty-one Thousand Dollars! For That Thing!"

"She'll be here in an hour and a half," he said frown that made his long, horselike profile seem t longer and more horselike. "You handle her y I'm going to keep my hands off."

He paused and passed the letter back to Mr. Then he continued: "All I ask is, go easy. Sixty sand dollars is a lotta money, and we ain't as young used to be."

"Leave it to me, Frisbie," Mr. Blass chortled. never saw me come a cropper yet, did you?"

"Not—yet," Frisbie admitted grudgingly.

Mr. Blass leaned forward and pressed the buzzer edge of his desk.

"Miss Kuhn," he said to the stenographer wi swered the ring, "please take a dictation. Carbon legal size."

"Yes, sir," the girl replied, then laid a card up desk before him. "Mr. Callister is outside, waiting you."

Mr. Blass picked up the card and fingered the edg with his fat thumb as if to test it for cutting qualities glanced at the name, Ben Callister, then with a wink at Frisbie: "Show him in, Kuhn."

The stranger who entered a moment later personable-looking young man in the late tw or thereabout.

He wore a Stetson hat, high-laced boot gray tweeds, Norfolk cut. His face was tanned, and his hair a crisp light brown eyes were brown also, and direct of gaze looked like a man who liked to have his way—and was used to getting it.

"The Consolidated phoned your message an hour ago, came right up," he said briefly

Mr. Blass nodded. He tri affect pompousness, but som he failed. He had intende elaborate quizzing, his usual m of procedure in hiring people stead he found himself asking tually asking the man before h he would take the job of dr a well for him. Followed ten utes of haggling over terms, d which time Frisbie's face grew l and longer. An agreement ha finally been made—at Mr. C ter's terms—the man arose.

"I'll have my crew and the ber for the derrick on the grou a week from to-day."

"Very well," Mr. Blass Wetting his lips he gave Callis sidelong glance. "Mum's the w understand? I don't want thing go off half cock."

"I know how to keep my mouth shut," the driller plied easily. "I haven't been in the oil business for years for nothing."

When Callister passed out of the building a min later he almost collided with a girl entering the eleva As he apologized he noted briefly the tired look in girl's eyes and the threadbare suit she wore. Her face tanned like his own, and her gloveless hands showed unmistakable marks of hard work.

on, you would never have suspected the true character of Rowans Valley.

It was never quite clear why this region had been dubbed a valley. Topographically it might be classed as a valley, but to most people the word "valley" is synonymous with pleasant meadows, lowing kine, orchards and corner meeting houses. The only kine one is apt to meet with in Rowans Valley, with the exception of the gentle burro, navigates like Napoleon's army—on its belly—and carries castanets in the tip of its tail. Of meadows there are none, and the orchards consist of here and there a square mile of cactus-bearing sand, fenced about with barbed wire for apparently no good reason whatever, unless perhaps to guard careless strangers from walking into a bunch of spine-bristling cactus in the dark.

Mr. Blass put his stubby index finger upon a small square marked in red ink on the map, two inches removed from a flyspeck marked Inca. The red-inked square was not the work of the map artist. Mr. Blass had made it himself a week earlier, upon the advice of Mr. William Blair, chief geologist for the Buena Vista Oil Company, that all of Townships 14, 16, 18 and part of Sections 4, 5 and 9 of Township 22 contained oil.

Only the upper ten acres of Section 9, Township 22, came within the report, but Blair had been emphatic about this ten acres being directly in the line of oil; so Mr. Blass had thoughtfully marked the ten acres in red ink and dispatched a letter to Miss Marsh, the owner of the ten acres, the answer to which now reposed in the tray on his desk.

Mr. Blass adjusted his gold-rimmed glasses, which hung suspended from the button on his cerise waistcoat by a white silk band, and regarded the square of red ink with contemplative rapture. His thoughts moved back two years to a certain day when a young girl and her aged, muscle-bound father had called at his office and had brought to him a certified check for sixteen hundred dollars in answer to an advertisement of his. The check was drawn on an Eastern—Iowa—bank, and passed into Mr. Blass' bank and to the credit of his account in exchange for a section of sand and cactus, two inches by map, two miles by crowflight from the flyspeck marked Inca.

During the two years that followed this transaction Mr. Blass had considerable correspondence with Miss Nora Marsh, the drawee of the check, a correspondence that had annoyed Mr. Blass and ruffled his usual serenity to the point of exasperation.

The correspondence came to an abrupt end when Mr. Blass replied one day to a supplicatory and discouraged letter of Miss Marsh's, anent dry farming, that if she did not think her farm was dry enough, to try some other and lower location, the dryness of which he could guarantee absolutely.

Mr. Blass permitted himself a slight frown as he remembered this letter of his. It was regrettable that he should have let his annoyance get the better of him to such an extent, but when he considered that at the time of writing he had not had the faintest suspicion that the land might carry oil he excused himself at once. Still, for the first time in his life he was sorry that he had been rude.

Mr. Blass had acquired the land himself in a somewhat roundabout way. He had grubstaked the former owner of it, an aged prospector, named Tomlinson, to thirty-five dollars and sixty cents' worth of flapjack flour and bacon, in exchange for which Tomlinson had given Mr. Blass a deed to the section, and had congratulated himself upon having driven a shrewd bargain.

Mr. Blass ran the map up and drew the rose-colored draperies together. Returning to his desk he flecked an imaginary dust speck from the knee of his carefully creased pearl-gray trousers and regarded the burning end of his cigar critically. The last inch of the cigar had turned to ash, a perfect section of dark, firm ash, varying not the fraction of a millimeter in circumference—the ultimate test of a first-class smoke.

With a sigh of renunciation Mr. Blass laid the cigar on the ash tray, pulled one of the overstuffed chairs close to the desk, facing his swivel chair, and surveyed it, lips pursed slightly. Then he stepped to the window and drew the draperies apart a little, noted the result, and returned to the desk and moved the chair another six inches, so that the light from the window would fall directly in the face of anyone occupying it. Satisfied with the result he seated himself in the swivel chair, with his own back to the light, and placed his fat forefinger on the ivory button of the desk buzzer.

He answered the knock upon the door a moment later with a pleasant "Come in," and when Miss Marsh entered timidly and closed the door behind her he arose with just the correct amount of deferential alacrity and led his caller to the chair beside the desk, and glanced at the marble clock.

"Promptness is a sterling virtue, Miss Marsh," he purred.

Miss Nora Marsh smiled faintly and gave him a look that might have been distrust—might have been just timidity—then dropped her eyes.

"Yes," she murmured.

Mr. Blass cleared his throat in the weighty silence that followed. He shot her a quick glance and noted several things: that her hat was faded and of a vintage two seasons past; that her shoes though polished bravely had the unmistakable roughness that desert sand imparts to leather and that no amount of polish can hide; and that her dark blue broadcloth suit was cleaned and pressed to the quick of the nap. Her gray eyes had lost some of their eager faith of two years ago, but they

Melting-Pot Literature

EVERY thoughtful novel reader and playgoer in middle life must be uncomfortably aware of the striking changes wrought during recent years in the prevailing standards by which younger people judge current books and plays. Victorian standards of propriety were by no means faultless; but they were infinitely better than those that are replacing them. The flaw in the Victorian code was a certain humorless prudery; and yet, for the most part, it was sane and wholesome. Its weakness we have perpetuated; its strength we have allowed to die.

Like the Victorians, we wince at forthright Saxon nouns, the ugly names that designate ugly things. As long as a writer's smooth synonyms hold out he may go as far as he likes, for in the minds of many of his readers he will be judged not by the thoughts he seeks to convey but by the diction he uses as his medium. Let his words be suave and he may be as salacious as he chooses. Young people with insufficient literary background to know the worst writing from the best will read him for his "wonderful style," as they call it, and critics will not be lacking to defend his books on the ground of art. We are accepting at their own valuation certain of these critics with the lackey type of mind who can find nothing good in literature unless it is a colorable imitation of a decadent European model.

In Shakspere's day and for more than two hundred years that followed, there were standards of decency far more sound than our own. Words that are never seen in modern writing were employed with a thoughtlessness that we find it hard to imagine. Broad jests and racy stories that no one took the trouble to "parlorize" were the order of the day. And yet there were limits, and the prevalence of the dueling code and a certain fundamental decency kept speech within the bounds, such as they were. For plays there were censors; and authors had to take their chances with the law. Standards were broad and elastic, but still, they operated.

Somewhere between the rollicking bawdiness of old times and the finical nasty-niceness of to-day there must be paths that can be trod with clean feet. Grossness of speech is never admirable, but right-minded men and women find it infinitely less offensive than the more subtle language of smirking innuendo. The gradual shift of style from one extreme to the other is an infallible sign of degeneracy in a certain group of authors and in the growing audiences whose morbid tastes they address. The old smut brought grins, laughter and guffaws. The new is not intended to provoke either mirth or merriment. In other centuries strength and virility went along with vulgarity. To-day our salacity is overcast with the taint of degeneracy and viciousness. Old landmarks of morality are removed. Virtue and vice are painted the same color. Basic standards of decency are ignored or sneered into the background. Far too commonly is our body of current fiction and drama defiled and brought into disrepute by those who find lewdness delightful, once it has been dusted over with sachet powder and tricked out with the cosmetics of catchpenny literary art.

In vain shall we search English literature for the fountain-head of this polluted stream. Its true source lies between the Baltic and the Ægean. If we explore the capitals of burnt-out European civilizations we need not go so far east as Suez to find places "where there ain't no ten commandments" and where sex morals are an outworn tradition. There, too, shall we find the diseased and degenerate life that half-caste authors and their native imitators are portraying in plays and novels.

This contamination, this fouling of our own nest is part and parcel of the punishment that is visited upon us in consequence of a generation of unrestricted immigration. The policies that have permitted our clean old stock to be steadily and mercilessly mongrelized now make possible the intellectual subjection of American young manhood and young womanhood. The moral standards of youth are plastic. They may be shaped awry quite as easily as they may be modeled in lines of strength and beauty.

He who has eyes to see may perceive all these things without being a puritan, an ethnologist or an uplifter; and yet Congress with plenty of support behind it for the accomplishment of the task of framing and passing a permanent protective immigration code continues to temporize. Senators, congressmen and government officials are moved almost to tears by the stories of young immigrants who would be kept out of the country by the enforcement of our very temperate three per cent law; but they still view with cool judicial mien the national tragedy that is being enacted under their very eyes with their own kith and kin as the unprotected victims.

Melting-pot literature and melting-pot plays are the inevitable scum of our melting pot.

More on the Costs of War

THE provisional budget of the German Government for the year 1922 has been placed before the Reichstag. It is provisional in two senses: With fluctuations of the mark, no one knows how much revenue will be needed, and no one knows how much will be secured by the new tax levies. The present-day Germans are past grand masters in tax evasion. The total figure stated is 265,000,000,000 marks. Of this, 188,000,000,000 marks is set aside to cover reparations, the cost of defeat. Then 50,000,000,000 marks is to be devoted to domestic costs of the late war, being pensions, and so forth. That leaves for all other expenditures 27,000,000,000 marks, and of this 27,000,000,000 marks, 5,000,000,000 is to be used to support the present army and navy.

Germany is supposed to be disarmed. Her army is supposed to be only large enough to guarantee order and security. The disarmament commission of the Allied Governments has worked in Germany continuously since the adoption of the treaty enforcing disarmament. The German Government boasts that it has the smallest military budget of any nation of her size. And yet the military budget is one-sixth the total budget devoted to ordinary governmental expenditures, and exceeds the sum to be devoted to education. This budget illustrates how far the world has yet to go in the eradication of war waste of money.

Relocation of Business by War

BEFORE the war the average annual world production of the nonferrous metals—aluminum, copper, lead, tin and zinc—was 3,300,000 tons, of which the United States produced 1,282,000 tons—39 per cent—and consumed 1,089,000 tons—33 per cent. In 1919–20 the average production of these same metals in the was 2,800,000 tons, of which the United States pro 1,555,000 tons—55 per cent—and consumed 1,3 tons—48 per cent. The output of the world fell output rose. The consumption of the world declined consumption increased. This amounts to a transfe of the business in nonferrous metals from other parts world to the United States. Europe, of course, ha the loser. And of Europe, Central and Eastern Europ lost more than Western Europe.

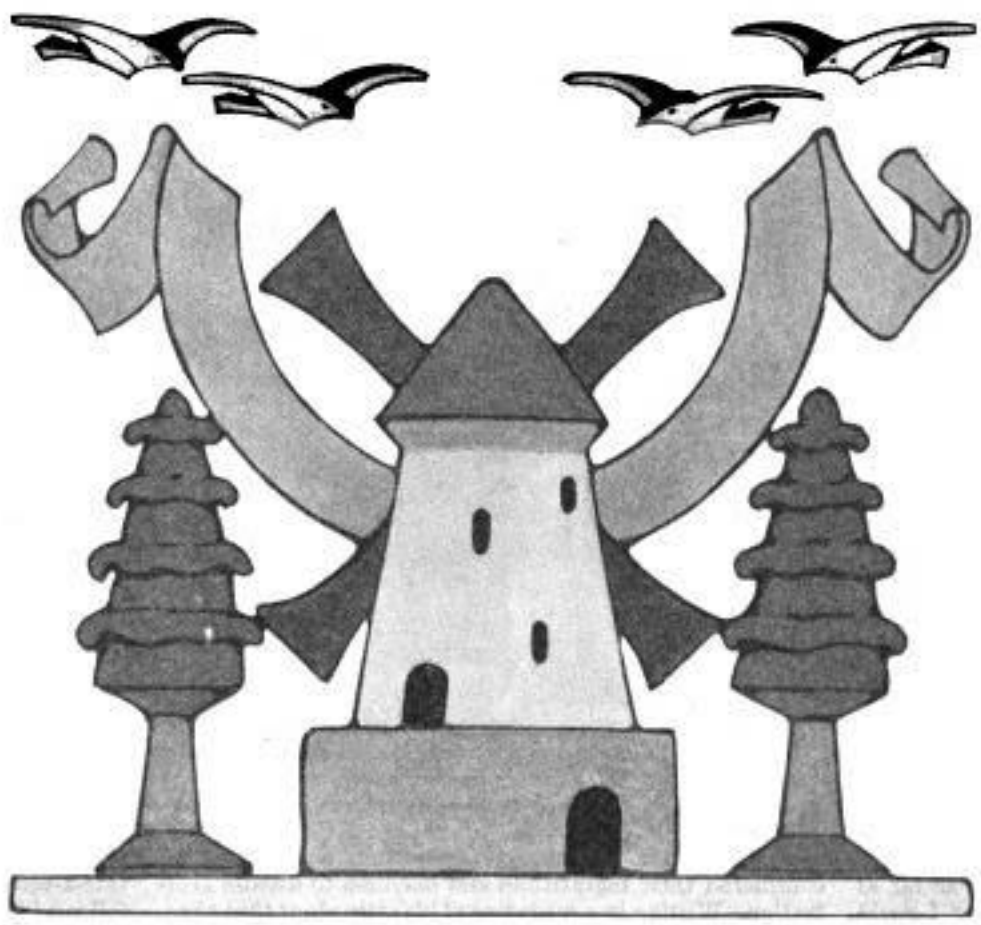
These figures are drawn from a mournful recital circumstances that has appeared in a publication iss the German Metal Company of Frankfort on the the successor to the company that before the wa employed by the German Government to control t nonferrous metals. Germany has lost more tha other country. The increase in use of these me 1919–20 was part of the boom. Part of the good used at home, but a considerable fraction went a When trade revives this will be one of the parcels fought for, we striving to retain our preëminence, l struggling to recover hers.

Three Poor Arguments

THE proponents of immigration belong to three or at least three arguments are advanced in fa removal of restrictions. A certain type of employer the market of unskilled labor kept glutted. A rem historical idealists still clings to the notion that this try is the haven of the oppressed of all countries. A large group, finally, favors the admission of foreigne type needed in this country. They read in digests recent census that the population of cities has inc that of country declined. They are impressed wi statement that the number of agricultural wor actually smaller than in 1910. Could we not admit ants who would enter agriculture, and make sure of g farmer material by selecting them at the source?

The meaning of decline in country population is misunderstood and exaggerated. Farming has be more efficient, and the farmer population has not nee maintain its earlier percentage in order to keep us su with products of the soil. The census of farm worke made before the return to the country of the men to arms and drawn to the cities for war work. A census to-day would give a different result. Judg acreage or yields, the work of farming has been fully tained. If we need farm workers we should endea secure them from our cities, not from Europe.

The idea that we could prepare a card catalogue o workers needed in this country and then pick them European countries is insular indeed. We have no authority in foreign countries. The countries of E want to get rid of undesirable elements; they wa keep the industrious elements. If we should ou attempt to pick out the best for immigration we be promptly and properly told to go to. Europeans suffer under no despotism, unless it be the despot democracy—and they would be exposed to that here peasants of Europe enjoy the best conditions in countries. Land reforms are in progress everywhere country is in much better condition than the city buying power of farm produce is higher than the b power of city goods. The peasant enjoys a sellers' m If European farmers were to read in our press the accounts of the depression in agriculture here they regard their conditions as greatly preferable for the ent. No occupation is so profitable in Europe as a ture. Can we offer homesteads, land at low price market prices, fortune as well as security? And could Europe needs her farmers as she never did, sh would regard as avarice our attempt to secure the elements and exclude all others.



The present restriction of immigration should b placed by a more stringent rule. The city is wasting v sympathy on the farmer. If the city will pay the fa a living price for his produce the farmer will do his without immigrants. We can face an ultimate policy when we are further on.

We have followed in steps of Babylon long enough; it o look about and take stock of the

ve reached a time when labor and instead of pulling together as yoke- at a burden that needs their com- ergies, have wriggled out of the d stand facing in opposite directions, glaring at er as they mill about, getting nowhere, but wasting rgies like two hungry dogs quarreling over a bone. public pays heavy bills for nominal service while vo agencies of industry mark time under what s to a condition of armed neutrality, and progress o a standstill, everybody blaming somebody else little gets done at so high a cost, while he himself all the ducats obtainable while the getting is good.

High Wages, High Prices

extreme position of labor is well expressed by the ase "A living wage," and that of capital by the y proposition "Pass it on to the consumer"—twin s born not of enterprise but of industrial warfare; th need some critical study before we proceed much along the road that leads to nowhere. Let us con- ese two propositions for a moment, if we can, as a pher from Mars might regard the situation.

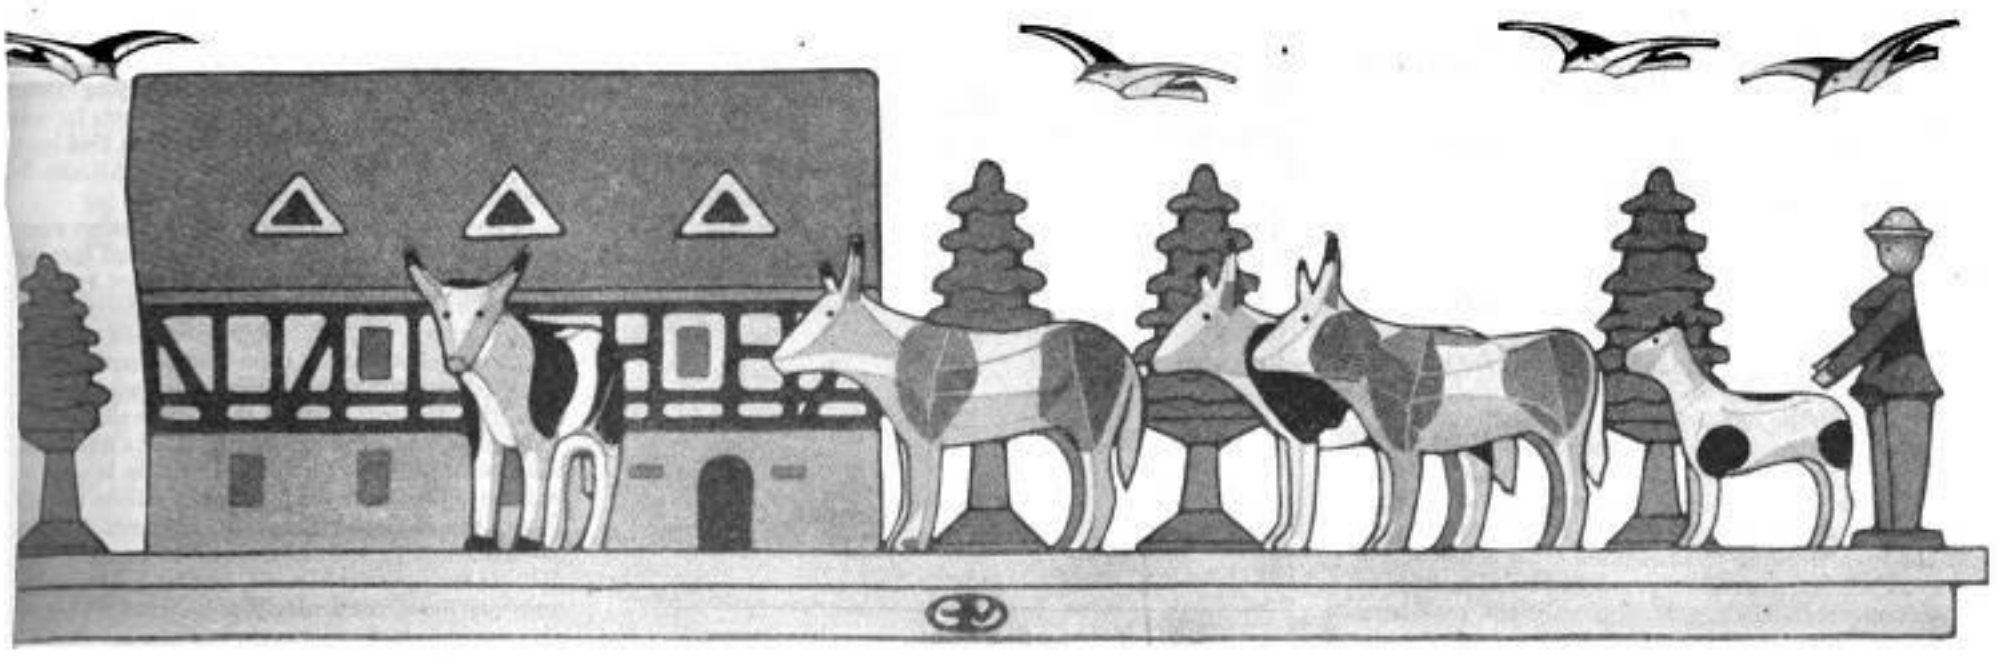
contention that an American laborer with no capital time and his talents should be able to earn enough to support himself and his family in comfort is so obviously fair that it has won universal sympathy and has thereby become a kind of slogan without any very careful consideration of the inherent elasticity of the phrase or what unthinking adherence to its demands is likely to involve.

Under this slogan all sorts of increases in pay have been asked and granted in the attempt to keep up with ascending prices, but, strangely enough, without much relief. For no sooner are increases granted than prices rise to meet them, and the laborer finds himself no better off than before. Why? Wherein lies the mystery of it? Why will not prices stay level when wages go up? There must be some sinister influence at work to rob the laborer of every chance to make a good living when with every increase he finds his dollar less valuable than before, and in a blind unthinking way he lays it on the speculator and the profiteer; nor does he have to go far to find instances that seem to justify his contention.

As a matter of fact there is no mystery about this element of wages and prices when we remember that most buyers are laborers of some kind, working for a wage. For example, a man or a group of men succeeds in securing a notable advance in pay, say 20 per cent. This means to them as individuals either of two possibilities: First, that with the additional pay they can advance their scale of living; second, if they prefer ease to comforts, that they can maintain the old scale of living and lie still a good part of the time.

Now if only a few individuals were involved here and there, with all the rest of the world going on as before, then either of these Utopian dreams could be realized; but when any considerable numbers try it the scheme breaks down, for this is the way it works in actual practice:

First of all, when men in large numbers attempt to advance their scale of living by reason of increased wages they at once increase the demand for consumptive goods in the open markets and inevitably raise prices on themselves by competing against one another as never before, by which it is clear that prices will advance with every increase in pay and possibly at even a greater rate than the increased size of the pay check.



Underproduction

SECONDLY, when men in large numbers reduce their working days or hours because of a higher rate of pay, expecting to maintain the old scale of living with greater ease and more leisure than before, then production is lessened, and even the old demand is met by a decreased supply. Now, as before, competition between buyers will raise prices, and again the increased pay has failed of its supposed benefits because so promptly followed by the inevitable rise in prices.

No little surprise has been expressed that a dollar is worth in buying power so little now as compared with its value a few years ago, and yet even a casual study of what naturally happens and what has been happening all about us cannot but show how inevitable will be the results of the false economy that has taken possession of so many of us.

The whole matter seems to be treated as a mystery, whereas it is no mystery at all. We live upon goods, not upon money, and the moment we fail to maintain production in proportion to our demands prices will rise quite independently of speculation or of profiteering. Indeed it is increased demand in the absence of increased production that lays the very foundation for speculation to the extent of profiteering, which would be impossible were we producing in proportion to our demands.

The Print of My Remembrance

By AUGUSTUS THOMAS

IN PRECEDING chapters, in trying to tell how I came to go at the business of writing plays, to tell how my attention was led in that direction and how information, experience and material for the work were gathered, I have tried to use discrimination. This is probably not apparent, but as I mentally review what I have considered the high lights of this irregular report I am conscious of much that has been omitted.

After getting the paper that preceded this, the editor, sensing my difficulties, suggested that I extend the intended series of ten installments by adding two more. That permission makes it almost imperative that I refer to some of the facts and happenings connected with making a play which was called New Blood and was produced by Mr. Joseph Brooks late in the summer of 1894. If this publication were political in its character I might slam ahead and call a lot of people a lot of names, because, fair-minded and unprejudiced as I have tried to be, I fear that I am a good deal partisan. I have frankly told that as a young man I was a Master Workman in the Knights of Labor. I deeply sympathized with the working classes of the country, to which I thought I belonged, and their problems became my own as far as study and investigation went, and also as far as I could express myself and be tolerated as a member of one of the principal political parties. I made speeches in all the presidential campaigns after I became of age, and occasionally talked in local campaigns in the congressional years.

Adora Andrews, Walter Hale and Vincent Serrano in the Play "Arizona"

Issues of the Early Nineties

IT WILL be remembered that in the early '90's two absorbing considerations in the country were the trusts and the money question. The Populists and—strongly influenced by them—the Democrats were urging the free and unlimited coinage of silver; the Republicans were also urging the coinage of silver, but after an international agreement. The most outspoken of their party at that time, Senator Henry Cabot Lodge, was for the unlimited coinage of silver and a discriminating tariff that should force England from her gold standard into bimetallism. Senator William V. Allen, of Nebraska, a man who had much of the physical appearance, the habit of thought and the oratorical power of our present Senator Borah, characterized this advice by Senator Lodge as "simply a piece of Yankee ingenuity." Mr. Allen's party, the Populist, was at one with the Democratic Party in its fight against the trusts, and the Republican Party was not far behind in a wish to regulate those combinations.

With the trusts as a sustaining theme, I had written a play in which a manufacturing company was divided against itself. A son, impersonated by Mr. Wilton Lackaye, in sympathy with the new spirit of regulation, was at war in the board of directors with his father, played by Mr. E. M. Holland, who adhered to the older ideas of a man managing his own business in his own way. When the play was ready Mr. Brooks engaged one of the best companies that could be got together at that time. Besides the two excellent actors named, the cast included also Maurice Barrymore, C. W. Couldock, J. H. Stoddart, George Nash, Jack Barnes, Ffolliet Paget and Anne O'Neill, a prominent ingénue of that time who soon afterwards married and left the stage.

Shortly before we got ready for our production some of the forces that I had been endeavoring to estimate and depict came into collision. The most outstanding figure on the labor side was Mr. Eugene Debs, now, in 1922, in the public eye because of his attitude during the World War and his consequent incarceration at Atlanta and his subsequent pardon from that place by President Harding. In 1894 Mr. Debs had asked that a difference of opinion between the Pullman Company and the men working in the Pullman car shops at the town of Pullman, near Chicago, should be submitted to arbitration. Mr. George M. Pullman, the president, who had been a great benefactor, in that he had built a model city for his employes, was deeply hurt at what he considered their ingratitude and declined to discuss arbitration. Writing in a magazine of his attitude at that time, and the various patents the Government had granted him, Dr. Albert Shaw said:

> Mr. Pullman should certainly feel very good natured, indeed, toward a nation that has afforded him such unparalleled opportunities and has rewarded his talent and energy with such colossal tributes of wealth. . . . To very many people it seemed clear that he ought not to have allowed his local quarrel to go on unsettled and unappeased until it had assumed continental proportions.

The same impartial writer condemned Mr. Debs for extending the strike to the American railroad unions and through them obstructing trains that carried Mr. Pullman's cars. When Mr. Debs did this he also stopped trains

Olive May and Robert Edeson in "Arizona"

on which there were the States mails, with the res President Cleveland step the situation, and when Blood company approach cago toward the end of train on which it was ran a district with miles of freight cars on either s arrived in Chicago to fi city under martial rule, w artillery strung along t front and commanding proaching streets. The who came at night to Chicago performance obliged to show tickets diers at intersecting corn establish the peaceable c of their errands.

Of course, in that wild that subject and that e company, the manag thought we had the American play that co written. Mr. Palmer can see it and immediately Mr. Brooks time at his Br theater. He even su strengthening the already cast by substituting Elita Otis and Katherine Grey ladies already named Charles Richman was eng the place of Mr. Barnes desire for betterment through every department of the production. At tête-à-tête between Barrymore and Lackaye in the followed by a love scene between Barrymore an Grey, the men in Chicago had lighted their cigarett a match, but for New York we had a fine double-copper outfit that stood on the table and burned a

First-Night Contretemps

ON THE first night in New York, at the most c moment, this alcohol became superheated, over its lamp, made a flare on the copper tray. People audience began to gather up their wraps; Reube who was playing a butler, came on and backed o this flaming exhibition, but too late to recover att and a most essential part of the exposition of the sto lost. Miss Otis had procured a new silk dress f new engagement, very snugly fitting a week bef play. That interval of hope and maybe entertai however, contributed enough added outline to bu new dress in a hurried adjustment, and a scen was held several minutes while the modiste pu gore. The whole night took on a tone of unreali a dispute between Mr. Palmer and Mr. Brook stage hands, extra ones, though needed, were n gaged, and altogether it was one o'clock before ou performance ended. Our New York press was a as Chicago's had been favorable. Charley Fr saw the play in the middle of the week and li But in his characteristic way he touched at once what he thought made it fail.

A strike leader who has been shown into hi ployer's breakfast room, after stating his claim a condition of his people points to the table and "What you have left there on your plate," and so

Charley said, "That workman saying 'Those are as much as one of our families gets for a day speaking to a parquet full of people that leave i You can't say those things on the Atlantic Seab although you may in Chicago."

My own belief is that the play came when p and magazines were so full of the stuff that the p looking for entertainment didn't want any more But it had been written under conditions less hea

As a playwright I was depressed and needed en agement. I thought I had been writing from knowledge of the Middle West and from my experi as a young man, and that those were all I had that valuable to tell. I was forgetting that a man's educa may constantly go forward, and if he is a writer painter or sculptor people would still be interested seeing things through his temperament. An older at that time, L. J. B. Lincoln, said encouraging th He was not a writer himself, but he had been a lect and was more particularly a handler of literary m

THE GOLDEN RULE OF HEALTH—EAT SOUP DAILY

Here is a game the kids acclaim
With vigor, vim and zest.
Their pep and force derived, of course,
From "Ox Tail" at its best.

—and thereby hangs a tale

Campbell's is Ox Tail Soup at its best. Not merely a deliciously satisfying food, but a recognized health-builder as well. It brings you, in a tasty dish, the native vigor of meaty, marrowy ox joints; the beneficial properties of fresh vegetables and herbs; the strength-building qualities of barley.

Campbell's Ox Tail Soup

A rich, nourishing stock made from medium-sized ox tails, combined with diced Chantenay carrots and golden turnips, tomato puree, sliced ox-tail joints, celery, parsley, barley, a little leek, and a touch of flavoring to bring out the natural savor of this delicious combination. Order Ox Tail today.

21 kinds **12 cents a can**

A dainty garnish

Many housewives are fond of giving "a personal touch" to their dishes, especially when they are entertaining and wish everything to be even more attractive than usual. At such times you will find this a most pleasing garnish to Campbell's Ox Tail Soup: a thin slice of lemon in each plate, a thin slice or two of hard-boiled egg and a sprinkling of finely chopped parsley. The lemon may be cut in fancy shapes.

Jules Levy

(Continued from Page 30)

He had a paper organization of audiences in Boston, New York and Chicago to which he gave what he called uncut leaves, papers yet unpublished, that their respective authors read aloud.

Lincoln was walking with me up Fifth Avenue to the Grand Central Station, on his way to spend the night at our home in New Rochelle, and I said, "Linc, I think I'm written out."

He laughed the jolliest, most reassuring laugh that a man making that speech could ask to hear, and then told me of the number of men he had heard say the same thing at about the same period in experience. His observation was that this fear came to them in a fallow time, and frequently preceded the best of their work. Supporting his belief, he said much more in the same direction. The first play I wrote after this encouragement of Lincoln's was Arizona. Among other plays written after that time, also, were The Earl of Pawtucket, The Other Girl, Mrs. Leffingwell's Boots, The Witching Hour, As a Man Thinks and The Copperhead.

Luther Lincoln's Glassy Stare

THAT night at New Rochelle, as Lincoln sat reading, I endeavored to make in the guest book a caricature of him; but as I look at it now it is less caricature than portrait. I have said Lincoln was not a writer, by which I mean writing was not a source of income to him; but he was skillful and entertaining when he tried it. A year or two later he had to furnish an introduction to some Annals of The Lambs, at that time the most powerful and most interesting theatrical club in America. Because the opening paragraph of his paper leads attractively to its subject, and because it is a fairly condensed expression upon masculine club life in general, and because it is a good indication of Lincoln's style as well as a good example of impromptu performances, I wish to quote it. He said:

> The evolution of Bohemia as a factor in civilization may be written from the annals of clubdom. From the day when neolithic man emerged from his cave and discovered that the grape juice which he had squeezed into a coconut shell the day before had become a beverage whose ruddy glow tingled his heartstrings and made him forget his troubles, he became convivial. Becoming convivial, he called his friends about him and established a club. Since, an unbroken line of care-dispelling, self-forgetting, pelf-despising good fellows; Arcadians, Corinthians, Bohemians. So the Anglo-Saxon, in his gradual absorption of the best things in civilization, has developed to its greatest value the essence of club life—the dining club. Literature in English rings with that especial institution. From the imagination of Chaucer in his Canterbury Pilgrimage to the realities of Ben Jonson's Apollo and the Mermaid Inn; from the Kit-Kat Club, Will's Coffee-House, and the still extant Cheshire Cheese—with its hallowed chair of Doctor Johnson—to the countless groups which now meet in and out of Alsatia to engender the flow of wisdom which a hospitable round table can alone induce, there is one long and brilliant procession of Bohemians of every rank and class, without whom language becomes tame, art pedantic and life, as Mr. Mantalini so succinctly put it, "one demnition grind."

Having been thus respectful to Luther Lincoln's memory, and after stating further that he was one of the most vital influences of an artistic and literary kind that ever came into The Lambs, I hope I shall be forgiven for talking of him in lighter vein. With all his ability to encourage other men, there was a touch of fatalistic despondency in him concerning himself. Not any of his male forbears of whom he had information had lived beyond fifty years. Lincoln had a premonition that fifty would be his limit, and it was. This death-sentence feeling made him take the pleasures of life as they came. Like the preceding members of his family, he lost some ten years before his death the sight of one eye. To save the other it became necessary to remove this useless member, and it was replaced by an artificial eye. Both eyes were overhung with fairly heavy brows and were behind spectacles. Lincoln during the last hours of some all-night sessions sometimes closed the good eye and slept, while the artificial eye remained on duty and looked steadily at the detaining monologist. In one of these slumbering moments he was leaning on the little bar of the old Thirty-sixth Street clubhouse, seemingly listening to a club bore considerably intoxicated. It was a warm night, and this talker was gradually fascinated by the unwinking attention of Lincoln's glass eye. When he saw this steady gaze still maintained, although a fly alighted upon the pupil of the eye and twiddled its hind legs, he felt that he was the victim of alcoholic hallucinations. The few to whom he confided his experience said nothing of the eye's being artificial. Lincoln died soon afterward and the man never drank alcohol again.

When I started West to get Arizona, Frederic Remington superintended the organization of my kit just as he would have arranged his own. It was very much on the camping-out order, with a shift to something that would be presentable on formal occasions. I carried, as I have said before, a letter from General Miles to the officers commanding the Western posts. I started at Lincoln's encouragement and counsel, with Frederic Remington's good wishes and the color that I had absorbed from his talk and stories in the preceding eight or nine years, and added to this equipment a most useful admonition from Capt. Jack Summerhayes, whom I met in St. Louis, where I stopped a day or two to see my people. Summerhayes was attending to some war preparations at Jefferson Barracks and happened in the city for that day only. Our meeting was accidental. His contribution was this:

"That department letter you carry will command anything those men can give you; but they'll feel happier if their contributions seem voluntary and come only under the head of General Miles' permission. Also you will find that they are marooned out there, and that they will be mighty glad to see you; that about the only thing they have worthwhile to them is their rank, and at all times, especially in the presence of their junior officers, the more respect you pay to that, the more you do to preserve its traditions, the happier you will make those old fellows feel."

When, after several weeks in the territory, I came to say goodby to Col. Winfield Scott Sumner, who had given up to me the best room and private bath in his quarters, he said:

> Thomas, although you've been a member of my family here, I never came into a room or went onto the porch where you were or left a group of which you were a member but that you stood up at my going and coming just as one of these lieutenants would, and I want to say to you it made me feel damned fine.

William Hoey

I don't think I would have done anything to ha brave officer, but I am sure I would not have b punctiliously attentive to that little ceremony if it been for the friendly counsel of Jack Summerhaye

On the way to Fort Grant one leaves the rail Willcox, at that time a little one-street row of co shops and barrooms. The hotel proprietor told I came off the train for my first night in Arizona t ambulance with four mules was there to carry over fort a captain who was expected on the train arri five in the morning. I saw the driver of this outf night. He promised to tell the captain of my presen in the morning I was standing around ready to be i But again, under the remembered advice of Su hayes, I didn't spring my headquarters paper on th tain or try to address anybody except the comma to whom the letter was directed; and as it meet little to this captain to learn that a stranger wanted to the fort, his four mules and his ambulance and without me. I went some hours later on a little two depot wagon that made a daily trip, and was again nate in that fact, as the driver on that twenty-mi told me many useful things. I was directed fro colonel's quarters to the officers' There was no attendant. The room contained four or five o playing cards around the table. a pause one of them casually l up. I asked for Colonel Sumne nodded toward that officer. Su with his cards, paid no attenti

The Courteous Colone

Sales Mounting Higher and Higher In Greatest Hupmobile Year

The first quarter's Hupmobile business for this year is closed just as this is being written.

The completed sales figures positively clinch the conclusion indicated by the first two months—that this is the greatest year in Hupmobile history.

Sales and production volume in March was higher than the company ever before experienced for any one month. The quarter far exceeded any previous first-quarter record.

New Thousands Are Coming to Hupmobile

Two significant things are happening.

First, the Hupmobile is being bought by those who now see how futile it is to try to get enough more in a car to make a higher price worth while.

Second, it is being bought, also, by those who are finding out that a lesser price can prove to be anything but economy.

All these, of course, in addition to those who have learned by their own Hupmobile experience, how much it means to satisfactory ownership to have the extraordinary soundness and reliability, the notable economy, and service, and long life always associated with the Hupmobile.

For 14 years the Hupmobile has been best known for these qualities. Known for them not only in its own immediate circle, but by all owners of all cars.

How Hupmobile Sales Are Sweeping Upward

Without a single exception, Hupmobile distributors have increased their requirements for this year, one hundred per cent over last year. The total increase in the Hupmobile business for the first quarter of 1922 was 172 per cent over the first quarter of 1921. The following typical examples among Hupmobile distributors cover the quarter ended March 31st:

Atlanta . . . 271%	Detroit . . . 143%	Minneapolis . 120%
Boston . . . 257%	Fort Worth 230%	New York . . 145%
Charlotte . . 70%	Harrisburg 200%	Pittsburgh . . . 50%
Chicago . . . 195%	Huntington . 33%	San Francisco 275%
Cincinnati. . 158%	Jacksonville 50%	St. Louis . . . 275%
Cleveland . . 90%	Kansas City 233%	Sioux City . . . 100%
Dallas 126%	Los Angeles 201%	Syracuse . . . 100%
Des Moines 50%	Milwaukee . 100%	Toronto 75%

Reaping the Harvest Of Faithful Service

What more natural than that these additional thousands should be coming to the Hupmobile now?

People are buying carefully and critically. They are choosing proven goodness and value and life-long service.

The Hupmobile today is reaping the harvest of its years of faithful service in this country and all over the world.

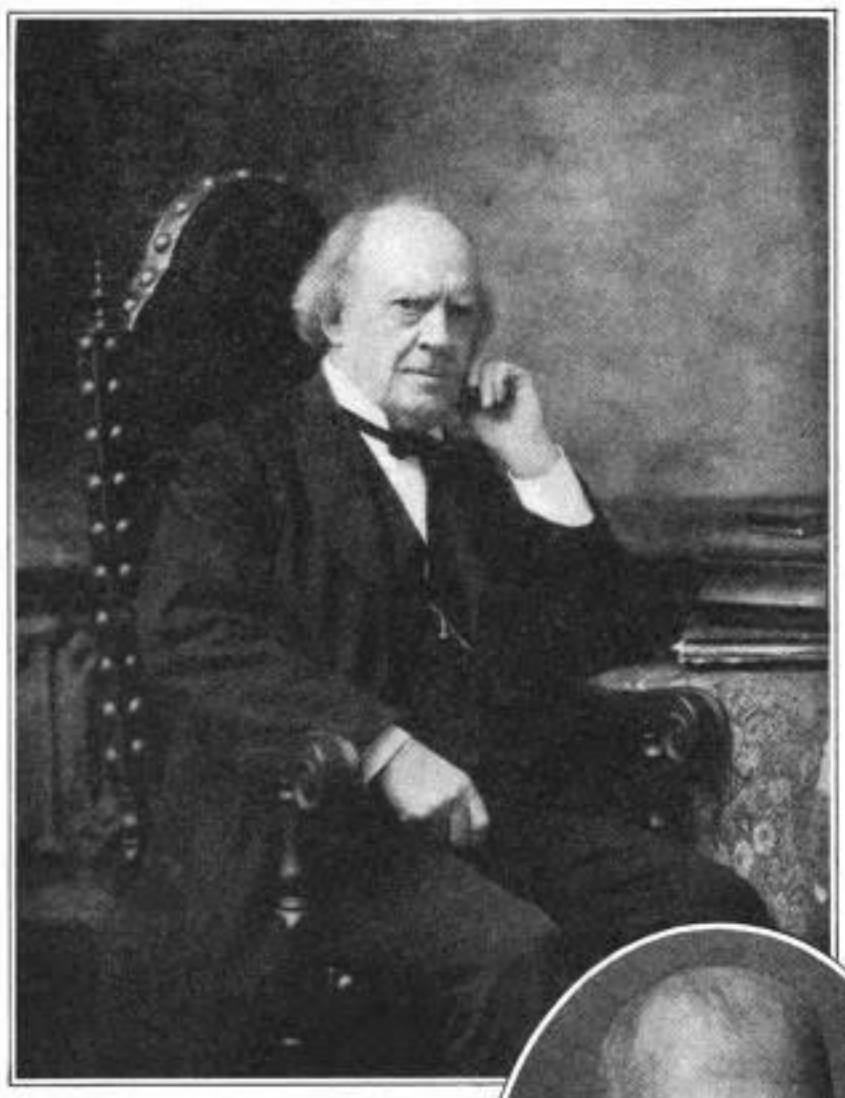
(Continued from Page 32)

as my Leavenworth attorney, ex-Senator Thomas P. Fenlon. He introduced me to his son-in-law, Captain Nicholson, also at the post and in whose quarters he was staying. Nicholson had been one of the officers in Plowman's court room that busy afternoon eleven years before, when they had ridden over from Fort Leavenworth in full dress to protest the foolish slander of the talented Helen M. Gouger.

I am working now between the need to economize space and a wish to talk freely enough about my experience to fix whatever significance it may have to other men trying to make plays. And when I say significance I mean only that. I don't mean a rule or a way of doing. Each man writing plays makes his own rules, and one man at different times will have different ways. If I seem occasionally minute it will not be because I regard any act of mine in epic fashion, but only because I remember it as an articulating part of what subsequently became machinery in a play. I had been writing plays too long to be entirely free from habit. I suppose that a man sent out to write a comic opera would at least begin by thinking in terms of a quartet. All those fine soldiers, every sturdy private, the smart officers, the forceful old colonel, each of them began to be in my mind a possible factor if not center of romance.



The officers' quarters there in Fort Grant are doby, and face the parade ground. To the western end of the row the first two or three are two-story buildings, substantial as any brick or brownstone residences of the city. They then tail off into bungalows, with fine shady porches, and all, because of their doby walls, with cool window and door recesses from eighteen inches to two feet deep. I don't remember how many ladies were in the fort; I should say half a dozen. The majority of these, of course, were married; and when we have checked off their husbands it left a fine circle of unattached officers, attentive, complimentary, respectful. I heard no breath of scandal or even of gossip that in any way involved this compact little community, but it was impossible to view them with an imagination bent by the theater without beginning to play chess with their reputations. Nothing could be further from fact than any hint of discordance in the household of Col. Win Sumner and his wife, almost his own age; but as I wanted to use him as a principal character, I had no compunction in mentally hooking him up with a much younger woman, somewhat regretful of the disparity in their years. Of course this discontent of the wife would be evident to more than one of the young officers, if not actually shared in or promoted by one or another. Besides domestic life at the quarters, there were a few wives down at the barracks, and one or two daughters of enlisted men. My difficulty on the first day or two was to keep an open mind and not have these characters form associations in my fancy that would by repetition of the concept begin to take on the authority of fact.

As I listened to Colonel Sumner talk at his dinner table of cattlemen, Indians and soldiers; as I heard Mrs. Sumner tell of Tony, the doby messenger that came down the valley with social notes, I felt that the field was too rich to make immediate commitments of selection.

At Hooker's Cattle Ranch

SOME dispenser of mental tonic has said that thoughts are things. I offer no opinion on that, but if they are they're curious things, and it is hard for one who trades in them to keep clear of superstition. I have seldom begun to work earnestly upon any line of reflection but what that line has been frequently twanged by cross currents that the overcredulous would misread. I wrote earlier in these chapters of coincidences, naming two that were noteworthy in my own experience. Personally, I am willing to accept the explanation of somebody whose words, but not whose name, I remember, to the effect that a line of thought is like a magnetized wire, and that particles from all the waves and currents that cross it adhere when there is sufficient affinity. If that is true, a man thinking along certain lines would mistake the selection made by his attention for fateful response.

I wonder if this is an approach too clumsy to another one of these points. I was slowly dictating the stuff above about the military post and was thinking as I had been thinking for a day or two about Hooker's ranch, some ten or twelve miles away from it, and how I could be accurate about certain items, when Robert Bruce, of Clinton, Oneida County, New York, came to the door. Mr. Bruce has written historically of incidents in the Civil and Revolutionary wars. He and I had an exchange of letters about the first two or three installments of these reminiscences which at this writing have appeared in this publication, and he had promised to stop in and see me sometime when he was in the city. His call just now interrupting my

C. W. Couldock

dictation about the army post was prompted by that invitation and was determined by the fact that he had two leaves of the Erie Railroad Magazine of December with an article in it about Mrs. Forrestine Hooker, author of The Long Dim Trail and other stories.

He brought it to me because near the finish of the article the writer said of Mrs. Hooker: "She married E. R. Hooker, son of Henry C. Hooker, the cattle king of Arizona, and lived at the Sierra Bonita ranch near Fort Grant and Willcox, where the famous play, Arizona, was written around her as Bonita by Augustus Thomas."

Stuart Robson, 1903

Thanks to Mr. Bruce's call, I don't have to cudgel my brain to remember Mr. Hooker's first name, or the name of his beautiful daughter-in-law, who away out in the wilds played the piano with such delightful skill.

To distinguish him from his brother Col. Sam Sumner, of Fort Myer fame, my Colonel Sumner was called by his army friends Bull. This was an appellation affectionate and descriptive but not critical. He told me of the several elements in the life of that section of Arizona, particularly of the wild station of San Carlos on the Gila River, where so many times a year a troop of cavalry on guard was relieved by one from the post in its monotonous duty of guarding that end of the Apache reservation and dealing out beef and flour to the poor Indians who came periodically to get their supplies from the Government. He told me also of the ranchers who were his neighbors at intervals of ten and fifteen miles.

After a few days at the post I was taken over to Hooker's ranch. The administrative center of this was also the residence of Mr. Hooker, his daughter-in-law and grandson. This doby hacienda was a quadrangle about one hundred feet square, with blank walls some eighteen feet high outside. Three sides of the inner court were made up of little rooms one story high, with roofs sloping to the center and rising to somewhat less than the height of the outer walls, whose superior margin served as parapet in case of attack. A fourth side of the quadrangle, besides having a room or two and a shed for vehicles, had a large reënforced double gate that could be thrown to and fastened with heavy bars and staples. In the center of the court thus formed there was a well, so that the colony might have water to withstand a siege.

Henry C. Hooker was a quiet little man who had been some twenty-five or thirty years in that locality selling beef to "Government and Apaches"; at times on the defensive and at other times on friendly terms with his savage neighbors. He had known the old Apache chief, Cochise, the predecessor of Geronimo, a hundred interesting tales of his ex with Indians and cowboys and soldiers under the average height of the Amer slight and quiet, and while adopting h the liberty of replacing him in my mi more robust and typical frontiersman; dreds of the lines I finally gave to Hen the rancher in the play of Arizona, were own words, which I remembered and a was alone set down because of their pi quality and their great simplicity and

Picking a Heroine

ONE speech that all the Canbys—se fourteen that finally played it—us and which Douglas Fairbanks, an aspiri ster of the theater long before he wen movies, learned to recite, although never the remotest chance of his pla part, was Hooker's description of his selecting a cowboy. Before I had any to justify it or any theme to which it nent, I had this speech from that m man. Think what a helpful nugget th picked up by a writer looking for mat

"We take a man on here and ask no We know when he throws his saddle on whether he understands his business o may be a minister backslidin', or a ban his last lung, or a train robber on his w we don't care. A good many of our m men have made their mistakes. All we now is, will they stand the gaff? Wil sixty hours in the saddle, holdin' a h tryin' to stampede all the time?"

At Hooker's ranch I decided his in-law should be the heroi story. It would take me out closely knitted life of the a and while giving a heroine w appeal to a young cavalryma girls on the ranch rode as w men did, it would be a tru breezy touch of character, as this self-reliant and ath was associated with the most characteristics and accompli Colonel Sumner thought I sh life at San Carlos. That had wish when planning the play, pected to get the element of bustle for it in an Indian uprisi had the disadvantage of harking several other American plays, and thing of the color of Jessie Brown relief of Lucknow. But there was nothi sight. To reach San Carlos from Fort G a day's cavalry march up the valley to I and another day's ride over the mounta first half of this journey was made in an ambula mules drawing it, while a small detachment of c telegraph construction outfit, two Indian guides or six pack mules with supplies were in the escor lop's was another doby house, with ornamental s ings on the ground floor, and an upright piano.

We had an early start the second morning, wit body in the saddle. Captain Myer, in charge of tachment, lent me a handsome pacing stallion, ge a weight carrier. The features of our second da none of which I used in the play and which therefo little place in this recital except as they contrib sense of hardship and the stamina needed to meet narrow trails on the hogback of the mountains, w aneroid barometer showed five thousand feet, an the path was so narrow that everything was intr the animals, which carefully picked their way one absolute line before the other, sometimes all four f short slide and often each stone gingerly tested f sure of footing; climbing grades on which no hon have carried any rider, and where no tenderfoot, ter how stout of lung, could have climbed in that unaided.

The procedure was to take with one hand a ti on the long tail of your horse and let him pull you walked behind him and led the horse for the m followed. When the height was reached where a m tion of the grade made it possible to get again i saddle, all the company, troopers and Indians alik glad to pause and recover breath before attemp mount.

Across these ridges the wind, which is always blo that season, came at a pace of forty miles. Should on our left was a wall that occasionally graned a s nearer, on the other side, a declivity dropping at a of eighty degrees for three thousand feet.

SOME men think a soft collar suggests a lazy untidiness, or a comfortable carelessness; and perhaps it does.

But the VAN HEUSEN has about as much relation to the ordinary soft collar as a full-dress suit has to a pair of carpet slippers.

In appearance, no other collar—stiff or soft—can compare with the VAN HEUSEN, for no other collar is made from the same seamless fabric.

The VAN HEUSEN is the World's Smartest Collar because it makes no concessions to either appearance or comfort, but gives you the benefits of both without the disadvantages of either.

Some men say they wear the VAN HEUSEN because it is the most dressy collar; others, because it is the latest and most stylish collar; and still others because they scorn soft collars!

But the real reason is:

the VAN HEUSEN is the *only* collar with comfort and style both *woven* and *tailored* into it!

For immediate delivery, nine styles, quarter sizes $13\frac{1}{2}$ to 20—boys' sizes 11 to 13. Price fifty cents. Will outwear half a dozen ordinary collars.

HENRY GETS AN ASSIS

By Jonathan Brooks

ILLUSTRATED BY WILLIAM KEMP STARRETT

A PITCHER is as old as his arm, an outfielder is as old as his legs and a hitter is as old as his eye; but a ketcher is as young as his head. That is why old Henry Hammond can still go behind the bat and turn out a good job of work. He does it by brain strength and awkwardness, for his arm, legs and eye are gone these many years.

Henry has outlived three baseball generations of outfielders and hitters, and a whole human generation of pitchers. He has caught in more leagues than Old Man Farrell ever heard of, and from nearly every league he has sent up at least one pitcher that was a whish. You know, one of those speed boys, like Walter Johnson, Grover Alexander or old Charley McCormick in his prime. He was a regular traveling school for pitchers.

Every year he was in a different league. Most of the winters he spent in a little town up New York State, figuring out which league he would tackle for the summer. It got to be a tough problem a few years back when he found he had been in almost all of them. But he usually managed to locate one in the Ozarks or Carolinas or the copper country or somewhere. Then he'd sit down and write a snappy letter to a manager in that league, setting forth his batting averages of a decade back, along with some fielding averages. He always included a twelve-year-old photograph. His first letter generally brought him a contract. Sometimes the manager that hired him knew him as the old-time battery mate of Charley McCormick, but more often did not.

A fresh haircut, a new plug of tobacco and an old mitt formed his equipment when he descended on the new club and the new league. Every ketcher hangs onto his mitt until there is nothing left but the back of it. The fresh haircut destroyed heavy streaks of gray over Henry's ears and around the back of his neck. And Henry knew that the only way to keep the skin of the face from wrinkling is to have it perpetually stretched to its utmost by a large healthy chew. On reporting, Henry looked almost young.

"Lemme have a month's pay to kinda get along on," were his first words to the manager. "I'm buyin' a little farm back home and the payments kept me broke all winter."

That was true about the farm, and he generally got an advance, which lasted until his job was safe for the summer. But he lied about being broke, because he had more dollars stored away than Ty Cobb has base hits. It was a poor season when Henry did not lay by enough to start buying another farm.

"G'wan, I'll beat yuh to a whisper!" were his first words during the first workout of the season. He addressed them to the nearest man who happened to have a ball in his hand. "Gimme 'at ball, will yuh?"

Glaring fiercely, he grabbed the leather and threw it as hard and as far as he could into center field. Regularly the manager would rush out on the diamond and beg him to be careful of his arm.

"Bloo-a-ah, now I feel better! I'm all right. Arm's like iron. What time's 'is first game called?"

Henry's career as a rolling stone began the year after the celebrated firm of McCormick and Hammond dissolved partnership. Never heard of McCormick and Hammond? Oh, yes, you have, under the real firm name. Like Mathewson and Bresnahan, they were known throughout the land as a pair to strike terror into the hearts of strong hitters. Back in the days when people read Mr. Dooley and bragged of shaking hands with John L. Sullivan, McCormick and Hammond were as well and favorably known as pepper and salt, McKinley and Hanna, ham and eggs, Damon and Pythias, Barnum and Bailey, or any other celebrated battery partners in the public eye.

McCormick's speed and Hammond's cunning were vaunted in barber shops from Eastport to Vancouver. But

"Son, I'm Proud of You," She Answered. "And You, Too, Bless Your Old Bones"

McCormick dropped out of sight like a meteor, and then Henry gradually faded from view. As in the dissolution of the celebrated firm of Me and Gott, which found Me hitting less than .0017 when left alone, Hammond ceased to flourish.

The head was still there, but the arm, the legs and the eye were going. Moreover, the baseball public in the big-league cities seemed to resent his presence without his great battery mate.

Thus much, introducing old Henry Hammond, ketcher. Known him always? Perhaps you have. There were two tastes to which, in common with his kind, Henry held firmly. The first was a liking for hulking big right-handers with a world of speed. The second was an aversion, equal to horror, for undersized southpaws with none. That is where this story comes in.

"I like these pitchers you've got," said Henry to Mike Barnes, manager of the Terre Haute club in the old Central League, one night in April as the league schedule was being broken open. "Nice big husky boys, all of 'em. Plenty o' smoke."

"Yeah," grunted Barnes. "Lots of speed. Nothin' but speed. Too much of it."

"How d'yuh get that way?" demanded Henry. "Speed's like beer and money. Never was too much."

"H'mph!"

"What else d'yuh want?" Henry pursued.

"Well, we need a left-hander," vouchsafed the manager.

"Not just because he's left-handed," declared Henry. "I can't see this stuff o' carrying a wrong-hander simply because all the other boys slings with the hand. For me, gimme these big guys that enough heft into the ball to burn the old l I like to feel my fingers sting."

"We're not payin' pitcher your old bones, but to win a pennant," rejoined Barne

"Well, you take it from more my hand burns the mo we'll win, 's all I gotta say."

That ended the discussio time, but the subject was Barnes constantly longed f hander, but Henry concent expert abuse on the cubright that crowded the Tots' be ready he was looking for his prospect for the big time. coaching, cajolery and cu general level of pitching beg and the Tots rose with it in centage column. Henry's was red twenty-four hour now, and his blood was wa forgot all about left-hander

"Henry, I've got him," Barnes one afternoon in the second week in June.

"Who?" Henry had lost cion of the manager by this

"Why, that left-hander huntin'. Who did you s'pos

"Oh," said Henry. The w out of his sails. "Oh, yeah."

"Mebbe he's the goods!" declared.

"Mebbe," said Henry "What's he like? Big?"

"Well, not so big."

"H'mph, little guy!"

"Not so little, either."

This confirmed Henry's fears.

"I think," Barnes hastened "that he may be another Dick

"As to size and left-hand mebbe," Henry grunted. "B have to show more than that like this Kerr. Where is he? have a look at him."

"Well, I told him we'd g a try," said Barnes. "But he feelin' well. Hadn't ate much so I bought him a good meal him along home to Terre Haut him to get a uniform and w at the park, and we'd give chance when we got home."

Henry grew a grouch befo left Wheeling. It developed and by the time the club reached home he was ready a bat in two. It looked as if the waiting southpaw for mangling when the team pulled in. The boys hurry from the train to the park and rush into the forms, so Henry had no opportunity to look over the But the respite ended next day.

"Hey, look out there!" Henry yelled during m practice. "I'll beat yuh to a whisper! Whassa big steppin' on 'at mitt?"

He scowled heavily at the offender, who proved to new pitcher, busy playing hi-lo with half a dozen me of the team.

"I'm sorry," said the boy. "I didn't see it."

"You'll be worse'n sorry in a minute," Henry g back at him.

"Kid didn't mean anything," interposed Barnes. you'd give him the once-over to-day, Henry. Mebb not ready yet, but you can get a line on him."

"Give him a life line," Henry replied. "He's ov head in this league. I can see that right now."

Barnes sent the youngster out to pitch in b practice, which is no test of pitching ability. Eve Henry whaled out a few nice line drives, but wa appeased thereby.

"Not there, Mike," he declared positively. "H got a thing."

"Give him a chance," the manager answered. "W got to get a good left-hander some time. Might as keep tryin'."

That afternoon Henry, warming up the pitchers, ca a few from the new candidate. Instead of working him

Friction meets its master

FRICTION is the unseen enemy of production in every plant in the world. There can be no mastery of friction save by Correct Lubrication.

The Vacuum Oil Company, for 56 years the world's leading specialist in lubrication, operates on this principle:

First: to scientifically analyze the correct lubricating requirements of every engine and machine used in modern industry.

Then: to manufacture, specify and supply the correct oils to meet those requirements.

Due largely to the wide acceptance of this Vacuum Oil principle, the old thoughtless assumption that "oil is oil" now stands universally disproved and discredited.

Protect your machinery. Speed your output. Ascertain from the Vacuum Oil Company your correct grades of lubricating oils. Only in this way can you be *sure* that friction will meet its master throughout your entire plant.

Barrett Everlastic Roofings

Colorful Roofs are no longer a luxury—

It was but a few years ago that artistic colorful roofs were found only on the homes of the wealthy. Their cost made them a luxury beyond the reach of many people.

Today the most modest cottage may boast a roof every bit as attractive as that of the most pretentious residence. For a roof of colorful, durable Barrett Everlastic Shingles is a land-mark of beauty—an investment in economy.

The mineral surface which colors these shingles a soft, fadeless red or green, also increases their durability and resistance to fire; while a "seal-back" of special waterproofing compound protects the under surface from the injurious effects of air and moisture.

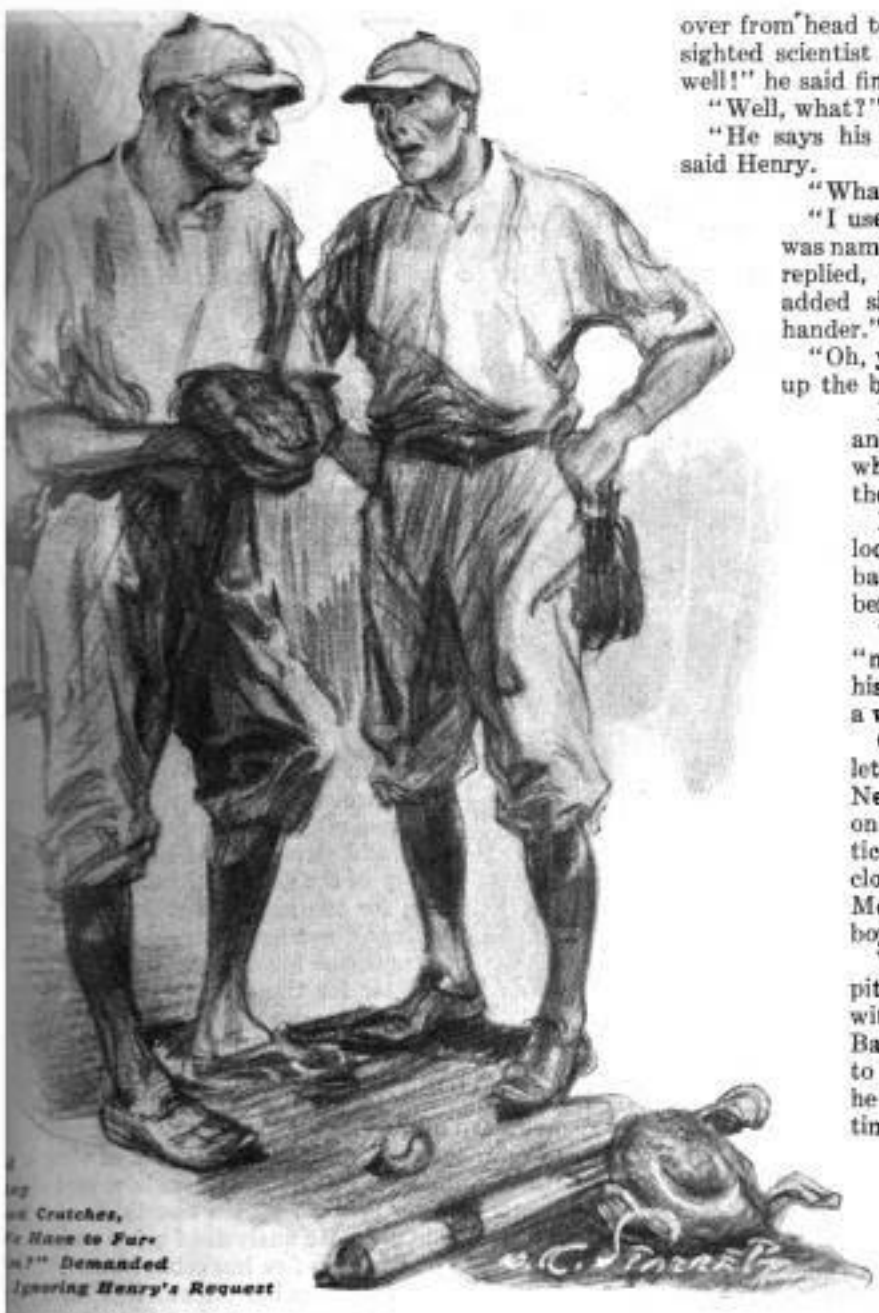
Besides four forms of shingles, Barrett Everlastic Roofings are made in two kinds of roll roofing. These are described below. *Be sure you get a Barrett Everlastic brand.*

Your Choice of Six Styles

Everlastic Octo-Strip Shingles. A new Everlastic Shingle that is the latest development in the strip shingle. Beautiful red or green mineral surface. Made in a form that offers a variety of designs in laying.

Everlastic Multi-Shingles. Four shingles in one. Made of high grade waterproofing materials with a red or green mineral surface. When laid they look exactly like individual shingles. Fire-resisting. Need no painting.

Everlastic Single Shingles. Same material and art finish (red or green) as the Multi-Shingles, but made in individual shingles; size, 8 x 12¾ inches.



Everlastic Giant Shingles. Identical in shape with Everlastic Single Shingles but made considerably heavier and thicker. They are "giants" for strength and durability.

Everlastic Mineral-Surfaced Roofing. The most beautiful and enduring roll roofing made. Surfaced with everlasting mineral in art-shades of red or green. Requires no painting. Combines real protection against fire with beauty. Nails and cement in each roll.

Everlastic "Rubber" Roofing. This is one of our most popular roofings. Used throughout the world. It is tough, pliable, elastic, durable, and very low in price. Easy to lay; no skilled labor required. Nails and cement included in each roll.

...Crutches,
...Have to Furn...
...?" Demanded
...gnoring Henry's Request

(Continued from Page 36)

...vented his accumulated spite and grouch of ten ... gave the boy a veritable third degree and a col... rolled in one. He yelled for speed, and then ... asked for a curve. He demanded to see the boy's ...en declared he'd called for an inshoot. He called ... ball three times in a row, and swore up and down ...d thrown him nothing but straight balls. All the ...s shooting the ball back at the boy with all the ... old right arm. He fired high and low, according ...y was bending over or reaching up. He shot to ...r the other, always almost out of reach. When ...d exhausted his fiendish ingenuity he threw down ...nd waved the boy to the bench.

...went to the water bucket for a drink and was ...y silent. Barnes knew Henry's game, but saw no ... of ability in the boy. He realized that as far as ...s concerned he might as well turn the little fellow ...ut he decided to postpone breaking the sad news ...e and try him again.

...hance came early. Evansville's Little Evas, a ...crowd, drove two of the Tots' speed boys to the ... the first three innings with an avalanche of hits ... Starting the fourth, with the game hopelessly ...mes told the new southpaw to go in. Henry shook ..., then acquiesced.

...ailure of the Evas to score was certainly through ...t of the little left-hander. And it was no fault of ...either, for the old fellow continued his hazing until ...inning ended, doing his worst to make the boy look ...arnes sympathized with the kid at the same time ...laughing over Henry Hammond's vicious prejudice ...left-handers generally and this one particularly.

...at's he got, Henry?" Barnes asked after the game, ...dressing shed.

...thing but his glove, and he borrowed it," the old ... answered.

...ess you're right, at that," Barnes agreed. "Might as ...ll him now. Hey, boy," he called, motioning the ...er to the corner where he and Hammond were ..., towels in hand. "I've just been talkin' to the ..., here, and we—uh—that is, I—what did you say ...ame was?"

...y showed nothing but contempt for the proceedings ...this point. When Barnes asked the question the ...cher was rising from rubbing his feet, and looked ... boy.

...Cormick," said the boy. "Charles McCormick."

...Cormick—Charley McCormick?" repeated Henry. ...nked and shook his head. Then he looked the boy over from head to foot, staring at him as a near-sighted scientist stares at an ugly bug. "Well, well!" he said finally.

"Well, what?" asked Barnes.

"He says his name's Charley McCormick," said Henry.

"What of it?"

"I used to know a pitcher once that was named Charley McCormick," Henry replied, speaking slowly. "But," he added significantly, "he was a right-hander."

"Oh, you go to, yuh big stiff!" spoke up the boy deliberately.

He turned away from the pair and stalked back to the bench where he had been dressing when they called him.

Barnes, holding back a grin, looked at Henry, and Henry looked back at Barnes. It was a minute before Henry broke the silence.

"You know, Mike," he said, "mebbe the kid will do. I like his looks. Lemme work with him a while before you decide."

Old Henry Hammond wrote a letter that night to a friend in the New England League. From then on a close observer might have noticed that the ketcher was keeping close scrutiny on young Charley McCormick. He quit razzing the boy.

When he was warming up pitchers he took McCormick along with the rest. Twice he asked Barnes to send in the left-hander to finish games and treated him as he would any pitcher. All the time he seemed to be studying the youngster. One morning ten days later he called at the post office and received a letter from the friend in the New England League. He read it in a daze, and reread it so many times he was late for forenoon practice. At the park he asked Barnes to let him work with the boy a while.

"Say, did you bring your own crutches, or do we have to furnish 'em?" demanded Barnes, ignoring Henry's request.

"What's eatin' yuh?" Henry countered. He had no idea what was on the manager's mind.

"I've tumbled, 'at's all."

"If I fell for all you do," Henry retorted, "I wouldn't brag about it. What's eatin' yuh?"

"Your name's Hammond, and you knew a pitcher named McCormick," said Barnes significantly, eying Henry closely.

"Oh, that's it!" Henry laughed in relief.

"That's plenty, ain't it?" Barnes demanded. "Listen! I'm glad t' know yuh. I've heard my dad talk about you. Many's the time he's traveled from here to Chicago, from here to St. Louis, from here to Cincinnati even, to see you and McCormick work, and he put in the rest of the time talkin' about yuh. Never occurred to me you'd still be alive."

"Where'd yuh get that stuff? Your dad? It was my gran'dad he saw," Henry interrupted, concealing a blush under his leathery hide.

"I know what I'm talkin' about. I'm glad to know yuh, for old time's sake. But, say, I'm runnin' a ball club, not an old men's home." He glared at Henry in resentment.

"Well, I can't say much for the rest of your ball club, but there's nothin' wrong with your ketchin' department." Henry glared right back at the boss, feeling he was on solid ground here. "If you'll say you're not satisfied with the ketchin' you can have my job right now. See?"

Barnes refused to say anything, partly because Henry was holding up his end on the field, and partly for the reason he was more than holding up his end in a business way. At that moment Henry had six weeks' pay drawn in advance, and he'd kept one green kid ketcher to warm up the pitchers. This boy could not begin to ketch a game.

"Forget 'at stuff about my age," Henry continued. "You should worry about how old I am—when I fall down on the job. But say, lemme work with this kid, will yuh?"

"Did yuh tell him who yuh are or who he is?"

"Ain't told him anything, and won't," Henry declared positively. "None of that sloppy sentimental stuff in mine!"

"I'll tell him—I'll tell the papers too. Look at the publicity we'd get!" Barnes exclaimed. "Big crowds all over the league!"

"You do," said Henry firmly, a gleam in his eye, "and I'll beat yuh to a whisper! This is my party and I'll do all the talkin'."

Barnes held mental reservations about being beaten to a whisper. Next day he told the sports editors all he knew and had ever heard about Henry Hammond, of the famous old battery, McCormick and Hammond. Attendance at the Tots' games grew overnight, old fans flocking out to see a friend of their youth perform behind the bat. It did not occur to Barnes to mention young Charley, for he did not connect the two McCormicks. However, that is getting ahead of the story.

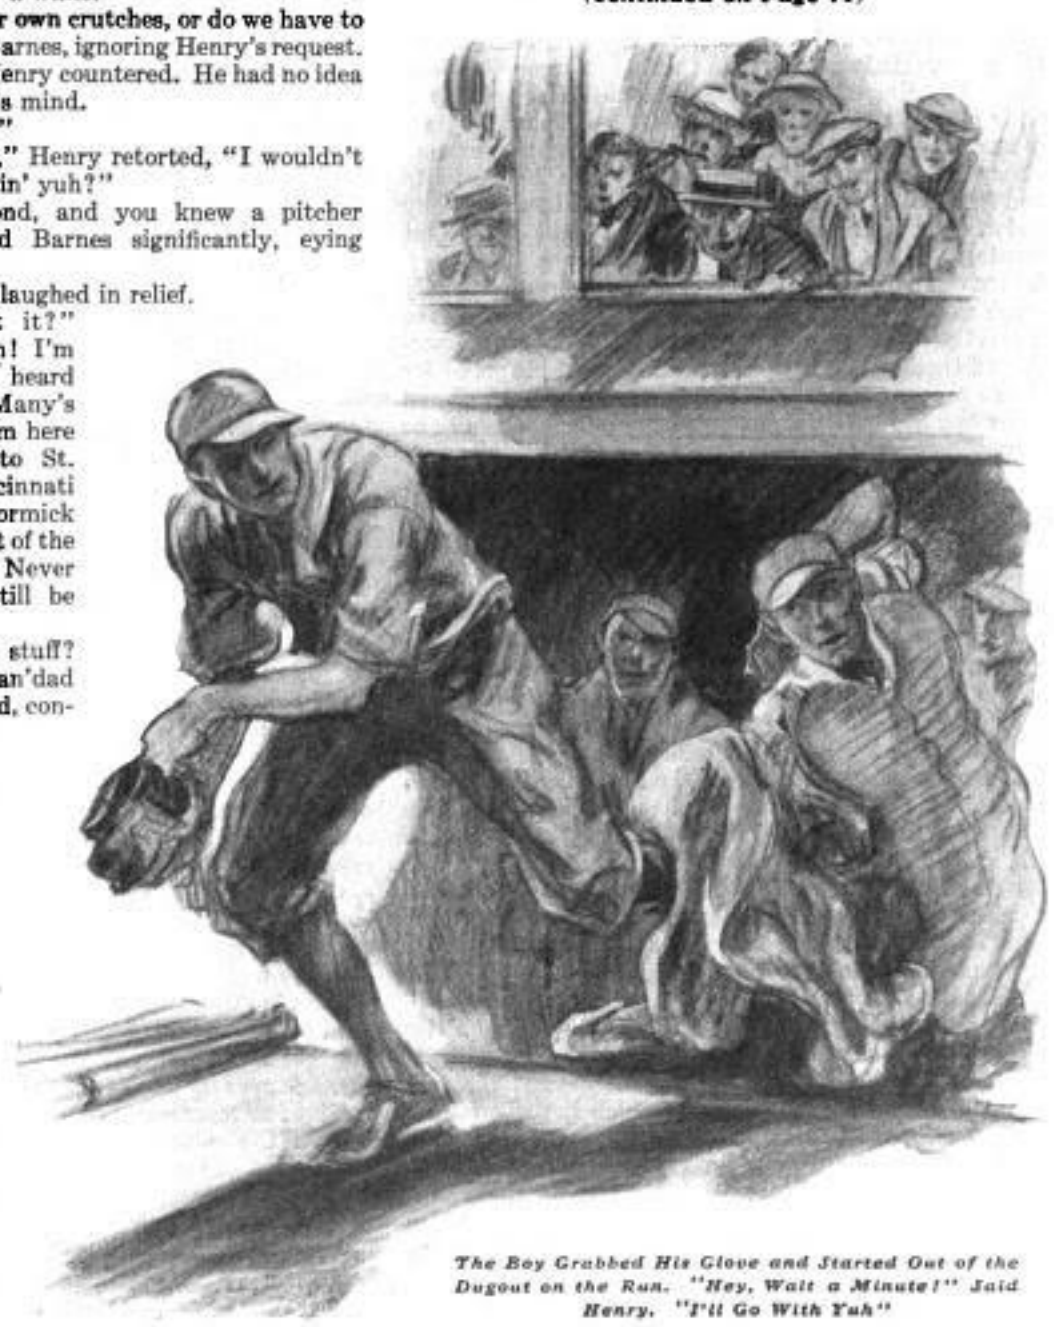
"Hey, kid," Henry called to the boy as they were throwing the ball back and forth, "how old are yuh?"

"Twenty-two," McCormick grunted, putting his weight into what he intended to be a fast ball.

"You're lyin'," said Henry, taking the shot in his gloved hand and tossing the ball back leisurely.

"Yes, I am!" growled the boy, shooting another one after a short windup. "How d'yuh know?"

"Because you're not throwin' any harder'n a nineteen-year-old kid," said Henry. "But don't get smart with me! I'll beat yuh to a whisper!"



At this McCormick put on the last ounce of strength he had and whirled through a fast ball that would have done credit to a high-school youth. Henry took it in his glove as easily as if it had been tossed.

After five minutes he said, "Not even makin' 'em tunk in the mitt."

"Old stuff," rejoined McCormick. "You can make a slow ball tunk if you wanta, and keep a fast one from it."

By way of answer Henry dropped his mitt and took the next one with his bare hands. McCormick, resenting this

BALANCED WORK

By Woods Hutchinson, M. D.

DECORATIONS BY GUERNSEY MOORE

WE ARE informed that work is a punishment for sin. For two bites out of a wormy apple was the sentence pronounced upon our first parents, "In the sweat of thy face shalt thou eat bread." A terrible and far-reaching penalty for so tiny a crime, think most of their descendants around the hour of seven A. M.

But though the burden of work is laid upon our reluctant shoulders by the sternest of necessities, because we need the money, there are certain redeeming features about it. The sweat of our brow not merely earns our bread but gives us a splendid appetite for eating it. No one knows what real pleasure in life is who doesn't work—at least part of the time. And if we will make a game out of it, see how many points we can win each day, we can get a good deal of pleasure out of work itself.

The first thing needed is to tackle our job with our brains and our gumption, instead of our backs and our hind feet; second, to remember that the new physiology tells us that we never stop growing but keep right on improving until we are getting ready to die; third, to hang the motto over our desk or bench or kitchen table, Most Accomplishment for Least Agony.

Some cynic declares that 5 per cent of people think, 10 per cent think they think, while 85 per cent would rather lie down and die than think. And if the man from Mars should come down and gaze with thoughtful and dispassionate eye upon the way men labor, from the rising of the sun until the going down of the same, he would be strongly inclined to agree with the cynic. There are few things we do so stupidly and brainlessly as work. The average worker is given no choice in the matter, no chance to exercise his intelligence. He is not hired to think, but to obey orders, as some captains of industry delight to inform us. He is simply offered a job at so much per, for so many hours a day and week, often the highest number that the sense of decency of the particular community can be made to stand for. So he has no chance to consider how his really wonderful powers can be harnessed to the very best advantage.

There was a day when the average employer used simply to grab as many hours a day of the worker's time as the law and the labor unions and public sentiment would permit, and then try to drive him at the top of his speed for as large a proportion of his time as was possible. Small wonder the worker sometimes stalled and soldiered! The employer was hardly to blame personally. He didn't mean to be so stupid and greedy; it was just a custom of the trade.

Common Sense in Eating

BUT the senselessness of it! Just think what would happen to a horse trainer if he trotted or galloped his promising colts just as far and as fast as he could every day before the race. Yet we are supposed to be training our young men for the sixty-year race of life, instead of a dash of a few short furlongs. But now, thank heaven, a change is coming over the spirit of the working world.

The new point of view is that the human machine is so far the finest and most wonderful machine in the whole wide world, turns so much more of its fuel energy into work, is so infinitely more resourceful and elastic than any other make yet invented, not only making its own repairs but building itself bigger and increasing its horse power and capacity indefinitely, that it is a shame not to give it every possible favoring condition and facility for doing its best that the wit of man can devise.

And this recognition is made just as frankly and fully by employers and their combinations as by workers and their organizations. Nearly a third of our great industrial plants are already on the eight-hour day, which is the first and high outward and visible sign of this inward and spiritual grace, or attitude. Business is no longer merely business, but humanity and good sense and scientific intelligence as well. For the whole movement is based on and driven irresistibly forward by modern science.

Suppose then that a man has a reasonable degree of control over the times and tensions and hours of his work, and over the conditions which enable him to develop the very best that is in him, either by being on his own or under a sensible, broad-minded employer with the modern point of view, what can he do to make the most of himself and his powers? How can he make himself of greatest use to his day and generation?

How can we fuel and lubricate and run and rest and avoid breakages in that magnificent human machine of ours, half dynamo, half gas engine, so that it can run at full speed with least friction, without hot boxes, or burning of its bearings, breaking its cogs or short circuiting?

First and most fundamental is the matter of fuel. It can be summed up in one sentence: The best of everything is none too good to work on. There have been wide and windy differences of opinion on the problem in the last thirty years. But the wind has been pretty well squeezed out of the different theories, particularly in the fierce red wine press of war, and the almost invisible remnants—remainders of the no-meat and low-meat fads, the anti-sugar, anti-white-bread, anti-canned-food and anti-cooked-food crazes and the chew-chew insanity—have been shot into the ash barrel.

The air is cleared of dust and the situation greatly simplified: Starches—that is to say, bread, biscuits, potatoes, cereals, cakes and puddings—for mere horse power; meat or protein in the form of beef, pork, mutton, fish, eggs, game and milk for repair material and growth, and for drive, pep and resisting power against disease; fat for brain work; the marvelously important but still mysterious vitamines of present popular fame, as contained in fruit, green vegetables, salads, tomatoes, butter and cream, for lubricants and growth regulators.

Cut down on any of these Big Four and the machine loses efficiency and begins to grind itself up at once. Cut out starch, and horse power falls; cut out or cut down too heavily on meat, and tuberculosis, pellagra, as now threatened in our Southern States from cotton reverses, and one kind of beriberi develop; go short on the vitamines, and you get scurvy, anæmia, chalky teeth, stunted growth, myxœdema and other forms of disordered metabolism.

Give fair representation on the table at every meal to all four of the classes, not forgetting minority representation—most of the starches, next of the meats or proteins, then of the reds-and-greens, last of the fats and oils. Mix according to taste, and engulf according to common-sense, healthy appetite, which abundant experiments not only upon man but upon animals have shown to be a better and safer guide to health and efficiency than the most elaborate and machine-made diet lists of the so-called hog cafeteria which permits pigs to choose their own from six or seven self-feeding ders of corn cotton chopped and so for and cha gives b growth in time than skilled measure weighed Exclusive diets are only in sickness; tween ou outside tes, of precious little use even then. We a just as we sensibly please, and living longe less frequently and uncomfortably, and taller and stronger and happier than eve history of the world before.

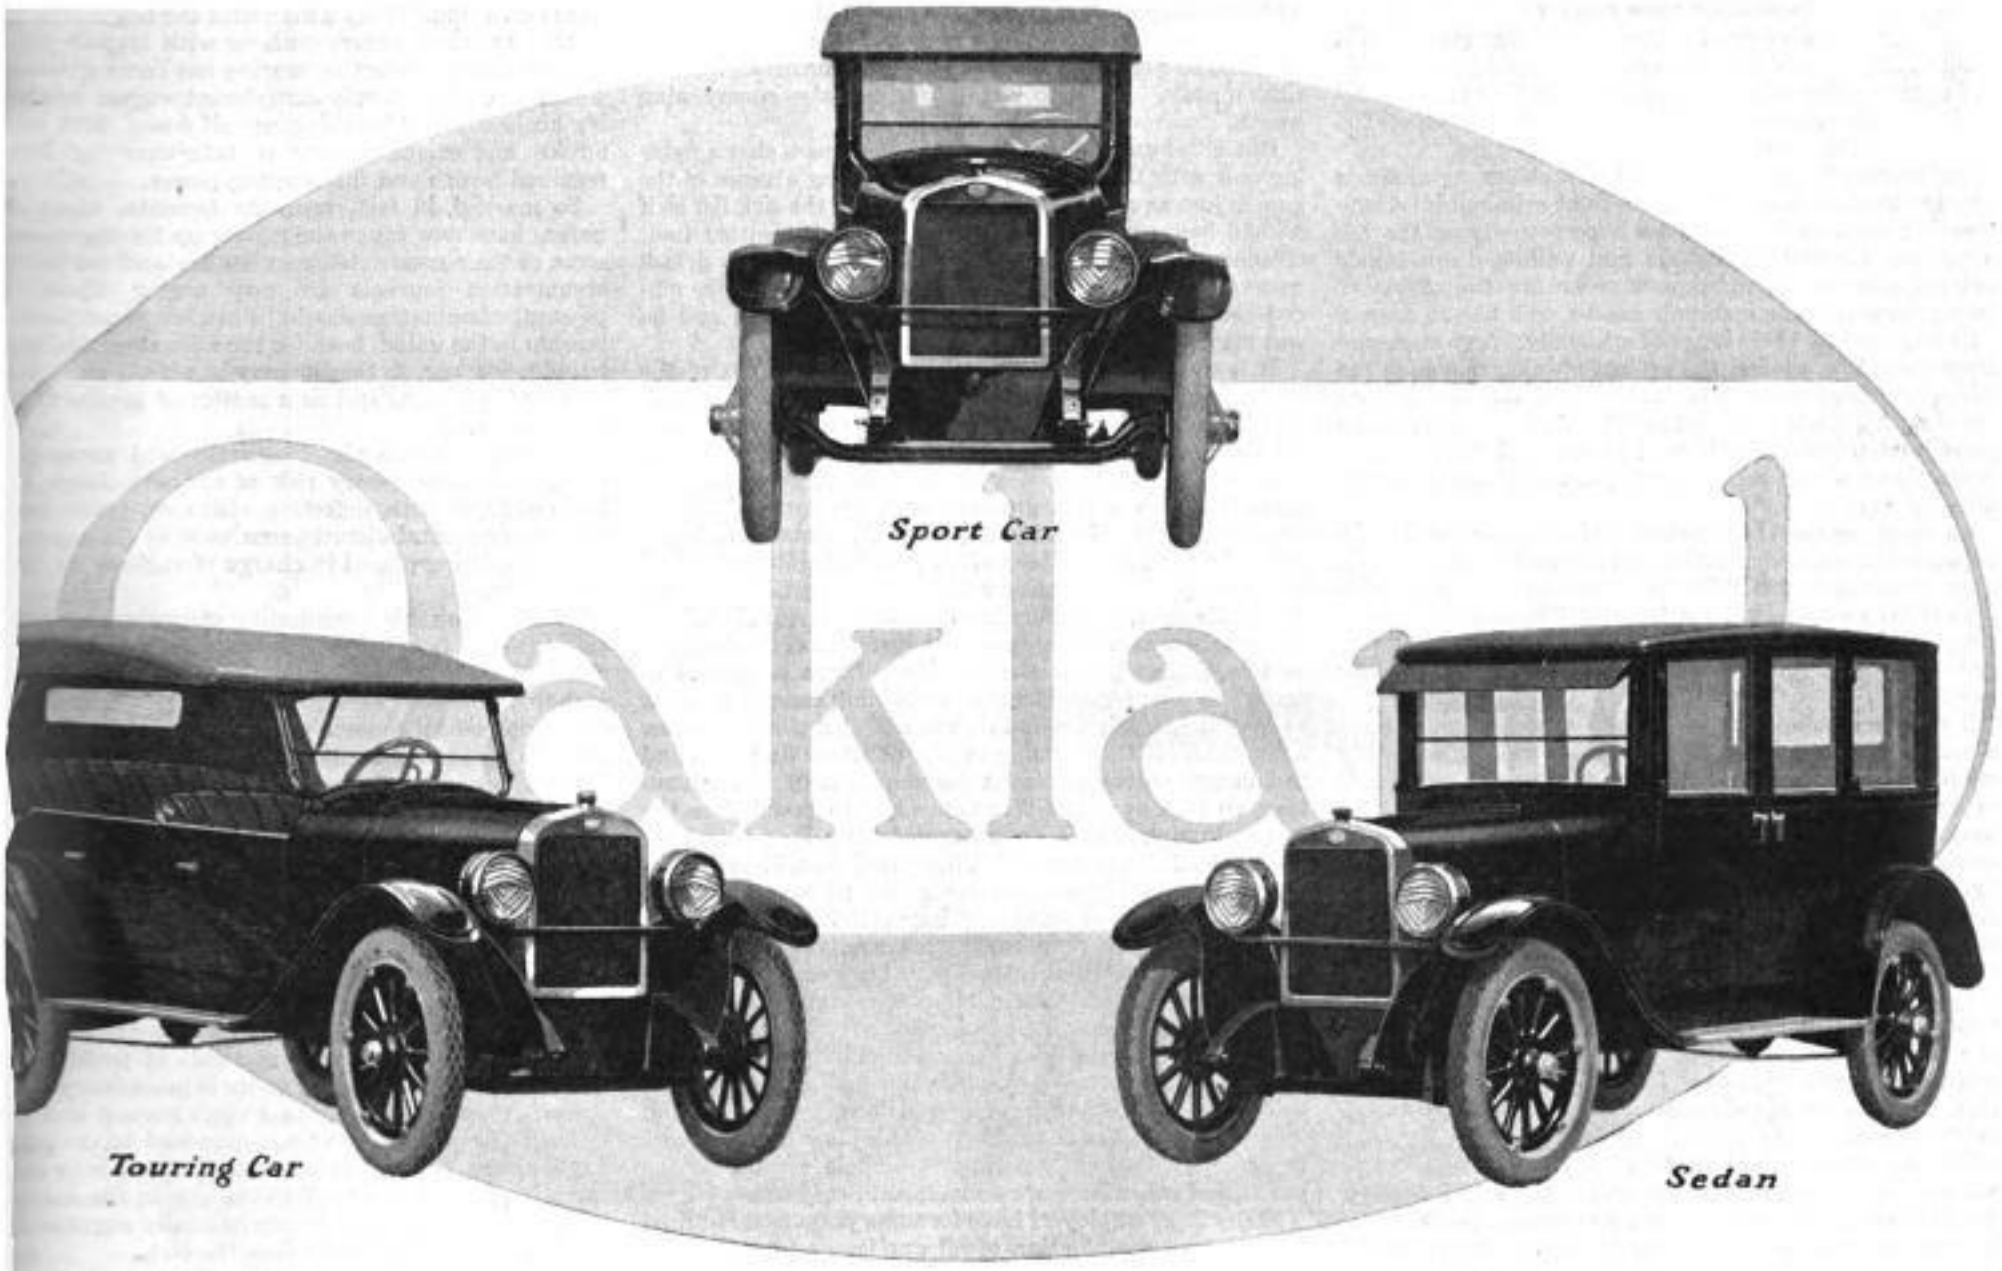
As for the size and distributions of t coalings, three square meals a day is the arrangement for the cooks, but four or is better for the eaters—a midmorning milk and crackers and a four-o'clock tea is at night or a pantry supper at nine if the meal is in the middle of the day. As to t main meals, they should all be square, with one trimmed off for breakfast and two for lunch.

On another matter the new point of view is ag tinctly different. The most important part of our water—partly because we are two-thirds water ou consisting in ultimate analysis of a few pounds of and salts dissolved in five buckets of water. We ar ing brine tanks, storage batteries on legs; every life takes place and can take place only under water, our tissues need plenty of elbowroom and sea room ever they want to do any real work. The more acti the more vitally important they are the more wate have in them. Our bones and our skins contain onl 25 to 50 per cent water, while our liver, our di glands and our brains are from 80 to 90 per cent while the most highly explosive living tissue on ear electrical organ of the torpedo ray, is 92 per cent "Sap-head" should no longer be a term of reproa

Sickness From Infections

WHEN we go too long between drinks we dry die. It's always healthy to drink pure water ever you feel like it—on rising in the morning and o to bed at night, at meals and between meals, wint summer, particularly the latter, engulfing not merely but gallons a day in hot weather.

Now that the machine has been properly filled and cated, with provision for repairs, comes the ques keeping dirt and grit out of the machinery. By commonest and most serious grit that wriggles in bearings of our human machine is an extremely fi penetrating powder made up of tiny living particles germs.



They are so infinitesimally small that it take men and a microscope to see one, but they are of damnable gumminess and grittiness when they lodge human bearings. Tiny and apparently trivial as th they smash up and send to the scrap heap nearly 2 pe of all workers the world over every year, and keep 5 to 10 per cent continually laid off through sickne

That this serious drain on productiveness is due not merely to infections in general but to infection spread only indoors is shown by a recent report Public Health Service, covering about 50,000 wo scattered all over the United States. The number per thousand who are laid off for a week or mo account of sickness of all kinds, each month ranges 56 in September to 109 in December, 275 in Januar 326 in February! After which it falls steadily and r through March, April and May, reaching the summe of a little over 60 in June.

The significant point is that nearly 85 per cent o tremendous sickness loss, affecting one-third of the force during January and February, is due to infec while in July, August and September barely one-half vastly lower rate is caused by catching diseases. In words, the sickness disability rate from infectio

The New and Guaranteed Oakland Is Proving its Unusual Worth

One of the most significant recent developments in the automotive industry is the New Oakland Six with its special written guarantee.

The New 6-44 is not merely a new model but a new and advanced motor car in construction, performance, appearance and value.

In the severest experimental tests the New Oakland Six overhead-valve engine has shown new power, new smoothness, new reliability, and unusual economy in operation.

The new style bodies mounted on the oversized chassis reveal a beauty, a comfort, a completeness and refinement of appointment that are positively a revelation.

Increased Oakland sales prove that Oakland performance reveals new merit, new and permanent dependability.

One example of the permanent dependability Oakland gives is its 15,000 mile written performance guarantee which goes with every New Oakland Six.

This is the trustworthy New Oakland. At a price amazingly low—a price never before equalled for a six-cylinder car of such sterling quality and performance.

See the New Oakland—the quality six of the year. It will raise your standard of what you can get in a motor car this year at this price.

Oakland's 15,000 Mile Performance Guarantee

"Should the engine in this car fail to perform properly due to the presence of excess oil in the combustion chamber (commonly known as 'oil pumping' and evidenced by oil on the spark plugs) the Oakland dealer who delivered this car to you will remedy the cause of the trouble *without cost to you for either material or labor.*"

PRICES AT FACTORY

(Continued from Page 40)

January and February is about eight times as great as it is in July, August and September. The months of open-air and open-window life are more than five times as healthy as the months when we live and work indoors with all the windows and doors shut.

Unfortunately in the ventilation problem no chain is stronger than its weakest link, and one criminal idiot who doesn't believe in fresh air and is perpetually on the job going round shutting windows and pulling down blinds will trample on the rights and neutralize the efforts of twenty sane sensible men and women who like to draw a little oxygen into their lungs occasionally. Any man who shuts a window, against the protest of other people in the hall or building, ought to be, at the third attempt, thrown out of it. No single step that could be taken would save so many human lives, especially of women and children, as a dozen or two of such righteous vengeances at the beginning of every winter.

As one of our most famous tuberculosis experts and highest authorities on ventilation once complained to me in utter discouragement: "Doctor, I can't even keep the windows in my own hospital wards open! There are forty perfectly good and sufficient reasons why a window should be shut, and not a single self-acting one why it should be open!"

If you want to keep your machine off the scrap heap for as many decades as possible and running swiftly, smoothly and tirelessly, have your windows open day and night, and for heaven's sake keep at least ten or, better, twenty feet away from every human being who is showing visible or audible signs of engine trouble, coughing, sneezing, grouching. Many up-to-date great offices and industrial plants have their entire force given the once-over by the official nurse or the company doctor every morning, and everyone who looks out of sorts is set aside for the third degree, and if he has a temperature is sent home at once to stay there until it comes back to normal. They find that within six months they have cut down their absentee rate on account of sickness 50 to 75 per cent, and at the same time greatly diminished their percentage of snarls and mix-ups and mistakes and lost orders.

For the blackest and fuzziest fly in the apothecary's ointment, the sharpest-cornered and the scratchiest cinder in the eye of a great industrial organization is the mechanic or clerk or boss who is just coming down with a cold or other more serious infection, and dropping monkey wrenches into the machinery or adding up the wrong totals or giving contradictory orders and bawling out everybody for the mistakes he has made himself.

Dentistry That Pays

EVEN such an apparently trivial and at first sight chiefly ornamental defect as blackened and decayed teeth is now recognized by intelligent managers as an important factor in business efficiency. Many of the large department stores and great office forces now have a company dentist with offices in the building, and require all their employes to have their teeth put and kept in first-class condition on the company's time, charging them just the expense of the materials actually used in the work. Not only so, but they refuse to accept applicants for employment until these repairs have been made if the defects are in a visible and conspicuous position in the mouth, or at least put well under way, for the cold commercial reason that the increased attractiveness of the selling force raises the total of sales, while the prevention of toothaches and gum boils distinctly diminishes the number of days' absence per month on account of sickness.

The same fact was proved up to the hilt by the experience of the Army upon a scale of millions. At first sight it seemed little short of ludicrous to reject a sturdy, upstanding would-be fighting man simply because he had two or more hollow or ulcerated teeth. We felt strongly inclined to sympathize with the disgust of the square-shouldered six-foot Highlander who, when rejected for this trivial cause, glared and rumbled at the army surgeon: "Mon, yer makkin a turrible mistak. Ahm no wantin' to bite the enemy, ahm wantin' to shoot um!"

But bitter experience in the field has shown that a fighting unit with the toothache or a throbbing abscess of the gum is just as effectively disabled and on the sick list as if he had had a bullet through his left hand or either foot. Of course later in the war they no longer rejected for dental reasons, but simply placed the recruit in charge of the official camp dentist until his defects were repaired and he was made as good as new.

It is an interesting illustration of the workings of the professional military mind that when a crack Canadian division arrived in England in the first months of the war with a complete and fully equipped modern staff of dental surgeons, the English War Office ordered them back to Canada at once, on the ground that it was not advisable to bear the expense of transportation and maintenance in the zone of war of individuals of no practical military value! It was only upon the most urgent representation of Canadian statesmen, and offers from private individuals to bear all the expenses of the support and operation of the despised unit in England, that the dental staff was permitted to accompany its regiment into the training camps, where it so overwhelmingly proved its value that a perfect clamor arose from all the training camps at home and base and rest camps in the war zone for similar help and advantage, so that even the War Office had to bow before the storm, though it even then haggled for a long time over giving the dental surgeons military rank as officers.

Speaking of physical examinations as a condition of employment suggests another important aid for keeping one's working powers in healthy balance. Go to your family physician at regular intervals, at least once a year, and let him give you and your habits a thorough going over to discover beginning or threatening hot boxes or other engine troubles, and advise you how to avoid them. In other words, pay him to keep you well, instead of for trying to tinker you up after you have broken down. So obvious and innumerable are the advantages of this plan that I venture to prophesy that in a decade the whole method of the practice of medicine will be reversed to conform to it.

Many large employers have for some years past required full physical examination of all applicants for work and reëxamination whenever the employe is changed to another department or promoted. In the beginning these examinations were usually opposed and looked upon with suspicion by labor unions, on the ground that they would be made an excuse for shutting out union members or dismissing employes who for other reasons the boss didn't like, or dropping men from the pay roll when they began to show signs of breaking down and thus avoiding liability in the way of pensions or workmen's compensation.

But fortunately their practical result has been just the reverse of this. Very few applicants have been refused on account of physical defects discovered, still fewer employes dropped on account of approaching breakdown. But the findings of these examinations have been utilized in a broad-minded and kindly spirit to fit or change over men into the particular jobs or kinds of work for which they were best fitted. Many a man with the beginnings of disease or latent tuberculosis or with impaired vi one eye or with defective hearing has been given a p which he could not only earn decent wages without ing his health and breaking himself down, but with advice and encouragement to take care of himse regained health and full working power.

So marked, in fact, were the benefits, that the unions have now taken the matter up for themselv some of their most intelligent leaders and editors o organization journals are now urging that the physical examination should be made a condition of bership in the union, both for the advantage of the found below par, so that he may be placed in a posi recover his health, and as a matter of protection fellow worker.

The workers in a plant naturally and properly to running unnecessary risk of life and limb fro low employes with defective vision or poor hear nervous or mental disturbances, such as epilepsy or ing spells, being placed in charge of engines or dan machinery.

In the admirable community campaign against culosis which is being conducted at Framingham, M chusetts, under the leadership of Dr. Donald Arms a shop committee consisting entirely of workers largest industrial concern of the town of their own came to the management and requested that cases o tuberculosis in their fellow workers should be placed i toria, both to enable them to regain their health protect their families and their fellow workmen fro risk of contagion, the expenses of the patients to b out of sick-benefit funds to which both employe workers contributed.

Machinery and Brain Power

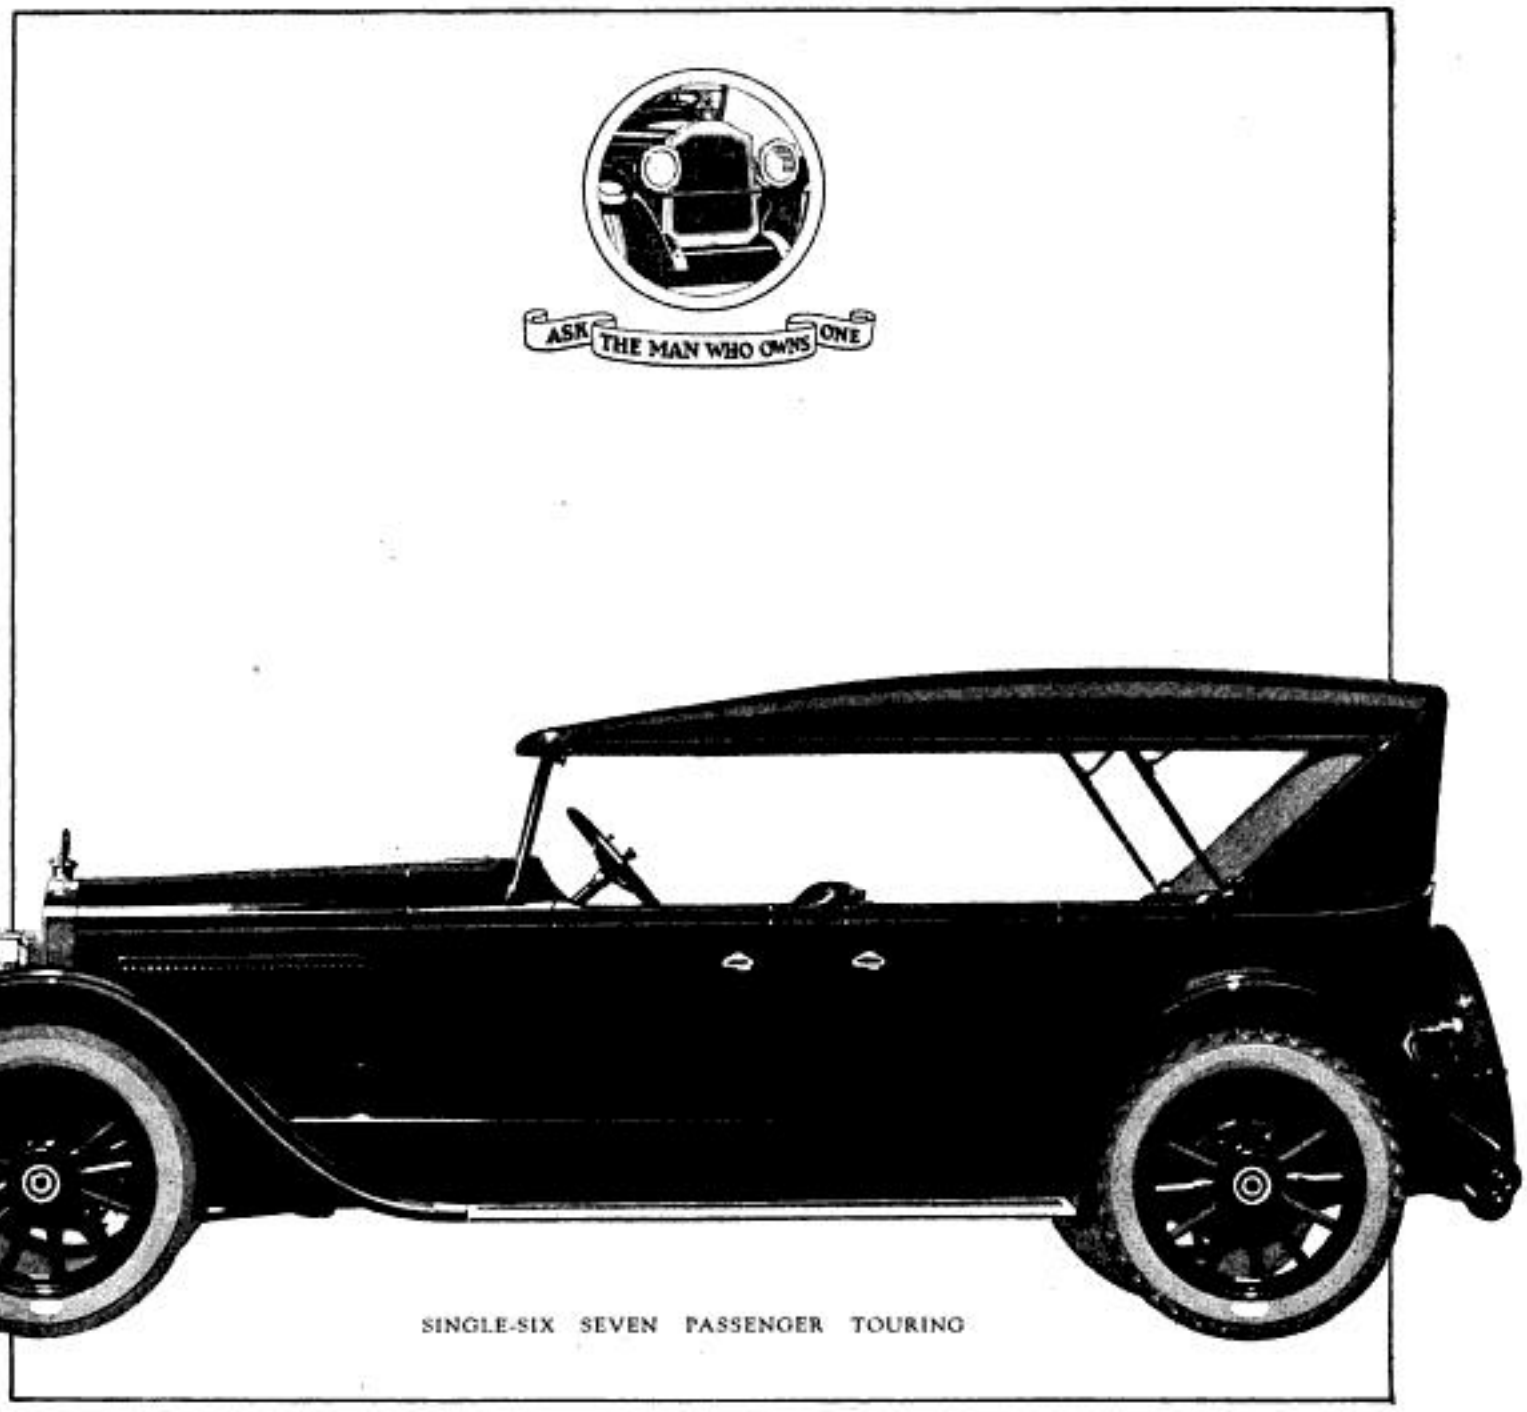
WE HEAR on every hand loud laments over the ening effect of machine methods of production intellect, of the dwarfing influence of machinery upon power. There can hardly be a more absurd and utt lusion. The machine worker is supposed to do nothi day long but drop a sort of glorified nickel into one extract it from another. Wind him up in the mornin he will press the button at mechanically regular int all day, while the machine does the rest.

I frankly confess that my own enlightenment was matter of yesterday, some eight or ten years ago. inspecting a number of Southern cotton mills, with a for hookworm among their employes, and the machi was so wonderful and lifelike that I became interested in spite of myself.

Glancing down the long line of spinning jennies their thousands of whirring bobbins and their hu tenders, I noticed gaps every here and there, and sionally quite a stretch of machines without any appa tender.

"Is it safe for those machines to run themselves wit watching?" I said to the foreman who was showing through. "Where is the man who is supposed to be ing that machine?" pointing to a vacant one jus front of us.

"There he is," said he, pointing to an agile little fe two or three machines up the line. "He'll soon be this way, and if anything was to go wrong he'd be on like a hawk."



"Why, can one man run more than one of these bobbin machines, which almost makes you seasick t to follow the whirl of its of spiders' threads?"

"Sure he can! Any nary chump after t months' training can run machine well enough, b good intelligent worker run two or three, and a cra jack like that man there, or six or even seven, an better work with fewer th

SINGLE-SIX SEVEN PASSENGER TOURING

EVERY hour of Packard history has been dedicated to the production of motor cars which should be beyond cavil or comparison.

It is Packard's high privilege, now, in this new Single-Six, to culminate these years of unique preparation by rendering a public service greater still.

Out of the wealth of Packard engineering and manufacturing experience has come a mastery of production which has resulted in value little short of revolutionary.

Packard has learned how to surpass itself—and still widen immeasurably the circle of Packard ownership.

For those who seek cars of the highest calibre, the value plainly expressed in these exquisite cars leaves literally no choice but Packard.

Packard dealers are demonstrating these new cars. Single-Six five passenger touring, $2485 at Detroit. New price of the Twin-Six touring, $3850 at Detroit

Jim Henry's Column

A Digression

I have a one-product mind. I shall always consider that the purpose for which I was produced was to show men how to enjoy shaving by doing it right—with Mennen Shaving Cream.

So it is with reluctance that I occasionally capitalize on the confidence which millions of converts must feel regarding anything I tell them, by discussing other products.

It is a peculiar fact that only recently has science concerned itself with bodily comfort. Our internal mechanism has always appealed to science as an attractive field for experimentation and research but things like itching, raw skin, prickly heat and baby rashes have not ranked as laboratory headliners.

Now my company has always specialized on comfort. It gave Talcum to the world. It freed men from old-fashioned shaving soap. But I am inclined to believe that history will record as Mennen's greatest contribution to the comfort of living, our miraculous Kora-Konia.

Kora-Konia is one of those things you have to find out about for yourself. I can tell you that it's great for sunburn, but you will never appreciate what I mean until you see the angry redness change to healthy pink, and the pain subsides.

I can assure you that it saves you from the torture of skin rubbed raw by damp clothing or chafing muscles, but you must shoot eighteen holes without a suggestion of irritation before you will understand.

But Kora-Konia reaches its pinnacle of beneficence on babies. A baby with plenty of food inside and plenty of Kora-Konia outside is at peace.

I feel some diffidence in discussing the matter, but through no fault of its own, a baby's skin is exposed to conditions which can only be described as deplorable. Kora-Konia places on inflamed little legs and other areas, a velvety film of cooling, soothing powder which clings for hours, protecting while it heals.

Kora-Konia is amazingly efficient for prickly heat and baby rashes.

A big tin costs 35 cents at druggists'. Send 10 cents for a generous sample.

(Continued from Page 42)

breakages than the one-machine man. We can't get enough of these three to five loom hands."

And anyone who watched for ten or fifteen minutes that lithe and agile little blue-shirted figure dancing and swaying up and down the line of his five machines, darting his fingers into the tangle of yarns and mending a broken thread with a single twist of his thumb and finger as swiftly and surely as a humming bird darting its beak into a flower would need no assurance that whatever else he might suffer from at the end of the day it wouldn't be thick-wittedness or brain stagnation.

It takes a great deal more brains and intelligence to run a machine, to keep it purring musically, to prevent and repair breakdowns, to steer it from chewing up and tearing into shreds the raw material fed to it, than it does to handle simply ordinary tools, such as 95 per cent of all workers had to use in that mythical Golden Age of craftsmanship of William Morris' dreams before the blight of machinery fell upon industry.

When the product of their toil reached such a level as to be possessed of beauty and capable of giving pleasure, then the joy of craftsmanship and the instinct of creation awoke. But such fortunate craftsmen, before the age of steam, were only a few in the hundreds—indeed, a handful in the thousands—and the overwhelming majority of the toilers during the ages of barbarism—which for 90 per cent of us ended only in 1830—delved in the mud and wallowed in manure, and heaved huge beams and heavy building stones into place with wooden levers and wet ropes, lived in filth and died in misery, and were worse fed and housed than the cattle alongside of which they worked and with which they were practically yoked neck to neck.

This is a plain, unvarnished picture of the real life of the Happy Villagers and the contented craftsmen of eighty years ago. If anyone doubts it I should be pleased to show him surviving samples of the same, in every country in Europe and in most states of our Union. The loss by the worker of his pride in craftsmanship and pleasure in his work since the coming in of machinery, so loudly and eloquently bewailed by long-haired and short-brained sentimentalists, particularly arts-and-crafts ladies of both sexes and a certain class of paid welfare workers, is one of the most imaginary of his troubles.

Twenty minutes cut off his working day and spent at the movies would recompense him for the whole of it and give him a chance to see and enjoy more beautiful things than he would all day long in the average factory. Besides, even supposing the things he manufactures are pretty, what good is that in his life if he can't afford to buy them himself?

How the Head Saves the Heels

Nor is the increased intelligence required in the worker limited to those palatial beehives of glass and steel which pour forth such marvelous and varied torrents of everything that the wit of man could devise or his heart desire, of whose toiling Vulcans one usually thinks first when work or labor questions are mentioned. It is equally necessary and indispensable in business life of every sort—in great executive offices, in insurance companies, in banks and department stores, in publishing concerns, in government offices, in the schools, in the professions—everywhere except in the courts, where the same brainless old formulas are still being droned over as two hundred years ago and all the chief authorities and rules of procedure are four to six centuries old.

Just consider what a tremendous part machinery plays, not merely in factories and mills but in every department of human toil and activity. The office errand boy no longer runs—figuratively speaking, of course—four or five errands in a morning; he telephones thirty or forty; the clerk or secretary no longer laboriously transcribes letters and bills and notices in longhand; she clicks them off at forty miles an hour on the typewriter and multiplies them into thousands by mimeographs or multigraphs, besides taking her dictation from a talking machine. The grocer's clerk would be utterly lost without his cash register, and the bank clerk without his adding machine and check-writing machine. Go into the executive offices or the cashier's department of any big business concern and you will find yourself surrounded by scores of the most mysterious, complicated-looking machines, of which you can hardly even guess the uses.

Practically every member of our city working forces and office forces the land over has become a machinist. It may not call for the very highest degree of intelligence to run these business machines and avoid snarls and stoppages and breakdowns, but it certainly does require a great deal more than the old brainless, routine handwork with pen or pencil or gelatin pad. Even telephoning is a matter of ears and tongue—and temper—and our supposedly highest human accomplishment, speech, instead of being merely a strain upon our hind feet, as running errands was. In a physiological sense we have raised the general average of human intelligence at least 50 per cent since the coming of steam. Or to put it in another way, we have become three-fourths brain workers—that is to say, the parts of us which we chiefly use in our work are our brains, our nervous systems, our eyes and ears and the smaller and more delicately balanced groups of our muscles, particularly those of our fingers and hands.

Nervous Strain

I have dwelt upon this point at some length because it is of such tremendously vital importance in any scientific view of this problem to realize clearly that two-thirds to three-fourths of all those of us who work draw chiefly upon our brains and our nerves. And these sensitive and exquisitely balanced mechanisms in the first place simply will not stand the strain of the old twelve and fourteen hour muscle-working day. In other words, our brains and nerves to-day are fatigued and utterly worn out in little more than half the time that our muscles used to be fifty years ago.

Secondly, and equally vital from a practical point of view, it is precisely our brains and our nerves which are the most highly educable and capable of the highest improvement of all the tissues in our bodies. These two facts alone explain the apparent paradox that we workers in modern industry of every sort and class can train ourselves or be trained to do far more work in less time, provided we work short enough hours to leave us abundant time for rest, healthful recreation and education and development along broad and happy lines, as well as those of our work.

That workers at modern machines whose strain falls most heavily upon the brain, the nerves and the senses simply cannot stand the length of medieval working day is almost obvious, but a few illustrations may be of interest. One of my colleagues who was keenly interested in industrial hygiene told me that some years ago he had just been back for a visit to his old home town. The town had changed from a largely agricultural and small trading community into an industrial one by the coming of a big manufacturing plant. On talking with his former friends, running over the list of their boyhood acquaintances and school fellows and inquiring what had become of them, he learned that first one and then another, and then two or three more had gone to work in the factory and gone crazy. He was naturally deeply shocked and made careful inquiries after these unfortunates among their families and friends. He found that what had really happened was that these youngsters had flocked eagerly into the factory, attracted by the novelty and good wages, and shorter hours as compared with work in the fields and in the country stores. They had caught on quickly to the trick of running machinery, and then been speeded up by injudicious foremen until their eyes had been dazzled into hopeless confusion by the incessant strain and glitter, their ears deafened by the clatter and clang, their hands and fingers cramped and aching so that their nerves were frazzled to the breaking point.

Then the inevitable explosion came; they lost all control over themselves, became hysterical and weepy or quarrelsome and abusive, and ended by either throwing up their jobs in a tantrum or being fired by the puzzled and indignant foreman. This was particularly troublesome in certain departments of the factory, which actually had an industrial mortality of several hundred per cent per annum! That is to say, their whole working force was fired, or quit, every three months. This of course was ruinous, not merely to the health of the employes but to the efficiency of the plant.

An efficiency expert with scientific t ing was called in, the hours in t man-eating departments were cut d the heating and ventilating of the p improved, the lighting of the mac altered, and the workers shifted abo three or four different quieter departm alternate months. The mental breakd stopped at once and most of the fo victims were coaxed back into the fa again, and with a little intelligent and pathetic assistance learned to adjust t selves quite comfortably to the work. quite a number flatly refused to tak risk again and a few remained nerv unbalanced for a considerable period.

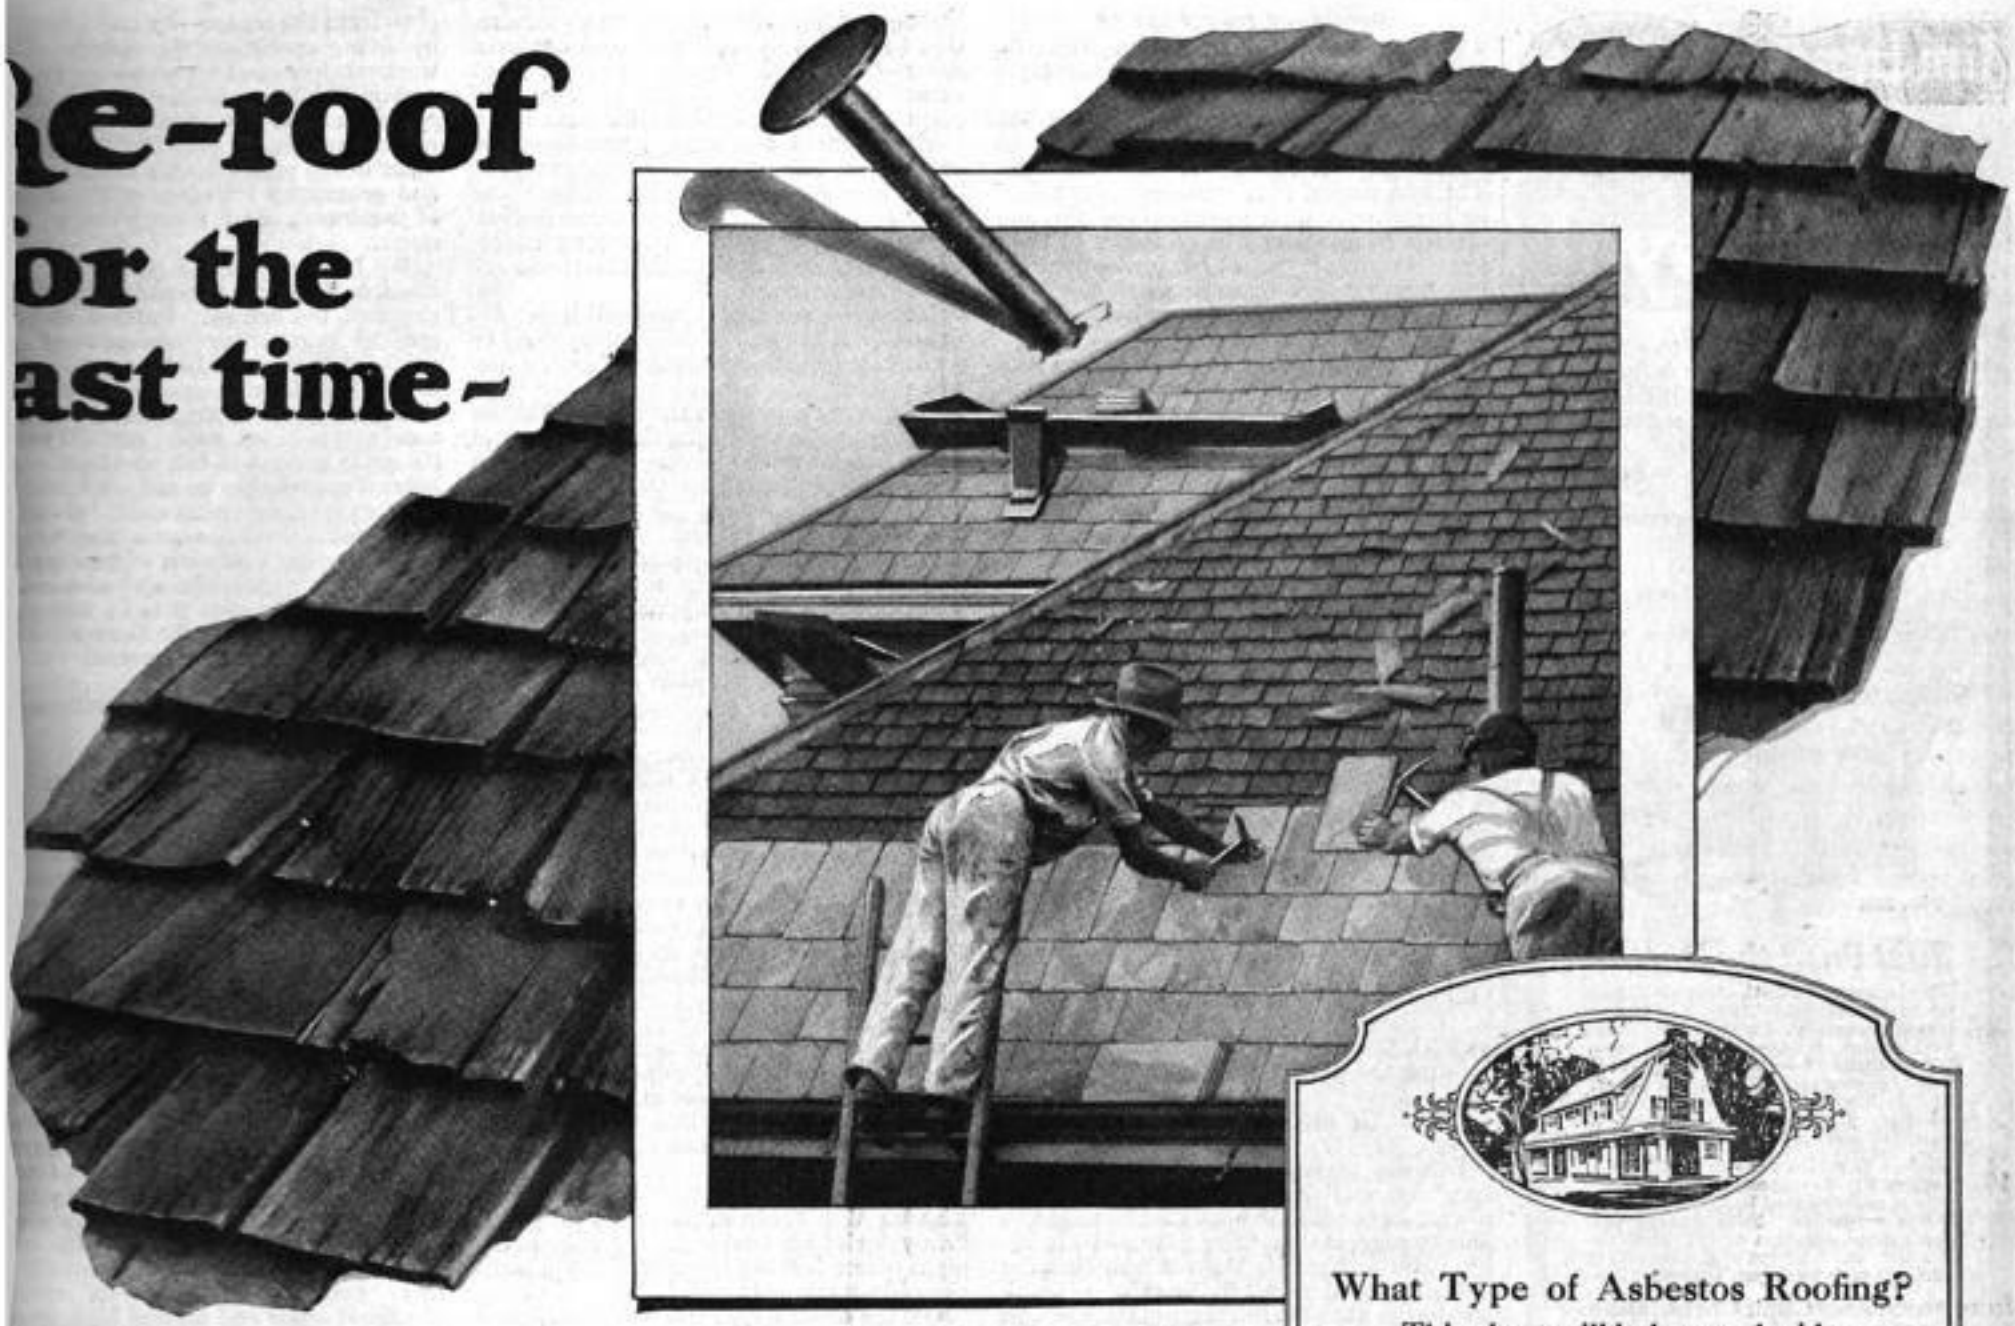
Not all individuals and races, of c react in the same way, and a curio stance of another sort of response to i trial nerve strain is found among negroes in the Southern cotton mills going through these huge establishm was struck at once by the total absen negroes from their working force, exc the boiler and engine rooms and the l porter work of the receiving and tru departments.

I was the more surprised at this be I happened to know that one of the p pal reasons why the mill men had m their factories down from New En and the North to the Southern State to utilize the large supply of cheap co labor, as well as to get nearer the sou the raw material. And on asking the man why this plan had failed to devel told me that the earliest mills had st themselves almost completely with workers, but that their nerves s would not stand the dazzle and glitt the looms, the incessant clatter of the chinery, and the all-day, monotonous tition of little insignificant hand-and-f movements. But instead of going they took another tack and went p fully to sleep on their feet and fell int machinery—with disastrous results to machinery and field hands! So the were at that time run largely by the dren of the poor whites of the mou districts and of the sand barrens.

Cured by a Cat

In recent years, under intelligent sc tific management, negroes have been ex sively employed in both cotton mills munition works, and they make excel and reliable workmen; but the change farm work and construction work in open air to factory conditions, with t glitter and clatter and foul air, was sudden.

Just to show what apparent trifles wreck or restore the efficiency of the p when dealing with these brainstorm n frictions, one of our most ingenious sc tific trouble fixers told me that he had c a breakdown and tie-up of a largeroom-deed, a whole department—in a big Ma Western factory with a cat. The emplo in the disorganized department were s sixty or seventy girls, the job was turn out huge numbers of little stamped, wh metal disks, the method was piecewo There was keen competition for the hig records and wages, and in spite of the ploring appeals of the forewoman and n agement, who wanted only just enou disks turned out to keep pace with other parts produced in the other dep ments, the girls would speed up against another, particularly in the late afternoo Then when human nature could no lon stand the strain the lid would blow off. room would split up into cliques, furi quarrels would break out, and when distracted forewoman interfered to prev actual hair pulling, all hands turned on h



After a careful study of the situation the expert the lighting was changed from a to overhead and slightly muffled, to les the glitter from the shining disks, the ro was cooled down five or six degrees, and ternoon tea at four o'clock was introduc These improved the situation somewh but the girls still scrapped viciously amo themselves, and the champions and would-champions spurned the allurements of and bread and butter and sat tense at th silent machines, like a cat at a mouse ho waiting to renew the fight at the first pos ble moment.

One day the puzzled expert, skirmishi through the factory to see what new lig he might discover, saw a couple of the gi playing with and fondling a cat. It was large handsome Maltese, of most luxurio and alluring fluffiness and softness; and th

Re-roof for the last time-

Nail 'em over the old shingles!

THERE are thousands of acres of old, worn shingles, like these, on the house-tops of America. No doubt they have given service, but their period of service is over. Perhaps there are some right over your head at this moment and you are even now considering re-roofing.

But don't tear them off. They are still valuable.

Re-roof the Johns-Manville way. Lay Johns-Manville Asbestos Shingles, artistic and everlasting, right over your old roof.

Count the advantages

1. The old roof underneath the new and permanent one will always be an additional protection and insulation.

2. You save the cost, labor and time of tearing off the old roof.

3. No muss or dirt around the house of littered, broken shingles.

4. Johns-Manville Asbestos Shingles are unconditionally fire-proof. They are given highest ratings by Underwriters' Laboratories, Inc.

5. They make a roof of artistic beauty, in soft tones of gray, brown or red, whichever you prefer.

6. You need *never re-roof again*, because Asbestos Shingles are practically indestructible. They should last as long as the structure they cover and protect.

See your dealer or send to us for further information. The coupon in the corner may help you.

JOHNS-MANVILLE, Inc.

What Type of Asbestos Roofing?

This chart will help you decide

Kind of Building	Type of Asbestos Roofing	Brand or Trade Name
Small buildings	Slate surfaced roll roofing or shingles	Flexstone—red or green
Dwellings $3,000–$7,000	Slate surfaced roll roofing or shingles or rigid asbestos shingles	Flexstone—red or green; rigid—red, brown or gray
Dwellings $7,000–$25,000	Rigid asbestos shingles	Standard or extra thick—red, brown, gray or blended
Dwellings $25,000 upwards	Rigid asbestos shingles	Colorblende—five-tone, brown with or without red or gray accidentals
Factories, shops and mills—Monitor and Sawtooth roofs*	3 or 4 ply ready roofing	Johns-Manville Asbestos Ready Roofing or Built-up Roofing
Flat roofs—all buildings*	Built-up roofing	Johns-Manville Built-up Roofing
Skeleton frame buildings—standard conditions*	Corrugated asbestos roofing with steel reinforcement	Johns-Manville CorrugatedAsbestos Roofing
Skeleton frame buildings—excessive temperature or condensation conditions*	Corrugated asbestos roofing without steel reinforcement	Johns-Manville TransiteCorrugated Asbestos Wood Roofing

Note—Industrial buildings call for expert advice. A roofing expert is available at all Johns-Manville Branches.

Relax in a Royal

The inestimable health value of periodic relaxation is today fully recognized by medical authorities. Just 15 minutes a day of this perfect rest brings most amazing results. What is needed most is the will to relax and the necessary equipment.

No. 830

Just Push the Button

This famous "Push-the-Button" chair encourages restful relaxation. You sink into it gracefully. Pull out the Disappearing Leg Rest—push the famous "Push Button"—and recline to a position of perfect rest. Release the button and the back locks. No strain—to any position. Just "Push the Button"—a patented and exclusive Royal feature.

Modern or period designs—oak or mahogany finish—tapestry, fine leather, velour or fabricated leather coverings. Prices moderate. Fully guaranteed. See a demonstration at your dealer's. Booklet on "World's Easiest Easy Chairs" sent free upon request.

Royal Easy Chair Corporation
Sturgis, Michigan, U. S. A.

Royal
EASY CHAIRS
"Push the Button—Back Reclines"

No. 1009
One of the finest over-stuffed leather chairs made. Mahogany or walnut finish. Spanish leather, tan, blue or black. Equipped with loose cushion seat over Spring-Edge sub-construction. Disappearing Leg Rest.

No. 801-0
Mahogany or walnut finish. Tapestry, Velour, "Buckskin" Imitation Spanish Leather in blue, black or brown. *De luxe* Spring-Edge Seat.

Special No. 6
Oak, mahogany or walnut finish. "Rand" or "Buckskin" imitation leather, tan, blue or black. *De luxe* Spring-Edge Seat. Showing Leg Rest extended.

(26)

(Continued from Page 44)

a flash an idea came to the expert which he put into execution with Napoleonic promptness.

About three o'clock in the afternoon the door of the workroom flew open and in walked pussy, waving her tail alluringly. The first pair of girls she came to pounced on her at once with squeals of delight, and after petting her and hugging her to their hearts' content, passed her on to the next group in response to an eager clamor from all over the room, and she made the circuit of the entire line of tables.

Afternoon tea that day was a real social function, with all grudges buried and rivalries forgotten. Pussy was immediately adopted as a mascot, and in response to the unanimous petition of the entire room, as a special favor, placed by the management upon the pay roll. She was provided with a silk-lined basket in the sunniest window seat, and whenever a girl began to feel tired or too much strung up she would run over and rub her cheek against the soft fur and be purred back into comfort and good humor. In fact, the cat acted as a shock absorber and tension reliever—not to say "catalyzer"—for the entire room and no further riots occurred.

But these apparently trifling frictions have their tragic side as well. In one corner of a great industrial plant stood a massive stamping machine which riveted together sharp-angled bars and spikes of shining steel in a way that required the most careful and closest attention in feeding. It had stood idle for many months, for it was known as the mankiller because it had killed two workmen and disabled three others, and the men flatly refused to tend it. So the management had been obliged to go back to the slow and toilsome method of riveting the parts together by hand.

A Matter of Light

One day an expert was visiting the factory and was shown this grim white elephant, on the chance hope that he might be able to suggest something to tame its ferocity. His first glance showed him that the monster stood right in front of a south window so that the full blaze of the sunlight poured down upon it and glared up into the eyes of the tender from every angle of the glittering steel that it riveted. Derricks were attached and the great machine was swung over to the other side of the room, where the light came from above and over the shoulder of the workman. Then the expert ran it himself for half a day, and a foreman for another day and a half, to give confidence to the boldest of the workmen; and the great brute stamped and gnashed its teeth in smooth and harmless rhythm and never after displayed a single sign of relapse into its man-eating tendencies.

The extent to which working hours can be profitably reduced varies considerably with the individual and with the nature of the occupation. But all that has been said and so abundantly proved on both sides of the Atlantic about the increase of output, from shortening hours in industrial plants is even more strikingly true of higher grades of work. The moment that quality and executive ability and arriving at sound decisions upon great masses of data or the planning of new ventures and the use of constructive imagination come into play, the necessity of short, decisive concentration to brief working limits becomes even more absolute. The majority of our great executive heads of business and financial and engineering enterprises have cut down their conference hours and actual executive working day, not merely to eight hours, but sometimes to even less. Your chances of finding anybody of any importance in New York City, for instance, working in his office after four o'clock in the afternoon are exceedingly slim.

Not a few successful men will boast delightedly of the way in which they used to work sixteen and even eighteen hours a day when they were getting their start and fighting their way up in the ranks. But the simple explanation is, first, that all facts and figures seem much larger and longer in memory's rosy light than they really were; and second, that these great men in their raw-salad days didn't really know how to work to the best advantage. Executive ability consists precisely in turning everything possible over to your subordinates, or, in the language of one of my successful friends, "Never do anything that you can hire done." The worst and most unsuccessful boss is the one who tries to do all the work of his entire staff himself.

Last, but not least, comes the question, What shall we do with that portion of our freedom which we have won back from the clutch of the demon of overwork?

Here we strike another paradox, and that is that though what we need most to develop is our brain power and our nerve coördination, the only practical way in which we can do this is by exercising and training our muscles. But this is perfectly logical and rational, for two reasons. It is obvious that we are not going to rest or improve our poor tired brains by purely mental exercise and discipline, such as solving problems in higher mathematics or playing chess or wrestling with the Einstein problem. The awful and abysmal infantility and banality of the relaxations chosen by the famous tired business man, who, as Will Irwin declares, "gently but firmly locks his brains in the safe every night before leaving the office," are a sufficient illustration of this.

On the other hand, the way to a man's brain is through his muscles, just as surely as that to his heart is through his stomach. From a modern physiologic point of view all that we know about and can do toward training our brains is training certain muscular centers and certain centers for sight, hearing and touch, which together form the basis and foundation for the entire cerebrum, to work smoothly and swiftly and with good judgment in teamwork with one another. Whatever mental development we get comes as a by-product. In other words, intelligent mental education and intelligent physical education are one and the same thing.

Thoughtful modern physical educators, who are now being trained in thousands all over the country, under the stimulus of our wartime legislation by the different states, will tell you without hesitation that the real field of physical education and athletics is, first, the heart and its marvelous resources under trying circumstances; and second, the nervous system.

On the other hand, thoughtful and progressive experts in pedagogy are equally agreed that the best way to train the mind is to train the senses—by moving pic by living specimens, by bird and work outdoors and by actually maki creating things with tool and brus pencil, combined with training the m by free and happy play in the open hikes in the open country for farm g and geography training, with a min of bookwork and schoolroom imp ment.

We have no way of reaching the itself, or the mind, except through th cles and the senses. Indeed that guished organ, our intellectual joy pride, though incredibly and enorm complexed, is from another point o steadily becoming simpler. Not onl nearly 90 per cent water, but 80 per its solids consist of fat, so that one nearest approaches we can make to i position is an ice-cream soda. Even t is present in both, because the near proach to and imitation of protopla can make is a mass of soap bubbles. seems probable that it is in the po making soap-bubble-like films with a and fatty acids that the special value in our brainstuff consists.

The pictures of memory are photogr upon soap-suds films.

Restful Amusements

Therefore play hard and happily open air for at least two or three every day if you want to put your and body into the best possible con for the greatest quantity and highest ity of work during office hours. Walk the best single and far most available door exercise. Get the habit by allen but it has the great disadvanta allowing you to continue the same tr thought which has been fatiguing yo day. Hence the advantage of various which compel or allure you to concen your attention upon them and forget troubles, especially golf, which thoug tle more than a joke as physical exerci a mental occupation is superbly absor and entrancing. Likewise the aut bile is of priceless value, especially if drive yourself, both for its relax change of scene and air and high driv from-worries power. And in addition plenty of that most valuable form of which can be enjoyed with pictures, beautiful buildings and charming l scapes, with exhibitions of all that is b tiful and graceful and vivid, such as do shows, dog shows and horse shows, in letic meets, in theaters, and last, but b means least, in the cinemas, the grea boon to human intelligence and educa and amusement that the century has s You will find literally scores of things go ing out of your work and your business will be of greatest pleasure and interest growth value to you in your leisure ho

But after all, in spite of its laborious and its everlasting and incessant demar our work is and ought to be our chief and pride in life. It is a poor and worth business or occupation or profession wh does not open up a dozen avenues of velopment and self-culture in history music, in science, in the drama and in ev field of human interest. When you yourself properly trained and conditio for success in your work, your work it will become your favorite play.

INSIDE THE BOOTLEG

(Continued from Page 25)

his cars. His investment is just a truck, a touring car and his current load.

Of course there are risks. If you get pinched and they make it stick, you lose your cars, probably forty or fifty cases of stuff, a fine and a lawyer's fee, besides your time. That will cost you up to $10,000, which knocks all the profit out of two or three months of hard work. Even if you get the case thrown out of court it is expensive. Still, trouble with the law happens only once in a while. What the bootlegger fears more than the officials is highjackers—booze highwaymen who hold you up along the line. They are mostly guards or chauffeurs from whisky convoys who have learned the game and then gone still more crooked. They know of course that in a booze robbery you have no recourse with the law. In case they get away with it they go scot-free. If they can sneak your truck from you they'll do it. A good many times a set of bootleggers have left the convoy for a few minutes, and missed it when they got back. The importer, in such a case, can't take any chances making inquiries. He knows that likely as not some country cop or prohibition agent has it. If he's caught trying to get it back he'll not only lose it but probably be put through besides. He usually hoofs it away.

Sometimes the importer manages to double-cross the crooks. There was a case last month where a crew of four men stopped in a town north of New York, very hungry, and went together into a restaurant. When they came out the touring car was still there, but the truck was gone. There was a light fall of snow on the ground, and the truck had one tire with a peculiar tread. They tracked it easy, until it turned into the main road to New York. Then they knew that the thieves were highjackers, not local cops. They figured out a cut-in on the main New York road about twenty miles down the line, took chances with the speed laws over bad country roa held up the truck just at nightfall, got drop on the thieves and recovered whole thing.

Every night something that would l great in the papers happens up on th Canadian road. Early in the spring Iz Wasserman, who runs a one-truck outf had to get a new chauffeur before he start out of New York. He grabbed the first m he could find. It turned out that he w really a high-jacker and was taking th job in order to deliver the truck to his pal The last night out they were coming dow through a long patch of woods with a hea load. Izzy noticed that the chauffeur the truck was making flashes with his hea light. Izzy stepped on it and came u alongside. Just then the truck made dead stop, and firing broke out from th woods. Izzy and his outfit had to throw up their hands, because it was so dark they

(Continued from Page 46)

couldn't see where to shoot. There were three high-jackers in the gang, besides the crooked chauffeur. They rolled Izzy and the two guards—didn't leave them a cigarette—blindfolded them, marched them round in the woods and tied them to a tree. There's where the chauffeur made a mistake. Instead of letting himself be rolled and tied up with the rest he went off with the load.

Along towards morning Izzy worked himself loose and untied the guards. The rest of the night they stumbled round in the woods trying to find the road. When dawn broke they hoofed it to the next town and Izzy got the proper people in New York, reverse charges, on the phone. When the thieves were running into Yonkers they were met on the road by a reception committee and forced to come down and have a little talk. Inside of ten minutes they had given up their loot, their diamond pins, their watches and their rolls, and the crooked chauffeur was down on his knees—honest—begging them not to kill him that night. You see, Izzy has a direct pull with people high in the underworld. These were New York crooks. They recognized the reception committee and knew who was behind them.

Old-Fashioned Smugglers

There's another case where the high-jackers lost out. You know in fashionable country places just now they're installing burglarproof wine vaults with combination locks. The owner of such a place—it's up the Hudson from New York and not far from the regular Canadian route—went to Florida this winter, leaving a caretaker and his wife in charge. About two or three o'clock one morning a gang of high-jackers backed a truck up on the lawn by the cellar door, held up the caretaker and his wife, stood them against a wall under guard, blew the lock on the wine vault and loaded up the truck to the top with fancy vintage stuff—the kind that brings almost any price these days.

It was about daylight before they'd finished. They climbed aboard to start her, and she wouldn't go. They got down and found that the wheels had sunk to the hubs in the soft turf. They tried to dig out, but it was no use; the grass was too slippery. By the time they'd given that up it was broad daylight and cars were beginning to appear along the road. They started to unload a little and see how that would work. Then a car turned into the driveway and came toward the house. It was only the butcher, but they didn't know that. They lost their nerve and skipped. The caretaker telephoned to a lot of the boss' friends, who drove straight over, to be on hand in case the thieves showed signs of coming back. They didn't. When the boss returned from Florida he found that he had all his booze, besides a fine truck that nobody has claimed yet.

A good many importers operate not one truck but whole fleets. At $1000 a week a truck, you can figure how much they make. Besides, it gives better security. Each load insures the others. You don't lose a whole two months' profits in case one convoy gets caught. But the robbery business makes the Canadian route a little insecure, and the tendency now is more and more to bring it in by sea. Booze piracy hasn't started up yet, and I doubt if it ever will. It's hard to find a ship at sea. Besides, beyond the three-mile limit alcohol is property, and you have the British Government to deal with, because many of the ships are under British charter.

Rum running into New York by sea is only for the big fellows. On an average truckload from Canada your initial investment is $2000 or $3000. By sea it hardly pays at all in cargoes worth less than $100,000 or $200,000. This generally involves bankers. There are some firms in New York doing very little but bootleg financing right now.

The owner or his agent is ashore in New York when he gets the flash saying what day she's coming and how much she has aboard; he goes round to the proper place and inserts the stiffening. He doesn't pay just then quite the ten dollars a case that it costs to bring liquor down from Canada. For some of the cops usually have to be seen, and a reasonable allowance must be made for that. In the end, it probably figures about the same as it does on the Canadian run—ten dollars a case. In addition to your charges for carrying, for graft and for unloading, you have to pay for the trucking in New York. I don't know exactly how the total cost to the importer compares with that for Canadian work. But it must be favorable, because, as I've said, the stuff is coming more and more by the sea route. The cargoes are consigned from Nova Scotia to the Bahamas or the other way about. The skipper knows how to load under his camouflage cargo so as not to sink her too low at the water line. If he's stopped on the way up the harbor he always has a good alibi, even when the prohibition people find booze aboard. He's allowed by sea law to put into a foreign port in case something's wrong, like a sick seaman or damaged machinery. He takes good care to have a sailor groaning in the forecastle, or a broken part. The worst he risks, before he actually begins to unload, is putting back to sea and waiting for further instructions by wireless.

The trouble in this lay is mostly with drunken help. The kind of skipper they get is no prohibitionist. One big consignment was lost last year because the captain and the officers entered the harbor, docked, and gave orders to unload in broad daylight. When they were arrested they were too well shellacked even to put up a fight.

They used to run it into the Bronx River in barges, covered over with a fake cargo of some heavy material like brick or coal. A jag stopped that too. One of the crew, while they were waiting for darkness, burrowed under the bricks and got properly corned. That would have been all right if they hadn't gone to fighting and to throwing the cargo at one another. It turned into such a riot that the patrolman called out the reserves. While they were hammering the fight out of the crew they looked down under the bricks and saw bottles. That spoiled operations by barge—in the Bronx River, at least.

Though you don't have the steady risks by sea importation that you do on land, they tell me that the unexpected is more likely to happen. One of the big seizures last winter was just a throw of the cards. She was unloading at night at a quiet open wharf away up toward the northern end of the city. Everybody who was likely to interfere had been sweetened. The land lies so that no one can see what is doing at that wharf except from the roof or from one little place out in the river. The bootleggers were unloading fast and the trucks were waiting to take it away. They had a lookout with a flashlight on the top of a shed, where he could watch approaches. Some little thing happened to scare them. The lookout saw it was nothing, and flashed the signal meaning "All clear." It would have been all right, maybe, if he had done this only once; but he was so anxious to reassure them that he kept it up.

Methods of Distribution

Just then a free-lance police patrol was coming along the river in the shadow of the wharfs, looking for harbor pirates. They saw these mysterious flashes, sneaked up on the wharf—and made the pinch. That little slip may cost somebody $200,000 or $300,000 besides part of the graft money put up in advance.

When the booze is fairly landed in New York it passes into the control of the brokers. They have the soft end of the business—very little risk and big, quick profits. But they have to work for their money and keep their eyes open every minute. The broker has his list of importers on the one hand and of peddlers on the other. It is his job to keep them in touch with each other, but not too close touch, or they'll form a combination and double-cross him out of his fees. He must see to storage if necessary, and insure delivery. When he gets the flash that a consignment is coming on to New York he works fast to get it all ordered before it arrives, so as to clear it in the shortest possible time. Probably he has a lot of orders already. Either by messenger or telephone he interviews the peddlers who have given these orders, and arranges for the place and hour of delivery. If this doesn't eat up the whole consignment he keeps the wires hot until it is all sold.

Usually everything is arranged before the convoy or the ship reaches New York. But not always. Even the brokers have no way of regulating the flow of liquor into town. There are bound to be some days when goods are not arriving and you can't fill your orders right away. Then again there will be a jam which the retail market simply won't absorb. The latest to come have to store it. Where it is stored is a thing I'm not telling. But the ch are expensive—usually fifty cents a night, and often a dollar. A few nigh that will eat up a lot of profit. A br standing with his importers depends a deal on how fast he clears the stuff those days of heavy importations th pulling every wire to beat each oth the immediate market.

The importer gets ninety dollars a in bulk. We retailers have to pay $ case just now. The difference does belong to the brokers. Half a dozen ants, including those who take graf a slice of that eighteen dollars. A has to employ a considerable staff bootleg help comes high. Transport and transfer from one vehicle to an cost a lot of money. On an easy tra tion, where they simply put an impor touch with a customer, brokers cha fee of two to four dollars a case. It's what they figure to make, too, whe transaction gets a little more compli I should say that a firm with a good ness ought to clear 500 cases a day. I that for yourself. Most of the broke just hung with kale. I can almost them on the streets by their clothes. order $200 suits six at a time, and w tree silk shirts by the dozen, and flash carat diamonds. They've never ha before, and they spend it quickly.

Next, it gets down to the retailer—m example.

I'm moving all the time, keeping tra my old custom, looking for new. I in my mind—I keep as few books as p ble—a record of my steady patron know that Smith, say, uses a case a once in three weeks. When time is pr nearly up I visit him or talk to him the telephone.

A Strictly Cash Business

I'm in a combination with five or other peddlers who employ a boy at th dollars a week to sit at a telephone, which we're paying jointly. When a re lar customer wants to order unexpect he calls up that number. Of course I'm in, but the boy takes his name. Thre four times a day I call up the boy, col the names that have been left, and see customers or telephone to them as soon possible. My share of this service is biggest overhead expense. The others just a little tip to the cop on the beat a and then, and an occasional taxicab a rush order. Married bootleggers of don't need this telephone service. Th wives answer calls for them at the flat.

Most retailers of my class work by f case lots. When I have orders for th whole cases I tap the broker for five ca Three of those go in bulk to my custom For them I pay just now $108, and rece $120—a profit of twelve dollars a case, thirty-six dollars for the lot. The re have sent to my flat. As I've said, I swee the policeman on the beat not to get quisitive about deliveries.

That small lot of two cases is my reta I distribute it by one, two and three bott at an average of eleven dollars a bottle, $132 a case. This is harder work, of cour than selling it in big lots, but the margi twenty-four dollars a case. From the fi case lot I've taken on an average a gr profit of eighty-four dollars. Sometime fellow who has had a stroke of luck a wants to lay in a supply will give me a fr case order. That is sixty dollars for no m trouble than seeing the broker and bei present to make the collection when t goods are delivered.

I always try to do that. I've told t broker to set down a case at the basem door of Number Umpty-five, West Umpt sixth Street. The broker notifies me ju when it may be expected. I'm there abo of the hour. I collect on the spot just soon as the customer sees his goods. Th is strictly cash business—no checks—n even certified checks. You don't want an record in the banks. I take my $120, pe off my twelve, and hand the rest to th driver of the truck. He turns this over t the broker, who pays the importer. If b any reason I fail to show up the driver co lects the whole sum, and next day I find m bit waiting for me at the broker's. My reason for being present is to prevent double-crossing. The stuff is still, usually, the hands of the importer. Often it's in th truck that brought it from Canada or th docks. It stands him ninety-five dollars

A Knight-Motored Car for All

Never before has the amazing Knight sleeve-valve motor, used for years in some of Europe's most famous cars, been available in so *fine* a car at so *low* a price.

The Willys-Knight motor, highest development of the Knight sleeve-valve principle, delivers a smooth, ceaseless, silent flow of power, greater than the power of any other engine of its size and weight.

Free from the troubles common to poppet valves, it turns carbon, that deadly enemy of most motors, into a friend and ally which builds up its power, so that it improves with use and is still in the full vigor of its prime after many years.

The car is especially designed to match the motor in long life and distinction. Its sturdy steel chassis beats off jolts and jars and holds the body permanently free from rattles and squeaks.

The Willys-Knight is fleet, comfortable, responsible—and a sound investment.

WILLYS-OVERLAND, INC., Toledo, Ohio . Canadian Factory: Willys-Overland, Ltd., Toronto

The Equal of the Finest Hickory

As everybody knows, good hickory is growing scarcer. The Bristol Steel Golf Shaft is equal to the finest hickory shaft in every detail. In actual practice it has met every test. Many of the best professionals have given it their endorsement.

Because it is lighter than hickory the weight of the club is lower, thus making a more perfectly balanced club. Climatic conditions will not affect it. Unquestionably it is stronger and more durable.

NOTICE—Basic and Supplementary Patents covering Steel Golf Shafts are controlled exclusively by us.

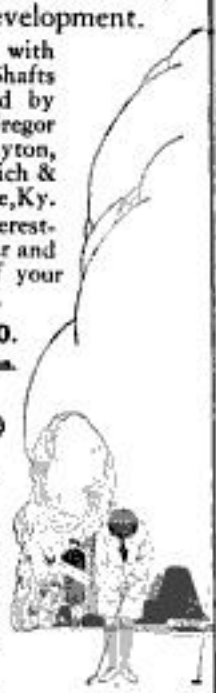
"Bristol" Steel Golf Shaft

Patented Nov. 12, 1910. Oct. 3, 1911 May 12 1914. May 2, 1916

Buy a new club equipped with the Bristol Steel Golf Shaft from your "Pro" or have him attach a Bristol Steel Golf Shaft to one of your old club heads; then try it and see if it doesn't appeal to you. Talk it over with your "Pro."

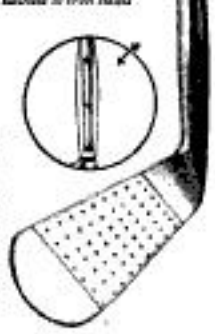
Golf Shops and Sporting Goods Dealers: The Bristol Steel Golf Shaft is meeting with enthusiasm everywhere. Write us for information relative to this interesting development.

Golf Clubs fitted with Bristol Steel Golf Shafts can now be supplied by The Crawford, McGregor and Canby Co., Dayton, Ohio, and The Hillerich & Bradsby Co., Louisville, Ky.



Write for our interesting descriptive circular and give us the name of your club and professional.

THE HORTON MFG. CO.
452 Horton St., Bristol, Conn.



"Bristol" Steel Fishing Rods

Bristol Steel Fishing Rods have always been the choice of expert fishermen in all kinds of game fishing, because they give the utmost in service.

The same can be said of our other products, Meek and Blue Grass Reels, and Kingfisher Silk Fishing Lines. They are the leaders in their respective lines.

How Bristol Steel Golf Shaft is attached to iron head

No. 11 Cork Handle "Bristol" all-around Fishing Rod, 8 feet 6 inches long, retails for $6.50. No. 27 Full Jeweled Bait Casting Rod retails for $12.00. These can be purchased from your dealer or they will be sent you direct by us postpaid upon receipt of price.

Bristol, Meek and Kingfisher Fishing Catalogs will be sent you *free* upon request.

(Continued from Page 48)

he sells it straight by five-case lots, and the price to the customer is $120.

The chauffeur, if he and his boss are inclined to be double-crossers, will say to the customer, "That's good stuff. I've got some more just like it coming down next week. You can have it for $105 a case. That fellow you ordered from is cheating you."

Right there, you lose a customer. This end of the business got so bad once last winter that a combination of retailers went to the expense of hiring a storage place and making deliveries themselves. Finally the brokers used their pull with the big boys and put down the screws.

So far I have been telling only about whisky. When Americans can't get beer they are first of all whisky drinkers. That is the staple of the trade. Next in demand is gin, next red wine, and after that the fancy stuff such as champagne, brandy, sweet wines and liqueurs. All these come to me through different routes.

Very little gin is imported. Even before the prohibition law most of our domestic supply was synthetic. Pure alcohol and distilled water were blended with juniper extract and other flavoring and allowed to age. The aging was important. New synthetic liquor of this kind, even when all the ingredients are as pure as you can get them, is bad for the lining of the stomach. It needs two or three years' aging in bottle or wood. But it's being turned out and sold raw by thousands of gallons a day in most of the big Eastern towns. In winter gin costs from thirty to thirty-five dollars a case, and sells for from forty-two to forty-five dollars. In summer, owing to gin rickeys, the price goes up about ten to fifteen dollars a case. The profits are small. But people want gin mostly in case lots for cocktails at home, and there's little peddling by the bottle, which takes time.

Poison in the Cup

I don't much like to handle gin. You never can tell where they get their alcohol. Don't think I'm talking about wood alcohol either. The worst trouble at present is this denatured stuff. Pure grain alcohol is easy and cheap enough to get. I sell it regularly to customers who want to make their own, at sixteen to eighteen dollars a gallon. It has cost the druggists from whom I get it $5.75, and they sell to me at about eleven dollars. But the supply has its limits, and the denatured stuff is even cheaper. This denatured alcohol is doped in two different ways to make it unfit for drinking. Either a drug that can be precipitated—quinine, for example—is put into it, or it is distilled with a poison like formaldehyde. Precipitating quinine is easy, and the manufacturer has to get it all out or the taste spoils his stuff. But when formaldehyde has been used the alcohol must be redistilled. Some of the big manufacturers employ chemists to do this work. The little ones try to do it themselves, and don't always succeed. Gin with a trace of formaldehyde won't knock you out the first time or the second, but keep it up, a cocktail or two every day—and good night!

Some of the whisky coming up here from the Bahamas is diluted with cane alcohol and coloring matter. It isn't poisonous, but it has an awful kick and gives you a headache next day. When the Canadian whisky I handle is diluted it's cut with only distilled water.

That cut stuff is generally most common in periods of high prices, and there's a special reason. About half of the retail peddlers and bootleggers don't want the cost to the consumer to get too high. They say it's killing the goose that lays the golden eggs. This is all a matter of psychology. Somehow the average customer has ten dollars fixed in his mind as about the price he's willing to pay for a bottle of whisky. He'll go half a dollar or a dollar above that, just as a man at an auction will go a dollar above his price for something he really wants.

After that a certain proportion of customers will say "Too expensive," and begin to drop out. When wholesale prices rise too high the bottleggers or peddlers will make twelve bottles of Scotch out of ten in order to hold their profits at eleven dollars. But it tends to lose your customers. A guy who knows whisky tastes the water or finds he doesn't get enough kick. Then, likely, he goes to somebody else. When I have to handle the cut stuff I try to work it off on transient custom or amateur drinkers.

Our trouble with prices comes mostly from pikers—people who don't follow bootlegging as a steady game but do it on the side. That is happening more and more all the time. Sometimes I wonder if there will be any really professional peddlers after a while. That's one of my reasons for pulling out. The piker competition is making itself felt. There are thousands of them. Certain manicure or hair-dressing parlors do regular business with lady customers. Many clerks working in offices on small salaries make money on the side bootlegging among their pals in the shop. Then there are the outsiders like news-stand men, proprietors of small cigar stores and head waiters. They have a location and a steady income out of another regular business and the customers come to them; they don't have to go out rustling for trade. So they can afford to undersell. When we are charging $120 a case for Canadian whisky they often let it go for $115. Their trade is mostly case goods in large lots. They have no time to deliver small orders. But some of them will land ten cases a day at a profit of seven dollars a case and no expenses except perhaps fifty dollars a week or so to the cops. All classes of retail trade are doing it more or less. I know one foreigner who has just left for the old country to be a magnate. He made it in two years because he had a location in the basement of a big office building and an inside acquaintance with most of the bosses and clerks. I don't know how this price cutting is going to be stopped unless the big boys at the top get together and let the pikers know that if they sell below the market price they'll be pinched for bootlegging.

The two elements that sell regularly in excess of the market price are the female bootleggers and the hotel bell boys. The women in the game are usually pretty girls with good clothes who know how to flirt. They stick around dances and lay to get men a little goofed on them. When the sucker is hooked the girl breaks the news. She's already sized him up as good for one or two or three cases. Generally he says, right away, "Put me down," and names a time and place for delivery. When it comes to a question of price she says "A hundred and fifty dollars." Well, even if he knows the regular price he hates to appear a piker; so he falls.

It's all lovely until next morning when she's delivered and got her money. Then she becomes strictly business. She's bought through the same broker as I have, and for the same amount—$108 to $110, say. If he's stung himself for three cases she's made $120 to $125 for her evening's work. And sometimes by playing it fine she'll land two or three suckers in one evening.

The Bell Boy Trade

The bell boys have a regular trade price—eighteen dollars a bottle in one, two or three bottle lots—the only way they ever sell. If a boy is found underselling he loses his job quick. Not through the management—they aren't in on it—but because the other boys ride him until he has to get out. They charge more if they can. Hotel clerks and bell boys are great judges of human nature. They give you a once-over and have you sized up. Well, a man registers who looks prosperous and a little like a sport, and the bell boy sees there's a good sucker in him. He says as he's taking his tip, "Is there anything more I can do?" About half the time the sport asks where he can get some whisky.

The bell boy says maybe it can be fixed, but it's rather hard to get now and will cost twenty-two dollars. Usually he starts with some such sum as that and comes down if he must to eighteen, where he sticks. He is afraid to keep the stuff in the hotel. The management won't stand for that. There's nothing in it for them. Either he has a bottle buried with some friend near by or he rings up a peddler and makes a date to slip the goods at some quiet entrance to the hotel. He pays the peddler $10.50 or eleven dollars like anybody else, and makes from seven up, minus a split with the head bell boy, maybe.

After you cut your eyeteeth you don't deliver to a customer in a hotel more than once. When the bell boy sees you coming with a suitcase or a bundle he rushes at you to take it. If you refuse he looks you over as if you were a piker trying to get out of your tip. Really he suspects you are peddling booze and is sizing you up to remember you. If you do it a second time he tips off the hotel detective, who follows you up and puts his ear to the keyh the room where you're selling. Wh hears you just about to pass the goo breaks in and pinches you.

We get back at the bell boys on Sat nights, when booze is sometimes a hard to get right away. A guest wil three or four bottles for a party or to tain buyers. When the bell boy calls you know he wants it quick and count on getting it. So you say, "All but to-night it will be five dollars ext delivery."

He kicks, but he falls for it. I he gets the five dollars out of the cust at that.

You can't buy liquor in every New hotel. Some of them employ speci tectives just to watch the boys and s the place is bone-dry. These hotels have some trouble keeping their though.

It's a game where you have to keep eyes open every minute, because if y yourself be stung there's no comp through the law.

In Christmas week I cleared more $1000. I could have sold three tim much if I had been three men. I s couldn't fill the orders. Now in any business I could have hired extra la make the deliveries and collections. I worked the telephone. But in boom dling! Half your assistants would ru with the money and the other half knock you to your customers and get away from you. Early in my business rience I handled five cases of Cana Scotch. I'd sampled the stuff, and it l all right. But two bottles in every were filled with cheap claret, the kind costs fifty cents a gallon in Canada. to replace those ten phony bottles with stuff in order to keep my customers, lost on the transaction both in time money. The wholesaler in Canada fixed a whole truckload that way befo delivered to the importer.

Waterfront Transactions

The worst place for trickery and cheat is the docks. You have to depend on purchases now and then, because mos the fancy stuff comes that way—liqu port, sherry and champagne. Stoker petty officers buy it in small lots at sma prices in Europe, stow it in a dark p about the ship, and split profits with s one employed ashore, who distributes But these people will generally do yo they can. And between the docks First Avenue on one side or Seventh A nue on the other the law doesn't run n at night.

They've got you alone down there they can pretty nearly chuck you into water and no questions asked.

A friend of mine who broke into business recently lost all his second we profits on a dock transaction. One of customers was giving a party. He wan a case of champagne right away. friend had a tip that a dock guard was ing off several cases of good stuff arrived. He went over in a taxi and the goods. What the guard really sho him was a lot of strictly temperance S aërated apple juice, which comes in cha pagne bottles, is labeled in French and a trade name a little like the word "cha pagne." It sells for fifty cents at the d catessen stores. "All right," says friend, "let's taste a sample." The gu pops a cork and pours out a glassful. the real thing.

It was the customer who discovered mistake, not the bootlegger. His pa was a complete failure. He had a polic pull long enough to make my friend back the money. The guard had steam the label from a bottle of the apple ju pasted it on a bottle of real champa and opened that for a sample.

"Serves me right for trying to do bu ness in a foreign language," says my fri to me. "I don't read Swiss."

Well, *ishkabibble*. If they don't get this week they never will. It's their l chance. I'm through. I saw Jim Mallo day or two ago, and told him so. He w just up from Palm Beach on his way Ireland. Jim's living easy now, and enjo ing himself. He listens to me, and then says, "I don't know but you're a w young man."

That's as far as Jim ever commits hi self. But he's on the inside, and I've s dom seen him miss the turn. Something going to happen.

TRADE MARK

DUTCH BRAND PRODUCTS

Reduce Upkeep for the Motorist

More mileage from your tires, greater operating efficiency, fewer mechanical and electrical repair bills, less depreciation on your car as a whole—these are the objects of DUTCH BRAND specialties for the motorist. This name invariably assures highest quality and most satisfactory results.

Look for the package with the orange label, checkered border and Dutch Girl's head.

To Lengthen the Life of Tubes and Casings

DUTCH BRAND SURE-SEAL COMBINATION OUTFIT contains everything needed for a quick, permanent inner-tube patch; self-curing, non-splitting, and elastic. It includes a supply of 2-in-1 Cut-Filler which seals casing cuts and prevents sand blisters and rotting of fabric and wears as well as the casing itself. Medium size outfit, 50c; large, 75c; extra large, $1.00.

To Make Gasket Joints Leak-Proof

DUTCH BRAND GASKET SHELLAC SOLUTION is highly concentrated, forming a thick plastic layer that fills the finest crevices. The gasket is hermetically sealed against the passage of all gases or fluids—air, steam, water, oils, etc. It is so highly adhesive that it will not loosen. 2-oz. bottle, 20c. Also put up in larger sizes for shop use.

To Insulate Wires and Make General Repairs

DUTCH BRAND FRICTION TAPE is the standard of quality. It is a mistake to imagine that "tape is tape"—no article the motorist buys shows greater variation of quality. Dutch Brand has an unusually strong and dense foundation fabric, heavily impregnated with a rich rubber compound. It has high adhesiveness, tensile strength and electrical resistance and it does not dry out. 2-oz. carton, 10c; 4-oz. 20c; 8-oz. 35c.

If your dealer is not supplied with Dutch Brand specialties, a trial assortment including all above products will be sent you postpaid on receipt of $1 and your dealer's name.

Dealers: Send for complete catalog, and order from your jobber.

VAN CLEEF BROS.

Established 1910

Woodlawn Ave. 77th to 78th St.

Manufacturers of Dutch Brand Products, including Auto and Cycle Specialties, Bicycle Tire Fluid, "Snow-White" Millinery Cement, Moving Picture Film Cement, "Triple-Tite" Shoe Cement, Shoe Heel Enamel.

The Hotel Remembe

By G. Appleby Terrill

ILLUSTRATED BY WILLIAM MEADE PRINCE

THE town clerk of Weyport West was dining at the house of old friends, Ronald Morrit and his wife. The Morrits and he and Spenliss, who was the only other guest, had gone to the Weyport High School kindergarten together thirty-odd years before, so naturally there was no formality about this dinner. Dessert was past, but Mrs. Morrit stayed on in her chair.

The big white cloth had been taken from the table, leaving a beautiful surface of dark oak, across which two very narrow white cloths now stretched, arrayed with decanters and wineglasses, coffee cups and silver ash trays.

Mrs. Morrit was slim, fair, still pretty. On her right was the town clerk, slim also, clean shaven and looking the astute lawyer that he was. Spenliss, on her left, and her husband, opposite her, were both strong-framed, stoutish men, who were contrasts in temperament. The dark-mustached Spenliss was noted for irascibility; Morrit, of the cropped, sandy mustache, was practically always in a good humor.

These two, Spenliss and Morrit, were coupled as the richest men in Weyport. Spenliss had inherited a large fortune; Morrit, shipowner, grain merchant and much else, was making a particularly large one. Compared with them the town clerk was poor; his income was merely two thousand pounds a year.

Conversation for the moment was running on foreign coins and postage stamps. Mrs. Morrit and Spenliss, insatiable collectors, were urging Morrit to board the Ulansa—from the China Seas—when she approached port early next morning, and to clean her out of Asiatic money and stamps before their great rival collector, the Missions to Seamen chaplain, could get alongside. Morrit was remarking genially and untruthfully that he could just foresee himself emerging from bed at four A. M. to have a boat race with the chaplain.

The town clerk was silent. He intended to give a surprising turn to the conversation presently, but there was not the least hurry. By his side was an empty chair. His hand happened to be resting on the arm of it. Perhaps once in every minute his eyes stole down the long room to the open window which looked over Weyport and the sea. The light of the room was oppressively yellow, for the electric bulbs were draped in orange silk and the dark old pictures were in heavy, gleaming, gilt frames; and outside the window was an expanse of cool gray sea under a dim gray-green sky, athwart which was thrust a jagged shaft of mauve-gray cloud, the sharp promontory of a cloud mass. But it was not to rest his eyes with this scene that the town clerk looked towards the window.

Sitting in the window recess, with a movable electric lamp by her side, was the girl who had occupied the chair next to his—the big girl with the sun-tanned neck and sun-peeled back and the long, thick plait of dark hair. She was a member of the household rather than a guest. She was Mrs. Morrit's niece, and had come down from Northumberland a month previously to make a long stay with her aunt. This was her first visit to Weyport West.

The town clerk was forty-one; the girl was just eighteen. From the day of her arrival the town clerk had felt tired of being a bachelor. The girl—unfortunately for him—had felt utterly tired of the dinner table. Not liking to leave the room without her aunt, she had compromised by settling in the recess. She was reading a magazine, with one eye; the other was temporarily unusable owing to the recent impact of a cricket ball. Now and again her eye roved to the sea, to the jagged, mauve-gray cloud cape. It certainly did not rove in the town clerk's direction yet. The town clerk fresh cigar, expelled with something of a and took a letter from pocket.

"If you people have quite done ing," he said, "listen to this. I think interest you. I got it to-day." He u the letter. "It's headed 'Rue de Pa Paris,' and, as you see, typewritte money order for five shillings was in Now listen —— Oh, shut up arguing. Get aboard the ship yourself. Buy a l ing canoe and paddle out to her. Li

TO THE TOWN CLERK,
WEYPORT WEST, ESSEX, ENGLAND.

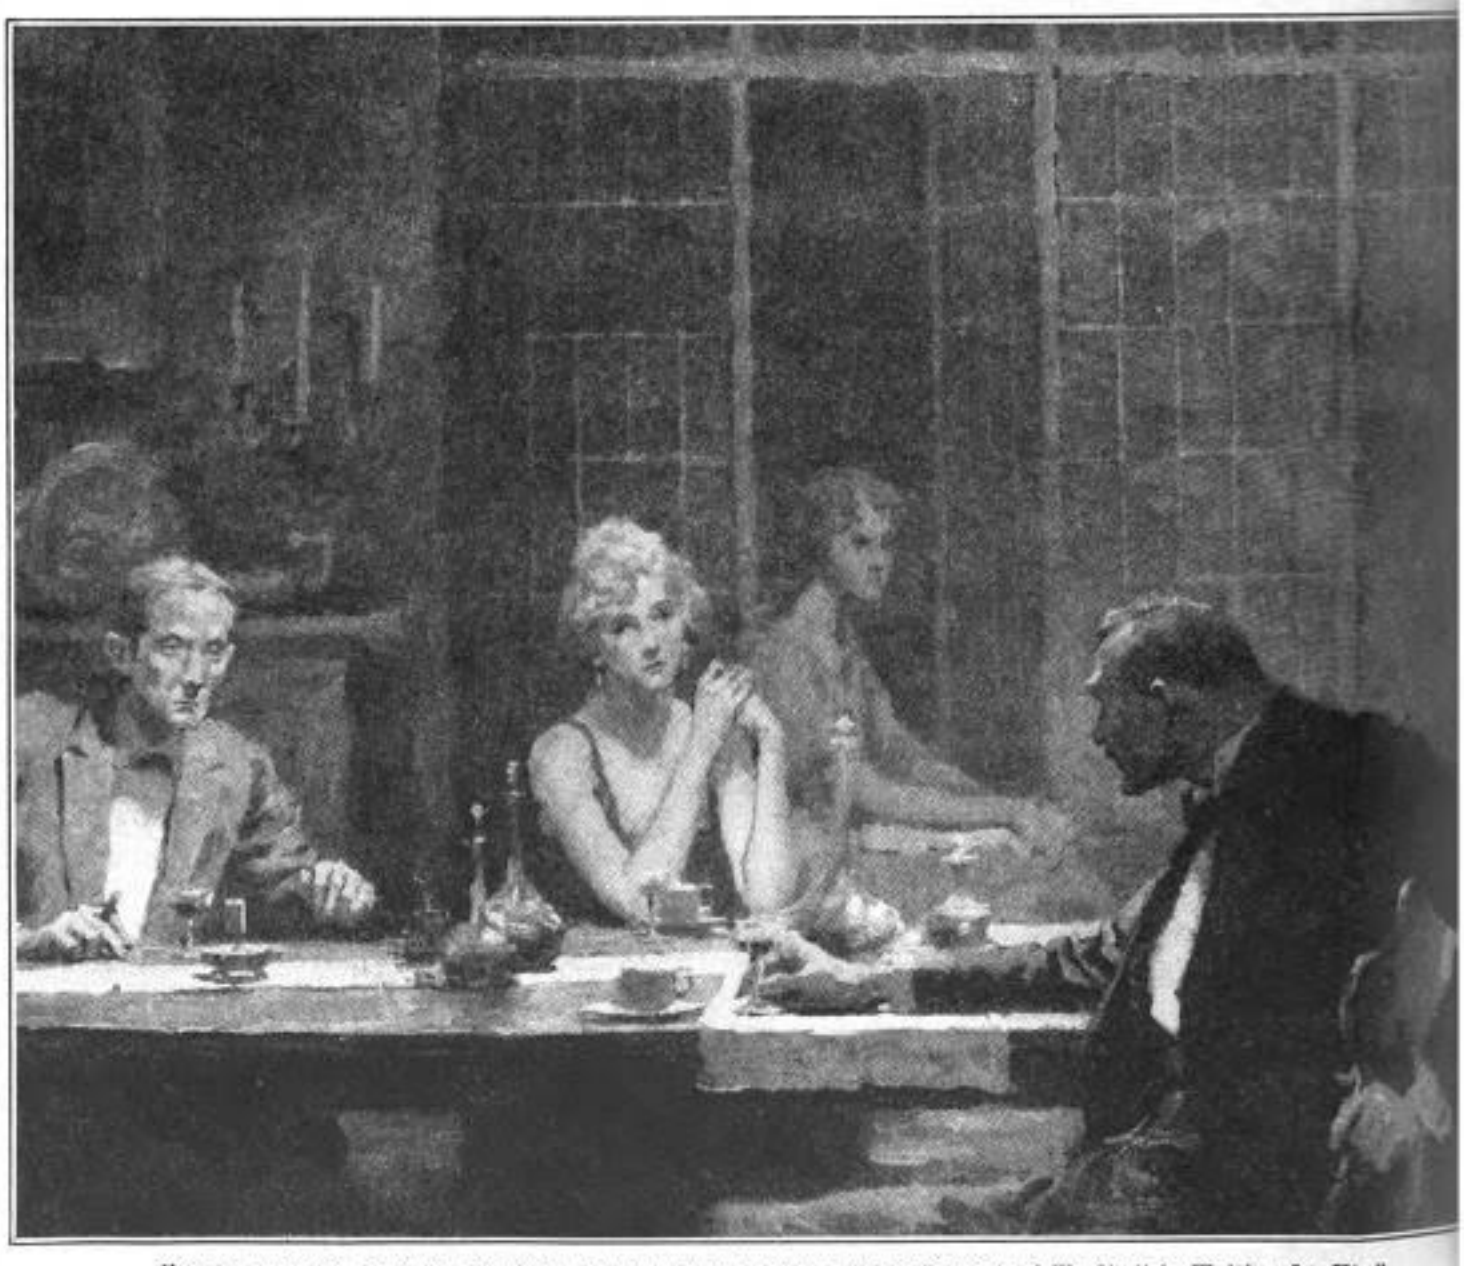
Dear Sir: I believe it is not unusual t to the town clerk of a place for local in tion.

Can you tell me whether Mr. Charle ert Lydekker is still living at his hous White Gate, Weyport West? As my a after to-night is uncertain, perhaps you kind enough to insert your reply in the p column of the (London) Morning Sta Saturday's issue.

With apologies for troubling you t extent, Yours faithfully,
GILBERT BANTH

The town clerk laid down the letter "Well?" There was a little note citement in his voice. "Well, who something to say?"

Mrs. Morrit surveyed him with a pu frown.



"What is there to say?" asked Spe "Quite a reasonable sort of letter."

Morrit, after rumination, observe know a Fred Banthrop, farmer in S set."

The town clerk smiled with a tou self-pride.

"The name Banthrop has nothing with it—in my opinion. Nell"—to Morrit—"I'll prompt you a bit. W does old Charley Lydekker make one of? Here's somebody wants to see hi doesn't like to write him ——"

When you need a new Battery Know the *Reason Why*

ou never buy a new bat- as long as the plates in old are right. Live plates n your battery is alive; rn-out plates, that you d a new battery. For the of your battery is in its tes.

here's the net of buying attery. And the simple, ect way to get the *best* bat- y is to get the *best plates* he liveliest, longest-lived tes.

PREST-O-PLATES for Long Life

est-O-Plates, the backbone of Prest-O-Lite Batteries, we have every right to believe, are the best plates made.

Always a maker of a *better* plate, always specializing in plates, Prest-O-Lite centered its laboratory knowledge and skill in improving them, and produced Prest-O-Plates.

They are superior to ordinary plates. They possess *hardness* combined with *porosity* to a marked degree.

The result: Prest-O-Lite is a battery with ready delivery of power, and great tenacity of life.

Against the most extreme weather conditions, Prest-O-Lite Batteries serve out the long life Prest-O-Plates put into them.

PREST-O-LITE All-Weather Battery

In the cold of the *Arctics,* they are noted for their ready reserve power, and in the torridity of the tropics for their non-buckling, heat-resisting toughness.

Every part of a Prest-O-Lite Battery is par with the supreme standard set by Prest-O-Plates.

The rock-ribbed Prest-O-Lite guaranty vouches for every Prest-O-Lite Battery. This is a definite obligation *plus* a *spirit* of organization which says the car owner *must be pleased.*

Prest-O-Lite first makes a better battery; then takes care of it with a policy and a service which assures you the utmost battery life.

Sales and Service Stations everywhere.

THE PREST-O-LITE COMPANY, INC.
Carbide & Carbon Bldg., 30 E. 42d St., New York
Eighth and Brannan Streets, San Francisco, Cal.

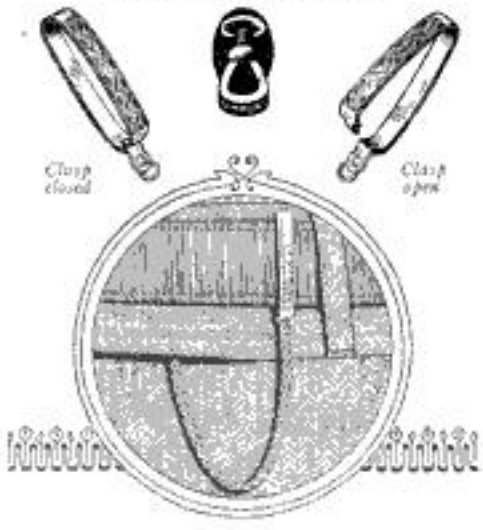
CHAINS

The right
WATCH CHAIN
for
summer days

THE new Simmons Belt Chain is just the thing for vestless summer days. The patented clasp slips over the belt and locks firmly. Touch a tiny spring—it unlocks and slips off. Nothing could be simpler, nothing more secure.



Like all Simmons Chains, the new Belt Chains are made in a variety of finely wrought link-styles—green and polished gold and PLATINUMGOLD, and in harmonious combinations. The patented Simmons process of drawing gold over a less expensive base makes these chains surprisingly reasonable in price.

Ask your jeweler about the Simmons Belt Chains.

The Swivel Says It's a Simmons

(Continued from Page 52)

"Oh-h!" cried Mrs. Morrit very softly.

"Somebody who doesn't know who's town clerk here—I'm pretty sure of that—but who won't send his address to Weyport, because by a remote chance some person might guess that Gilbert Banthrop's real name ——"

"Derek!" Mrs. Morrit breathed—"Derek Smith!"

"Derek Smith," said the town clerk with conviction.

Away in the window recess an eye abandoned a magazine page with a jerk, and, very wide and blue and interested, dwelt steadily on the town clerk. Engrossed with his subject, he missed the pleasure of noting this.

"Derek Smith," he said again. "That's who Gilbert Banthrop is. I'd bet a thousand pounds on it. How do I shape as a detective, Ron?"

"Absolute first-rate," said Morrit slowly, scanning the letter, which he had reached for. "Derek didn't do this signature—if I recollect his writing. But I agree with you. This is from Derek."

"I wonder if he's altered much—in nine years," said Mrs. Morrit. "Far and away the best-looking man I ever saw, was Derek."

"Here, I say!" protested the homely featured Morrit. "Phew! There's spite—over a few confounded Chinese stamps!"

The town clerk took a sip of wine.

"Care to see him, Nell—on Saturday night?"

Mrs. Morrit looked puzzled again. But Spenliss, whose expression had become particularly unamiable in the last half minute, lifted his cigar quickly from his mouth.

"I would." His mustache twitched slightly once or twice—a sure sign that his temper was thoroughly stirred. "I would," he repeated after a pause; "I'd very much like to see him, the blackguard; very much like the chance of punching at him for a couple of minutes before I handed him over to the police—helping to swindle me, a pal, an old schoolfellow! If I could get within reach of Master Derek ——" He stopped, actually phlegmy with anger, coughed, and leaned towards the town clerk. "Jimmy, I know what you're half thinking of doing. You won't tell him that Lydekker's house is empty; that the old boy's living in Colchester. You'll reply that he's still at The White Gate. And one night, probably Saturday, Derek'll come sneaking along there, and we shall be waiting for him. Do it, Jimmy! You must!"

Morrit whistled.

"Poor Derek!" said Mrs. Morrit. "Still it would serve him right—and how exciting for us all! He never could stand against you in boxing, could he, Spen? Jimmy"—her eyes lit eagerly—"are you going to do it?"

The town clerk twisted his wineglass.

"I'm rather inclined to make the capture. . . . For this reason especially," he added: "Derek's nerve and will, you may be sure, haven't lost their trick of weakening on occasions; and I think that Spen with his fists or the hope of escaping with a light sentence at his trial would persuade Derek to say where the real scoundrel of the piece, Lionel Gandry, is at present. . . . What d'you say about this, Ron?"

Morrit, with unwonted seriousness, hesitated.

"Should be pleased to see Gandry caught," he said at length. "But as to Derek—well, he was one of us, Jimmy. Can't forget that when his people moved up north he lived on here with his Uncle Lydekker just to be near us."

"Just to flatter his uncle," corrected Spenliss swiftly; "just to cajole the old chap into buying him a partnership in Gandry's Estate Agency business; just to keep Lydekker in the humor to leave all his money to Mr. Derek Smith."

Morrit poured out a liqueur, his mouth pursed.

"Don't agree with any of that. And I often doubt that Derek knew anything about Gandry's swindles: anything at all, before the night when—all right, Nell and Spen, you can say he did. I say ——"

"Look here!" interposed the town clerk. "I've been trying for hours to decide whether to trap Derek or not. As I couldn't decide I thought that the four of us should settle the question this evening in a businesslike way. We don't want irrelevancies and disputes cropping up every few seconds." He paused. "Tell you what—and this should give us the proper atmosphere—although you all know as much as I know about Derek, I'll lay the case before you: facts, doubts, surmises. If you disagree with a point we'll discuss it at the end. That done, we'll have a vote—*trap* or *not trap*."

"Yes, yes! This is really thrilling!" Mrs. Morrit's other arm came onto the table; she clasped her hands expectantly.

Spenliss jabbed at an ash tray with his cigar.

"My vote's *trap*. Facts and surmises be hanged! Now, Nell, vote *trap*."

"Won't count if she does," said Morrit, "any more than yours. Jimmy's going to speak on the case before there's any voting. I want time to think. Go on, Jimmy."

The town clerk drew at his cigar.

"Till midway through this month, nine years ago," he said, "we considered Derek, whom we'd known all our lives, absolutely straight and honest. We considered his partner, Lionel Gandry, honest, for that matter; but for eighteen months past, unknown or known to Derek, Gandry had been swindling wholesale.

"Something was discovered, and late one night Uncle Lydekker told Derek that probably Gandry would be arrested in the morning. It was foolish of Lydekker, for only a fortnight previously Gandry, at the risk of his own life, had saved Derek from drowning—you can keep your charitable regrets to yourself, Spen. Don't interrupt. Of course what did Derek do? He slipped off at once to warn Gandry, to help him to escape. Presumably Derek acted from sheer gratitude. For, whether in the swindles or not, he was in no discernible danger himself. Gandry alone had appeared in the various transactions, and no document incriminating Derek was ever found. But Derek's move to help Gandry was disastrous.

"Gandry and he went to their office. Gandry wanted the ready money in the safe. Two policemen saw their light and, suspecting burglars, invaded the office. It promptly occurred to Derek and Gandry that these chaps had come to arrest Gandry. They simply leaped at the bobbies and chucked them clean down a flight of stone stairs—laid 'em both very much out. And then Derek, in an understandable panic, went off with Gandry and a bag of other people's cash. A warrant was straightway issued for his arrest, but Gandry and he had vanished, and have remained vanished all these years."

The town clerk drew at his cigar again.

"The warrant charged Derek with assault and—not unnaturally—with being a co-swindler with Gandry. Like Ron, I doubt that he was, until he became something like it on this night. Anyhow, Derek nearly killed a policeman; he achieved the escape of Lionel Gandry, among whose dupes were myself to the tune of three hundred and eighty pounds, Spen to that of seven hundred, and Ron—nineteen hundred, was it, Ron?"

Morrit nodded.

"And," continued the town clerk, "Derek undoubtedly shared that bag of loot, for he had to leave his money behind in the bank. What he's been doing these nine years—honest work, or picking pockets—we can't say. But whichever it is, he hasn't prospered. The significance of his letter is obvious. He's hard up; he wants to get money out of Lydekker. He probably communicates with his parents and sisters in the north, and knows exactly how furiously his uncle disowned him and disowned them for speaking up on his behalf. But he believes that if he walked suddenly into the old man's room and held out his hands in entreaty he'd be forgiven. So he means to risk coming to Weyport if he's told Lydekker's here." The town clerk leaned back in his chair. "Any point objected to? No? Well, what's the voting?"

Spenliss struck a match viciously.

"Don't look at me! You know my vote."

"Ron?"

Morrit shook his head.

"I say *don't trap*."

Spenliss smacked the match down in disgust. "Nell, say *trap!*"

The town clerk looked at Mrs. Morrit and was met with arched eyebrows and a shrug.

"I s'pose I ought to follow Ron's lead, but it would be tremendously interesting, wouldn't it? And Spen's so keen and you're the real leader in this, and I almost know how you'd like me to vote—I vote *trap*."

"Here! Nell hasn't a franchise!" exclaimed Morrit. "She didn't lose anything."

"Excuse me. Derek had a pound of mine to put on a horse."

"Pah!" said Morrit. "Jimmy, you side with me. Let's deadlock the proceedings, two against two. Come, what's three-eighty pounds?"

"Um-m—it's something I'm still sore about." The town clerk stared at his cigar. "There'd be a satisfaction in landing the pair in jail—Derek and Gandry."

"But no police on the scene till I've had a couple of rounds with Derek, mind that!" said Spenliss. A smile, very unpleasant, touched his face. "Derek won't feel like throwing police about when I've finished with him. Jimmy, it's just struck me that you'll have to vote *trap*. You, as town clerk—and Ron, of course, as a magistrate—'ll be neglecting your duties if you don't catch Derek."

Mrs. Morrit gave a sigh of exultation, and the town clerk was unmistakably pleased by the introduction of this viewpoint.

"Very well, Spen," he said, "I'll ——"

"Duties—rubbish!" intervened Morrit. "Don't vote that way, Jimmy. Vote with me. Stop shaking your head! Listen! Make it two against two and we'll toss up to decide. Be sporting, Jimmy."

"Don't you be anything of the sort," ordered Spenliss.

The town clerk hesitated, then, "To please you, Ron—*no trap*."

With a certain amount of relief in his face, Morrit took out a half crown.

"Heads, Derek isn't interfered with; tails, trap him."

"Oh, mind my dear table!" cried Mrs. Morrit.

The coin spun up and fell on the carpet.

"Tails—*trap*," said the town clerk; and Mrs. Morrit softly clapped her hands, while Spenliss nodded in gratification.

"Of course, you needn't be one of the house party, Ron," he remarked, "if you'd prefer ——"

"Oh, I'll go—to see you're not too rough with Derek."

"May I?" whispered Mrs. Morrit ecstatically.

For once Morrit snapped, "Certainly not!"

Mrs. Morrit shrugged.

"I shall laugh if it isn't Derek, or if he loses his nerve when he finds himself in Weyport—turns back before reaching The White Gate. What a sell for you three, holding your breaths in ambush there!"

"I've thought of that turning back," said the town clerk. "I shall bring a few more people into this—people who knew Derek well—to watch for him on the edge of the town and at the railway station. Unless he comes cleverly disguised or hidden in a motor car, he won't have much chance of retreat, once he's entered Weyport. Yet"—there was keen regret in his voice—"yet I wish he'd let slip his address in London. We'd be so sure of him then. I suppose he's in London—some hotel, if he can afford that. Pity he hadn't a favorite hotel, back in the past. He might have gone there. The staff would scarcely recollect him in connection with the Weyport affair."

"Derek with a favorite hotel!" said Spenliss. "Dissatisfied prig! Did he ever stay at the same hotel twice? Did he ever discover that 'quiet, comfortable little place' he was always saying he meant to discover?"

The others shook their heads.

Away in the window recess, very wide and blue and shining, an eye that had not rested from its long gaze gazed on at the table.

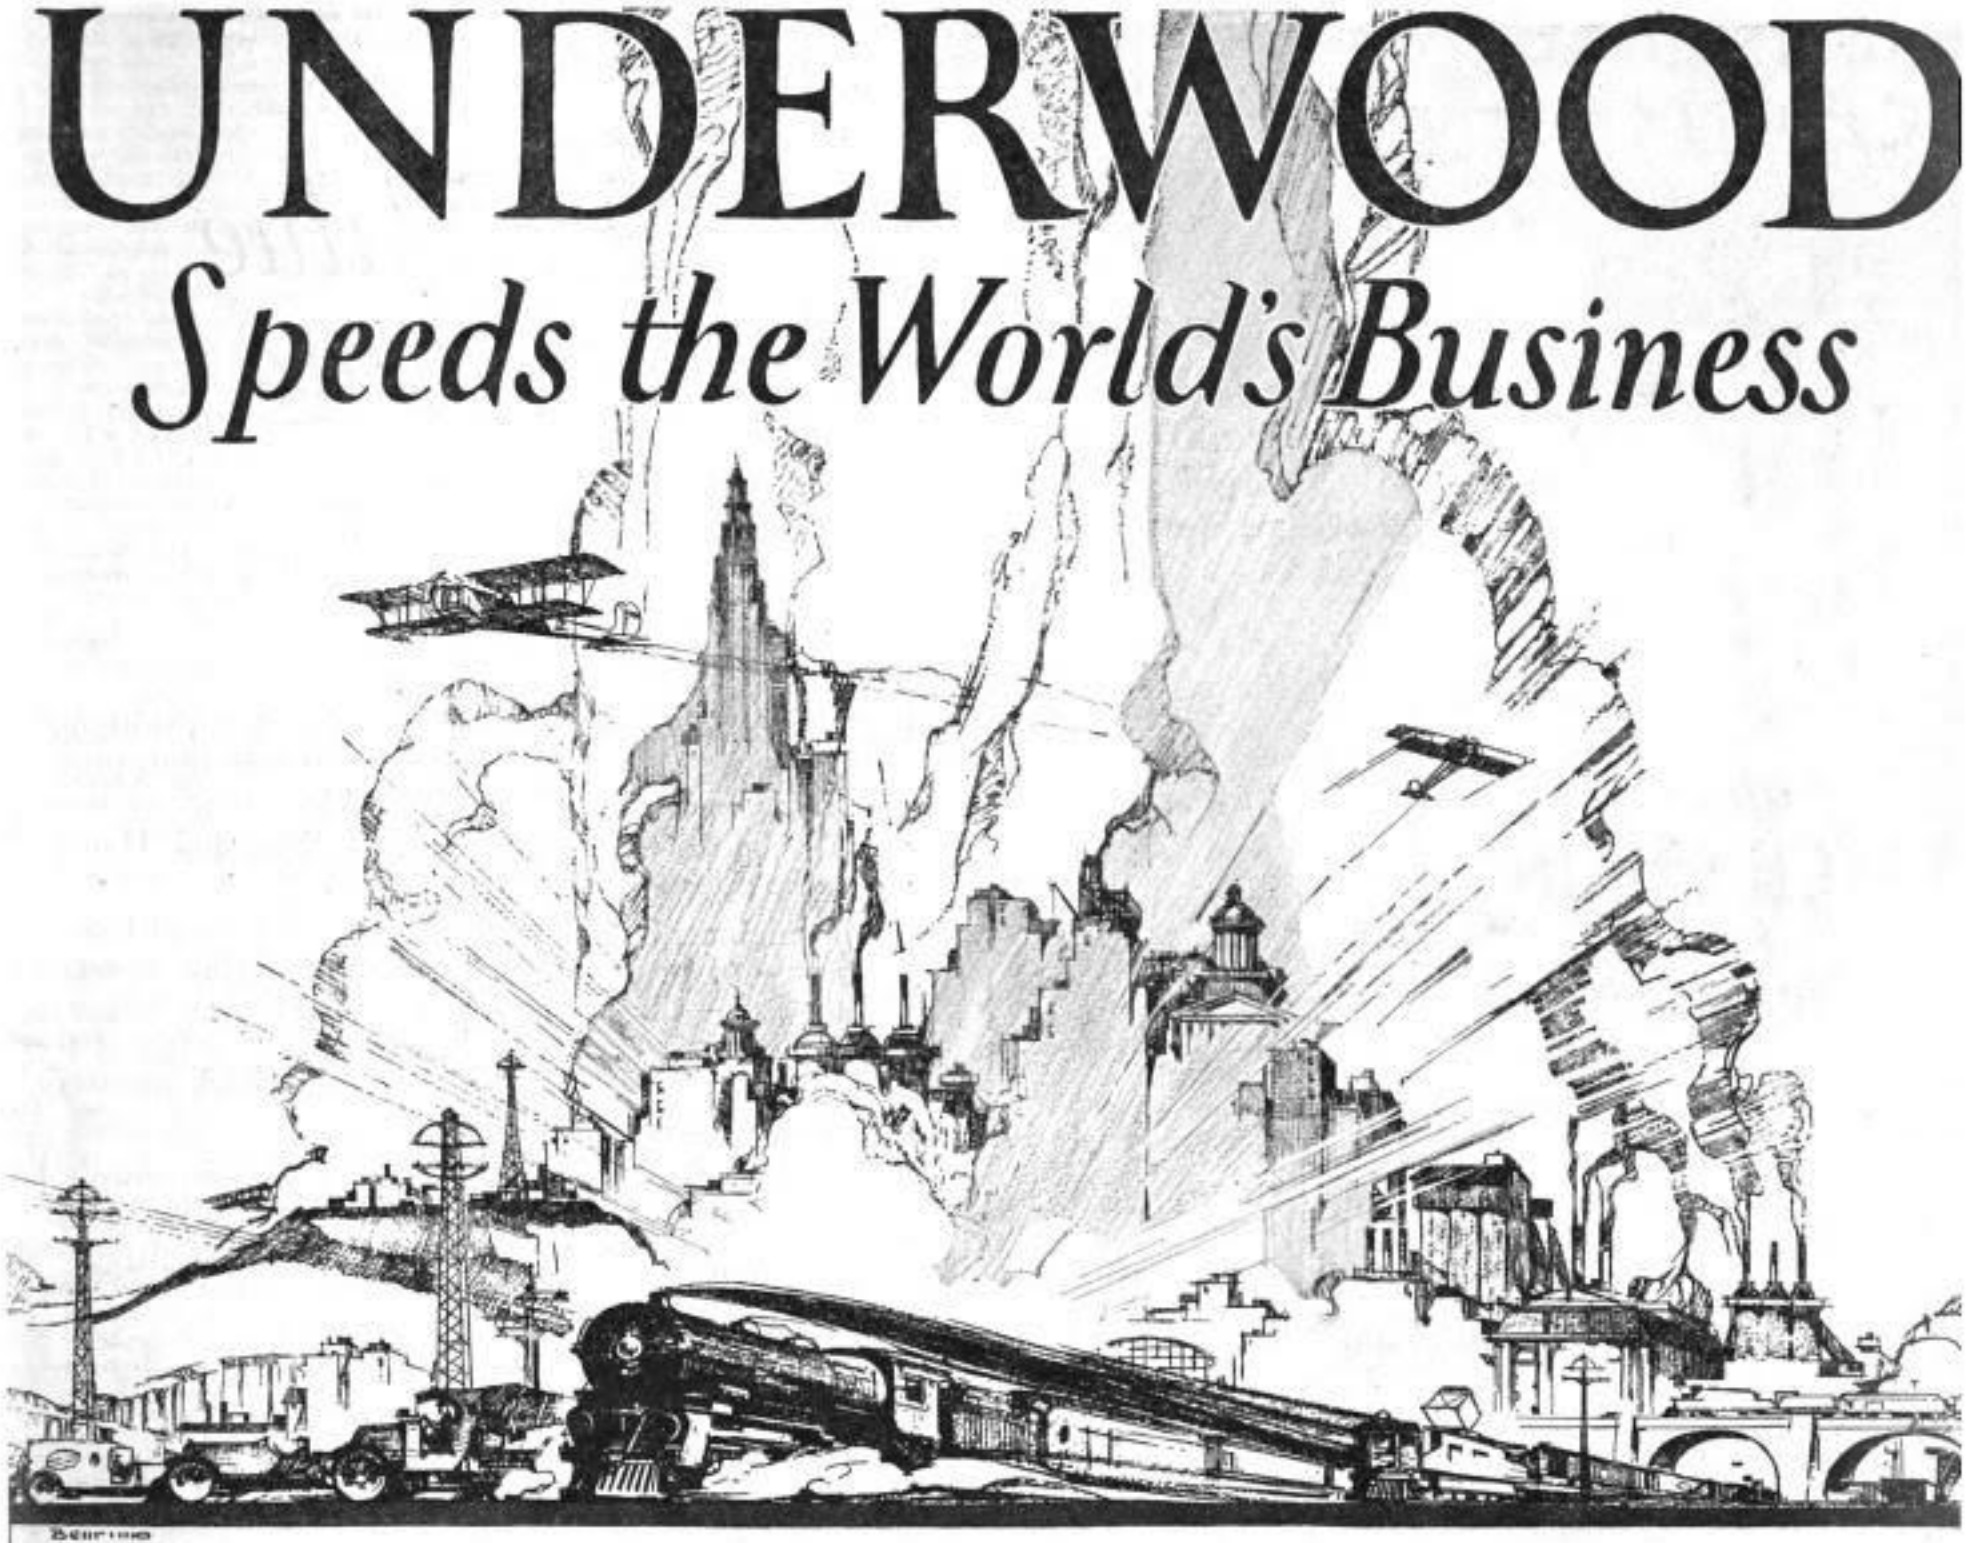
Amid the black and varicolored patch which formed the environment of the other eye there was now a blue, bright slit, slowly becoming wider. Of those at the table it was Mrs. Morrit who first glanced towards the window recess—swiftly, after giving an exclamation.

"Veronica," she said, "you recollect Derek Smith, don't you?"

"Derek Smith?"

From the magazine in which she had been absorbed the girl looked up uncomprehendingly.

"Yes. Why, he used to play with you in Northumberland when you were a kid—your mother often told me. Surely you remember!"



The girl pondered—vainly, it was obvious—and lapsed back to the magazine.

The Value of Time

By Krónos

Paintings by
HAROLD DELAY

TIME! Before every train that thunders through the night flies Father Time—the same watchful, protecting personality that guided Alexander across the ocean's floor to the defiant walls of Tyre, and Hannibal across the Alps to the gates of Rome!

The engineer in his rocking cab, staring ahead into the darkness—the conductor going methodically about his nightly task—the passengers lying in their comfortable berths, listening to the storm shriek past—all put their trust implicitly in that hovering, watchful, protecting figure of old Father Time.

For Father Time, on America's Railroads, stands for that amazing development of Time Service, train despatching and block signals which alone make modern train safety possible, and enable travelers to save the most costly thing in the world—*Time*.

For half a century, moreover, Father Time has stood for the finest Railroad timepieces that money, brains and skill could produce—*Elgins!* Broadly speaking, Father Time *is* Elgin. He has been Elgin's official trade-mark for half a century. One of America's favorite Railroad models, indeed, bears his name. Among Elgin owners, in Railroad circles as elsewhere in the busy world, pride of possession unites with perfection of performance.

* * *

*"Father Time"—one of Elgin's popular Railroad movements, here shown cased up with Winding Indicator Dial. * * * Twenty-one jewels; adjusted to temperature, isochronism and five positions. Material, construction, adjustments and service fully covered by Elgin Guarantee. * * Made in Elgin, U. S. A.*

(Continued from Page 54)

"Great luck!" breathed Mrs. Morrit across the table. "Else she'd have listened to all we've said. Forgot she was there. Don't want her to tell her people. Talk of something different now."

It was not from her sister, Veronica's mother, that Mrs. Morrit particularly wished their conversation kept. It was from the "conceited, aristocratic" father, the distinguished athlete with "absurd notions" as to honor. His criticism of a stamp deal effected by Mrs. Morrit as being "absolutely not 'cricket,'" by which he meant "absolutely not sporting—not honorable," had led to a protracted quarrel, in celebration of the end of which Veronica had come on this visit.

Veronica had inherited from her father all his love for outdoor games, and something of his predilection for honor, though not enough to render her talkative when reticence was diplomatic.

She put down the magazine, leaned back in the recess and rested her eyes—closed them. One word, directed at the table, was shaped soundlessly by her lips:

"Swine!"

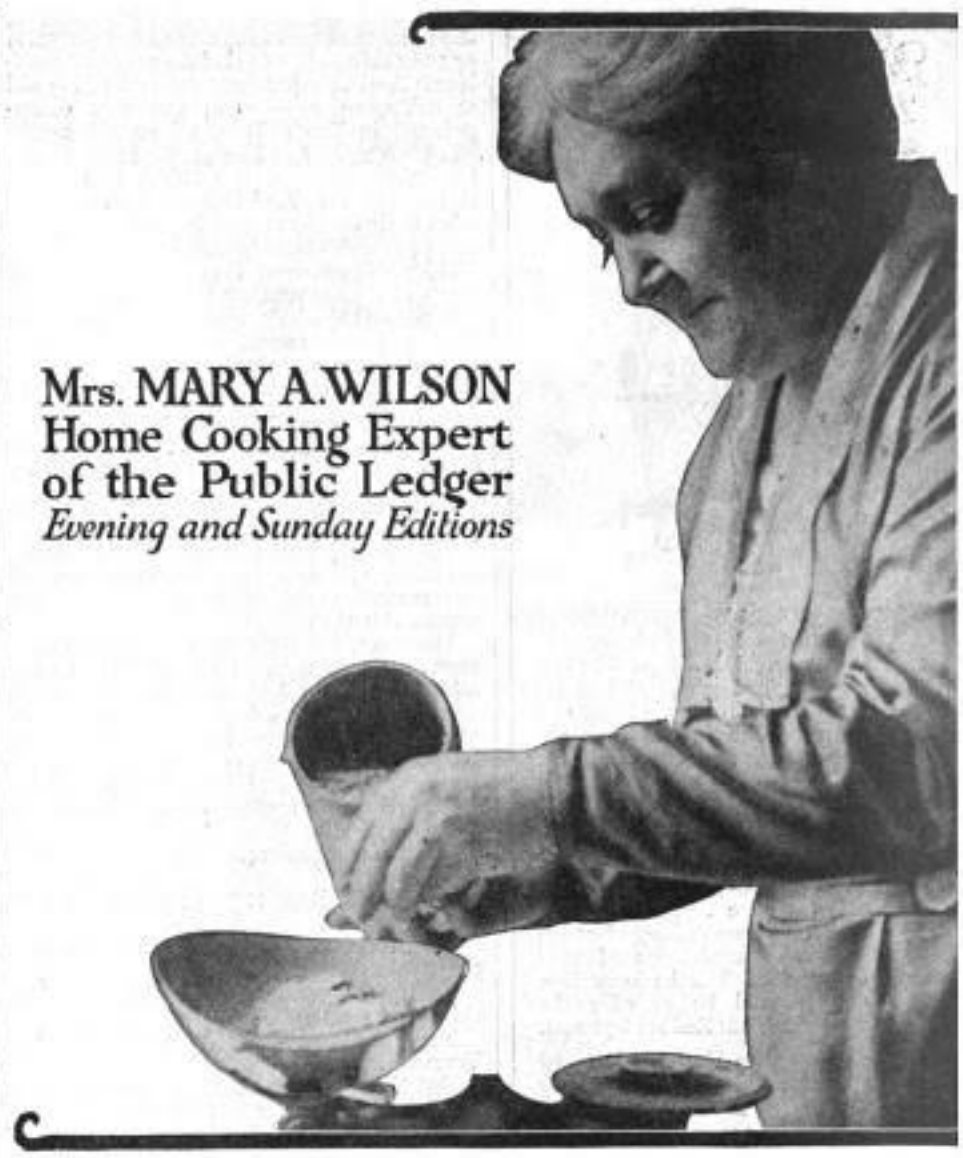
She folded her arms.

Dear old Derek! She smiled. What cheek she had in those days, always calling him Derek! She a short-frocked, bare-kneed, often grubby-faced urchin, with the ribbon bow on her sea-water-soaked, rat-tailed hair reaching little higher than his elbow even in the last days of their friendship. . . . Couldn't she recall things vividly! Her delight whenever Derek was in Northumberland visiting his people and, as an old friend of her mother, visiting her people; her wanderings along the beach with him, when they collected driftwood, searched the rocks for crabs and wondered whether they would find a stranded mermaid or something equally exciting beyond the big black point.

The cuttlefish! Her smile increased. How persistently she tried to get Derek to sample the tooth powder which she manufactured by grinding up those chalk-like bits of cuttlefish that were to be found on the shingle, and how vehemently he refused—the matter culminating in that hilarious afternoon when her father and mother held him in a chair and she thrust at his teeth with a cuttle-powder-charged brush every time he couldn't help laughing!

And his nickname for her! That was really humorous when one recalled that thenadays she secretly very much fancied herself as a pretty and graceful young person.

She had cut her knee. While she sat on her mother's lap Derek plastered it for her.



"Is it very deep?" asked her mother.

"Deep!" said Derek scornfully. "How could anything go deep into these leathery, weather-beaten old knees? They're just like the knees of a rhinoceros I know at the Zoo. There you are, Little Rhinoceros Knees."

And after that she was always Little Rhinoceros Knees to him, except when she was Rhinos. It was jolly difficult to feel ethereal when you were addressed as Little Rhinoceros Knees. Dear old Derek! So here was news of him at last! He had managed to struggle through the nine

"It is Rough on the Child. So Derek Had the Keys?"

Queen Victoria's cook

Although Mrs. Wilson cooked for royalty, she is also a practical cooking adviser for the most modest purse.

For years she prepared and passed upon every dish set before Queen Victoria of England at Buckingham Palace, and there devised some of the favorite dishes of that Prince of Epicures, afterward King Edward VII.

She has been a chef for Italian nobles, stewardess of the American Hotel at Lake Como and a cook in the famous Cafe Royale, of Paris.

During the war she was cooking instructor of the United States Navy. Thus she is a food economist in the strictest sense.

For five years she has been in charge of the cookery department of the Public Ledger, (Evening and Sunday Editions). In her own kitchen she tries out every recipe before she publishes it. Every day she answers questions on cooking and diet, sent in by her readers.

Mrs. Wilson's daily service has proved so valuable that many other newspapers print it regularly by arrangement with the Ledger Syndicate.

The Red Elephant, The Blue Dealer and The Red Tag

A MAHARAJA OF MUMBI wanted a Red Elephant. No other brand would do. The last one he had possessed had far surpassed all others in Speed and Power. But he had broken thru the Garage door and left for Parts Unknown.

So the Maharaja dispatched a Runner to the Local Elephant Dealer with a Rush Order for One Red Elephant—F. O. B. Factory. Upon receipt of the Order the Dealer heaved a Heavy Sigh. His stock of "Reds" was gone and he had not reordered. Profits weren't Large Enough on the Red brand. They lasted too long—Renewals were few. But he knew how Impossible it would be to offer the Maharaja any shade but Red in Elephants.

Now it occurred to him that he knew of a Firm that could paint an ordinary Black Elephant so natural a Red that Nobody would ever notice the Difference.

So it came to pass that the Maharaja received an Imitation Red Elephant. All was well until the Maharaja, who was a wise bird when it came to Elephants, made a trial trip and noticed a lack of Pick-up in his new pet. Upon close examination he found a black patch on the elephant's back where the Red Paint was wearing off.

The next morning a certain Elephant Dealer was requested to devote his Energies to breaking up Stones for new Movie Palaces. That's enough to make any Elephant Dealer blue.

* * * *

The Maharaja had learned the importance of demanding the Genuine.

Mr. Motorist, when you discover that a dealer has sold you a non-genuine part, your anger is no less than was the Maharaja's. But when buying Stewart Replacement Parts, you can protect yourself by looking for the Red Tag.

The Maharaja was unable to tell his product was counterfeit until after he had used it. With Stewart Replacement Parts, you can assure yourself of their genuineness before you even purchase them.

Genuine Stewart Parts are tagged for *your* protection. Be sure to

Look for the RED TAG
on all Stewart Replacement Parts.

Stewart
PRODUCTS

years, and now he couldn't resist seeking the hand that could lift him out of poverty, or something akin to it, into a decent position. And this precious quartet of his old schoolfellows —— Oh, she was disappointed in Uncle Ron, whom she really liked! Why hadn't he squashed that heartless Nell—stopped the thing, instead of sliding into it? And this precious quartet, with their comforts and their money, were out to smash the helpless chap!

Thank goodness, there were heaps of ways of circumventing them, even if they did turn the whole town into a trap for Derek. For instance, the insertion—with special arrangements for big type—in Saturday's Morning Standard of the following:

DEREK—'GILBERT BANTHROP': That snipe of a town clerk is lying. Trap set. Keep right away. RHINOS;

would scarcely fail to warn Derek—or to make things interesting for Veronica in Weyport. Veronica opened the easily openable eye and very smilingly studied the mauve cloud mass, now spread far across the sky.

However, the advertisement plan was a reserve one. Again she visualized a certain afternoon which had come into her mind as soon as Derek's name was spoken—an afternoon only a week before his flight from Weyport. Her mother and she were in London; Derek had lunched with them.

"Derek," her mother said, "I've got to call on two or three people. Do take Veronica somewhere. Take her to the Zoo."

"Zoo! I daren't!" ejaculated Derek, looking scared.

"Daren't?" Perplexity on her mother's part.

"They'd keep her there with the other rhi —— Ow!"

The "Ow!" marked a frenzied attack by Veronica.

But they went to the Zoo. As they were returning on top of a bus Derek pointed to the portico of a building, an attractive portico of white pillars and glass, with pots of flowers and clipped shrubs that were like little trees—these were in low, polished barrels—at the sides of its flight of steps.

"That's my hotel," he said; "not so big as yours, but a fine place to stop at. I discovered it yesterday—mean to stay there always when I'm in London."

Veronica peered.

"There're people having tea in the hall. Such a fascinating [!] hall. Derek, let's have another tea—there."

Derek pretended to consider.

"They're awfully particular about knees at my ho —— Keep off! You mustn't hit persons in public! Of course we'll have another tea. Bang the bell, Rhinos. Steady, they'll think the bus is on fire!"

Veronica couldn't eat much, but the hall was even more fascinating than it had appeared from the bus. There were a black cat and a kitten who came and made friends, and every minute or so the kitten would take it into its head to climb like lightning up the trunk of a miniature tree which stood by their table. There were little children at the next table actually talking French; there was nice soft violin music; and there was a sort of counter laden with the hugest boxes of chocolates—white boxes with orange ribbons. Derek bought her one, and, on a hint, endeavored to purchase the kitten.

Presently mummy, helping eat the chocolates and expressing satisfaction that the kitten had not been for sale, remarked: "I think I shall give you my daughter, Derek. She'd much prefer that. Mummy and dad are nothing to her. It's only Derek that matters, eh, Veronica?"

That was an exaggeration, yet Veronica's anguish a short time afterwards, when she heard that Derek had run away, that no one would ever see him again unless he were being led to prison, was terrible. The Veronica of to-night thought pityingly of the child who lay for hours moaning, almost stunned, in her mummy's arms, and who for weeks thereafter would break suddenly into fits of desolate sobbing.

Veronica, as a schoolgirl of thirteen, had forgotten that a person called Derek once existed. But there came a summer afternoon when from the top of a London bus she saw a portico—white pillars and glass, shrubs in polished barrels. The breath she was drawing quickened, making her chest heave.

"I remember!" she whispered.

The kitten, the French children, the chocolate boxes! "I remember!" she whispered again, and her sunlit afternoon turned dim with unhappiness. She twisted round in her seat to keep her eyes on the portico. "What's its name? Did I ever know?" She could not discern a name. "I'm sorry I forgot all about you, Derek. I won't any more, now I've seen the—the Hotel *Remember*."

With eyelashes flickering, she scanned the house fronts for the name of the street.

When she went back to Northumberland a fortnight later she searched her home for a photograph of Derek and, finding one in a bedroom drawer, installed it on the drawing-room mantelpiece; and no one took it down.

Several times in ensuing years she passed the Hotel Remember; certainly not by design, for the sight of it meant the clouding of her day. She read its name, but she preferred to know it by the name she had given it. She had seen it last a month ago when she spent a few hours in London on her journey to Weyport.

Veronica shifted in the window recess . . . Derek's careless words, nine years old—"Mean to stay there always." What were they worth?

The magazine, which had been gliding, fell. Mrs. Morrit looked round.

"Veronica, to-morrow's Friday. You won't be able to play cricket for Miss Andrews' team, with that eye—surely?"

"No," said Veronica, "and it feels a bit funny. I think I shall run up to London to-morrow morning and let old Muirhead Simms, dad's town doctor, take a stare at it."

II

VERONICA passed among the miniature trees in the hall of the Hotel Remember, wondering whether in a moment she would be retracing her steps, horribly disappointed and drafting in her mind the precise form of advertisement which she would deliver in person at the Morning Standard office. Yes, now for the shock of disappointment. Of course Derek wouldn't be here. There wasn't a chance.

"A Mr. Smith, madam?" said the hotel clerk. "From Paris—quite so." He turned a page of his register. "Oh, yes, madam; Mr. D. R. Smith, arrived last evening." And then, having been instantaneously wrought upon by bruised beauty, he hurried aside from his register and moved forward a chair. "If you will please be seated I will send up word. What name, madam?"

"Thurloe. Please tell him Miss—Veronica—Thurloe—no one with her."

A page boy—also wrought upon—saluted.

"There is the gentleman, madam, just going into the smoking room. Pardon me one instant."

"No," said Veronica quickly. "I see—I'll go."

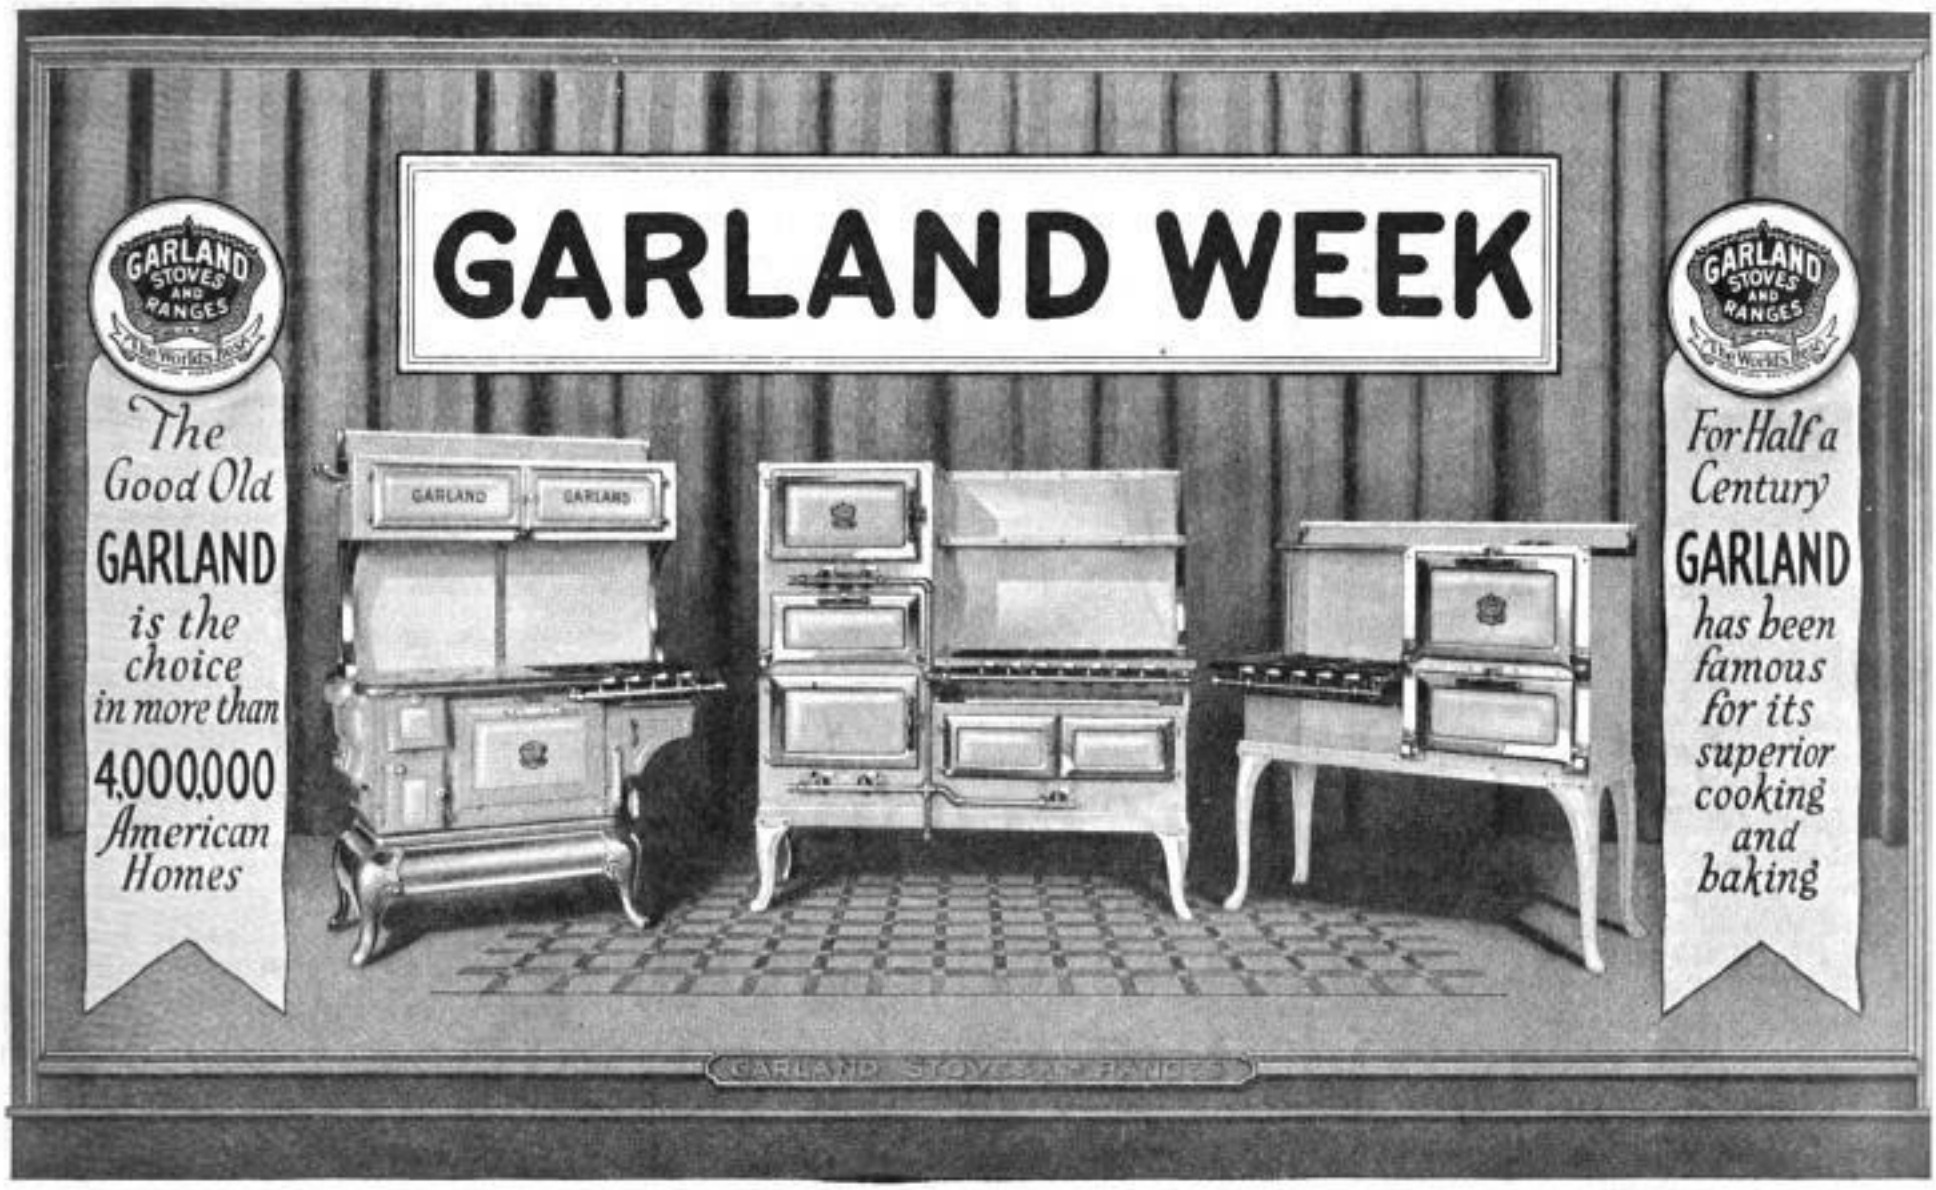
Lightly she went across the hall and caught the door of the smoking room as it was swinging to. The room was empty save for the man with his back to her—the tallish man with the neat head of brown-gray hair. Noiselessly she came round the door and noiselessly let it close.

"Busy, Derek?" she asked.

He turned and surveyed her. He was clean shaven as formerly, but there was an unexpected, slender furrow at either corner of his mouth. With his mouth shut rigidly, yet with a stupefaction that he could not hide, he examined Veronica's features. Suddenly there was wonder in his eyes—wonder with exuberant delight.

"Little Rhinoceros Knees!" Then in apologetic embarrassment he actually became red.

"Veronica," he corrected, holding her hands tightly.



Veronica squeezed his hard. Her query, "Busy, Derek?" had been a magnificent effort at calmness. Now she felt hot dribbles from her eyes going right down her cheeks, curling under to her throat. She snuffled. Seeing that Derek used to kiss

Garland Week All Over America

Thousands of Dealers Everywhere Are Demonstrating the Beautiful New 1922 Garland Stoves and Ranges

Beginning today, and continuing all next week, thousands of department stores, gas companies, furniture stores, hardware stores and general merchants, all over America, are giving special exhibitions and demonstrations of the new 1922 models of Garland Stoves and Ranges.

For over fifty years, Garland has been famous for its superior cooking, baking and heating. Today more than four million American homes, and 80 per cent of the up-to-date hotels, restaurants, institutions and clubs, are using Garland Stoves and Ranges.

Never, in its half century of continuous leadership, has the Garland been so beautiful, so varied and so good as it is today.

The new low prices make this year's Garland still more attractive in view of the quality, long life and fuel economy for which it is so well known.

The Garland store in your locality is showing Garland Stoves and Ranges in its window. Look for a window like the one illustrated above. See the beautiful new Garland models. See them demonstrated, and you will understand why they are the cooking mainstay of hundreds of thousands of good housekeepers in America.

The new 1922 Garland models include full enamel and plain gas ranges of every size and type, with or without the Garland oven heat regulator, a complete assortment of the famous three-fuel Garland Combination Range, in sizes for every kitchen, large or small, and a great variety of coal and wood stoves and ranges. If you do not know the name of the nearest Garland dealer, or if you have any heating or cooking problem, write direct to us because there is a Garland heating and cooking device for every purpose.

her good-night, surely —— Gripping his hands harder she leaned forward and kissed him.

"You dear child!" said Derek, his lips decidedly aquiver. He cleared his throat. "At least, not child. Veronica, what a great, dazzling beauty you've grown into! What a beauty!"

"Good!" choked Veronica. "I—I must be, since you can't help thinking so. But—no Veronica-ing. Stick to Rhinos."

"That I won't!" said Derek emphatically.

And then for quite a time they stood as they were—hands locked, smiling; their smiles ranging, without a word spoken, from sparkling to almost wistful, from contemplative to almost riotous.

"I say, how much longer am I going to keep you standing!" exclaimed Derek. "Come, let's sit down."

"Is the female gender allowed in this room? Shall I be turned out? Oh, I don't care! Over in the window seat, Derek. Excuse me." Veronica produced a handkerchief and mopped at her cheeks.

"Isn't this fine!" said Derek, sitting so that he could face her squarely. "My dear, don't think I'm reverting to criticism, but the wonderful color scheme of your eye ——"

"Cricket—silly stroke of mine. The ball came up off the bat."

Veronica put down her handkerchief and parted her lips widely.

Derek looked, and ejaculated: "What a downright shame! Three of those lovely 'cuttlefish' teeth—bottoms snapped off!"

"Hockey, last March. But I'm going to have them crowned. I suppose I *am* rather clumsy and reckless, for I've also a patched-up collar bone, and if you feel this wrist ——"

"What a shame!" Derek repeated vehemently, running his fingers tenderly along the wrist.

"It's tremendously strong, really. Last night"—Veronica took a breath—"I nearly jumped up and hauled that little snipe of a town clerk —— I've a dangerous temper, you know ——"

"Town clerk! That sounds like Weyport West." His fingers on her wrist paused. The furrows by his mouth straightened. With eyes something the blue color of Veronica's, but faded, he questioned hers. "Weyport West," he said again. "Veronica, I'm all at sea as to how you found me. Did you pick up a clew in Weyport—yesterday?"

"I did, Mr. Derek 'Gilbert Banthrop.'"

He nodded with a whimsical grimace.

"Hue and cry on its way here?"

"Certainly not! Your address wasn't ascertainable. But a deputation of old and venomous friends will meet you at The White Gate to-morrow, if you care to go. I was a bit anxious to tell you this."

His fingers slid from her wrist to her palm.

"Veronica!" he said by way of thanks.

Veronica swallowed. The manner in which he spoke that word was pretty affecting.

"Spenliss was going to maul you," she remarked after a moment—"if he could, and then—the police."

"I laid out a poor beggar of a bobby, you know—seriously, according to the newspapers."

"He's quite got over it," said Veronica cheerfully. "He's to be specially invited to The White Gate. Sweet-natured Spen's idea." And then she withdrew her hand swiftly.

A white-haired, very amiable-looking old gentleman, with a newspaper and a novel under his arm, had come into the room. He was an old gentleman of delightful tact; for promptly he felt in his pocket for a forgotten pipe, and, looking more amiable than ever, went away to find it. Veronica blushed hard and willfully misinterpreted his retreat.

"He's going to have me booted out," she observed. "Anyhow, before that happens I'll tell you about last night."

She leaned sideways to recover her handkerchief from the floor, and straightened with the end of her great plait looped over her forearm. Getting the plait in her fingers and flicking at one of her palms with the final inch or two, she gave details—clearly, indignantly.

"Not altogether cricket, was it?" she ended bitterly, with a vicious flick.

"My own fault, I suppose." Derek, with his hands in his jacket pockets, shrugged. "Jimmy was right about that bag. I had to use twenty-five pounds." He stared at the floor. "I didn't think Ron and Nell—still, what do they matter, when Veronica ——! Veronica, I never once suspected that Gandry was swindling. And since that night, except for the twenty-five pounds, I've been straight, really straight."

"As though I doubted it!" said Veronica. "Dear old Derek! Now listen! I haven't yet explained how I found you."

She moved a shade nearer, and, leaning forward and twisting the tail of her hair, told him.

"So jolly glad we had tea that afternoon—at the Hotel Remember," she breathed eventually—"you and the object with knees. I wonder if the kitten's still alive. We'll ask presently. Derek, keep your head as it is a second. That's how you are in a photograph I have. Now have you really changed much? No; bit older, thinner, lines—don't know whether I like them or not—but, as some return for a compliment, very nice looking. Front hair's getting a trifle scanty, though." Veronica's finger lightly brushed it. "I'll give you some ripping stuff for that."

"Anything to do with cuttlefish?"

Veronica's smile well-nigh menaced him with physical violence.

"If you don't appreciate my solicitude ——"

"Appreciate!" His eyes, it seemed to Veronica, were scanning her more than fondly—yearningly. "Appreciate! My dear, if you knew how I appreciate! . . . Veronica, I separated from Gandry a week after we bolted from Weyport, and ever since I've been living among strangers in France or Spain, without making any friends somehow. It's been a terrible lonesome life, except for little spells that I've managed to put in with my people during the last few years; divine little spells of—of being with those who care about me. It's one of those spells, yet with something—I can't quite tell what—with something strangely different in it, that you're giving me now, Veronica, sitting there in your pretty flower-print dress, with your white filmy scarf—grown up, remembering, caring."

His voice had gone somewhat queer. He glanced away. Veronica saw his eyelids tremble. Her own immediately followed suit.

"If the sun had taken all the skin off your shoulders you'd want to wear a filmy scarf," she said gaspingly, and that set him laughing.

"So your people didn't know Mr. Lydekker had left Weyport?" she asked presently. He shook his head.

"And they didn't want me to risk going to him. But I *am* comparatively hard up, with no prospects. Also, I was very fond of him. I'd like to see him."

"I'll get his address. Yet—you mustn't go to Colchester. The precious conspirators are quite capable of having his house watched when you don't turn up at The White Gate." Veronica pensively stubbed her chin with the plait end. "Look here, Derek, I'll go and see him. I don't mind if the conspirators do find out; they shan't follow me here. I'll fix up an interview for you, even if Mr. Lydekker isn't—well, altogether in favor of it." She pressed her lips into the plait end, spreading it like a silky shaving brush, and smiled. "I *can* be persuasive when I wish."

Derek's furrow-cornered mouth had been getting very firm, but at that he chuckled. Then his mouth stiffened again; but the firmness in his face was less than the tenderness in it.

"Veronica, dear, I won't let you go. I won't have you mixed up in that way with—with a fellow like me; a sort of criminal. Why, it hardly seems right to keep you here with me for—for ——" But there wasn't any firmness in his face now. Rather weakly, in fact, he held his hand towards Veronica. "You won't go for an hour or two, Veronica?"

"Hour or two!" She gave his fingers a big squeeze. "I'm going to stay with you till the six-something train to-night, if I may. We'll discuss Mr. Lydekker some other day. But—I want to know this: How much money have you altogether?"

"Fifty pounds. Not a great lot, after nine years of language teaching, but something."

Veronica gave a sigh of part relief.

"I was just a scrap afraid you were down to your last five-pound note." She opened the vanity bag beside her. "I brought up a couple, in case."

Derek nodded his head slowly several times.

"You dear!" he said, repeating the term whisperingly.

"You might take care of them till to-night." Veronica leaned across and dropped a small mauve purse into his side pocket. "And of these." A pink manicure brick, a spare handkerchief, and three or four half-crowns followed the purse. "I'm always losing things out of this wretched bag. I've a trick of giving it an absent-minded whirl round—nearly welted a man on the nose this morning; but he was awfully nice about it. And now what shall we do? Lunch, inquire about kitten—what then? I say, let's go to ——" With extraordinary abruptness she stopped, her face scared. "Derek! You don't walk about in the streets as you are—without some disguise? Suppose anyone from Weyport met you!"

"Not a chance in a million," he answered, taking her possessions from his pocket and studying them before putting them carefully in an inside pocket. "I've a sixpenny beard for Weyport—at night. In daylight it'd cause a crowd to collect."

Veronica came close and linked her arm with his.

"If you were arrested when I was with you, I—I should die," she said tremulously, very earnestly. "I don't look like it, but I should."

He pressed her arm.

"Not you! You'd load up that little bag and welt—and I expect the police would be 'awfully nice' about it."

Veronica looked doubtful.

"I was going to say," she observed, "let's go to Lords and see the cricket. That would be splendid! And I should feel that you were safe from Weyport conspirators there. We should be among cricketers only." A touch of conscience—or mischief or sheer blitheness impelled her to add softly, "That old gentleman who forgot his pipe just now was a bit of a cricketer himself."

"Because he didn't have you booted out? Was it likely he would?" asked the obtuse Derek.

III

IN ONE of those narrow stone-walled lanes which run between two rows of back gardens of old Hampstead houses were Veronica and Derek, three weeks afterwards. They had been on the heath. Really, they were hurrying now to find a taxicab to take them across London to Veronica's train; but under the spell of the lane they were motionless—very completely in each other's arms. Possibly the train would have been missed, as on two previous occasions, had it not been for a sudden but somewhat stealthy grating open of a garden door within a yard of them. There was a lightning parting of their lips, a desperate readjustment of arms, and they were walking coolly and self-consciously from the neighborhood of the gate.

"I know we're being stared after," breathed Veronica. "Beastly unsporting! Do look back, Derek."

He obeyed, and then his arm slipped round her, and, turning, he turned her with him. The lane was empty save for a rough-haired white-and-black terrier whose obvious sentiments were pride in his skill as a door opener and benevolent interest in them.

"My dear, we mustn't wait!" protested Veronica as Derek brought her laughing face to his. "Well, *there*, and *there*! Now come."

She pressed her hands against him, and since the forefinger of the left was in a splinted bandage, having been fractured in a recent cricket match against men—for whose blood Derek thirsted—he yielded before it instantly, for fear of hurting it.

"I simply mustn't get late again," she said, her other hand in his as they walked on. "I believe Aunt Nell'd fairly lose her temper this time—invite me to clear off to Northumberland. Things are pretty tense—I told you—because of my twice-a-week trips to London. Still no suspicion of you, of course; no thought"—Veronica grinned—"no thought that the noble conspirators owe me thanks for six disappointing evenings at The White Gate and tons of perplexity. Dear Jimmy—I've been proposed to—dear Jimmy, the snipe, is still rheumaticky from exposure to an empty house, you'll be desolated to hear. However"—Veronica looked contentedly at their hands—"there's now a distinct suspicion of something else—this sort of thing; perhaps I'd better tell you. I don't think Nell would have let me come to-day if Uncle Ron hadn't wanted me to go to the safe

WATERSIDE SUEDE-LIKE

Jaunty and youthful are the new Tams, fashioned from Waterside "Suede-Like". The soft, supple texture of "Suede-Like" is just right for Tams and its durability insures satisfactory service.

At good stores everywhere, Tams of Waterside "Suede-Like" are obtainable in a wide range of crisp, new colorings. If your dealer does not carry Tams bearing the "Suede-Like" label, send us his name and $2.00 and we will see that you are supplied. State color preferred.

The genuine is stamped

ALADDIN
Thermalware
JARS-DISHES

Keep Foods or Liquids Hot or Cold

One for Coffee ~and One for Fried Chicken

Two Aladdin Thermalware Jars double the joy of your motor trip.

In one you can carry a **full gallon** of hot coffee, iced tea, lemonade or cold water—16 cups.

In the other, pack your **hot dinner.** Four-inch opening admits **big pieces** of fried chicken, meat or cold potato salad. Or carry baked beans or ice cream—enough for everybody!

Absolutely sanitary. You can put your whole hand inside for cleansing and drying. Insulated container of heavy glass, beautifully silvered. Joined to outside steel jacket by patent Thermalware seal. High thermal efficiency. Extremely sturdy and staunch. Stands bumps. Insulated sanitary glass stopper instead of cork.

A New Dish for Keeping Meals Hot

Aladdin Thermalware Dish

Prepare soups, stews, vegetables, puddings, desserts, griddle cakes in advance, and serve **piping hot** at mealtime. Foods kept hot during entire meal, even though diners are late.

Bake or cook food in insert, place it hot in insulator (outer receptacle) and put on insulated cover. **Instantly sealed by vacuum.** Released by touch of air-vent valve. Satin or Polished Silver, Polished Nickel or Copper. A most acceptable gift.

Sold by leading Department, Drug, Hardware, Jewelry, Sporting Goods and Auto Accessory Stores

deposit for those papers of his. You've got them all right, Derek?"

He showed her a large envelope in his pocket.

In Fitzjohn's Avenue they hailed a taxi. Derek's tone, as he told the driver to close it, was somewhat biting—to discourage a smile. It could not be explained to these men that the sole reason for seclusion was Veronica's terror that while they drove through the streets someone from Weyport might catch sight of him. Veronica, settling within Derek's arm, was silent during the rush downhill. Then:

"I'm having a little look at some of our difficulties, dear. Here's Mr. Lydekker abroad—we don't know where. You've only fifteen pounds left." Reprovingly she lifted her hand that he might see a ring—which would be slipped off as she approached Weyport, and slipped on again in her bedroom. To discredit the reproof she put the ring to her lips. "Only fifteen—though I've twelve to add to that. And I can't endure you to go back to France without me, or to have a cheaper room than at the Hotel Remember—which has meant so much to us. I've a jolly good mind to ask dad to help us." Then she drew a deep breath and laughed gently. "It is strange to remember that when I was a kid you were a grown-up friend of his, a sort of extra father to me, whilst now"—she looked round at him and her blue eyes shone—"whilst now, to me, you're just my own age, my dear—my dear!"

Their lips came together.

"Don't ask dad." Derek's arm tightened about her. "His first concern would be to take you from me." He raised his head rather unhappily. "Poor old Tom, what a thundering cad I've been to him, snaring his daughter into loving me—*me!*"

"For ever—and she didn't require any snaring, thank you," said Veronica blithely. "As for cad"—her voice went low—"dear, haven't you utterly refused to let me do what dad and mum might—might have some excuse for feeling hurt about? Wouldn't I run away with you this evening, to be married in France, to be poor, to work every minute of the day? Wouldn't I?" She laughed suddenly, a hint quaveringly. "There! I'm really begging you again to take me. I can't help it. I want to go. Of course"—teasingly—"I may not seem worth taking, all mended up——"

He lifted her to him.

"If only I could say 'Come along'!" he whispered. "But there're not only dad and mum to consider, and—far above them—you, the present you, involved in such a—a proceeding. There's you of the future, my wife. I won't keep you in exile! I want you to live in England with me—openly, free of any fear that I shall be arrested." He hesitated. "Veronica, if I were arrested now and found not guilty of having a hand in Gandry's frauds—and most probably that would happen—I shouldn't get a long imprisonment on that bobby's account, after nine years. That imprisonment would sweep away a lot of our difficulties. We could face people so boldly! Dear, there's a possibility that I may get several years, but I think that when we've had a few more days together I'll surrender to the police."

Almost frantically Veronica grabbed at him—with her left hand, hurting her finger and whipping it back with a gasp and moan.

"No! no! no!" she entreated. "Oh-h, promise!"

With the hand between his palms, striving to comfort it, muttering reproaches at himself, he promised fervently.

The taxi brought them to Liverpool Street station two and a half minutes before Veronica's train, at a remote platform, was to leave. Derek was never allowed to emerge from the taxi in this neighborhood. Veronica swung out—and faced the interior of the cab before both her feet were on the ground.

"Nearly forgot!" she ejaculated. "Quick, all my possessions in your pockets—Ron's papers"—she tucked the envelope under her arm—"purse, bunch of keys. What? Didn't I give them to you? Oh, they're in the bag with all these moldy pennies then. What a weight! My finger brick, please. Moremoney? Can'twait. Good-by, dear! You shall see me sprint."

She darted, swinging back her vanity bag in a gesture of farewell as she swerved into an entrance.

"Hang!" She'd welted someone; but neither to apologize nor to pick up the couple of pennies, undoubtedly her own, which dropped in front of her, could she pause. She was lifted into an empty first-class carriage of the moving train by a gallant—and muscular—inspector; and, smiling happily, she relaxed in her deep comfortable seat and reviewed the latest day with Derek. Though presently their difficulties arrayed themselves formidably in her mind, her smile did not change. Difficulties—tsh! Didn't Derek compensate ten thousand times over for difficulties—for all the difficulties in the world! The great, beautiful, tired girl—excitement, rush, and a throbbing finger had told on her—sank lower in her corner, with her eyes on the ceiling of the compartment. Her lids drooped. She half dozed. Then her eyes flew open and she laughed gayly.

That nice ticket examiner at the barrier just now—how fortunate that instead of asking to see her ticket as she whirled by he had devoted his voice to a desperate endeavor to prevent the train from starting! Her return half ticket was in Derek's waistcoat pocket. And then her face became a little anxious. Fancy if Uncle Ron's keys were in Derek's pocket! She wasn't at all sure they weren't. She took up her bag. Ron had given her his bunch of duplicate keys that morning; for the key of his safe at the deposit was on it, and he was finding trouble in detaching it, and Veronica was in a hurry to be off.

She emptied her bag on to the seat, swept her hand scatteringly across the pile of odds and ends, and said "Botheration!"

There! She had known positively that Derek had the keys. This was a trifle awkward. Still, what did it matter? It was only one more difficulty—a tiny, temporary one.

She lay back again and thought. . . . Uncle Ron was dining out—wouldn't be home till she had gone to bed. Ripping luck! But she had told Derek to go to a theater—to have a bright evening. He wouldn't be back at the hotel till midnight. Bally luck! It would be a risky business long-distance phoning him from uncle's library at that hour. Ah, she wouldn't phone Derek. She would ring up the hotel presently from Weyport station—give a message to be repeated to him as soon as he returned. He must send her the keys by messenger, first train in the morning.

That was settled! With something better than keys to think about, Veronica drew off her ring, kept it against her lips for a while, and then, slipping it on to the threadlike gold chain around her neck, dropped it inside her blouse.

IV

VERONICA'S first realization, on waking next morning, was that it was raining. What a driving against her window—open top and bottom! Dressing table was sure to be soaked. Couldn't be helped. And then she heard a knocking at her door, and called "Hullo!"

"May I open it?"

"Why, come in, Uncle Ron. It's all right."

"What a sleepy-looking person!" Her uncle's smile was genial, but there was something unusual in his face. He was untidy too. He had not shaved, or brushed his hair, and his collar and tie were in a wonderful muddle. "Had a good ten-hour snooze?"

He sank his hands into his pockets. "I say, Veronica, did you lose those duplicate keys of mine by any chance?"

Silence.

"I left them in London. They'll be here directly."

Morrit made a somewhat rueful grimace.

"They've been here already—to Harbour Street, at least. They've unlocked the side door of the office, unlocked the strong boxes and one of the safes, and departed with about five hundred pounds in notes and eighteen hundred pounds' worth of securities—probably did the job in five minutes." He moved towards the window. "It's a particular nuisance about those securities. They belong to a friend of mine."

Veronica, with no recollection of having turned over, discovered that she was lying with her forehead on the pillow, with her mouth strained open and the fingers of one hand hooked hard over her lower teeth. She bit deliberately on the fingers. The pain made her writhe. She took away her hand.

"If you'll—go down to the library," she muttered—"give me a minute—to collect thoughts—and garments, I'll come."

As the door closed she huddled her hands, splint bandage and all, beneath her chin, stretched to her utmost, and lay rigid, teeth clenched, eyes shut.

After a space she remarked huskily, "If you'd known how jolly bad I should feel, Derek, I don't believe you could have done it."

With a vicious twist she got out of bed. She fastened on a white skirt, slid into a blue kimono, and, bare-footed, hair in sundry plaits, went to the library, quiet, cold rage in her eyes, and, as it proved, not a falter in her voice—for a time.

"I was with Derek Smith yesterday," she said, sitting down. "I've gone up to see him—always."

Uncle Ron's face expanded. For an instant his lips were folded, and then he blew prolongedly.

"No need to tell your aunt," he said. "She'd only make an upset."

"I was in love with Derek—till five minutes ago." Veronica fingered her ring. "I'm sorry if it's a wicked thing to say, but I do wish I had died just before you knocked on my door this morning." Her breath came in a violent heave.

Uncle Ron looked at the ring. He moved over to her. She felt his hand on her shoulder.

"It is rough on the child. So Derek had the keys?"

She nodded.

"We'll let the matter drop," said Uncle Ron.

Staring vindictively at the carpet, Veronica turned and turned the ring. Her face began to flush.

"We won't. You've always been kind to me—incredibly kind in this minute, and I've been siding with him against you. I kept him out of The White Gate trap."

"You—you ——" Uncle Ron stuck, swayed her gently with his powerful hand, and then proceeded to chuckle. "I'll be ——" He laughed outright. "Thinking of Spen," he explained.

She was still speaking, her voice oddly monotonous.

"I'm siding with you now. Derek shan't have your money and things if I can prevent it. Derek's weak"—she rambled a little—"weak, you know. Oh, of course you knew that. I saw it the first day. He thought I oughtn't to be with him, but—but he let me stay . . . Weak—but only when it suits him. He wouldn't take me to France ——"

Uncle Ron's hand jumped.

"My dear, I haven't looked after you!" There was tremendous consternation in his tone.

"He wouldn't take me, because—of course—he didn't want me, didn't love me. He was just lying to me, just weakly making pretense to love, because, I suppose, he liked it. He might have remem—recollected I was such heaps younger than himself. . . . Then his money was going; there were difficulties. So when the keys gave him an idea he weakly yielded—preferred thieving to me. That's how things went, Uncle Ron." Her right hand moved to the chair arm; her nails began to work into the wood. "There's no reason to let Derek off; he's treated me pretty ——" Her breath came in another great heave; she nodded at the telephone. "Ring up the police or whatever're the right people. I'll tell you the name of his hotel—in a second. He'll have left there now, but it may help them to get on his track. Go on, Uncle Ron. I mean it."

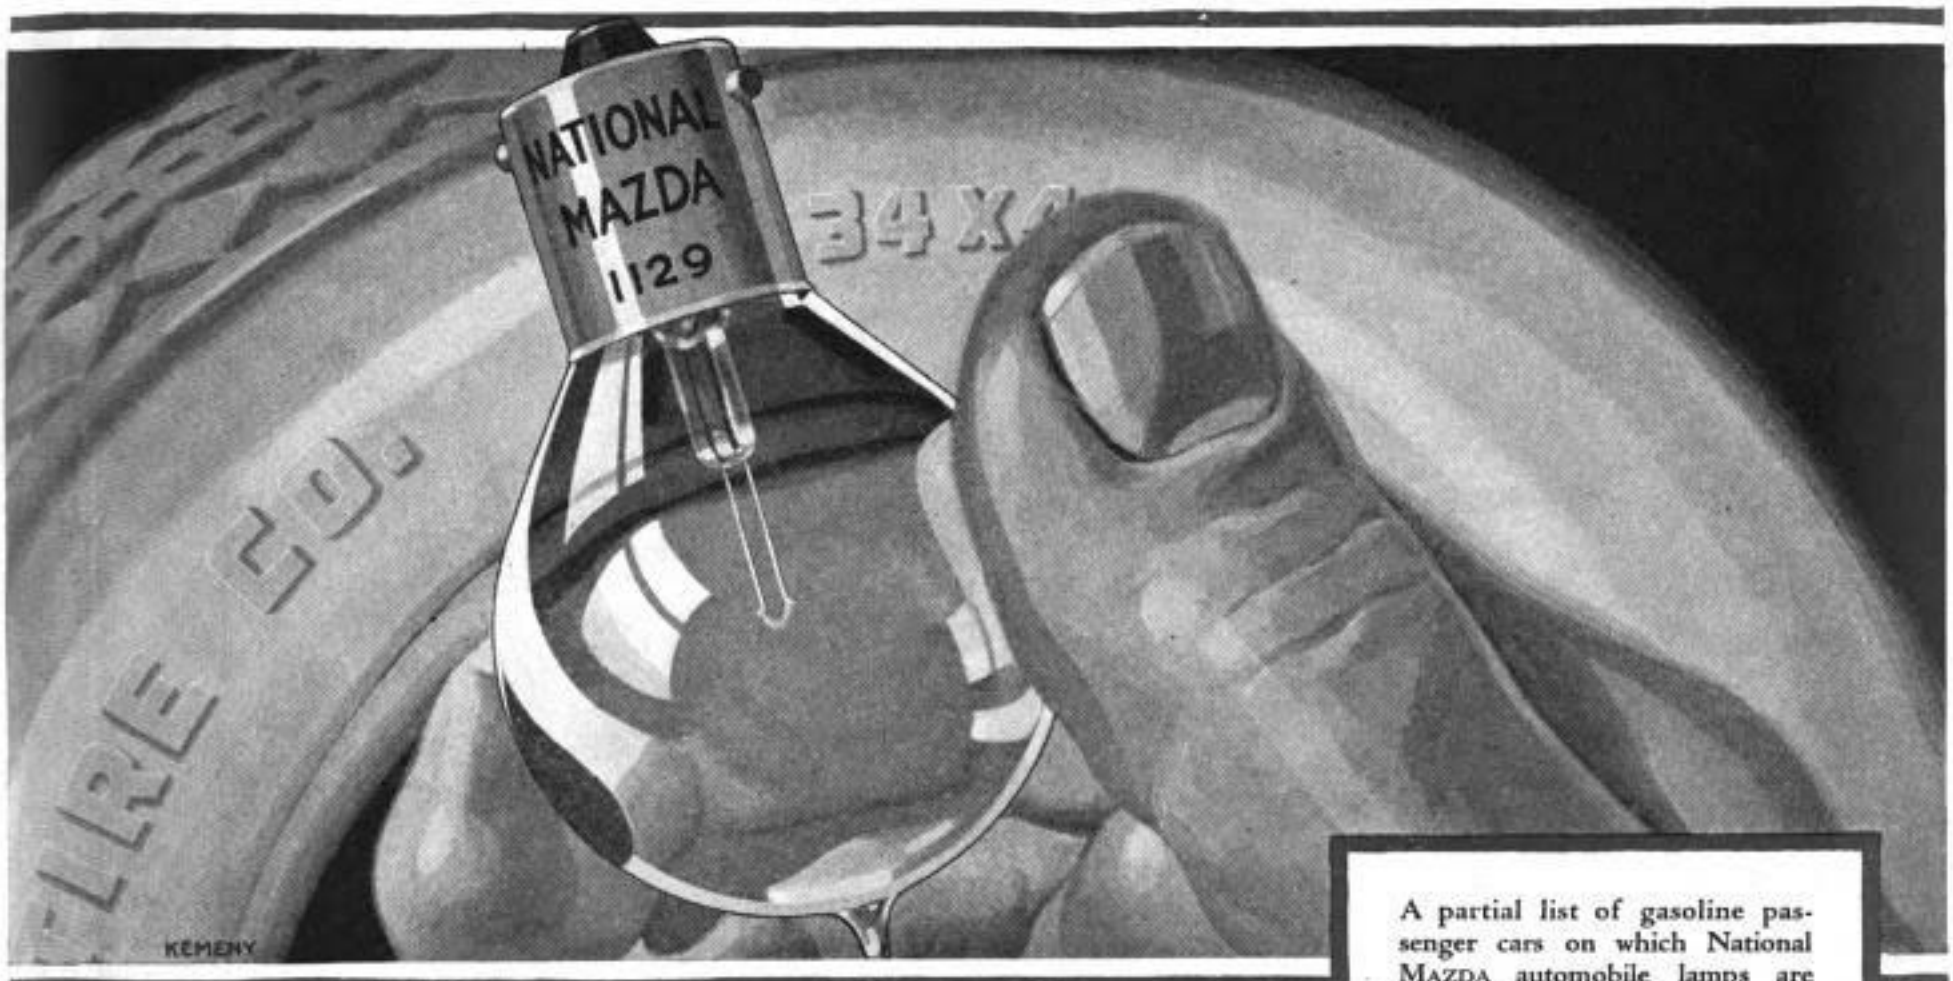
"Oughtn't to let him have those securities." Her uncle walked to the telephone.

"Weyport fourteen," she heard him say.

That was the town clerk's private number, wasn't it? So the arrest would be organized by that little sn —— Her face sank between her hands; she began to cry silently, dazedly. She heard nothing with distinctness save presently her uncle's request for the hotel name, which she gave him, and, ages afterwards, the telephone bell as he rang off.

Then she stood up very suddenly, and made a step.

"Upstairs," she panted. "Feel awfully queer—can't breathe properly."



"Here!" vociferated Morrit, springing from his chair. "A great prize-fighter like you couldn't faint if —— Deuce! what a smash she's gone!"

"Feel pretty seasick," admitted Veronica, an hour and a half later. White, ringed about the eyes, still in her kimono, she sat with Uncle Ron by the telephone. "But," she added, "I won't lie down again till we have some news."

NATIONAL MAZDA

Remember these Facts When You Buy Auto Lamps

There is the same need for care in the selection of automobile lamps that there is in the selection of tires or any other motor car necessity. It pays to remember:

1—That accuracy—far more difficult to obtain in working with glass than in working with metals—is necessary to secure proper headlight focus and to eliminate glare.

2—That years of research work have been required to perfect the machines and processes used in the manufacture of accurate, dependable MAZDA automobile lamps.

3—That the majority of well known cars have National MAZDA automobile lamps as standard original equipment.

No car owner can escape the logic of these facts. You must conclude first, that accuracy is important, since the most accurate lamps are the ones most universally used; and second, that the research work is necessary, since the desired qualities could not have been obtained without it.

Only MAZDA lamps have the benefit of the research facilities that brought them to their present perfection. Only National MAZDA lamps have the name "National MAZDA" on the base. Be sure, therefore, when next you buy an automobile lamp that it has on its base the words "National MAZDA" and the correct MAZDA Lamp Number. National Lamp Works of General Electric Company, 304 Nela Park, Cleveland, Ohio.

Each of these labels represents a Sales Division equipped to give a complete lighting service.

When He Comes to Your Door

WHEN this gentleman calls at your home, invite him to enter. He has expert knowledge of the hardest work you have to do as a housekeeper. Washing and ironing, cleaning and dusting—these are his specialty. His methods are new. At one-third the cost in Time, in Money and in Labor, he can guarantee to you a cleaner home, cleaner clothes and household linens and more of them.

You will never regret listening to the message he brings you. In return for just a few minutes of your time he will give you *hours*—hundreds and thousands of hours—for rest, for recreation, for amusement and for self-culture. In fact, he will show how you can save 56-¾ days every year by the use of these electrical appliances.

Give him the chance to mention the names of your own friends who will vouch for him. He is the personal representative of the leading electrical household appliance dealer in your neighborhood. Your entire life may be wonderfully changed by the things he will show you and tell you about the famous APEX Electric Suction Cleaner, the ROTAREX Electric Clothes Washer and the ROTAREX Home Double Roll Ironer. We invite you to write us for the name of our nearest distributor.

THE APEX ELECTRICAL DISTRIBUTING COMPANY, CLEVELAND, OHIO

Factory and General Offices: 1067 East 152nd Street

Canadian Factory: Apex Electrical Mfg. Co., Limited, 181 Allen's Ave., Toronto, Ont.

DEALERS: Investigate the "Big Three"—the only complete line manufactured by one company —the ROTAREX Clothes Washer, the APEX Suction Cleaner and the ROTAREX Home Double Roll Ironer

We can use a few clean-cut men desiring to enter the selling profession. Previous selling experience unnecessary as we teach you our business under experts. If you can furnish good references, write us.

(Continued from Page 62)

She stared at a telegram in her lap:

"Haven't keys. So sorry. Will search on heath. Shall I advertise loss? D."

"Needn't have ended up on a big lie, need he?" she asked wearily. "For he can't intend to brazen it out." She looked at the telephone. "What a time they are letting us know! I expect he's got away."

"More than likely," said her uncle.

"Aunt Nell was very decent over it, don't you think?"

The telephone bell raced. Uncle Ron reached for the receiver.

"Jimmy? Well?" He listened for a while. "Right! See you directly." He put back the receiver. "They got him, Veronica—at the hotel."

She nodded, bending her head. Uncle Ron turned impatiently to the telephone. The bell, starting when he hung up the receiver, had not ceased to ring. He jerked the receiver hook.

The bell raced on.

"Can't they understand I've rung off!" He picked up the receiver. "You—Exchange! Why in blazes—eh? Oh, sorry.... Who? Colchester?"

Veronica, with no further interest in the telephone, stooped and pulled at one of the woolen slippers on her stockingless feet, and got up.

"Half a minute," Uncle Ron said to her, the receiver at his ear. Soon after he spoke into the telephone. "Very smart of your police. Many thanks. I'll motor right over."

He rang off, looking at Veronica. He had lost color considerably.

"The Colchester police ——" he said.

But she moved her head in appeal.

"Tell me later. I couldn't understand now." One of her feet turned over sideways, and back, over and back, nervily. Her blue eyes had a heavy stare. "I feel as if"—she passed her fingers across her eyes—"as if I shan't ever understand anything again. He's numbed me, being so shameful to me."

She breathed hard through her nostrils. "Oh, Derek!"

Uncle Ron stepped over and took her arm.

"You'll understand—and feel lots better. No silly self-reproaches, mind, though we have made a rare hash of things. The Colchester police rang up to say that they've just collared a man who has my five hundred pounds, the securities and the bunch of keys. He confessed everything at once. He found the keys on the ground in Liverpool Street station, read the office address on the tab, and took the eight o'clock train to Weyport."

"When the pennies fell out—I gave someone no end of a welt!"

Veronica laughed gayly, and then screamed, rocking in her uncle's hands, which had gripped her above the elbows.

"Whoa!" Uncle Ron shook her. "Attend to me! Derek'll be free in a day or two! Free! Understand that? He shall come before the Weyport magistrates—before me! I'll take care the swindling charge isn't proceeded with. There'll only be that policeman business. What'll he get for that? A paltry few days! Understand?"

But Veronica had quite ceased to understand.

Uncle Ron laid her on the floor and shouted, "Nell!"

▼

VERONICA stood amid the miniature trees in the hall of the Hotel Remember, with her eyes on the entrance doorway. The kitten of yore, stout in these days, purred somnolently yet anticipatingly at her feet. The arrival of Veronica meant that a plate of really choice viands would presently be placed before him. The plate appeared. Veronica spared one glance to note the commencement of the meal; then her eyes went back to the doorway.

Derek was coming here to meet her, straight from the fourteen days' imprisonment which had been his sentence. She had not seen him since that evening when she left him outside Liverpool Street station, that evening before his arrest. She was now facing, in her own phrase, a decidedly strenuous sort of moment. In fact, from head to foot she was in a quiet tremble. She had engaged a private sitting room on the ground floor. She was within easy retreating distance of it as she waited, wishing she could retreat to it forthwith but believing that Derek would be frightfully disappointed if he didn't catch sight of her as soon as he reached the threshold of the hall. Now and again her quivery fingers touched her hair. It was "up" for the first time in honor of the occasion.

Two taxis stopped outside. Wouldn't be Derek—just yet. There was a little influx of people—of luggage—and there *was* Derek, trying to edge past, smiling at her, with his eyes simply dancing.

She made a sign and slipped into the sitting room. Derek, following her, shut the door quickly; for Veronica, her forearms across her eyes, was crying—in great gasps. He took the forearms, kissed each, kissed the bandaged left-hand finger, and then parting the arms let them fold together again behind his head while his cheek pressed against a hot, already soaked cheek. Whispering, coaxing, saying that she would make him cry as well, he strove to calm Veronica, strove to brace her body—a big body, maybe, but seeming pitifully soft and defenseless in this stress—against the shock of her sobs. Fairly soon the sobs grew less rapid, grew gentler; but minutes passed before a coherent word came from Veronica.

"Swine—I am! Treacherous swine! Derek! Oh-h, Derek, why don't you fling me off—detest me?"

He whispered many reasons, and after a little she moved her head and with a sound that would have been a groan but for happiness in it rested her lips on his.

"But to think—of what I did!" She had put back her head. Tears were welling in her eyes again. "To think ——"

"Think of the great, black difficulty that's gone!" retorted Derek enthusiastically, joyously. "Think of that, you dear love!"

A smile wavered into her face at last.

"There's another great difficulty—nearly gone." She held him still more tightly, with her cheek to his. "Very nearly gone. Dad—he's coming here directly. Dad says—what I did—was so—so appallingly not cricket that perhaps, if you'd care to accept me—as a sort of apology from him and mum—from all three of us, he'll—let you have me."

THE RAZOR THAT SHARPENS ITS OWN BLADES

A few strokes on the strop—the blade is keen again

AS radical a departure as the first safety razor itself! No more of this spending good money for blades every little while! No more pulling and scraping to get the beard off with a half dull edge!

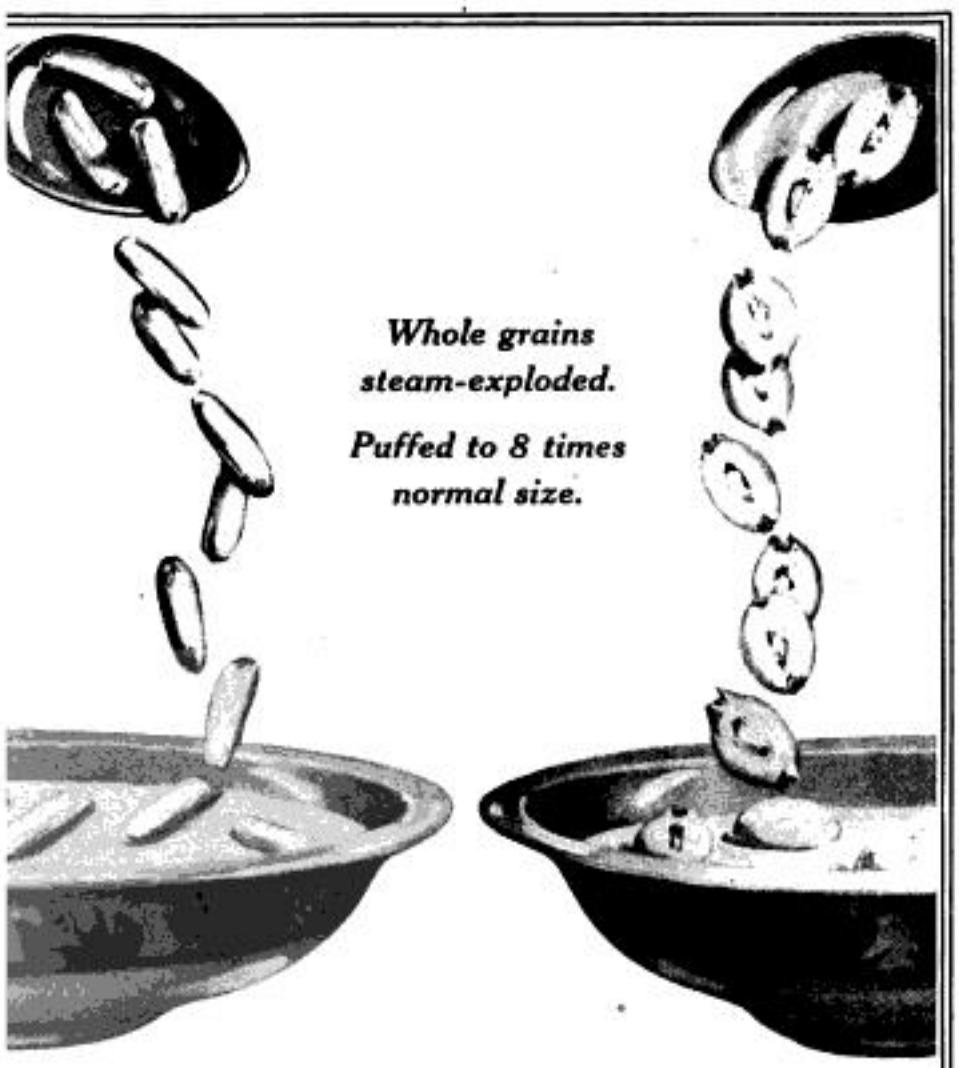
Hundreds of thousands of men are turning to the Valet AutoStrop Razor—the razor that sharpens its own blades.

A few strokes back and forth on the straight leather strop, and there's a new keen edge for your morning's shave. No knack needed! No bother! Strops, shaves and cleans without removing the blade.

Every day in the week the Valet AutoStrop Razor gives that fine smooth shave—the kind that makes you smile when you stroke your chin.

And the money-saving! More than a solid year of smooth, clean shaves are guaranteed from every $1.00 package of blades. Ask your dealer to demonstrate the Valet AutoStrop Razor for you today.

Valet AutoStrop Razor



Silver plated razor, strop, year's supply of blades, in compact case $5.00

Now also in a nickel plated model with strop and three blades for $1.00

Strops and blades may also be bought separately.

Saves constant blade expense

Whole grains steam-exploded.

Puffed to 8 times normal size.

One at Night

One in the morning

Make these all-day-long delights

Puffed Grains are the supreme breakfast dainties. Never was cereal food made half so enticing.

But that isn't all. Puffed Wheat in milk is a matchless dish for luncheon or for supper.

Puffed Rice, crisped and lightly buttered, is an afternoon delight. And on desserts, like ice cream, it tastes like bubbled nuts.

Think what puffing does

Puffed Grains are made by Prof. Anderson's process. They are steam exploded—shot from guns.

Every food cell is blasted. Over 100 million steam explosions are caused in every kernel.

Digestion is made easy and complete. Every element in the whole grain is fitted to feed.

Thus one gets whole-grain nutrition—16 needed elements. All can be assimilated.

Puffed Grains are tidbits, flimsy and flavory. The texture is like snowflakes, the taste like toasted nuts.

But, above all that, they are scientific foods—the best-cooked cereals in existence.

Let children eat all they will.

Puffed Wheat

In Your Soups

Airy, toasted wafers, ever ready

OUT-OF-DOORS

The Camper's Coffee

TO ME the most important item of food on a camping expedition is coffee. There is nothing quite so stimulating or warming as a good cup of coffee in the morning or when you are tired. There is nothing in the world so unsatisfying as a bad cup of coffee. Badly made coffee always makes me sick. In the woods there is a long-standing argument as to whether coffee or tea is better for a man after physical exertion. Personally I prefer coffee. I believe that a majority of woodsmen, except in the far north, will agree with me. Up there they insist on tea. If you ever tasted the watery stuff they brew as coffee you would also insist on tea.

On one trip in Nova Scotia the Indian guides tried to please us with coffee one morning. Just one taste and we drank tea for the rest of the trip. Every guide up there carries a teakettle on his back. Instinctively he seems to know just when you are getting tired and suggests building a fire and "bilin' kittle." We grew to like this, but my, how we did enjoy a cup of real coffee on the train when we started south!

I have found that about one man in fifty knows how to make good coffee. I will take a chance on saying that about the same percentage of families have good coffee at their homes. I don't know if this is due to carelessness or to the fact that they do not know what good coffee is.

It requires very little more trouble to make good coffee than to make bad coffee. In a camp, of course, it is not practicable to have drip coffee or to use a percolator. But there are other ways. The main idea is to buy a very good blend of coffee to start with, and then use plenty of it. That old idea of using one tablespoonful of ground coffee to each cup won't always work. I've often wanted to know who started that tradition anyway. It may do for some people, but it doesn't suit me. I've found that it didn't suit the fellows with me either.

A better plan is to keep on using ground coffee until you have enough to make it as strong as you like. When you think you have enough I would even suggest that you use a little more. If you think it too strong for your health, why, drink less of it. But don't spoil the coffee. Others may not be so particular about their health. A small cup of coffee is much better for you than two or three large cups of sweetened, muddy water.

One of the best ways of making coffee over an ordinary fire is to fill the pot about three-quarters full of cold water. Pour in a cupful or two of ground coffee, covering the water until you can no longer see it. Let this come to a boil. The moment it starts to boil over pour in a few spoonfuls of cold water with just a bare pinch of salt. Then set the pot to one side and let it simmer. It will settle as clear as wine. The longer it stands the stronger it will be. If you see traces of the oil of coffee on top of your cup you may know you have good coffee.

Never heat coffee over or use the grounds a second time. Always make it fresh and have the pot clean. That's the trick.

By accident we discovered another good way once while on a boat. We had put ground coffee in the bottom of a pot to save trouble in the morning. In some way a little water had got in the pot, and the coffee had soaked all night, until the grains were swollen. The next morning we poured in cold water and boiled it in the usual way. The soaking had drawn the substance from the coffee and it was delicious.

There is still another method, commonly employed around fishing shacks. I do not think it is so good as the others, but it has the advantage of speed. Place a cup and a half of ground coffee in the bottom of a pot and pour in enough boiling water to cover it—just at the moment it begins to boil. Let this set, and then pour in more hot water. Sometimes it works well and sometimes it doesn't. You'll have to gamble.

The tiny bit of salt helps any coffee—gives it a tang or snap. But don't use too much. If in doubt don't use it at all.

I certainly would like to see all the campers have a good time this summer. They'll do it, too—if they use plain common sense and don't try to be Daniel Boone in two weeks.

Mange in Dogs

HAS your bird dog or your house dog picked up a case of mange? If so go to a good veterinary. If you have none get one of the standard remedies. You can perhaps profit by a little knowledge of home treatment. An English veterinarian's book recommends sulphur, two ounces, lard, two ounces, carefully rubbed in. A stubborn case would perhaps do better on one ounce oil of tar and twenty ounces of whale oil. Red mange, the skin disease which gives a red tint to the hair, is best treated, in the belief of that veterinary, by an application of one ounce of oil of juniper and four ounces of glycerin. The standard American remedies are good.

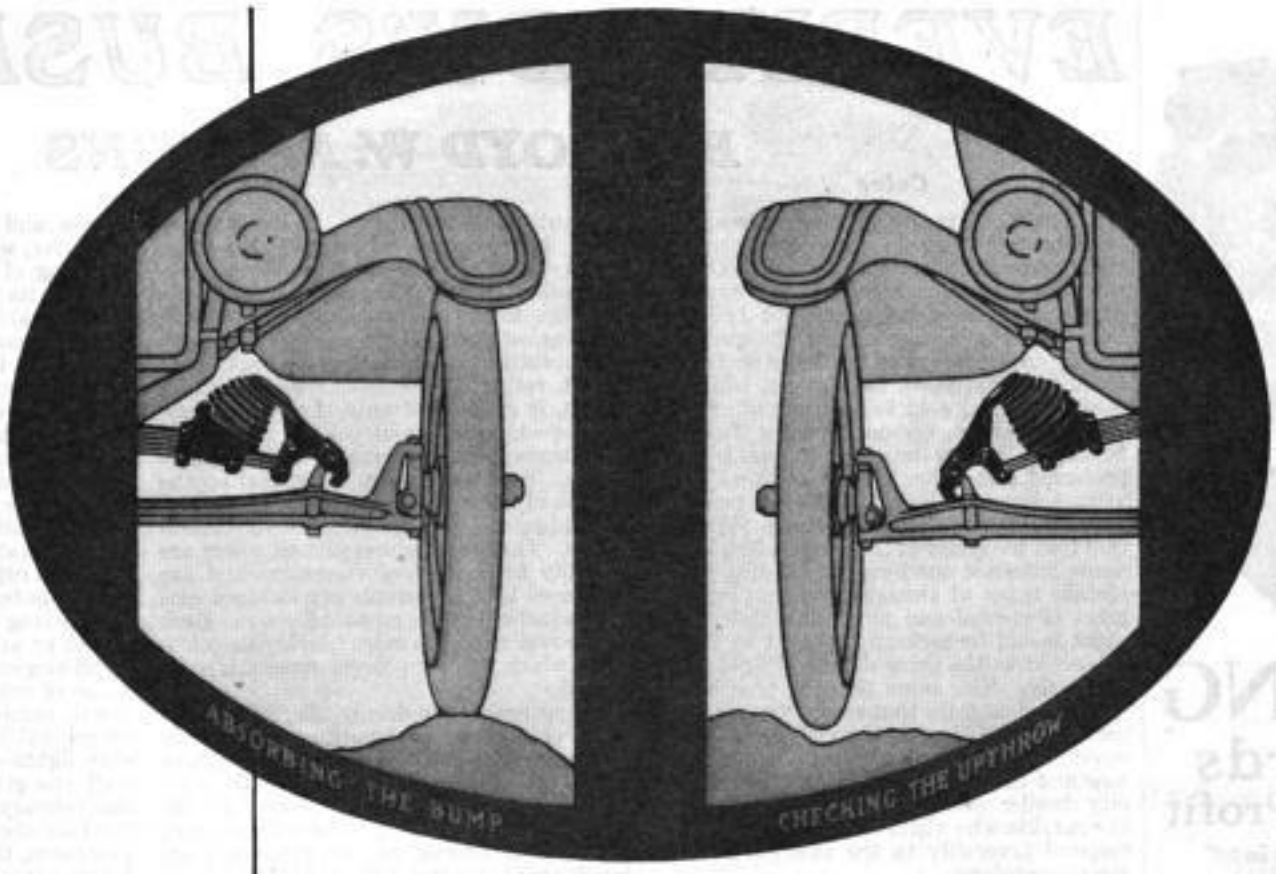
It is no use to treat a dog for mange unless you treat its bed also. Scald out the kennel thoroughly. When dry, swab it with a solution of an ounce of corrosive sublimate in a gallon of hot water. Move the dog to new quarters if possible.

Silver Trout

SURELY we do not lack in improvements on Nature. A sporting journal points out that a considerable amount of the so-called silver-trout eggs were in process of shipment to Eastern states by government authorities in exchange for the eggs of the brook trout of the East. The writer of the article is an angler of the state of Washington, and cautions Eastern stockers against having anything to do with the silver trout of the tributaries of the Columbia River. I do not know this fish, but it is said that it is a pygmy salmon, whose length when mature is only six or eight inches, and that the fish is utterly devoid of any game qualities.

"As a game fish for a sportsman," he says, "I should call him a flat failure, and as a food fish for real game fish worse than a failure. For such purposes a fish should be noncompetitive with the fish that he is intended to feed."

Indians point out that these silver trout "eat all the bugs up; by and by no trout in lake." They have protested against the planting of this fish in some of the waters in the Northwestern country, where they fish for the larger native trout. The Western writer is of the belief that Eastern sportsmen ought to beware of experiments of this nature, because the introduction of a strange species might be quite hurtful rather than helpful. The name of the silver trout is alluring, and it seems too bad that the creature cannot live up to its cognomen. Look before you leap in stocking a stream. Be sure you know what you want.



The Trophy Supply

ONE taxidermist firm in an Eastern city—not one of the largest of Eastern cities either—reports the past year as the banner year in the entire life of the firm. It received for mounting, tanning or other treatment a total of 5567 pieces. The owner thinks that this year will run fifty per cent higher in totals. There were 768 deer heads, 500 deer hides, 81 bear hides, 150 fox skins, and a great amount of other smaller game. This firm received for mounting a bald eagle with a wing spread of six feet five inches which, incidentally, was taken by a hunter and poisoner in South Dakota.

On the whole, it would seem that the demand on wild life for furs of every description is greater now than ever was known, and there are more wholesale campaigns of poison, side hunts, vermin campaigns, and the like, being waged now than ever were known against all our wild game animals. We would have all the game we really would need if the game had any sort of a chance. Of course, these tremendous figures on the part of taxidermists indicate an abnormal amount of killing, rather than a normal amount of game supply. The last year of the buffalo on the Western plains turned out more hides than any other year in all the skin-hunting days. The next year there were none.

In one trade paper I notice in one column eight advertisements of poisons for use by trappers. This poison idea seems to have sprung up within the last three or four years. It is spreading very fast, under national government encouragement. Ain't civilization wonderful?

The famous Hassler action does it

IT is the unique Hassler design—that makes so much difference in the way your Ford or Dodge Brothers car rides.

Hasslers cushion the bumps, check the upthrow and stop sidesway. They work on both upward and downward movements of the car body! And because Hassler Springs have been scientifically provided with the right degree of resilience for each model they do it thoroughly.

Hasslers absorb the heavy jolts that might cause breakage. Nuts stay tight longer. Repair and up-keep costs are minimized. Tires are saved. Less fuel is used.

To get Hassler results you must ride on Hasslers. That's why over a million cars are Hassler-equipped. Try them ten days at our risk. Ask your dealer.

KARDEXING
Your Records
Will Increase Profit

60,000 Up-to-date Users in
Over 300 Lines of Business

With records Kardexed, 50 to 75% of your clerks' and executives' time is saved. Kardex your perpetual inventory, sales, advertising, production, payroll, ledger and credit records—take them out of their boxes and loose-leaf books—make them fool-proof. You can Kardex your present record card or use up-to-date Kardex forms.

When Kardexed, each record card is in its own transparent-tipped pocket—in sight always. Each steel unit Kardexes 500 to 3,000 of any size record cards or ledger sheets. By using backs of card holders, this capacity is doubled and two sets of records are combined in one. Kardex units stack together to hold any number of cards—hundreds or millions.

Write for KARDEX booklets. Send samples of cards you now use or ask for new Kardex card forms. If not convenient to write a letter, use the coupon below.

EVERYBODY'S BUSINE

By FLOYD W. PARSONS

Color

WHAT is it in the nature and temperament of certain races that makes them prefer certain colors? Why do Orientals select clear rich colors, and savages display a marked preference for brilliant hues? Centuries ago among the ancients there were schools of color. Green was dedicated to piety, black to intellect, white to inspiration and gold to understanding.

The average person remains faithful throughout life to the color or colors he first preferred. In other words, certain colors attract certain individuals. People respond to color as plants do to the sun. We are told that the colors of the surrounding landscape influence our lives by creating in us certain types of thought and varying degrees of mental and physical activity. A plant would be seriously injured by being subjected to the same degree of light continuously. The same thing is true of an individual, and for that reason the average person benefits largely through a change of environment which surrounds him with a new and different set of color waves. The city dweller who goes to the country and the ruralite who visits the city are likely to respond favorably to the changes in surrounding colors.

The progress of civilization represents a slow advance from an understanding of simple truths and elementary principles to an attempt to master such mysterious forces as light and electricity. We have now come to the science of color, which subject presents a field of interesting possibilities. In addition to its use in the art of illumination color is being applied to the treatment of human disease. It is likely that before many years intelligent people will seriously consider the hygienic value of colored lights the same as they do the health factor in proper ventilation at the present time. In the past we demanded that light should be given us in sufficient quantity; in the future we shall insist that it be of proper quality. Some day we shall look back with amazement on our present lighting practice, which condemns most human beings to live and work in a dead level of color which not only impairs personal efficiency but which injures human eyes and nerves. One reason for the health resulting from an outdoor life is that the individual is subjected to the ever-changing vibrations of Nature's color rays.

One of the pioneers in the rapidly expanding group of color scientists is Beatrice Irwin, whose research has been carried on in many parts of the world and whose work in this new art, or industry, has been recognized by various scientific and technical organizations. A talk with Miss Irwin developed a number of points that will be likely to interest many people.

There are three fundamental scales of color, reacting respectively on our physical, mental and nervous systems. Each one of these is divided, in turn, in accordance with its affective values, into sedative, recuperative and stimulant colors. Respiration is affected by color. The sedative colors induce deeper respiration; they soothe and calm us. The recuperative colors induce a more superficial or more even respiration; they equalize and refresh us. The stimulant colors excite a more rapid respiration; they quicken our activities. The sedative, recuperative and stimulant colors of the three systems are classified as follows:

The Physical	The Mental	The Nervous
SEDATIVE Lead Gray Prune Terra Cotta Moss Green	SEDATIVE Olive Green	SEDATIVE Moonlight Blue
RECUPERATIVE Golden Brown Turquoise	RECUPERATIVE Rose Madder Fawn Royal Blue Emerald Green	RECUPERATIVE Orange Flame Rose
STIMULANT Vermilion	STIMULANT Violet Chrome	STIMULANT Eau de Nil Mauve Citron Azure Blue

The theory is that people lean toward those colors which represent qualities or aspirations in which they are deficient. The people of primitive races prefer the hard, brilliant, mental colors. Individuals or races handicapped physically show an affinity for the colors which represent physical power, while as a general rule people who are highly materialistic turn to the nervous, or spiritual colors, which furnish the vibrations in which they are lacking.

The retina of the eye, color scientists affirm, is capable of only three color sensations—blue, red and yellow. All other sensations result in combinations of these colors. Each eye has an individual appreciation of color; the left eye generally prefers physical and the right eye mental colors. The nervous or spiritual colors are actually intensities of vibration, and are discerned by most people in a diffused sensation rather than as an actual vision. Each individual responds more quickly to colors with which his own development is concerned.

Many people are deeply affected by displays of color without noting or analyzing the reaction on the human system. Certain colors make one draw a deep breath, as if one were drinking in those colors. Sometimes we observe a color scheme that makes us hold our breath, or perhaps causes an involuntary exclamation. Frequently a vision of color unfolds before us, and the sensation causes us for an instant to remain speechless, and our eyes involuntarily close. Such is the effect on many urban dwellers when they view the pool of color which opens before them at the seashore after many months spent in the city.

Red has been called a stimulant, blue a sedative and green an exhilarating color. The modern belief is that red can be recuperative, blue a stimulant and green a sedative, according to the composition of these three colors or their combination with other colors. It should be remembered that the terms "red," "blue" and "green" are only symbols for long ranges of vibratory phenomena.

The use of color in the preservation and restoration of health is gaining recognition in many quarters. Screens and color filters which absorb certain color rays and allow other rays to pass through are being employed in the treatment of diseases of the eyes and the nerves. There are good reasons for the statement that a change of color is often of as much benefit to an invalid or convalescent as a change of air. The green of the ocean or of the woods is a physical sedative, soothing nerves and giving fresh life to people who are mentally tired. In medicine, reds, greens and yellows are the most powerful in healing properties. The records show that insomnia and dipsomania have been materially relieved by color treatments. Practically all the color cures are based on the therapeutic effect of light when filtered through color mediums. Since respiration is affected in different ways by different colors, it follows that color science may be used in the treatment of various nervous conditions, such as shell shock and other inflammatory nervous ailments.

The most immediate use of color rays, however, is in the illumination of our homes, offices and public buildings. One authority says, "The lighting of the future which does not take into account the value of color effects may be likened to a scheme of decoration in black and white—a scheme that is sufficient and satisfactory only to those who are color-blind." Since the absolute necessities of lighting, especially in the matter of quantity, have now been supplied, the time is opportune for the development of a decorative art in illumination. We have reached the day when we must have lighting artists as well as illuminating engineers. Lighting schemes in our homes and offices will be carried out in accordance with plans which take into account the effects of the light rays on health and efficiency. Most everyone is aware that opaque colors such as those on walls and ceilings exert an influence on the temperament of people; luminous colors have far more decided affective powers than those which are nonluminous. A discriminating alliance of color with illumination is becoming a constructive necessity.

Because of the large item of cost many people cannot afford to redecorate their homes and offices at fre

green. Lighting installations which
pletely eliminate shadows will be reg
as bad engineering, especially in sick r
Shadows reduce monotony and relieve
strain. In schemes where the light
flected through a room from pools
floor the owner will be able to char
color of each pool whenever he desi

The whole subject of the color qu
of light is intensely interesting, an
prove a fruitful field of study for in
gating minds. Let those who deny
color rays have an effect on people
the strength of their opinion by ex
menting first with animals. One si
test is to climb the fence of a pasture
wave a red flag at an observing bull.

There is much we have yet to le
concerning light and its effect on life. Co
pared with the lower animals man is p
sessed of limited powers of vision. Abo
the absolute zero of temperature all bod
continuously radiate rays of light, invisib
to humans, except when reënforced b
daylight, but doubtless perceptible to many
animals and birds. The phosphorescent
qualities of the eyes of a cat, so apparent
at night, doubtless enable the animal to
see the invisible rays that all objects emit.
The cat can clearly see the outlines of the
bodies of other animals in the black of
night, whereas human eyes would not be
able to discern the long wave radiations
from these same objects at all.

Some day there will be rooms dedicated
to certain color schemes, so that regardless
of season or location the dweller in the city
will be able to surround himself with the
green of the forest or the blue of the sea.

Eventually, when women understand
the full value of color as a force of attraction,
men will be more helpless than ever
in resisting the artifices of the fair sex. In
that day many people will surround themselves,
physically and mentally, with colors
whose potencies they desire. Also, in the
future, we shall profit greatly through our
better understanding of how colorful Nature,
coöperating with climate, has molded
the temperaments of peoples and largely
shaped the destinies of the races of the
earth.

What Movie Stars Discover

About Shapeliness of Ankle and Leg by wearing a certain type of hosiery

PATSY RUTH MILLER

*has found in this chic style a hose that combines very smart looks with exceptionally long wear**

It is now a well-known fact among movie stars and directors, that hosiery can make an almost unbelievable difference in the appearance of ankle and leg. Countless camera tests have proved this.

That is why you will find a certain type of hosiery worn almost exclusively by such celebrities of the screen as Patsy Ruth Miller, Billie Dove, Joan Crawford and Dolores del Rio. A type of hosiery which accentuates the natural shapeliness of their ankles and legs.

Miss Miller has found in this chic Allen-A style a hose that is both beautifying and very long wearing. It is a crystal-clear weave of selected Service Sheer silk. Full-fashioned to caress the ankle and knee for a charming effect.*

The foot is made of very fine mercerized lisle. Reinforced at the heel, sole and toe. It seems to wear "forever."

You will find this lovely Allen-A creation at your dealer's in all of the newest shades. Ask for it by style number—3760. If you prefer a Chiffon Weight, ask for style number—3780. If your dealer does not carry either of these styles, simply send us his name —a post card will do—and we will see that you are promptly supplied.

IVER JOHNSON

(Continued from Page 44)

"I was at the meeting when Roe said that," put in Bert Mills. "He asked for estimates of the cost of producing a six-column, eight-page paper, 2000 copies. Would you fellows believe that those estimates ran all the way from $75 to $300? The men who were publishing the papers didn't know, most of them, what it cost them. How are you going to sell advertising space at a fair price if you can't prove to the advertiser that it is a fair price? And you can't prove that unless you know what it costs you.

"I think I've got the costs pretty well worked out in the Gazette plant, but it took my older boy, fresh from college, to show me where I had omitted a lot of items in my old way of figuring. Now we charge up to costs not only the wages paid and material used but a rental by the week for each machine, high enough to cover depreciation and interest on the investment, a fair rent for the building and everything else we can think of in the way of expense, including my own salary, and then we add a profit at an arbitrary figure on top of all that, to be safe.

"I run a sixteen-page, six-column paper, and print a little more than 3000 copies every week. I average about 1000 inches of advertising each issue. Figured the way I've just described, it costs about $446 an issue to produce. I get 40 cents an inch for advertising space, or about $400 an issue. That may look as if the Gazette were headed for bankruptcy, but that apparent loss of $46 a week is offset, first, by the 25 per cent profit which has been figured into the costs all along the line, so that on advertising alone there is a profit in getting out the paper of $65.50 a week. I draw a salary of $60 a week, which is included in the costs. Those two items come to $6500 a year, and the subscription revenue runs another $7500. The interest on the investment, charged also into costs, brings my profits above $15,000 a year, without counting legal advertising, sale of extra copies and such items."

I was pretty well convinced by this time on every point but one.

"I'd hate to try to borrow money at the bank on the strength of that subscription revenue," I suggested.

A Local Necessity

There was a chorus of laughter from the entire group around the luncheon table.

"Try to subscribe to an up-to-date country weekly without paying cash in advance and see what you get," said one of them. "The Cash-in-Advance Club is one of our strongest and most popular organizations. It has taken a good deal of educational effort, both with subscribers and with publishers, to establish the principle of paid-in-advance subscriptions, and there are a good many papers still which do not enforce it very strictly. But I should say that a clear majority of the country weeklies now get their money from subscribers promptly, both for original subscriptions and for renewals. The modern farmer has not the aversion to paying out cash that his granddad had. He has the cash to pay, for one thing, and he buys machinery and other things for cash, so that it seems natural to him to pay for his paper in cash. And while we think of the old-time editor as taking apples or cordwood for subscriptions, we've found some papers, in the course of our association investigations, which have always enforced the cash-in-advance rule. There's the Southern Standard, for example, which has been published at McMinnville, Tennessee, since 1879 without a break, and which has never sent a copy to a subscriber who wasn't paid up for a year ahead. They get somewhat less than the prevailing rate of $2.50 a year, or five cents a copy, which is now almost the standard rate all over the country and which gives the publisher a run for his money."

"The whole trick is to make the paper so useful and interesting to the local readers that they can't get along without it," said Bert Mills.

"Like the Star Clipper," agreed the man from Iowa. "That's the prize-winning country weekly for 1927–28. One of the things which the National Editorial Association does every summer is to award a prize to the best country weekly. Bert, here, got it one year. Until the 1928 convention, next summer, it's held by a paper out in my state, in a town you probably never heard of, called Traer, in Tama County, Iowa. And what makes it the best weekly paper in the United States, as it has a right to call itself, is the fact that it is so full of local news about local people and events that everybody in its territory just has to read it. Traer has a population of 1329, but the Star Clipper has a circulation of 3575—and all paid in advance at two dollars a year. When the N. E. A. committee checked up its circulation it was found that in thirteen townships in the county nine out of every ten farmers were subscribers. Three townships showed 100 per cent subscriptions."

Spurs to Better Papers

"That's a real record," said Bert Mills. "They give another award every year, too, for the paper with the best editorial page. It is an upstate New York paper that holds that this year—Jacob Strong's Rhinebeck Gazette. Most of us don't go in very strongly for editorial comment, but the Gazette speaks right out in meeting about matters of local interest, and has a great influence in Dutchess County."

"I think there's a decided tendency toward stronger editorial expression, as well as toward constructive community service, among country weeklies generally," added the editor from Oklahoma. "That last is another matter which the National Editorial Association is encouraging. At its last convention the association gave a prize to the Clinton County Republican-News, published at St. Johns, Michigan, for the greatest community service, in recognition of its campaigns to raise money for a county hospital, for fireproof vaults for the courthouse and for tuberculosis tests of cattle in the county.

Awards like those, and the others which the association gives annually, are doing a great deal to stimulate country editors to produce better papers. The Brookings Register, in South Dakota, for example, holds the current award for the best front page. That puts the Eastern publishers on their mettle; but it was an Eastern paper, the Graphic, of Newton, Massachusetts, which won first prize in the association's advertising contest, while the News, of Montevideo, Minnesota, took first place as an example of good newspaper production."

These awards are powerful influences for the betterment of the country press, the others agreed, but two or three spoke simultaneously of the schools of journalism as perhaps the most potent factor of all in the progress of the small-town weeklies.

"You didn't think that all this flock of boys and girls who are being graduated every year from the schools of journalism were getting city jobs, did you?" asked Bert Mills as I expressed surprise. "I don't know just how many there are—somewhere between thirty-five and fifty universities, I believe—which have full-fledged journalism schools. I noticed that Prof. Willard Bleyer, dean of the Wisconsin University school, said the other day that there were more jobs than there are graduates to fill them, and I believe he's right. And many of these schools are concentrating on the problem of the small-town weekly rather than on the daily press. Indiana State, for example, pays almost no attention to daily journalism, but when a boy or girl is graduated there he or she can always find a job on a country weekly. It won't be long now, perhaps in our own time, wh... the country editor who is not a universi... graduate will be as rare a bird as the o... time tramp printer is today."

SEIBERLING CORDS

From Bead to Bead—the Same Tough Tread

When your wheel drops into a rut or grazes a curb, your tire is all tread.

If the side-wall of your casing has less resistant qualities than good *tread* qualities, it is right there and then that you pay for any real or assumed saving by the use of somewhat less expensive side-wall material.

Seiberling Cords have the same kind of rubber—"tread-stock", we call it—from bead to bead. It is thicker, of course, at the center, where most of the wear comes, but is one and the same tough piece throughout—built to take the hard rubs and the hard knocks and the sharp stones and bits of glass with least injury.

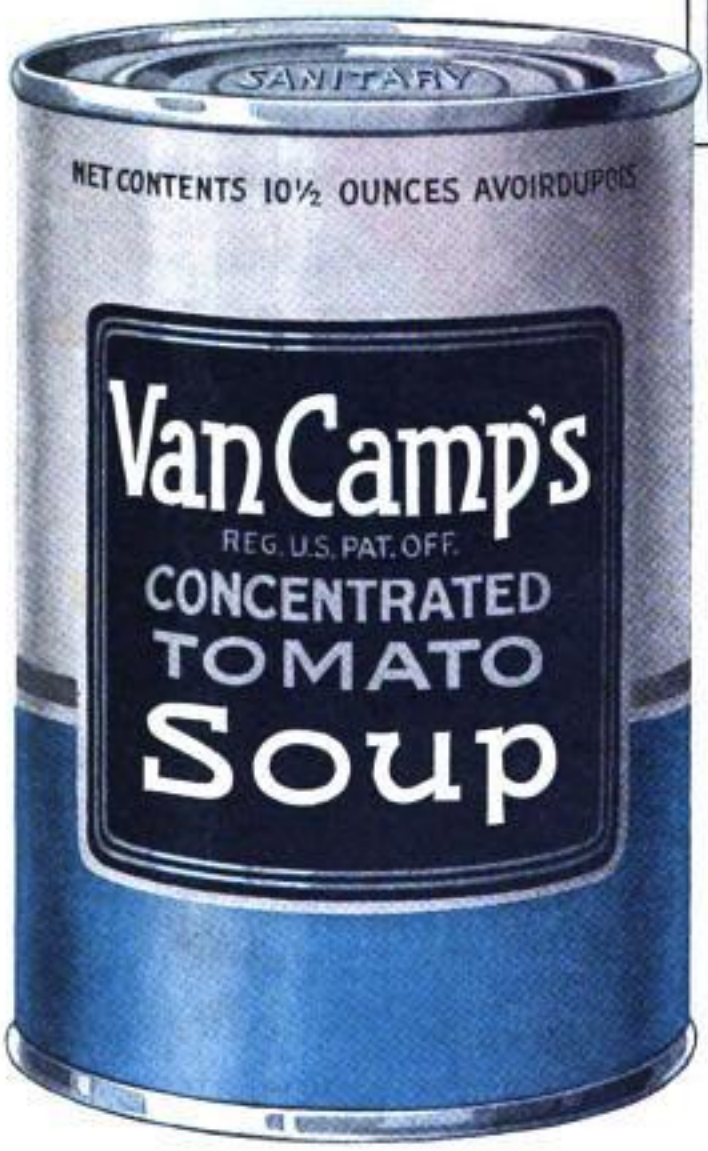
There is no joining of two pieces of surfacing material, so that there can not be any separation of the tread from the side-wall such as you often notice in looking at a car standing by the curb.

This one Seiberling Cord feature is a good illustration of the principles you'll find in all other points of construction, which will be fully explained in subsequent advertisements.

SEIBERLING RUBBER COMPANY, AKRON, OHIO

"A Tire that Will be Known Everywhere"

TO TIRE DEALERS: Seiberling Cords and Tubes are distributed through regular retail channels. We desire to establish connections with good business men who agree with us that high-grade products, a policy of selected and not closely competitive distribution, and service to the user form the right basis for a lasting and mutually profitable relationship. Write or wire Seiberling Rubber Company, Akron, Ohio.



"CORDS ONLY": Seiberling Tires are Cords only. All Tires, Tubes and other products carrying the Seiberling name and trade-mark are of one grade only—as good as we can make it.

SEIBERLING TUBES: Seiberling Tubes, like Seiberling Cords, are of "one grade only, as good as we can make it". They are heavy, large tubes, of long-lived "pure gum, floating stock", and should last as long as the casing itself.

Prize French Recipes

From Hotel Ritz, with American perfections

YEARS ago, a famous chef from Hotel Ritz in Paris came to the Van Camp kitchens. He had won prizes in French culinary contests. And he brought his finest recipes for Soups.

But here we employ scientific cooks—men with college training. We use exacting methods. Materials are selected by analysis. Countless blends are tested to get the ideal flavor.

Then every detail is fixed in the formula. So every soup is always like the model soup adopted.

And here, to get the home flavor—to make the soups as you would—we employ a Domestic Science expert of nation-wide repute.

Combined skill

So the chef made up his recipes. Our culinary experts studied months to perfect them. The final result was soups much finer than one ever makes by guess.

Those Van Camp Soups are now delighting millions. They bring to homes the finest soups produced—a new conception in exquisite flavors.

Try them, in fairness to yourself and us. One serving will induce you to adopt Van Camp's. And it will induce you, we think, to try some other examples of our matchless cookery.

They will come to you from the finest kitchen in the world, from master cooks; and you'll enjoy them.

As a test ask your grocer to send you Van Camp's Tomato Soup today.

HENRY GETS AN ASSIST

(Continued from Page 39)

worst of all insults, burned the ball through with everything he had.

"No use," said Henry finally. "The fast ball ain't there. I can throw harder'n that with my left hand, and I never used it for slingin', either."

At this the boy caved in, covering up his discomfiture with a sickly attempt at a smile.

"How old d'you say you was?" Henry asked, putting his mitt on again.

"Nineteen—uh—that is, almost," McCormick answered.

"Atta boy!" yelled Henry loudly. "Le's see what yuh got! C'mon, boy, shoot!"

That evening McCormick approached Manager Barnes in front of the hotel. He was a very much discouraged youngster.

"Say," he said, "can't you make that old bum lay offa me? He thinks his job consists of ridin' me all the time. If he don't cut it out I'm through. I'll quit the job."

"Suit yourself, son," Barnes replied, blowing smoke rings. "But remember, you asked for work. I never sent out any searching parties to find you, did I?"

"Aw, say ——" the kid began.

"Now, wait a minute," Barnes continued. "What you need is to keep still and learn something from the old bum."

"Why, he wouldn't tell me anything if his life ——"

"Yes, he would," Barnes cut in. "He told me a while ago he thought you had the stuff. And listen! If anybody in the world can make a pitcher outa you, old Henry Hammond's the guy to do it. Now you run along to bed and do what you're told."

Began, then, a thorough course of schooling for pitchers. Young Charley McCormick did not get into another game for three weeks, even to finish a loser. The reason was that after his forenoon workout and another session in the afternoon before game time he was so utterly weary he had nothing left. An hour every morning he worked at fielding bunts and hard grounders, playing every ball as if a pennant depended on it. Barnes swung the bat and old Henry Hammond egged him on. A half hour every morning he worked on a snap shot to first base, the only variation being a shot to third, also for the purpose of picking a runner off the bag.

Another half hour he spent pitching to Hammond, learning to put his weight into every ball. This was the only phase of the task over which old Henry was not enthusiastic.

"The kid will be a world-beater fieldin' his position," he confided to Barnes. "And he can take a runner offa first or third now with anybody. But he can't throw as hard as Bryan tried to keep from bein' President of the U. S. A."

"He's gotta throw, though, to be a pitcher," and Barnes grinned.

"So I'm gonna make a slow-baller outa the kid."

"Yeah, but even a slow-baller has got to have something else," said Barnes.

"This kid will have a slow ball," Henry replied, "and for a change of pace he'll have a slower one. You watch him!"

Barnes watched him. He saw Henry show the boy how to hold his fingers to throw a slow ball. He saw him demonstrate the body action, the shoulder motion and the position of the feet. He saw Henry show the kid a fast motion for a slow ball, and a slow motion for the same delivery. When all these were mastered he watched the old ketcher show the boy how to throw a slow curve, as well as a slow straight ball that floated on the air like a cork on a canal.

The longer they worked the more enthusiastic old Henry became. The boy went into his task with a dogged perseverance; but Henry, laboring just as hard, was strangely jubilant for one of his years and gnarled experience. What Barnes did not notice was a growing affection on the part of Henry Hammond for young McCormick. The kid had dropped his resentment, but held aloof from the old-timer as if while tolerating the discipline and schooling he did not intend to let anybody think he liked it or his teacher. He had taken the chip off his shoulder, but he seemed to carry it handy in his pocket. Old Henry went about his work in a benign manner that took no notice of the boy's feelings.

Presently Barnes began to be impatient. He was carrying McCormick as an extra, and one salary more in the minors makes a difference.

"Say, Henry," said the manager, "isn't that kid about ready with his slow ball?"

"Just about," Henry replied. "I was goin' to ask you to use him in the morning game on the Fourth."

"Good enough! We'll give him a chance. If he can come through—fine! If he can't it's curtains for him," said Barnes. "He's costin' us money."

"He'll deliver," Henry declared confidently. "And say, Mike," he added after a moment, "I didn't tell yuh about this boy. But since the papers told about me some time back ——"

"Yes, and I told them, and it helped boost the crowds," Manager Barnes interrupted.

"Well, you can tell 'em that this kid is old Charley McCormick's boy," said Henry quietly.

"What?" Barnes almost yelled. Henry nodded. "Gangway, gangway! Lemme get to a telephone! I'll tell the papers that, and we won't be able to hold the crowds!"

Barnes hustled off toward the ball-park office. Managers in the minors have to think of many things other than hits and errors.

The youngster did deliver, thanks to some hard hitting and good fielding behind him, brainy support by old Henry Hammond, and his own sharp fielding. A great crowd was out rooting for him and Henry, before the other Tots. He was a happy kid that evening.

"Not so bad, not so bad," conceded Henry when McCormick asked him how he had done. "You were not as good as you will be with another game or two under your arm."

The boy swore at the ketcher under his breath, denouncing him for an old crab. But he changed his tune soon afterward when Manager Barnes told him that Hammond had asked to have him as his roommate for the coming road trip. He hunted up the old ketcher.

"Say, I'm much obliged," he said awkwardly. "The boss just said you wanted me to bunk with yuh on the trip, and I'll be glad to. Mighty nice of yuh."

"Forget it!" Henry replied.

"But, Henry," said the boy, "is this stuff in the paper here I've just read, about you and my dad, right? Did you used to ketch him?"

"Don't know what the paper says," Henry replied. "But many's the game I've been in there with old Charley McCormick."

"Why didn't you tell me about it long ago?"

"Never just got around to it, I guess. Why? What difference does it make? This is a different league."

"Nothing, except I've sworn I'd never be friends with any friends of my old man," the boy said bitterly.

Henry thought a long time before he replied.

"There's more'n one kind of friend, boy."

Henry learned by judicious questioning why the boy was trying to become a baseball player. McCormick told, a little at a time, how his father had left his mother when he was a baby, and had later died somewhere in the Northwest. His mother, he said, had kept him in school because she did fairly well with a little millinery shop she owned in Woonsocket. She even sent him to college for one year. But then business got bad and he had to drop out. Now she was barely able to get by herself. In fact he wanted to make as much money as he could, to repay her and take care of her. It was a rough job though. Henry betrayed no knowledge of his own.

"But why did you wanta play ball?" he asked.

"High wages. Anyway, everybody said a good ball player could make a lot of money."

"Good ones, yeah," Henry grunted. "But most of 'em don't keep it."

"Well, I'm gonna get into the big leagues, or quit and go into something where I can get over," the boy declared. "I've got to make good and make money both, that's all. My mother's not gonna be thrown down by two men of the same name, not if I know it."

His blue eyes flashed and his jaws set as he spoke, but Henry did not notice. He was blowing his nose, and when he finished that he had to clear his throat.

"Fine!" he said finally, in a voice that may have been a little husky. "That's the stuff, boy! I'm for yuh. But don't be too rough on your old man, son. He was one good guy."

He slapped McCormick on the shoulder and walked away.

Young Charley McCormick won four games in a row on the road for the Tots, and fans and newspapers all over the Middle West talked of the new edition of McCormick and Hammond. It was a bigger sensation than that caused by the effort of Peeka-boo Veach's boy to break into baseball at Indianapolis, where the old-time slugging second baseman got his start. On the way back to Terre Haute Henry Hammond asked Manager Barnes for permission to take two days off. Barnes was reluctant, but agreed when Henry suggested he might be able to sell a pitcher to one of the big-league managers.

"Ross?" asked Barnes..

"Nope."

"Not Smith?"

"Well, mebbe," Henry said.

"Who, then?"

"Why, prob'ly McCormick."

"Who're you kiddin', Henry? That swell-headed kid can't pitch for marbles."

"But you'd sell him, wouldn't yuh, Mike?"

"Sure, but if he ever gets to the big time he'll blow like a toy balloon in a baby's hands."

Henry did not pause to argue the point, but took his two-day vacation. He journeyed to St. Louis, and forgathered with Bill Higgins, manager these many years of the Royals. Traditionally strong and traditionally winners, the Royals were fighting their way to another pennant and another world series. Bill Higgins, a rough character of the days when baseball was played on the diamond instead of in the sport pages and the movies, was an old friend of Henry. He had played third base for years on the club for which McCormick and Hammond had worked. Higgins was a quick-spoken, cocksure fellow.

"Don't need any," was his answer to Henry's query about pitchers.

"Also you don't need to breathe," Henry countered.

"Air's free," said Higgins, and laughed. "But listen, Henry, why don't you see Charley Earle? He needs pitchers terrible, and would buy if you tipped him off to something good."

Henry Hammond unbosomed himself then at great length. He included several facts, among them the fact that he had never delivered Higgins a lemon; also the fact that he knew a pitcher when he saw one; also the fact that every cussed one of the pitchers he had tipped off to Higgins, four in all, had made good.

"I ain't arguin' any o' them things, Henry," Higgins said. "All I'm sayin' is I don't need a pitcher. Go see Charley Earle."

"But you do need this one," Henry insisted patiently. He proceeded then to sell his goods. "Why don't yuh ask me what I've got?" he demanded. "Tell me yuh don't want it when you don't know what it is! Listen! Suppose I told yuh I got the pitcher yuh may need to win this here series this fall. What then, hey?"

"I'd have to laugh, Henry. I got eleven pitchers now."

"You wouldn't laugh near as loud as people laugh when they think about yuh gettin' into the series again," declared Henry, warming to his task. "Lemme tell yuh something, Bill. If you'd think about this series before the darn games was starin' yuh right in the face mebbe your club would win once in a while."

"I never noticed you leadin' any ball clubs into the series," said Higgins, hotly resentful.

"No, but that ain't no sign I can't lead one little idea up to a series and make it work."

"Oh, well, what yuh got on your chest? Shoot! But I'm not gonna buy, and you can make up your mind to that."

"Listen, Bill! I'm gonna sell you a pitcher. Le's look at this thing a minute. You got eleven pitchers," Henry began slowly.

Winner of Grand Prize at Panama-Pacific Exposition; at Brussels; at Milan; and Paris. Highest Award at Amsterdam.

THE spontaneous and widespread enthusiasm accorded the new 1922 model Eureka has strengthened our belief that this improved Eureka is the finest vacuum cleaner engineering skill has yet produced.

Of the thousands who have already seen the new model since its introduction, none, we are convinced, had ever witnessed such an amazing demonstration of deep, thorough cleaning power, effortless operation, and ease in using attachments to clean portières, mattresses, and upholstered furniture.

For the new Eureka embodies sound refinements of design and construction that make it even more efficient, more dependable, more beautiful and easier to use than any previous model—*yet the previous Eurekas were awarded more international grand prizes and highest awards of merit than all other portable electric cleaners combined!*

See the superb new Eureka in operation! Observe the effect of its many refinements and improvements! Watch how quickly the most deeply embedded dirt is removed—how easily lint, hairs, and surface litter are swept up—how simply the attachments are connected and how perfectly they utilize the unsurpassed suction!

Eureka dealers will gladly make just such demonstration of the new model. Write us for name of the one nearest you.

EUREKA VACUUM CLEANER COMPANY, DETROIT, U. S. A.

Canadian Factory: Kitchener, Ontario. Foreign Branch: 8 Fisher Street, Holborn, London, W. C. 1, England

(Continued from Page 71)

"Every durn one of 'em's a fast-ball pitcher, right or left hander. Is any one of the lot a slow-ball pitcher?"

"Why, I wouldn't have a man on my club that couldn't throw a slow ball!" Higgins exclaimed.

"Throwin' a slow one don't make a man a slow-ball pitcher," said Henry with conviction. "I'm talkin' about a slow-ball pitcher. Now listen! Have you figured on the teams yuh may have to play in this series? I'll answer that myself. They tell me the Whales are done, leavin' the Terriers and the Red Men to fight it out. Well, look at them two teams."

"Sumpin to look at, I'll say!" muttered Higgins.

"Oh, I don't know! Wouldn't yuh say they're both free-swingin' clubs? Neither one's got a real smart hitter on it. Every durn one of 'em likes to lay back and take his swing from his heels to hell an' gone. Ain't that right?"

"Yeah," Higgins admitted grudgingly.

"Well, that's why I'm sellin' yuh a slow-ball pitcher."

"Who said you was sellin' me a slow-ball pitcher?" Higgins demanded warily.

"I did. And I've got two more things to say before we make a deal. You're gonna sign me up so's to have me eligible for the series. Go ahead now and laugh, before I finish what I'm sayin'!" He paused while Higgins let out a yell. Then he continued. "This boy I'm gonna sell yuh is a little, undersized, left-handed slow-baller. His name"—and here he paused again, while Higgins held up both hands in horror—"his name," Henry continued, "is McCormick—Charley McCormick."

He eyed Higgins closely and Higgins stared at him in disbelief.

"Why, Charley's gone long ago—passed out!" Higgins began.

"That's right," Henry agreed. "His boy."

They were silent for some little time, Higgins thinking back into the past, Henry into the future.

"McCormick and Hammond," said Higgins soberly. "McCormick and Hammond, Waddell and Schreck, Brown and Kling, Young and Criger, and—McCormick and Hammond. Henry, that's been a long while."

When Henry Hammond took the night train back to Terre Haute the next evening he had sold Bill Higgins one pitcher and one ketcher, to be kept up the sleeve as an ace for the series in which they were sure to take part. Higgins agreed to say nothing of the deal publicly, and Henry resolved to mention it to no one but Mike Barnes, the Tots' manager.

At home with the club, he obtained Barnes' agreement to keep the news from young McCormick, with the thought that the boy would develop better and be more likely to escape swelled head if he knew nothing of the sale.

Then began the second phase of Charley McCormick's education. If he had thought he had been hazed, the boy must have decided that the next three weeks was one continuous tornado. The work he had done on joining the club seemed play compared to what he went through now. Never was a more relentless taskmaster than old Henry Hammond. At home and abroad, morning and afternoon, the boy toiled to meet the exacting demands of the old ketcher. Besides laboring manfully to develop his stuff, as Henry called it, McCormick started three games of his own, and slow-balled his way to victory in two of them.

More than that, he finished two games in which a pair of the Tots' speed boys had been knocked out of the box.

McCormick could not help boiling over under the strain. Once during the late innings of a game he decided to use his own judgment in pitching to a batter instead of relying on Henry. He shot a fast ball, or what was intended to be a fast ball, when Henry had asked him for a slow curve. The hitter looked it over without offering to swing, but Henry turned to the bench and wigwagged Barnes to call in another pitcher from the bull pen.

"What's the big idea?" demanded McCormick sullenly, on the bench when the inning ended.

"Wanted yuh to take time out where yuh could remember who gives the signals," replied Henry laconically.

"Where do you get off, yuh big stiff? Only guy on this club can tell how to pitch to a hitter?"

Henry ignored him then, but that night he reminded the boy very pointedly, but without heat, that the way to get ahead in baseball is to play the game according to orders. Next morning Charley was still rebellious.

"Field 'em yourself, old-timer," he called airily when, in fielding practice, Henry was driving him harder than ever, handling bunts for throws to first and third. "If you wasn't so old and stiff you could pick 'em up yourself, right there by the plate."

"Come on, get this one!" yelled Henry, ignoring the remark. Charley came up fast, scooped the ball on the jump and made a snap shot to third. Then, standing near the plate, he said:

"I'm wise to you, yuh big stiff. If you wasn't dead from the neck down yuh could move around fast enough to field 'em yourself. I don't see yuh makin' Ross and Smith and the big fellows field your bunts for yuh."

"No, and I don't see him tryin' to chase them into any big leagues either, you little tramp!" barked Barnes, who was hitting to the infielders. "Go on back out there, now, and do what you're told!"

Henry said nothing. McCormick cooled off before the day was over, but, like a spoiled child, did not take the trouble to apologize. Shortly after that Barnes broke the news to the youngster that he had been sold to the Royals, to report the first week in August. Henry was not around at the time, and did not see Barnes until late in the evening.

"Told the kid this afternoon," said Barnes.

"Yeah? How'd he take it?"

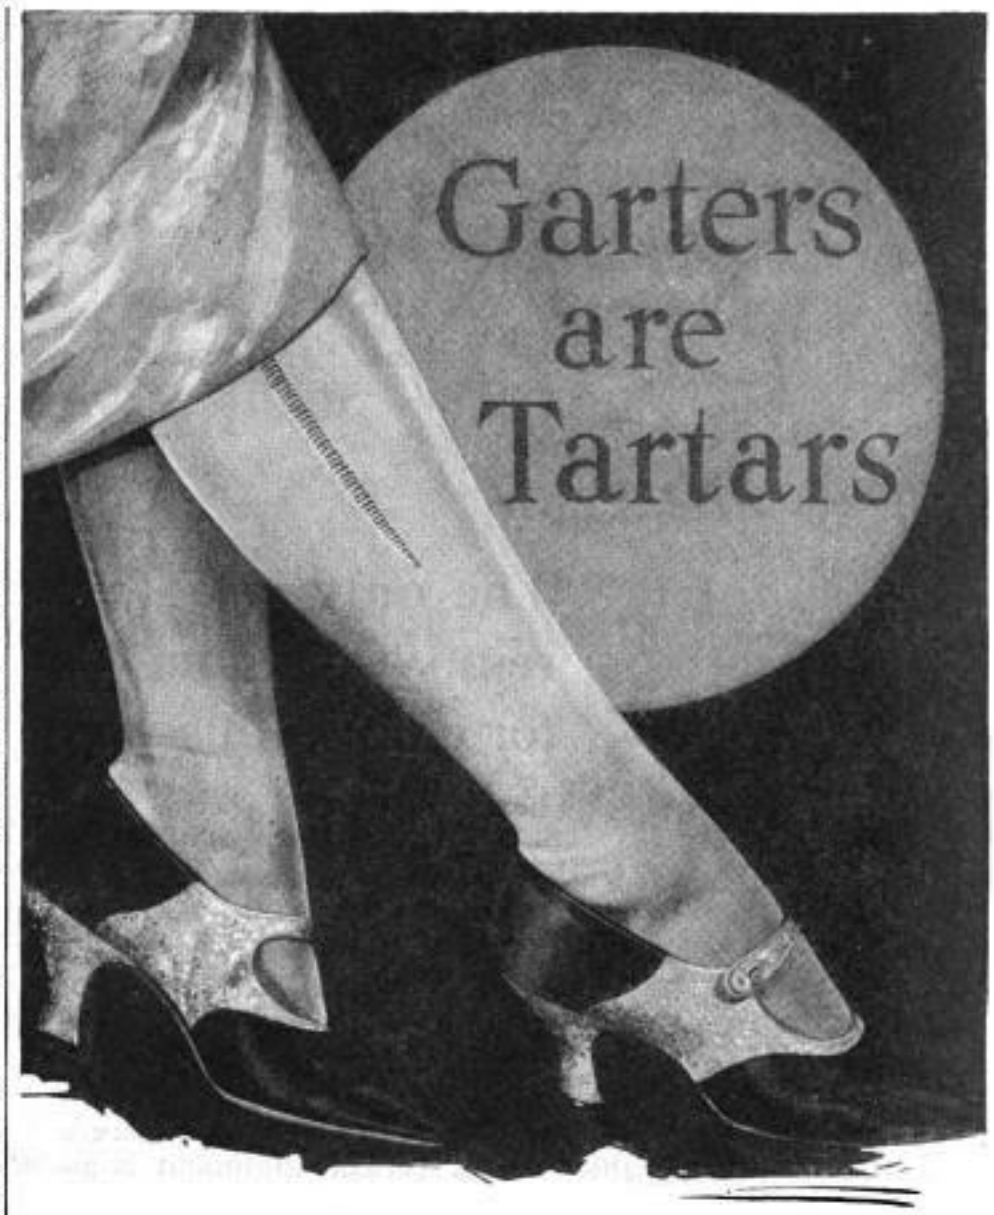
"Wanted to laugh or cry or something. Finally started to kiss me, but I walloped him one."

"Where is he?" asked Henry.

"Don't know."

Henry started a search for McCormick, going first to a rooming house where the boy had been living, and then to the hotel pool room downtown where the younger ball players loafed. Charley was not there, and neither was any other of the Tots' line-up. It was an hour before Henry found him with some of the younger and wilder Tots in a bootlegging drug store on the outskirts of Terre Haute. He had almost to carry the boy out and drag him home.

There was one other occasion of the same sort. It came a month later when the pair had been sitting on the Royals' bench day after day until they were in danger of wearing out the seats of their uniforms. They were rooming together, and Charley had been behaving himself, realizing that old Henry had been responsible for his opportunity in the majors. One night the boy went out alone. Henry found him at midnight in a soft-drink saloon, drinking harder drinks than were sold when all drinks were hard.



"Won' lemme have a chansh," Charley was complaining to a small group of new friends. "Get me up here 'ith a splend' record in Shentr'l League, but won' lemme pish. Make me sit roun' all day. Never throw a ball."

Once more Henry dragged him home. This time he gave him a sharp lecture, for McCormick was rebellious.

"And last of all, I'll say this," Henry concluded: "You're a little runt. You've got no build, no weight, no constitution. Now, listen! I knew your dad, and he was a pal of mine. Never told yuh that before, but he was. Your dad was a strappin' big, powerful fellow. Throw a ball through a brick wall. That's why I can ketch your fast one barehanded. But he was a big man. He tried this same stuff you're tryin', and it licked him—licked him cold. See? If you was the man he was you'd still get licked by the booze. See? You've got to cut it out.

"And while we're at it, kid, lemme tell yuh this: If you was the man he was you c'd throw a fast one like his. But you're not. That's why I had you work on 'at slow ball. It's all you've got, and it ain't enough to keep you up here in the big time. You wanted to come up, and I've brung yuh. You can stay a while if you're good. See? If you're not you're through, that's all."

It was the longest single speech Henry ever made, and probably the most effective, for young Charley McCormick walked the chalk from that time on. He and Henry journeyed out to the Royals' park every day for morning practice and went through workouts faithfully. Afternoons, they sat

THOSE Tartars—your garters! Hungrily, tirelessly gnawing away till through goes the fabric—down goes the run—into the discard go your loveliest stockings.

The only vise removable from base for continuous work

The "Yankee" Vise means more speed—greater accuracy. Lock the work in the vise just once. You don't have to remove the work from the vise until the entire job is completed.

When you carry the work from bench to drill press, to milling machine, and so on, simply lift the vise, work and all, off the swivel base.

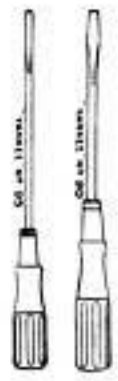
No matter how or where you place a "Yankee" vise, perfect alignment is assured—because bottom, sides and ends are machined true.

"YANKEE" VISES with swivel base (detachable)

Vise is quickly released from base by turning a set screw. Can be locked in any desired position on base simply by moving the cam-throw lever at side. Hardened steel block, with V-shaped grooves, holds round or irregular work.

With Swivel Base

No. 1994—Body, 10½ in. long; 4 in. wide. Jaws open 4 in.; depth 2⅛ in.
No. 1993—Body, 7¼ x 2¾ (wide) x 3 in. Jaws open to 3⅛ in.
No. 1992—Body, 4⅞ x 2 (wide) x 2⅛ in. Jaws open to 1 15/16 in.
No. 1991—Body, 3⅝ x 1½ (wide) x 1¾ in. Jaws open to 1½ in.



Without Swivel Base

As above: Nos. 994, 993, 992, 991.

"YANKEE" Plain Screw-drivers will not turn in handle

Even if you clamp a "Yankee" Plain Screw-driver in a vise, set a wrench on the handle and pull with all your might, yet the blade won't turn in the handle.

Stand hard use, and even abuse. Blades of specially tempered steel.
No. 90—Standard style. Blades 1½ to 30 in.
No. 95—Cabinet style. Blades 2½ to 15½ in.

Dealers everywhere sell "YANKEE" Tools

"YANKEE" TOOLS

Make Better Mechanics

on the bench. The first of September rolled around, and Bill Higgins sent Henry on a trip scouting the Terriers, now apparently certain winners in the rival league and therefore opponents for the Royals in the big series.

"You won't stick the kid in there while I'm gone, will yuh?" asked Henry. "Better keep him covered up or the idea won't work."

Higgins promised, and Henry went forth to dog the trail of the Terriers until the end of the season and they should be ready to start play for the world title. He was a canny scout, and a faithful one, although it must be recorded that on one occasion when the Terriers were in Boston he deserted them to spend a day in Woonsocket, and repeated the offense on a day when they were in New York. Furthermore, when it rained one Saturday in Philadelphia he left them again and did not get back from Woonsocket until Monday afternoon when the game was almost over. His friends, if he had bumped into any of them, would have remarked that the old ketcher was sprucing up, looking younger than he had in years.

The series came on, and the United States of America left a nation-wide coal strike, an international situation and the high cost of living flat on their backs to give attention to the great event. Newspapers mortgaged their accounts receivable to employ great experts to write many columns of baseball. Poor fans stayed up all night to acquire tickets to the games, and rich fans dug up money at the banks to buy reserved seats at fabulous prices. It was a wonderful series, probably the best in the history of world's title play, but that makes little difference in the telling of this tale.

McCormick and Hammond had their full share, and more, of the publicity preceding the series. When Manager Higgins submitted his list of eligible players, and the newspapers printed the names of all his Royals, Royal followers could not believe their eyes. McCormick and Hammond? Why, hadn't McCormick shot himself, or something, years ago? And Hammond—he wasn't in the game any more, surely! Must be other players by the same name; but, boy, so the head-wagging comment ran, that was some battery! A pair to draw to, or rather to stand pat on—McCormick and Hammond!

Charley and Henry played big rôles in the publicity, but took no part in the first half dozen games on the diamond.

The world knows how the Royals, with a dashing, slashing attack and fast, furious pitching, won the first three games. It knows, too, how the Royals collapsed in the next three games, falling flatter than a flivver tire on a muddy road. It saw through its own eyes, or more vividly through the eyes of the great experts aforementioned, how this collapse took place. It saw the nervy Terriers, with their teeth set in the series, hanging on like grim death while they added a second game and then a third to their string, tying up the title contest. It saw them smash and pound their way to three victories in a row against cannon-ball pitching.

Then came that seventh and deciding game, with the Royals on their home grounds and a massive crowd of sullen fans waiting to be shown whether the Higgins men could come back for one lone game. The park was packed as tight as a sausage. Everywhere bets were offered that the Terriers would walk away with the game, but the Royal rooters would not bet.

"Pitchers all shot," was the universal comment when Royal chances were discussed.

Higgins had used eleven of his twelve pitchers in the first six games, eight of them in the three straight defeats. His staff was on the run, routed and in a sorry plight. Every speed merchant on the list had been smashed hard and often by the free-swinging Terriers. Only little Charley McCormick, sliding nervously back and forth on the bench, had not been used against the enemy. Old Henry Hammond sat placidly beside Higgins at the other end of the bench. Higgins had given his men a terrific tongue-lashing in the clubhouse before the game, calling them everything he could think of from mere quitters to filthy yellow dogs. The line-up was full of fight, but the spirit was tinged with uncertainty, for the men did not know what sort of pitching they would have as their bulwark.

Higgins sent in Whaley, a great, hulking six-footer with a fast ball that was reputed to dent armor plate whenever it met a battleship. Whaley had all his steam, and got by for two innings without wavering. Then the Royals, reassured, tore into the Terriers for six runs in the next two rounds, sending the crowd into the clouds.

"There goes the old game!" said the fans exulting.

But they repeated the remark shortly afterward with a different inflection, for the Terriers adjusted their sights to Whaley's fast ball and waded into him for two runs in the sixth. He got the side out, but the fans wavered. Starting the seventh, the Terriers slammed a pair of doubles for another run, and Whaley retired to let Smithson, another giant with a faster ball, finish the round. Back came the Terriers in the eighth to peel another run, getting to Smithson for a single and a long triple. A double play staved off further disaster, leaving the score stand 6 to 4, with one inning to go.

The crowd breathed easier and got ready to go home, waiting only to see the Royals take their turn at bat. The Royals went down in a row, and then began the test. Dobbins, a lanky Terrier, leading his league in hitting, landed on Smithson for a three-base drive to open the last half of the ninth. Royal rooters gasped in dismay. Some of them filed out at the gates, and others sat back in disgust to see the brutal finish. They swore aloud as Swope, another fine hitter, but better known for his speed on the bases, came up to face Smithson.

"Nobody out, and they only need two to tie," groaned the fans. "Watch him kill it!"

But Swope was too smart to take a chance on a double play with two runs required. He played to get on base. Instead of swinging, therefore, he dumped a pretty bunt down the third-base line. Smithson fielded the ball, but watched Dobbins, on third, so long that he had no chance to throw out Swope. He stood and held the ball and saw his own undoing, as the fans execrated him and his kind for a race of dumb-bells. The Royal infield surrounded Smithson to calm him down, but they were just as far in the air as he was.

Bill Higgins, smart manager though he was, appeared at a loss. He did not know what to do, for he had nothing but more of the same stuff that Smithson was made of warming up in the bull pen. He looked them over and studied Smithson, standing sullenly in a group of his mates on the diamond.

"Say, Bill"—Higgins felt an elbow in his ribs and looked around—"lemme take the kid and go in there now."

It was old Henry Hammond talking, as nearly excited as he had ever seen the ancient ketcher. Higgins looked at him in amazement.

"That kid?" he jeered. "You're crazy!"

"He'll slow-ball 'em outa this," declared Henry patiently. "They'll murder all the speed yuh got left."

Higgins pondered the suggestion an instant, incredulous, and then wavered.

"But he's stone cold," he said.

"Don't need to be warm to throw a slow ball," whispered Henry.

Instantly Higgins was on his feet. He wigwagged to Smithson, who professed not to see him, and then piling out of the dugout rushed toward the base lines and called him in. Motioning the catcher to hold the fort a moment, Higgins went back to the bench, followed by the disconsolate Smithson, kicking his glove in the dirt.

"You, kid," he said, jerking a thumb at young Charley McCormick.

The boy's heart beat wildly as he heard Higgins address him, but he calmed down when he looked from the manager to Henry and saw the old-timer buckling on his breast protector. Henry winked at him. Reassured, the boy tore off his sweater, grabbed his glove and started out of the dugout on the run.

"Hey, wait a minute!" said Henry. "I'll go with yuh."

An announcer, following a hurried consultation with Higgins, ran out to the diamond with his megaphone.

"Ladies and gen'l'mun, for th' Royals, McCawmick pitchin'. For th' Royals, Hammon' ketchin'. McCawmick and Hammond!"

The effect, as he repeated the announcement to all corners of the grounds, with fans studying their score cards and old sport writers scrutinizing the strange pair taking the battery positions, was electrical. All eyes were on the boy after the first instant, for older fans remembered Henry and passed around the word it was the old fellow himself.

Ginger Ale
Sarsaparilla
Birch Beer
Root Beer

"Well," said the little Eskimo, "I'll tell you all about it

"LONG, long ago there was a King whose boast it was that he had the best feasts that men could devise or cooks could cook.

"He had a beautiful daughter, as all Kings of olden time had. When she was old enough, the King announced that he would give his daughter's hand to him who would bring a new beverage that would be as beautiful as golden sunlight, would be icy-cold and hot at the same time, would sparkle and live through a whole feast, and which, while it quenched the thirst of the moment, would awaken desire for it in young and old, rich and poor, male and female.

"And in due time it came to pass that a handsome young Prince, aided by an old wizard, brought some roots from one island, some canes from another, and some fruits from a third. From below the ground he drew the living waters of a magic spring. Then the old wizard blended the essences of the roots and the fruits, sweetened them to a nicety, and infused the whole with the bubbles that gave it life. And at the next feast the Prince won the King's daughter with the wonderful new beverage, which fulfilled all the King's conditions.

"'And what is the name of this beautiful golden liquid?' asked the King when the feast was over.

"But the Prince had walked into the garden with the King's daughter, and there was no answer.

"So, my dears, we must assume that then and there was discovered the universal beverage, Ginger Ale—the one of which we say *'They all like it'*."

Under the ground at Millis, Massachusetts, are bed-rock springs of pure, cold water. The ginger used in Clicquot Club Ginger Ale comes from Jamaica. The sugar is from the cane. Lemon and lime juice are combined in the Ginger Ale that is cold and hot, is alive and golden, and which pleases everybody.

For your feasts, for meals and between meals, drink Clicquot Club Ginger Ale.

THE CLICQUOT CLUB COMPANY, Millis, Mass., U. S. A.

FISK TIRES

There's Extra Value in Fisk Tires

THE only time a lower price is a real inducement to a wise buyer is when comparison proves the price to give a greater purchasing power to his dollar—when he can buy more for less. Because Fisk Cord Tires show contrasting values in size, strength, resiliency and appearance when compared with any other tires, the price is interesting.

30 x 3½—Fisk Premier Tread	$10.85
30 x 3½—Non-Skid Fabric	14.85
30 x 3½—Extra-Ply Red-Top	17.85
30 x 3½—Six-Ply Non-Skid Clincher Cord	17.85
30 x 3½—Six-Ply Non-Skid Cord, Straight Side	19.85
31 x 4 —Six-Ply Non-Skid Cord	27.00
32 x 4 —Non-Skid Cord	30.50
32 x 4½—Non-Skid Cord	39.00
34 x 4½—Non-Skid Cord	41.00
35 x 5 —Non-Skid Cord	51.50

There's a Fisk Tire of extra value in every size for car, truck or speed wagon

(Continued from Page 74)

"But 'at kid, now?" was the question.

"Naw, naw, he's dead long ago," wiser fans replied. "'Nother McCormick, 'at's all."

Then the word went round that this was the son of old Charley McCormick, discovered by Henry in the minors and hand-raised by him for the Royals. As the throngs grasped the situation they broke into a cheer out of pure friendly sentiment. Any son of old Charley McCormick deserved a hand. But as the audacity of Bill Higgins in trotting out an untried youngster and a broken-down backstop in a last desperate effort to stall off the onrushing Terriers became apparent to the fans they went wild. Here was a situation to warm the heart of even a Philadelphia fan. Trust Bill Higgins to pull something good! McCormick and Hammond—wow!

Old Henry Hammond, shoving on his mitt, shuffled along beside the boy as far as the third-base line. Then, an arm over his shoulder, he whispered to the boy and belted him on the back reassuringly. Whispered? Rather, he shouted to make himself heard above the clamorous greeting accorded to the new version of the old battery—McCormick and Hammond. Followed some stage management. While the Terriers' manager rushed out to the head umpire and wrangled over the eligibility of this unfamiliar battery, although he vaguely remembered their names from the certified list of eligibles, young Charley McCormick warmed up. He shot through the fastest ball he had, and old Henry took it in his mitt with a thud like that of a Darktown bass drum. The Terrier manager dragged his feet back to his bench and sat down.

"More speed, eh? We'll eat it up!" he said to himself.

Then, with Dobbins on third, Swope on first, nobody out and Wayburn, a heavy-hitting first baseman, up, Henry ambled out toward the box to hand the ball to McCormick instead of throwing it to him. Again he put his arm around the boy's shoulders, and again, with an eye on the base runners, spoke to him. Then he went back behind the plate and crouched.

"All right, boy!" he called.

Charley responded with a fast one through the heart of the pan for a strike. He followed that, upon signal, with another fast one, this time a ball. Old Henry walked out with the ball.

"You field the ball and play it to me," he ordered.

Calling for a high slow ball, Henry looked quickly at Dobbins on third and Swope leading far off first to satisfy himself he had guessed the enemy campaign. McCormick came through with a floater, and Wayburn dumped a slow roller down the first-base line. Dobbins and Swope were on the run.

"Play it here, kid!" yelled Henry at the top of his voice as Dobbins came whirling home from third. Charley was on the ball in a flash, and flipped it to the pan, where old Henry was waiting. Dobbins flung himself at the plate, sliding in a cloud of dust. Henry bluffed at tagging him, and then straightening up whipped the ball like a bullet to third base. Swope, springing like a Paddock, was caught standing up in his desperate try for two bases on the play, and Wayburn stopped at first base.

The crowd, sensing old Henry's strategy in trading one run for the chance to cut off Swope with the tying marker, roared its approval. The applause heartened Charley and was music in the ears of the old ketcher.

"If you big stiffs 'at try to pitch on this club would learn to field a ball like 'at kid, and you ketchers had the guts and brains to pull a play like that, we'd never lose a game to anybody," pronounced Bill Higgins, Royal manager. The Terrier leader, in the enemy dugout, was alert to keep his men on the jump. With only one out and an old man behind the bat, the Terrier boss ordered Wayburn to steal.

"We get the tyin' run on second, and either George or Mason can drive it home," he said to himself.

Henry, watching Wayburn narrowly, sensed the play, knowing full well the opposition would hold him and his old arm cheaply. He called for a fast straight ball over the plate, and George looked it over—for a strike. Henry then resolved to put up a bluff at playing into the Terriers' hands. He bluffed by taking a position wide of the plate for a pitchout, and George bluffed a desperate desire to knock the ball over the fence. Young Charley McCormick, carefully watching Henry's signal, bluffed a windup.

Wayburn edged away from first, down the line for second base. He dug in his spikes and swung into his stride as Charley's arm lifted. Even as he did so, however, he heard the ball slapping into the first baseman's mitt and knew he had been tricked. Wayburn ran it out as best he could, but was trapped halfway to second.

Forty thousand fans went crazy. Bill Higgins drew a long breath. Old Henry Hammond and young Charley McCormick settled down to the task of disposing of the third and last man. George, facing a forlorn hope now, was desperate. He clutched his bat and crowded the plate, determined to swing the Terriers back into the running if it were humanly possible. Henry called for a slow curve ball over the plate. With one strike, George took a chance that the second one would be wasted, but swore bitterly as the ball curved through the heart of the pan.

It was two strikes. The hitter smashed the plate with his bat, jerked his cap down and defiantly faced the pitcher as the crowds, appreciating not merely the Royal comeback but a beautiful example of battery art, yelled their approval. Henry called for another slow curve in the same groove. This time George, overanxious and smarting under the taunts of the throng, waded into the ball. He was off balance in his anxiety to hit, and had started his swing before he realized that the little southpaw, though using a snap delivery, was floating another slow one up to him. The best he could do was a high looping pop-up to the second baseman, and the game and the series were over.

Triumphant Royals, jubilant over the decisive turn in their favor, started to carry Henry and Charley off the field on their shoulders, but gave it up when wild fans insisted on parading to the clubhouse bearing the pair aloft.

"Henry," called Higgins in the dressing room, "the boys are gonna do the right thing by you and the kid."

"Aw, f'rget it!" Henry replied.

"F'rget nothin'! We're gonna vote you one full share between yuh. Of course, you only worked one inning; but, man, what an inning!"

"Aw, f'rget it!"

"Modest as well as brainy, hey?" yelled Higgins. "How about the kid? Say, boy, that was a nice game yuh pitched."

Henry, watching the boy, saw McCormick flush. He blushed himself an instant later as Charley replied, "You're talkin' to Henry, not me. He's the guy that pitched that game."

When they had finished dressing, Henry took the boy's arm.

"Come and go with me," he said. "I'd like for yuh to meet my girl."

McCormick stared at the old-timer in disbelief. This was too much, old Henry Hammond having a girl!

"Yeah," Henry continued. "Gotta date with her for after the game up by the press box."

Three minutes later they crossed the diamond and approached the stand. Charley's heart missed on three cylinders. He stopped a moment and stared in surprise, then ran forward to take old Henry's girl in his young arms. "Mother!" he cried.

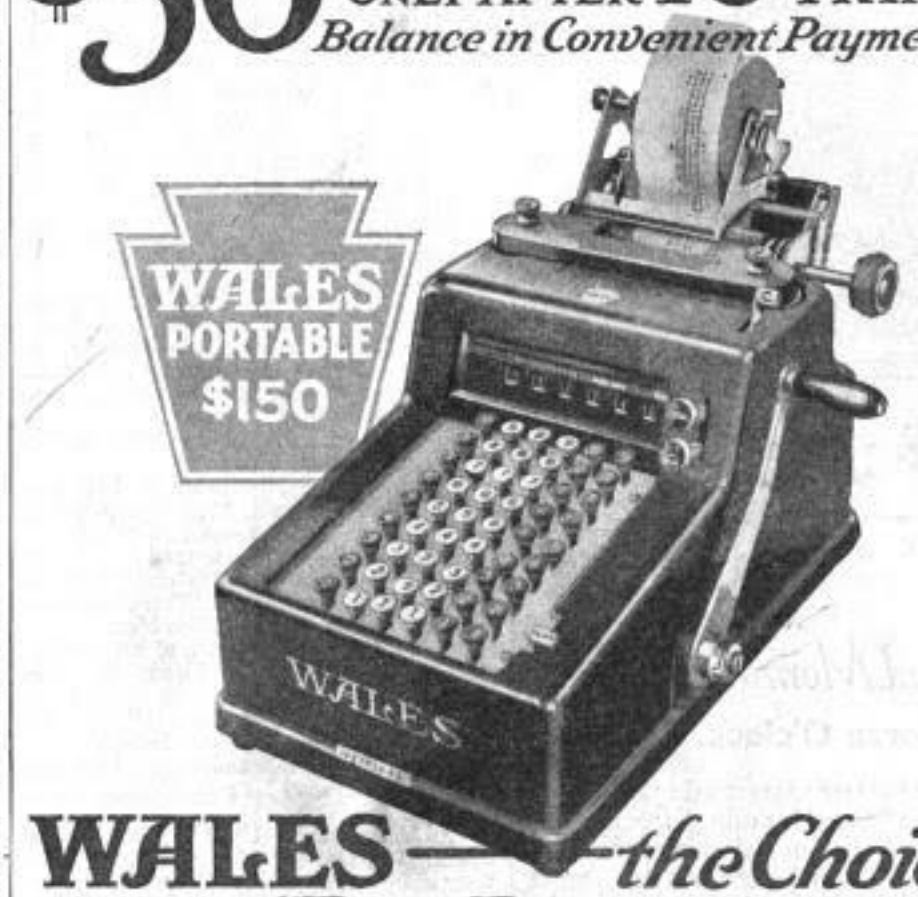
"Son, I'm proud of you," she answered. "And you, too, Henry, bless your old bones," she added, holding out a hand to the old ketcher over Charley's shoulder.

Henry grinned happily.

"But you didn't say anything to me," Charley began in reproach.

"We intended to all along," his mother said.

Charley looked around for a place to sit down. "When did all this begin?" he asked, the surprise too much for him.



"When *the* Charley McCormick was pitchin' and yours truly was ketchin'—McCormick and Hammond," said Henry. "Your mother had her choice between us. I won't say anything about her first guess, but the second makes a hit with me."

"All I've got to say is, three cheers," exclaimed the youngster. "But what'll you do? Quit and settle down? Who'll do the ketchin' for me?"

"You wanted to hit the big time, and you've done it," said Henry. "Now you go back to pitchin' to one of these college faculties, son. McCormick and Hammond it used to be, and I'm proud it was McCormick and Hammond again to-day." He looked at the boy in an almost paternal pride. "But to-morrow"—and he shifted his gaze—"I'm prouder to say, it will be Hammond and Hammond."

WALES—*the Choice of "Big Business" Is Offered on the Easiest of Terms*

The Wales Portable adds, multiplies, divides and subtracts. Can be used for every form of calculation. It combines these proved superiorities which are features of every Wales Machine:

1 *speed* Every form of calculation is done with the least mental and physical effort because of Wales triple visibility and easier handle and keyboard action.

2 *accuracy* The Wales provides the greatest number of mechanical safeguards against human error. In no other adding machine has mechanical precision so completely replaced human variability.

3 *durability* Wales Machines from 13 to 15 years old are today giving continuous service on the hardest kind of work.

We have used the Wales Adding Machine for several years and at present have several hundred of their machines in use in our various offices and stores. We do not hesitate to recommend this machine.—F. W. Woolworth Co.

The Wales Portable has met with a reception seldom accorded an office appliance. We have been forced to alter our sales plan to take care of territories. This opens the most attractive opportunity in the office appliance field—for a few experienced salesmen with managerial ability. Communicate with our home office.

HOW long this offer will be open we cannot say. It is an experiment to see if the easy payment plan appeals to American business men. The point is—if it appeals to *you*, may we suggest that you act at once?

Simply notify us to place a Wales Portable in your office on ten days' free trial. At the end of that time you have the option of returning the machine at our expense or making a first payment of $30. The remaining $120 can be paid in convenient installments.

The Wales Portable gives you in portable, compact form the *proven* Wales superiorities which have made Wales the choice of such organizations as:

The Standard Oil Co. of New Jersey, F. W. Woolworth Co., E. I. Du Pont de Nemours Co., Fox Film Co., R. J. Reynolds Tobacco Co., Westinghouse Electric Co., Winchester Repeating Arms Co., National City Bank of New York, Corn Exchange Bank of Chicago, New England Trust Co. of Boston, etc., etc.

"Good Morning Mr. Lang it's Seven O'clock."

What better to start a day right than a cheery "Good Morning" from a voice that makes you feel things must go well today? It's worth a lot to get started right, especially when you're "on the road" and have to arise often to make an early train.

Keenan Hotels—the Plankinton at Milwaukee, the Waldorf at Toledo and the Anthony at Fort Wayne—are all governed by a desire to make each and every guest feel at home from the time of arrival to the hour of departure.

Comfort Assured

For instance: the clerk invariably 'phones you immediately after your arrival to be sure that all details of service are satisfactory.

It is a Keenan custom to do everything possible to make your stay with us enjoyable.

When stopping in any of these cities, be sure to go to a Keenan Hotel. Cafe service and room rates reasonable. Notice the names carefully. Sales managers will find it to the advantage of their firms to suggest Keenan Hotels to their men.

THE NINTH WAY

(Continued from Page 27)

had acquired the greater brilliance of suffering. Her face was sun-tanned but youthful as ever. Mr. Blass was forced to admit to himself that even in her threadbare raiment Miss Marsh would give most city girls—Miss Kuhn, f'r instance, whom Mr. Blass had selected because her dark hair and pallid complexion went well with the rose-colored draperies—cards and spades, and beat them at their own game.

"You are looking well, Miss Marsh," he remarked. "And Mr. Marsh? How is his rheumatism?"

"My father is well," the girl replied. "The dry desert air has nearly cured him. If it wasn't for that I don't know what we would have done," she murmured faintly. "He worked for the railroad nearly three months this spring."

Mr. Blass nodded. This was the entering wedge he had hoped for.

"Quite so!" He beamed happily. "Would you believe it, Miss Marsh, when you and your father came into this office two years ago"—here he tapped the arm of his chair impressively with one fat forefinger—"I said to myself 'There's a man that the desert will cure,' Miss Marsh?"

"Oh!" There was a note of surprise in the girl's voice. She shot him a swift, appraising glance. "The desert came near killing us both—of starvation," she informed him as impassively as before.

Mr. Blass' eyebrows shot upward in well-simulated distress. He pursed his lips and frowned.

"As bad as that? Upon my word, Miss Marsh, I assure you I had no idea —— Why didn't you—tell me?" he demanded, turning upon her with reproachful vehemence.

"We had—quite a lot of correspondence, Mr. Blass. I ——"

"Oh, yes," Mr. Blass interrupted. He glanced at the face of the marble clock as if to refresh his memory. "I remember now. I was—up north at the time.' Mr. Frisbie, my partner, handled the correspondence. He spoke to me about the matter when I returned, but when I did not hear any more from you I thought everything was all right."

Miss Marsh opened the frayed hand bag in her lap.

"The letters were signed by you," she said. "I have some of them here."

Mr. Blass waved the letters away.

"Not by me, personally, Miss Marsh," he corrected. "Miss Kuhn, my secretary, signed my name to them of course, but Mr. Frisbie dictated them. I came across this old correspondence quite by accident the other day—your letters to us and the carbon copies of the letters mailed to you over my signature. I was thunderstruck, Miss Marsh—posi-tively thunderstruck!" he repeated. "I hastened at once to write to you. You wouldn't believe me guilty of such fla-grant discourtesy to a lady, Miss Marsh?" he implored. He paused. "A serious—er—rupture has taken place between Mr. Frisbie and myself over the matter. I'm genuinely distressed, I assure you." He paused once more, imploring her with his eyes. "To set myself aright in your estimation I wrote you at once making the offer of drilling for water to help you out. I had no idea that you did not have the funds for drilling, yourself. If I had known this in the first place I would never have permitted you for a moment to go on the land."

The girl studied him in silence for a moment. Then running her hand across her eyes, as if to brush away from her mind the unpleasant suspicion that had dwelt there, she said, "A well, I understand, will cost about two thousand dollars, Mr. Blass. I have nothing to offer you as security."

Mr. Blass waved his pudgy hand magnanimously.

"My dear lady, I'm afraid you do not understand land values in California. With plenty of water developed your land will be worth at least two hundred dollars an acre." He smiled apologetically. "Naturally I shall expect something in return. Enough to reimburse me for the expense of drilling."

Pausing he brought down his pudgy fist on the glass-top desk, as if a bright idea had suddenly occurred to him.

"Tell you what, Miss Marsh! You can deed me ten acres somewhere—say, the upper ten. We will draw up a contract to the effect that all the water we strike will belong to you with the exception of enough to irrigate the ten acres you deed me, free of charge, indefinitely. I will give you a right of way to the well—twelve feet wide, we'll say—through my ten acres, for your irrigating ditch."

Mr. Blass leaned back in his chair, fairly carried away with the brightness of his idea.

"How does that strike you?" he demanded grandly, both his stubby thumbs hooked into the armholes of his cerise waistcoat.

"You are very generous, Mr. Blass," the girl replied so promptly that Mr. Blass wondered momentarily if the tone of her voice was sarcasm or just plain relief.

"With plenty of water your land will be worth two hundred dollars an acre," he hastened to explain. "Think of it, Miss Marsh! Six hundred and forty acres at two hundred per acre. One hundred and twenty-eight thousand dollars."

The girl stared at him in amazement.

"But—Mr. Blass, why didn't you keep this land and drill for water yourself if it is worth such an amount?" she asked incredulously.

Mr. Blass nodded delighted approval.

"A perfectly natural question—to the un-initiated, Miss Marsh," he beamed. "It's like this: We promoters have so many irons in the fire all the time we are forced to let some of 'em get cold to keep the others hot." The contemplation of this apt simile pleased him hugely. "When I sold you the land," he went on beamingly, "I was badly in need of ready cash for developing a mine project in Southern New Mexico. Your sixteen hundred dollars, small as the amount was, just about saved the day for me. Naturally I feel that I owe you something."

"Oh!" The girl studied him again in silence for a moment. Then she asked, "Why do you want to drill the well on the upper ten acres? The ground is higher there. I should think you'd have to drill that much deeper."

Mr. Blass slapped his fat knee in delight.

"An apt question, Miss Marsh. Shows you've got the makings of a fine business woman." He arose and led her around the desk. Pulling down the map he pointed to the square in red ink. "From this point," he explained, "your land slopes away in all directions. You can irrigate every inch of the whole section by natural gravity. Fifty feet more or less of drilling makes little difference, Miss Marsh."

"I see," said Miss Marsh thoughtfully. "Very well, then; I'll accept your offer—gladly."

III

THE town of Inca, Rowans Valley, lay blazing in the hot midday sun—a peculiar habit of desert towns—as it had lain every noon of its twelve summers since the day the city of Los Angeles gave birth to it by planting two portable cottages and a water tank beside a narrow-gauge railroad and calling it Inca.

The railroad continued its way up the alkaline floor of the Rowans Valley to Rowans River, but Inca remained to grow and prosper or to wither and die.

Inca grew but did not prosper. Neither did it wither, and it refused flatly to die. Its first census, taken ten years after its birth, showed a population of eighty-seven souls, eighty-four of whom were engaged in wringing a living from the moistureless soil, a discouraging task.

Of the three remaining, one ran the Sierra Café, the only restaurant within a radius of thirty miles. Another had committed suicide a year earlier by misappropriating his neighbor's horse. He was buried at the foot of one of the Nevada-Los Angeles Light and Power Company's conduit poles, after having been suspended briefly from said pole by the neck. And the third, a drinking man, had walked himself to death with a prescription blank in his pocket, looking for a rattlesnake. His body was never found, and quite a heated discussion arose at the census taking about his status. Municipal pride was strong for admitting the wanderer to the final count, but Duffy, the census taker, who made his living between censuses by running the Sierra Café, and for this reason was a dictator of sorts, decided against it.

Duffy was a large clean-shaven man. He looked like the average fat man, which he was not; but he had one trait in common with all fat men—cheerfulness. His small gray eyes twinkled. A network of fine mirth wrinkles crisscrossed his bland moon-like face. He seemed unnecessarily cheerful, considering his environment.

He was seated on his high stool behind the cash register of the restaurant with his two hundred and forty pounds of obesity spilling, wheat-sack fashion, over the edge of the high stool. The narrow-gauge train from Cardinal had just pulled in. The train crew—both of them—were uncoupling a flat car loaded with heavy timbers, and in the shade of the station awning, sprawled on bundles of blankets and suitcases, were seated sixteen men who had alighted from the train. All sixteen were mopping their foreheads listlessly with their handkerchiefs. If the expression upon their faces could have been translated into words it would have read something like this:

"What a place to be dumped off at!"

One of the strangers, a tall young man in a Palm Beach suit, arose and detached himself from the group, and sauntered down the platform toward the Sierra Café. Pausing before it he surveyed it dubiously for a moment, then put one sun-tanned, efficient hand upon the handle of the screen door and entered, accompanied by a cloud of flies.

"Dinner ready?" he inquired of Duffy.

Duffy glanced at the clock behind him.

"'Twill be in ten minutes," he informed his questioner. "Mac's twenty minutes early to-day." Mac was the engineer of the iron steed champing on the track outside.

Mealtime at the Sierra restaurant was regulated by Mac's schedules, he and his conductor being the star boarders.

The young man flashed a row of strong white teeth at this information.

"There are sixteen of us; I and my drilling crew. I'll call the boys," he said, stepping to the door and beckoning to his gang. The fifteen men arose, picked up their various bundles and filed into the restaurant.

"Dinner for sixteen, Miss Marsh," Duffy's voice boomed.

At the word "Marsh," the young man wheeled about and found himself looking into the gray eyes of a quiet-looking girl in the apron of a waitress, behind the counter. He recognized her at once as the girl he had collided with at the elevator the day he went to see Mr. Blass.

"Yes, Mr. Duffy," the girl replied.

She gave the young man in the Palm Beach suit a glance of swift scrutiny as the fifteen others ranged themselves in a row upon the stools at the counter, then dropped her eyes.

"Marsh," said the young man, addressing her with a smile; "that's the place I'm looking for—the Marsh place."

The girl raised her eyes to the speaker, then let them travel down the row of faces lined up before her. She smiled faintly.

"You must be the men who are going to dig my well," she said. "I'm Nora Marsh."

The young man held out his hand with an answering smile.

"My name is Ben Callister. I'm the driller in charge." He looked at her in silence for a moment as if he was trying to make up his mind about something. Then releasing her hand he said, looking about him, "You own this place?"

The girl flushed.

"I work here," she informed him.

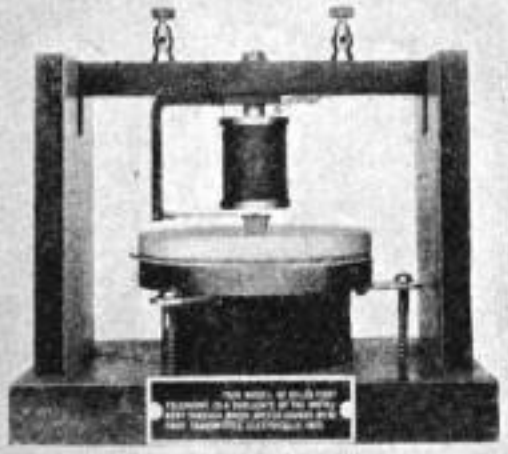
Ben Callister's eyes twinkled.

"Well, you won't have to very long," he said in a low voice.

"I hope not," she replied.

"We've met before, I think," Callister said, reminding her of the episode a week earlier.

"Oh, yes, I remember now," the girl returned. "I thought your face was familiar."



When they had given their orders Callister questioned her about the distance to her place, and asked her if she knew where he could rent a truck.

"I've got a flat car loaded with lumber for the derrick, out there," he told her. "Mr. Blass will be out in the morning. I want to get the stuff hauled out right away. My employer is anxious to begin drilling at once." He paused. "I guess you are too," he added.

"Yes," she told him. "I've had all I want of dry farming. There's a man by the name of Stanley down the track half a mile who has a big truck. I think you can get him to haul your lumber. He hauled ours—for the house."

1875 A duplicate of Alexander Graham Bell's first telephone.

1877 Bell's Box Telephone, used both as transmitter and receiver. This instrument, demonstrated by the inventor in his early lectures, became the first commercial type of telephone.

1886 One of the instruments through which our fathers talked.

1898 This year marked an important change in telephone design.

1900 The type of telephone used during Roosevelt's first term.

From Bell's first model to the telephone now in use

Your telephone, then and now

Since the time, forty-odd years ago, when the telephone was recognized as a commercial possibility, the Western Electric Company has been a maker of telephones.

This long experience has enabled us constantly to improve your telephone and to make it a marvel of mechanical and electrical precision, sensitive to the subtle differences in inflection of your voice. Yet with all its accuracy, the telephone must be manufactured economically and in great quantities to meet the demands of a growing telephone system.

In finding the solution to this problem, Western Electric has helped make possible the quicker, more efficient, more intimate life of the nation today.

How Heat Comfort Is Assured

Many years of comfort are embodied in the service of an International Heater, well selected and properly installed. Down in the cellar, where the modern heater belongs, it will continue to protect health by maintaining summer coziness indoors regardless of weather out-of-doors. Year after year there is an assurance that this comfort will be provided.

The right selection of type, style and size of heater, however, is of great importance. Houses differ and so do conditions surrounding them. But there is an exact style and size of International Heater to meet each set of conditions.

What is it worth to have the right choice assured? How much would you be willing to pay to insure yourself against the expense of correcting a mistake? Remember that the selection of a heater for a given building should come rarely more than once in a lifetime.

You can have this assurance free of any charge. You can make certain that your heater is exactly suited to your needs and will be the most economical.

We make *all* types of standard heaters. Hence we can and do give entirely unprejudiced advice concerning the type, size, etc., that will provide the greatest heating satisfaction at lowest cost. A good reputation of 75 years' standing is one result of this policy. We would not risk losing that reputation for the sake of a sale.

Send for our catalog. With the catalog we send a simple chart and question blank. These returned, enable us to give you the valuable advice you need. Address Service Dept. A.

"You live on the place then?" Callister asked.

"Yes—I and my father," the girl replied.

IV

THE derrick was finished and Callister was watching his men removing the planking from the newly constructed concrete starter hole one afternoon two weeks later, when the girl and her father came up the trail.

Mr. Blass, moist and perspiring, was sitting on a timber in the shade of the tool shack, fanning himself with his Panama hat. He arose as the two rounded the corner of the tent, and held out his hand with a word of greeting. Something in old Marsh's eyes made him pause. He glanced sharply at the girl, who ignored his proffered hand, then shot Callister a quick, suspicious glance. Evidently someone had been blabbing.

"Well?" he demanded, on his defense.

Old man Marsh took a step forward, his slight wasted figure bent threateningly.

"I met Warren, of the Buena Vista Oil Company, down at Duffy's to-day," he said. "When I told him you were drilling for water he laughed in my face."

Mr. Blass drew his breath in sharply. Then running his hand into his inside vest pocket he pulled out his pin-seal cigar case, selected a cigar and removed its end carefully with his pearl-handled penknife. Lighting the cigar he blew a cloud of fragrant smoke skyward.

"What are you going to do about it?" he asked, flecking an imaginary speck of dust from his carefully creased trousers.

"I'm—I'm going to make you and your gang get off my land, derrick and all, you swindler!" the old man retorted in a blaze of fury at the other's insolent attitude.

"Zat so? Where d'you get that stuff—your land?" Mr. Blass scoffed. Pulling a document from his pocket he held it up before the old man's eyes. "Your daughter's deed, Mr. Marsh, to this ten acres, recorded two weeks ago. Run along home and don't bother me. I'm a busy man."

"You're a—crook, that's what you are!" Marsh shouted. "I'll have the law on you! I'll ——"

"Go as far as you like," Mr. Blass retorted placidly. "I signed an agreement to deliver to your daughter all the water I strike here in drilling, in consideration for which she deeded me this ten acres. If there's anything illegal about that you gotter show me."

"Water! Phaugh! You knew there was oil here," Marsh stormed.

"Nobody knows where you might strike oil. Oil is a gamble, Mr. Marsh—a big gamble. Besides, you didn't say nothing about oil. Water was what you wanted. If we get it it's yours, I assure you."

"And if you strike oil it's yours, eh?"

"Well, of course," Mr. Blass agreed. "Drilling a well is an expensive proposition. I stand a good chance of sinking fifty thousand dollars here without getting one cent in return."

"You mean to tell me that you'd have taken the chance of losing that amount if you hadn't thought there was oil here? I'll have you arrested for false pretenses."

Mr. Blass laughed heartily. He was vastly amused.

"It ain't what a man thinks that puts him in jail, Mr. Marsh. It's what he signs his name to." The promoter wagged his fat forefinger in Marsh's face to emphasize his remarks. "I might think this whole section was full of, f'r instance, diamonds, and go digging for them. If I found that it was so I suppose you'd have me arrested for guessing right. But suppose I didn't find no diamonds, could I have you arrested, Mr. Marsh, for letting me think wrong and go ahead losing my money, digging?"

Marsh made a movement of impatience.

"Your twisted arguments don't stand with me!" he retorted, his thin face white with anger. "You swindled me once before. The laws of this state must be pretty rotten when such as you are walking around loose instead of being in jail."

"Tut, tut," said Mr. Blass reproachfully. Veneration for the law that had always served him so well was his long suit.

Callister stepped off the derrick platform just then and joined them, attracted by the argument. He glanced at the girl questioningly, then at his employer.

"What's the matter?" he asked.

"Matter enough, Mr. Callister," Blass replied. "These people sign an agreement and then try to welsh on me."

The girl threw her head back haughtily. She gave Callister a curious level glance which included the gang on the derrick, as well as himself and his employer.

"You people have taken advantage of my ignorance of—of the law to swindle me and my father." She turned upon the promoter with blazing eyes. "No; we may be fools, but we're not—welshers—even to cheaters."

Taking her father's arm she turned her back upon Callister and Blass, and the two, man and girl, walked down the trail.

Mr. Blass winked at Callister.

"Lots of spunk that girl has," he chortled. "A good looker too." He rubbed his double chin reflectively. "If I was twenty years younger I'd go after her and have her eating out of my hand in a week."

Callister glanced at Mr. Blass' perfectly manicured right hand. "She'd have to be hungry," was on his lips, but what he said was, "I'll be ready to start drilling in the morning. If I judge right we ought to strike oil sand in less than a month. We're drilling in decomposed granite, and it's soft as cheese."

"Fine," said Mr. Blass. "Don't forget that I'm paying you to hold down expenses. So don't waste any money."

"I never do," Callister replied quietly.

V

DUFFY looked up from his stool by the cash register when the driller and his crew filed in to supper that evening. A scowl rode, slack saddle, across the restaurant man's usually cheerful countenance.

"You're a fine flock of crooks," he said, including them all, but addressing Callister. "I ought to refuse to feed you. If Nora drops a spider into your coffee I wouldn't be surprised, but delighted. You're sixteen fine excuses for a coroner's inquest."

McFee, the tool dresser, an old wizened-looking desert rat, spoke up.

"What's eatin' you, grandpa? Stow the gab and trot out your mulligan. We're hungry, and when this crew's hungry we eat 'em alive."

Nora took their orders without a word. Callister watched her out of the corner of his eye, but not once did she glance his way.

When the rest had finished he stayed behind on purpose. Nora was clearing away the dishes from the end of the counter farthest removed from him.

"Another piece of apple pie, Miss Marsh, please," he said.

When she placed the pie before him a moment later and wrote out the amount of his check his hand closed about hers holding the pencil.

"I want to know if I was included in that remark of yours this afternoon," he said.

She tried to withdraw her hand, but Callister held it fast. Her first impulse was to strike him with her free hand, but something in the young driller's eyes deterred her.

"Certainly!" she blazed out.

Callister let go her hand. Nora got the impression that the look in his eyes was more of contempt than of anger.

"I don't know what your agreement with my employer is," he said quietly. "It's none of my business. I've taken the job to drill this well, and I'm going to drill it." As he picked up his check a cold, steely look came into his eyes. "You're the first human being that called me a cheat and got away with it. This fact may interest you."

Without glancing at the amount of his check he tossed a twenty-dollar bill on the counter, picked up his hat and strode out of the restaurant.

When Nora gave Duffy the check and the money the restaurant keeper rang up the amount, fourteen dollars and seventy-five cents, and handed the girl the remainder.

"Well," he said, "they're good spenders at any rate. A tip of five and a quarter is not to be sneezed at."

The girl laid the money down on the rubber mat beside the cash register.

"Please give Mr. Callister back his change to-morrow," she said with a toss of her head, and went back to her work of clearing the dishes.

Duffy chuckled softly to himself as he pictured Callister's discomfiture on the morrow. An hour later when he was closing up for the night he was still smiling, and he lay awake half the night, mentally staging his little personally conducted drama of

A Most Remarkable Engine Value

To meet the needs of those who want a thoroughly dependable engine at a comparatively small investment, we have designed this new engine. It is a genuine "Z" and is built to the same *high standards*. Its remarkable value has been made possible by scientific study and large production facilities. We believe it offers buyers one of the greatest values in years.

The new "Z" Engine has simple, high tension battery ignition; suction fuel feed; hit and miss governor; positive lubrication; quiet running, spiral cut gears; generous bearing surfaces; renewable die-cast bearings; parts liable to wear are made of hardened and ground steel. The crankshaft, connecting rod and camshaft are drop forgings. The new type, safety flywheels are balanced. Thorough insulation prevents shocks to the operator and short circuits in the ignition. Operates on gasoline alone.

The engine is wonderfully simple—no complicated parts and has clean cut lines. It starts easily, runs steadily; requires little attendance; carburetor requires no adjusting; delivers more than rated horsepower; control lever gives six speed changes. Rigid inspection insures against flaws and minor faults. All parts are positively interchangeable and easily accessible. The engine is built to give years of satisfactory service.

See it at your dealer's—or write us

This new "Z" Engine we consider one of the important achievements of our 70 years of manufacturing experience. Over 300,000 users have approved the "Z" Engine. It is sold in over 5,000 towns. Your dealer will give you full details. Or write us.

Fairbanks-Morse Engines for every purpose

The many kinds and sizes of Fairbanks-Morse Engines, operating on gasoline, kerosene and low grade fuel oils, supply dependable, economical power for

—concrete mixers
—conveyors
—crushers
—hoists
—pumps
—saw rigs
—spraying outfits
—feed grinders
—clothes washers
—milkers
—cream separators
—churns
—grindstones
—corn shellers
—clover hullers
—shredders
—hay balers
—tiering machines
—wood workers
—cotton gins
—flour mills
—grain elevators
—rice plantations
—irrigation and reclamation projects
—manufacturers
—oil producers
—railroads
—municipalities
—water works
—public service companies
—electric light plants
—mining companies
—machine shops
—refrigeration plants
—pleasure boats
—tug boats
—fishing craft
—freight boats
—work boats of all kinds

No other engines embody all the engineering and structural features which have established the Fairbanks-Morse line as distinctive in type. These engines combine durability, ease of operation and high fuel economy. Estimates upon request.

HAPPINESS!

Can it ever really be had if the foundations of all healthful activity are kept imprisoned and inert in stiff, unnaturally shaped shoes that nag and drag at every step?

What a pity so many people seem to think so! How much of all the best life has to give they miss!

For how can one expect head or hands or vital body-organs to function alertly over the handicap of *deadened FEET?*

GROUND GRIPPER WALKING SHOES

will restore LIFE to your feet!

There's real *exhilaration* in these famous ORIGINAL Flexible-Arch Health Shoes. No shoes in the world are exactly like them—nor ever can be. Their patented straight-inside-line, graceful swing and snugly-fitting, *pliant* grip relieve and straighten poor cramped muscles and bones, while at the same time supporting and strengthening every part of the foot;—keeping good red blood in vigorous circulation and encouraging the entire body to smarter, happier, fatigue-free action.

You'll like the smart STYLE of GROUND-GRIPPERS, too. Most intelligent people do. There are more than sixty handsome numbers from which to choose;—brisk oxfords, boots, pumps, sport models—in all popular leathers and colors—for Men, Women and Children. They're *wonderful* shoes!

Don't fail to write us at once for our Style and Medical Booklets on Feet—FREE!

GROUND GRIPPER SHOE CO., Inc.

revenge. So when Callister and his men came in for breakfast the following morning he waited until they were all seated, then beckoned to the driller.

Callister, thinking that he had made a mistake in paying his check the night before, arose. Duffy handed him the five silver dollars and the quarter, and said in a voice that could be heard a block away, "Miss Marsh asked me to give you back your tip, with her regards."

The driller glanced at the money in his hand, then back over his shoulder at the girl behind the counter, who never so much as raised her eyes.

Without a word of comment Callister walked to the door, opened it and threw the six coins out into the street. Then he returned to his seat and picked up the bill of fare.

"A bowl of oatmeal mush with plenty of cream, and a double stack of buckwheats, Miss Marsh, please," he said in a steady voice.

The girl gave him a brief nod and passed on to the next.

Duffy drew a long breath and scratched his head. He looked worried.

When the men had gone and Nora was busy in the kitchen the restaurant keeper left his seat and sauntered outside. Looking up and down the street to satisfy himself that he was not being observed, he poked the inch-deep dust of Inca's main thoroughfare with the toe of his slipper. For a full minute he stood, thumbs hooked into the armholes of his ample vest, whistling. Then stooping quickly he picked up the six coins, stuck them in his pocket and sauntered back to his high stool.

When Nora returned from the kitchen he was still whistling energetically.

VI

EARLY one morning the following week Fred Warren, field manager for the Buena Vista Oil Company, called on Callister. Warren was an easy-going, mild-mannered little man, with a stubby gray beard, bushy eyebrows and very little hair on top of his head. Callister had drilled several wells for his company and, young as he was, had won for himself the reputation of being one of the best rotary drillers in Southern California.

The two men were friends. Warren had no desire to antagonize a man whom he might need at any moment, so he held out his hand with a smile and said in his mildest tone, "Reckon you're going to strike oil here, Ben?"

"Search me," Callister grinned. "I'm hired to drill a two-thousand-foot hole. What might be at the other end of it don't worry me."

Warren gave the driller a quick, searching glance, then dropped his eyes.

"My people have been wondering how you fellows got the hunch to go looking for oil around here," he said.

"Search me again," Callister replied. "All I know is that Blass left word for me at the Consolidated, where I had just finished a well, to come and see him. When he told me where he was going to drill I thought he was crazy, but my business is to drill and not to give geological advice. Besides, I've struck oil in some pretty unlikely places the past three years, so I hustled my crew together, and here we are."

Warren smiled softly.

"Not so crazy—this man Blass," he said. "We've been scouting this territory for three months. Bang-up report. What we'd like to know is, How in blazes did it leak out? We've been wearing muzzles and rubber heels all summer. Funny about him knowing to drill on this spot. Of the whole section, only this upper ten acres comes under Blair's report as possible oil-bearing."

"That is funny," Callister agreed.

"Another thing," Warren went on. "Old man Marsh showed me the paper his daughter signed with your employer. It's a rank swindle, Ben—the rankest I've seen in my life, and I've seen a few. Gets the girl to deed him this ten acres under pretext to drill for water for her." He pulled a document from his pocket and handed it to Callister. "I had my stenographer make a copy of it when Marsh came to see me last week. Read it."

Callister ran his eyes down the typed page, then beckoned Warren to a seat beside him in the tool shack, while he perused it more carefully.

"Suffering cats!" he exclaimed when he had finished reading it. "That man Blass is an artist and no mistake. Robs them of their eyeteeth and makes them sign him clean."

"Pretty rank, eh, Ben?" Warren said with a nod.

"Rank is right," said Callister. "No wonder they raised the roof. They were up here a week ago—the old man and his daughter. Nice girl, Miss Marsh."

Warren nodded.

"A hard worker. She's supported herself and the old man by working at Duffy's. Duffy feeds Marsh. That's part of the bargain. The two of them came out here from Iowa a couple of years back—to keep the old man from passing out. The girl was a school-teacher back there. Your employer sold them this dry section for a farm. When they got tired of starving the girl went to work." Warren paused and frowned mildly. "It seems as if the people that can least afford it are always the ones who get swindled."

"Yes," said Callister. He was thinking of the somber-eyed girl slaving her youth away in the stuffy heat of Duffy's restaurant.

"How far you down?" Warren asked after a pause.

"A little over four hundred feet. We'll hit sand in less than a month—unless we strike hardpan. I don't think we will."

"You won't," Warren agreed. "It's easy going all the way down, Blair reported." He arose. "I thought maybe you'd like to know what sort of a man you're working for."

"I sure do."

"Well, so long, Ben."

"So long, Fred."

Instead of going straight home after supper that evening, Callister sauntered across the street to the depot and tried, unsuccessfully, to engage Jean Bullpit, the station agent, in conversation at his open window. Bullpit talked, but in monologue, a monologue directed against those who use the law to aid them in swindling helpless womenfolks and old men.

Callister listened until Bullpit ran out of breath, then said, "I know you mean well, Bullpit, so I won't punch your face for you."

"Try it and see what'll happen to you," the station agent invited him.

Callister shook his head.

"Nothing would happen—to me. The S. P. would be a man short for a week or so, that's all."

Bullpit scowled at the driller.

"You hate yourself, don't you?" he growled.

"Not particularly," Callister replied cheerfully.

"Well, there's a lot of us in this town that do," the station agent informed him, "and don't you forget it. If I had my way about it you and your outfit would be hitting the ties south by daylight to-morrow morning."

Callister laughed.

"It'd take a lot of you to make us."

"Oh, I don't know. There's a sight of us here who know how to nurse a pair of shooting irons."

"That's all right with us," Callister grinned. "I and my crew always travel heeled. Trouble is our middle name."

"That so? Well, maybe we'll teach you how to spell it backwards—yet," Bullpit retorted, pulling down the window with a bang.

Callister strolled about town until he saw Duffy lock up his place for the night. When Nora came out of the alley a moment later and walked down the road he followed.

Increasing his pace until he was abreast of her he said, "I owe you an apology for insulting you with that tip. My only excuse is that I was so mad that I forgot the change."

"You owe me nothing," the girl replied, increasing her own pace.

"All right. Consider it a present then."

The girl bit her lip and made no reply.

"There are one or two things I'd like to know about," Callister went on imperturbably. "You bought this section from my—employer?"

"I did."

"You put all the money you had into it—or nearly all?"

"I don't see that my affairs are any of your business," she retorted haughtily.

"They are—and they are not. I'm making them my business—if you don't mind."

The girl whirled upon him angrily.

"I do mind! I wish you'd leave me alone!"

Callister laughed.

"You've got the same kind of a temper that I have. We'd make a fine pair." Then seriously he added, "I'm butting into your affairs for the simple reason that they need butting into—unless you want to sling hash at Duffy's for the rest of your life. You need a man to take care of you."

"Indeed!" she remarked acidly.

"Yes, indeed," Callister reiterated; "and I'm going to elect myself a committee of one for the job."

The girl stopped short, fists clenched.

"Oh, if I were only a man!" she cried. "I'd—I'd—I don't know what I'd do to you!"

Callister caught her raised arm by the wrist.

"I'm glad you're not—a man," he said, "but not because of the walloping I might get," he added gently. Then as she left him and took the path across lots to the house he called out after her softly, "Good night, honey!"

Mr. Blass and Frisbie motored out from the city the following week. Mr. Blass was in the usual good humor preceding the successful consummation of a deal, as he termed his questionable transactions. Frisbie was morose and silent. The junior partner was suffering from an aggravated case of writer's cramp, from O.K.ing vouchers for the new enterprise. Half of the firm's bank balance had been depleted, and only half of the hole in the ground, as he gloomily referred to it, had been dug.

Chills of horror percolated down his spine when he had itemized the first weekly expense account.

"Listen to this!" he shouted. "Twelve dollars a day for a well digger. Ten more for a tool dresser. Does he maybe manicure 'em too? Is the man crazy? Two hundred dollars a day—wages alone. Forty dollars a day more for meals. Did he hire a bunch of ostriches, oder does he maybe board them at the Waldorf Astoria?"

Mr. Blass explained patiently the difference between a well driller and a well digger. Instead of answering, Frisbie waved a bill for three hundred and eighty dollars' worth of gasoline—a thousand gallons—in his face.

"Maybe you can explain this also. Is it that we have Barney Oldfield running races for us, und did you dilute the gasoline with perhaps champagne? Thirty-eight cents a gallon! For that price I could fill me, almost, a cellar with bootleg."

Mr. Blass explained here that the gasoline was used for the engine and that its price—thirty-eight cents a gallon—was due to the three-hundred-mile haul across the desert by tank car. When he suggested that Frisbie accompany him to the property, his partner demurred at first. But later, drawn as a criminal to the scene of his crime—to Frisbie, paying out money, his own, was synonymous with crime—he agreed to motor out with Mr. Blass.

For the best part of the three-hundred-mile drive he sat listening in agonized silence to the high-powered cylinders eating up a gallon of gas every fifth sand-strewn mile; and when they arrived at the well, tired and dusty, he took one amazed look at the derrick, then exclaimed, "Thirty-one thousand dollars! For that thing! For thirty-one thousand dollars I could build me on Wilshire Boulevard a house, with a Jap cook and seven bathrooms."

"Oh, shut up!" Mr. Blass exploded as the two men, hot and perspiring, climbed the derrick platform.

"Well, well, how's it going, Mr. Callister?" Mr. Blass ejaculated, pleased at his own little pun.

"All right," the driller replied, acknowledging his employer's introduction of Frisbie with a brief nod. "We're down twelve hundred feet."

Frisbie poked his long nose over the edge of the casing and looked down, as if expecting to glimpse there some of his vanished dollars.

"Such a business!" he muttered.

VII

A FIRST-CLASS well driller can do things with a well that would make a magician sick with envy. Callister was a first-class driller. He had the reputation of being able to use his head in an emergency. He had been using it for the past week—since his talk with Warren.

He was down now where his drills told him that he was nearing oil sand, and his nose confirmed the suspicion. Gas had been rising in the casing for the past two shifts.

Sheetrock is wall plaster cast in sections!

Insert shows the actual thickness of Sheetrock

SHEETROCK has the great advantage of being ***a fireproof wallboard.*** It is gypsum plaster, made from rock that is mined and ground and factory cast in broad, ceiling-high sheets. It cannot burn, ignite, or transmit heat. On the walls and ceilings of your building, it furnishes a fire-resisting protection to the studs and joists to which it is nailed. It makes rigid, tight-jointed, standard walls and ceilings that will not ***warp, shrink or buckle,*** and will last as long as the building stands.

There are many economical uses for Sheetrock in new construction, alterations and repairs. It saws and nails readily, and any good carpenter can do good work with it, easily and quickly. It offers a perfectly flat, smooth surface for any decoration you want—wallpaper, paint or panels. As soon as it is up, you can decorate and move right in. Lumber dealers and dealers in builders' supplies sell Sheetrock. Its cost is low. Write for our free illustrated booklet about Sheetrock, "Walls of Worth."

(Continued from Page 82)

In his little cubby-hole of an office behind the tool shack he considered his position. For a full half hour he sat in his chair, thinking—about his own reputation as a driller, about the unscrupulous piracy of Blass, his employer, but mostly about the girl who had been bucking the wolf, lone-handed, with a sick father. His eyes grew hard, and when he finally arose they had narrowed to mere slits.

That night, under the cover of darkness, he sent a wagon team down to the creek which skirted the lower end of the adjoining quarter section, for a load of adobe clay.

Adobe clay is inseparably interwoven with the history of Southern California. Sun-dried bricks were made from it by the Indians and the early settlers for their dwellings. The ruined arches of the old missions are chapters in the history of adobe construction.

Adobe is the stickiest of sticky clay, a dark brown substance, soft as peat in winter, tenacious as India rubber in spring, and hard as concrete in summer. It has the adhesive qualities of a leech, and the impenetrableness of an elephant's hide. Mixed with straw and smoothed down with a trowel it makes an excellent plaster. When damp it sheds water like a gaberdine.

Callister found a new use for adobe clay. Mixing it with water to the consistency of tar he poured it down the drill casing by the bucketful. As the drill ate its way into the oil sand the wet mud formed a coating of adobe on the walls of the bore, which upon hardening prevented the oil from flowing through.

Watching his drills closely as they were pulled up for resharpening he noted that their points were sticky with oil. Blass had guessed right. There was oil there—lots of it. But he was not going to get any of it—not if Callister could help it.

After three shifts of drilling the formation changed. He had gone through eighty feet of oil sand to the harder stratum below. Pulling out his drill he lowered a six-inch casing into the bore, thus shutting off, for good, any flow of oil.

Then smiling softly to himself he wired Blass at Los Angeles, and went on drilling.

He had one trick more up his sleeve. If it failed he could still break Blass by drilling.

When Blass and Frisbie arrived from the city in Mr. Blass' eight-cylinder roadster Callister led them into the office behind the tool shack and shut the door.

"Well, gentlemen, she'll blow inside the next forty-eight hours," he said. "I figured that you'd like to be on hand for the fireworks, so I wired you."

Mr. Blass rubbed his fat hands.

"You think there's plenty of oil there then, Mr. Callister?" he asked anxiously.

"I don't think it—I know it," the driller replied.

Frisbie relaxed his gloom momentarily, and permitted himself one of his rare smiles.

"It's about time," he grumbled. "We've paid out already sixty thousand dollars. If something don't happen pretty quick we'll be looking for a meal ticket."

"Something will happen—pretty quick," Callister assured him.

McFee, the tool dresser, came into the office then. He nodded to Blass and Frisbie.

"There's a gang of men with rifles coming up the hill, Ben," he said to Callister.

Mr. Blass' pudgy hands clutched the arms of his chair. His smooth, pink face turned the color of chalk. Frisbie stared, mouth drooping, from McFee to Callister. The driller glanced out of the window and saw a crowd of perhaps fifty armed men coming up the trail. He turned to McFee.

"Pass out shooting irons all around, Mac," he said quietly. "The cartridge clips are in that box," he added, pointing to a box under the desk. "Better move them up on the derrick platform. Rouse the two off shifts and form a line around the derrick. I'll be with you in a minute."

He turned to Blass and Frisbie as McFee carried the box of cartridges outside.

"You gentlemen had better stay where you are," he said. "There might be some shooting going on around here in a little while. I reckon you'd look good to them for targets."

"We'll—stay," said Mr. Blass hoarsely, and Frisbie seconded the motion with a forward droop of his head.

Callister opened the drawer of his desk and took from it his automatic pistol. Slipping two extra clips of cartridges into his pocket he stepped outside.

When the advancing men were within a hundred yards of the derrick he called them to halt, and asked them what they wanted. The men paused. Jean Bullpit was the first to speak.

"We want you and your gang to get out," he said briefly.

"The sooner the quicker," Duffy, the restaurant man, supplied, stepping forward.

Both men were armed with rifles. Callister pulled out his pistol.

"I suppose you know what the law says about attacking a man, or his representatives, with deadly weapons on his own land," he said.

Bullpit laughed.

"We're not losing any sleep over what the law says," he jeered.

"Perhaps not," Callister came back, "but you'll have a nice long one if you don't observe it." He raised the pistol. "The first man that comes a step nearer will go back down the trail feet first. I took the job of drilling this well and I'm going to finish it if I have to bury Inca by mass funeral. Think it over."

The men conferred among themselves briefly; then Bullpit said, "We'll give you one hour to pull out—or be starved out."

Callister shook his head.

"Come again. We won't pull out, and we'll shoot our way to grub—if necessary."

"It'll be necessary, all right," Duffy chipped in. "You won't get nothing to eat from me—not for a hundred dollars a meal."

The men retreated a short distance, then split up in groups of twos and threes and proceeded to surround the derrick on all sides.

Callister joined his men on the platform.

"We're in for a fight, boys," he said. "Can I depend on all of you?"

"Sure you can, boss," they informed him in unison.

"All right, then." He turned to the tool dresser. "Gather up all the empty cement sacks, Mac, and fill them with sand, and pile them up around the derrick. The shift on duty, go back to your drilling."

Looking around he noted that the attacking party also were preparing for a siege. They were busy piling up brush and digging trenches in the sand. He smiled grimly. His last card still remained unplayed.

VIII

THE happenings of the next thirty-six hours are history in the annals of oil. For six shifts, without food or water, and under the blazing desert sun in midsummer, a handful of determined men defied a whole community.

When the water supply ran low on the third shift Callister called the men together.

"We need every drop of water in the tank to keep the drill going," he informed them. "That means nothing to drink from now on until we're through. We can shoot our way to water, but some of us are bound to get killed. Have you got the nerve to stick it out?"

"Boss, we'll go to the devil for you if you say the word," one of the men replied. The others nodded their agreement to this homely sentiment.

"Maybe some of you will be called on to do that," Callister replied grimly, glancing with pride about the circle of sweat-grimed faces.

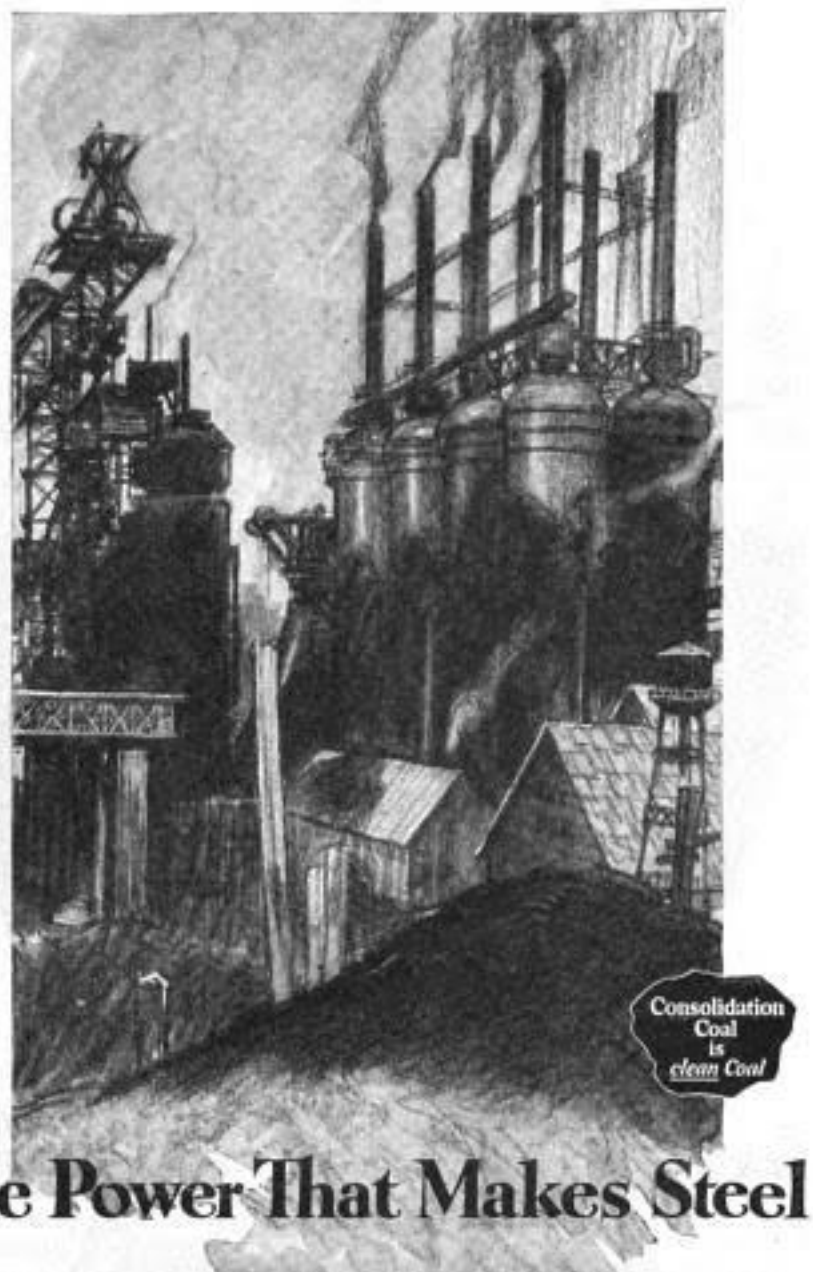
At the end of that first hot day the beleaguering forces grew restless. Bullpit advised a rush during the night, but Duffy, the cautious, demurred.

"Another day of it, and they'll run out of water," he said, hardly knowing how great a truth he was uttering. "They'll be too weak to fight. We can dump 'em on a flat car and ship 'em south then."

For the next ten hours sixteen hungry and worn-out men awaited the desert dawn that would be the beginning of another day of suffering.

At five o'clock the red ball of the sun crept up over the rim of the wastes.

Callister called the men together for the last time.



"I'm going to ask you to stick until dark—no longer," he said in a dry, parched voice.

The men nodded in silent agreement. None spoke. But Callister reading their faces felt assured.

Blass staggered out of the office just then, followed by Frisbie. All the promoter's bravado and complacency were gone. His face had turned a ghastly green. His clothing was disarranged and his collar was pushed askew. He walked with the

The Power That Makes Steel

Prosperity manifests itself invariably in an increased demand for steel. From farm implements and machinery to pleasure cars and the fine tools of expert industry, little that is important in American life can be done without the use of steel.

Coal furnishes the power that transforms iron ore into the vital and necessary steel. It is estimated that the iron and steel industries of America **consume approximately 100,000,000 tons of bituminous coal each year. Three-quarters of a ton are required to produce one ton of iron ingots and four tons are consumed in making one of finished steel.**

From our 92 mines in the four great coal producing states, The Consolidation Coal Company supplies a large volume of bituminous coal precisely suited to the needs of steel production.

Consolidation Coal of high heat content and greatest possible cleanliness appeals to the industrial manager with an eye for economy.

gait of a drunken man, and when he climbed up the platform ladder his movements were those of a huge, ungainly turtle.

Behind him stalked Frisbie, hatless, with his long arms dangling at his sides and the palms of his hands turned outward, ape fashion.

"Where's the—drinking water?" Blass gasped.

"In there," Callister said, pointing to the tank.

The promoter reeled forward.

"We couldn't stand it—any longer. Came out—to get a drink."

"You came to the wrong place," Callister said coldly.

"What! Is the tank empty?"

"No, but we need every drop for the drill. You can't have any."

"But I want a drink!" Blass shrilled, clutching at his throat.

Callister laughed hoarsely.

"There are sixteen of us here in the same notion. You're no better than the rest. Get back where you belong and stay there."

"But we'll—die of thirst!" Blass screamed.

"You'll die of something else if you don't get off this platform or stop your blubbering," the driller informed him.

Mr. Blass looked down at the pistol in Callister's hand. With a gulp of terror he slid down the ladder into Frisbie's long arms and the two of them staggered back to the tool tent.

As the desert day advanced the men began showing signs of weakening. Callister moved among them, laughing and joking, shaming them into taking a grip upon themselves. He cajoled them, told them what he thought of them, bitterly, pointedly, praying the while for time.

At noon the engineer collapsed and Callister himself took charge of the engine. When he measured the water in the tank he found that less than six inches remained.

The heat was now almost unbearable. The sun rays poured upon them like sheets of molten metal that seemed to break and become shattered against the blinding whiteness of the desert sand into minute pinpoints of heat which pierced their skins and drained their bodies of the last vestige of moisture. Callister lifted his head. Above them a buzzard soared in long lazy circles. He returned to his seat at the engine with a savage shrug of his shoulders.

Two interminable hours dragged by. His throat was parched. His tongue had swollen to shocking proportions. It seemed as if there was no longer room for it in his mouth. Every bone and joint ached. He felt sick and faint. His body from the waist down was a cumbersome, leaden thing, that responded to his will only at his most determined effort.

The short staccato gasps of the engine fell upon his ears with maddening monotony. He had a sudden frenzied desire to leap upon it and shatter it to bits.

He sounded the tank again. A scant two inches remained. One hour more and he'd have to shut off the engine. He was drilling in hardpan, and without water to keep the drill cooled he'd have to shut down. In one hour it'd be all over. His judgment as a driller hung upon a scant sixty minutes.

He was bending over the engine, filling the lubricating cups, when looking up he saw Nora coming up the trail. Dropping the oil can he straightened up and shaded his sun-blinded eyes with his hand.

The girl paused at the nearest group of watchers and exchanged words with them briefly, then came toward the derrick.

McFee, the tool dresser, raised his pistol almost involuntarily. If the girl saw the motion she did not heed it, but kept coming. Fifty feet from the derrick she stopped.

"Don't you think this has gone far enough?" she demanded of Callister.

The driller tried to reply, but the words rose to his swollen lips unuttered.

Blass, hearing the girl's voice, staggered out of the tool shack.

"Water, water!" he gasped, dropping at her feet in the sand.

The girl shrank back. She stared at the prostrate man, then at the row of thirst-maddened faces that peered at her dully over their breastwork of sandbags. Turning swiftly she ran down the trail to the nearest group of watchers. Before the men could prevent it she had snatched a two-gallon canteen from them and started back to the derrick with it.

As Callister reached for the canteen and straightened up one of the sand hummocks behind him spat a puff of smoke. The report of the rifle was deadened in the noise of the engine, but he felt the sharp sting of the bullet in his left shoulder.

Clutching the canteen in the crook of his wounded arm he whirled about, raised his pistol and emptied it at the hummock. The would-be murderer rose to his knees, sawed the air with his arms briefly, then fell across the hummock and lay still.

Callister replaced his pistol in his pocket and unscrewed the cover of the canteen. Then to the girl's amazement he staggered across the platform and poured the two gallons of water into the casing.

"Fifteen minutes more time," he muttered thickly, as he threw the empty canteen back on the sand to her.

A groan went up from his men. Blass shrieked and beat his fists on the sand.

The girl climbed the ladder to the platform.

"Please, please, stop!" she implored Callister. "You'll all be killed."

Callister clutching his wounded arm smiled and shook his head.

"You're hurt!" she cried. "Oh, you stubborn, arrogant man!"

She forced him to sit on a beam and examined his wound. When she leaned forward he swept her into his right arm and laid his parched burning lips to her cool ones.

There was a rush and a roar behind them. A shiver seemed to pass through the platform; then a recoil. The derrick rocked and swayed. Out of the mouth of the sixteen-inch casing burst a column of cool sparkling artesian water! It rose ten feet in the air, then collapsed, fan-fashion, and struck the platform with the roar of a cataract, engulfing the man and the girl completely, and almost sweeping them from the beam where they were sitting.

Callister dropped to his knees and buried his face in the cool turbulence and drank—with every pore of his thirst-racked body. Again and again he plunged his face into it and drank; and the girl clung to him, sobbing.

"You wanted water a minute ago," he shouted to Blass. "Take a swim and drown, you crook!"

IX

"I WANT you to tell the truth, Ben," Fred Warren said one evening two days later when the two men were forgathered at Duffy's over a bottle of not very soft cider. "Did you or did you not strike oil?"

Callister stroked his bandaged arm solemnly.

"That would be admitting that I had bungled or—faked a well," he came back with a smile. "Either would queer me for life as a driller. But if you want my advice it's this: Get your crews together and drill for all you're worth."

Warren smiled back.

"You think you're pretty foxy," he growled good-naturedly. "But I've been on to you for a week. When I found that somebody had been swiping 'dobe, at the dark of the moon from the creek on our property I put two and two together." He offered Callister his cigar case. "You can move your rig over on the quarter section next to you and go to it. We've leased it from the S. P. on royalty. You get a bonus of a thousand dollars if you strike oil within sixty days. But for the love of Mike be careful. I don't want no second Niagara on my land. The floor of this whole valley is a lake, Blair says."

Callister blew a cloud of smoke ceilingward.

"I knew I couldn't miss it if I kept on going," he chuckled. "This gang of rubes came near spilling the beans on me though."

"When can you be ready to start drilling?" Warren asked.

"In two weeks," Ben replied. "There are two things I want to attend to first. I want to record a deed and take out a license."

"What!" Warren exclaimed. "You haven't been drilling in this county without a license?"

"Yes," said Ben with a wink. "I've been drilling all my life without that kind of a license. But I won't do it any more, Fred." He handed the other a legal-looking document. "Blass' deed, conveying back to my future wife ten acres of land." He smiled reminiscently. "He owed me and the crew for the last week's drilling, so I agreed to take the ten acres in payment. Cleaned out? Well, I guess yes! I had to stake him and his long-faced partner to their breakfasts, and thirty gallons of gas to get back home on."

THE CREDIT TRIMMERS

By Edward H. Smith

DECORATIONS BY GUERNSEY MOORE

IT WAS a memorable morning, this twenty-third of May, 1712. The flowery frost was fallen from the branches and the amorous promise of June glowed in the sunshine. In the forking streets of London the curious crowds were clad cap-a-pie in the high plumage of the season. Catches of song were in the air, and where the spaces were green there was the whistle and whir of birds.

Richard Town sat in the lumbering cart with the Newgate ordinary at his side and thought he had never seen the old city so mellow, so magnificent. Never before had he remarked its ways and vistas. Never before had he felt the same kinship with its throngs. And never had the women, who stared at him as he passed, tugged at his male imagination with such exigence. He gazed back at them with calm, unflinching eyes. He felt a vibrancy, a sentience in his nerves and veins. He was glad to be alive on this tumultuous morning—and sorry.

"You do not know, sir," said he to the ordinary, "that this is my birthday."

The religious turned a sour eye upon him.

"I had thought you would not jest at ——"

Richard Town did not let him finish.

"You do not believe me; and yet it is so," he insisted. "If I live until noon I shall have completed my forty-first year."

Something in his melancholy smile and the visioning cast of his eye caught the ordinary's attention and wrought belief.

"Is this truth, Town?" he demanded.

"As God may have mercy on me, it is so. Forty-one years ago my sainted mother bore me in Spitalfields, and I came brawling into the world as the bells announced noon."

The preacher let his head slip from its prim erectness and stared before him at the back of the driver, wordless for once. Presently the racking, springless cart bruised its wheels on the last of the cobbles and eased upon the grateful dirt roads in the half-rural section approaching Tyburn.

Stern Measures of Old Times

"THERE are the Tyburn elms," said Town, "and there is the crowd, dressed for a fête. I like to think it is my birthday they have come to celebrate."

"You are a strange man, Town," said the preacher. "Why do your thoughts run on these things at such a time?"

"Because the world is very beautiful and life is very sweet," murmured the merchant—"and I always liked to indulge my fancies."

The cart turned into the open space and wedged its way forward through the crowd.

"And what of your immortal soul?" demanded the ordinary.

"That is in your hands," said Town.

"It should be in your mind."

"Perhaps. But I have another thought."

"What?"

"Men will say," said Richard Town, "that I celebrate to-day the strangest birthday any man has known."

The car stopped abruptly before the tall structure. The two sheriffs on the rear seat sprang down. The parson dropped his head into his hands and prayed aloud.

Richard Town stood up in the cart and stared again at the inviolate green of the Tyburn elms, at the flower and glow of the fields, at the fleckless blue of the vernal sky. He took into his lungs a great draft of the opulent sunlight and turned quiet, smiling eyes upon the multitude.

"My friends," he called resolutely, "this is my birthday. I see you have come to help me honor it."

He sprang down from the cart and walked briskly to the first sheriff, from whom he took the white cap of doom. In a moment he had mounted the scaffold, slipped the harness about his neck and placed himself to adjust the cap. A pretty woman in the front row caught his eye and he bowed to her.

"Madam, my compliments," said he. "And thank you for coming to my adventure."

He placed the cap over his head with easy assurance and gave the signal himself.

The drop fell. The rope lashed out like a serpent and jerked taut. The body plunged to the tether's end, and Richard Town had been hanged.

He had been executed under the law of 1705 for concealing assets of the value of twenty pounds and for fleeing from his creditors. His was the first hanging under this strange and significant statute. In reality, Town had caused fifteen tons of tallow, valued at four hundred pounds, to be shipped out of the country and had then attempted to follow his goods, taking his money with him and defrauding those he owed. The ship in which he had set sail was driven back by a gale, and Richard Town was captured and brought to trial and death.

You may find a record of all this in the Old Newgate Calendar, and you must not object if a later poet has somewhat embroidered and adorned the tale.

Early in the reign of Queen Anne in England there had been serious creditor trimmings, with the result that Parliament finally nominated this trick a felony in 1705, providing that whoever might conceal his assets and attempt to fleece his creditors after April, 1707, should be publicly hanged. But Queen Anne in her darkest day never witnessed such a volume of this type of crime as is seen in the United States on the brightest one.

This offense of trimming creditors, legally called commercial fraud, is related, to be sure, to fraudulent bankruptcy, yet it is a distinct offense, committed in its own peculiar manner. Its technic, too, bears certain analogies to bankruptcy scheming; but the two things are distinct, since one falls within the punitive powers of the national bankruptcy act, with its wide rights, whereas the other must be prosecuted under the ordinary criminal law, unless circumstances should permit the harmed creditors to throw the culprit into bankruptcy.

In a former article I gave some authorities for the estimate that fraudulent bankrupts mulct American business of sixty million dollars a year. It is possible to keep some sort of record in this matter and prove the probabilities at least. On the other hand, there is practically no check on the credit trimmers, and only a rash man would try to tabulate the amounts they steal annually. However, the best judges of the situation tell me that the latter offense is as costly as the former. It is certain there are many hundreds of such cases each year. It is a fact that in certain districts the reputation of merchants for this sort of crime is so bad that no broad credits can be got.

When the National Industrial Tax Conference was in session in Chicago two years ago, various witnesses estimated the yearly turnover at anywhere from two hundred to six hundred billions of dollars. The question arose as to what a one per cent tax on retail sales would yield, and the economists summoned said that in their opinion the Federal income from such an impost must be between two and six billion dollars. Let us take the mean and say that four hundred billions are spent yearly by the people of this country. Ninety per cent of the goods so retailed are sold to the dealers on credit. I mention these figures only to show how vast is the field in which the credit crook operates.

In no other type of crime save stock or market swindling and bank defalcations is the loss a crime so great as in this. Mr. C. D. West, the veteran authority of the National Association of Credit Men, who has put thirty-odd years of his life into the detection and prosecution of these offenders, assures me that the creditor trimmer who takes only twenty or thirty thousand dollars is called a piker. Fifty thousand dollars, says Mr. West, is probably the average loss. And there have been cases in which a single trimming conspiracy cost the creditors a million dollars and even a million and a half. These things we are to witness presently.

The Growth of Commercial Fraud

HISTORICALLY it is a little difficult to catch this matter. I find no record older than that of Richard Town, yet there must have been numbers of antecedent crimes and many punishments. As soon as Europe turned from its old organization and became a continent of commercial empires, credit organization grew up, and credit crimes must have appeared at about the same time. The more commerce and credit were extended and liberalized the greater became the opportunities of the crook. After England had weathered the peril of the Armada and begun to colonize the New World her commercial prosperity mounted rapidly, and energies long wasted on military aims came to be expended upon the handling of goods and the making of money. Trimming grew as did prosperity.

In our own country there seems to have been no time at which this type of skin game was unknown. But our attitude toward it used to be far different from what it is at the present. In the brave old days the manufacturer and jobber charged off such losses and put the cost of them on the shoulders of their honest customers. In his computations of a fair selling price he put in his own cost, his overhead, his handling cost—and stealage. The false bankrupts and trimmers were thus provided against. This may have been a convenient way of doing business, but it had its decided evils. Perhaps the greatest of these was the gradual education of a troupe of men in the arts of credit trimming. They were allowed to commit their crimes in high immunity, and they soon came to regard this fraud as their privilege.

To-day many organizations of makers and wholesalers of goods are carrying on a determined fight against this

A good way to save

INSTEAD of cream for coffee, fruits and cereals, use Carnation Milk. It is rich and delicious. Use Carnation in your home for every milk purpose and you will effect quite a saving in your monthly milk bills. It is pure, country milk, evaporated to creamy thickness and sterilized in air-tight containers. When you add an equal part of water to one part of Carnation you get milk of normal richness. To get thinner milk, add more water. Your grocer is the Carnation Milkman. Send today for our Cook Book.

CARNATION MILK PRODUCTS COMPANY, 532 Consumers Building, CHICAGO; 632 Stuart Building, SEATTLE

Chocolate Blanc Mange—¼ teaspoon salt, 2 cups Carnation Milk, 2 ounces unsweetened chocolate, ¼ cup sugar, 1 teaspoon vanilla, 2½ cups water, ½ cup cornstarch. Combine 2 cups water and Carnation Milk. Put in double boiler and bring to boiling point. Mix cornstarch, sugar, salt and balance of water. Add to first mixture, stirring constantly. Add melted chocolate, stirring occasionally until mixture thickens. Cook fifteen minutes. Add flavoring; mould, chill and serve with whipped Carnation Milk.

Why do women like pipe-smokers?

We asked many women. One said: "Because a man who thinks things out, does them and goes all the way through with anything he starts generally smokes a pipe if he smokes at all—and nearly always he does smoke."

Another replied: "A pipe smoker is more of a home man, it seems to me. There is no better picture of contentment than a man smoking a pipe in his home after the day's work is done."

"He is more honest, more reliable, more manly," said another—but she was rather young.

"Pipe-smokers are not so jumpy and fidgety, so nervous as non-smokers. They're more easily contented," was the opinion of one woman.

There were many reasons given by the fair ladies; some of them not very powerful from a logical viewpoint. The significant feature of the questionnaire was that the great majority of the women admitted that they do like pipe-smokers.

And just to show that woman is not the only illogical of the two sexes, we asked a number of men why they liked the tobacco they smoked. One said it was strong enough for him. Another said it was mild enough for him—and they were smoking the same brand. All of them had some more-or-less indefinite reason for liking a certain tobacco, but putting that feeling into words was difficult. Even our old Edgeworth smokers—our best friends—have difficulty in telling why they like Edgeworth. "It is a friendly, friend-making tobacco that just suits me," was the best answer we could get. *Just suits me!* There's the whole thing.

But Edgeworth doesn't suit everybody. Out of every hundred pipe-smokers there may be one or two who couldn't get supreme satisfaction out of Edgeworth.

Nevertheless, we would like to send any pipe-smoker free samples of Edgeworth, and we are sincere when we say that we would rather send samples to a man who thinks he will *not* like Edgeworth—for he may find he is mistaken and then he will be the best friend for Edgeworth that a smoker could be.

If you will send us your name and address on a postcard, we will forward samples of Edgeworth, Ready-Rubbed and Plug Slice, and there is no tag attached, "Send money if you like it." The samples are free and postpaid. Address your card to Larus & Brother Company, 1 South 21st St., Richmond, Va.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

(Continued from Page 88)

kind of thing. Hundreds of the crooks have been caught and sent to prison. Hundreds of officers and investigators and guardians are in the field. But the crime is most difficult to suppress.

It is not possible to write clearly and justly of this subject without remarking that such crimes are contrary to the practice of Americans and of those elements in our population which made the older United States. When failures occur among peoples of these bloods they are due almost invariably to inexperience or incompetence. Too many young men plunge into business without equipment or knowledge, and they come rapidly to grief.

Recognizing this fact, many organizations have launched business schools. The American Bankers Association has its Commercial Bankers Institute. Along similar lines, the National Association of Credit Men has lately inaugurated the Institute of Credit, in which it hopes to train men to resist the schemes of the trimmer and his related criminals.

Though our own people are convinced of the wrongness and unprofitableness of this offense, there are among us several races with whom the trick is highly popular. These are largely Mediterranean or Levantine peoples. I intend no aspersion upon the quality or moral fiber of these races. The thing is rather a matter of being used to the law, of litigious habitude. These Southern and Eastern peoples have no such system of credits as prevails among us. They come here and see the, to them, loose methods. Naturally they conclude that the American business man is a fool, and the impulse to trim the fool is universal.

Bankruptcy as an Industry

What is moral in one part of the globe is extremely nauseous to the ethical palate of another part. New and strange customs and laws are not readily bowed to. The Kurds and Armenians are neighbors. The Kurds are a simple, hardy, warlike people, seminomadic, close to the soil, engaged in constant small wars and broils. Among them whatever is done by courageous action is honorable. The castles of their chieftains are bandit roosts and their heroes are great banditti. The adjacent Armenians are, on the other hand, the shrewdest traders in the East. Their sharpness in merchandising is historic, legendary, proverbial. They live in cities and subsist by buying and selling. They love peace and commerce and profits. They can no more understand why it is not right to trim the guileless Kurd and charge him a high price for grain in time of famine than the Kurd can grasp any reason for not holding up the Armenian merchant's caravan or committing murderous raids on Armenian towns when he feels he has been wronged.

We have here the explanation of some of the massacres and the continual bleeding of Armenia, which has come to be a byword.

The same contrast in laws and business morals exists between our understanding of these things and that entertained generally in the Near East.

For a number of years many Syrians have been crowding to our textile centers. They are experts in cotton and linen weaving and are more than welcome. But there are among them habitual traders with the Oriental slant. A creditor-trimming conspiracy of a group of these men has lately been investigated, and most of the participants are in jail.

A bright young Syrian arrived in one of our textile cities several years ago and went forthwith to a prominent man of his own country.

"I want to work in a factory," said he.

The leader, called a king in the vernacular, looked the young man up and down, plied him with questions, tested his intelligence.

"Why work in a factory?" he asked finally.

"I came to make money," responded the youth, wondering.

"Can't do that in a factory."

"But they pay well."

"Yes, in our money; not in their own. Listen. If you want to make money put yourself in my hands, let me teach you a little while, and then just do as I say. It will be a hundred times as good as the factory."

So the king and the young immigrant came to terms.

After a preliminary few months of coaching the young man was sent into the South to open a silk-and-white-goods shop in a small city. He had already been instructed in the manner of getting credit, and managed the affair well. Small orders, promptly paid for, were followed by constantly larger ones until the time for the explosion came. Then the young fellow went quietly and soberly into bankruptcy.

It was not a specially glaring case. Nothing was thought of it. But a few weeks later another young Syrian of a similar name came the same sort of cropper in a not distant town. And a few hundred miles away another man apparently of the same race had likewise gone bankrupt a few months before. Credit men began to scratch their heads and wonder. Then there was a fourth debacle. An investigator was sent to the region, and he shortly discovered amazing and diverting things.

Three of these kings had apparently planned and organized the whole affair. Each of them had a large store in a principal city. The fifteen or twenty other shops were all in the hands of their tools and were scattered through five states. The tools opened credits and bought goods, which they immediately transferred to the big shops of the kings, who then sold the stolen stuff at low prices. As soon as one of the pawns got to the bursting point he cleaned out his store absolutely, sent a final shipment to his master, and then either vanished or stood his ground and played bankrupt.

The Technic of Trimming

The final detail of the plot was even more sagacious. When one of the underlings failed and the creditors swooped down to get what might be left the kings showed up and suavely presented a mortgage on the store and entire stock of the defunct tool. But the thing was too good to be true. About thirty men are under arrest and may shortly inhabit the prisons.

The technic of creditor trimming is nowise a recondite matter. In elementals the jobs are always much alike. A man opens a shop and manages in one way or another to run up his credit. Then he conceals his assets, usually by shipping his goods to some distant city or turning them over to some local fence. And thereupon he vanishes into distance and doubt.

But this simple fundamental structure of fraud may be almost infinitely varied. Burglary crews are often employed, and arson experts are still more common.

The credit trimmer uses incendiarism for two purposes. His idea may be to conceal the removals he has been guilty of, but quite as often he is simply aiming at the insurance companies. This kind of criminal overlooks no opportunities.

In many of the great seaside summer resorts the boardwalk merchants do a thriving business for the spring and summer. But when October comes skulking along the sea, with its sharp winds and frigid waters, trade drops to nothing. The gay and purse-free crowds are gone and there is the long, hard winter to face. So it happens that a power of small merchants go to the wall in these places as soon as summer has sung and danced away.

In one resort, not so long ago, a man of alien race, whom I shall call Nichols, set up a fancy goods store and laid in a large stock, which he gradually increased by means of boosted credits. On the first day of the ensuing October he vanished into the fine clear air of the place, and his store was found to contain nothing worth mention. A search was instituted, but this wise Mr. Nichols had most thoroughly obliterated traces. Finally, in going over the meager records he had left, a detective found a bill from a dealer for one dozen animal satchels. The thing caught the investigator's eye. What was a man doing with animal satchels in a fancy goods shop? Why had he ordered them? For whom? The remaining papers in the abandoned shop were gone over thoroughly, and finally a railroad waybill was found, showing that the dozen animal satchels had been shipped to a town in Pennsylvania, and to a man of the storekeeper's own name. The detective hurried out into Pennsylvania.

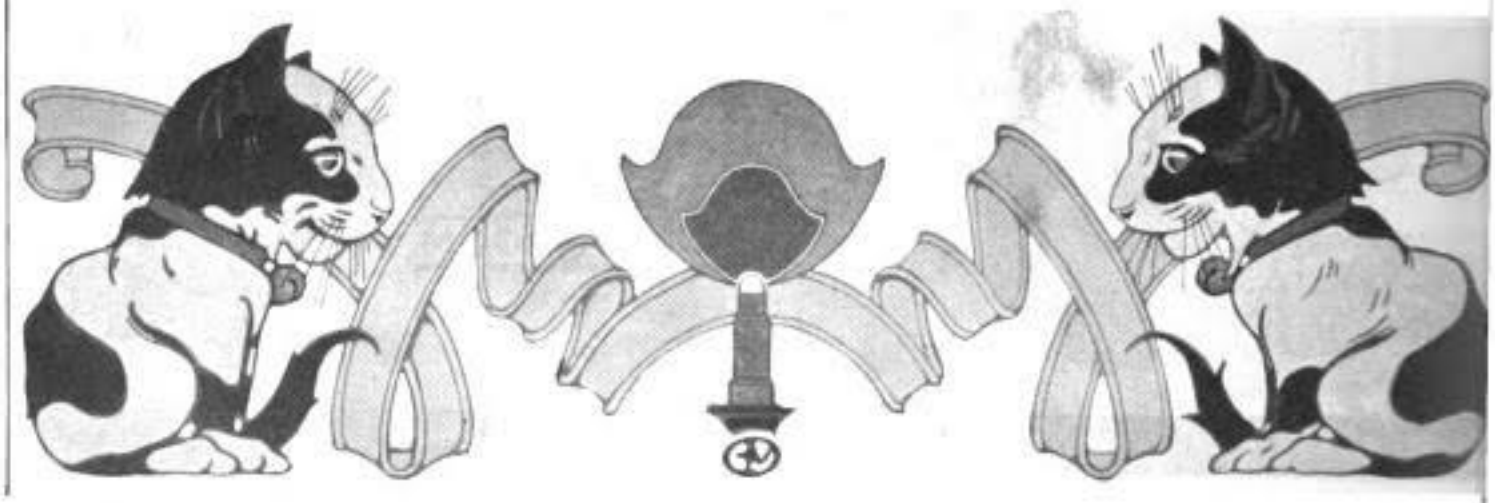
Hot on the Trail

In an old house in a quiet street of this slumberous Pennsylvania town resided Mr. Simon Nichols, the elder. The detective sensed at once the respectability of the old gentleman and discovered after brief inquiry that it was the son who had been guilty of the vanishment at the seashore. Though a father is by no law answerable for the sins of his son, the investigator thought a little scrutinizing of Mr. Nichols might not be without profit. In what business was Mr. Nichols? The town gossip told him at once that old Simon was an animal trainer.

"Kinda funny, too," said the glib informant, puckering his nose. "The old guy trains cats."

"Cats?" echoed the detective thoughtfully.

"Yep. That's wot I said—cats."



The crime hunter went away very absorbed. The next morning, after an agitated night, he presented himself to Simon Nichols, Sr., in the guise of a circus scout, searching for trained animals. Did Mr. Nichols, by any chance, have a couple of cultivated elephants or a troupe of docile wildcats?

Mr. Nichols was very curt and very suspicious. He would not have the intruder in his house. He did not train animals. He had a couple of cats which he worked with for his own amusement. Where had any circus man got hold of his name anyhow? And, besides that, get out!

The wariness of the old man convinced the investigator that all was not well. He began more careful inquiries into the past of Mr. Simon Nichols, and soon found that the cat man had formerly been a merchant. His reputation had never been spotless, and he had, moreover, suffered a fire which came very near wiping out the business section of a certain city. After the fire he had retired. Had he always trained cats? How many did he keep on hand? Did he ever sell any?

The details of such an investigation are undramatic and tedious. By watching for

Edwin Schotz, Wheaton, Ill.

William King, La Salle, Ill.

Mrs. G. H. Bangs, Underwood, Wash.

Mrs. Joanna Sherburne, N. Topeka, Kans.

$1,000 in prizes was offered for the best titles to the painting by Norman Rockwell reproduced in the Save the Surface Prize Contest advertisement. This advertisement appeared in The Saturday Evening Post of December 31, 1921, in January American Magazine, in January Farm Journal, and elsewhere.

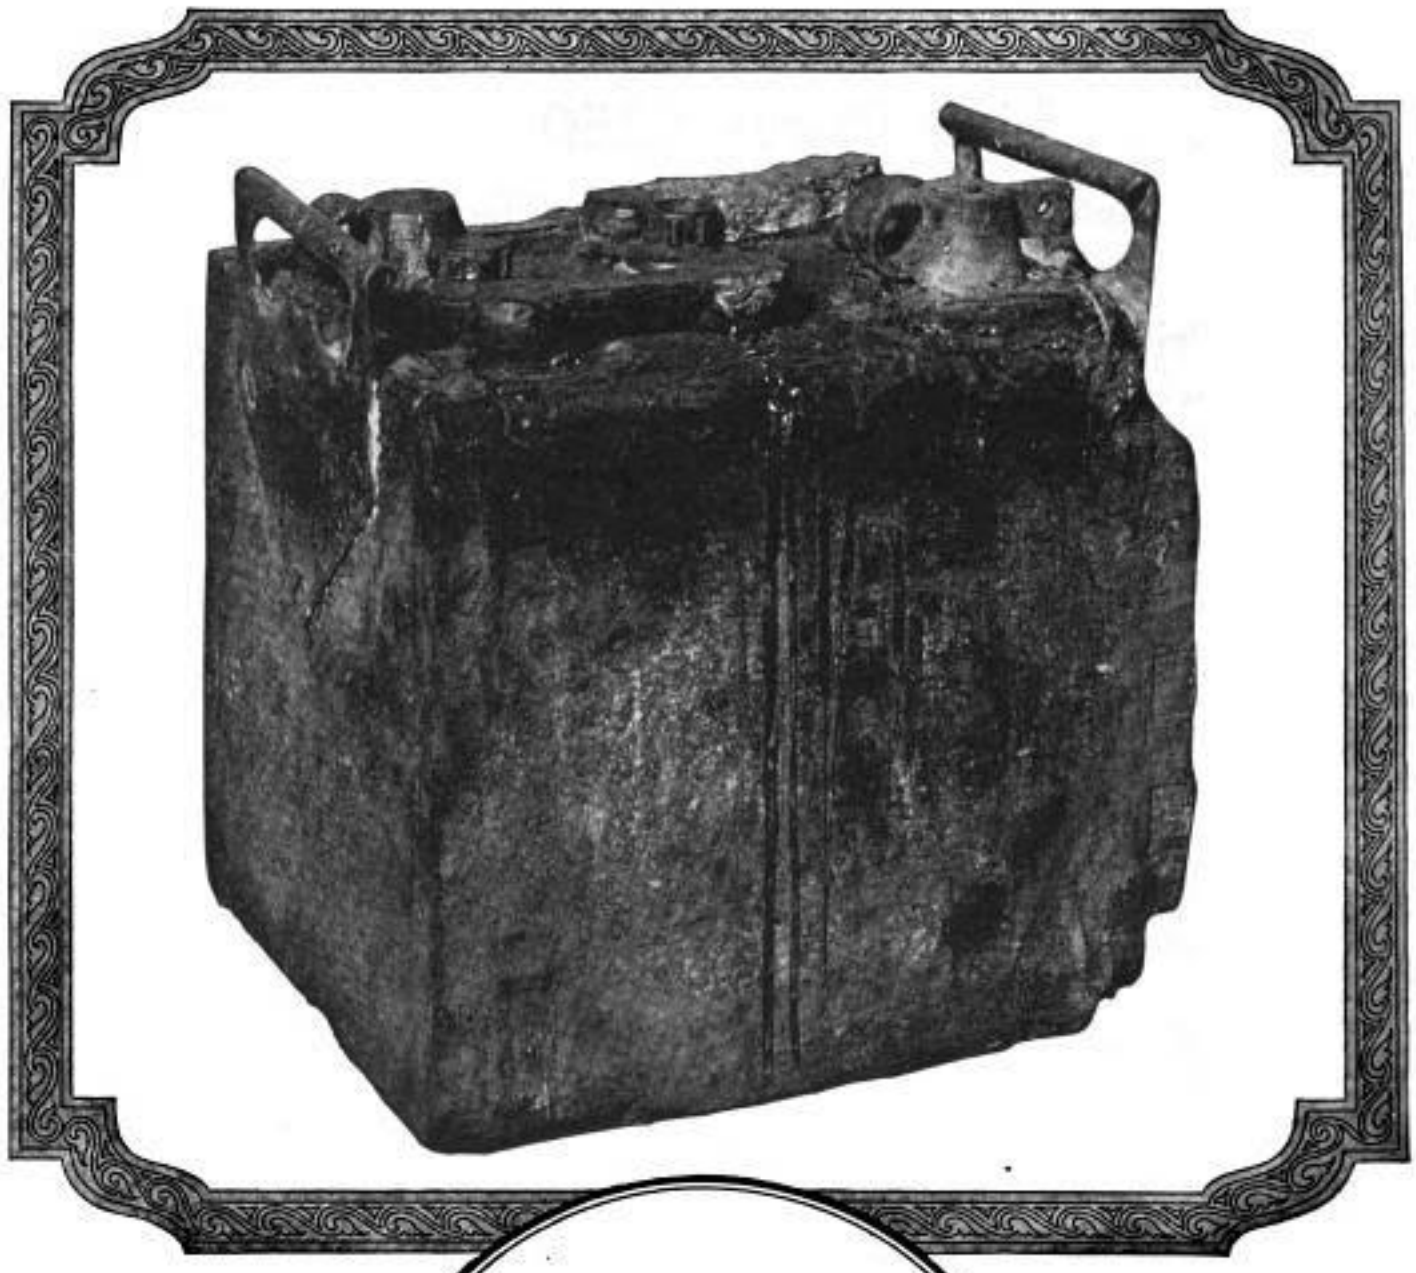
The contest closed on February 1, with 42,000 titles and 25,000 stories received. The judges of the contest were Edward Bok, Norman Rockwell and Ernest T. Trigg.

The titles submitted came from every section of this country and Canada and in fact from all parts of the world. We take this opportunity to congratulate the winners and to express our gratitude to all participants for their keen interest in this contest.

One condition of the contest read: "Your suggestion must be accompanied by a story of some particular surface which you have caused to be saved or know to have been saved with paint or varnish —or know to have been ruined by lack of paint or varnish."

These stories form a remarkable collection of first-hand personal experiences with paint and varnish; many of them will be used to further the great cause of surface protection of property. The personal observations reported, of needless rot, rust and ruin, provide overwhelming evidence that America is a land of waste. But through the great majority of these stories rings the conviction that paint and varnish, applied in time, is the answer to this waste.

If these Save the Surface stories could be told to every property owner in the United States, millions of dollars' worth of valuable property would be saved to its owners and to the nation. Every day more and more of the property-building, property-owning, property-using American people are grasping and acting on the economically sound idea—"Save the surface and you save all."



SAVE THE SURFACE CAMPAIGN
507 The Bourse Philadelphia, Pa.

A co-operative movement by Paint, Varnish and Allied interests whose products and services conserve, protect and beautify practically every kind of property.

Husky! – after 5 Canadian Winters

Regarding his Gould Battery shown below, Mr. J. L. Carhart, of Toronto, Ont., states: "A battery that will live this long (March, 1916, to Nov. 18, 1921) in Canada, where the excessive cold drains it at least 25% more, is surely something to brag about." Affidavit and battery in Gould office.

How the Long Life Gould is Built

An outstanding difference between the Gould Starting Battery and others is this: it is built complete in one plant (with the single exception of rubber jars). Read these four fundamentals that make the Gould reliable in performance, long-lived and economical:

1—Dreadnaught Plates

The famous long-life Dreadnaught Plates, made from an exclusive formula, are the foundation of Gould Quality. Their rugged stamina made possible the Gould National Contest Average Record of 4 years, 1 month.

2—Gould-made Oxide

Long-life plates demand good oxide. To insure uniform high quality, all lead oxide used in Dreadnaught Plates is made in the Gould Oxide Plant. No other battery manufacturer makes his own oxide.

3—Armored Separators

Rubberized wood separators—combining the ideal porosity of wood and the acid resistance of rubber—are an exclusive patented Gould feature. *Long-life* separators side-by-side with *Long-life* Dreadnaught Plates.

4—One Quality Standard

Gould Batteries, whether for the Ford or the Rolls-Royce, are made to one standard only—Dreadnaught Quality. Every Gould for every car has the famous Dreadnaught Plates and Armored Separators, and bears the Dreadnaught trademark.

A Famous Battery Family

Gould Storage Batteries are specially designed and built for Farm Lighting Plants, Motor Boats, Electric Trucks and Vehicles, Home Radio Receiving Sets and Emergency Wireless, Railway Signal and Train Light Systems, Submarines, Mine Locomotives and Industrial Trucks.

GOULD STORAGE BATTERY CO.
30 East 42nd Street, New York
Chicago, Detroit, San Francisco *Plant: Depew, N. Y.*

Over 3000 Service Stations in principal cities and towns

Longest Life by Owners' Records

The Gould Endurance Contest

The slogan "Longest Life by Owners' Records" is based on the average long life record established in the recent nationally advertised Gould Endurance Contest by standard type Gould Batteries on various makes of cars—the average among all Gould owners entering the contest being 4 years and 1 month.

(Continued from Page 92)

months, by making constant guarded inquiries, and finally by insinuating a child into the house of the cat trainer, the truth was got. Nichols trained his cats to do just one thing.

Over a table in his kitchen was a gas bracket whose jet was fitted with a constantly burning pilot or tip of light. This was turned up into full flame by pulling a short chain. The cats were trained to pull this chain and turn up the light.

Here was a little trick apparently harmless, but the investigation showed that these cats were used for incendiary purposes. Any man who came to old Nichols peoperly introduced could buy one of these trained cats. The price was three hundred dollars. The cat was thereupon installed in the store of the purchaser, where a gas jet was similarly arranged. The cat turned up the gas every night and lay on the table to sleep. Then came the time for the fire. The bib, or tip, was taken from the gas jet so that the flame must leap up to a great height. Inflammable substances were arranged above it. The cat was taken away and put in charge of a confederate.

Then the arson-plotting merchant went with his family to the mountains or the seashore. When he had been gone several days the confederate took the trained cat to the vicinity of the store at some late hour of night and there released her, a cellar window or some other opening having been left for her entrance.

Puss walked in and turned up the gas as usual. The flame shot up and ignited the inflammables, and the creditors and insurers suffered. No doubt the hapless cat usually perished in the blaze.

This is not a piece of imagination. Father and son both went to prison, and the story of the trained cats was put upon the court records at their trial.

The motives of the trimmer never require elucidation. He wants to get goods without paying for them, to the end that he may undersell the market and flee with the spoils. He wants fast and easy money, to be spent fast and easily. To this end he will fabricate the most intricate designs, the most marvelous textures of chicane.

Fast Friends Hit Hardest

In a recent Eastern case a man of so great talent that there may be real regret at its perversion began as a small jobber in a railroad center of middle size. He ordered small lots and paid cash, often discounting his bills. From this he gradually worked his way to credits and ever-increasing lots of goods. He extended the number of his creditors constantly by referring new men to his old creditors, who cheerfully recommended him.

Here is a point for digression. These men always hit the original creditor hardest, probably because he has benefited them most. He gives them their first goods and their first trust. He writes the first recommending letter for them, and is frequently called upon thereafter to vouch for the responsibility of these sharpers. In the end, as the oldest man on the list, he is given the severest blow. The psychology of the thing is plain. There is not only the confidence which protracted dealing gives but there is the fact that a man who constantly writes commendations of another man soon or late comes under the spell of his own epistles. The flatterer grows to sup on his flatteries.

Just this happened in the case in question. This fraudulent jobber began with small purchases from a New York house and rapidly extended his dealings among New York manufacturers and wholesalers. Then he jumped to other cities for his goods, and when the debacle came it was found that the original befriender had been gouged far worse than any two others.

This schemer had, at first, only his single jobbing place. But as things grew in volume he opened branches in several cities and under assumed names, putting assistants in charge. He then employed a regular corps of buyers, who went from dealer to dealer and sent in goods. When they were not buying for the chief they were acting for his assistants in his branch houses.

This man knew the danger of railroad shipments in the concealing of assets. He provided himself with heavy motor trucks, also partly on credit, and used these to cart his stolen wares from one part of the country to the other. He employed both burglary and arson gangs, and it is of record that one of his branches was first burglarized to get insurance and later fired for the same purpose. This culprit was careful not to dump his stolen stuff on the American market. Instead he exported everything and underbid other American dealers in Mexican and West Indian centers. It has the ring of the incredible to say that when he attempted to flee he owed over a million dollars.

There is another notorious case which shows the manner in which trimming is taught and the field constantly extended. In a small Middle-Western city a few years ago Simon Gold, or one who might have borne that name, operated a small haberdashery. He was a lean little man, past fifty, worn out, not too intelligent. He had been successively an inaccurate clerk, an indifferent salesman, a low-salaried traveling man and finally an unsuccessful merchant. His business was always in trouble. His payments were always made, but they were always slow. Everyone knew him to be thoroughly honest and tolerably incompetent. There was a mortgage on his modest home, and his wife and four children were constantly howling for money he could not supply.

One night Gold came home more depressed than ever. For once his wife went to him anxiously and forbore to lament.

The Magnificent Renner

"We've got to get five hundred dollars somewhere," said Gold woefully in answer to her questions.

"You can't get another cent on the house," said she.

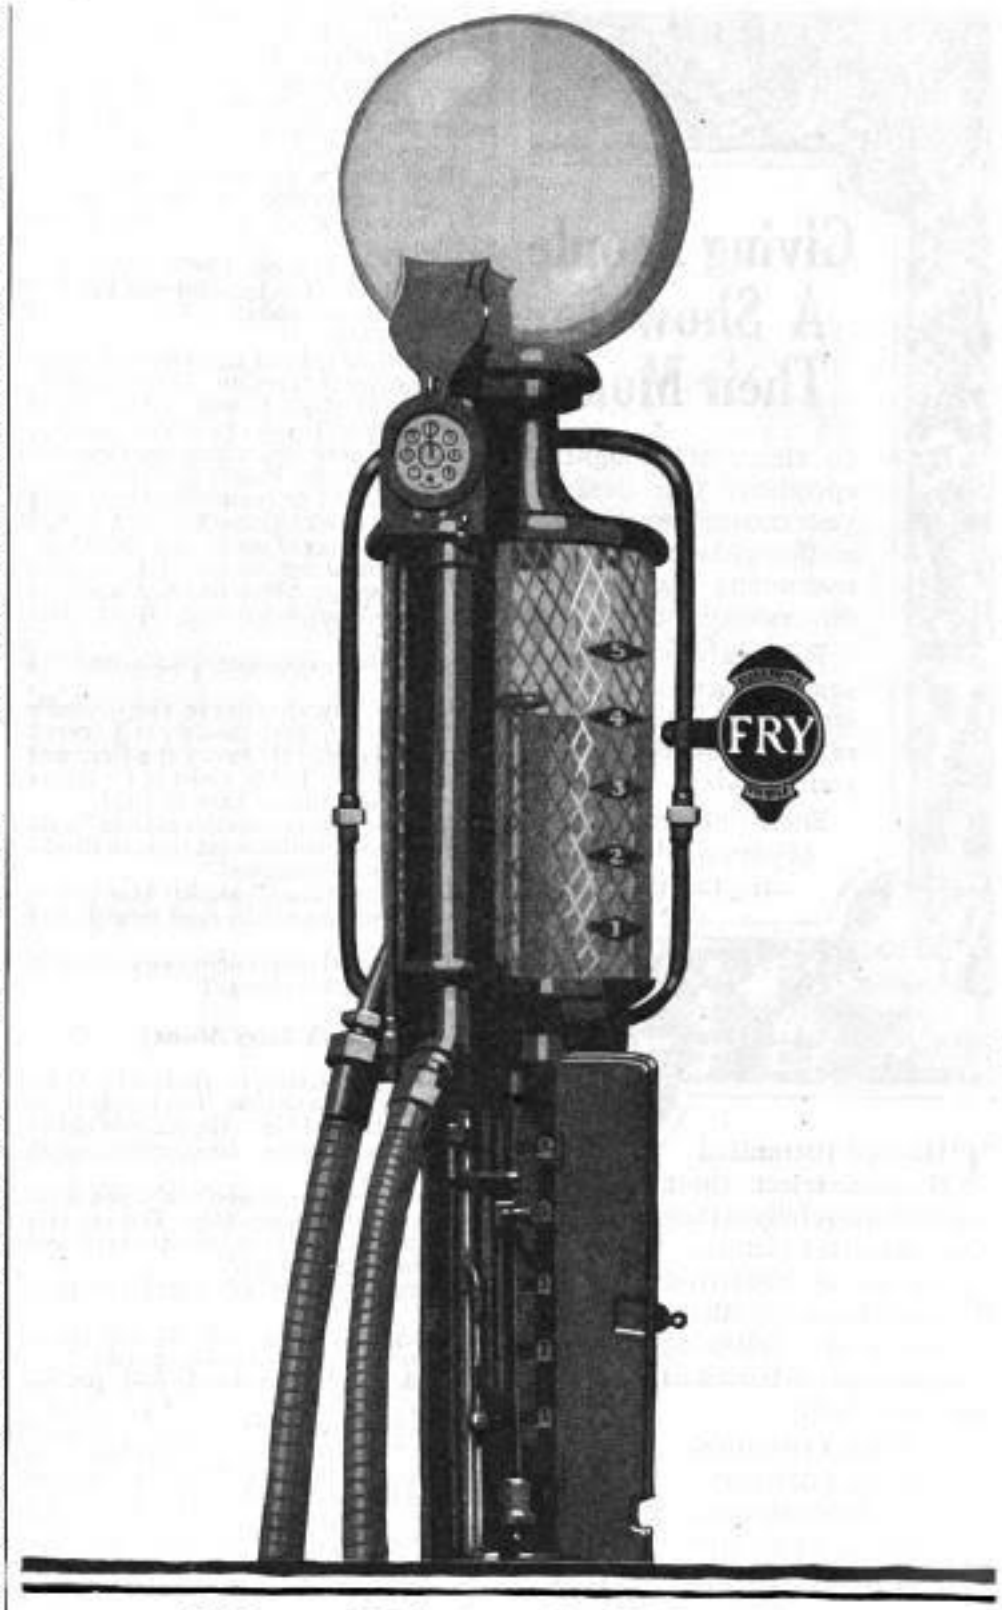
"And I wouldn't if I could."

"Then there's just one thing to do—go to the charity society. Just as good men as you have gone, and Renner has always helped them."

Late the next day Simon Gold arrived in the principal city of his district and sought out an organization, founded about ten years before, which made it a practice to lend sums of money to merchants in difficulties. Loans were made without interest or security. They were payable at a fixed date, but might be renewed under proper conditions. The prime mover in this benevolent organization was one Renner, a rather extraordinary person. When Gold appeared at the office of the charity society and asked to whom he might tell his woes, he was directed to Renner. Gold hesitated a little about going into the presence of this formidable personage, but there was no other way and he set out.

In the heart of the city's business district he found a big modern building with the name of Renner upon it. This housed the magnate's business. Gold stood across the street for some time and gathered courage. He knew a good deal of Renner. The man had come in by way of Castle Garden forty years before, with hardly a cent in his childish pockets. He had worked in the slums of New York, got his start after infinite and desperate labor and then gone West to make a place for himself. He had gradually built up this great wholesalery of his. He seemed to dominate the local field. He made annual trips abroad. He conducted his charity society because of the goodness of his heart and because he had never forgotten his own days of struggle and trouble. He was a millionaire. He was influential in politics. These details of the Renner tradition Simon Gold let trickle through his processes as he stood at the curb. Finally he went resolutely across the street and into the great house of business. A clerk stopped him.

"You wish to see Mr. Renner on business, or about the charity society?" he asked.



"The society," said Gold humbly.

"Have a seat," said the clerk, and went to the rear of the great room.

Gold sat down on the bench and wiped his neck with his handkerchief, for the day was warm and he was suffering from nervous distrust of his adventure. After interminable moments the clerk appeared at the end of an aisle and motioned to Gold, who rose and tottered into a rich private office, where a secretary received him and pushed him through another door into the sanctum of the chief.

A large, genial man, in white flannels and a silk shirt—for those were the days of silk shirts—turned a well-massaged face upon the tremulous merchant and motioned him into a chair.

"Business pretty bad, eh?" asked the big man.

Your Money's Worth—

That's exactly what you have a right to expect when you buy gasoline.

If you ask for five gallons you want just that—full measure.

Makers of gasoline were the first to appreciate this and always aim to give "full measure" service.

The Famous Fry Guarantee Visible Pump is one pump that makes it possible for them to carry out this service.

This well known pump automatically gives full measure at all times under all circumstances.

Learn to recognize this pump and buy from the man who owns one.

Fry Guarantee Visible Curb Pumps approved by Underwriters Laboratories.

Giving People A Show For Their Money

In times of thoughtful spending, you demand your money's worth from motion pictures. In your community your theatre owners realize this.

Progressive exhibitors prefer to increase the variety of your entertainment rather than risk disappointing you.

Short Subjects are half of your motion picture enjoyment.

THE best patronized theatres select short subjects as carefully as they do their feature picture.

The most crowded theatre entrances are those in which the following Educational attractions are advertised:

CHRISTIE COMEDIES
TORCHY COMEDIES
MERMAID COMEDIES
CAMPBELL COMEDIES
SHORT-REEL FEATURES
By Selig-Rork
WILDERNESS TALES
By Robert C. Bruce
SCENICS BEAUTIFUL
By Robert C. Bruce
SKETCHOGRAFS - CARTOONS
By Julian Ollendorff
KINOGRAMS - NEWS WEEKLY
and specials like
THE BATTLE OF JUTLAND

Theatres which insure you a WHOLE evening's entertainment can be identified by this sign on posters and lobby cards

E. W. Hammons, President

Simon Gold hardly remembered to shake a confirmatory head. So this was the great Renner. The poor merchant stared at the diamonds in the rich man's rings and tie pin. He gaped at the fine office accouterments. So this was Renner. The thought kept pursuing itself.

"How much will you need, Mr. Gold?" came the suave voice of the other again.

"I don't know, exactly ——" began the merchant.

"But, then, how can I help you?"

"Well, I think five hundred might do it."

"Tell me all about it," commanded Renner briskly.

Simon Gold got out some notes and began to go over the condition of his business. He hesitated often, feeling that his petty affairs must be tedious to so great a man, but Renner gave him unflagging attention and urged him on. Finally he was through.

Renner nodded comprehendingly and made a few brisk calculations on a pad of paper. He swung about in his swivel chair, cocked a mathematical eye at the ceiling and said curtly: "Five hundred won't do it. You need seven hundred. Good. You can have it."

Simon Gold managed to murmur his thanks.

"I'll give you an order on the treasurer of the society," said Renner, and turned back to his desk. He took out a form and began to write. In the midst of his labors he paused and turned back to Gold.

"Let me ask you something, Gold," said he. "Has your business out there in Blankville ever been a success?"

"I can't say it has," admitted the haberdasher, trembling lest he meet refusal after all.

"Don't you think it might be a good thing for you to make a change?"

Gold's Easy Money

Gold began to object. He had his home and family in Blankville. The people there knew and trusted him. He was too old to pull up his deep roots. Renner interrupted him brusquely:

"The thing I mean won't take you away from the town permanently. You can still live there, but you may have to travel and take your family along."

"That costs money," noted the merchant.

"But you'll be making it—twenty times, fifty times what you've been getting."

"Well ——" said Gold, and got no further.

"See here, Gold," said Renner impressively. "You're one of those fellows who stands in his own light. You're not a good merchant. You're not a good boss. You don't know how to manage yourself. But you'd be a fine man to work under me. Now, understand, you can have the seven hundred and God bless you. But you're a fool to take it. Come in with me, learn the business for a few months under my roof at good pay, and then I'll send you out where you can really do something for your family."

The two men went into conference, and Gold went to work for the magnificent Renner.

Seven weeks later Simon Gold, who had been honest for all his fifty-three years, went out on the road to become a credit crook. He had orders to proceed to Noville, Illinois, and there to open a linen-and-white-goods store with capital provided by Renner. He had in his pocket a list of business men whom he might give as credit references. In his wallet he had several thousands in cash to deposit in the best bank of Noville. But most important of all, the wallet contained a list of goods he was to get hold of on credit—linens, silks, hosiery and certain special items.

The shop was opened and orders sent to a list of suckers also provided by Renner. Demands for references came back, and Gold, who was operating under an assumed name, to be sure, sent on the list given him at headquarters. The goods came tumbling in, and Gold paid for them with impressive promptitude. The orders grew in size. Payments continued to be made on time. Credit was now established, and it was time to fire in the agreed order. These goods were brought to Gold's shop, but never unpacked. They were transshipped to another point, where another agent received them and again sent them on their way. They made a devious journey, but in time they reposed safely in Renner's big shop.

Long before these goods had reached their destination Simon Gold had drawn his money from the bank, packed his valise and departed for parts well veiled in mist. Search was instituted, but without quarry. Months elapsed. From the track of the missing man never a sign came back.

Meantime Simon Gold had gone back to Renner with his invoices. Renner took them into white, gleeful hands and patted the corrupted merchant on the back. The invoices called for the payment of something more than seventy thousand dollars, and the check which Renner turned over to his tool was for forty per cent of this amount. Renner kept the goods and paid the freight both ways.

The benefits of this delicate arrangement may be glimpsed at once. Renner had, for about forty thousand dollars, goods invoiced at more than seventy thousand. Gold had, instead of a scanty living and a continual staving off of the bankruptcy wolf, more than thirty thousand dollars made in about seven months. His wife and family naturally ceased to complain.

Gold now rested for several months before embarking on a similar adventure. This time he was sent to a small city in Missouri with instructions to repeat. He had a changed list of suckers to trim; he had also a slightly altered plan of working up the game; but the result was to be the same.

One of those fortuitous trifles, those trivial misadventures which upset the destinies of nations and gods, intervened. A merchant in Gold's new town who was naturally jealous of the newcomer sensed something in the conduct of Gold that gave an excuse for reporting the new storekeeper to the credit men in the nearest metropolis. An investigation was made, and Gold was arrested under circumstances which pointed directly to prison. The man saw escape only in confession, and made it.

One morning a few weeks later three strangers walked into the big building occupied by Renner and his wholesale business. That suave gentleman had not yet arrived, but would be on hand at any moment. The strangers said they had come on business and would wait. Presently Renner came in, jauntily dressed, opulent, blazing with jewels, magnificently self-confident. His visitors followed him into his office. He took his seat and turned a smiling inquiry upon them, rubbing his hands with satisfaction as he spoke.

At that instant one of the three visitors, who had got a little behind the magnate, reached out and snapped a shiny pair of bracelets about the schemer's wrists.

The surprise of the man was unbounded. He knew of Gold's arrest, but reposed implicit trust in his lieutenant, who had been sent word that Renner's fortune would be behind him in his trial. Never before had a support failed this fraudulent colossus. It was something unbelievably atrocious. He nearly fainted.

Lucky Days for Crime

But he was dragged off to jail, and the contents of his safe were loaded into a van and followed into legal custody. Renner spent practically everything he had amassed in his defense, but in the end he went to the Federal prison, saying, "I haven't a cent or a friend left in the world."

Simon Gold, stripped of his briefly held spoils and his life's structure of good reputation, was let go without further punishment.

Out of the sense of evil, of wrong have come a thousand forms of that vast procession of superstitions which still oppresses nearly all mankind. Certain things harmed him, others benefited him; so the savage postulated twin forces of evil and good, each exerting itself through legions of spirits, gnomes, witches, kobolds, haunts, demons and gods. The right and the wrong came to have distinct empires and separate rulers. The right must be propitiated and the wrong appeased. These ideas are by no means foreign, even yet, to the most civilized races, and among the more backward peoples they hold their ancient regnancy.

Among many nations the idea has grown up that there are special beings which protect the evildoer. In pagan times there was the god of thieves, and his festival is still celebrated in parts of Europe. More modernly many superstitious people have believed that the rulers of the ghostland world were benign to the thief and evildoer at certain times.

These strange beliefs furnish the explanation of a peculiar fact connected with credit trimming, arson and pretentious burglary. For many years credit men wondered why there were so many crimes at Christmas-time and, again, why Saturday night was so often chosen as the proper hour for an absconding, burglary or fire. It was formerly believed that the unusually heavy stocks laid in at the holiday season wholly explained the great number of creditor trimmings at that time. Undoubtedly this is a factor, but the ancient superstitions of Mediterranean peoples, those fancies out of the fume of the dead past, have much more bearing here.

Were it possible to read completely the minds of the Levantines who close their shops on Christmas Eve and vanish into the waste of winter with hundreds of thousands of dollars' worth of goods got on credit, it would no doubt be found that they believe themselves specially protected by heaven at the time of rejoicing. And it would also undoubtedly be discovered that the Sicilian who decamps and leaves behind an empty grocery store does so on Saturday evening for precisely the same reason, plus the fact that he has until Monday to effect his escape.

Here is, then, another interesting facet to be observed in studying our alien credit adventurers. I have already pointed out that it is probably their lack of habitude in our business morality which leads to the great number of credit crimes among these races.

An Ill-Learned Lesson

Some rather diverting incidents have arisen in connection with the misdeeds of Mediterraneans.

In Denver a short time ago an Italian had set up a grocery-and-olive-oil shop and was apparently forwarding goods to mining camps in Utah. The man saw that credit methods were open to attack and decided on a rather original assault. Having first carefully removed and concealed his stock and sold off for cash as much as he could, concealing the money as well, he made off for Utah. It was said he had gone to collect accounts and would not be back until a week following the first of the month. But this guileful information evidently failed to reach one of the creditors, for he sent a man to the merchant's place on the fourth to find out why the bill had not been paid.

"Oh, mister, mister! It is terrible," wailed the trader's daughter when the collector appeared with his demand. "My father has just been held up in the desert and robbed of everything—thirty thousand dollars."

The poor young woman seemed distracted, and the investigator took her at her word; but not so his superiors. They decided to watch. They had not long for waiting.

On the morning of the sixth a disheveled, bleeding, terribly frightened Italian appeared at the police station of a small Utah town and reported that he had just been held up and robbed of thirty thousand dollars. He collapsed and had to be revived before he could give descriptions of his assailants, which he did in voluble detail. He kept the police resources of that particular county in violent motion for several days. Then the discrepancy between the fourth and the sixth was discovered by the single exigent creditor, and the dumfounded merchant was made to disgorge. What beauties of patois he must have bestowed on his blundering daughter may be left unsaid.

Surely no one will read of these rascalities without wondering how it is possible to conceal successfully huge stocks of merchandise. How does a man manage to hide two or three hundred thousand dollars' worth of goods? After all, groceries and clothing and furniture and silks and linens are not rubies and pearls, to be hidden in the folds of a turban.

Concealment of goods is a subject to which a volume might be given. It has a history. It possesses a romantic tradition. We can concern ourselves with it only as it applies to the present matters, and then only briefly.

The most successful creditor trimmers, like the topmost criminals in other lines, operate with thorough organization. They ship goods back and forth among themselves, transship and intership. What is stolen here is sent hence and disposed of yonder. Merchandise obtained on brummagem credit is shunted about in every direction and often sent out of the country before it comes at last into the hands of the ultimate disposer. The railroads and

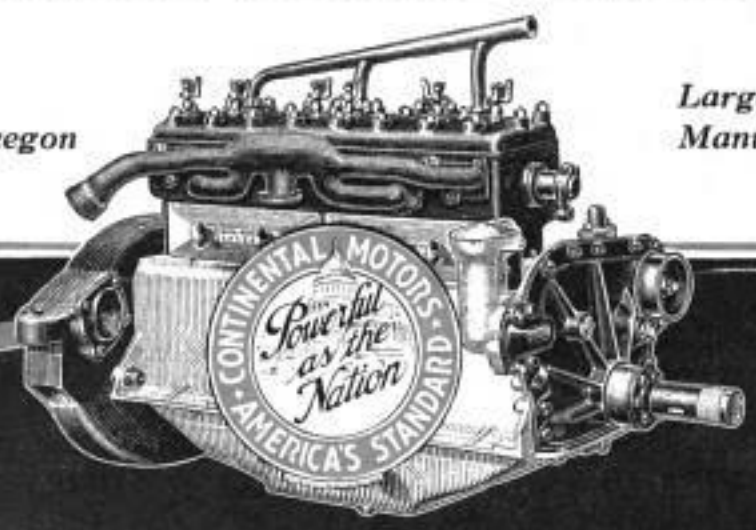
What kind of a motor vehicle would *YOU* build?

In visualizing the kind of vehicle that you would choose to build for your own use, instinctively your mind focuses upon absolute essentials. For instance, no matter whether your ideal car is light or heavy, no matter whether your truck needs are for a one-ton or a five-ton capacity, you see at once that your *real* building objective would be consistent daily performance.

How would you achieve it? You would make certain that every major unit in the vehicle was a proven unit, a guaranteed unit, a unit backed by parts-distributing stations that dotted the world.

Such units exist. They are built by great organizations that have SPECIALIZED on the production of individual units such as the motor, the axles, the transmission, the clutch and kindred products. Only through this SPECIALIZATION have masterpiece units for the various classes of motor vehicles been developed.



And these SPECIALIZED units, these units that you recognize as vital to performance, are embodied today in genuine SPECIALIZED vehicles.

Therefore, purchase a high-grade SPECIALIZED vehicle—the very type of vehicle that you, yourself, would build. And in so doing, identify the car or truck you select by the motor of sovereign excellence, the motor that bears on its crankcase that foremost symbol of SPECIALIZATION—the Continental Red Seal.

OVER 126 YEARS — BIRD'S NEPONSET PRODUCTS — ON THE JOB

Bird's Rugs

Rug Pattern No. 630
Colors: dark brown, blue and cream with black outline on light brown ground

Save You Many a Dollar

NEVER in all your days have you seen such an outstanding combination of the practical and the beautiful in floor coverings, *at such amazingly low prices!*

Yes, and more than that, Bird's Neponset Rugs on the floors — where the most wear comes — save you many a precious hour and most of the back-breaking energy that now goes to keeping your floors clean.

Dining room, bedroom, kitchen, pantry, bathroom — the downright hard work and muscle it takes to keep these rooms presentable is done away with altogether with Bird's Neponset Rugs on the floors. No heavy sweeping, no taking up off the floor for beating and brushing. No down-on-your-knees removing spots. The smooth-printed surface of a Bird's Neponset Rug comes brand-new-clean with a once-lightly-over with a damp mop.

For every room in many homes
For many rooms in every home

They wear, too. They're astonishingly durable, these modern, sanitary rugs. They're waterproofed, both sides and all the way through, which means they do not rot. And they lie smooth and flat all around. You don't have to tack them down. They don't squirm out of shape. They never kick up at the corners.

There's no longer any need to put up with a faded, shabby rug or carpet while you wait for a "bargain sale." The price of a nice, new, first-quality Bird's Neponset Rug is always a "sale price." It's a bargain whenever you buy it.

The makers of these rugs are the originators of felt-base, printed floor coverings. And Bird's Neponset Rugs are made of exactly the same materials and by exactly the same process as the original and time tested Bird's Neponset floor covering. Go see them in all their different patterns and colors, at your department store or house furnishing dealer's.

BIRD & SON, INC.

Established 1795 — East Walpole, Mass.

(Continued from Page 96)

steamship lines have always been used in this great game of shuttlecock. But these transportation systems, moving on their fixed ways, with their fixed systems, present certain difficulties to the criminal. There is always the bill of lading or the waybill. There is always, for the investigator who is persistent and clever enough, a method of tracing the stolen articles, and through them the thief.

Invention, which has raised mankind from the brutes and furnished the skeletal frame for society, has always been commandeered by the antisocial. In this instance the automobile has been taken over by the trimmers. Their trucks are on the highways, and they now move their plundered wares freely in any direction and without track or trace. In some instances professional truckmen who have learned to keep a close tongue are employed. In the greater conspiracies the trimmers own their own lorries and keep their secrets at home. This is, indeed, one of the great problems of the day in combating the specialist in commercial fraud—how to put a check on the trucking of goods; how to thwart the criminal here.

The fraudulent merchant who operates alone has a different kind of problem. If he ships his goods from place to place, he must follow or precede them in person. More frequently than otherwise he resorts to nothing of the sort. He finds among his own countrymen a fellow who has a warehouse, a loft, an old stable or a store. To some such haven he has his goods transported, generally by a truckman also of his own people and one who is used to the intricacies of crooked minds. This method is risky naturally. But the trimmer here relies on the notorious fact that creditors have an easy way of refusing to put up money for investigation and prosecution—sending good money after bad, as they phrase it.

Hiding the stolen stuffs in some warehouse is perhaps the commonest of all practices in this connection. Much more remarkable are the concealments on the premises used in fake bankruptcy cases. In one instance a merchant had deep shelves built. When he was ready to go broke he put the goods into rows of boxes in the back of the shelves and ranged before them a similar structure of strictly empty cartons. Thus, when he went to his creditors and offered a settlement, he was able to show to the examiners that his great show of stock was a display of empty boxes. They did not look beyond or behind, and he was successful in deceiving them.

The Four Clews Found

In another such case there was a broad staircase of some thirty-five steps leading from the showroom into the basement. The crook had the staircase boarded up beneath and hid about forty thousand dollars' worth of fine silks in the triangular spaces thus left under the steps. On another occasion the same man finished off the beams in his cellar, supporting the floor above. By boarding the beams up underneath he again created spaces about ten inches deep between the upper floor and the basement ceiling. Here he concealed what there was to be hid, but this time he tripped himself. The cellar ceiling looked too new.

In the nature of things such methods are of no use to the trimmer, who must always flee. The place will thereafter be notably unhealthy for him, and he must take his goods along or send them into some alien situation. There is one method of accomplishing this aside from those I have already related, and this brings us to the celebrated affair of Gashie and his wife's seven cats.

It was October in Michigan. The distances purpled with haze. Every copse and grove was dripping with the year's red blood. There was that mighty fire of migration in the air that draws the winged flocks across half the world and sends the wild herds restlessly toward the southering sun. Mr. Henry Gerard decided to take a vacation.

Mr. Gerard was the proprietor of two prosperous shops for general assortments of women's wear in a Western town of general celebrity. He put a saleswoman in charge of each of his stores and said he would go to his ranch for a week or two. And he was gone.

The weeks came and went in their ancient procession, but Henry Gerard came no more. The saleswomen wondered and worried and then proceeded to make the most of their employer's recreancy. The cat was away. Only the creditors of Gerard, to whom he owed thirty or forty thousand dollars, could not believe that they had seen the last of him. But finally they, too, were forced to credit the bitter intelligence. They began bankruptcy proceedings, and there entered upon the scene that amiable and persistent person, Mr. C. D. West, of whom something heretofore.

It is perhaps superfluous to say that Mr. Gerard's shops were stripped to the bone. In his evacuation he had included most of his stocks. And lo! where were they?

Mr. West found four clews in the man's room—a railroad guide, two envelopes, a few sheets of hotel paper and a medicine bottle. The paper and envelopes led into culs-de-sac. The railroad book, on the other hand, yielded something tangible. With its back to the table, Mr. West let it fall gently open. The page with the westbound schedules of the Santa Fe Railroad lay before him. He tried it again and again and yet again. Always the book fell open at the same page. So! Mr. Gerard had been thinking of taking the Santa Fe for the Southwest. Well, at least the trail was long enough to be interesting.

Gashie's Seven Cats

The medicine bottle, too, gave a faint glitter of light upon the trail, for it was traced back through the druggist to the prescribing physician, who told what he knew of Mr. Gerard and his wife. The chief fact was that Mrs. Gerard was the owner and abject devotee of seven cats.

"Seven cats!" exclaimed the startled detective.

He took his hat, thanked the physician and went out in a hurry, lest his astonishment should further betray him.

So then it was Gashie. The old scoundrel; his trail again. Witless, after all, this wonder crook. He could do everything but make his wife give up this hobby. She would have her cats—and perhaps the cats would betray them.

West knew Gashie and his record well, and he had reason to be privy to the matter of the cats. On several former occasions when Gashie, always under another alias, had turned up absentee and left his shops stripped the wife's felinomania had obtruded and had once been hard upon leading the astounding owners into jail.

Gashie was no common order of rascal. He had been in prison and out; a straight and honorable merchant for many years and then again a crook. He was known to retailers and credit men from one end of the country to the other under thirty or forty names. He turned up here as Immerling Brothers, there as J. Gordon Fowler, yonder as W. C. Gordon, H. Evans, George Stutz. The most remarkable thing about him, aside from his uncanny gift of getting credit from usually careful men, was his method of concealing and transporting his goods. Some years earlier Gashie had married the lady with the seven cats. This woman was a model wife to him, cleaving to him in woe and weal and aiding him stoutly in his complicated business. She was by his side sometimes, in the months when he built up his credit in a new locality, dividing her affections between him and her pets. Again, she ranged far and operated the other end of his vanishing line of communication.

At such times mysterious telegrams would be exchanged between the lady and her lord. He might wire her from St. Paul, "Where is Margery?"

And she might answer from Louisville, "Margery is in Memphis."

Whereupon he might reply directing that Margery be sent to him in Billings.

There were fifty-one such feminine names upon Mr. Gashie's list, and it was thus inconceivable that they represented members of his family. It was also unlikely that a gentleman so extraordinarily mobile and so obviously faithful to his wife should have this metropolitan chorus of ladies in his entourage. The solution is more telling. These were the names of large Saratoga trunks in which Gashie and his wife hid their bought-and-not-paid-for goods.

The trunks were laden with furs, silks, linens, robes, kimonos, what not. And always in each there were a few articles of personal apparel, in case any question might arise. The trunks were shipped back and forth, up and down. They were stored in the baggage rooms of railroads, in hotels, in warehouses, wherever it was convenient, and the lady of the seven cats went and got them out when the master called for them.

All this was well known to Investigator West, and it had its bearing upon the present strategic problem. The tactics of the moment, however, rested rather upon the railroad guide and the cats. Obviously it is a labor fit for Heracles to trace a man or a couple with no denser clew than the fact that they may have traveled by the Santa Fe Railroad, a long and intricate system. But when there is the sore thumb of the seven cats, sticking up like a spire from a valley village, there is some limitation to the field. So West set out along the Santa Fe. He traveled a short distance at a time and questioned every porter, brakeman, baggageman and conductor he encountered.

Had they seen Gashie and his wife? Nay, but they had seen cats!

So the trail took the dogged investigator westward, through Chicago, out through Illinois, across the corner of Iowa into Missouri and on to Kansas City. Here there was a stop. Gashie and the cats and some of the contents of the trunks must be somewhere in the neighborhood. Mr. West made a tour circling this vicinity. The hunted man was not in St. Joseph, Atchison or Topeka. He must be in Leavenworth. Were there any newly sprung merchants in the town? Mr. West did not go there. He looked up the lists and found that Leavenworth had lately been blessed with The Outlet Merchandising Company, Mr. C. K. Noble, manager. A letter was written this firm, and a typewritten answer came back, signed by Mr. Noble.

Now typewriters have their individualities, like men. And those who use these excellent machines have also their peculiarities. Mr. West had picked up some samples of Gashie's typing in the years the credit man had been on the trail of this marvelous depredator, and he knew both the stigmata of Gashie and his trusty machine. He cheered silently when The Outlet Merchandising Company's letter came to his hand. Outlet indeed—for the contents of those fifty-one great trunks with their soft, woman-sweet names. West caught the first train for Leavenworth, arriving the day before Christmas. He had some arrangements to make, some little investigating to do before he might risk the arrest. Before he was ready the lamps of Christmas Eve were touched to flame, and the celebration had begun.

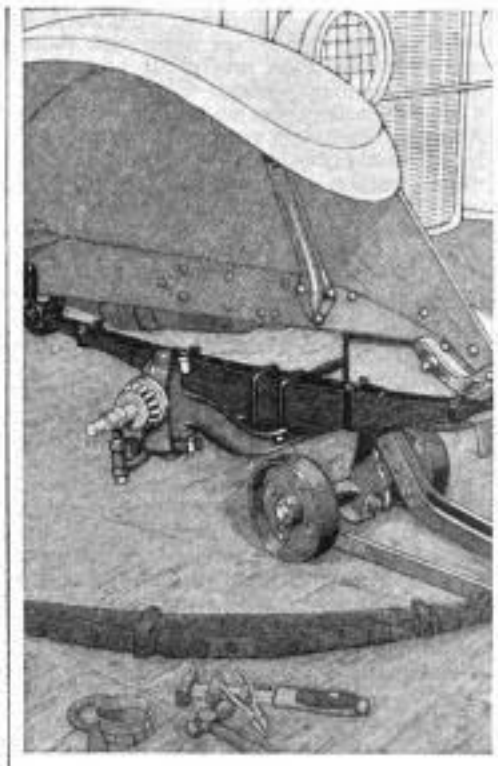
A Surprise Party

Mr. C. K. Noble was among the Leavenworth people who believed they had reason to be thankful and joyous. He was celebrating the season with a dinner to his employes at the principal hotel. He and his wife occupied the ends of a long table at which sat eight or ten of the salespeople. The coffee had been served, and Mr. Noble was getting up to say a few words to his people on the art of selling. He did not observe the quaint, ministerial little man who came in and shed a good fair look upon him.

"There is a principle in everything," began Mr. Noble.

A bell boy touched him at the elbow and whispered.

"Tell them to wait!" commanded Noble irritably out of the corner of his mouth. "Don't they know better than to interrupt now?"



"They're kinda insisting," said the boy.

Mr. Noble ceased talking to his table and took a look at the door. What he saw did not reassure him. Three men were coming in. One was in possession of his coat and hat. Another bore his wife's furs and wraps. The third looked a bit too triumphant for much good. He motioned to Noble, and the latter thought he had better respond. He excused himself and went toward the advancing leader. The other made no formalities.

"Too bad, Gashie," said the officer, "but the game is up. Come on."

At least the employes had got their Christmas Eve dinner. Gashie and his wife enjoyed, let us say, their next in that great grim house which stands northwest of the little city of Leavenworth and scowls down upon it with bright, menacing night eyes—the Federal prison.

Take the case of a firm of textile jobbers in an Eastern city. Both men were prosperous; to the common eye they shone as millionaires. Their establishment was impressive. They did a rich business. Yet they

Cradle Your Car on Ride Rite Springs

Learn the real joy in driving that thousands of other motorists have found. Get greater tire mileage and more miles per gallon of gas—reduce wear and tear—decrease upkeep costs—and add thousands of miles of comfort and pleasure.

Here's what a Dodge owner says:

"I drive a Dodge car, testing tires, and average about 175 miles a day over the roughest roads in the country and I find Ride Rites can't be beat; they not only make riding a comfort but are a great saver on gas and tires. If some of these other Dodge owners want to ride 100% easier they should use Ride Rite Springs."

And this from a Packard owner:

"I am more than pleased with the (Ride Rite) Springs. Passengers tell me they have never ridden in a car that rode so smoothly. Other Packard owners notice the wide difference between the springs on their cars and mine."

Ride Rite Springs function as springs should function, eliminate vibration and remove unnatural strains from chassis, body and motor. By absorbing jars, jolts and shocks before they are communicated to the car and its occupants they save operating costs, increase car life and add 100% driving pleasure and riding comfort.

There is a set designed for your car. Get ready for summer touring now. Equip your car with Ride Rite Springs.

Six simple tests in the "Joy of Easy Riding," a meaty little book, tell you how to judge riding comfort. Your copy is ready.

Harvey Spring & Forging Co.
Dept. 5 Racine, Wis.

Designers and manufacturers of automobile springs. Makers of the famous guaranteed Easy Riding Boldless replacement springs for all cars.

Harvey Dealers, all over the country, offer you complete immediate Harvey service.

Make Rough Roads Smooth

Digitized by Google

went to prison as thieves and trimmers, and eight of their underlings went with them, while fourteen took precipitate advantage of the Canadian border. When the petard went off under them at last it was found that they had been guilty of twenty-seven fraudulent failures and had stolen more than a million and a half from their creditors. It is by no means certain that these figures are complete.

The *modus operandi* was delicacy and simplicity embodied. When the great chiefs at headquarters were ready for a coup, they sent out one of their underlings or agents to open a textile store in a chosen town.

Let us assume that the man's name was Blass and the town Someville.

On some favored morning Mr. Nicholas P. Blass arrived with imposing baggage at the best hotel in Someville and scrawled his name emphatically upon the register, that daybook of the transitory. Having settled himself at the hotel, Mr. Blass went to the First National Bank and there opened an account with five thousand dollars in cash, saying to the cashier that he might and probably would open a jobbing house in the city.

The Operations of Mr. Blass

Mr. Blass now ventured upon the streets of the town and selected a storeroom. For his purposes a big, deep chamber was desirable. As soon as he had found it he set men to painting the windows, in order to screen the operations within. Shelves were then built down both sides and across the rear. Big rough tables ranged down the center of the room and a counter cut across near the front, so that customers could not get back. Then, when a small private office had been built in one front corner, the structural arrangements had been made.

Finally an assortment of goods out of the last failure was scattered about on the tables.

A code telegram now went forward to the principals, and in response came a number of cases of goods, to be followed immediately by a crew of experts. These cases contained only empty boxes and cartons in the flat. The crew immediately went to work, put the boxes together, labeled them and filled the shelves. Shirts, socks, underwear, linens, blouses, all manner of manufactured textile articles appeared on Mr. Blass' shelves by the mere touch of the paste brush. The gang went back at once to headquarters. Mr. Blass summoned some sign painters to do the honors on his windows, and then he opened his doors.

Before ever he had let in the air and the public, his principals had moved on their wing. Being subscribers to the commercial rating houses, they asked for a report on Mr. Nicholas Blass, of Someville, and a reporter was sent to get it. Mr. Blass received his caller in his little private office and seemed to be peevish and morose.

"Wot can I do for you?" he inquired, scowling.

"We want a financial statement," said the reporter.

"W'y?"

"It's customary."

"Wot fer? I don't need none. I pay cash. I got all the credit I want."

There followed ten minutes of delicate and definite persuasion before Mr. Blass consented to give any facts about himself.

"Well," he began, "I got forty thousand dollars in stock."

The reporter looked at the imposing array of empty boxes and noted the amount.

"How about accounts receivable?" he inquired.

"Wot's dat?" asked Mr. Blass, feigning ignorance.

The reporter explained in laborious detail.

"Oh, dat's it," said the merchant. "Well, I got some notes."

He drew forth his portfolio and displayed unquestionable notes in amount of eighteen or twenty thousand dollars.

"Good," said the reporter. "Now how about cash?"

Mr. Blass backed away dangerously.

"Lookahere, young man," he growled, "you're going a little too far. Whose business is it how much cash I got?"

"It's ours if you want a rating."

"I ain't gonna tell you dat."

More persuasion followed before the astonishingly stubborn Blass consented to say that he had an account in the First National with about five thousand dollars on hand.

Finally the reporter succeeded even in selling Blass the rating service for seventy-five dollars. He left the new jobber's place and went directly to the bank, where he received verification of the man's statement. Naturally his report was colored a bit in Blass' favor, and so it finally reached his principals through the commercial rating house.

Thereupon they immediately wired the waiting Blass, "Nelly is much better; don't worry."

There are many ways, you may be sure, of interpreting such a telegram, but only one correct one, as usual. Precisely translated, this affectionate little message reads, "We have received the report; go ahead."

And the bold Mr. Blass went. In that night's mail he sent out orders for a selected bill of goods to a prepared list of sucker jobbers and manufacturers. When they wrote back asking who Mr. Blass was and why he ought to be trusted, he referred them lightly to the credit rating house. And so, within measurable time, the bills of goods came tumbling into Blass' storeroom. He put the invoices in his pocket, scratched the addresses off the shipping cases and immediately had the goods sent elsewhere. He paid for this first order and immediately asked for a larger stock. The old, old game was played. Credit was run up to the bursting point, and every case of goods that came to Blass went out again unopened. Finally he evaporated like a puff of ether. By devious ways he got back to headquarters, and here the arch conspirators paid him fifty cents on the dollar, according to his invoices.

One of the humorous details of this case rests on an order of thirty-five hundred dollars' worth of silk hosiery. The firm wanted these goods, of a special manufacture. The plant in which they were made was just a few blocks from that of the rascals. Instead of going and buying it, they bought a few hundred dollars' worth of the same goods from the manufacturers and held the receipted bill and canceled checks. Then they sent Blass out to Someville, in Indiana, with instructions to get the thirty-five-hundred-dollar order of the same goods from the factory a few blocks from home and trim the makers out of their money. And so, in truth, it was done.

I have said these rascals came to grief and to prison. Let us see how.

Slender Clews

There had been a number of unexplained failures in Pennsylvania, Ohio, New York, Virginia and Kentucky. Finally came two synchronous vanishments in St. Louis, Missouri, and East St. Louis, Illinois, both stores belonging to the same firm. An investigator for the National Association of Credit Men was sent to look the matter up, and most unhappy visions smote his eye.

Two partners had operated these shops, and they were gone. They were lost in the fog and river miasma, leaving not hail nor hallo. The investigator, finding nothing better to do, sent to all the creditors for the letters they had received from the two partners. Let us call them Black and White.

In going over the letters from Messrs. Black and White the investigator noted no special peculiarities save that the stenographic initials in the lower left-hand corner displayed great variety. As a speculation he put the letters into various piles, according to the stenographers' initials, and was not greatly surprised to find that each pile represented a week's correspondence, beginning on Monday and ending on Saturday. So, then, Messrs. Black and White had employed a different typist every week. Clever fellows these. No gum-chewing miss was going to get any insight into their operations.

However, the very number of girls gave this sharp detective a clew. He resorted at once to the nearest commercial employment bureau and found that a girl had been sent to Black and White. The address of the girl was got and she was interviewed. What could she remember about the men? Nothing except that Black had one bad eye and that White had a protruding lower lip, which twitched when he talked. Oh, yes! One thing more. On Friday they had sent off a large registered letter to an address in Dover, Delaware. The girl could think of nothing more.

Another of the Black and White stenographers had married and moved down into Arkansas with her husband. The detective went to see her, and she confirmed the first girl's description of the men and the Friday dispatch of the registered letter to Dover.

With so slight information at his command, the officer traced the registered letters to Dover, and the trail led him to the door of a woman, evidently the wife of the wanted man. From her he managed to extract the fact that her husband had a store in Baltimore.

The truckmen of Dover were canvassed, and it was discovered that goods as well as registered letters had come to the town, whence they were transshipped to the jobbing firm. A great light glowed in the brain of the investigator. He jumped to Baltimore at once and went to the suspected shop in the guise of buyer. He talked to the proprietor, who had not a bad eye. The man gave him little enough information. But the lip twitched, the lip twitched!

There was no more for this clever man to do. He summoned the government agents and put the case into their hands. They worked quietly in conjunction with him until they had their case built up. Then they descended upon the house of the chief pirates. The result has already been stated—ten to prison and fourteen in flight out of the country.

A New Method

In creditor trimming as in all things there are the old-established manners, the customary ways of working and succeeding. The crook is almost superstitious about departing from the steps of his fallacious fathers, but now and again some genius crowds up above the others—some man with the courage of the pioneer and the eyes for looking east. He originates something; he steps out of the old trammels and the dead conventions.

Charles W. Eckman is not the name of a distinguished-looking, mellow, soft-mannered man of nearly sixty. He is an American of the first native generation. He has five or six children, grown up and married. He was accounted a rich man, and his family certainly is not without large means, judging from the way in which its members give and spend.

But Eckman had got old. He was retired from his regular business. He had seen his sons and daughters safely launched. It was no longer necessary to strive and struggle. Eckman stood the idleness for a few years. He got more and more nervous. He could not stay in the house. As soon as breakfast was over he burst out into the sunshine and spent hours strolling up and down Riverside Drive, watching the maids with their baby carriages, sitting on the benches with his eyes on the mighty river, gazing abstractedly at the huge, cruel battleships lying sleepily at anchor.

Often he did not return to the house until hunger drove him in. Then he ate hastily, in silence, and went out again. He marched up and down for miles, ogling the girls, talking to the men and women lounging on the seats, seeking some excitement. But he was too old. It would not pass his way.

One afternoon as Eckman sat blinking in the sun an idea for action came to him and he sprang up and went downtown. It was so simple it needed no elaboration. All he wanted was a certain book. Then he would be off—adventure, excitement, money!

Eckman went to the office of his friend, Rose, an attorney.

"Have you got the commercial-rating books?" asked Eckman.

"Sure. There they are," said the lawyer. "Going back in business?"

"Maybe; maybe," answered the retired merchant busily, and fell to studying the books.

At the end of fifteen minutes he got up, with several names and addresses written on a bit of paper, thanked the lawyer and went hurriedly away.

Old Charley Eckman spent three days sauntering up and down lower Broadway looking for a suitable loft. Finally he found it—a little farther north than he would have liked, but still quite desirable. He paid a month's rent, signed a lease and moved in. His equipment consisted of one desk and two chairs.

He next went to a printer and had some stationery prepared, for which he paid cash. Eckman's sign and stationery read:

EDWARD BLANK & CO., Wholesalers.

Let us say, for the mere purpose of this relation, though the facts be otherwise, that Eckman's number on Broadway was five-twenty-blank. An investigator would have discovered at once that there was another and older firm of Edward Blank & Co. on Broadway, but at three-fifty-blank. Once your attention is called to it, the disparity between a firm at five-twenty-blank Broadway and another at three-fifty-blank is obvious and painful.

But such discrepancies do not always obtrude, and on this fact Mr. Eckman was counting.

He had been through the rating books carefully in preparing his little scheme, and he had found only one Edward Blank, a firm rated A1. He had accordingly chosen this house to screen his operations.

Eckman immediately sent out to manufacturers in all parts of the country orders for large bills of goods. The credit men of these various organizations looked at the orders, saw that they were from Edward Blank & Co., looked up that firm in the rating books and saw that it was considered most responsible. If they noticed the discrepancy in the street number at all, they probably concluded that the house had moved.

Moreover, the rating books rarely give street numbers.

The thing worked out exactly as Eckman had planned. The goods came rumbling and tumbling in. He turned them over to illicit buyers at low prices, put the money in his pockets and sent further orders to other manufacturers. The thing got so big on him that he immediately went to other large cities and repeated the performance, picking the name of some well-known and responsible house and setting himself up in the same street under the same name. And in each case the factories once more bled precious merchandise.

It was a great and exciting game, full of the thrill and movement he wanted. It kept him skipping from city to city, planning, maneuvering, defrauding. He was alight with the passion of it. He had what he wanted.

Eckman Trapped

One night when he was about to close his office a well-known commercial investigator received a long telegram from a firm in the Middle West, asking about Edward Blank & Co., of five-twenty-blank Broadway, reciting the nature of the transaction and requesting an investigation. The officer took his way to the number indicated and found the loft with Eckman's sign on it. He got no answer. He went away and came again, with the same result. He waited. Still no result.

That night he put an assistant in his place to watch. No one came. Finally he got the janitor of the building, took this individual partly into his confidence and got the door to the loft opened.

On the floor lay a mass of unopened mail, put through the door slot by the postman. The detective copied the names of the addressers from the envelopes, stepped out into the hall, closed the door after him and put the mail back through the slot.

One day, two, three, five passed, and still no stir in the loft of the false Edward Blank concern. It had about been decided that the man had taken alarm and skipped when the distinguished and genial Mr. Eckman appeared, thrust his key into the lock and his head into the trap. He had been taking a swing round his circuit of cities. That explained his long absence.

There are times when the duty of the stern priest of the law is none too pleasurable a thing. The man who caught old Charley Eckman felt a thousand qualms. The man was able to make restitution, and willing, for that matter. His family was widely known and terribly abased at the father's secret crime. His sons and daughters moved heaven and earth in his behalf. Friends from the loftiest legal and business circles came to his rescue. Everywhere there was the feeling that Eckman's crime was the work of a half-demented man or, at best, a neurotic. All these things the officer and his employers considered.

On the other side was the dour fact that Eckman had not only committed a great series of depredations but also that he had evolved an entirely new form of creditor trimming, and one likely to be widely copied unless its originator were severely punished. For this reason the prosecution was forced, and the man was eventually convicted and sent to Atlanta.

Roll Call
of White Truck Fleets In Active Service

THIS year's Roll Call of White Truck fleets covers twelve years of transportation experience by the foremost truck owners in the country. Nothing like it in *extent and quality* of ownership has ever been published by any other maker.

It shows a steady, yearly growth of individual fleets in every line of trucking service, among a class of owners who *know* motor trucks. The list includes only fleets of ten White Trucks or more, totaling 18,419. There are also 33,392 Whites in fleets of less than ten, and a host of single trucks.

The Roll Call is Industry's endorsement of White Truck performance,—a performance resulting from the maker's "Twenty-one Years of Knowing How."
